Foreword

The present Check List of the Freshwater Fishes of South and Central America (CLOFFSCA) is a product of exciting scientific detective work and an outstanding example of voluntary international collaboration. Why attach superlatives to a ‘simple’ annotated check list of fish names? Several reasons explain this appreciation. They relate to the *what* it is, *who* did it and *how*.

First and foremost, it has taken a sheer incredible amount of detailed scrutiny of old and not so old source material, not readily accessible to a large public, to reconstruct the sources of names, descriptions and occurrence of almost 4,500 species of Neotropical freshwater fishes. In the process, tentative evidence on a large number of undescribed species was uncovered and provides direction for where future work is much needed for completeness. Perhaps as many as 1,550 species are thus estimated to await scientific description. The result is the core information on identity and classification, which links so much of the other types of knowledge on Neotropical fishes, their ecosystems and the various types of use into a coherent whole.

CLOFFSCA provides the platform from which work can proceed in two complementary directions: (i) more detailed national lists or other functional sub-sets of this almost continental core information, e.g. by river catchment; and (ii) expanding the arrangement of other types of knowledge associated with the valid identity of a species, e.g. geographical range, use as a food species (and associated processing characteristics) or suitability for aquaculture, value in the aquarium

trade, conservation status and trade, legislation and regulations. Without valid identification and classification, knowledge on individual species is of limited usefulness beyond the immediate purpose and certainly does not allow any cost-effective inferences on related, yet little researched, species or other expanded use.

Though not without its own problems, the willingness of CLOFFSCA authors to include at least some of the more accessible local or vernacular names is commendable. Local names, though often not unambiguous and unique like scientific names, are the major access route to information for the majority of people. This is borne out by an analysis of FishBase use, ostensibly the most utilised public information system on fishes, which shows that about 40% of all search entries are via the local name. In addition, the inclusion of local names in scientific classifications can build bridges between local ecological and ethnographic knowledge and scientific knowledge.

CLOFFSCA enables countries to step up their compliance with the Convention on Biological Diversity (CBD). CBD demands documentation and conservation of global biodiversity – the very foundation of the smaller number of species directly used by humankind. 187 countries were already parties to CBD in early 2003, making it one of the most widely ratified or accepted international treaties ever. Yet the institutionalization of mechanisms at national and local level which would ensure systematic practice of the principles and commitments enshrined in CBD is

still a long way off. The present publication is a step in this direction.

Secondly, getting 64 authors from Southern America, North America and Europe with different cultural backgrounds under one roof is a fine piece of international scientific cooperation, all the more remarkable as it was not supported by big funding or even a formal project. It was initiated by a vision of Rainer Froese, the FishBase team leader and the trustful relationship between the editors, Sven Kullander, Roberto E. Reis, and Carl J. Ferraris, Jr. and the numerous authors and supporters and the sense of purpose and achievement developed in this voluntary collaboration. It was sustained by all partners making available their knowledge and institutional resources, driven by intellectual curiosity and a desire to render research useful for society and using limited available funds judiciously.

The European Commission has supported international scientific cooperation (INCO) based on mutual respect and partnership since 1983. This experience serves in good stead with the ambitious process to create a European Research Area open to the world, in which the best scientific competence of Europe and its partners in different parts of the world is harnessed to improve our common understanding of the Earth's ecosystems and help to make the transition towards rebuilding and sustainable use of their natural wealth. Every good cooperation experience, like the one bringing about CLOFFSCA, is a valuable building block in this much larger endeavor. The achievement should serve as inspiration to others of what voluntary collaboration can do.

Finally, how did the group of dedicated individuals and their institutions make it happen – and in a relatively short period of time at that? As is usually the case, several factors combined favorably.

Among the human factors were the sense of initiative with a clear understanding of the objective, the mutual respect between the collaborators cemented and further developed through direct interaction at two workshops and the leadership of the editors to keep the undertaking on course throughout.

Key among the material conditions was the availability of two core electronic databases relevant to the undertaking, namely Bill Eschmeyer's *Catalog of Fishes* with names of all genera and species of recent fishes and FishBase, the electronic encyclopedia on the world's fishes, which had been launched and developed by Rainer Froese and Daniel Pauly into a global collaboration around a public knowledge good. Backed up by the highly dedicated FishBase team in the Philippines, CLOFFSCA work could start with a pre-structured information base provided by these two sources and then bring in the CLOFFSCA collaborators' knowledge about Neotropical fishes for a complete review of accessible knowledge of this large group of freshwater fishes. Thanks to information technology, under conditions of mutual trust, a 'laboratory without walls' developed and produced the check list.

The European Commission has supported the FishBase collaboration from the very beginning and has been very pleased with its extremely fruitful interaction with the California Academy of Sciences' *Catalog of Fishes* and more recently CLOFFSCA. In addition to this printed version of CLOFFSCA, the material can be accessed globally through FishBase, thus adding significant value to the work accomplished. I trust that the check list provides a very useful baseline for systematic knowledge of Neotropical fishes and thus enables improved compilation of other biological and ecological knowledge around it, but also constitutes a great stimulus to explore the knowledge gaps it is making apparent.

Cornelia E. Nauen

Check List of the Freshwater Fishes of South and Central America

Introduction

What is CLOFFSCA?

The Convention on Biological Diversity (CBD for short), established in Rio de Janeiro in 1992, was a major effort in several respects relevant to systematic research and the use of organisms. It made clear that mankind is dependent not on farm products alone, but on the functional interaction of the totality of the organisms on earth, the biological diversity. It stressed that this diversity is still unknown for the most part, that properties of unknown or little known organisms may be of vital interest to mankind, and that the obligation of management and right of exploitation of local diversity remains with the nation or traditional ethnic groups occupying the particular area.

The convention had several desirable effects. One was increased awareness of diversity itself, and focus on the presumed extremely species rich tropical forested regions of earth. Another was awareness of the need for sustainable use not only of farmland, but also of natural resources and need for research on natural harvesting and new channels for distribution of profits from natural products to benefit rural societies to a greater extent than before.

The undesirable effect was that numerous countries closed their boundaries to systematic research for fear of economic exploitation, and whereas deforestation and other large scale destructive activities continued as before or even accelerated, the exploration of biodiversity suffered greatly.

What matters in this world is not only economic profit. The intellectual gains from research on an inexhaustible global biological diversity is fundamental to any rational use of natural biological resources, and the basic science dealing with biodiversity is systematic research.

The CBD prescribes that all countries should establish lists of their national fauna and flora. Even for most developed countries, this remains a huge undertaking, much more so for tropical countries which mostly have other primary concerns with available funding. The only option is to organize local and international expertise to at least give such lists a start. Several projects have been started in this direction, notably GBIF the Global Biodiversity Information Facility, but also FishBase, Species2000, and similar database projects which on a smaller scale paved the way for the bigger undertakings. All of these are driven by scientists, and all recognize that mapping the world's biodiversity cannot be done with national concerns, but have to be based on a scientific approach. In the Neotropics, the NEODAT project has existed for two decades with the goal to collect and share all kinds of information of interest to the systematic study of Neotropical freshwater fishes.

CLOFFSCA is one more contribution towards the objectives of the CBD. It is intended to be a methodologically precise, complete, and reliable list of all freshwater fishes occurring in the Neotropical realm.

and can be used as a platform for both national and regional checklists.

The objectives of CLOFFSCA

CLOFFSCA is a biodiversity inventory of the freshwater fishes of South and Central America, including the Caribbean islands. It meets two immediate objectives, the first to list all known taxa for the region, and the second to establish a platform for keeping the inventory updated. The most frustrating part of making a checklist is knowing that the day after publication, it will inevitably be outdated by new discoveries; but in fact the checklist will boost new discoveries because it makes it easier to spot new taxa.

How CLOFFSCA was accomplished

CLOFFSCA was made possible by two database resources combined with a large number of systematic expertise. The *Catalog of Fishes* compiled by William N. Eschmeyer at the California Academy of Sciences, is the first large-scale animal names registry to become available in electronic form and covers all generic and species names of Recent fishes: 10,300 generic and subgeneric names, and 53,500 specific and subspecific names (Eschmeyer, 1998: 7). The Catalog also forms an important part of the taxonomic backbone in FishBase, which is a global information system covering all aspects of fish biology, created by Daniel Pauly and Rainer Froese (Froese & Pauly, 2000) and developed into one of the most comprehensive electronic data sources of any larger animal group. FishBase contributed the staff for editing and entering information into a version of the Catalog. Both the Catalog and FishBase have had free access to CLOFFSCA information and in this way all three projects have benefited from the enterprise.

The editors invited experts for each family or subfamily of Neotropical fishes to participate in CLOFFSCA. In the end 64 persons, mostly from South America, some from North America, and a few in Europe, were enlisted. All experts have exerted strong ambitions and considerable devotion to the task, and only two eventually gave up the idea. For groups where no experts were available, the editors have made the compilations to the best of their ability.

FishBase sent excerpts of names to the authors, who prepared lists of valid names with synonyms, and these clean lists were then used for successive revisions of information as now displayed in CLOFFSCA, including valid name and all synonyms with publication reference, information on name-bearing types, and type locality, as well as information on geographical distribution, length, and common name, and when needed also remarks on the status of the taxon con-

cerned. Authors have also compiled brief family descriptions.

The bibliographic references at the end of each family account were pulled from FishBase according to references given in the checklist proper, usually with considerable updates provided by the authors.

Editors have acted as pushers, and to quite some extent guided the work to comply with the intended format. Over the four years of existence, editors have met once to compile the final revisions, but otherwise corresponded by email. A major event in CLOFFSCA history was the gathering in September 2000 of more than half of the author score for a brainstorming in Santo Domingo, Dominican Republic. The week-long exercise also included several non-specialists from northern South America and the Caribbean region working with country checklists and FishBase staff. The meeting was especially fruitful in providing a better understanding of, and coordination of higher level systematics. There were considerable differences in the family classification of the Neotropical fishes between the Catalog, FishBase, and the active scientists, and CLOFFSCA reflects the opinion of the scientists.

The final version of CLOFFSCA was ready by the end of 2002, and the publishing house of the Pontificia Universidade Católica do Rio Grande do Sul accepted to publish the volume.

Present status of systematic ichthyology in South and Central America

The volume on Phylogeny and Classification of Neotropical Fishes (Malabarba et al., 1998) was a milestone in Neotropical ichthyology, with numerous specialists presenting overview information on nearly all groups of Neotropical freshwater fishes. As exposed in this volume, Neotropical fish systematics is still a dynamic field, with numerous problems still to be resolved, but it also reflects the existence of a stable platform grounded in cladistic methodology and with taxon coverage being a major obstacle. The Neotropical fish fauna is an extremely rich component of the global freshwater fish fauna, including about 6,000 of the world's about 13,000 freshwater fish species.

Many areas of the Neotropics are still not ichthyologically explored, and large collections exist that have still not been carefully studied by specialists.

How many Neotropical freshwater fish species are there?

The information available from CLOFFSCA can be used in numerous ways to calculate fish biodiversity, and will be a significant tool for creating regional.

Check List of the Freshwater Fishes of South and Central America

drainage, or country lists of species. Here we will be content to look at species numbers by family. CLOFFSCA recognizes 4,475 valid species of Neotropical freshwater fishes. This is the exact figure of the known species richness of the Neotropical freshwater fish fauna. Altogether, 1,550 undescribed species may be estimated from authors' expertise or conjectures and knowledge about ongoing work, bringing

the estimated existing fish species in Neotropical freshwater to 6,025 (Table 1). This is slightly higher than the traditional recent estimate of 5,000 South American freshwater fishes (Schaefer, 1998: 377), but much less than Schaefer's (1998:378) calculated estimate of possibly more than 8,000 Neotropical freshwater fish species.

TABLE 1. Numbers of valid, estimated undescribed, and total estimate of freshwater species in Neotropical freshwaters, in systematic order. Estimates may be considered low, and even for families with no expected new species, at least the more species rich families have a potential for new discoveries.

FAMILY	VALID SPECIES	UNDESC SPECIE	TOTAL SPECIES	FAMILY	VALID SPECIES	UNDESC SPECIES	TOTAL SPECIES
Geotriidae	2	0	2	Heptapteridae	186	52	238

Methods

Summary of Information Included

CLOFFSCA lists provide basic nomenclature] information on genera and species of freshwater fishes from South and Central America, including the Caribbean islands. The southern limit extends to the southern tip of the continent and includes the Falkland Islands/Islas Malvinas. All Antillean islands are covered, and all Central America. The northern limit is less precise. The Neotropical fish fauna is well characterized by numerous endemic families in South America, e.g., almost all ostariophysan families. That fauna extends to southern Mexico, and traditionally the Isthmus of Tehuantepec is considered to be an imprecise northern limit of the Neotropical fauna. The North American fauna, characterized by circumarctic families like pikes (Esocidae), perches (Percidae) and cyprinids (Cyprinidae), extends into northern Mexico. We include members of Neotropical families that are found north of the Isthmus of Tehuantepec, principally cichlids and poeciliids, but we exclude North American families from that area. Thus, Cyprinidae and Ictaluridae are not covered in CLOFFSCA, even though they are represented by several species within the range of the Cichlidae and Poeciliidae in northern Mexico. There is thus a slight overlap with the American Fisheries Society checklist of North American fishes (Robins et al., 1991; new edition in preparation), but essentially CLOFFSCA complements that checklist.

Most families included in CLOFFSCA are purely freshwater fishes. Several of the included families,

however, include species which are predominantly marine or brackish water. The Gobiidae are globally chiefly shallow water coastal marine or estuarine fishes, with rather few representatives restricted to freshwater. Many species of Atherinopsidae are marine but migrate to estuaries for spawning, whereas others are euryhaline or restricted to freshwater. In these and other families with representatives in both fresh and more or less saline waters, we have included species that are likely to be found in freshwater conditions near the coast, but excluded species for which available information suggests that they are only found in salt water. Decisions have not always been straightforward and for many taxa the relevant information is simply not available. Other families include migratory species, like the Anguillidae, and Megalopidae, which spend only part of their life cycle in fresh water. In CLOFFSCA, these migratory species are included. A selection was made of families which only contain brackish or marine species, some of which are regularly encountered in fresh water, e.g. the Carcharhinidae. We have otherwise strived to exclude essentially marine fishes which would be expected to be covered by check-lists of coastal and marine fishes. All in all, CLOFFSCA is a documentation of the highly endemic and particular Neotropical freshwater fish fauna, not a field guide to whatever fish might be encountered in South or Central American streams and ponds.

The coverage is believed to be exhaustive up through mid-2002, and probably quite complete also up through December 2002. New taxa are being des-

cribed all the time, and descriptions in obscure literature are difficult to locate immediately.

Classification used

CLOFFSCA classification builds on results covered in Malabarba et al. (1998), which radically revised views of both relationships and classification of Neotropical fishes. CLOFFSCA thus departs from many traditional texts, such as Nelson (1984), Eschmeyer (1998), or FishBase, and implements the frontline in systematic research. This is most notable in the classification of families within catfishes and characids. Research by de Pinna (1998) shows that Neotropical catfishes are not a monophyletic group, but particular families have their closest relatives on other continents, and traditional groups were based on overall similarity rather than on shared derived characters. Thus, a large part of the traditional Pimelodidae here appears as a separate family, the Hepapteridae, and a smaller component is now the Pseudopimelodidae. The classification is thus novel with CLOFFSCA, but is judged to be stable in regard to novel proposals. Ongoing research may further improve on the classification used herein, however.

Listing standards

Families are arranged in systematic order as far as possible. Two large families, the Characidae and the Loricariidae, have been subdivided into subfamilies. Several smaller families also contain subfamilies, but such are then detailed on only in the family synopsis.

Within families, genera, and species within genera, are listed in alphabetical order under the valid name for the taxon. Each genus entry is followed by a list of synonyms with reference to author, year and page number in the original publication, followed by the name of the type species and type category (by monotypy, original designation, or subsequent designation), and the gender of the generic name (masculine, feminine, or neuter). The name of the type species is the original combination unless particular conditions require that some other combination be used. Synonyms are listed in chronological order.

The same arrangement is followed for species, but in the synonymy list reference is given also to the principal illustration, if any, in the original publication. The type locality is intended to be the type locality as stated in the original publication. Clarifications or corrections to the original type locality are sometimes included in square brackets. Information about type specimens is derived from the original publication or from other sources.

Contextual information for species includes maximum length, geographical distribution, countries of occurrence, common names, and remarks and references.

Maximum length is derived from various sources available to authors, but is often not known to a reasonable degree of certainty. Many species are known only from the type series, which may be based on subadult specimens. Length information derived from systematic sources is usually standard length, abbreviated SL, which is the length from the tip of the snout to the base of the caudal fin (details of measurement may vary between systematic groups, however). Length information from other sources, however, is commonly total length, abbreviated TL, which is the length from the tip of the snout to the tip of the caudal fin with the caudal fin lobes pressed together. The size of skates and rays is rather given as disk width, DW, which is the greatest width between tips of pectoral fins.

The geographical distribution refers to river drainages, lakes, islands or similar geographical features, and extends to the best of knowledge. The distribution is only sketchily documented for most species. Geographical names are mostly in the language of the country where the fishes are distributed. In cases of rivers running through different countries, like the Maroni (French)/Marowijne (Surinamese), which forms the border between French Guyana and Suriname, only one of the names is used consistently. We use Paraguay and Uruguay (Spanish) instead of Paraguai or Uruguai (Brazilian) for two major rivers in southern South America, and we use Amazon basin (English) instead of Amazonas (Brazilian, Spanish) for the major river in South America.

The list of countries simply records the countries from which a species is positively recorded. Introductions are indicated as such. Also this list is often to be considered preliminary.

Common names are listed by country, and derive from FishBase as a principal source, but modified and completed by authors. Any list of common names of fishes from a large tropical region cannot presently be complete. Common names may be unavailable because the species are not recognized by non-systematists, and particular species may be called by a generic term. Thus, cichlids are known as acar, bujurqui, vieja, or mojarra in different regions, but noncommercial species are often not given particular names. It is also frequently the case that recorded common names cannot be correlated with a particular species as known in a scientific sense. The recording of common names thus has a potential for development, and lack of a common name for any particular

species in CLOFFSCA should be considered an inspiration for efforts of recording and allocating names rather than as a shortcoming.

Remarks and references highlight important recent revisions, and cases of nomenclatural uncertainty or different opinion on the status of names. The remarks and references are certainly not exhaustive.

Original spelling of names

In the synonymies, we use the original spelling of a name, as it appears in the original description. The International Code of Zoological Nomenclature (ICZN, 1999), says that capital first letters in species epithets and diacritic marks have to be corrected to lower-case letter or deleted, respectively, in subsequent usage, but we consider it more appropriate to record here the original spelling rather than introduce corrections in the citation, particularly because this facilitates correction of spelling of names whenever used as valid names. Thus diacritic marks appear in the synonym list, but of course may never be used in valid names.

Type-localities as originally stated by author of name

The type locality is the locality from which the name bearing type was collected. Often the type locality is erroneously reported, or place names are misspelled. Sometimes, additional information is available rendering greater precision to a vaguely expressed type locality. Whenever a neotype is selected, the type locality is formally changed to that of the neotype. A syntype series consisting of specimens from several localities has a complex type locality including different geographical sites; when a lectotype is selected, the type locality automatically becomes that of the lectotype. By citing "corrected" type localities or only a neotype locality one loses information that could affect future revisions negatively. Whenever the cited original type locality is different from the known type locality, we add information about the known type locality.

Date of publication of names

The date of publication of all names listed herein represents the best available information on what year the publication containing the new name, or that portion of the publication in which all elements necessary to make the new name available, was actually issued. In many cases, this date differs from that stated on the publication. Publications were sometimes issued earlier than stated but, more often, the publication was not actually issued until a date later than that listed (sometimes several years later). In the References

section of each family account, the actual date of publication is listed along with the stated year of publication (usually enclosed in square brackets). More precise information on the date of publication (i.e., month or month and day) is only provided if that information is relevant to the decision of the valid name for a species in which two or more available names for the species were published during the same year.

Cited page numbers for new names

Page numbers provided for each proposed new name represent the page of the publication in which the name is first proposed as new and for which information is provided that makes the name available. In a few cases, two page numbers are listed, because the information needed to make the name available is divided between those two pages.

In some 19th and early 20th Century journals, offprints of articles were issued with pagination that differs from that of the article in the journal. In general, the page numbers cited herein are the journal numbers and not those of the offprints. However, if evidence exists that the offprint was issued in advance of the journal, that is so noted in the References and the appropriate page number of the offprint is listed.

In a few cases, cited publications were issued without pagination. New names described in such publications are listed with a page number enclosed in square brackets, with the assumption that the article containing the new name began on page 1.

Cuvier and Valenciennes' (1828-1850) *Histoire naturelle des Poissons* was issued in two, apparently simultaneous, editions. One edition, called (by Bailey 1951, 1957) the *Regular Edition*, consists of 22 volumes in octavo format. The other, called the *Strasbourg Deluxe Edition*, also consists of 22 volumes, but in a slightly larger, royal octavo, format. Although the contents of each volume the two editions are identical, the pagination of the volumes differs, with fewer pages in the Strasbourg deluxe edition. Although the existence of the two editions is well known (see Dean, 1916: 287), most authors have access to only one of the two editions (usually the *Regular Edition*, which is more widely available), which has resulted in a certain amount of confusion about the correct page of a new name. Herein, we cite the page numbers of the *Regular Edition*. When authors provided page numbers from the *Strasbourg Deluxe Edition*, we list those numbers in square brackets after the page from the Regular Edition.

Genera and species of uncertain relationships

Check List of the Freshwater Fishes of South and Central America

In several accounts within this volume, genera and species are listed as valid, but their placement within a higher taxon is unclear. These genera and species are listed at the beginning of the Order or Family to which they belong, under the heading *Incertae sedis*, to make clear that the species should be considered valid, but not in the genus in which it was described or any of the treated genera.

Names of uncertain status

A number of available species names and, in a few cases, generic names, for Neotropical fishes could not be placed either as a valid name or as a synonym of another name. In general, these names were proposed with descriptions that were not sufficiently precise to allow the CLOFFSCA author to assign the name to a particular species and the type or types are either missing or otherwise unavailable for study. These names have been included at the end of the taxon to which their assignment could be made, under the heading *Species inquirenda* (*Species inquirendae*, pl.) for species names and *GENUS INQUIRENDUM* (*GENERA INQUIRENDAE*, pl.) for generic names. Species names that were not assignable to any genus are listed at the end of the family account, with *SPECIES INQUIRENDA* in capital letters.

Museum codes

Type specimens of Neotropical fishes are distributed in numerous collections all over the Americas, Europe and elsewhere. Each such collection is identified by a 2-5 letter code (sometimes longer). Museum codes generally follow Leviton et al. (1985), Leviton & Gibbs (1988), and Eschmeyer (1998).

Acknowledgments

The initiative to CLOFFSCA was taken by Rainer Froese, FishBase, back in 1998, and soon thereafter taken up by the editors, but Rainer Froese continuously supervising the progress and coordinating the interactions between the editors and contributors and the FishBase staff. The project was supported financially by The World Fish Center, Penang (then ICLARM, Philippines), channeled through its support to FishBase staff and operations.

The FishBase scientist team at Los Baiios, Philippines, E. Emily Capuli, Armi Torres, Christine M. V. Casal, Cristina V. Garilao, and Josephine F. D. Rius, managed the data entry and revisions, and produced the pre-printout for CLOFFSCA. Boris Fabres, administrator of the FishBase project, coordinated the interactions between FishBase, ICLARM and the EC, and with the author team. The operation was designed

primarily by Rainer Froese, and database interactions programmed by Josephine F. D. Rius. Alexandre Zart, CPD-PUCRS, helped with word processor programming for generating the Taxonomic Index.

The September 2000 workshop in Santo Domingo was ably arranged by Cristina Garilao, Emily Capuli, and Tess Cruz from the FishBase team, and by Carlos Rodriquez as local host. The workshop funding was provided by ICLARM, drawing on funds from the EDF, enabling not less than 23 specialists and regional biologists from five countries to gather in the Dominican Republic for one week of intense discussions.

CLOFFSCA would have been impossible to make without the access to the Catalog of Fishes, designed and compiled by William N. Eschmeyer, California Academy of Sciences.

Family Geotriidae (Southern lampreys)

Sven O. Kullander and Bo Fernholm

The Petromyzontiformes are represented in South and Central America by two species of the family Geotriidae in southern South America, and two species of Petromyzontidae in Northern Mexico north of the CLOFFSCA limit (*Tetrapleurodon geminis* Alvarez, 1964, and *Tetrapleurodon spadiceus* (Bean, 1887)). The Geotriidae are found also in Australia and New Zealand where represented by the widespread *G. australis* and the endemic *Mordacia preaecox* Potter, 1968, and *Mordacia mordax* (Richardson, 1846). The family level classification of recent petromyzontiforms is unstable with authors recognizing Petromyzontidae, Geotriidae, and Mordaciidae as separate families or as subfamilies of Petromyzontidae, or the Mordaciidae are ranked under the Geotriidae or Geotriinae.

Lampreys are eel-like in shape. The skeleton is entirely cartilaginous. Jaws, scales and lateral fins absent. The larval (ammocoetes) stage lives for several years in fresh water before undergoing a radical metamorphosis and then as a rule returns to the sea. Non-parasitic species breed immediately after metamorphosis. Adults have well developed eyes and corneous teeth on the circular oral disk and the tongue. The larval stage is filter feeding, whereas the adult uses the sucker shaped mouth to attach to other fishes and feeds off the wound. Land-locked, lake populations or species are common in the northern hemisphere petromyzontids, which also commonly appear as species pairs, with one species parasitic, and the other non-parasitic. The South American species, *Geotria australis* and *Mordacia lapicida*, are both anadromous. Taxonomic reviews are provided by de Buen (1961), Hubbs & Potter (1971) and Fernholm (1990). Eigenmann (1927) illustrated life stages of both South American species, but used names now mostly appearing in the synonymy of *Geotria australis*.

GEOTRIA

Geotria Gray, 1851: 142. Type species: *Geotria australis* Gray, 1851. Type by monotypy. Gender: feminine.

Velasia Gray, 1851: 143. Type species: *Velasia chilensis* Gray, 1851. Type by monotypy. Gender: feminine.

Thysanochilus Philippi, 1857: 268, footnote. Type species: *Thysanochilus valdivianus* Philippi, 1857. Type by monotypy. Gender: masculine.

Yarra Castelnau, 1872: 231. Type species: *Yarra singularis* Castelnau, 1872. Type by monotypy. Gender: feminine.

Neomordacia Castelnau, 1872: 232. Type species: *Neomordacia howittii* Castelnau, 1872. Type by monotypy. Gender: feminine.

Exomegas Gill, 1883: 524. Type species: *Petromyzon macrostomus* Burmeister, 1868. Type by original designation. Gender: masculine.

Macrophthalmia Plate, 1897: 137. Type species: *Macrophthalmia chilensis* Plate, 1897. Type by monotypy. Gender: feminine.

Dionisia Lahille, 1915: 374. Type species: *Dionisia patagonica* Lahille, 1915. Type by monotypy. Gender: feminine. Availability uncertain as *D. patagonica* appears in the synonymy of *Geotria chilensis* on p. 380.

Geotria australis Gray, 1851

Geotria australis Gray, 1851: 142, pl. 1 (fig. 3). Type locality: Inkar Pinki R., Hobson's Bay or Onkaparinga, South Australia. Holotype: BMNH 1851.7.11.1.

Velasia chilensis Gray, 1851: 143, pl. 1 (fig. 4). Type locality: Chile. Holotype: BMNH 1951.10.4.2.

Thysanochilus valdivianus Philippi, 1857: 268. Type locality: Valdivia, Chile. No types known.

Ammocoetus landbecki Philippi 1858: 307. Type locality: Valdivia, Chile. Syntypes: ?NMW 77395 (2).

Petromyzon acutidens Philippi, 1865: 107. Type locality: Chile. No types known.

Petromyzon onki Philippi, 1865: 109. Type locality: Chile. No

types known.

Petromyzon macrostomus Burmeister, 1868: xxxvi. Type locality: Buenos Aires, Argentina. No types known.

Geotria allporti Günther, 1872: 675, pl. 70. Type locality: Tasmania, Australia. Holotype: BMNH 1871.8.18.51.

Yarra singularis Castelnau, 1872: 231. Type locality: Captain Sinnot's dock, lower Yarra R., Victoria, Australia. Holotype: MNHN A-7542.

Neomordacia howittii Castelnau, 1872: 232. Type locality: Cape Schanck, Victoria, Australia. Holotype: MNHN A-7543.

Velasia stenostomus Ogilby, 1896: 409. Type locality: Se. and s. Australia, Tasmania, etc. Based on literature sources; types not researched.

Macrophthalmia chilensis Plate, 1897: 137. Type locality: Source of Río Maullin from Lake Llanquihué, s. Chile.

Geotria macrostoma gallegensis Smitt, 1901: 26, pl. 4. Type locality: Río Gallegos et ... ses affluents, Río Ruben et Río Turbio. Syntypes: NRM 17755 (1), 28537 (30), NRM 28995 (1), NRM 28996 (1), 28997 (1), 28998 (3), 30109 (6), 30111 (8), 30118 (fragments), 43782 (9). As subspecies on p. 29, as species *Geotria gallegensis* on p. 28, as "forma (l. var.)" [forma (or varieties)] on p. 26, apparently intended as subspecific taxon.

Geotria saccifera Regan, 1911: 197. Type locality: Otago, New Zealand. Holotype: BMNH 1886.11.18.112.

Dionisia patagonica Lahille, 1915: 374. Type locality: Río de la Plata, San Isidro and Dock Sur, Buenos Aires, Argentina. Types: unknown. Availability uncertain as *D. patagonica* appears in the synonymy of *G. chilensis* on p. 380.

Maximum length: 62 cm TL

Distribution: Coasts of southern South America, South Georgia, New Zealand and southern Australia, ascending rivers to spawn. Countries: Chile, Argentina, South Georgia, Australia, New Zealand

Common names: Lamprea de bolsa, anguila blanca (Chile)

MORDACIA

Caragola Gray, 1851: 143. Type species: *Caragola lapicida* Gray, 1851. Type by monotypy. Gender: feminine.

Mordacia Gray, 1851: 143. Type species: *Petromyzon mordax* Richardson, 1846. Type by monotypy. Gender: feminine.

***Mordacia lapicida* (Gray, 1851)**

Caragola lapicida Gray, 1851: 143, pl. 1 (fig. 5). Valparaíso, Chile. Holotype: BMNH 1951.10.4.1.

Maximum length: 16 cm SL

Distribution: South America: Rivers of southern Chile.

Countries: Chile

GENUS INQUIRENDUM

Chilopterus Philippi, 1858:308. Type species: uncertain, possibly *Ammocoetes caeruleus* Philippi, 1858, as reported in Eschmeyer (1998: 1890). Gender: masculine.

SPECIES INQUIRENDA

Ammocoetes caeruleus Philippi, 1858: 306. Type locality: Valdivia, Chile. No types known.

Family Carcharhinidae (Requiem sharks)

Marcelo R. de Carvalho and John D. McEachran

Carcharhinid sharks, popularly known as requiem sharks, are the only sharks with recurrent and confirmed fresh water records. The family is circumglobally distributed in tropical and temperate marine waters, but a few species, the most noteworthy of which is the bull shark (*Carcharhinus leucas*), enter tropical rivers that have access to the sea. Altogether, some 12 species of requiem sharks may be present in brackish waters, even if marginally, but the bull shark is the only euryhaline carcharhinid that is widely distributed in tropical rivers (Compagno & Cook, 1995). The Ganges shark, *Glyphis gangeticus*, may be the only carcharhinid restricted to fresh waters, but it is known from only three specimens from the Ganges-Hooghly River system (India) and may be extinct (Compagno, 1984, 1988; Compagno & Cook, 1995; Zorzi, 1995). Some 50 valid species and 12 genera presently comprise the Carcharhinidae (Compagno, 1999).

Carcharhinids are small to large-sized sharks (ranging from 75 to over 550 cm TL), with two prominent dorsal fins (the first is always larger), a large caudal fin clearly divided into two lobes (the upper lobe with undulations), an anal fin, moderately long labial furrows, five gill slits, lateral eyes, internal nictitating lower eyelids, spiracles usually absent, precaudal pits present, scroll intestinal valve, strong dignathic heterodonty, gray, olive, brown or bluish dorsal coloration, white or creamy white ventrally, and mostly devoid of strong color patterns. Reproduction is viviparous (ovoviviparous in the tiger shark, *Galeocerdo cuvier*), and many species form maternal-fetal connections in the form of yolk-sac placentae (Compagno, 1988). Most carcharhinid species are coastal, but some are oceanic and very widespread (Compagno, 1984).

The species-rich genus *Carcharhinus* was reviewed by Garrick (1982, 1985), and the general morphology and systematics of carcharhinid sharks has been extensively reviewed by Compagno (1984, 1988), who summarized most of the pertinent literature. Many references concerning the taxonomic history of carcharhinids can be found in Eschmeyer (1998). Grace (2001) is a recent update of western north Atlantic carcharhinids, Last & Stevens (1994) reviews the Australian requiem shark fauna, and Compagno & Niem (1998) provide an overview of Indo-west Pacific species. Compagno (1999) is an updated list of living carcharhinid (and chondrichthyan) species. Fresh water carcharhinds are discussed in detail in Thorson (1976b), Compagno & Cook (1995) and Zorzi (1995), and references cited therein. The carcharhinid fossil record is reviewed in Cappetta (1987) and Cappetta et al. (1993).

The extensive generic synonymy below follows Compagno (1988) and Eschmeyer (1998) for the most part, with the exception that *Prionodon* Müller & Henle, 1838 (preoccupied by *Prionodon* Horsfield, 1822 in Mammalia) is not listed as a synonym of *Carcharhinus* Blainville, 1816, because its type species is *Squalus glaucus* Linnaeus, 1758 (= *Prionace glauca*), and it should therefore be included in the synonymy of *Prionace* Cantor, 1849. The nominal genera *Bogimba* Whitley, 1943, and *Lamnarius* Whitley, 1943, are based on nominal species later synonymized with the bull shark. There is a single nominal species that is based on a Neotropical freshwater shark, *Eulamia nicaraguensis* Gill, 1877, from Lake Nicaragua, which was synonymized with *Carcharias* (*Prionodon*) *leucas* Müller & Henle, 1839, by Bigelow & Schroeder (1961). Authorship of *Carcharias* (*Prionodon*) *leucas* is attributed to Müller & Henle, 1839, and not to Valenciennes (in Müller & Henle, 1839), following Eschmeyer (1998; cf. Compagno, 1984).

CARCHARHINUS

Carcharhinus Blainville, 1816: 121. Type species: *Carcharias melanopterus* Quoy & Gaimard, 1824. Type designated by ICZN and genus placed on official list (Opinion 723; Eschmeyer, 1998). Gender: masculine. Originally published as a subgenus of *Squalus* Linnaeus, 1758.

Carcharias Cuvier, 1816: 125. Type species: *Squalus carcharias* Linnaeus, 1758. Type by monotypy and tautonymy. Junior homonym of *Carcharias* Rafinesque, 1810 (valid in Odontaspidae, Lamniformes). Gender: masculine. Placed on official index (opinion 723). Originally published as a subgenus of *Squalus* Linnaeus, 1758.

Hypoprion Müller & Henle, 1838: 34. Type species: *Carcharias* (*Hypoprion*) *macloti* Müller & Henle, 1839. Type by subsequent designation of Gill (1862: 401). Gender: masculine.

Aprion Müller & Henle, 1839: 31. Type species: *Carcharias*

(*Aprion*) *isodon* Müller & Henle, 1839. Type by subsequent designation (not determined; Eschmeyer, 1998). Gender: masculine. Preoccupied by *Aprion* Valenciennes, 1830, in Osteichthyes.

Galeolamna Owen, 1853: 96. Type species: *Galeolamna greyi* Owen, 1853. Type by original designation. Gender: feminine.

Aprionodon Gill, 1861: 59. Type species: *Squalus punctatus* Mitchell, 1815 (preoccupied by *Squalus punctatus* Bloch & Schneider, 1801). Type by monotypy. Gender: masculine. Synonymized with *Carcharhinus* by Garrick (1985).

Eulamia Gill, 1862: 399, 401. Type species: *Carcharias* (*Prionodon*) *milberti* Müller & Henle, 1839. Type by monotypy. Gender: feminine.

Hypoprionodon Gill, 1862: 400, 401. Type species: *Carcharias* (*Hypoprion*) *hemiodon* Müller & Henle, 1839. Type by original designation. Gender: masculine.

Isoplagiodon Gill, 1862: 400, 401. Type species: *Carcharias*

Check List of the Freshwater Fishes of South and Central America

- (*Prionodon*) *sorrah* Müller & Henle, 1839. Type by original designation. Gender: masculine.
- Platyodon* Gill, 1862: 401. Type species: *Carcharias* (*Prionodon*) *menisorrhah* Müller & Henle, 1839. Type by original designation. Gender: masculine.
- Gymnorhinus* Hilgendorf in Hemprich & Ehrenberg, 1899: 8. Type species: *Gymnorhinus pharaonis* Hemprich & Ehrenberg, 1899. Preoccupied by *Gymnorhinus* Maxillian, 1840, in Aves. Gender: masculine.
- Mapolamia* Whitley, 1934: 188. Type species: *Carcharias melanopterus* Quoy & Gaimard in Freycinet, 1824. Type by original designation. Gender: feminine.
- Gillisqualus* Whitley, 1934: 189. Type species: *Gillisqualus amblyrhynchoides* Whitley, 1934. Type by original designation. Gender: masculine.
- Galeolamnoides* Whitley, 1934: 191. Type species: *Carcharias macrurus* Ramsay & Ogilby, 1887. Type by original designation. Gender: masculine.
- Longmania* Whitley, 1939: 231. Type species: *Carcharias* (*Aprion*) *brevipinna* Müller & Henle, 1839. Type by original designation. Gender: feminine.
- Ogilamia* Whitley, 1939: 231. Type species: *Carcharias stevensi* Ogilby, 1911. Type by monotypy. Gender: feminine. Originally published as a subgenus of *Galeolamna* Owen, 1853.
- Uranga* Whitley, 1943: 115. Type species: *Uranga nasuta* Whitley, 1943. Type by original designation. Gender: feminine.
- Urangops* Whitley, 1943: 117. Type species: *Galeolamna* (*Urangops*) *fitzroyensis* Whitley, 1943. Type by original designation. Gender: masculine. Originally published as a subgenus of *Galeolamna* Owen, 1853.
- Lamnarius* Whitley, 1943: 119. Type species: *Carcharias spenceri* Ogilby, 1910 [= *Carcharias* (*Prionodon*) *leucas* Müller & Henle, 1839]. Type by original designation. Gender: masculine. Originally published as a subgenus of *Galeolamna* Owen, 1853.
- Bogimba* Whitley, 1943: 125. Type species: *Galeolamna* (*Bogimba*) *bogimba* Whitley, 1943 [= *Carcharias* (*Prionodon*) *leucas* Müller & Henle, 1839]. Type by absolute tautonomy. Gender: neuter. Originally published as a subgenus of *Galeolamna* Owen, 1853.
- Pterolamia* Springer, 1950: 7. Type species: *Squalus* (*Carcharias*) *longimanus* Poey, 1861. Type by original designation. Gender: feminine. Preoccupied by *Pterolamia* Breuning, 1942, in Coleoptera.
- Pterolamiops* Springer, 1951: 244. Type species: *Squalus* (*Carcharias*) *longimanus* Poey, 1861. Type by being a replacement name (for *Pterolamia* Springer, 1950). Gender: masculine. Placed on official index (opinion 723).
- Carcharhinus leucas* (Müller & Henle, 1839)**
- Carcharias* (*Prionodon*) *leucas* Müller & Henle, 1839: 42, pl. 26, fig. 2. Type locality: Antilles. Syntypes: MNHN A-9650 (dry specimen), A-9652 (dry specimen), and 2 lost specimens.
- Carcharias* (*Prionodon*) *zambezensis* Peters, 1852: 276. Type locality: Zambezi River, Mozambique. Holotype: ZMB 4468.
- Prionodon platyodon* Poey, 1860: 336, pl. 19, figs. 5-6. Type locality: Cuba. No types known.
- Squalus obtusus* Poey, 1861: 337, pl. 19, figs. 7-8. Type locality: Cuba. No types known. As *Prionodon obtusus* on pl. 19.
- Eulamia nicaraguensis* Gill in Gill & Bransford, 1877: 190. Type locality: Lake Nicaragua, Nicaragua. Holotype: USNM 16887 (skin, skull and jaws only).
- Carcharias azureus* Gilbert & Starks, 1904: 11, pl. 2, fig. 5. Type locality: Panama. Holotype: SU 11890.
- Carcharias spenceri* Ogilby, 1910: 3. Type locality: E. Australia. Holotype: AFAQ 290 (jaws only, not QM).
- Galeolamna* (*Bogimba*) *bogimba* Whitley, 1943: 123, fig. 5. Type locality: Bogimbah, Fraser Island. Holotype: AMS IB 1225 (teeth and skin only).
- Galeolamna greyi mckaili* Whitley, 1945: 1. Type locality: Swan River dist. (Australia). Holotype: AMS IB 508. Type specimen originally illustrated as *Galeolamna greyi* without subspecific designation in Whitley (1940: 273, fig. 303), according to Eschmeyer (1998).
- Carcharhinus vanrooyeni* Smith, 1958: 12. Type locality: St. Lucia, Natal, South Africa. Holotype: RUSI 175. Synonymy follows Compagno (1984: 478).
- Maximum length: 350 cm TL
- Distribution: Central and South America: Amazon and Ucayali Rivers (in Peru, some 4200 km from the Atlantic). Lake Nicaragua and San Juan River, Lake Izabal and Dulce River, Patuca River, Honda River. Probably elsewhere in other Neotropical systems.
- Countries: Belize, Brazil, Colombia, Guatemala, Honduras, Nicaragua, Peru.
- Remarks and references: The bull shark is viviparous with a yolk-sac placenta, producing from 1 to 13 young per gestation, which may take from 10 to 12 months (Jensen, 1976; Compagno, 1984). This species breeds mostly in marine coastal and estuarine areas, but is able to reproduce in fresh water at least in Lake Nicaragua, even though this may occur only occasionally (Jensen, 1976; Thorson, 1976a). Size at birth ranges from roughly 50 to 80 cm TL (Jensen, 1976; Thorson, 1976a; Compagno, 1984), and pups congregate in brackish or fresh water nursery grounds. Reproductive maturity comes after about 6 years, and bull sharks are reported to live for more than 15 years (even in captivity). Bull sharks are very common in lagoons, estuaries and river mouths (Schwartz, 1959, 1960; Sadowsky, 1971), and may be the dominant predator in murky waters of coastal regions (Compagno, 1984). In the Amazon River, the bull shark has been recorded from Iquitos (Peru), Leticia (Colombia), Manaus, Santarém and Belém (Myers, 1952; Thorson, 1972; Figueiredo, 1977; Ferreira et al., 1998). Thorson (1972) also presents circumstantial evidence of its occurrence 200 km south of Iquitos, representing the farthest inland occurrence of any fresh water elasmobranch that is primarily marine. There is only scant information about the bull shark in the Amazon River, especially concerning its reproductive biology (we have only examined a small juvenile male from Belém, AMNH 4031). Studies similar to those compiled in Thorson (1976b) on the Lake Nicaragua bull sharks are therefore very much needed. Lake Nicaragua and San Juan River (Nicaragua) records are summarized in Thorson (1976a), who reviews the literature (see also Thorson, 1965, 1971, 1982; Thorson et al., 1966a, 1966b; Thorson & Lacy, 1982; Tuma, 1976). Other verified fresh water Neotropical records of the bull shark are from the Honda River (Belize; Greenfield & Thomerson, 1997), Lake Izabal (Guatemala; Bigelow & Schroeder, 1948; Thorson et al., 1966a) and the Patuca River (Honduras; Strong, 1934, cited in Bigelow & Schroeder, 1948: 341, footnote 25). The bull shark is also present in the Panama Canal (Bigelow & Schroeder, 1948). Miles (1947) mentions a shark, as "*Carcharhinus spec.*" from the Magdalena River (Colombia), but does not provide any data. The bull shark has a very wide distribution outside of the Neotropical region, occurring in coastal waters of the Indian, Pacific and Atlantic oceans, as well as in the mouths, tidal estuaries and far upriver in many tropical rivers worldwide (for a summary of occurrences and references from areas outside the Neotropical region, see Bigelow & Schroeder, 1948; Garrick, 1982; Daget, 1984; Compagno, 1984; Séret, 1990; Shimizu & Taniuchi, 1991; Last & Stevens, 1994; Compagno & Cook, 1995). Bigelow & Schroeder (1948), Thomerson et al. (1977) and Burgess & Ross (1980) provide information on North American fresh water reports (in the Mississippi River system, reaching 3800 km upriver to Illinois). For a physiological review of the fresh water tolerance of bull sharks, see Thorson (1962, 1967), Thorson & Gerst (1972) and Thorson et al. (1973). Compagno (1984) provides a summary of other biological aspects of the bull shark, including its potential danger.

Check List of the Freshwater Fishes of South and Central America

Common names: Cabeça-chata (Brazil), Bull shark (USA), Tiburón or tiburón sarda (Colombia, Peru, Honduras, Nicaragua, Guatemala).

Family Pristidae (Sawfishes)

Marcelo R. de Carvalho and John D. McEachran

Sawfishes are large to extremely large (reported to 8 m in length), sluggish, bottom-dwelling batoids, distributed circum-globally in tropical and subtropical shallow coastal marine waters, estuaries, mouths of rivers, and inland fresh waters (with some populations breeding in fresh water; Thorson, 1976). They occur on sandy and muddy bottoms, usually in less than 10 m. Presently, sawfishes comprise from 4 to 7 valid species (of 23 nominal species) in 2 genera (*Pristis* and *Anoxypristis*), placed in a single family (Pristidae) and order (Pristiformes). *Anoxypristis* is monotypic, but the exact number of species of *Pristis* needs to be determined, and ranges from 3 to 6 according to recent authors (Last & Stevens, 1994; Compagno & Cook, 1995; Zorzi, 1995; Compagno, 1999; Compagno & Last, 2000). Lack of adequate material in collections constrains more detailed taxonomic studies of sawfishes, an unfortunate situation because many forms are critically threatened (Compagno & Cook, 1995; Zorzi, 1995).

Sawfishes are among the most easily recognizable elasmobranchs, presenting an extremely elongated rostrum (rostral blade) endowed with lateral rostral spines (together forming the “rostral saw”). The rostral saw is between one-third and one-fifth of total length (proportionally longer in *Anoxypristis*), originating just anterior to the eyes (dorsally) and nostrils (ventrally). The rostral spines (also known as “rostral teeth”; not to be confused with oral teeth) are hypertrophied dermal denticles that grow continuously, perpendicular to the rostral blade, and are not replaced when broken or lost (as in sawsharks, family Pristiophoridae). The rostral spines are of more or less equal size in a given individual (less so in specimens of *Anoxypristis*), but vary in both size and number among the species groups of *Pristis* (see below). In *Anoxypristis*, the rostral spines are very short and do not reach the saw base, being dorso-ventrally compressed with a single posterior edge. In contrast, the rostral spines of *Pristis* are posteriorly double-edged and triangular in cross-section (rostral spines of both genera also differ histologically, Herman et al., 1997). In pristids, the rostral spines are embedded within sockets (alveoli) in the saw, and the superficial ophthalmic and buccopharyngeal nerves are enclosed in canals within the rostrum itself (Miller, 1974, 1995). This is in contrast to the condition in sawsharks (Pristiophoridae), in which the rostral spines only abut the rostral saw, and both nerves and vessels pass outside of the rostral blade (Hoffmann, 1912; Slaughter & Springer, 1968; sawfishes cannot be confused with the much smaller, usually deep-water sawsharks, as these have ventral rostral barbels on the saw and lateral gill openings, among other differences).

Sawfishes, unlike most other batoids, have the pectoral fins somewhat disjunct from the head and not reaching the level of the mouth (i.e., not forming a complete or continuous disc), and have a stout, but moderately depressed, shark-like body (therefore swimming exclusively by lateral movements of the tail as opposed to undulations of the disc). Gill openings, mouth and nostrils are entirely ventral. Nostrils are more or less on the same level as the dorso-lateral eyes, while the mouth is level with the dorsal spiracles. The eyes are large and bulging, and the spiracles are separated from them by a small gap. Two well developed, shark-like dorsal fins are present, the first positioned over the pelvic fins and slightly greater than the second. The caudal fin is also shark-like, with a much greater dorsal lobe, and without a definitive ventral lobe in some species (*Anoxypristis* has a more developed lower lobe). The anal fin is absent. Oral teeth numerous (in up to 180 rows), small and situated in pavement-like bands along jaws. Body covered with small denticles, but lacks bucklers or thorns of any kind. Coloration is usually greyish-brown, yellowish or olive dorsally, white ventrally, and without distinctive patterns.

Two groups of species within *Pristis* are apparent: one with proportionally larger, heavier saws but with fewer rostral spines (usually), and with a small ventral caudal lobe (*Pristis pristis* group), and another with proportionally smaller, lighter saws but with usually more rostral spines, and without a noticeable ventral caudal lobe (*Pristis pectinata* group). Most species of sawfishes have wide distributions, and some occur in rivers far beyond tidal reaches (and in inland lakes) as well as in tropical seas (some are even reported from different ocean basins, e.g., *P. pectinata*). Most sawfish species, if not all, appear to have some capacity to enter fresh or brackish water, but the following two species have definitive fresh water records, i.e., they are reported to be euryhaline with extended periods in freshwaters (including breeding), and not just found in estuaries or a few km upriver (Thorson, 1974, 1976, 1982b; Shimizu & Taniuchi, 1991; Last & Stevens, 1994; Compagno & Cook, 1995): *P. pristis* (including *P. perotteti*, see below), and *P. microdon* (species of the *P. pristis* group). The remaining species (*P. pectinata*, *P. clavata* and *P. zijnsron* – *P. pectinata* group) also have freshwater records but have not been recorded to reach as far inland as the former two species (Ishihara et al., 1991; Compagno & Cook, 1995). The status of *Anoxypristis cuspidata* in Asian fresh waters (e.g., in India and Myanmar; Day, 1873) awaits confirmation (Compagno & Cook, 1995).

The identification of sawfishes worldwide is still difficult at present, and many records are in need of verification through additional collection and taxonomic study. Systematic, long-term studies, such as Thorson's (1976, 1982) seminal work on species of *Pristis* in Lake Nicaragua, need to be conducted in order to correctly identify sawfish species and account for their true occurrence in fresh water (including reproductive cycles). Shimizu & Taniuchi (1991) is a good initial study of Australian and Papua New Guinean sawfishes, but much remains to be done especially in relation to South American forms. In the present account we use the nominal species *Squalus pristis* Linnaeus, 1758 for the more commonly employed *Pristis perotteti* Müller & Henle, 1841, following Robins et al. (1986), Zorzi (1995), Smith (1997), McEachran & Fechhelm (1998) and McEachran & Carvalho (in press), among others, because their separation has not been adequately substantiated (cf. Bigelow & Schroeder, 1953).

All species of sawfishes are viviparous without a placenta (ovoviviparous), giving birth to between 1 and 23 young per gestation, but litters are usually between 6 and 9 young. Fetuses feed exclusively on yolk. Gestation periods and reproductive cycles are poorly known for most species, but reproductive maturity is achieved only after some 20 years in western Atlantic *P. pristis* (Thorson, 1976; see below). Sawfishes may occupy different habitats during different phases of their life-cycles, such as migrating from the sea into freshwaters to give birth. They feed on benthic organisms and small schooling ray-fined fishes. The saw is used to probe the bottom for benthic prey and to slash and disable schooling fishes (Breder, 1952; Bigelow & Schroeder, 1953).

Sawfishes are frequently captured in tropical regions by trammel nets, gill nets, set nets and trawls. The flesh is sometimes sold fresh, frozen and dried-salted for human consumption, and the saws are procured as ornaments. Overexploitation and habitat degradation has led to the decline of many sawfish populations (Compagno & Cook, 1995). All sawfish species are listed by the IUCN (www.redlist.org), but not all are given the same status. Sawfishes are more threatened in certain areas, but fresh water populations may be at greater risk (e.g., in Nicaragua). Compagno & Cook (1995) provide an up to date account of the current threat to sawfishes worldwide.

There is an extensive literature on sawfishes, dating back at least to Latham (1794), the first comprehensive systematic overview of the group. Subsequent systematic works include Garman (1913), Beebe & Tee-Van (1941), Fowler (1936, 1941), Whitley (1940), Bigelow & Schroeder (1953), Tortonese (1956), Krefft & Stehmann (1973), Stehmann (1978), Daget (1984), Stehmann & Bürkel (1984), Séret (1990), Stehmann (1990), Shimizu & Taniuchi (1991), Last & Stevens (1994), Compagno & Cook (1995), Zorzi (1995), Eschmeyer (1998), McEachran & Fechhelm (1998), Compagno & Last (2000) and McEachran & Carvalho (in press). Life history aspects, including reproductive biology and distribution, can be found in Bigelow & Schroeder (1953) and Thorson (1974, 1976, 1982a, 1982b). Compagno & Cook (1995) and Zorzi (1995) provide historical summaries with notes on sawfish conservation and taxonomy, citing numerous references. Their fossil history is reviewed by Woodward (1889), Arambourg (1935, 1940), Schaeffer (1963), Cappetta (1987) and Cappetta et al. (1993). Anatomical or descriptive works of varying scope include Engel (1910), Hoffmann (1912), Holmgren (1941), Bradford (1957), Slaughter & Springer (1968), Miller (1974, 1995), Thorson (1973), Oetinger (1979), Shellis & Berkovitz (1980) and Herman et al. (1997). Phylogenetic relationships of sawfishes are discussed in Compagno (1973, 1977), Nishida (1990) and McEachran et al. (1996).

PRISTIS

Pristis Linck, 1790: 31. Type species: *Squalus pristis* Linnaeus, 1758. Type by monotypy and tautonymy. Gender: feminine.

Pristis Latham, 1794: 276. Type species: *Squalus pristis* Linnaeus, 1758. Type by tautonymy. Objective synonym of *Pristis* Linck, 1790.

Pristobatus Blainville, 1816: 121. Type species: *Pristis antiquorum* Latham, 1794 (= *Squalus pristis* Linnaeus, 1758). Type by subsequent designation of Jordan & Evermann (1896: 60). Gender: masculine.

Myriosteon Gray, 1864: 164. Type species: *Myriosteon higginsii* Gray, 1864. Type by monotypy. Gender: Neuter. Described originally as an echinoderm, but specimen is a segment of a pristid rostral saw (Woodward, 1889: 73; Fowler, 1941: 291; Cappetta, 1987: 158; Stehmann, 1990: 51).

Pristiopsis Fowler, 1905: 459. Type species: *Pristis perotteti* Müller & Henle, 1841 (= *Squalus pristis* Linnaeus, 1758). Type by original designation. Gender: feminine.

***Pristis pectinata* Latham, 1794**

Pristis pectinatus Latham, 1794: 278, pl. 26, fig. 2. Type locality: Not mentioned ("Habitat in oceano"). Types: No types known.

Pristis granulosa Bloch & Schneider, 1801: 352. Type locality: Havana, Cuba. Type material: Reported lost by Eschmeyer (1998). Synonymy follows Krefft & Stehmann (1973: 52) and Stehmann (1990: 52).

?*Pristis serra* Bloch & Schneider, 1801: pl. 70 (upper fig.; as *Pristis pectinata* on p. 351; new species was not intended according to Eschmeyer, 1998.).

Pristis megalodon Duméril, 1865: 476, pl. 9, fig. 4. Type locality: Cayenne, French Guiana. Holotype: MNHN 3483 (rostrum only). Holotype erroneously given as MNHN 3484 (Bertin, 1939: 78) and Séret & McEachran (1986: 9).

Pristis acutirostris Duméril, 1865: 479. Type locality: Antilles. Holotype: MNHN A-9476 (stuffed specimen, 740 mm TL male; Séret & McEachran, 1986: 9).

?*Pristobatus occa* Duméril, 1865: 479. Type locality: Unknown. Type material: Unknown.

?*Pristis woermanni* Fischer, 1884: 39. Type locality: Cameroon. Holotype: ZMH 6278.

Maximum length: to 750 cm TL

Distribution: North, Central, and South America: Amazon River (reaching perhaps only to Belém), Essequibo River (?), and Atrato and Quito rivers. Lake Nicaragua and San Juan River, Lake Izabal and Dulce River, and Colorado River.

Countries: Brazil, Colombia, Costa Rica, Guyana ?, Guatemala, Mexico, Nicaragua

Remarks and references: Little is known about its reproductive biology, but 15 to 20 young are born at the end of each gestation, each measuring some 60 cm TL. Credited as having a very wide distribution, perhaps more widespread than any other sawfish, occurring in the Indian, Pacific and Atlantic oceans, and recorded from the mouths and tidal estuaries of many tropical rivers

worldwide (for a summary of marine occurrences and references, see Bigelow & Schroeder, 1953 and Compagno & Cook, 1995). Bigelow & Schroeder (1953) provide information on North American fresh water reports (in Florida and in the Mississippi River basin). Not believed to reach far inland in rivers where it occurs, even though there is a confirmed record in Lake Nicaragua (Thorson, 1976). Thorson (1976) also mentions this species from near the mouth of the Colorado River (Costa Rica). Occurrences in the Amazon River are summarized in Thorson (1974), and Thorson et al. (1966) provide data for this species in the Lake Izabal-Dulce River basin of Guatemala. Eigenmann (1920a, 1920b, 1922) records this species from the Atrato basin (Atrato and Quito Rivers; Colombia). Schultz's (1949) records of this species from Venezuela are all marine. Miles' (1947) account of *P. pectinata* from 600 km upriver of the Magdalena River mouth (Colombia) probably refers to *P. pristis* (he also correctly noted *P. pectinata* from the estuary of the Magdalena). Fowler's (1910) record of *P. pectinata* from the Essequibo River (Guyana) is too vague to corroborate, but may also refer to *P. pristis*. True fresh-water Mexican records of this species are from Gulf of Mexico drainages (Castro-Aguirre, 1978).

Common names: Peixe-serra (Brazil), Smalltooth sawfish (USA), Pez sierra (Colombia, Nicaragua, Guatemala, Costa Rica).

Pristis pristis (Linnaeus, 1758)

Squalus pristis Linnaeus, 1758: 235-236. Type locality: "Habitat in Europa" [= Europe]. Type material: No type material.

Pristis antiquorum Latham, 1794: 277. Type locality: Not mentioned ("Habitat in oceano"). Types: No types known.

Pristis canaliculata Bloch & Schneider, 1801: 351. Based on Latham (1794, pl. 26, fig. 1 = *Pristis antiquorum* Latham, 1794), according to Eschmeyer (1998).

?*Pristis mississippiensis* Rafinesque, 1820: 86. Type locality: Mississippi River, Lake Pontchartrain, Red River, Arkansas River, Mobile River, Ohio River. Type material: No type material.

Pristis perotteti Müller & Henle, 1841: 108. Type locality: Senegal (fresh water). No type material, according to Séret & McEachran (1986). Bertin (1939) inaccurately considered MNHN A 9699 (a stuffed female specimen) a paratype (see Séret & McEachran, 1986: 36), but Eschmeyer (1998) considered this specimen a syntype along with another male specimen (107 mm TL), collected by Perottet, apparently lost (Séret & McEachran, 1986).

Pristis typica Poey, 1861: 360. Unneeded new name for *Squalus pristis* Linnaeus, 1758.

?*Pristis woermanni* Fischer, 1884: 39. Type locality: Cameroon. Holotype: ZMH 6278.

Pristis zephyreus Jordan & Starks, in Jordan, 1895: 383. Type locality: Mouth of Presidio River (Mazatlan, Sinaloa, Mexico). Holotype: SU 12670 (skin only).

Maximum length: to 750 cm TL

Distribution: Central and South America: Amazon, Atrato and Magdalena Rivers. Chucunaque and Tuirra Rivers, Lake Nicaragua and San Juan River, Lake Izabal and Dulce River.

Countries: Brazil, Colombia, Ecuador, Guatemala, Nicaragua, Panama, Venezuela

Remarks and references: Lake Nicaragua *P. pristis* is the most intensely researched fresh water sawfish population to date. Thorson (1976, 1982b, as *P. perotteti*) provides much data on its reproductive biology, noting that sexual maturity occurs at about 300 cm TL, females bear from 1 to 13 young, breeding season is primarily in June (parturition is in late October/early November), gestation is 5 months, size at birth about 80 cm TL, and breeding occurs probably every other year. Thorson (1976, 1982b) confirmed that young are born in fresh water at least in Lake Nicaragua and the San Juan River (Nicaragua), and that copulation also takes place in the lake. Adults remain in the lake for several years, but neo-natal young were recorded to go out to sea (Thorson, 1976). This species probably breeds in fresh waters in other areas as well. *P. pristis* reaches farther inland than does *P. pecti-*

nata in the Amazon River (Thorson, 1974, 1976). However, data concerning *P. pristis* in the Brazilian Amazon is scarce. According to Thorson (1974; also Figueiredo, 1977; both as *P. perotteti*), the farthest record inland in the Amazon River is near Manacapuru, some 80 km west of Manaus, and about 1340 km from the sea (see Thorson, 1974 for summary of records in the Amazon River). Roberts (1972) provides anecdotal evidence of its occurrence in the Madeira River. Ferreira et al. (1998) document this species from the mid-Amazon basin (near Santarém). A very large but incomplete saw (measuring some 135 cm in length) of *P. pristis* from Brazil (AMNH 49528) could not be conclusively traced to fresh water. Other fresh water records (usually as *P. perotteti*) of Atlantic or Caribbean drainages include Lake Izabal and Dulce River (Guatemala; Bigelow & Schroeder, 1953; Thorson et al., 1966), Magdalena River (Colombia; Miles, 1947), Atrato River (Colombia; Eigenmann, 1920a), and Maracaibo Lake (Venezuela; Schultz, 1949). Fowler's (1910) and Miles' (1947) accounts of *P. pectinata* in the Essequibo (Guyana) and Magdalena Rivers, respectively, probably refer to *P. pristis*. Records from Pacific drainages include the Chucunaque and Tuirra Rivers (Panama; Breder, 1927; Schultz, 1949; both as *P. microdon*), the San Juan River (Colombia; Eigenmann, 1920b), and coastal estuaries of Ecuador (Barriga, 1991, as *P. microdon*, but lacks more specific information). References for marine occurrences (usually as *P. perotteti*) are summarized in Bigelow & Schroeder (1953) and Compagno & Cook (1995). Beebe & Tee-Van (1941, as *P.*) summarize Pacific sawfish records (including from fresh water). For fresh water occurrences in western tropical Africa, see Daget (1984) and Séret (1990). Castro-Aguirre (1978) summarizes Mexican occurrences, but none appear to be from true fresh water. The identity of *P. microdon*, the name most commonly employed for largetooth sawfishes in Asia (e.g., Last & Stevens, 1994), needs to be clarified and compared to Atlantic *P. pristis*. Thorson (1976, 1982a) outlines the threatened status of this species in Lake Nicaragua.

Common names: Peixe-serra (Brazil), Largetooth sawfish (USA), Pez sierra (Ecuador, Colombia, Venezuela, Panama, Nicaragua, Guatemala, Costa Rica).

Family Potamotrygonidae (River stingrays)

Marcelo R. de Carvalho, Nathan R. Lovejoy, and Ricardo S. Rosa

Neotropical freshwater stingrays of the family Potamotrygonidae includes three genera (*Potamotrygon*, *Paratrygon* and *Plesiotrygon*) and at least 18 species. The family has an extensive taxonomic history dating back to 1834, but was known long before formal taxonomic recognition (Castex, 1963a). Potamotrygonids are much maligned and feared because of their venomous caudal stings, but pose little or no threat if not stepped on or directly interfered with. The Potamotrygonidae is the only living chondrichthyan family restricted to freshwater habitats.

Potamotrygonid stingrays are clearly monophyletic, sharing unique morphological and physiological specializations, including a pelvis with a greatly expanded anterior median process (pre-pelvic process), blood with low concentrations of urea, and reduction of the rectal gland (Garman, 1877; Thorson et al., 1983a). They are generally medium to large sized batoids, ranging from about 25 cm in disc width or length to well over 100 cm in adults of some species (e.g., *Paratrygon aiereba*). Species of *Potamotrygon* have moderately stout and short tails, usually shorter than disc length, whereas *Paratrygon* and *Plesiotrygon* have slender, filiform or whiplike tails (in *Paratrygon* the tail is very long in juveniles but reduced in adults, and in *Plesiotrygon* it is much longer than disc length but also stout at base). The dorsal surface of the disc and tail are usually covered with many denticles, thorns and tubercles. The caudal sting (or serrated spine) is a rigid dermal derivative, located on the dorsal surface of the tail, containing small lateral serrations directed toward its base and an acute distal tip. The sting is reduced and situated closer to the tail base in *Paratrygon*, but well developed and located farther posteriorly in both *Plesiotrygon* and *Potamotrygon*. The stings contain longitudinal grooves to conduct venom produced in special glands at their bases, and are continuously worn, shed and replaced; up to four stings may be present in one individual. Additionally, many species have enlarged, non-venomous spines on disc margins or over tail, sometimes in numerous rows. The disc is usually slightly longer than wide (especially in *Paratrygon*), and covers most of the pelvic fins posteriorly (but less in *Plesiotrygon*). Dorsal and caudal fins are absent, but membranous skin folds (finfolds), with rudimentary internal radial elements, occur in *Potamotrygon* on both upper and lower tail midlines posterior to caudal stings (only ventral finfold is present in *Plesiotrygon*, and finfolds are absent in *Paratrygon*). The eyes are moderately large in *Potamotrygon*, but smaller and less protruded in *Paratrygon* and *Plesiotrygon*. Oral teeth are small with short, single cusps (more prominent in adult males), in usually less than 50 rows in either jaw (large specimens of *Plesiotrygon* may have more than 60 rows), and set in quincunx. Most potamotrygonid species have colorful dorsal arrangements, including spots of various dimensions, ocelli, reticulate patterns, and vermiform markings, which are generally species-specific, and grey, brown, reddish-brown or black background coloration.

The genus *Paratrygon* is monotypic, but one putative additional species, currently not assigned to genus but closely related to *Paratrygon*, has been cited from the Orinoco River (Ishihara & Taniuchi, 1995; cf. Carvalho, 1996). References to its generic validity and synonymy include Rosa et al. (1987), and Rosa (1990). *Plesiotrygon* is also monotypic but one additional form that may represent a new species has been reported in the aquarium literature (no museum specimens of this form are available). *Potamotrygon* is a species rich and complex genus containing, as here recognized, 16 valid species, but at least three additional new species have been recently discovered. The status of a few nominal species is still uncertain (e.g. *Trygon garrapa* Jardine, 1843), and some valid species below may require subdivision after further study (*Potamotrygon motoro*, *Potamotrygon orbignyi*). The list below is therefore conservative. Recent references concerning its generic and specific composition include Rosa (1985a, 1985b), Rosa et al. (1987), and Compagno & Cook (1995).

Potamotrygonids are ovoviviparous (aplacentally viviparous), and the developing embryos are nourished by uterine milk secreted by trophonemata (Thorson et al., 1983b). Both uteri are functional and appear to be synchronous. Gestation may be restricted to certain stations or occur throughout the year, and the number of young produced in each gestation varies among species, but is usually from two to seven.

Potamotrygonids occur only in South American rivers that drain into the Atlantic Ocean or Caribbean Sea. They are conspicuously absent, however, from the São Francisco basin in northeastern Brazil, rivers that drain into the Atlantic from the Atlantic rainforest of northeastern and southeastern Brazil, the upper Paraná basin, and rivers south of the La Plata River in Argentina. Generally, most potamotrygonid species have distributions restricted to a single basin or river system, with only a few species present in more than one basin (e.g. *Potamotrygon motoro*, *Potamotrygon orbignyi*). Some species are even restricted to a single river (e.g. *Potamotrygon leopoldi*). This high degree of endemism has led recent workers to express concern that some species may be endangered (Compagno & Cook, 1995; Rosa & Menezes, 1996), or are at least clearly

vulnerable at present (two species are cited on the IUCN Red List as “data deficient”). Potamotrygonids are generally not consumed as food, but are commercialized in increasing quantity by the aquarium trade, and are only seldomly bred in captivity for commercial purposes (Ross & Schäfer, 1999; cf. Carvalho, 2001). Further studies on their population structure and dynamics are therefore very much needed.

The literature concerning potamotrygonids is vast. After the revision of Garman (1913), the next taxonomic study to treat the entire family is that of Rosa (1985a). Anatomical descriptions can be found in Garman (1877, 1913), Thorson & Watson (1975), Rosa (1985a), Nishida (1990), Taniuchi & Ishihara (1990), and Lovejoy (1996). Their phylogenetic relationships have been treated by Rosa (1985a), Dingerkus (1995), Lovejoy (1996) and McEachran et al. (1996). Accounts of their natural history are presented by Castex (1964a) and Castello (1975). Physiological aspects of potamotrygonids are summarized in Thorson et al. (1983a), and the reproductive biology of certain species by Thorson et al. (1983b), Teshima & Takeshita (1992), and Lasso et al. (1997a). Their historical biogeography has been studied by Brooks et al. (1981), Lovejoy (1996, 1997), Lovejoy et al. (1998), and Lundberg (1998). Recent descriptions of fossil remains (mostly isolated denticles) can be found in Deynat & Brito (1996) and Lundberg (1997). Recent taxonomic and historic compilations are those by Compagno & Cook (1995) and Zorzi (1995), and the extensive literature on potamotrygonid parasites is summarized in Brooks & Amato (1992).

The following account is based mostly on original work by the first author, supplemented by information from Rosa (1985a) concerning type specimens of *Potamotrygon* deposited in museums in Argentina. This account differs from the revision of Rosa (1985a) in relation to the fate of various nominal species, and is also more conservative, recognizing fewer species. At least five new species have been found and are not included below (these are presently being described elsewhere). Taxonomic work on the family is constrained by the fact that many species of *Potamotrygon* are poorly described, lack adequate material, or present much intraspecific variation in coloration. This is compounded by generally overlapping meristic and morphometric features among species of *Potamotrygon*. Therefore, the approach adopted here is to not recognize certain species that are inadequately defined at present, or that lack adequate material for proper characterization (e.g. *Potamotrygon dumerilii*, *Potamotrygon humerosa*). The account that follows is a working summary of the family, one that is subject to modifications as more collecting and research is conducted. We treat the family as it has traditionally been used in the literature, i.e. restricting it to *Potamotrygon*, *Paratrygon* and *Plesiotrygon* only, and refrain from including in it other genera that have recently been hypothesized as being their sister-taxa (amphi-American *Himantura* and *Taeniura*; Lovejoy, 1996; McEachran et al. 1996). Note that, below, DW is disc width, and DL is disc length, which are standard measurements in stingrays (total length is usually not used as the distal tip of the tail is frequently missing in stingray specimens).

PARATRYGON

Paratrygon Duméril, 1865: 594. Type species: *Trygon aiereba* Müller & Henle, 1841. Type by monotypy. Gender: feminine.

Disceus Garman, 1877: 208. Type species: *Trygon stroglyopterus* Jardine, 1843. Type by monotypy. Gender: masculine.

Paratrygon aiereba (Müller & Henle, 1841)

Trygon aiereba Müller & Henle, 1841: 196. Type locality: Brasilien [= Brazil]. Types: No types known, one original specimen mentioned in ZSM, probably lost. Appeared on p. 160 as "(Dubia) *Trygon Aiereba*".

Trygon stroglyopterus Jardine, 1843: 183, pl. 22. Type locality: Rio Branco. No types known.

Disceus thayeri Garman, 1913: 426, pl. 34. Type locality: Juruá river, a southwestern affluent of the Upper Amazon above Tefé. Syntypes: MCZ 297-S, MCZ 563-S, MCZ 606-S (localities: Óbidos, Manaus, and Pará River, Brazil).

Maximum length: 80 cm DW

Distribution: South America: Amazon River basin (Ucayali, Solimões, Amazon, Negro, Branco, Madeira and its affluents in Bolivia, and Tocantins River) and Orinoco basin.

Countries: Bolivia, Brazil, Ecuador, Peru, Venezuela

Remarks and references: Synonymy follows Rosa (1990). Paepke & Schmidt (1988) report the type of *T. stroglyopterus* as ZMB 4632 - but this is not type (Paepke pers. comm.). Reproductive biology in upper Orinoco basin provided by Lasso et al. (1997a), where females appear to bear only two young per gestation. Larger individuals may attain 25 kg in weight. Food includes insects, crustaceans and fishes.

Common names: Arraia (Brazil), Raia (Brazil), Raya (Bolivia, Ecuador, Peru, Venezuela)

PLESIOTRYGON

Plesiotrygon Rosa, Castello & Thorson, 1987: 449. Type species: *Plesiotrygon iwamae* Rosa, Castello & Thorson, 1987. Type by original designation. Gender: feminine.

Plesiotrygon iwamae Rosa, Castello & Thorson, 1987

Plesiotrygon iwamae Rosa, Castello & Thorson, 1987: 449, figs. 1-10. Type locality: Rio Solimões, above Tefé, Amazonas [Brazil]. Holotype: MZUSP 10153.

Maximum length: 58 cm DW

Distribution: South America: Upper to lower Amazon River basin, from Ecuador to Belém, Brazil, in the rivers Napo, Solimões, Amazon and Pará.

Countries: Brazil, Ecuador

Remarks and references: Food items consist of fishes (e.g. catfishes), insects, crustaceans and nematodes (Rosa et al., 1987). Nothing is known of its reproductive biology, but pups are free-swimming at least by 12 cm DL.

Common names: Arraia (Brazil), Raia (Brazil), Raya (Ecuador)

POTAMOTRYGON

Potamotrygon Garman, 1877: 210. Type species: *Trygon histrix* Müller & Henle, 1834. Type by subsequent designation of Jordan (1919: 389). Gender: feminine.

Potamotrygon brachyura (Günther, 1880)

Trygon brachyurus Günther, 1880: 8. Type locality: Buenos Ayres [= Buenos Aires, Argentina]. Holotype: BMNH 1953.8.10.14.

Potamotrygon brumi Devincenzi & Teague, 1942: 99, pl. 6. Type locality: Isla Queguay Grande, rio Uruguay [Uruguay]. Holotype: originally in MHN reported lost by Luengo (1966) and Olazarri et al. (1970).

Check List of the Freshwater Fishes of South and Central America

Maximum length: 95 cm DW

Distribution: South America: Paraná-Paraguay (including Cuiabá River in Brazil) and Uruguay basins.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: One of the largest species, reaching 30 kg in weight. Reproductive biology relatively unknown.

Common names: Arraia (Brazil), Raia (Brazil), Raya (Argentina, Bolivia, Peru)

***Potamotrygon castexi* Castello & Yagolkowski, 1969**

Potamotrygon castexi Castello & Yagolkowski, 1969: 2, pls.; fig. 1. Type locality: Rosário, Río Paraná [Argentina]. Holotype: MACN 5777 presently lost (Rosa, 1985a).

Maximum length: 60 cm DW

Distribution: South America: Upper Amazon River basin (Guaporé, Beni, Solimões and Marañón Rivers), and Paraná-Paraguay River basin.

Countries: Argentina, Bolivia, Brazil, Peru

Remarks and references: One of the few species cited to occur in both the Amazon and Paraná-Paraguay basins, but some reports may actually refer to other species. Reproductive biology unknown.

Common names: Arraia (Brazil), Raia (Brazil), Raya de agua dulce (Argentina, Bolivia, Peru)

***Potamotrygon constellata* (Vaillant, 1880)**

Toeniura constellata Vaillant, 1880: 252. Type locality: Calderón [= Calderão, Solimões River, Brazil]. Holotype: MNHN A.1010.

Potamotrygon circularis Garman, 1913: 419. Type locality: Teffé, Brazil [= Tefé, Amazonas State, Brazil]. Syntypes: MCZ 291-S (from Tefé), 295-S (from Coari, Amazonas State, Brazil). Junior synonym of *Potamotrygon constellata* (in part, 291-S) and of *P. motoro* (in part, pl. 31 (1-2), 295-S, 296-S?), as type-series is complete.

Maximum length: 62 cm DW

Distribution: South America: Amazon and Solimões River basin.

Countries: Brazil, Colombia

Remarks and references: Thorson et al. (1983b) document the reproductive maturity for males at 32 to 34 cm DW, and at 35 to 45 cm DW for females, which can carry up to 11 fetuses per gestation. Delimitation of type-series of *Potamotrygon circularis* follows Hartel & Dingerkus (1997).

Common names: Arraia (Brazil), Raia (Brazil)

***Potamotrygon falkneri* Castex & Maciel, 1963**

Potamotrygon falkneri Castex & Maciel, 1963: 60. Type locality: puerto de la ciudad de Santa Fe, río Paraná [Argentina]. Holotype: MFA 236 (as by Rosa, 1985a).

Potamotrygon menchacai Achenbach, 1967: 1. Type locality: río Colastiné, Paraná Médio [Santa Fe, Argentina]. Holotype: MFA 289.

Maximum length: 47 cm DW

Distribution: South America: Paraná-Paraguay River basin, from Cuiabá and Piquiri Rivers (among others) to the La Plata River.

Countries: Argentina, Brazil, Paraguay

Remarks and references: Synonymy of *P. menchacai* follows Rosa (1985a), but possibly valid. Reproductive biology unknown.

Common names: Arraia (Brazil), Raia (Brazil), Raya (Argentina, Paraguay)

***Potamotrygon henlei* (Castelnau, 1855)**

Trygon (Taenura) henlei Castelnau, 1855: 102, pl. 48 (fig. 3). Type locality: Tocantins [Tocantins River, Brazil]. Holotype: MNHN 2353.

Maximum length: 45 cm DW

Distribution: South America: Tocantins River basin (Tocantins and Araguaia Rivers).

Countries: Brazil

Remarks and references: Reproductive biology unknown. A large

female weighing some 15 kg gave birth to one pup of 12.5 cm DW, according to Rosa (1985a). Rare in scientific collections, but frequently commercialized by aquarium industry. Highly endemic distribution coupled with commercial interests makes this species vulnerable to overexploitation.

Common names: Arraia de fogo (Brazil)

***Potamotrygon histrix* (Müller & Henle, 1834)**

Trygon histrix Müller & Henle, in d'Orbigny, 1834: by indication only, as legend of a plate published in d'Orbigny (1834). Type locality: Buenos Ayres [= Buenos Aires, Argentina]. Holotype: MNHN A.2449 (specimen on which plate in d'Orbigny [1834] was based).

Maximum length: 40 cm DW

Distribution: South America: Paraná-Paraguay River basin.

Countries: Argentina, Brazil, French Guiana(?), Guyana(?), Suriname(?), Venezuela(?)

Remarks and references: Authorship controversial, but follows Rosa (1985a) in crediting original species name to Müller & Henle and not to d'Orbigny. Species later redescribed (as *P. histrix* by Müller & Henle (1841) based on five additional specimens, but these do not have type status. The action of Castex (1969) in designating a lectotype is therefore not valid (Rosa, 1985a). May be confused in the literature with *P. orbignyi* (occurrences in French Guiana, Guyana, Suriname, Venezuela). Reproductive biology unknown.

Common names: Arraia (Brazil), Raia (Brazil), Raya (Argentina, Spar (Suriname), Tjoeboela (Suriname)

***Potamotrygon leopoldi* Castex & Castello, 1970**

Potamotrygon leopoldi Castex & Castello, 1970a: 1, fig. 5; pl. on p.15. Type locality: Little creek on the right shore of Alto Xingú, down river of the Auaia-Missu confluence, Mato Grosso state, Brazil [Auaia-Miçu River]. Holotype: IRSNB 475.

Maximum length: 40 cm DW

Distribution: South America: Xingu and Fresco Rivers (Xingu River basin).

Countries: Brazil

Remarks and references: Known from three specimens in collections, this species may be vulnerable to overexploitation because of its high endemism and commercial appeal (Rosa & Menezes, 1996). Reproductive biology unknown.

Common names: Arraia (Brazil), Raia (Brazil)

***Potamotrygon magdalenae* (Valenciennes, 1865)**

Taeniura magdalenae Valenciennes in Duméril, 1865: 625. Type locality: Rio de la Magdalena [= Magdalena River, Colombia]. Holotype: MNHN A.2368.

Maximum length: 35 cm DW

Distribution: South America: Magdalena and Atrato River basins.

Countries: Colombia

Remarks and references: Teshima & Takeshita (1992) studied the reproductive biology of this species, and found that males are usually reproductively mature at 17 to 19 cm DW (however, the holotype is an adult male of 15 cm DW), and that females are sexually mature between 17 and 21 cm DW and produce one embryo per uterus (born at 10 cm DW). Females give birth throughout the year.

Common names: Raya (Colombia), Raya de río (Colombia)

***Potamotrygon motoro* (Müller & Henle, 1841)**

Taeniura motoro Müller & Henle, 1841: 197. Type locality: Fluss Cuyaba [= Cuiabá River, Brazil]. Syntypes: Three reported, of which remains ZMB 4662 (Rosa 1985a; Paepke & Schmidt, 1988).

Trygon (Taenura) mulleri Castelnau, 1855: 102, pl. 48 (fig. 2). Type locality: rios Crixas et Araguay [= Crixás and Araguaia Rivers, Brazil]. Holotype: MNHN 2354.

Potamotrygon circularis Garman, 1913: 419. Type locality: Teffé,

- Brazil [= Tefé, Amazonas State, Brazil]. Syntypes: MCZ 291-S (from Tefé), 295-S (from Coari, Amazonas State, Brazil). Junior synonym of *Potamotrygon constellata* (in part, 291-S) and of *P. motoro* (in part, pl.31 (1-2), 295-S, 296-S?), as type-series is complete.
- Potamotrygon laticeps* Garman, 1913: 417, pl. 31 (figs. 3-4). Type locality: Obidos [=Óbidos], Brazil. Holotype: 605-S (MCZ).
- Potamotrygon labradori* Castex in Castex, Maciel & Achenbach, 1963: 117, fig. 1. Type locality: perto de la ciudad de Santa Fe [Paraná River, Argentina]. Holotype: MFA (number unknown).
- Potamotrygon alba* Castex, 1963a: 55. Type locality: Asunción [Paraguay River, Paraguay]. Syntypes: 3 original specimens mentioned, whereabouts unknown.
- Potamotrygon pauckei* Castex, 1963c: 291. Type locality: río Colastiné [near Santa Fe, Argentina]. Syntypes (6 specimens): MFA 232 and 245.
- Maximum length: 50 cm DW
- Distribution: South America: Uruguai, Paraná-Paraguay, Orinoco, and Amazon River basins.
- Countries: Argentina, Bolivia, Brazil, Colombia, Paraguay, Peru, Uruguay
- Remarks and references: Hartel and Dingerkus (1997) also credit 290-S as syntype (along with 605-S) of *P. laticeps*, but Garman (1913) only mentions specimen from Óbidos in original description, therefore MCZ 605-S is considered holotype. Authorship of *T. motoro* is credited to Müller & Henle (1841) and not to Natterer (who collected the type specimen) as in Rosa (1985a). *Potamotrygon pauckei* (Castex 1963a), and *Potamotrygon labradori* Castex (1963b) are nomina nuda. A widespread species that may require further subdivision after more study. Studies of its reproductive biology indicate that females attain sexual maturity between 24 and 32 cm DW (males between 20 and 30 cm DW), and may produce from three to 21 embryos per gestation (Achenbach & Achenbach, 1976) or only six or seven (Thorson et al., 1983b; these differences may be populational). Larger specimens may weigh 10 kg. This species has been captively bred in aquaria, but is still the most commercially imported species by the aquarium industry.
- Common names: Arraia de fogo (Brazil), Raya amazónica (Peru)
- Potamotrygon ocellata* (Engelhardt, 1912)**
- Trygon hystrix ocellata* Engelhardt, 1912: 647. Type locality: Südküste von Mexiana: Brasilien [= south shore of Mexiana island at mouth of Amazon River, Brazil] Type: reported lost, originally in ZSM (Rosa, 1985a).
- Maximum length: 20 cm DW
- Distribution: South America: Pedreira River (Amapá) and south of Mexiana Island (Pará).
- Countries: Brazil
- Remarks and references: This species may be synonymous with *Potamotrygon motoro* (Müller & Henle, 1841), and is tentatively accepted as valid on the basis of a single specimen from the Pedreira River that differs slightly in coloration from typical *P. motoro*, following Rosa (1985a). Reproductive biology unknown.
- Common names: Arraia (Brazil), Raia (Brazil)
- Potamotrygon orbignyi* (Castelnau, 1855)**
- Trygon (Taenura) dumerillii* Castelnau, 1855: 101, pl. 48 (fig. 1). Type locality: rio Araguay [= Araguaia River, Brazil]. Holotype: MNHN 2367.
- Trygon (Taenura) d'orbignyi* Castelnau, 1855: 102, pl. 49 (fig. 1). Type locality: Tocantins [Tocantins River, Brazil]. Holotype: MNHN 2333. Also spelled *Toenura orbignyi* as legend of pl. 49.
- Trygon reticulatus* Günther, 1880: 8. Type locality: Surinam. Holotype: BMNH 1870.3.10.1.
- Potamotrygon humerosus* Garman, 1913: 419. Type locality: Parietuba river at Monte Alegre, Brazil, on the lower Amazon [Amazon River, Brazil]. Holotype: MCZ 299-S.
- Maximum length: 35 cm DW
- Distribution: South America: Widespread in Amazon and Orinoco River basins and in river systems in Suriname, Guyana and French Guiana.
- Countries: Bolivia, Brazil, French Guiana, Guyana, Suriname, Venezuela
- Remarks and references: A widespread species that may require subdivision. Rosa (1985a) recognizes *Potamotrygon dumerilli* (Castelnau, 1855) and *Potamotrygon humerosus* Garman, 1913 as distinct species, but evidence given is meager. Larger specimens may weigh close to five kg. Reproductive biology studied by Lasso et al. (1997a) in Venezuela; males achieve sexual maturity at 23 cm DL and females at 18.5 cm DL, and females give birth to up to two pups during any time of year. Food consists of fishes, insects and crustaceans.
- Common names: Arraia (Brazil), Laraie rivièrè (French Guiana), Liba spari (Suriname), Raia (Brazil), Spar (Suriname), Tjoeboela (Suriname)
- Potamotrygon schroederi* Fernández-Yépez, 1957**
- Potamotrygon schroederi* Fernández-Yépez, 1957: 8, fig. 1. Type locality: Río Apure, Boca Apurito [= Apure River at mouth of Apurito tributary, Apure State, Venezuela]. Holotype: MHNLS 2504 (consisting of isolated remains of mouth, caudal sting and edge of disc only; Lasso et al. 1997b).
- Maximum length: 60 cm DW
- Distribution: South America: Apure (Orinoco basin) and Negro (Amazon basin) Rivers.
- Countries: Brazil, Venezuela
- Remarks and references: Holotype was originally in the private collection of A. Fernández-Yépez (AFY 51289). Distribution of this species was expanded by Castex & Yagolkowski (1970) to include the Negro River of the Amazon basin. Note that the species we recognize as *Potamotrygon schroederi* does not correspond to this species in Rosa (1985a) – his “*P. schroederi*” actually represents a new species. Reproductive biology unknown.
- Common names: Arraia (Brazil), Raia (Brazil), Raya guacamaya (Venezuela)
- Potamotrygon schuhmacheri* Castex, 1964**
- Potamotrygon schuhmacheri* Castex, 1964b: 92, fig. on p. 93. Type locality: río Colastiné [Santa Fe, Argentina]. Museo Provincial de Ciencias Naturales, Santa Fe 269.
- Maximum length: 25 cm DW
- Distribution: South America: Paraná-Paraguay River basin.
- Countries: Argentina, Paraguay
- Remarks and references: Spelled *Potamotrygon schuhmacheri* in the title of the original description, but *Potamotrygon schühmacheri* in the text, and wrongly emended by Taniuchi (1982) to *Potamotrygon schuemacheri*. Reproductive biology unknown. Possibly a junior synonym of *P. hystrix*.
- Common names: Raya (Paraguay)
- Potamotrygon scobina* Garman, 1913**
- Potamotrygon scobina* Garman, 1913: 418. Type locality: Cametá, Brazil [= Tocantins River at Cametá, Pará, Brazil]. Holotype: MCZ 602-S.
- Maximum length: 45 cm DW
- Distribution: South America: Mid to lower Amazon River, lower Tocantins River, Pará River, Trombetas River.
- Countries: Brazil
- Remarks and references: Nothing is known about its reproductive biology.
- Common names: Arraia (Brazil), Raia (Brazil)
- Potamotrygon signata* Garman, 1913**
- Potamotrygon signatus* Garman, 1913: 420. Type locality: Rio Poti a tributary of the Paranahyba River, and Paranahyba at San Gonçallo [= Poti River and Parnaíba River at São Gonçalo, Brazil]. Syntypes: MCZ 560-S (1), 600-S (1); USNM 153589 [ex

MCZ 560-S] (1).

Maximum length: 30 cm DW

Distribution: South America: Parnaíba River basin.

Countries: Brazil

Remarks and references: The only species reported from northern Brazil to the east of the Amazon basin. Nothing is known about its reproductive biology.

Common names: Arraia (Brazil), Raia (Brazil)

Potamotrygon yepezi Castex & Castello, 1970

Potamotrygon yepezi Castex & Castello, 1970b: 16, fig. on p. 19.

Type locality: Palmar river at bridge 70 km southwest of Maracaibo [southeast of Maracaibo Lake, Venezuela]. Holotype: USNM 121662.

Maximum length: 40 cm DW

Distribution: South America: Rivers draining into Maracaibo Lake.

Countries: Venezuela

Remarks and references: Reproductive biology unknown.

Common names: Raya (Venezuela)

GENUS INQUIRENDUM

Elipesurus Jardine, 1843: 184. Type species: *Elipesurus spinicauda* Jardine, 1843. Type by monotypy. Gender: masculine [Wrongly emended to *Ellipesurus* by Duméril (1865), and followed by various subsequent authors (e.g. Günther, 1870; Miranda Ribeiro, 1907, 1923)].

SPECIES INQUIRENDAE

Elipesurus spinicauda Jardine, 1843: 184, pl. 23. Type locality: Rio Branco at Fort San Joaquim. Holotype: unknown. [We follow the cogent arguments of Rosa (1985a, 1985b) in considering *Elipesurus* Schomburgk, 1843, and its only originally included species *Elipesurus spinicauda* Schomburgk, 1843, as nomina dubia. Additional reference: Zorzi (1995)].

Pastinachus humboldtii Duméril 1865: 625. Type locality: fluviale du Meta [= Meta River, Colombia]. Type specimen unknown [Rosa (1985a) summarizes evidence that this nominal species cannot be unequivocally applied].

Trygon garrapa Jardine, 1843: 182, pl. 21. Type locality: Rio Branco. Type: unknown (Paepke, pers. comm.). [Further collecting in the Branco River is needed to determine if this species is valid, a junior synonym of *Potamotrygon motoro* or a senior synonym of *Potamotrygon henlei*. The last option is the most improbable of these (*P. henlei* is endemic to the Tocantins River), but this decision cannot be made without additional specimens from the Branco River].

Pastinachus humboldtii Roulin, in Duméril, 1865: 625. Type locality: fluviale du Meta [Meta River, Colombia]. Type: unknown [Rosa (1985a) summarizes evidence that this name cannot be unequivocally applied to any known species].

Family Lepisosteidae (Gars)

Carl J. Ferraris, Jr.

The family Lepisosteidae comprise the true gars, a group that is known from at least as far back in time as the Cretaceous. In its history, gars were widely distributed through the world's continents, but at present, they are only known from seven species in the Americas.

Gars are readily identified by the following combination of characters: body long and cylindrical; snout elongate, with large numbers of needle-like teeth in both jaws; body with diamond-shaped, ganoid scales that cover the entire body in a heavy coating of armor; caudal fin rounded and abbreviate heterocercal (i.e., with caudal skeleton extending part way along dorsal margin of the fin); dorsal fin with short base and located well posterior along body, dorsal to the anal fin.

Only two species of gar are known to occur south of the United States. One species, *Atractosteus tristoechus* occurs only in western Cuba and the Isla de la Juventud (formerly Isle of Pines); the second species (*A. tropicus*) occurs sporadically through Mexico and Central America.

The taxonomy of living gars is based on the conclusion that there are two groups of species that are either considered to be separate genera (*Lepisosteus* and *Atractosteus*) or two subgenera of *Lepisosteus*. Herein, we follow the former classification and place the two Neotropical species into *Atractosteus*.

Gars are typically piscivores and individuals of some species may grow to more than three m. in length. Gars are little economic value, except that they are sometimes considered pests to local fishermen when they become entangled in nets.

ATRACTOSTEUS

Atractosteus Rafinesque, 1820: 171. Type species: *Lepisosteus (Atractosteus) ferox* Rafinesque, 1820. Type by monotypy. Gender: masculine.

***Atractosteus tristoechus* (Bloch & Schneider, 1801)**

Esox Tristoechus Bloch & Schneider, 1801: 395. Type locality: Fluvios et paludes Havannae [Cuba]. No types known, based on drawing in Parra (1787, pl. 40, fig. 2).

Lepidosteus Manjuari Poey, 1853: 273, pl. 28. Type locality: Cuba. No types known.

Maximum length: 200 cm TL

Distribution: Caribbean Islands: Western Cuba and Isla de la Juventud.

Countries: Cuba

Remarks and references: Reported from brackish and marine waters as well as rivers.

Common names: Cuban alligator gar (Cuba), Manjuan (Cuba)

***Atractosteus tropicus* Gill, 1863**

Atractosteus tropicus Gill, 1863: 172. Type locality: Western coast Central America. Holotype: USNM 6806.

Maximum length: 125 cm TL

Distribution: North and Central America: Caribbean and Pacific drainages of southern Mexico and Central America.

Countries: Belize, Costa Rica, Guatemala, Honduras, Mexico, Nicaragua

Common names: Catán (Mexico), Pejelagarto (Mexico)

Family Osteoglossidae (Arowanas)

Carl J. Ferraris, Jr.

The Osteoglossidae consists of five species of tropical freshwater fishes. Two of these species occur in the Neotropical region; one in the freshwaters of Southeast Asia, and the remaining two in Australia and New Guinea. Osteoglossids are similar in appearance to arapaimatids and were, until recently, considered to be part of one family. Species of both families have elongate, slender bodies with large scales. Osteoglossids differ from arapaimids in a number of characters, the most obvious of which are the presence of barbels at the symphysis of the lower jaw, a highly compressed abdomen (instead of a nearly cylindrical abdomen), and huge mouth with a markedly oblique gape.

In the Neotropics the distribution of the two species is quite different. One species, *Osteoglossum ferreirai*, appears to be restricted to the Negro River system of the upper Amazon basin. The second species, *O. bicirrhosum*, in contrast, occurs widely through the lowland waters of the Amazon basin as well as the rivers of Guyana, and in the Oyapock River.

Both species are important as food fishes as well as specimens for the home aquarium market.

OSTEOGLOSSUM

Osteoglossum Cuvier, 1829: 328. Type species: *Osteoglossum bicirrhosum* Cuvier, 1829. Type species established in Opinion 1621. Gender: neuter.

Osteoglossum Spix & Agassiz, 1829: 30, 46. Type species: *Osteoglossum bicirrhosum*, Spix & Agassiz 1829. Type by monotypy. Gender: neuter.

Ischnosoma Agassiz in Spix & Agassiz, 1829: 46. Not available, name published in synonymy of *Osteoglossum* Cuvier, 1829, and apparently never made available.

***Osteoglossum bicirrhosum* (Cuvier, 1829)**

Ischnosoma bicirrhosum Cuvier, 1829: 328. Type locality: Brésil. Holotype: MNHN A.9632. Originally appeared as, "On en connaît une espèce assez grande du Brésil (*Osteoglossum Vandellii*, n., ou *Ischnosoma bicirrhosum*, Spix, xxv)." Established as senior synonym of *Osteoglossum vandellii*, and placed on the Official List of Specific Names in Zoology in Opinion 1621.

Osteoglossum vandellii Cuvier, 1829: 328. Type locality: Brésil. Holotype: MNHN A.9632. Placed on the Official Index of Rejected and Invalid Specific Names in Zoology in Opinion 1621.

Osteoglossum arowana Jardine in Schomburgk, 1841: 205, pl. 12. Type locality: "... the Rupununi, although few if any are found in the Essequibo. In the Rio Branco they are also plentiful, though scarce in the Rio Negro..." No types known.

Osteoglossum minus Valenciennes in Cuvier & Valenciennes, 1847: 294. Not available, mentioned in the account of *Osteoglossum vandellii* and apparently never validated.

Maximum length: 90 cm. TL (Goulding, et al., 1988)

Distribution: South America: Amazon River basin, Rupununi and Oyapock Rivers.

Countries: Brazil, Colombia, Ecuador, Guyana, French Guiana, Peru

Common names: aruana

***Osteoglossum ferreirai* Kanazawa, 1966**

Osteoglossum ferreirai Kanazawa 1966: 166, fig. 3. Type locality: Lago de Limao on lower Rio Branco, trib. of Rio Negro, Amazonas, Brazil. Holotype: USNM 198197.

Maximum length: 90 cm TL (Goulding, et al., 1988)

Distribution: South America: Negro River basin.

Countries: Brazil

Family Arapaimatidae (Bonytongues)

Carl J. Ferraris Jr.

The Arapaimatidae includes only two species, the Neotropical arapaima, *Arapaima gigas*, and the African bonytongue, *Heterotis niloticus*. These two species had in the past often been included within the Osteoglossidae, but are now generally considered to represent a distinct family. The name Heterotidae has been used for the family name of this group, but the name Arapaimatidae is older and, therefore, is the correct name.

The sole Neotropical representative of the family, *Arapaima gigas*, is one of the most distinctive and easily recognized species of freshwater fishes. It is the largest truly freshwater fish in South America, the largest known individuals of which are at least 390 cm in length (with unconfirmed reports of even larger individuals, of greater than 450 cm). In addition to its great size, it is readily recognized by its long cylindrical body that becomes compressed posteriorly, large scales, and heavily sculptured bones of the head.

The arapaima is found throughout the lowland waters of the Amazon basin as well as the rivers of Guyana. In life, the arapaima often relies on atmospheric oxygen to survive. The fish rises to the surface of the water and inspires air in a noisy, distinctive, gulp. Fishermen locate individuals of the arapaima by the sounds they make during aerial respiration, which is reported to carry for long distances. Active fishing of these fishes has reduced both the population size, and occurrence of large individuals, especially around populated regions of the Amazon. The arapaima is listed on Cites II.

ARAPAIMA

Sudis Cuvier, 1816: 180. Type species: *Sudis gigas* Schinz, 1822.

Type by monotypy. Gender: feminine. Appeared first without species. First addition of species by Schinz (in Cuvier, 1822). Preoccupied by *Sudis* Rafinesque, 1810, in fishes.

Arapaima Müller, 1843: 327. Type species: *Sudis gigas* Cuv. [=Schinz, 1822]. Type by monotypy. Gender: feminine. Placed on the Official List of Generic Names in Zoology in Opinion 1132.

Vastres Valenciennes in Cuvier & Valenciennes, 1847: 433. Type species: *Vastres cuvieri* Valenciennes, 1847. Type by subsequent designation by Jordan (1919). Gender: masculine.

Arapaima gigas (Schinz, 1822)

Sudis gigas Schinz, in Cuvier, 1822: 305. Type locality: aus Brasilien. Holotype: specimen illustrated in Cuvier (1816: pl. 10). Placed on the Official List of Species Names in Zoology in Opinion 1132. Name available from reference to plate in Cuvier 1816 (pl. 10, in vol. 4).

Sudis pirarucu Spix & Agassiz 1829: 31, pl. 6. Not available, first published in the synonymy of *Sudis gigas* of Cuvier and apparently not made available subsequently.

Vastres Agassizii Valenciennes in Cuvier & Valenciennes 1847: 456. Type locality: [Brazil]. Based Spix and Agassiz (1829: fig. 16).

Vastres Cuvieri Valenciennes in Cuvier & Valenciennes 1847: 441, pls. 579-580. Type locality: Il est probable qu'il vient du Pará [Brazil]. Holotype: MNHN ?

Vastres arapaima Valenciennes in Cuvier & Valenciennes 1847: 461. Type locality: le Rupununi. No types known. Name based on the description of *Sudis gigas* in Jardine (1841).

Vastres Mapae Valenciennes in Cuvier & Valenciennes 1847: 449, pls. 581-582. Type locality: lac Mapa, sur les confins des nouvelles frontières de la Guyane française. Holotype: MNHN A.8836 (mounted).

Maximum length: 395 + cm

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Ecuador, ? Guyana, Peru.

Common names: Pirarucu (Brazil); Paiche (Peru, Ecuador).

Family Megalopidae (Tarpons)

Carl J. Ferraris, Jr.

The Megalopidae consists of two species of large, silvery bodied fishes generally referred to as tarpon. Tarpon can be distinguished from similar looking fishes by the presence of a filamentous last ray of the single dorsal fin, a large mouth, in which the maxilla extends at least to the posterior margin of the orbit, large scales covering the body, and a large gular plate.

Tarpon are found only in near-shore habitats in tropical and warm temperate waters. Both species can exist in freshwater and are often found in river mouths and estuaries. Tarpon are generally not considered to be a valuable food fish, but are important game fish through much of their distribution. The countries listed here for the species are only those for which specimens are reported in Neodat (<http://neodat.org>) and probably are not a comprehensive list.

MEGALOPS

Megalops La Cepède, 1803: 289. Type species: *Megalops filamentosus* La Cepède, 1803. Type by monotypy. Gender: masculine.

Brisbania Castelnau, 1878:241. Type species: *Brisbania staigeri* Castelnau, 1878. Type by monotypy. Gender: feminine.

Tarpon Jordan & Evermann, 1896:408. Type species: *Megalops atlanticus* Valenciennes, 1847. Type by original designation. Gender: masculine.

Megalops atlanticus Valenciennes, 1847

?*Clupea thrissoides* Bloch & Schneider, 1801:424. Type locality: mari Atlantico et Pacifico. On several literature sources, which include both valid species of megalopids. Types not identified.

?*Clupea gigantea* Shaw, 1804:173. Type locality: American and Indian seas. On several literature sources, types not identified.

Megalops atlanticus Valenciennes, in Cuvier & Valenciennes, 1847:398. Type locality: Guadeloupe, Martinique, Saint-Domingue, Porto-Rico. Syntypes: MNHN A.8839, MNHN A.8840, MNHN 3317.

Megalops elongatus Girard, 1859:224. Type locality: Long Island, New York. No types known.

Maximum length: 250 cm TL

Distribution: Tropical Atlantic Ocean and associated estuaries, lagoons, and rivers. Reportedly also taken on Pacific Ocean side of Panama Canal.

Countries: Bahamas, Brazil, Cuba, French Guiana, Guatemala, Haiti, Mexico, Panama, Puerto Rico, Venezuela.

Remarks and references: Recent authors are divided on the generic placement of this species. Many place it in the monotypic genus *Tarpon* Jordan & Evermann, apparently following Forey (1973). Others place it into *Megalops* together with the one other species of the family, *Megalops cyprinoides* (Broussonet). *Clupea thrissoides* Bloch & Schneider and *Clupea gigantea* Shaw are based on literature sources that include both the Atlantic and Pacific

Ocean species of megalopids. Until lectotypes or neotypes are designated for these names, the species with which they should be associated remains uncertain.

Family Anguillidae (Freshwater eels)

Carl J. Ferraris, Jr.

The Anguillidae comprise a small family of true eels, which can be distinguished from other eel families by the presence of small embedded scales on the body, pectoral fins, and a slightly protruding lower jaw. The Anguillidae includes one genus, *Anguilla*, with 16 species that are found in various parts of the world. Most, if not all, species of this family are catadromous, living most of their lives in freshwaters and returning to the sea to reproduce (Tesch, 1977).

Only one species is known from the western side of the Atlantic Ocean basin. This species has been named at least 20 times due, in part, to the marked morphological changes the species undergoes during its transformation from fresh to salt water environments. Most reports of the species are from localities in the temperate regions of the northern hemisphere, but the species has been found throughout the Caribbean region. Specimens are only rarely encountered from the northern coast of South America.

The synonymy presented here follows Smith (1989). Country reports are based on museum records as listed in Neodat (<http://neodat.org>).

ANGUILLA

Anguilla Schrank, 1798: 304, 307. Type species: *Muraena anguilla* Linnaeus, 1758. Type by monotypy. Placed on the Official List in Opinion 1672, with *Muraena anguilla* Linnaeus, 1758, as type species. Gender: feminine.

Terpolepis McClelland, 1844: 225. Type species: *Anguilla brevirostris* McClelland, 1844. Type by original designation. Proposed as a subgenus of *Anguilla*. Gender: feminine.

Tribranchus Peters, in Müller, 1846: 193. Type species: *Tribranchus anguillaris* Peters, 1846. Type by monotypy. Gender: masculine.

Anguilla rostrata (Lesueur, 1817)

Muraena argentea Lesueur, 1817: 82. Type locality: Boston Harbor, Massachusetts. No types known

Muraena bostoniensis Lesueur, 1817: 81. Type locality: Boston, Massachusetts. No types known.

Muraena macrocephala Lesueur, 1817: 82. Type locality: Saratoga, New York; Philadelphia market. No types known.

Muraena rostrata Lesueur, 1817: 81. Type locality: Cayuga and Geneva lakes, New York. No types known.

Muraena serpentina Lesueur, 1817: 81. Type locality: Harbor of Newport, Rhode Island. No types known.

Anguilla blephura Rafinesque, 1817: 120. Type locality: Southwest shore of Long Island, New York. No types known.

Anguilla chrisypa Rafinesque, 1817: 120. Type locality: Lake George, Lake Champlain, and Hudson River above the Falls.

Anguilla laticauda Rafinesque, 1818: 447. Type locality: Ohio River, Wabash River, Green River, etc. A. No types known. Name also spelled *laticanda*, but *laticauda* in wide use.

Anguilla aterrima Rafinesque, 1820: 245. Type locality: Tennessee River, Cumberland River, etc. No types known.

Anguilla lutea Rafinesque, 1820: 246. Type locality: Cumberland, Green and Licking rivers. No types known.

Anguilla xanthomelas Rafinesque, 1820: 245. Type locality: Ohio River No types known.

Anguilla tenuirostris DeKay, 1842: 310, pl. 53 (fig. 173). Type locality: New York. No types known.

Anguilla cubana Kaup, 1856: 44. Type locality: Cuba. Holotype: MNHN B-2105.

Anguilla macrops Kaup, 1856: 49, pl. 7 (fig. 38). No locality. Holotype: MNHN B-3154.

Anguilla novaeorleanensis Kaup, 1856: 43, pl. 6 (fig. 33). Type locality: New Orleans, Louisiana. Syntypes: MNHN B-2111 (2).

Anguilla novaeterrae Kaup, 1856: 45, pl. 7 (fig. 35). Type locality: Newfoundland, Canada. Holotype: MNHN B-2106.

Anguilla punctatissima Kaup, 1856: 44. Type locality: Niagara Falls and Canada. Holotype: MNHN (not found).

Anguilla texana Kaup, 1856: 45, pl. 7 (fig. 36). Type locality: Texas. Holotype: MNHN B-2109.

Anguilla wabashensis Kaup, 1856: 46. Type locality: Wabash River, tributary of Ohio River Holotype: MNHN B-2117.

Anguilla tyrannus Girard, 1858: 171. Type locality: Mouth of Rio Grande del Norte (Rio Bravo), Texas. Holotype: USNM 857.

Leptocephalus grassii Eigenmann & Kennedy, 1902: 84, figs. 1, 1a-b. Type locality: Atlantic Ocean, Albatross sta. at 38°25'N, 72°40'W and Albatross sta. 2103, 38°47'20"N, 72°37'W. Syntypes: USNM 49751, 49752.

Maximum length: 150 cm TL

Distribution: North, Central, and South America and Caribbean Islands: Atlantic Ocean and northern Caribbean draining rivers.

Countries: Bahamas, Belize, Colombia, Costa Rica, Cuba, Dominica, Dominican Republic, Guatemala, Haiti, Honduras, Jamaica, Martinique, Mexico, Panama, Puerto Rico, St. Martin, Trinidad and Tobago, Turks & Caicos, Venezuela.

Family Ophichthidae (Worm eels and snake eels)

Sven O. Kullander

The Ophichthidae comprise more than 250 species distributed among 55 genera, all from tropical marine waters except one species which is only known from freshwater in South America. The American Ophichthidae were monographed by McCosker et al. (1989). Many other species occur in shallow water in the Neotropics.

STICTORHINUS

Stictorhinus Böhlke & McCosker, 1975:5. Type species: *Stictorhinus potamius* Böhlke & McCosker, 1975. Type by original designation. Gender: masculine.

***Stictorhinus potamius* (Böhlke & McCosker, 1975)**

Stictorhinus potamius Böhlke & McCosker, 1975: 5, fig. 1. Type locality: Freshwater pool of Rio Tocantins near Tucuruí, Pará, Brazil. Holotype: MZUSP 9248.

Maximum length: 34.5 cm TL

Distribution: South America: Amazon River basin, in the lower Tocantins River; Orinoco River basin, in the lower Orinoco River; northeastern Brazil in Bahia.

Countries: Brazil, Venezuela

Family Clupeidae (Herrings)

Sven O. Kullander & Carl J. Ferraris, Jr.

The family Clupeidae includes fishes known as herrings, shads, sardines, pilchards, and sprats. The family currently consists of about 180 species, but Whitehead (1985:25) estimates that the true number of clupeid species to be closer to 200. Clupeids are generally fusiform fishes that typically have a single series of scutes running along the ventral midline of the body. Fins are without spines, and there is no adipose fin or lateral line canal system on the body. The mouth is usually terminal, but distinctly inferior in some genera (e. g., most species of *Dorosoma*).

Clupeids are distributed throughout temperate and tropical waters. Most clupeids are schooling, coastal marine species. Some species venture into estuaries and freshwaters and a few are found primarily, if not exclusively, in inland waters. Many of the coastal marine species are important food fishes. None of the species listed here are thought to be significant as a food fishery, except in localized regions.

There are four genera of clupeids in the Neotropics that have species found in freshwaters. Three of these genera are endemic to the Neotropical region and the fourth, *Dorosoma*, is also found in North America. All species of these four genera are reported here, even though the distributions of some species of *Dorosoma* do not extend into the Neotropics. The taxonomy and nomenclature presented here is taken from Whitehead (1985).

DOROSOMA

Dorosoma Rafinesque, 1820: 171. Type species: *Dorosoma notata* Rafinesque, 1820. Type by monotypy. Gender: neuter.

Chatoessus Cuvier, 1829: 320. Type species: *Megalops cepedianana* Lesueur, 1818. Type by subsequent designation by Valenciennes (in Cuvier & Valenciennes, 1848:94). Gender: masculine.

Signalosa Evermann & Kendall, 1898: 127. Type species: *Signalosa atchafalaya* Evermann & Kendall, 1898. Type by original designation. Gender: feminine.

***Dorosoma anale* Meek, 1904**

Dorosoma anale Meek, 1904: 93, fig. 26. Type locality: El Hule, Oaxaca, Mexico. Holotype: FMNH 4637.

Maximum length: 20 cm SL.

Distribution: North and Central America: Atlantic slope, from the Papaloapán River basin to the Usumacinta River basin.

Countries: Guatemala, Mexico

***Dorosoma cepedianum* (Lesueur, 1818)**

Megalops cepedianana Lesueur 1818: 361. Type locality: Philadelphia. Possible syntypes: MNHN 0004, 3630, 3631, 3632 (3 specimens), 3633 (2 specimens).

Clupea heterurus Rafinesque, 1818: 355. Type locality: Ohio River. No types known.

Dorosoma notata Rafinesque, 1820: 172. Type locality: Ohio River, below falls. No types known.

Chatoessus insociabilis Abbott, 1861: 365. Type locality: 2 miles below Trenton, New Jersey. Syntypes: ANSP 23030-31 (2).

Dorosoma cepedianum exile Jordan & Gilbert, 1883: 585. Type locality: Galveston Bay, Texas. Syntypes: USNM 30913 (2, lost). Maximum length: 35 cm SL.

Distribution: North America: Widespread in southern and eastern USA, south to the Panuco River basin in Mexico.

Countries: Mexico, USA

***Dorosoma chavesi* (Meek, 1907)**

Dorsoma chavesi Meek, 1907: 112. Type locality: Laguna Jenicero, Granada, Nicaragua. Holotype: FMNH 5928 (1 of 6, 170

mm).

Maximum length: 18 cm SL.

Distribution: Central America: Lakes Managua and Nicaragua, and tributaries.

Countries: Costa Rica, Nicaragua

Common names: Sabaleta (Costa Rica).

***Dorosoma petenense* (Günther, 1867)**

Meletta petenensis Günther, 1867: 603. Type locality: Lake Petén, Guatemala. Syntypes: BMNH 1864.1.26.372 (1).

Chatoessus mexicanus Günther 1868: 409. Type locality: Mexico, New Orleans, and "said to be from Boero, East Indies". Syntypes: BMNH 1857.7.31.21 (2 ?) Mexico.

Signalosa atchafalaya Evermann & Kendall, 1898: 127, pl. 7 (fig. 4). Type locality: Atchafalaya R. at Melville, Louisiana. Holotype: USNM 48790.

Signalosa mexicana campi Weed, 1925: 143. Type locality: Resaca de la Guerra, near Media Luna Ranch, Brownsville, Texas. Holotype: FMNH 11413.

Signalosa atchafalaya vanhyingi Weed, 1925: 145. Type locality: Prairie Creek, 6 mi. southeast of Gainesville, Florida. Holotype: FMNH 11395.

Maximum length: 18 cm SL.

Distribution: North and Central America: Along the Gulf of Mexico from northern Florida to Guatemala and Belize, in rivers, but also brackish water.

Countries: Belize, Guatemala, Mexico, USA

***Dorosoma smithi* (Hubbs & Miller, 1941)**

Dorsoma smithi Hubbs & Miller, 1941: 232. Type locality: Flood pool between 2 branches of Río Piaxtla, ca. 12 mi. from ocean, near the town of Piaxtla, Sinaloa, Mexico. Holotype: UMMZ 133749.

Maximum length: 14 cm SL

Distribution: North America: Pacific slope, in northwestern Mexico, between Sinaloa and Sonora.

Countries: Mexico

PLATANICHTHYS

Platanichthys Whitehead, 1968:479. Type species: *Lile platana* Regan, 1917. Type by original designation. Gender: masculine.

Platanichthys platana (Regan, 1917)

Lile platana Regan, 1917: 394. Type locality: Río de la Plata. Holotype: BMNH 1908.8.29.15.

Spratella pallida de Buen, 1952: 7. Type locality: en el embalse de Rio Negro, Uruguay. Holotype: MHNM CI 1800.

?*Clupea melanostoma limnoica* Alonso de Arámburu, 1961: 2, fig. 1. Type locality: Laguna de Chascomús, Buenos Aires, Argentina. Holotype: MLP 12-X-58-31 (apparently lost).

Maximum length: 6.7 cm SL.

Distribution: South America: Lagoons, estuaries and lower parts of rivers from about Rio de Janeiro south to La Plata River.

Countries: Argentina, Brazil, Uruguay

Remarks and references: *Clupea melanostoma limnoica* could be a synonym of either *P. platana* or *Ramnogaster melanostoma* (see Whitehead, 1985: 121, 124).

RAMNOGASTER

Ramnogaster Whitehead, 1965:324. Type species: *Clupea arcuata* Jenyns, 1842. Type by original designation. Gender: feminine.

Ramnogaster arcuata (Jenyns, 1842)

Clupea arcuata Jenyns, 1842: 134. Type locality: Bahía Blanca [Argentina]. Syntypes: UMZC [Darwin no. 416] (2).

Maximum length: 9 cm SL.

Distribution: South America: Inshore regions around mouth of La Plata River, but apparently not entering freshwater.

Countries: Argentina, Uruguay.

Ramnogaster melanostoma (Eigenmann, 1907)

Pomolobus melanostomus Eigenmann, 1907: 452, pl. 23 (fig. 6). Type locality: Buenos Aires [Argentina]. Holotype: Princeton Univ. (not located).

?*Clupea melanostoma limnoica* Alonso de Arámburu, 1961: 2, fig. 1. Type locality: Laguna de Chascomús, Buenos Aires, Argentina. Holotype: MLP 12-X-58-31 (apparently lost).

Maximum length: 10 cm SL.

Distribution: South America: Lower portions of rivers along margins of the La Plata River.

Countries: Argentina, Uruguay.

RHINOSARDINIA

Heringia Fowler, 1911:207. Type species: *Clupea amazonica* Steindachner, 1879. Type by original designation. Preoccupied by *Heringia* Rondani, 1856, in Diptera; not replaced. Gender: feminine.

Rhinosardinia Eigenmann, 1912:445. Type species: *Rhinosardinia serrata* Eigenmann, 1912. Type by original designation. Gender: feminine.

Rhinosardinia amazonica (Steindachner, 1879)

Clupea amazonica Steindachner, 1879: 183. Type locality: Pará [Amazon River, Brazil]. Lectotype: NMW 1104, designated by Whitehead (1970: 12).

Rhinosardinia serrata Eigenmann, 1912: 445, pl. 62 (fig. 3). Type locality: Morawhanna, British Guiana. Holotype: FMNH 53927 [ex CM 2443].

Maximum length: 8 cm SL.

Distribution: South America: Along the coasts of eastern Venezuela, the Guianas, and northern Brazil, from the Orinoco to the Amazon River basin, in lower reaches of rivers.

Countries: Bolivia, Brazil

Rhinosardinia bahiensis (Steindachner, 1879)

Pellonula bahiensis Steindachner, 1879: 181, pl. 3 (fig. 2). Type

locality: Bahía, Brazil. Lectotype: NMW 2870, designated by Whitehead (1970:14).

Sardinella pernamencana Schreiner & Miranda Ribeiro, 1903: 6. Type locality: Pernambuco, Brazil. Holotype: MNRJ 1835.

Maximum length: 8 cm SL.

Distribution: South America: Along the Atlantic coast, from the Orinoco River to northeastern Brazil, in lower reaches of rivers.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Family Engraulididae (Anchovies)

Sven O. Kullander & Carl J. Ferraris, Jr.

The clupeiform family Engraulididae consists of small to medium sized fishes that are most easily recognized by their large underslung mouth and prominent snout. The body is covered with moderately sized scales which are often lost during specimen handling. The lateral line is absent from the body. The fins are without spines: The dorsal fin is short based and usually situated over the middle of the body and the pelvic fin located abdominally. A single pelvic scute is present and, in species found in areas other than the Neotropics, additional abdominal scutes are usually found.

Engraulidids, widely known as anchovies, are primarily found in coastal marine environments of the tropics and temperate regions. Some species enter brackish or freshwater environments sporadically and other species appear to be restricted to freshwaters. More than 130 species of anchovies are currently recognized and Whitehead et al. (1988) anticipate that more species await description. The family name for anchovies has been widely cited as Engraulidae, but it is now frequently referred to by the corrected formation Engraulididae.

Marine anchovies are an important food source, with more than 4 million tons harvested worldwide in 1982 (Whitehead et al., 1988) and a recorded peak annual harvest of over 13 million tons. Information on harvest of Neotropical inland species is largely lacking, and it is likely that the food fishery for anchovies in freshwaters is quite localized.

AMAZONSPRATTUS

Amazonsprattus Roberts, 1984: 317. Type species: *Amazonsprattus scintilla* Roberts, 1984. Type by original designation. Gender: masculine

***Amazonsprattus scintilla* Roberts, 1984**

Amazonsprattus scintilla Roberts, 1984: 318, fig. 1. Type locality: Rio Jufari between Castanheiro Grande and Santa Fe, Brazil. Holotype: CAS 52175.

Maximum length: 1.95 cm SL

Distribution: South America: Amazon River basin, in the lower Negro River.

Countries: Brazil

ANCHOA

Anchoa Jordan & Evermann, 1927: 501. Type species: *Engraulis compressus* Girard, 1858. Type by original designation. Gender: feminine. Originally proposed as a subgenus of *Anchoviella*.

Anchoviella Nelson, 1986: 895 Type species: *Stolephorus naso* Gilbert & Pierson, 1898. Type by original designation. Gender: feminine. Originally proposed as a subgenus of *Anchoa*

***Anchoa belizensis* (Thomerson & Greenfield, 1975)**

Anchoviella belizensis Thomerson & Greenfield, 1975: 50, fig. 1. Type locality: Sibun River, one km upriver from Freetown, Belize District, Belize. Holotype: FMNH 78363

Maximum length: 5.8 cm SL

Distribution: Central America: Pacific slope, in the Sibun River, Belize, and the Dulce River and Lake Izabal, Guatemala.

Countries: Belize, Guatemala

Common name: Belize anchovy (Belize)

***Anchoa spinifer* (Valenciennes, 1848)**

Engraulis spinifer Valenciennes, in Cuvier & Valenciennes, 1848: 39. Type locality: Cayenne. Lectotype: MNHN 3754, designated by Whitehead (1967: 129).

Engraulis thrissoides Müller & Troschel, 1849: 639. Cuyuni River, British Guiana. Holotype: ZMB 3836.

Anchoa argenteus Schultz, 1949: 45, fig. 5. Lago de Maracaibo 1 km. off Pueblo Viejo [Venezuela]. Holotype: USNM 121777.

Maximum length: 18.6 cm SL

Distribution: South and Central America: Atlantic and Pacific slope, usually in coastal marine environments, but recorded from fresh waters of the Guianas, Panama, and Venezuela.

Countries: French Guiana, Guyana, Panama, Suriname, Venezuela

ANCHOVIA

Anchovia Jordan & Evermann, in Jordan, 1895: 411. Type species: *Engraulis macrolepidotus* Kner, 1863. Type by monotypy. Gender: feminine.

***Anchovia surinamensis* (Bleeker, 1866)**

Stolephorus surinamensis Bleeker, 1866: 178. Type locality: Suriname. Holotype: RMNH 7072.

Anchovia pallida Starks, 1913: 9, pl. 1. Type locality: Market at Pará, Brazil. Holotype: SU 22216.

Anchoviella venezuelae Fowler, 1931: 406, fig. 6. Type locality: Caño Guanoco, Venezuela. Holotype: ANSP 53322.

Anchoviella potiana Schultz & Simões de Menezes, 1951: 235, fig. 1. Type locality: Poti and Parnaíba Rivers, Teresina, State of Piauí, Brazil. Holotype: USNM 112081

Maximum length: 12.4 cm SL

Distribution: South America: Estuarine and lower parts of rivers from Trinidad to the Amazon River, ascending the Amazon River to about Manaus.

Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela

ANCHOVIELLA

Anchoviella Fowler, 1911: 211. Type species: *Engraulis per fasciatus* Poey, 1860. Type by original designation. Gender: feminine. Originally proposed as a subgenus of *Anchovia*.

Amplovia Jordan & Seale, 1925: 31. Type species: *Anchovia brevisrostra* Meek & Hildebrand, 1923. Type by original designation. Gender: feminine.

Anchoviella alleni (Myers, 1940)

Amplova alleni Myers, 1940: 441. Type locality: Lake Cashiboya, Ucayali and Morona rivers, Peruvian Amazon system. Holotype: CAS 6421.

Maximum length: 8.8 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Anchoviella brevirostris (Günther, 1868)

Engraulis brevirostris Günther, 1868: 392. Caxoeira, Province of Bahia [Brazil]. Syntypes: BMNH 1840.2.16.27.

Anchoviella brasiliensis Hildebrand 1943: 138, fig. 62. Rio Ribeira de Iguapé, Sao Paulo, Brazil. Holotype: UMMZ 133663.

Anchoviella hildebrandi Carvalho, 1950: 78, fig. 1. Río Paraguaçu at Caxoeira, Bahia. Holotype: IO (apparently lost).

Maximum length: 7.2 cm SL

Distribution: South America: Atlantic estuaries and river mouths.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Anchoviella carrikeri Fowler, 1940

Anchoviella carrikeri Fowler, 1940: 73, fig. 28. Type locality: Mouth of Río Chapare, Cochabamba, Bolivia. Holotype: ANSP 68980.

Maximum length: 6.5 cm SL

Distribution: South America: Amazon River basin, in the Madeira River drainage, and upper Amazon River in Brazil

Countries: Bolivia, Brazil

Anchoviella cayennensis (Puyo, 1946)

Stolephorus cayennensis Puyo, 1946: 101, fig. 1. Cayenne River at Macouria, ca. 4 km from its mouth, French Guiana. Syntypes: (2) ?MNHN.

Anchoviella victoriae Hildebrand & Carvalho, 1948: 292, fig. 3. Victoria, State of Espirito Santo, Brazil. Holotype: USNM 143901.

Maximum length: 12 cm SL

Distribution: South America: Atlantic coastal estuaries and river mouths.

Countries: Brazil, French Guiana, Suriname, Trinidad and Tobago

Anchoviella guianensis (Eigenmann, 1912)

Stolephorus guianensis Eigenmann, 1912: 447, pl. 62 (fig. 5). Type locality: Bartica rocks, British Guiana. Holotype: FMNH 53932 [ex CM 2448].

Maximum length: 6 cm SL

Distribution: South America: Orinoco River basin, Atlantic and Caribbean coastal rivers south to Amazon River.

Countries: Brazil, Colombia, French Guiana, Guyana, Suriname, Venezuela

Anchoviella jamesi (Jordan & Seale, 1926)

Amplova jamesi Jordan & Seale, 1926: 410. Type locality: Brazil: Rio Jutahy. Holotype: MCZ 18014.

Maximum length: 4 cm SL

Distribution: South America: Amazon River basin; middle Orinoco River basin.

Countries: Brazil, Colombia, Peru, Venezuela

Anchoviella lepidentostole (Fowler, 1911)

Anchovia lepidentostole Fowler 1911: 214, fig. 3. Surinam. Holotype: ANSP 1346.

Anchoviella iheringi Fowler 1941: 124, fig. 2. Rio Jaguaribe, Brazil. Holotype: ANSP 69345.

Anchoviella hubbsi Hildebrand 1943: 128, fig. 56. Rio Ribeira de Iguapé, Sao Paulo, Brazil. Holotype: UMMZ 133664.

Anchoviella nitida Hildebrand & Carvalho 1948: 294, fig. 4. Victoria, State of Espirito Santo, Brazil. Holotype: USNM 143906.

Maximum length: 11.6 cm SL

Distribution: South America: Atlantic Ocean, in estuaries and

entering rivers.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Anchoviella manamensis Cervigón, 1982

Anchoviella manamensis Cervigón, 1982: 220, fig. 5. Type locality: Caño Mánamo, near Tucupita, Orinoco Delta, Venezuela.

Holotype: FCLR 638.

Maximum length: 2.5 cm SL

Distribution: South America: Orinoco River basin delta.

Countries: Venezuela

Anchoviella nattereri (Steindachner, 1879)

Engraulis nattereri Steindachner, 1879: 174. Type locality: Pará, Brazil. Holotype: NMW.

Maximum length: 5 cm SL

Distribution: South America: Amazon River mouth.

Countries: Brazil

Remarks and references: Only known from the holotype, which cannot be located. Whitehead et al. (1988: 227) considered that this might be a senior synonym of *A. lepidentostole* Fowler, 1911. Market fish from Belém may be of marine origin.

Anchoviella perezi Cervigón, 1987

Anchoviella perezi Cervigón 1987: 27, fig. 2. Laguna La Ceiba, Los Castillos de Guayana, Venezuela. Holotype: FCLR 650.

Maximum length: 3.6 cm SL

Distribution: South America: Orinoco River basin delta.

Countries: Venezuela

Anchoviella vaillanti (Steindachner, 1908)

Engraulis vaillanti Steindachner, 1908: 193. Type locality: Rio São Francisco at Joazeiro and Cidade da Barra; Rio Preto and Rio Grande do Norte, Brazil. Lectotype: NMW 1931 (1 of 22, 62.4 mm SL), designated by Whitehead (1970: 30).

Maximum length: 6.7 cm SL

Distribution: South America: Middle São Francisco River.

Countries: Brazil

JURENGRAULIS

Jurengraulis Whitehead, in Whitehead, et al., 1988: 384. Type species: *Cetengraulis juruensis* Boulenger, 1898. Type by original designation. Gender: feminine.

Jurengraulis juruensis (Boulenger, 1898)

Cetengraulis juruensis Boulenger, 1898: 427, pl. 41 (fig. 3). Type locality: Rio Juruá, Brazil. Holotype: BMNH 1897.12.1.196.

Maximum length: 16 cm SL

Distribution: South America: Amazon River basin, including the Madeira, Mamoré, Solimões and Juruá Rivers.

Countries: Bolivia, Brazil

LYCENGRAULIS

Lycengraulis Günther, 1868: 385, 399. Type species: *Engraulis grossidens* Spix & Agassiz, 1829. Type by subsequent designation by Jordan & Evermann (1896: 451). Gender: feminine. Originally proposed as a subgenus of *Engraulis*.

Lycengraulis batesii (Günther, 1868)

Engraulis batesii Günther, 1868: 399. Type locality: River Pará [Brazil]. Syntypes: BMNH 1849.11.8.73-75 (3).

Engraulis iquitiensis Nakashima, 1941: 62, fig. Type locality: Peruvian Amazon. No types known.

Lycengraulis barbouri Hildebrand, 1943: 151, fig. 69. Type locality: Rio Puty, Pianí State, Brazil. Holotype: MCZ 35277.

Maximum length: 26 cm SL

Distribution: South America: Amazon and Orinoco River basins, and the Guianas.

Countries: Brazil, Colombia, Guyana, French Guiana, Suriname, Venezuela

***Lycengraulis grossidens* (Spix & Agassiz, 1829)**

Engraulis grossidens Spix & Agassiz, 1829: 50, pl. 24 (fig. 1).
Type locality: Brasiliam. No types known. As *Engraulis janeiro* on plate.

Engraulis dentex Valenciennes, in Cuvier & Valenciennes, 1848: 28. Type locality: Rio de Janeiro, Brazil. Lectotype: MNHN 3720, designated by Whitehead (1967: 134).

Engraulis olidus Günther, 1874: 455. Type locality: Parana River, Brazil. Holotype: BMNH 1872.6.8.12.

Anchovia abbotti Fowler, 1915: 522, fig. 1. Type locality: Port of Spain, Trinidad I., West Indies. Holotype: ANSP 45079.

Cuplea [sic] *inermis* Larrañaga, 1923: 377. Type locality: Uruguay. No types known. Corresponds to *Clupea 25-radiata* on p. 389. Permanently invalid; preoccupied by *Clupea inermis* Basilewsky, 1855.

Clupea 25-radiata Larrañaga, 1923: 389. Type locality: Uruguay. No types known. Corresponds to *Clupea inermis* on p. 377.

Lycengraulis schroederi Hildebrand, 1943: 153, fig. 70. Type locality: Rio Doce, between Linhares and Aimors, Brazil. Holotype: MCZ 35275.

Lycengraulis simulator Fuster de Plaza, 1962: 2, fig. 1. Type locality: Río Paraná, zona de Bella Vista, Corrientes Prov., Argentina. Holotype: MACN 4571.

Maximum length: 23.5 cm SL

Distribution: South and Central America: Chiefly marine, in Belize, and from Venezuela to La Plata River, ascending rivers.

Countries: Argentina, Belize, Brazil, Colombia, Guiana, French Guiana, Suriname, Trinidad, Uruguay, Venezuela

Common names: Anchoa (Argentina), Manjubao, Sardinha prata (Brazil)

***Lycengraulis limnichthys* Schultz, 1949**

Lycengraulis limnichthys Schultz, 1949: 51. Type locality: Río Agua Caliente, 2 to 3 km. above Lago de Maracaibo, Venezuela. Holotype: USNM 121751.

Maximum length: 12.8 cm SL

Distribution: Lake Maracaibo basin.

Countries: Venezuela

PTERENGRAULIS

Pterengraulis Günther, 1868: 384, 398. Type species: *Clupea atherinoides* Linnaeus, 1766. Type by monotypy. Gender: feminine. Originally proposed as a subgenus of *Engraulis*.

***Pterengraulis atherinoides* (Linnaeus, 1766)**

Clupea atherinoides Linnaeus, 1766: 523. Type locality: Surinami. No types known.

Maximum length: 20 cm SL

Distribution: South America: Estuarine and freshwater, along the Atlantic coast from Trinidad to NE Brazil.

Countries: Brazil, Guiana, French Guiana, Suriname, Trinidad and Tobago, Venezuela.

Family Pristigasteridae (Pristigasterids)

Mário C. C. de Pinna and Fábio Di Dario

Species of the family Pristigasteridae are sardines superficially similar to those of Clupeidae, but rather distinctive in internal anatomy, as first noticed by Nelson (1967). They seem to be the sister group to Clupeidae plus Engraulididae (including Coiliidae), according to Di Dario (2002). The Pristigasteridae includes coastal marine sardines distributed in all tropical oceans and in the freshwaters of South America and Southeast Asia. Pristigasterids can be externally distinguished from other sardines (Clupeidae) by their long anal fin, with at least 30 fin rays. Also, in nearly all pristigasteroids, the small pelvic fin is markedly displaced anteriorly, so that the tip of the pectoral fin reaches or surpasses the vertical through the base of the pelvic fin. In practically all clupeids, the tip of the pectoral fin ends anteriorly to that point. The pelvic fin is absent in several pristigasterids worldwide, but only in *Pristigaster cayana* among South American freshwater taxa.

The family Pristigasteridae, as defined here, includes the Pristigasteridae and Pellonidae of Grande (1985), and is equivalent to the superfamily Pristigasteroidea. Ongoing phylogenetic work by the authors indicates that maintenance of two separate families, Pristigasteridae and Pellonidae, would be nomenclaturally costly, because it would require many additional family-group names to avoid paraphyletic groups. So, we prefer to consider an expanded Pristigasteridae as the single family in the superfamily Pristigasteroidea, an arrangement identical to that of Nelson (1967). Current generic limits in Pristigasteridae are poorly reflective of phylogenetic relationships. The genera *Pellona* and *Ilisha*, especially, form a complex ladder-like series of sister groups to the rest of the family. The South American freshwater pristigasterids are few and form a polyphyletic subgroup of the family, which indicates that there has been more than one freshwater invasion in the evolutionary history of the group in the region.

The taxonomy of the freshwater pristigasterids of South America has been the object of very little attention and needs to be re-investigated. Whitehead (1985) is the latest taxonomic treatment of all relevant forms. The only valid new species described from the region during the last eight decades was *Pristigaster whiteheadi* Menezes & de Pinna, but there are additional undescribed species of *Pellona* and possibly *Ilisha* as well. Also, a taxonomy of the larval and juvenile stages, currently unavailable, is badly needed for ecological studies and fisheries management

ILISHA

Platygaster Swainson, 1838: 278. Type species: *Clupea africana* Bloch, 1795, by subsequent designation by Swain, 1883. Preoccupied by *Platygaster* Latreille, 1809 in Hymenoptera and *Platygaster* Schilling, 1829 in Hemiptera. Gender: feminine

Ilisha Richardson, 1846: 306. Type species: *Ilisha abnormis* Richardson, 1846, by monotypy (synonym of *Alosa elongata* Bennett). Gender: feminine

Zunasia Jordan & Metz, 1913. Type species: *Pristigaster chinensis* Basilewski, 1855, by original designation (synonym of *Alosa elongata* Bennett). Gender: feminine

Pseudochirocentron Miranda Ribeiro, 1920: 8. Type species: *Pseudochirocentron amazonicum* Miranda Ribeiro, 1920, by monotypy. Gender: masculine

Euplatygaster Fowler, 1934: 246. Type species: *Pellona brachysoma* Bleeker, 1852, by original designation (synonym of *Clupea melastoma* Schneider). Gender: feminine.

Ilisha amazonica (Miranda Ribeiro, 1920)

Pseudochirocentron amazonicum Miranda Ribeiro, 1920: 8. Type locality: Manáos - R. Amazonas. Lectotype: MNRJ 1789A, designated by Miranda Ribeiro (1953: 398).

Ilisha iquitensis Nakashima 1941: 66. Type locality: Oriente peruano, cercanías del puerto de Iquitos (mentioned in title and introduction of the work). Types unknown.

Ilisha apapae Hildebrand, 1948: 3, fig. 2. Type locality: Amazon River somewhere between Pará and Manáos, Brazil. Holotype: USNM 52550

Maximum length: 19.5 cm

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Peru

PELLONA

Pellona Valenciennes, in Cuvier & Valenciennes, 1847: 300. Type species: *Pellona orbignyana* Valenciennes, 1847. Type by subsequent designation by Gill (1861:38). Gender: feminine.

Neosteus Norman, 1923:17. Type species: *Pellona ditchela* Valenciennes, 1847. Type by subsequent designation. Type designated by Norman in Zoological Record for 1923:25. Gender: masculine.

Pellona castelnaeana (Valenciennes, 1847)

Pellona castelnaeana Valenciennes in Cuvier & Valenciennes, 1847: 306. Type locality: bouches de l'Amazone. Lectotype: MNHN 3705, designated by Whitehead (1967:108).

Pellona altamazonica Cope, 1872: 256. Type locality: From the Ambyiacu. Types not found at ANSP (Böhlke, 1984).

Ilisha deauratus Nakashima, 1941: 77, fig. Type locality: Oriente peruano, cercanías del puerto de Iquitos (mentioned in title and introduction of the work). No types known.

Maximum length: 47 cm SL.

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru

Pellona flavipinnis (Valenciennes, 1836)

Pristigaster flavipinnis Valenciennes, 1836: pl. 10 (fig. 2). Type locality: Le nom de pellone est celui que porte l'espèce à Buenos-Ayres. Je n'ai pas besoin de dire pourquoi je l'ai dédié au zélé voyageur qui l'a procuré à la science. No types known.

Pellona orbignyana Valenciennes in Cuvier & Valenciennes, 1847: 302. Type locality: L'espèce a été rapportée de Buénos-Ayres par M. d'Orbigny...les pêcheurs du pays assurent que l'espèce remonte de la haute mer dans La Plata. No types known.

Maximum length: 55 cm SL.

Distribution: South America: Amazon, Parnaíba, Orinoco, Paraná/Prata River basins, and the Guianas.

Countries: Argentina, Brazil, Colombia, French Guiana, Guyana, Surinam, Venezuela, Uruguay

PRISTIGASTER

Pristigaster Cuvier, 1816: 176. Type species: *Pristigaster cayanus* Cuvier, 1829. Type by subsequent designation by Cuvier (1829: 321). Gender: feminine.

Pristigaster cayanus Cuvier, 1829

Pristigaster argenteus Schinz, in Cuvier, 1822: 300. Type locality: In den amerikanischen Meeren. Based on an illustration in Cuvier (1816). Nomen oblitum.

Pristigaster lichtensteini Jarocki, 1822: 332, fig. 3. Type locality: Zyie w południowych morzach Ameryki [Cayenne, French Guiana]. Types unknown. Based on an illustration in Cuvier 1916. Nomen oblitum.

Pristigaster triangularis Stark, 1828: 408. Type locality: American Seas. Based on an illustration in Cuvier (1816). Nomen oblitum.

Pristigaster cayanus Cuvier, 1829: 321, pl. 10 (fig. 3) [in Vol. 4]. Type locality: Cayenne, French Guiana. Holotype: MNHN 3699.

Pristigaster martii Spix & Agassiz, 1829: 55, pl. 24a. Type locality: Habitat in ostiis fluminis Amazonum. No types known.

Pristigaster americanus Guérin-Méneville, 1844: 33, pl. 57 (fig. 3). Type locality: les côtes de l'Amérique méridionale dans l'Atlantique. No types known.

Pristigaster phaeton Valenciennes in Cuvier & Valenciennes, 1847: 338. Type locality: l'Amazone. Holotype: MNHN 3700.

Maximum length: 14.5 cm SL.

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Peru

Pristigaster whiteheadi Menezes & de Pinna, 2000

Pristigaster whiteheadi Menezes & de Pinna, 2000: 239, fig. 1. Type locality: Brazil: Amapá, Rio Araguari, Ferreira Gomes. Holotype: MZUSP 52963.

Maximum length: 8.9 cm

Distribution: Amazon River basin.

Countries: Brazil, Ecuador

Family Parodontidae (Parodontids)

Carla S. Pavanelli

Parodontid species have been included in many families and subfamilies since the description of *Parodon*, its first genus. Nowadays, the family Parodontidae is recognized by a majority of authors, although its definition and relationship with other groups have not yet been satisfactorily investigated. Here, the family Parodontidae is recognized based mainly on Roberts (1974b).

Parodontidae are a relatively small family within the Characiformes. Its species are distributed throughout South America and part of Panama, except in some coastal basins, Patagonia and the Amazon channel. Most species do not exceed 15 cm in length, and are not usually commercially important. All species have fusiform bodies, no fontanel, and an inferior mouth with a poorly developed, or absent, upper lip. There are commonly four (rarely two) spatulate premaxillary teeth, which have a straight or cusped cutting border. Dentary and maxillary teeth occur in some species. Gill membranes are joined together and free of scaly isthmus.

There are three genera recognized in the family: *Apareiodon* Eigenmann, characterized by the absence of dentary teeth and the possession of only one unbranched pectoral-fin ray; *Parodon* Valenciennes, with dentary teeth present; and *Saccodon* Kner, without dentary teeth and with two unbranched pectoral-fin rays. The diagnostic characters among the parodontid genera, basically related to teeth that are difficult to see in young specimens and easily broken, allied with brief, incomplete or even mistaken descriptions, had previously caused several nomenclatural problems in the family.

Thirty-five names of parodontid species have been published since 1849. Originally 13 *Apareiodon*, 18 *Parodon* and three *Saccodon* were been described. Carl Eigenmann and Henry Fowler were the researchers that described the most parodontid nominal species. Britski (1969, 1976), Roberts (1974b), and Starnes & Schindler (1993) published some papers about parodontid nomenclature. Pavanelli (1999) made the most recent revision of the family recognizing 21 valid species (eight *Apareiodon*, 10 *Parodon* and three *Saccodon*). In addition, she recognized five new species of *Apareiodon*, mainly from headwater streams of the Amazon basin, and one of *Parodon*, but they have not yet been formally described. Richard Vari sent individuals of another supposed new species of *Apareiodon*, but the material has not yet been examined. Thus, some new species remain and others may appear in the family Parodontidae, mainly in headwater and less collected areas.

Parodontid species are popularly know as “canivetes” or “charutos” in Brazil and as “virolitos”, “rollizos” or other names in the rest of the Latin American countries where they occur. They are frequently found in current waters, exhibiting well-developed pelvic fins, which allow them a very good attachment to the substrate (mainly stony), where they usually feed by scraping the epilithon. Sazima (1980) published a behavioral study about some parodontid species. Species of the genus *Saccodon* exhibit the most extraordinary dental polymorphism among characoids (Roberts, 1974a). Travassos (1951, 1952a) and Miquelarena (1984, 1986) have made osteological studies on parodontids.

Some species of Parodontidae develop true nuptial tubercles mainly on the side of the snout and internasal regions. See Wiley & Collette (1970) and Pavanelli (1999) for more details. Azevedo et al. (1988a, b) and Barbieri & Barbieri (1989b) examined aspects of the reproduction of parodontids and Barbieri & Barbieri (1989a) consider their growth. Various researchers including Moreira-Filho (1983), Moreira-Filho et al. (1993), Jorge (1995), and Jesus (1996), have studied genetic aspects of parodontids.

Although nice to watch in aquarium, parodontids are not very exploited commercially, at least in Brazil. They have no importance as food at all, due to their small size. However, in some places, they are used as live bait in angling.

APAREIODON

Apareiodon Eigenmann, 1916: 71. Type species: *Parodon piracicabae* Eigenmann, 1907. Type by original designation. Gender: masculine. Revised by Pavanelli (1999), with species descriptions, geographical distributions, pictures and keys.

Apareiodon affinis (Steindachner, 1879)

Parodon affinis Steindachner, 1879a: 20. Type locality: La Plata-Strome (innerhalb der Provinz Buenos-Ayres) [La Plata River basin, Argentina]. Holotype: whereabouts unknown. Species also

described in Steindachner (1879b: 32) and in Steindachner (1879c: 179).

Parodon paraguayensis Eigenmann, in Eigenmann & Ogle, 1907: 6. Type locality: Asuncion, Rio Paraguay [Paraguay]. Holotype: CAS 6765 [ex IU 9953].

Maximum length: 14.3 cm SL

Distribution: South America: La Plata River basin.

Countries: Argentina, Brazil, Paraguay

Common names: Canivete (Brazil), Charuto (Brazil), Duro-duro (Brazil), Piki (Paraguay), Virolito (Argentina)

***Apareiodon davisi* Fowler, 1941**

Apareiodon davisi Fowler, 1941: 167, fig. 80. Type locality: Rio Jaguaribe, Russas, Ceará [Brazil]. Holotype: ANSP 69467.

Maximum length: 5.9 cm SL

Distribution: South America: Jaguaribe and Paraíba River basins.

Countries: Brazil

Common names: Peixe-rei (Brazil), Piaba-rei (Brazil)

***Apareiodon gransabana* Starnes & Schindler, 1993**

Apareiodon gransabana Starnes & Schindler, 1993: 756, fig. 1.

Type locality: Venezuela, Bolivar State, Gran Sabana, Río Tatorotá, tributary to Río Apongua, about 8 km S of Luepa, approximately 5°35'N, 61°25'W. Holotype: MBUCV 17000.

Maximum length: 9.2 cm SL

Distribution: South America: Orinoco River basin and the coastal basins of French Guiana, Guyana, and Suriname.

Countries: French Guiana, Guyana, Suriname, Venezuela

***Apareiodon hasemani* Eigenmann, 1916**

Apareiodon hasemani Eigenmann, 1916: 75, pl. 12. Type locality: Pirapora [São Francisco River, Minas Gerais, Brazil]. Holotype: FMNH 57615.

Maximum length: 6.8 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Common names: Canivete (Brazil)

***Apareiodon ibitiensis* Campos, 1944**

Apareiodon ibitiensis Campos, 1944: 173, unnumbered fig. Type locality: Rio Camanducaia, Monte Alegre, Estado de São Paulo [Brazil]. Holotype: MZUSP 3411.

Apareiodon mogiguaçuensis Travassos, 1952b: 313, fig. 1. Type locality: Cachoeira do Espriado, Rio Mogi-Guaçu, 1ª Cachoeira Grande depois de Soledade, Estado Minas Gerais [Brazil]. Holotype: MNRJ 6240.

Maximum length: 11.3 cm SL

Distribution: South America: Upper Paraná and upper São Francisco River basins.

Countries: Brazil

Common names: Canivete (Brazil)

***Apareiodon itapicuruensis* Eigenmann & Henn, 1916**

Apareiodon itapicuruensis Eigenmann & Henn, in Eigenmann, 1916: 72, pl. 11 (fig. 2). Type locality: Rio Paiaia, tributary of Rio Itapicuru [Bahia, Brazil]. Holotype: FMNH 56988.

Maximum length: 8.6 cm SL

Distribution: South America: Coastal basins of Bahia State.

Countries: Brazil

***Apareiodon machrisi* Travassos, 1957**

Apareiodon machrisi Travassos, 1957: 147, fig. 1. Type locality: Ribeirão Cristalino, Fazenda Oliver, Município de Amaro Leite, Goiás [Tocantins River basin, State of Maranhão (not Goiás), Brazil]. Holotype: MNRJ 8932.

Maximum length: 7.4 cm SL

Distribution: South America: Tocantins-Araguaia River basin.

Countries: Brazil

***Apareiodon orinocensis* Bonilla, Machado-Allison, Silvera, Chernoff, Lopez & Lasso (1999)**

Apareiodon orinocensis Bonilla, Machado-Allison, Silvera, Chernoff, López, & Lasso, 1999: 2, fig 1a. Type locality: Raudal Dimoshi, Río Tabaro, BO [Orinoco River basin, Venezuela]. Holotype: MBUCV V 29170.

Maximum length: 13.2 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela.

Remarks and references: Legend of fig. 1 reads holotype MBUCV 27180, contrary to the number listed in the material examined

section.

***Apareiodon piracicabae* (Eigenmann, 1907)**

Parodon piracicabae Eigenmann, in Eigenmann & Ogle, 1907: 6.

Type locality: Piracicaba [Piracicaba River, São Paulo, Brazil].

Holotype: CAS 6763 [ex IU 9292].

Maximum length: 11.4 cm SL

Distribution: South America: Upper Paraná and upper São Francisco River basins.

Countries: Brazil

Common names: Canivete (Brazil)

***Apareiodon vittatus* Garavello, 1977**

Apareiodon vittatus Garavello, 1977: 449, fig. 1. Type locality: Rio Iguaçú, Bituruna, Estado do Paraná, Brasil. Holotype: MNRJ 10481.

Maximum length: 8.9 cm SL

Distribution: South America: Iguaçú River basin.

Countries: Brazil

Common names: Canivete (Brazil)

PARODON

Parodon Valenciennes, in Cuvier & Valenciennes, 1850: 50. Type species: *Parodon suborbitale* Valenciennes, 1850. Type by monotypy. Gender: masculine. Revised by Pavanelli (1999), with species descriptions, geographical distributions, pictures, and keys.

Nematoparodon Fowler, 1943: 226. Type species: *Parodon apolinari* Myers, 1930. Type by original designation. Gender: masculine.

***Parodon apolinari* Myers, 1930**

Parodon apolinari Myers, 1930: 66. Type locality: Guaicaramo, Rio Guavio, Colombia. Holotype: CAS-SU 23725.

Maximum length: 9.3 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

***Parodon bifasciatus* Eigenmann, 1912**

Parodon bifasciatus Eigenmann, 1912: 274, pl. 36 (fig. 1). Type locality: Maripicru Creek [Branco River basin, Amazon, Guyana]. Holotype: FMNH 53582.

Maximum length: 9.8 cm SL

Distribution: South America: Branco River basin.

Countries: Brazil, Guyana

***Parodon buckleyi* Boulenger, 1887**

Parodon buckleyi Boulenger, 1887: 279, pl. 23 (fig. 1). Type locality: Canelos [Pastaza River basin, Amazon, Ecuador]. Holotype: BMNH 1880.12.5.125.

Maximum length: 15 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Ecuador, Peru

Common names: Julilla (Peru)

***Parodon caliensis* Boulenger, 1895**

Parodon caliensis Boulenger, 1895: 480. Type locality: Cali River, Colombia, 3200 feet. Syntypes: BMNH 1895.11.16.83-87 (5).

Parodon medellinense Posada, 1909: 299. Type locality: Medellín [Cauca River basin, Colombia]. Holotype: Unnumbered, whereabouts unknown.

Maximum length: 13 cm SL

Distribution: South America: Cauca River basin.

Countries: Colombia

Common names: Mazorca (Colombia), Rollizo (Colombia)

***Parodon carrikeri* Fowler, 1940**

Parodon carrikeri Fowler, 1940: 47, fig. 1. Type locality: Rio Lipeo, Bolivia [Argentina (not Bolivia)]. Holotype: ANSP

68735.

Parodon caudalis Fowler, 1940: 58, fig. 15. Type locality: Villa Montes, Rio Pilcomayo, Bolivia. Holotype: ANSP 68837.

Maximum length: 14.7 cm SL

Distribution: South America: headwaters of Bermejo and Pilcomayo rivers, Paraguay River basin.

Countries: Argentina, Bolivia, Paraguay

***Parodon guyanensis* Géry, 1959**

Parodon guyanensis Géry, 1959: 481, fig. 1. Type locality: Guyane Française, Haute-Mana, crique Deux-Branches, à la hauteur de Saut-Fini [Mana River basin, French Guiana]. Holotype: Géry coll. H04-20 bis-1.

Maximum length: 12 cm TL

Distribution: South America: Orinoco River basin and coastal rivers of French Guiana, Guyana, and Suriname.

Countries: French Guiana, Guyana, Suriname, Venezuela

Common names: Akusipila (French Guiana)

***Parodon hilarii* Reinhardt, 1866**

Parodon hilarii Reinhardt, 1866: 62, pl. 2 (fig. 3-4). Type locality: Minas Geraes,... da der i en ubetydelig lille Aa en Fjerdingsvei fra Byen Lagoa Santa [das Velhas River, Lagoa Santa, Minas Gerais, Brazil]. Holotype: ZMUC 90.

Maximum length: 13 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Common names: Canivete (Brazil)

***Parodon nasus* Kner, 1859**

Parodon nasus Kner, 1859: 167, pl. 7 (fig. 17). Type locality: Cujabaflusse [Cuiabá River, Paraguay River basin, Brazil]. Syn-types: NMW 56545.

Parodon tortuosus Eigenmann & Norris, 1900: 356. Type locality: Rio Tieté [Paraná River basin, São Paulo, Brazil]. Holotype: CAS 6762 [ex IU 9312].

Parodon gestri Boulenger, 1902: 285. Type locality: Rio Coxipó, Matto Grosso [Paraguay River basin, Brazil]. Holotype: MSGN 14863.

Apareiodon pirassunguae Campos, 1945: 442, fig. 8. Type locality: Rio Mogi-Guaçu, Pirassungua, Cachoeira [Paraná River basin, São Paulo, Brazil]. Holotype: MZUSP 3469.

Maximum length: 12.7 cm SL

Distribution: South America: La Plata River basin.

Countries: Argentina, Brazil, Paraguay

Remarks and references: See Britski (1976: 436) for synonymy.

Common names: Canivete (Brazil), Duro-Duro (Brazil), Tanchina (Brazil)

***Parodon pongoensis* (Allen, 1942)**

Apareiodon pongoense Allen, in Eigenmann & Allen, 1942: 286, pl. 14 (fig. 7). Type locality: Forest brook, foothills at Pongo de Manseriche [Marañon River basin, Amazon, Peru]. Holotype: CAS 6757.

Apareiodon caquetae Fowler, 1945: 106, fig. 6. Type locality: Morelia, Río Caquetá drainage, Colombia. Holotype: ANSP 71696 (with paratypes).

Maximum length: 10.4 cm SL

Distribution: South America: Western Amazon River tributaries.

Countries: Brazil, Colombia, Ecuador, Peru

Common names: Julilla (Peru), Pongo pongo (USA)

***Parodon suborbitalis* Valenciennes, 1850**

Parodon suborbitale Valenciennes, in Cuvier & Valenciennes, 1850: 51, pl. 637. Type locality: Rivières de Maracaibo [Lake Maracaibo, Venezuela]. Lectotype: MNHN 1807.

Maximum length: 12.1 cm SL

Distribution: South America: Lake Maracaibo and Orinoco River basins.

Countries: Colombia, Venezuela

Common names: Cochinito (Colombia), Corunta (Colombia), Marranito (Colombia), Mazorca (Colombia), Tuso (Colombia)

SACCODON

Saccodon Kner, 1863: 225. Type species: *Saccodon wagneri* Kner, 1863. Type by monotypy. Gender: masculine. Genus also described in Kner & Steindachner (1864: 31). Revised by Pavanelli (1999), with species descriptions, geographical distributions, pictures, and keys.

Parodontops Schultz & Miles, 1943: 251. Type species: *Parodon ecuadoriensis* Eigenmann & Henn, 1914. Type by original designation. Gender: masculine.

***Saccodon dariensis* (Meek & Hildebrand, 1913)**

Parodon dariensis Meek & Hildebrand, 1913: 83. Type locality: Rio Cupe, Cituro, Panama. Holotype: FMNH 7587.

Apareiodon compressus Breder, 1925: 4, fig. 3. Type locality: Rio Turquesa, Darien, Panama. Holotype: AMNH 8408.

Saccodon cauae Schultz & Miles, 1943: 252, fig. 2. Type locality: Upper Río Cauca north of Cali, Colombia. Holotype: USNM 121285.

Apareiodon brevipinnis Dahl, 1971: 117. Type locality: Río Verde, affluent of Río Sinu, Colombia. Holotype: unnumbered, whereabouts unknown.

Maximum length: 12.7 cm SL

Distribution: Central and South America: Continental waters of Panama east of Panama Canal, and Atrato and Magdalena River basins.

Countries: Colombia, Panama

Common names: Dormilón (Colombia), Mazorca (Colombia), Rayado (Colombia), Torpedo (Colombia)

***Saccodon terminalis* (Eigenmann & Henn, 1914)**

Parodon terminalis Eigenmann & Henn, in Eigenmann, Henn & Wilson, 1914: 12. Type locality: Vinces, rivers and forest pools [Ecuador]. Holotype: FMNH 56599.

Maximum length: 4 cm SL

Distribution: South America: Daule River basin.

Countries: Ecuador

***Saccodon wagneri* Kner, 1863**

Saccodon wagneri Kner, 1863: 225, fig. 10. Type locality: Aus dem Staate Ecuador. Holotype: unnumbered, whereabouts unknown. Species also described in Kner & Steindachner (1864: 31).

Saccodon cranocephalum Thominot, 1882: 248, unnumbered pl. Type locality: Río Guayaquil [Ecuador]. Syntypes: MNHN 2503, B.2996; USNM 150431.

Parodon ecuadoriensis Eigenmann & Henn, in Eigenmann, Henn & Wilson, 1914: 12. Type locality: River and forest pools, Vinces, Ecuador. Holotype: FMNH 56597.

Maximum length: 10.1 cm SL

Distribution: South America: Coastal drainages of Ecuador and northernmost coastal basins of Peru.

Countries: Ecuador, Peru

Remarks and references: Species also described in Kner & Steindachner (1864: 31).

Common names: Roncador (Ecuador)

Family Curimatidae (Toothless characiforms)

Richard P. Vari

The family Curimatidae is distinguishable from all other Characiformes by the combination of the absence in adults of dentition in either jaw (a feature present elsewhere among characiforms only in *Anodus* of the family Hemiodontidae) and a series of internal synapomorphies in multiple body systems (see Vari, 1989a for a summary). The species of the Curimatidae are broadly distributed across southern Central America and much of tropical and temperate South America. Members of the family occur in the Trans-Andean Pacific Ocean drainages from southwestern Costa Rica (Bussing, 1998) to northwestern Peru (Vari, 1989d). Curimatids inhabit the Trans-Andean Caribbean versant drainages from the Atrato River of northwestern Colombia (Vari, 1991) to the western drainages of the Maracaibo Lake basin in northwestern Venezuela (Vari, 1984b). East of the Andean Cordilleras, curimatids occupy most river basins from the Orinoco River system to slightly south of Buenos Aires, Argentina, being most speciose in the Amazon and Orinoco basins, with less diverse assemblages of species inhabiting the coastal rivers of the Guianas, the São Francisco River basin, and various of the shorter rivers from northeastern Brazil to Uruguay (Vari, 1989).

Externally curimatids range from fusiform to deep bodied, slab-sided fishes (Vari, 1989a: figs. 1-2), but with most species of intermediate body form. Internally curimatids demonstrate numerous modifications of various body systems, most notably the gill arches (Vari, 1989a). Members of the family demonstrate a nearly ten fold range in standard lengths, with the largest known adult males of *Curimatopsis evelynae* achieving approximately 3.3 cm SL (Vari, 1982b: 26) and the largest reported specimens of *Curimata mivartii* being over 32.0 cm SL (Dahl, 1971).

Many curimatid species travel in large schools (Santos et al., 1984) that often constitute a major portion of the fish biomass in both riverine and lacustrine habitats. Curimatids have a number of modifications of the mouth, gill-arches, and digestive tract which allow them to efficiently utilize the flocculent organic matter, microdetritus, microvegetation, and filamentous algae that are common in those habitats across the Neotropics (Carvalho, 1984; Nomura and Hayashi, 1980; Nomura and Taveira, 1979). Some members of the family are known to engage in mass spawning migrations (Godoy, 1975).

The questions of the relationships of the Curimatidae to other characiforms and of the generic-level intrarelationships within the family were dealt with by Vari (1983, 1989a). The species level taxonomy, phylogeny, and biogeography of the Curimatidae has been examined in a series of revisionary studies (*Curimata* (Vari, 1989b; Vari and Reis, 1995); *Curimatella* (Vari, 1992a); *Curimatopsis* (Vari, 1982a, 1982b); *Cyphocharax* (Vari, 1992b; Vari and Blackledge, 1996) *Potamorhina* (Vari, 1984a); *Psectrogaster* (Vari, 1989c); *Pseudocurimata* (Vari, 1989d); and *Steindachnerina* (Vari, 1991, 1993; Vari and Vari, 1989)). These publications placed a number of species into synonymy, but also resulted in the description of numerous species new to science. Several as of yet undescribed species are known to researchers and it is expected that additional species await discovery.

In the course of their annual mass migrations various curimatid species are exploited in commercial and subsistence fisheries from Colombia (Dahl, 1971) through Venezuela (Mago-Leccia, 1970) into the Amazon (Goulding, 1981) and elsewhere in South America (Lowe-McConnell, 1975). Curimatids are also important as food items for large, commercially important, predatory fish species.

CURIMATA

Curimata Walbaum, 1792: 80. Type species: *Salmo (Curimata) marggravii* Walbaum, 1792. Type by monotypy. Gender: feminine.

Curimata Bosc, 1817: 9. Type species: *Salmo edentulus* Bloch, 1794. Gender: feminine. Revised by Vari (1989b) with species descriptions, geographical distributions, and phylogenetic analyses.

Curimatus Oken, 1817: 1183. Type species: *Salmo edentulus* Bloch, 1794. Type by subsequent designation. Gender: masculine.

Semitapicis Eigenmann & Eigenmann, 1889a: 417. Type species: *Charax planirostris* Gronow in Gray, 1854. Type by subsequent designation. Gender: masculine.

Peltapleura Fowler, 1906: 300. Type species: *Salmo cyprinoides* Linnaeus, 1766. Type by original designation. Gender: feminine.

Acuticurimata Fowler, 1941: 166. Type species: *Curimatus macrops* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: feminine.

Allenina Fernández-Yépez, 1948: 39. Type species: *Curimata murieli* Allen, 1942. Type by original designation. Gender: feminine.

Bitricarinata Fernández-Yépez, 1948: 64. Type species: *Curimatus schomburgkii* Günther, 1864. Type by original designation. Gender: feminine.

Bondia Fernández-Yépez, 1948: 66. Type species: *Curimatus mivartii* Steindachner, 1879. Type by original designation. Gender: feminine. Preoccupied by *Bondia* Newman, 1856, in Lepidoptera, replaced by *Bondichthys* Whitley, 1953.

- Camposella* Fernández-Yépez, 1948: 60. Type species: *Curimatus simulatus* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: feminine. Preoccupied by *Camposella* Cole, 1819, in Diptera, replaced by *Camposichthys* Whitley, 1953 (also preoccupied), and replaced by *Stupens* Whitley, 1954.
- Lambepiedra* Fernández-Yépez, 1948: 62. Type species: *Lambepiedra allenii* Fernández-Yépez, 1948. Type by original designation. Gender: feminine.
- Bondichthys* Whitley, 1953: 134. Type species: *Curimatus mivartii* Steindachner, 1879. Type by being a replacement name. Gender: masculine. Replacement for *Bondia* Fernández-Yépez, 1948.
- Camposichthys* Whitley, 1953: 134. Type species: *Curimatus simulatus* Eigenmann & Eigenmann, 1889. Type by being a replacement name. Gender: masculine. Replacement for *Camposella* Fernández-Yépez, 1948. *Camposichthys* itself preoccupied by *Camposichthys* Travassos, 1946, in fishes and replaced by *Stupens* Whitley, 1954.
- Stupens* Whitley, 1954: 30. Type species: *Curimatus simulatus* Eigenmann & Eigenmann, 1889. Type by being a replacement name. Gender: masculine. Replacement for *Camposichthys* Whitley, 1953.
- Curimata acutirostris* Vari & Reis, 1995**
Curimata acutirostris Vari & Reis, 1995: 298, fig. 1. Type locality: Marginal lagoons by Rio Araguaia near Luis Alves, Município de São Miguel do Araguaia, ca. 13°14'S, 50°53'W, Goiás, Brazil. Holotype: MCP 17396.
 Maximum length: 8.2 cm SL
 Distribution: South America: Upper Araguaia River basin.
 Countries: Brazil
- Curimata aspera* (Günther, 1868)**
Curimatus asper Günther, 1868: 478. Type locality: Huallaga and Xeberos [=Huallaga River and Jeberos, Peru]. Lectotype: BMNH 1867.6.13.83, designated by Vari (1989b: 52).
Curimatus simulatus Eigenmann & Eigenmann, 1889a: 430. Type locality: Tonantins, Fonteboa [=Tonantins, Fonte Boa, Brazil]. Lectotype: MCZ 20198, designated by Vari (1989b: 53).
 Maximum length: 21.2 cm SL
 Distribution: South America: Amazon River basin, in western Brazil and eastern Peru.
 Countries: Brazil, Ecuador, Peru
 Remarks and references: See Vari (1989b: 50) for detailed description.
 Common names: Chio chio (Peru)
- Curimata cerasina* Vari, 1984**
Curimata cerasina Vari, 1984b: 30, fig. 1. Type locality: Venezuela, Apure, flooded area along road from San Fernando de Apure to Arichuna, 15 km southeast of San Fernando de Apure, approx. 7°47'N, 67°23'W. Holotype: MBUCV V-14025.
 Maximum length: 16.7 cm SL
 Distribution: South America: Central and western portions of Orinoco River basin.
 Countries: Venezuela
 Remarks and references: See Vari (1989b: 54) for detailed description.
 Common names: Bocachica (Venezuela), Bocoehica (Venezuela)
- Curimata cisandina* (Allen, 1942)**
Psectrogaster cisandinus Allen, in Eigenmann & Allen, 1942: 290, pl. 14 (fig. 3). Type locality: Iquitos [=Iquitos, Loreto, Peru]. Holotype: USNM 167834.
Lambepiedra allenii Fernández-Yépez, 1948: 62, fig. 33. Type locality: Rio Cashyboya [=Lago Cashiboya], Peru. Holotype: CAS 57144.
 Maximum length: 12.2 cm SL
 Distribution: South America: Branco River, middle and upper portions of Amazon River basin in Brazil and Peru.
- Countries: Brazil, Peru
 Remarks and references: See Vari (1989b: 47) for detailed description.
 Common names: Julilla (Peru)
- Curimata cyprinoides* (Linnaeus, 1766)**
Salmo immaculatus Linnaeus, 1758: 312. Type locality: America.
 Holotype: NRM LP 76; name suppressed.
Salmo cyprinoides Linnaeus, 1766: 514. Type locality: Suriname. No types known.
Salmo edentulus Bloch, 1794: 97, pl. 380. Type locality: Suriname. Holotype: ZMB 3523.
Charax planirostris Gronow in Gray, 1854: 154. Type locality: Fluminibus Americis Meridionalis [=Rivers of South America]. No types known.
Curimatus schomburgkii Günther, 1864: 291. Type locality: British Guyana [=Guyana]. Lectotype: BMNH 1978.9.12.2, designated by Vari (1989b: 40).
Curimata copei Fowler, 1906: 301, fig. 7. Type locality: Surinam. Holotype: ANSP 8201.
 Maximum length: 21.3 cm SL
 Distribution: South America: Orinoco River delta, Atlantic drainages of the Guianas, lower Amazon and Tocantins rivers.
 Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela
 Remarks and references: See Vari (1989b: 37) for detailed description.
 Common names: Branquinha-baião (Brazil), Yaya grojé (French Guiana), Yaya gros-yeux (French Guiana), makafishi (French Guiana), Pohaké (French Guiana)
- Curimata incompta* Vari, 1984**
Curimata incompta Vari, 1984b: 34, fig. 4. Type locality: Venezuela, Apure, Río Meta near Puerto Páez, approx. 6°13'N, 67°28'W. Holotype: MBUCV V-5991.
 Maximum length: 11.2 cm SL
 Distribution: South America: Orinoco River basin.
 Countries: Venezuela
 Remarks and references: See Vari (1989b: 33) for detailed description.
- Curimata inornata* Vari, 1989**
Curimata inornata Vari, 1989b: 31, fig. 21. Type locality: Brazil, Pará, Rio Tapajós, Itaituba, edge of river channel (approx. 4°17'S, 55°59'W). Holotype: MZUSP 28648.
 Maximum length: 13.6 cm SL
 Distribution: South America: Middle and southern portions of Amazon River basin, Tocantins River.
 Countries: Brazil
 Remarks and references: See Vari (1989b: 54) for detailed description.
 Common names: Branquinha (Brazil)
- Curimata knerii* (Steindachner, 1876)**
Curimatus knerii Steindachner, 1876: 83. Type locality: Wahrscheinlich bei Tefé [=vicinity of Tefé, Amazonas, Brazil]. Holotype: NMW 68685.
 Maximum length: 17.7 cm SL
 Distribution: South America: Middle and upper Amazon River basin.
 Countries: Brazil, Peru
 Remarks and references: See Vari (1989b: 54) for detailed description.
 Common names: Yahuarachi (Peru)
- Curimata macrops* (Eigenmann & Eigenmann, 1889)**
Curimatus macrops Eigenmann & Eigenmann, 1889a: 429. Type locality: Rio Puty [=Poti River, at Teresina, Piauí, Brazil]. Lectotype: MCZ 20309, designated by Vari (1989b: 45).
 Maximum length: 17.6 cm SL
 Distribution: South America: Poti and Parnaíba rivers, northeast-

tern Brazil.
 Countries: Brazil
 Remarks and references: See Vari (1989b: 44) for detailed description.

***Curimata mivartii* (Steindachner, 1878)**

Curimatus mivartii Steindachner, 1878: 90. Type locality: Magdalena-Stromes [=Magdalena River, Colombia]. Lectotype: NMW 68759.1, designated by Vari (1989b: 47).

Maximum length: 24.6 cm SL

Distribution: South America: Magdalena, Cauca, San Jorge, and Sinú River basins in Colombia.

Countries: Colombia

Remarks and references: See Vari (1989b: 46) for detailed description.

Common names: Cachava (Colombia), Sardina (Colombia), Vizcana (Colombia)

***Curimata ocellata* (Eigenmann & Eigenmann, 1889)**

Curimatus ocellatus Eigenmann & Eigenmann, 1889a: 427. Type locality: Xingu [=Xingu River, Amazonas, Brazil]. Lectotype: MCZ 20339, designated by Vari (1989b: 25).

Curimatus semitaeniatus Steindachner, 1915: 18. Type locality: Moura nächst der Mündung des Rio Branco in den Rio Negro [=Moara, near mouth of Branco River in Negro River, Amazon system, Brazil]. Holotype: NMW missing.

Maximum length: 22.5 cm SL

Distribution: South America: Middle and lower Amazon River basin, Negro, and upper Orinoco River basins.

Countries: Brazil, Venezuela

Remarks and references: See Vari (1989b: 23) for detailed description.

***Curimata roseni* Vari, 1989**

Curimata roseni Vari, 1989b: 35, figs. 25-27. Type locality: Brazil, Roraima, Rio Branco, Cachoeira do Bem Querer, cataract pool (approx. 2°50'N, 60°43'W). Holotype: MZUSP 28651.

Maximum length: 14.4 cm SL

Distribution: South America: Amazon River basin, upper Orinoco River basin.

Countries: Bolivia, Brazil, Guyana, Venezuela

***Curimata vittata* (Kner, 1858)**

Curimatus vittatus Kner, 1858: 139, pl. 1 (fig. 1). Type locality: Río Guaporé und Negro [=Guaporé and Negro rivers]. Lectotype: NMW 68805.1, designated by Vari (1989b: 29).

Salmo roncadador Natterer in Kner, 1859: 141. Type locality: None.

Curimata murieli Allen in Eigenmann & Allen, 1942: 298, pl. 14 (fig. 1). Type locality: Contamana, Rio Ucayali [=Ucayali River, Contamana, Amazon system, Peru]. Holotype: CAS 57148.

Maximum length: 18.7 cm SL

Distribution: South America: Amazon, upper Orinoco, and Essequibo River basins.

Countries: Bolivia, Brazil, Colombia, Guyana, Peru, Venezuela

Remarks and references: See Vari (1989b: 54) for detailed description.

Common names: Roncadador (Peru), Yahuarachi (Peru)

CURIMATELLA

Curimatella Eigenmann & Eigenmann, 1889a: 415. Type species: *Curimatus lepidurus* Eigenmann & Eigenmann, 1889. Type by subsequent designation. Gender: feminine. Revised by Vari (1992a) with species descriptions, geographical distributions, and phylogenetic analyses.

Apolinarella Fernández-Yépez, 1948: 22. Type species: *Curimatus meyeri* Steindachner, 1882a. Type by original designation. Gender: feminine.

Lepipinna Fernández-Yépez, 1948: 26. Type species: *Anodus alburnus* Müller & Troschel, 1844. Type by original designation.

Gender: feminine.

Walbaunina Fernández-Yépez, 1948: 24. Type species: *Curimatus dorsalis* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: feminine.

***Curimatella alburna* (Müller & Troschel, 1844)**

Anodus alburnus Müller & Troschel, 1844: 83. Type locality: Guiana [=Guyana]. Lectotype: ZMB 3527 (larger specimen), designated by Vari (1992a: 29).

Curimatus alburnus lineatus Eigenmann & Eigenmann, 1889a: 419. Type locality: Jutahy [=Jutaí River, tributary of Solimões River, Amazonas, Brazil]. Holotype: MCZ 20297.

Maximum length: 18.5 cm SL

Distribution: South America: Amazon and Tocantins River basins.

Countries: Bolivia, Brazil, Guyana, Peru

Remarks and references: See Vari (1992a: 25) for detailed description.

Common names: Llambina (Peru)

***Curimatella dorsalis* (Eigenmann & Eigenmann, 1889)**

Curimatus dorsalis Eigenmann & Eigenmann, 1889a: 420. Type locality: Coari, Manacapuru, Hyavary, Obidos [=Lago do Coari, Lago Grande de Manacapuru, Javari River, Obidos]. Lectotype: MCZ 20183, designated by Vari (1992a: 15).

Curimatus elegans paraguayensis Eigenmann & Kennedy, 1903: 510. Type locality: Estancia La Armonia, Arroyo Carumbey, Paraguay. Holotype: CAS 60583.

Curimatella alburnus australe Eigenmann & Kennedy, 1903: 510. Type locality: Asuncion, Paraguay. Holotype: CAS 60626.

Curimatus (Curimatella) alburnus caudimaculatus Pellegrin, 1909: 150. Type locality: Santarém, Brazil. Lectotype: MNHN 1909-57, designated by Vari (1992a: 17). Originally as *Curimatus (Curimatella) alburnus* var. *caudimaculatus*.

Curimatus bolivarensis Steindachner, 1910: 265. Type locality: Orinoco bei Ciudad Bolívar [=Orinoco River, near Ciudad Bolívar, Venezuela]. Lectotype: NMW 67037: 2, designated by Vari (1992a: 18).

Maximum length: 11.4 cm SL

Distribution: South America: Orinoco, Amazon, Tocantins, and Paraguay-lower Paraná River basins.

Countries: Argentina, Bolivia, Brazil, Paraguay, Peru, Venezuela

Remarks and references: See Vari (1992a: 11) for detailed description.

***Curimatella immaculata* (Fernández-Yépez, 1948)**

Lepipinna immaculata Fernández-Yépez, 1948: 27, fig. 9. Type locality: Obidos, Brazil. Holotype: CAS 60630.

Maximum length: 9.3 cm SL

Distribution: South America: Orinoco, Amazon, and Tocantins River basins and upper portion of Rupununi River basin of Essequibo River drainage.

Countries: Bolivia, Brazil, Colombia, Guyana, Peru, Venezuela

Remarks and references: See Vari (1992a: 31) for detailed description.

***Curimatella lepidura* (Eigenmann & Eigenmann, 1889)**

Curimatus lepidurus Eigenmann & Eigenmann, 1889b: 8. Type locality: Rio San Francisco below its falls (Brazil). Lectotype: MCZ 20292, designated by Vari (1992a: 9).

Maximum length: 11.3 cm SL

Distribution: South America: São Francisco River basin of eastern Brazil.

Countries: Brazil

Remarks and references: See Vari (1992a: 9) for detailed description.

Common names: Manjuba (Brazil)

***Curimatella meyeri* (Steindachner, 1882)**

Curimatus meyeri Steindachner, 1882a: 176. Type locality: Hual-laga [=Huallaga River, Peru]. Holotype: MTD F331.

Curimatus serpae Eigenmann & Eigenmann, 1889: 7. Type locality: Serpa [=Amazon River, Itacoatiara, Amazonas, Brazil]. Lectotype: MCZ 20320, designated by Vari (1992a: 23).

Curimata reticulata Allen, in Eigenmann & Allen, 1942: 295, pl. 14 (fig. 2). Type locality: Lago Cashiboya, Peru. Holotype: CAS 60628.

Maximum length: 15.6 cm SL

Distribution: South America: Central and upper Amazon River basin.

Countries: Bolivia, Brazil, Ecuador, Peru

Remarks and references: See Vari (1992a: 20) for detailed description.

Common names: Yahuarachi (Peru)

CURIMATOPSIS

Curimatopsis Steindachner, 1876: 81. Type species: *Curimatus (Curimatopsis) macrolepis* Steindachner, 1876. Type by monotypy. Gender: feminine. Revised by Vari (1982a, b) with species descriptions, geographical distributions, and phylogenetic analyses.

Curimatichthys Fernández-Yépez, 1948: 71. Type species: *Curimatopsis microlepis* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: masculine.

***Curimatopsis crypticus* Vari, 1982**

Curimatopsis crypticus Vari, 1982a: 19, figs. 15-18. Type locality: Guyana, Rupununi District, stream 2 km east of Lake Amucu, approx. 3°43'N, 59°25'W. Holotype: USNM 226872.

Maximum length: 5 cm SL

Distribution: South America: Amazon River basin and coastal rivers of Guyana, Suriname, and French Guiana.

Countries: Brazil, French Guiana, Guyana, Suriname

Remarks and references: See Vari (1982a: 19) for detailed description.

Common names: Yaya (French Guiana)

***Curimatopsis evelynae* Géry, 1964**

Curimatopsis evelynae Géry, 1964: 47, figs. 13-14. Type locality: 200 miles east of Bogota, Colombia, in the upper Rio Meta drainage. Holotype: USNM 198644.

Maximum length: 4 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Brazil, Colombia

Remarks and references: See Vari (1982a: 23) for detailed description.

***Curimatopsis macrolepis* (Steindachner, 1876)**

Curimatus (Curimatopsis) macrolepis Steindachner, 1876: 81. Type locality: Amazonen Stromes Zunachst der Mündung des Rio Negro, Tabatinga, Manacapuru [=Amazon River near mouth of Negro River, Tabatinga and Lago de Manacapuru]. Lectotype: NMW 75992, designated by Vari (1982a: 15).

Curimatopsis macrocephalus Ahl, 1931: 207, fig. 1. Type locality: Amazonas. Holotype: ZMB 20818.

Maximum length: 6 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru, Venezuela

Remarks and references: See Vari (1982a: 13) for detailed description.

***Curimatopsis microlepis* Eigenmann & Eigenmann, 1889**

Curimatopsis microlepis Eigenmann & Eigenmann, 1889b: 7. Type locality: Jatuarana [=Jatuarana, Amazonas, Brazil]. Holotype: MCZ 20344.

Maximum length: 8.9 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

Remarks and references: See Vari (1982a: 17) for detailed description.

***Curimatopsis myersi* Vari, 1982**

Curimatopsis myersi Vari, 1982b: 788, figs. 1-2. Type locality: Swamp, 3 km northwest of Lima, San Pedro Department, Paraguay (approx. 23°55'S, 56°29'W). Holotype: USNM 233602.

Maximum length: 3.7 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil, Paraguay

Remarks and references: See Vari (1982b: 778) for detailed description.

CYPHOCHARAX

Cyphocharax Fowler, 1906: 297. Type species: *Curimatus spilurus* Günther, 1864. Type by original designation. Gender: masculine. Revised by Vari (1992b) with species descriptions and geographical distributions.

Xyrocharax Fowler, 1914: 633. Type species: *Curimatus stigmaturus* Fowler, 1914. Type by original designation. Gender: masculine.

Hemicurimata Myers, 1929: 620. Type species: *Curimata esperanzae* Myers, 1929. Type by original designation. Gender: feminine.

Curimatoides Fowler, 1940: 225. Type species: *Curimatoides ucayalensis* Fowler, 1940. Type by original designation. Gender: masculine.

***Cyphocharax abramoides* (Kner, 1859)**

Curimatus abramoides Kner, 1859: 142, pl. 2 (fig. 3). Type locality: Barra do Rio Negro (Brazil). Holotype: NMW 67905.

Maximum length: 21.3 cm SL

Distribution: South America: Negro and upper Orinoco River basins, and tributaries to lower Amazon River.

Countries: Brazil, Colombia, Venezuela

Remarks and references: See Vari (1992b: 17) for detailed description.

Common names: Branquinha (Brazil)

***Cyphocharax aspilos* Vari, 1992**

Cyphocharax aspilos Vari, 1992b: 61, figs. 41-42. Type locality: Venezuela, Zulia, Estación Centro Adiestramiento Don Bosco, Carrasguero. Holotype: MBUCV V-13286.

Maximum length: 18 cm SL

Distribution: South America: Tributaries to Lake Maracaibo.

Countries: Venezuela

Common names: Bocachico (Venezuela), Corito (Colombia), Viejita (Colombia)

***Cyphocharax festivus* Vari, 1992**

Cyphocharax festivus Vari, 1992b: 45, figs. 26-27. Type locality: Peru, Loreto, Caños entering Río Nanay, northeast of Iquitos, approx. 3°49'S, 73°11'W. Holotype: USNM 280426.

Maximum length: 6.3 cm SL

Distribution: South America: Amazon, Orinoco, and Essequibo River basins.

Countries: Brazil, Guyana, Peru, Venezuela

***Cyphocharax gangamon* Vari, 1992**

Cyphocharax gangamon Vari, 1992b: 96, figs. 72-73. Type locality: Brazil, Pará, Rio Tapajós, Lago da Santa Clara, Monte Cristo, approx. 4°04'S, 5°38'W. Holotype: MZUSP 22037.

Maximum length: 4.7 cm SL

Distribution: South America: Tapajós River basin.

Countries: Brazil

***Cyphocharax gilbert* (Quoy & Gaimard, 1824)**

Curimata gilbert Quoy & Gaimard, 1824: 219, pl. 48 (fig. 1). Type locality: Rio Macacu [=Macacu River, tributary of Bahia da Guanabara, Brazil]. Holotype: MNHN 5430.

Curimatus albulus Lütken, 1875a: 127. Type locality: Flumine Rio das Velhas et Rivulis Affluentibus [=Das Velhas River and tributaries Minas Gerais, Brazil]. Lectotype: ZMUC 52, designated by Vari (1992b: 91).

Pseudocurimata grandocule Fernández-Yépez, 1948: 47, fig. 23. Type locality: Río Doce, Espírito Santo, Brazil [=vicinity of Linhares and lago Juparaná, Espírito Santo, Brazil]. Holotype: CAS 20352.

Maximum length: 12.6 cm SL

Distribution: South America: Coastal drainages of eastern Brazil from Bahia to Rio de Janeiro and eastern São Paulo.

Countries: Brazil

Remarks and references: See Vari (1992b: 86) for detailed description.

***Cyphocharax gillii* (Eigenmann & Kennedy, 1903)**

Curimatus gillii Eigenmann & Kennedy, 1903: 510. Type locality: Arroyo Trementina, Paraguay. Holotype: CAS 39829.

Curimatella rehni Fowler, 1932: 343, fig. Type locality: Descalvados, Mato Grosso, Brazil. Holotype: ANSP 53721.

Maximum length: 8.8 cm SL

Distribution: South America: Paraguay River basin in Brazil and Paraguay.

Countries: Brazil, Paraguay

Remarks and references: See Vari (1992b: 109) for detailed description.

***Cyphocharax gouldingi* Vari, 1992**

Cyphocharax gouldingi Vari, 1992b: 107, figs. 81-82. Type locality: Brazil, Amapá, Rio Cupixi, along road to Serra Navio, mouth of rainforest stream, approx. 0°40'N, 51°40'W. Holotype: MZUSP 41762.

Maximum length: 8.7 cm SL

Distribution: South America: Rivers of Amapá, and Capim, Tocantins, and lower Xingu River basins in Pará, Brazil, Yasuni River, eastern Ecuador.

Countries: Brazil, Ecuador

***Cyphocharax helleri* (Steindachner, 1910)**

Curimatus helleri Steindachner, 1910: 266. Type locality: Oberen Surinam [=Upper Suriname River, Suriname]. Type missing.

Curimatus vandeli Puyo, 1943: 145, fig. 3. Type locality: Une petite crique de la région du haut Marouni [=small creek in region of upper Marouni River, French Guiana]. Holotype: apparently lost.

Curimatopsis (Hemicurimata) esperanzae pijpersi Géry, 1965: 123, pl. 2 (fig. 18). Type locality: "Vier Gebroeders Creek", Paru Savannah, Sipaliwini River basin, Suriname. Holotype: ZMA 104.283.

Maximum length: 9.6 cm SL

Distribution: South America: Cuyuni River basin of eastern Venezuela, Atlantic drainages of Guyana, Suriname, French Guiana, and Cupixi River of Amapá State.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Remarks and references: See Vari (1992b: 32) for detailed description.

Common names: Branquinha (Brazil), Curimata (French Guiana), Yaya curimata (French Guiana)

***Cyphocharax laticlavus* Vari & Blackledge, 1996**

Cyphocharax laticlavus Vari & Blackledge, 1996: 109, fig. 1. Type locality: Ecuador, Provincia Napo, Río Yasuni basin, quebrada tributary to Río Jatuncocha (approx. 1 km upstream from Laguna Jatuncocha, 1°00'06"S, 75°31'36"W). Holotype: FMNH 101503.

Maximum length: 5.3 cm SL

Distribution: South America: Tributary to Jatuncocha Lagoon, Napo Province.

Countries: Ecuador

***Cyphocharax leucostictus* (Eigenmann & Eigenmann, 1889)**

Curimatus leucostictus Eigenmann & Eigenmann, 1889a: 425. Type locality: Rio Negro, Lago Alexo [=Brazil, Amazonas, Negro River, Lago do Aleixo]. Lectotype: MCZ 787, designated by Vari (1992b: 28).

Curimatus (Curimatella) xinguensis Steindachner, 1908: 167. Type locality: Rio Xingu, Brazil. Holotype: NMW 68817.

Maximum length: 10.5 cm SL

Distribution: South America: Amazon River basin and coastal drainages of Amapá State.

Countries: Brazil, Venezuela

Remarks and references: See Vari (1992b: 26) for detailed description.

***Cyphocharax magdalenae* (Steindachner, 1878)**

Curimatus magdalenae Steindachner, 1878: 90. Type locality: Magdalenaen-Stromes [Magdalena River, Colombia]. Lectotype: NMW 68873.1, designated by Vari (1992b: 58).

Pseudocurimata steindachneri Fernández-Yépez, 1948: 48, fig. 24. Type locality: Boca de Certegui, Hoya del Magdalena [=Colombia, Magdalena River, Truado]. Holotype: CAS 60623.

Maximum length: 15.1 cm SL

Distribution: South America: Magdalena and Atrato River basins, rivers of Pacific versant of Panama, and southwestern Costa Rica.

Countries: Colombia, Costa Rica, Panama

Remarks and references: See Vari (1992b: 56) for detailed description.

Common names: Campiniz (Colombia), Capani (Costa Rica), Madre de Bocochio (Colombia), Viejita (Colombia)

***Cyphocharax meniscaprorus* Vari, 1992**

Cyphocharax meniscaprorus Vari, 1992b: 105, fig. 79. Type locality: Venezuela, Bolívar, Río Aro, about 3 km downstream from bridge at Rt 19, about 85 km from Ciudad Bolívar (approx. 8°0'N, 64°15'W). Holotype: MBUCV V-20333.

Maximum length: 5.7 cm SL

Distribution: South America: Known only from the type locality, the Aro River of the Orinoco basin.

Countries: Venezuela

***Cyphocharax mestomyllon* Vari, 1992**

Cyphocharax mestomyllon Vari, 1992b: 77, fig. 54. Type locality: Brazil, Amazonas, Rio Negro basin, Rio Marauíá, Cachoeira de Bicho-Açu (approx. 0°20'S, 65°29'W). Holotype: MZUSP 41755.

Maximum length: 4.2 cm SL

Distribution: South America: Known only from the type locality, Cachoeira de Bicho-Açu along the Marauíá River, Negro River basin.

Countries: Brazil

***Cyphocharax microcephalus* (Eigenmann & Eigenmann, 1889)**

Curimatus microcephalus Eigenmann & Eigenmann, 1889a: 423. Type locality: Suriname. Lectotype: MCZ 785, designated by Vari (1992b: 56).

Maximum length: 16.9 cm SL

Distribution: South America: Atlantic drainages of Guyana, Suriname, and possibly French Guiana.

Countries: French Guiana (?), Guyana, Suriname

Remarks and references: See Vari (1992b: 54) for detailed description.

Cyphocharax modestus (Fernández-Yépez, 1948)

Curimantorbis modestus Fernández-Yépez, 1948: 43, fig. 21. Type locality: Isla Victoria, Sao Paulo, Brazil [=Brazil, São Paulo, Batalha River, tributary of Tietê River, near Bauru (Britski 1969: 201, 203)]. Holotype: CAS 20299.

Maximum length: 16.2 cm SL

Distribution: South America: Upper Paraná River basin and Paraguay River above Sete Quedas Falls.

Countries: Brazil, Paraguay

Remarks and references: See Vari (1992b: 82) for detailed description.

Common names: Saguiru (Brazil)

Cyphocharax multilineatus (Myers, 1927)

Curimatus multilineatus Myers, 1927: 109. Type locality: Brazil: Rio Negro, Bucury [=Bucuri]. Holotype: CAS 58605.

Maximum length: 10.9 cm SL

Distribution: South America: Upper Negro River in both Brazil and Venezuela and upper portions of Orinoco River in Venezuela.

Countries: Brazil, Venezuela

Remarks and references: See Vari (1992b: 38) for detailed description.

Cyphocharax nagelii (Steindachner, 1881)

Curimatus nagelii Steindachner, 1881a: 98. Type locality: Umgebung von Rio de Janeiro [=vicinity of Rio de Janeiro, Brazil; apparently erroneous (Vari, 1992b: 26)]. Holotype: NMW 68808.

Maximum length: 16.3 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

Remarks and references: See Vari (1992b: 23) for detailed description.

Cyphocharax nigripinnis Vari, 1992

Cyphocharax nigripinnis Vari, 1992b: 49, figs. 29-30. Type locality: Brazil, Roraima, Rio Branco, Praia do Xerui, approx. 1°00'S, 61°50'W. Holotype: MZUSP 42025.

Maximum length: 6.5 cm SL

Distribution: South America: Central and eastern portions of the Amazon River basin.

Countries: Brazil

Cyphocharax notatus (Steindachner, 1908)

Curimatus notatus Steindachner, 1908: 166. Type locality: Fischmarkt zu Pará [=Belém fish market, Pará, Brazil]. Holotype: NMW 75793.

Curimatus hermanni Ahl, 1931: 207. Type locality: Rio Capim (Pará, Brazil).

Maximum length: 12.3 cm SL

Distribution: South America: Tocantins, Amazon, and Capim River basins.

Countries: Bolivia, Brazil, Ecuador, Peru

Remarks and references: See Vari (1992b: 42) for detailed description.

Cyphocharax oenas Vari, 1992

Cyphocharax oenas Vari, 1992b: 121, fig. 93. Type locality: Venezuela, Territorio Federal Delta Amacuro, secondary caño off Caño Paloma, 92 nautical miles from sea buoy (8°28'00"N, 61°25'36"W). Holotype: MBUCV V-20336.

Maximum length: 4.8 cm SL

Distribution: South America: Central and eastern portions of the Orinoco River basin.

Countries: Venezuela

Cyphocharax pantostictos Vari & Barriga S., 1990

Cyphocharax pantostictos Vari & Barriga S., 1990: 551, fig. 1. Type locality: Ecuador, Napo, Laguna de Jatuncocha, 1°00'S,

75°29'W. Holotype: USNM 306594.

Maximum length: 9.8 cm SL

Distribution: South America: Western portions of Amazon River basin.

Countries: Ecuador, Peru

Remarks and references: See Vari (1992b: 30) for detailed description.

Cyphocharax platanus (Günther, 1880)

Curimatus platanus Günther, 1880: 12. Type locality: Río de la Plata, Argentina. Lectotype: BMNH 1878.5.16.59, designated by Vari (1992b: 23).

Maximum length: 13.4 cm SL

Distribution: South America: La Plata River basin other than for upper Paraná River above Sete Quedas Falls and upper Paraguay River.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: See Vari (1992b: 22) for detailed description.

Common names: Birú (Brazil)

Cyphocharax plumbeus (Eigenmann & Eigenmann, 1889)

Curimatus plumbeus Eigenmann & Eigenmann, 1889a: 425. Type locality: Lake Hyanuary [= Brazil, Amazonas, Paraná do Januari]. Lectotype: MCZ 31493, designated by Vari (1991b: 53).

Maximum length: 17.8 cm SL

Distribution: South America: Amazon and Tocantins River basins.

Countries: Bolivia, Brazil, Peru

Remarks and references: See Vari (1992b: 51) for detailed description.

Common names: Sabaru (Brazil)

Cyphocharax punctatus (Vari & Nijssen, 1986)

Curimata punctata Vari & Nijssen, 1986: 52, pl. 1 (figs. 1-4). Type locality: Suriname, Marowijne District, Marowijne River system, Litani River near Kawatop Village, 3°11'N, 54°12'W. Holotype: USNM 275000.

Maximum length: 4.3 cm SL

Distribution: South America: Apparently endemic to the Marowijne River basin.

Countries: French Guiana, Suriname

Remarks and references: See Vari (1992b: 63) for detailed description.

Cyphocharax saladensis (Meinken, 1933)

Curimatopsis saladensis Meinken, 1933: 71, fig. Type locality: Rio Salada und seine Nebenflüsse [=Salado River, affluent to Paraná River, Santa Fé region, Argentina]. Type missing.

Maximum length: 6.7 cm SL

Distribution: South America: Southern part of La Plata River basin and coastal drainages of Rio Grande do Sul and Santa Catarina States.

Countries: Argentina, Brazil, Paraguay

Remarks and references: See Vari (1992b: 71) for detailed description.

Common names: Birú (Brazil)

Cyphocharax santacatarinae (Fernández-Yépez, 1948)

Pseudocurimata santacatarinae Fernández-Yépez, 1948: 50, fig. 25. Type locality: Santa Catarina, Brazil [=Hansa, às margens do Rio Itajai, perto Blumenau, Estado de Santa Catarina; =Hansa, margin of Rio Itajai, near Blumenau, Estado de Santa Catarina, Brazil (Britski 1969: 203)]. Holotype: CAS 11581.

Curimata vari Gaye-Siessegger & Fricke, 1998: 3, fig. 1. Type locality: Rio Cubatao, 2 km above national hwy bridge, 27°41'30"S, 48°40'50"W, Santa Catarina, Brazil. Holotype: MCP 22105.

Maximum length: 20.1 cm SL

Distribution: South America: Coastal rivers of Paraná, Santa Catarina, and southern São Paulo States.

Countries: Brazil

Remarks and references: See Vari (1992b: 93) for detailed description.

Common names: Peixe-Duro (Brazil), Saguairú (Brazil), Saguaru (Brazil)

***Cyphocharax signatus* Vari, 1992**

Cyphocharax signatus Vari, 1992b: 67, fig. 47. Type locality: Brazil, Goiás, Rio Vermelho, where crossed by road from Aruanã to Britânia, pool along side of main channel. Holotype: MZUSP 41757.

Maximum length: 3.3 cm SL

Distribution: South America: Known only from the type locality, the Vermelho River, a tributary of the Araguaia River of the Tocantins River basin.

Countries: Brazil

***Cyphocharax spilotos* (Vari, 1987)**

Curimata spilota Vari, 1987: 603, fig. 1. Type locality: Brazil, Rio Grande do Sul, Rio Santa Maria, at bridge on highway BR-293 between Dom Pedrito and Livramento. Holotype: MZUSP 37133.

Curimata gnaca Azpelicueta & Braga, 1988: 118, fig. 1. Type locality: Pond of the Barrio Toba, a city district of Resistencia, Chaco Province, Argentina. Holotype: MLP 2-III-68-18.

Maximum length: 8.9 cm SL

Distribution: South America: Uruguay, lower Paraná, and Paraguay River basins.

Countries: Argentina, Brazil, Paraguay

Remarks and references: See Vari (1992b: 72) for detailed description.

***Cyphocharax spiluroopsis* (Eigenmann & Eigenmann, 1889)**

Curimatus spiluroopsis Eigenmann & Eigenmann, 1889a: 420. Type locality: Ica [=Iça River near Brazilian-Colombia border]. Lectotype: MCZ 20818, designated by Vari (1992b: 114).

Curimatus stigmaturus Fowler, 1914: 673. Type locality: Nauta, on the Marañon River, Peru. Holotype: ANSP 21424 (poor condition).

Curimata esperanzae Myers, 1929: 620. Type locality: Cachuela Esperanza, Río Beni, Bolivia. Lectotype: CAS 63049, designated by Vari (1992b: 120).

Curimatoides ucayalensis Fowler, 1940: 256, fig. 55. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68670.

Maximum length: 9 cm SL

Distribution: South America: Central and western portions of the Amazon River basin.

Countries: Bolivia, Brazil, Ecuador, Peru

Remarks and references: See Vari (1992b: 114) for detailed description

***Cyphocharax spilurus* (Günther, 1864)**

Curimatus spilurus Günther, 1864: 288. Type locality: Essequibo [=Essequibo River, Guyana]. Lectotype: BMNH 1864.1.21.70, designated by Vari (1992b: 101).

Curimatus surinamensis Steindachner, 1910: 267. Type locality: Oberen Surinam [=upper Suriname River, Suriname]. Type missing.

Maximum length: 10.4 cm SL

Distribution: South America: Cuyuni River in Guyana and eastern Venezuela; coastal rivers of the Guianas from the Essequibo River of Guyana to Mana River of French Guiana; upper Branco River in Brazil; possibly occurring in Orinoco and upper Negro rivers.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Remarks and references: See Vari (1992b: 100) for detailed description.

Common names: Branquinha (Brazil), Coumarou (French Guiana), Courimata (French Guiana), Cuticuru (Guyana), Maka Fisi (Suriname)

***Cyphocharax stilbolepis* Vari, 1992**

Cyphocharax stilbolepis Vari, 1992b: 20, figs. 4-5. Type locality: Brazil, Pará, Rio Xingu, Belo Monte (approx. 3°10'S, 5°50'W).

Holotype: MZUSP 41759.

Maximum length: 10.8 cm SL

Distribution: South America: Tocantins and Xingu River basins.

Countries: Brazil

***Cyphocharax vanderi* (Britski, 1980)**

Curimata vanderi Britski, 1980: 327, fig. 1. Type locality: Lagoa marginal do Rio Corumbataí, São Paulo (Brazil). Holotype: MZUSP 4325.

Maximum length: 6.8 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

Remarks and references: See Vari (1992b: 65) for detailed description.

***Cyphocharax vexillapinnus* Vari, 1992**

Cyphocharax vexillapinnus Vari, 1992b: 39, figs. 20-22. Type locality: Peru, Loreto, Río Itaya, main river

channel and mouth of caños entering river, 10 km upstream of Belén (Iquitos) (approx. 3°51'S, 73°12'W). Holotype:

USNM 296394.

Maximum length: 6.3 cm SL

Distribution: South America: Middle and upper portions of the Amazon River basin.

Countries: Brazil, Ecuador, Peru

***Cyphocharax voga* (Hensel, 1870)**

Curimatus voga Hensel, 1870: 78. Type locality: Rio dos Sinos bei S Leopoldo [=Dos Sinos River at São Leopoldo, Brazil]. Lectotype: ZMB 7472, designated by Vari (1992b: 81).

Curimatopsis maculatus Ahl, 1934: 240. Type locality: Argentinien [=Argentina]. Holotype: ZMB 20818.

Maximum length: 19.6 cm SL

Distribution: South America: Coastal rivers of Rio Grande do Sul and southern Santa Catarina States; Uruguay; Buenos Aires region and the rivers draining into La Plata River estuary; lower Paraná and Paraguay River basin.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: See Vari (1992b: 70) for detailed description.

POTAMORHINA

Potamorhina Cope, 1878: 675. Type species: *Curimatus (Anodus) pristigaster* Steindachner, 1876. Type by monotypy. Gender: feminine. Revised by Vari (1984a), with species descriptions, geographical distribution, and phylogenetic analysis.

Gasterotomus Eigenmann, 1910: 422. Type species: *Anodus latior* Spix & Agassiz, 1829. Type by original designation. Gender: masculine.

Suprasinelepicthys Fernández-Yépez, 1948: 35. Type species: *Curimatus laticeps* Valenciennes, 1850. Type by original designation. Gender: masculine.

***Potamorhina altamazonica* (Cope, 1878)**

Curimatus altamazonicus Cope, 1878: 684. Type locality: Peruvian Amazon. Lectotype: ANSP 21118, designated by Fowler (1906: 305).

Maximum length: 27 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Introduced into northeastern Brazil.
 Countries: Bolivia, Brazil, Colombia, Peru, Venezuela
 Remarks and references: See Vari (1984a: 19) for detailed description.
 Common names: Branquinha cabeça lisa (Brazil), Yahuarachi (Peru)

***Potamorhina laticeps* (Valenciennes, 1850)**

Curimatus laticeps Valenciennes in Cuvier & Valenciennes, 1850: 21, pl. 634. Type locality: Eaux douces des environs de la grande lagune de Maracaïbo [=freshwaters around Maracaibo Lake, Venezuela]. Lectotype: MNHN A.9772, designated by Vari (1984a: 26).

Maximum length: 25 cm SL
 Distribution: South America: Maracaibo Lake basin.
 Countries: Colombia, Venezuela
 Remarks and references: See Vari (1984a: 23) for detailed description.
 Common names: Manamana (Colombia), Manamana (Venezuela)

***Potamorhina latior* (Spix & Agassiz, 1829)**

Anodus latior Spix & Agassiz, 1829: 62, pl. 41. Type locality: Brasiliae aequatorialis fluviis [=rivers of equatorial Brazil]. No types known.

Maximum length: 20.5 cm SL
 Distribution: South America: Amazon River basin.
 Countries: Bolivia, Brazil, Colombia, Peru
 Remarks and references: See Vari (1984a: 29) for detailed description.
 Common names: Branquinha comum (Brazil), Yahuarachi (Peru)

***Potamorhina pristigaster* (Steindachner, 1876)**

Curimatus (Anodus) pristigaster Steindachner, 1876: 73, pl. 6. Type locality: Mündung des Río Negro, Tefé [=mouth of Negro River and Tefé, Amazonas, Brazil]. Lectotype: NMW 66920, designated by Vari (1984a: 19).

Maximum length: 21.9 cm SL
 Distribution: South America: Amazon River basin.
 Countries: Brazil, Peru
 Remarks and references: See Vari (1984a: 17) for detailed description.
 Common names: Yahuarachi (Peru)

***Potamorhina squamoralevis* (Braga & Azpelicueta, 1983)**

Semítapiscis squamoralevis Braga & Azpelicueta, 1983: 140, figs. 1-2. Type locality: Río Paraná, Rosario (Santa Fe), Argentina. Holotype: MLP 29-V-40-52.

Maximum length: 23.4 cm SL
 Distribution: South America: Paraguay and Paraná River basins.
 Countries: Argentina, Brazil, Paraguay, Uruguay
 Remarks and references: See Vari (1984a: 26) for detailed description.

PSECTROGASTER

Psectrogaster Eigenmann & Eigenmann, 1889b: 7. Type species: *Psectrogaster rhomboides* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: feminine. Revised by Vari (1989c), with species descriptions, geographical distribution, and phylogenetic analysis.

Hamatichthys Fernández-Yépez, 1948: 33. Type species: *Anodus ciliatus* Müller & Troschel, 1845. Type by original designation. Gender: masculine.

Pseudopsectrogaster Fernández-Yépez, 1948: 31. Type species: *Psectrogaster curviventris* Eigenmann & Kennedy, 1903. Type by original designation. Gender: feminine.

Semelcarinata Fernández-Yépez, 1948: 59. Type species: *Curimatus ignathus* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: feminine.

***Psectrogaster amazonica* Eigenmann & Eigenmann, 1889**

Psectrogaster amazonica Eigenmann & Eigenmann, 1889a: 413. Type locality: Tefé, Ica, Tabatinga, Obidos, Fonteboa, Lago Alexo, Jutahy, Tonantins, Santarem, Hyavary, Curupira [=Tefe, Iça River, Tabatinga, Óbidos, Fonte Boa, Lago do Aliexo, Jutaf, Tonantins, Santarém, Javari River, and Lago Curupira, Brazil]. Lectotype: MCZ 20312, designated by Vari (1989c: 34).

Maximum length: 16.7 cm SL
 Distribution: South America: Tocantins and Amazon River basins.
 Countries: Brazil, Ecuador, Peru
 Remarks and references: See Vari (1989c: 31) for detailed description.
 Common names: Branquinha comun (Brazil), Cascudinha (Brazil), Chico-duro (Brazil), Chio chio (Peru)

***Psectrogaster ciliata* (Müller & Troschel, 1844)**

Anodus ciliatus Müller & Troschel, 1844: 84. Type locality: Guiana, aus dem see Amucu [=Lake Amucu, Guiana]. Holotype: ZMB 3828.

Maximum length: 12.9 cm SL
 Distribution: South America: Essequibo, Orinoco, and Branco River basins, central portion of Amazon River basin.
 Countries: Brazil, Colombia, Guyana, Venezuela
 Remarks and references: See Vari (1989c: 17) for detailed description.

***Psectrogaster curviventris* Eigenmann & Kennedy, 1903**

Psectrogaster curviventris Eigenmann & Kennedy, 1903: 509. Type locality: Asuncion, Río Paraguay, Paraguay. Holotype: CAS 57145.

Curimata pearsoni Myers, 1929: 621. Type locality: Cachuela Esperanza, Río Beni, Bolivia. Holotype: CAS 57147.

Psectrogaster rhomboides australis Risso & Sánchez, 1964: 7, pl. 1. Type locality: Laguna de los alrededores de Resistencia, Argentina. Holotype: Mus. Cienc. Nat. del Chaco 37/60.

Maximum length: 17.1 cm SL
 Distribution: South America: Paraguay and southern portions of Madeira River basins.
 Countries: Argentina, Bolivia, Brazil, Paraguay
 Remarks and references: See Vari (1989c: 27) for detailed description.
 Common names: Sabalina (Bolivia)

***Psectrogaster essequibensis* (Günther, 1864)**

Curimatus essequibensis Günther, 1864: 291. Type locality: Essequibo [=Essequibo River, Guyana]. Lectotype: BMNH 1864.1.21.61, designated by Vari (1989c: 15).

Maximum length: 16.9 cm SL
 Distribution: South America: Essequibo and Amazon River basins.
 Countries: Bolivia, Brazil, Guyana, Peru
 Remarks and references: See Vari (1989c: 13) for detailed description.

***Psectrogaster falcata* (Eigenmann & Eigenmann, 1889)**

Curimatus falcatus Eigenmann & Eigenmann, 1889a: 430. Type locality: Xingu, Gurupa [=Xingu River, Gurupa, Brazil]. Lectotype: MCZ 20340, designated by Vari (1989c: 13).

Maximum length: 16.8 cm SL
 Distribution: South America: Lower portions of Amazon River basin.
 Countries: Brazil
 Remarks and references: See Vari (1989c: 15) for detailed description.

***Psectrogaster rhomboides* Eigenmann & Eigenmann,**

1889

Psectrogaster rhomboides Eigenmann & Eigenmann, 1889b: 7. Type locality: Rio Putz, San Goncallo [Poti River at Teresina, Parnaíba River at Amarante, Brazil]. Lectotype: MCZ 20306, designated by Vari (1989c: 36).

Maximum length: 17.8 cm SL

Distribution: South America: Parnaíba and Jaguaribe River basins. Countries: Brazil

Remarks and references: See Vari (1989c: 34) for detailed description.

***Psectrogaster rutiloides* (Kner, 1858)**

Curimatus rutiloides Kner, 1858: 76. Type locality: Matogrosso, Barra do Rio Negro [=Mato Grosso and Manaus, Brazil]. Lectotype: NMW 75980.2, designated by Vari (1989c: 25,27).

Curimatus isognathus Eigenmann & Eigenmann, 1889a: 428. Type locality: Lago Alexo, Ica, Manacapuru, San Paulo [=Lago do Aleixo, Iça River, near Brazilian-Colombian border, Lago Grande de Manacapuru, Solimões River at San Paulo de Olivença, Brazil]. Lectotype: MCZ 20314, designated by Vari (1989c: 23).

Psectrogaster auratus Gill, 1896: 201. Type locality: Bolivia. Holotype: USNM 5878.

Maximum length: 14.3 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Colombia, Peru

Remarks and references: See Vari (1989c: 23) for detailed description.

Common names: Branquinha cascuda (Brazil), Chio chio (Peru)

***Psectrogaster saguiru* (Fowler, 1941)**

Curimata saguiru Fowler, 1941: 164, fig. 77. Type locality: Lago Papary [=Lago Papari], Rio Grande do Norte, Brazil. Holotype: ANSP 69461.

Maximum length: 16.4 cm SL

Distribution: South America: Northeastern Brazil.

Countries: Brazil

Remarks and references: See Vari (1989c: 21) for detailed description.

PSEUDOCURIMATA

Pseudocurimata Fernández-Yépez, 1948: 45. Type species: *Curimatus lineopunctatus* Boulenger, 1911. Type by original designation. Gender: feminine. Revised by Vari (1989d), with species descriptions, geographical distribution, and phylogenetic analysis.

***Pseudocurimata boehlkei* Vari, 1989**

Pseudocurimata boehlkei Vari, 1989d: 21, figs. 15-17. Type locality: Ecuador, Esmeraldas, Esteros La Bocana del Cupa 100 m below Puerto Cupa, Río Esmeraldas basin (0°26'N, 79°26'W). Holotype: USNM 287745.

Maximum length: 10.9 cm SL

Distribution: South America: Esmeraldas and Santiago River basins.

Countries: Ecuador

***Pseudocurimata boulengeri* (Eigenmann, 1907)**

Curimatus guentheri Boulenger, 1898: 4. Type locality: Río Vinces (Ecuador). Lectotype: BMNH 1898.11.42.50, designated by Vari (1989d: 17). Preoccupied by *Curimatus guentheri* Eigenmann & Eigenmann, 1889, and replaced by *Curimatus boulengeri* Eigenmann, 1907 (also *Curimatus boulengeri* Pellegrin, 1908).

Curimatus boulengeri Eigenmann, in Eigenmann & Ogle, 1907: 3. Type locality: Río Vinces (Ecuador). Replacement name for *Curimatus guentheri* Boulenger, 1898, preoccupied by *Curimatus guentheri* Eigenmann & Eigenmann, 1889.

Curimatus boulengeri Pellegrin, 1908: 343 (footnote). Type locali-

ty: Río Vinces (Ecuador). Replacement for *Curimatus guentheri* Boulenger, 1898, preoccupied by *Curimatus guentheri* Eigenmann & Eigenmann, 1889; replaced earlier with same name by Eigenmann in Eigenmann & Ogle (1907).

Maximum length: 14.6 cm SL

Distribution: South America: Rivers draining into the northern portion of the Gulf of Guayaquil.

Countries: Ecuador

Remarks and references: See Vari (1989d: 17) for detailed description.

***Pseudocurimata lineopunctata* (Boulenger, 1911)**

Curimatus lineopunctatus Boulenger, 1911: 213. Type locality: Novita, Río Tamana, Choco Department, 150-200 ft., southwestern Colombia. Lectotype: BMNH 1910.7.11.159, designated by Vari (1989d: 14).

Maximum length: 11.4 cm SL

Distribution: South America: San Juan, Dagua and Atrato rivers of Colombia and rivers of northeastern Esmeraldas Province in Ecuador.

Countries: Colombia, Ecuador

Remarks and references: See Vari (1989d: 11) for detailed description.

***Pseudocurimata patiae* (Eigenmann, 1914)**

Curimatus patiae Eigenmann in Eigenmann, Henn & Wilson, 1914: 12. Type locality: Barbacoas [=Telembi River, Barbacoas, Lower Patia River system, Colombia]. Holotype: FMNH 56554.

Maximum length: 12.5 cm SL

Distribution: South America: Patia River basin.

Countries: Colombia

Remarks and references: See Vari (1989d: 14) for detailed description.

***Pseudocurimata peruana* (Eigenmann, 1922)**

Curimatus peruanus Eigenmann, 1922: 104, pl. 18 (fig. 4). Type locality: Sullana, Peru [=Chira River at Sullana, Peru]. Holotype: CAS 41722.

Maximum length: 12.7 cm SL

Distribution: South America: Chira and Piura River basins.

Countries: Peru

Remarks and references: See Vari (1989d: 15) for detailed description.

***Pseudocurimata troschelii* (Günther, 1860)**

Anodus troschelii Günther, 1860: 418. Type locality: Western Andes of Ecuador. Lectotype: BMNH 1860.6.16.173, designated by Vari (1989d: 20).

Curimatus brevipes Eigenmann & Ogle, 1907: 3, fig. 1. Type locality: Peru? [locality uncertain, probably Pacific coast drainages, Vari (1989d: 20)]. Holotype: USNM 35333.

Curimatus aureus Pellegrin, 1908: 342. Type locality: Río Guayas (Ecuador) [=Ecuador]. Lectotype: MNHN A.9774, designated by Vari (1989d: 20).

Maximum length: 15.5 cm SL

Distribution: South America: Rivers draining into Gulf of Guayaquil, and Zarumilla and Tumbes rivers in northern Peru.

Countries: Ecuador, Peru

Remarks and references: See Vari (1989d: 18) for detailed description.

STEINDACHNERINA

Steindachnerina Fowler, 1906: 298. Type species: *Curimatus trachystethus* Cope, 1878. Type by original designation. Gender: feminine. Revised by Vari (1991) with species descriptions, geographical distribution, and phylogenetic analysis.

Cruxentina Fernández-Yépez, 1948: 52. Type species: *Curimata hypostoma hastata* Allen, 1942. Type by original designation. Gender: feminine.

Curimatorbis Fernández-Yépez, 1948: 42. Type species: *Curimata atratoensis* Eigenmann, 1912. Type by original designation. Gender: masculine.

Rivasella Fernández-Yépez, 1948: 56. Type species: *Curimatus melaniris* Fowler, 1940. Type by original designation. Gender: feminine.

***Steindachnerina amazonica* (Steindachner, 1911)**

Curimatus elegans amazonica Steindachner, 1911: 330. Type locality: Rio Tocantins (Amazonas, Brazil). Lectotype: NMW 66988, designated by Vari (1991: 82).

Maximum length: 9.9 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Remarks and references: See Vari (1991: 80) for detailed description.

***Steindachnerina argentea* (Gill, 1858)**

Curimatus argenteus Gill, 1858: 422. Type locality: Western portion of the island of Trinidad, W.I. [=West Indies]. Lectotype: USNM 1114, designated by Vari (1991: 41).

Maximum length: 9.3 cm SL

Distribution: South America: Orinoco River basin, Caribbean versant rivers of Venezuela, Trinidad.

Countries: Colombia, Trinidad and Tobago, Venezuela

Remarks and references: See Vari (1991: 37) for detailed description.

Common names: Hump-backed sardine (Trinidad and Tobago), Silverfish (Trinidad and Tobago), Stout sardine (Trinidad and Tobago)

***Steindachnerina atratoensis* (Eigenmann, 1912)**

Curimatus atratoensis Eigenmann, 1912: 19. Type locality: Quibdo, Colombia. Holotype: FMNH 56024.

Maximum length: 8.3 cm SL

Distribution: South America: Atrato River basin.

Countries: Colombia

Remarks and references: See Vari (1991: 61) for detailed description.

***Steindachnerina bimaculata* (Steindachner, 1876)**

Curimatus bimaculatus Steindachner, 1876: 76. Type locality: Hyavary, Mündung des Rio Negro [=Javari River, tributary of Solimões River at Peru-Brazil border and mouth of Negro River]. Lectotype: MCZ 20232, designated by Vari (1991: 48).

Curimatus trachystethus Cope, 1878: 684. Type locality: Peruvian Amazon. Holotype: ANSP 21470.

Curimatus bimaculatus sialis Eigenmann & Eigenmann, 1889a: 422. Type locality: Manacapuru [=Lago Manacapuru, Brazil]. Lectotype: USNM 120401, designated by Vari (1991: 49).

Prochilodus pterostigma Fowler, 1913: 520, fig. 3. Type locality: Madeira River, about twenty 20 miles north of Porto Velho, Brazil. Holotype: ANSP 39187.

Curimatus semiornatus Steindachner, 1914: 262. Type locality: Mündung des Rio Negro [=mouth of Negro River, Brazil]. Lectotype: NMW 67102, designated by Vari (1991: 50).

Curimata melaniris Fowler, 1940: 253, fig. 54. Type locality: Ucayali River basin, Boca Chica, Peru. Holotype: ANSP 68669.

Maximum length: 13.3 cm SL

Distribution: South America: Amazon and lower Orinoco River basins.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru, Venezuela

Remarks and references: See Vari (1991: 46) for detailed description.

***Steindachnerina binotata* (Pearson, 1924)**

Curimatus binotatus Pearson, 1924: 28, pl. 9 (fig. 1). Type locality: Rurrenabaque (Bolivia). Holotype: CAS 60627.

Maximum length: 13.3 cm SL

Distribution: South America: Western portions of Amazon River

basin.

Countries: Bolivia, Peru

Remarks and references: See Vari (1991: 36) for detailed description.

***Steindachnerina biornata* (Braga & Azpelicueta, 1987)**

Curimata biornata Braga & Azpelicueta, 1987: 466, figs. 1-2. Type locality: Arroyo Juan Blanco, tributary of Río de la Plata, Municipality of Magdalena, Buenos Aires Province, Argentina (approx. 35°11'S, 57°24'W). Holotype: MLP 10-I-50-13.

Curimata stigmata Vari, 1987: 606, fig. 3. Type locality: Brazil, Rio Grande do Sul, Rio Jacuí, at bridge on the road between Santa Maria and Veracruz (approx. 29°41'S, 53°19'W). Holotype: MZUSP 37135.

Maximum length: 7.3 cm SL

Distribution: South America: Atlantic coastal drainages of Rio Grande do Sul State; Uruguay; Uruguay River in Santa Catarina State; and lower Paraná and Paraguay rivers.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: See Vari (1991: 51) for detailed description.

***Steindachnerina brevipinna* (Eigenmann & Eigenmann, 1889)**

Curimatus gilberti brevipinnis Eigenmann & Eigenmann, 1889a: 424. Type locality: Rosario (La Plata) [=Rosario, La Plata River system, Santa Fé, Argentina]. Holotype: MCZ 789.

Curimatus nitens Holmberg, 1891: 184. Type locality: República Argentina, Río Paraguay. No types known.

Curimatus nigrotaenia Boulenger, 1902: 285. Type locality: Rio Coxipo, Mato Grosso (Brazil). Lectotype: BMNH 1902.2.10.30, designated by Vari (1991: 100).

Maximum length: 10.9 cm SL

Distribution: South America: Paraguay, lower Paraná, and lower Uruguay River basins.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: See Vari (1991: 97) for detailed description.

***Steindachnerina conspersa* (Holmberg, 1891)**

Curimatus conspersus Holmberg, 1891: 185. Type locality: República Argentina, Río Paraguay, al pie de Formosa. No types known.

Maximum length: 12.8 cm SL

Distribution: South America: Paraguay River basin.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: See Vari (1991:42) for detailed description.

***Steindachnerina dobula* (Günther, 1868)**

Curimatus dobula Günther, 1868: 479. Type locality: Huallaga [=Huallaga River, Peru]. Lectotype: BMNH 1867.6.13.55, designated by Vari (1991: 69).

Curimatus nasus Steindachner, 1882b: 142. Type locality: Canelos, Ecuador. Lectotype: NMW 68900.1, designated by Vari (1991: 69).

Prochilodus stigmaturus Fowler, 1911: 494, fig. 1. Type locality: Affluent of the Chimbo River near Bucay, Province of Guayas, Ecuador [stated type locality erroneous, probably from eastern slope of Andes (Vari, 1991: 66)]. Holotype: ANSP 39104.

Curimata hypostoma hastata Allen, in Eigenmann & Allen, 1942: 297. Type locality: Río Pichis, Puerto Bermudez (Peru). Holotype: CAS 19881.

Curimata niceforoi Fowler, 1943: 224, figs. 1-3. Type locality: Florencia, Colombia [=Orteguasa River, Florencia, Caquetá Department, Colombia]. Holotype: ANSP 70490.

Maximum length: 16.3 cm SL

Distribution: South America: Western portions of the Amazon

River basin.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru

Remarks and references: See Vari (1991: 66) for detailed description.

***Steindachnerina elegans* (Steindachner, 1874)**

Curimatus elegans Steindachner, 1874: 529. Type locality: Rio Arassuahy, ein neben fluss des Jequitinhonha in der Provinz Minas Gerais [=Araçuaí River, tributary of Jequitinhonha River, Minas Gerais, Brazil]. Lectotype: NMW 67001.1, designated by Vari (1991: 95).

Curimatus elegans bahiensis Eigenmann & Eigenmann, 1889a: 421. Type locality: Bahia [=Salvador and environs, Bahia, Brazil]. Lectotype: MCZ 20325, designated by Vari (1991: 96).

Maximum length: 10.6 cm SL

Distribution: South America: Pardo and Jequitinhonha rivers in Bahia and Minas Gerais States, São Francisco River basin, and coastal rivers of Bahia State.

Countries: Brazil

Remarks and references: See Vari (1991: 92) for detailed description.

Common names: Biruba (Brazil)

***Steindachnerina fasciata* (Vari & Géry, 1985)**

Curimata fasciata Vari & Géry, 1985: 1030, fig. 1. Type locality: Rio Romari (or São Domingo) near Nova União, Municipality of Ouro Preto do Oeste, Território de Rondônia, 10°53'17"S, 62°33'35"W, Brazil. Holotype: MNRJ 11208.

Maximum length: 9.6 cm SL

Distribution: South America: Upper portions of the eastern drainages of the Madeira River basin.

Countries: Brazil

Remarks and references: See Vari (1991: 63) for detailed description.

***Steindachnerina gracilis* Vari & Vari, 1989**

Steindachnerina gracilis Vari & Vari, 1989: 474, figs. 1d, 5. Type locality: Brazil, Goiás, Rio Araguaia, Araunã, approx. 14°54'S, 51°05'W. Holotype: MZUSP 4847.

Maximum length: 7.3 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Remarks and references: See Vari (1991: 55) for detailed description.

***Steindachnerina guentheri* (Eigenmann & Eigenmann, 1889)**

Curimatus guentheri Eigenmann & Eigenmann, 1889a: 423. Type locality: Tabatinga (Amazonas, Brazil). Holotype: MCZ 20245.

Curimatus morawhanna Eigenmann, 1912: 266, pl. 34 (fig. 3). Type locality: Morawhanna, British Guiana [=Guyana]. Holotype: FMNH 53650.

Curimatus issororoensis Eigenmann, 1912: 266, pl. 34 (fig. 4). Type locality: Issoror Rubber Plantation, British Guiana [=Guyana]. Holotype: FMNH 53647.

Curimatus metae Eigenmann, 1922: 230, pl. 17 (fig. 1). Type locality: Quebrada Cramalote, Villavicencio, Colombia. Holotype: FMNH 55143.

Curimata robustula Allen in Eigenmann & Allen, 1942: 298. Type locality: creek, Yurimaguas (Loreto, Peru). Lectotype: CAS 63052, designated by Vari (1991: 87).

Maximum length: 11.1 cm SL

Distribution: South America: Northeastern Guyana, Orinoco River basin, western Amazon River basin.

Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru, Venezuela

Remarks and references: See Vari (1991: 83) for detailed description.

***Steindachnerina hypostoma* (Boulenger, 1887)**

Curimatus hypostoma Boulenger, 1887: 172. Type locality: Ucayali River [=Ucayali River, Peru]. Lectotype: BMNH 1881.5.13.105, designated by Vari & Vari (1989: 473).

Maximum length: 9.8 cm SL

Distribution: South America: Central and western portions of the Amazon River basin.

Countries: Bolivia, Brazil, Peru

Remarks and references: See Vari (1991: 53) for detailed description.

Common names: Chio-chio (Peru)

***Steindachnerina insculpta* (Fernández-Yépez, 1948)**

Cruxentina insculpta Fernández-Yépez, 1948: 53, figs. 27-28. Type locality: Rio Tatuhy, Sao Paulo, Brasil [=Tatuí River, Estado de São Paulo, Brazil]. Holotype: CAS 20312.

Maximum length: 10.6 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

Remarks and references: See Vari (1991: 71) for detailed description.

***Steindachnerina leucisca* (Günther, 1868)**

Curimatus leuciscus Günther, 1868b: 479. Type locality: Huallaga [=Huallaga River, Peru]. Lectotype: BMNH 1867.6.13.53.

Curimatus leuciscus boliviae Eigenmann & Ogle, 1907: 4. Type locality: Bolivia [=Mamoré River, Bolivia]. Holotype: USNM 44832.

Allenina pectinata Fernández-Yépez, 1948: 40, fig. 19. Type locality: Maracapuru, Brasil [=Lago Grande de Manacapuru, Brazil]. Holotype: CAS 57149.

Maximum length: 15.1 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Peru

Remarks and references: See Vari (1991: 32) for detailed description.

Common names: Julilla (Peru)

***Steindachnerina notonota* (Miranda Ribeiro, 1937)**

Curimatus notonotus Miranda Ribeiro, 1937: 55. Type locality: Rio Granjeiro, Ceará, Brazil. Lectotype: MNRJ 2611, designated by Vari (1991: 92).

Maximum length: 9.8 cm SL

Distribution: South America: Coastal rivers of northeastern Brazil.

Countries: Brazil

Remarks and references: See Vari (1991: 89) for detailed description.

Common names: Piabussú (Brazil), Saburú (Brazil)

***Steindachnerina planiventris* Vari & Vari, 1989**

Steindachnerina planiventris Vari & Vari, 1989: 479, figs. 1C, 11. Type locality: Brazil, Rondônia, Rio Machado, near mouth (approx. 8°03'S, 62°53'W). Holotype: MZUSP 38587.

Maximum length: 8.7 cm SL

Distribution: South America: Negro, Branco, and middle portions of Amazon River basins.

Countries: Bolivia, Brazil

Remarks and references: See Vari (1991: 59) for detailed description.

***Steindachnerina pupula* Vari, 1991**

Steindachnerina pupula Vari, 1991: 77, figs. 54-56. Type locality: Venezuela, Guarico, small caño draining into Río Orinoco, approximately 1 km upstream of mouth of Río Zuata. Holotype: MBUCV V-19300.

Maximum length: 9.9 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

***Steindachnerina quasimodoi* Vari & Vari, 1989**

Steindachnerina quasimodoi Vari & Vari, 1989: 476, figs. 6-7.
Type locality: Peru, Loreto, Río Javarí, near Petropolis. Holotype: USNM 293041.

Maximum length: 12.3 cm SL

Distribution: South America: Western portions of Amazon River basin.

Countries: Brazil, Peru

Remarks and references: See Vari (1991: 57) for detailed description.

***Steindachnerina varii* Géry, Planquette & Le Bail, 1991**

Steindachnerina varii Géry, Planquette & Le Bail, 1991: 32, pl. 8 (fig. 2). Type locality: Bassin du Maroni, Crique Awahakiki, French Guiana. Holotype: MHNG 2435.76.

Steindachnerina runa Vari, 1991: 75, figs. 50-53. Type locality: Suriname, Brokopondo, Morawijne or Gran Creek, 63 km S of Afobaka. Holotype: ZMA 120.501.

Maximum length: 9.4 cm SL

Distribution: South America: Coastal rivers of northeastern South America between the Suriname and Oyapock rivers.

Countries: Brazil, French Guiana, Suriname

Family Prochilodontidae (Flannel mouth characiforms)

Ricardo M. C. Castro and Richard P. Vari

Members of the family Prochilodontidae can be readily distinguished from other fishes, except as larvae, by their fleshy lips equipped with two series of numerous, relatively small, falciform or spatulate teeth, movably attached to the lips. Upon protraction these lips form an oral disk encircled by teeth. The two tooth rows in each jaw are variably separated from each other proximate to the symphysis, but converge towards the lateral margins of each jaw. Prochilodontids are moderate to large sized, robust fishes (reaching up to 74 cm TL in *Prochilodus lineatus*, Sverlij et al., 1993) with relatively large scales, fleshy to very fleshy lips (particularly in *Ichthyoelephas*). The dorsal fin is preceded by a procumbent spine which is either bifurcate (*Prochilodus* and *Semaprochilodus*) or pointed (*Ichthyoelephas*) anteriorly. The anal and caudal fins in *Semaprochilodus* species exhibit pronounced stripes across, other than for very large individuals. Although the three genera are readily distinguished externally, the external morphology of most species in each genus is relatively constant and many species can be difficult to tell apart.

Prochilodontids are limited to South America and occur to the west of the Andes in the Lago Maracaibo basin of Colombia and Venezuela, the Caribbean versant rivers of northwestern Colombia and the Pacific slope rivers of northwestern and southwestern Ecuador. East of the Andes, prochilodontids occur in the Orinoco, Amazon, Tocantins, La Plata River basins, the coastal rivers of the Guianas, the São Francisco River and the other coastal rivers of eastern Brazil, and the northern portions of the Laguna dos Patos basin of southern Brazil. Prochilodontids inhabit diverse habitats ranging from still ox-bow lakes, through flowing major rivers, to moderately rapid streams in piedmont regions and occur in black, clear, and white water.

All prochilodontids exploit detritus and aufwuchs (periphyton) on subaquatic surfaces (Araújo-Lima et al., 1986; Bowen, 1984; Bowen et al., 1984). The prevalence of these resources both in permanent fresh waters (Flecker, 1996) and the seasonally-flooded rain forest (Goulding et al., 1988) most probably accounts for the prominence of prochilodontids in Neotropical freshwaters (e.g., lower Paraná River basin where *Prochilodus lineatus* accounts for over 60% of total ichthyomass; Bonetto, 1975, 1994). As a consequence of their detritus feeding habits and large populations, prochilodontids play a significant role in energy flow within the aquatic systems which they inhabit (Jepsen et al., 1997; Winemiller, 1996) and are functionally dominant in some aquatic ecosystems (Flecker, 1996). Species of the Prochilodontidae undertake dramatic mass migrations associated with feeding and reproduction (Goulding, 1981; Ribeiro and Petrere, 1990), with some individuals traveling minimally nearly 1500 km between their mark and recapture (Sverlij et al., 1993) with daily movements of up to 43 km (de Godoy, 1975). Prochilodontids are famous for their ability to overcome obstacles encountered during migrations by strenuous swimming and dramatic leaps of several meters (Goulding, 1981; Patiño R., 1973).

The species-level taxonomy of the Prochilodontidae has long been pervaded by uncertainty (Mago-Leccia, 1972) as a consequence of various factors intrinsic (overall similarity of different species) and extrinsic (e.g., uninformative original descriptions and loss of type series) to the species. Mago-Leccia (1972) reviewed the prochilodontid species that occur in Venezuela. Subsequently, Castro (1988, 1993) described two previously undescribed species. The taxonomy of all species of the Prochilodontidae was evaluated in an unpublished thesis (Castro, 1990) and in an ongoing revisionary and phylogenetic analysis (Castro and Vari, in press.). The entries for the species in the following account are derived from the information in those two studies. Based on our results we expect that future research is unlikely to reveal many additional undescribed species in the family.

Members of all genera of the Prochilodontidae are very important in both commercial and subsistence fisheries across the range of the family. In the lower Negro River of Brazil, over 90 percent of the commercial catch consists of two *Semaprochilodus* species (Goulding et al., 1988) and prochilodontids are becoming progressively more important in the commercial fisheries of the central portion of the Amazon basin (Ribeiro and Petrere, 1990). Sverlij et al. (1993) report that *Prochilodus lineatus* constitutes 40% of the total fishery in the Paraná River, 86% of the fishery in the La Plata River, and 95% of the fishery in the Uruguay River. Other prochilodontid species are similarly important in the commercial and subsistence fisheries of Colombia (Dahl, 1971; Sánchez, M. et al., 2000), Venezuela (Espinosa and Gimenez, 1974; Novoa R. et al., 1982), and other countries (Welcomme, 1979). The importance of the Prochilodontidae in commercial and subsistence fisheries across the range of the family is also reflected in the numerous studies involving the induced spawning and captive rearing of members of the family (e.g., Antoniutti et al., 1995; Bustamente-Varón et al., 1997; and references therein).

ICHTHYOELEPHAS

Ichthyoelephas Posada, 1909: 300. Type species: *Ichthyoelephas patalo* Posada, 1909. Type by monotypy. Gender: masculine.

Ichthyoelephas humeralis (Günther, 1860)

Prochilodus humeralis Günther, 1860: 419. Type locality: Western Andes of Ecuador.

Maximum length: 24 cm SL

Distribution: South America: Guayas and Santiago River basins.

Countries: Ecuador

Remarks and references: See Böhlke (1958: 109-112) for description.

Common names: Bocachico (Ecuador), Bocochoico (Ecuador), Guavina (Ecuador), Ratón (Ecuador)

Ichthyoelephas longirostris (Steindachner, 1879)

Prochilodus longirostris Steindachner, 1879c: 195. Type locality: Cauca [= Cauca River, Colombia].

Ichthyoelephas patalo Posada, 1909: 300, 2 text-figs. on 301. Type locality: Colombia, Samana [= Samana River]. No types known.

Maximum length: 80 cm TL

Distribution: South America: Cauca-Magdalena River basin.

Countries: Colombia

Remarks and references: Species definition and distribution based on personal observation and examination of types.

Common names: Besote (Colombia), Besugo (Colombia), Getudo (Colombia), Hocicón (Colombia), Jetón (Colombia), Moreno (Colombia), Pataló (Colombia)

PROCHILODUS

Prochilodus Agassiz, in Spix & Agassiz, 1829: 62. Type species: *Prochilodus argenteus* Agassiz, 1829. Type by subsequent designation. Gender: masculine.

Pacu Cuvier, 1829: 309. Type species: *Prochilodus argenteus* Agassiz, 1829. Type by subsequent designation (Eigenmann 1910: 424). Gender: masculine.

Pacu Agassiz in Spix & Agassiz, 1829: 62. Type species: *Pacu argenteus* Agassiz, 1829. Gender: masculine.

Paca Valenciennes, 1836: pl. 8 (fig. 3). Type species: *Paca lineatus* Valenciennes, 1836. Type by monotypy. Gender: masculine. Misspelling of *Pacu* Agassiz, 1829.

Chilomyzon Fowler, 1906: 309. Type species: *Prochilodus steindachneri* Fowler, 1906. Type by original designation. Gender: masculine.

Prochilodus argenteus Agassiz, 1829

Prochilodus argenteus Agassiz in Spix & Agassiz, 1829: 63, pl. 38. Type locality: S. Francisci [=São Francisco River, Brazil].

Maximum length: 44 cm SL

Distribution: South America: Originally endemic to São Francisco River basin, but introduced into various rivers of northeastern Brazil.

Countries: Brazil

Remarks and references: Species definition and distribution based on personal observation and examination of types.

Common names: Curimatá-pacú (Brazil), Curimatã-pacu (Brazil)

Prochilodus brevis Steindachner, 1875

Prochilodus brevis Steindachner, 1875: 536, pl. 6. Type locality: Flüsse im der Umgebung von Bahia [=Rivers in the vicinity of Bahia, Brazil].

Prochilodus cearaensis Steindachner, 1911: 329. Type locality: Flüsschen bei Ipú im Staate Ceará [=River in Ipú, Ceará, Brazil].

Maximum length: 27 cm SL

Distribution: South America: Small to mid-sized coastal rivers of northeastern Brazil.

Countries: Brazil

Remarks and references: Species definition, synonymy, and distribution based on personal observation and examination of types.

based on personal observation and examination of types.

Common names: Curimatá-comun (Brazil)

Prochilodus britskii Castro, 1993

Prochilodus britskii Castro, 1993: 58, fig. 1. Type locality: Brazil, Mato Grosso, Rio Apiacá (tributary of Rio Arinos, Rio Tapajós basin) N of city of Juará, upriver from a fall (~10°36'S, 58°04'W). Holotype: MZUSP 41519.

Maximum length: 23.8 cm SL

Distribution: South America: Apiacá River basin in Mato Grosso State.

Countries: Brazil

Prochilodus costatus Valenciennes, 1850

Prochilodus costatus Valenciennes, in Cuvier & Valenciennes, 1850: 79. Type locality: Rio San-Francisco du Brésil [= São Francisco River, Brazil]. Holotype: MNHN A.8636 (dry).

Prochilodus affinis Lütken, 1875a: 128. Type locality: Rio das Velhas et rivulis affluentibus [= das Velhas River and tributaries, Minas Gerais, Brazil].

Maximum length: 42 cm SL

Distribution: South America: Originally endemic to São Francisco River basin, but reported to have been introduced into Jequitinhonha River.

Countries: Brazil

Remarks and references: Species definition, synonymy, and distribution based on personal observation and examination of types.

Common names: Curimatá-piao (Brazil), Curimatã-piao (Brazil)

Prochilodus hartii Steindachner, 1875

Prochilodus hartii Steindachner, 1875: 533, pl. 5. Type locality: Rio Jequitinhonha, Rio pardo und Rio Parahyba [= Jequitinhonha, Pardo, and Paraíba do Sul rivers, Brazil]. Syntypes: NMW 56646-56648.

Maximum length: 34 cm SL

Distribution: South America: Pardo and Jequitinhonha River basins.

Countries: Brazil

Remarks and references: Species definition, synonymy, and distribution based on personal observation and examination of types.

Common names: Curimatã (Brazil), Grumecha (Brazil), Gruxema (Brazil), Papa-terra (Brazil)

Prochilodus lacustris Steindachner, 1907

Prochilodus lacustris Steindachner, 1907: 152. Type locality: See von Parnagua und der nahegelegenen Lagoa da Missão; Lagoas bei Sa. Filomena und am Rio Medondo einem Nebenflusse des Parnahyba [=lagoa de Parnaguá, lagoa da Missão, Santa Filomena, and Medonho River, tributary to Paraíba River, Piauí, Brazil].

Maximum length: 32 cm SL

Distribution: South America: Paraíba and Mearim River basins.

Countries: Brazil

Remarks and references: Species definition, synonymy, and distribution based on personal observation and examination of types.

Common names: Curimatã (Brazil)

Prochilodus lineatus (Valenciennes, 1836)

Paca lineatus Valenciennes in Cuvier and Valenciennes, 1836: pl. 8 (fig. 3). Type locality: Rivière la Plata à Buenos-Ayres [=Argentina, La Plata River, at Buenos Aires; designated by Valenciennes (1850: 84)]. No types known.

Prochilodus scrofa Steindachner, 1881: 129, pl. 6 (fig. 2). Type locality: Umgebung von Rio Janeiro, vielleicht aus dem Rio Parahyba [=vicinity of Rio de Janeiro, perhaps from Paraíba do Sul River, Rio de Janeiro, Brazil]. Syntype: NMW 56702.

Prochilodus platensis Holmberg, 1891: 186. Type locality: Río de la Plata, Buenos Aires, Argentina. Types: unknown.

Salmo novemradiatus Larrañaga, 1923: 387. Type locality: Uruguay.

Maximum length: 74 cm TL

Distribution: South America: Paraná-Paraguay and Paraíba do Sul River basins.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: Species definition, synonymy, and distribution based on personal observation and examination of types.

Common names: Corimbatá (Brazil), Curimba (Brazil), Curimbatá (Brazil), Grumatã (Brazil), Sábalo (Argentina, Bolivia, Paraguay, Uruguay)

***Prochilodus magdalenae* Steindachner, 1879**

Prochilodus asper magdalenae Steindachner, 1879a: 78, pl. 12 (fig. 1). Type locality: Magdalenaen-Stromes [= Magdalena River, Colombia]. Syntypes: NMW 56627, NMW 56624, NMW 56625, NMW 56628. Cited as *Prochilodus asper* on page 51 in text. Originally as *Prochilodus asper* var. *magdalenae*.

Prochilodus beani Eigenmann in Eigenmann & Ogle, 1907: 5, fig. 2. Type locality: Truando [=Truandó (Choco, Colombia)]. Holotype: USNM 1662.

Prochilodus steindachneri Eigenmann, 1922: 115. Type locality: Cauca near Cáceres [=Colombia, Antioquia, Cauca River, close to Cáceres]. Holotype: NMW 68274. Preoccupied by *Prochilodus steindachneri* Fowler, 1906, replaced by *Prochilodus eigenmanni* Ahl, 1937.

Prochilodus eigenmanni Ahl, 1937: 136. Type locality: Colombia, Antioquia, Río Cauca near Cáceres. Holotype: NMW 68274. Replacement name for *Prochilodus steindachneri* Eigenmann, 1922, preoccupied by *Prochilodus steindachneri* Fowler, 1906.

Maximum length: 30 cm SL

Distribution: South America: Atrato, Sinú, and Cauca-Magdalena River basins.

Countries: Colombia

Remarks and references: Species definition, synonymy, and distribution based on personal observation and examination of types.

Common names: Bocachico (Colombia)

***Prochilodus mariae* Eigenmann, 1922**

Prochilodus mariae Eigenmann, 1922: 231, pl. 20 (fig. 2). Type locality: Barrigón, Río Meta [= Meta River, Barrigón, Colombia]. Holotype: CAS 15150 [ex IU 15150].

Maximum length: 37 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

Remarks and references: See Mago-Leccia (1978: 48) for redescription of the species.

Common names: Coporo de los Llanos (Venezuela)

***Prochilodus nigricans* Agassiz, 1829**

Prochilodus nigricans Agassiz, in Spix & Agassiz, 1829: 64, pl. 39. Type locality: Brasiliae mediae fluviis [=Rivers of Central Brazil]. No types known.

Prochilodus ortonianus Cope, 1878: 685. Type locality: Nauta, Peru [=Nauta, Loreto, Peru]. Holotype: ANSP 21267.

Prochilodus cephalotes Cope, 1878: 686. Type locality: Peruvian Amazon. Restricted by Fowler (1950: 217) to Nauta, Amazonas peruano [=Nauta, Loreto, Peru]. Holotype: ANSP 21211.

Prochilodus caudifasciatus Starks, 1906: 773, fig. 5. Type locality: Río Perené at Perené, Peru. Holotype: USNM 53473.

Curimatus tigris Fowler, 1913: 518, fig. 2. Type locality: Tributaries of the Madeira River near Porto Velho, Brazil. Holotype: ANSP 39156. Based on young of *Prochilodus* (Vari & Castro, 1988: 779).

Prochilodus beni Pearson, 1924: 29, pl. 9 (fig. 2). Type locality: Cachuela Esperanza, Río Beni basin, Bolivia. Holotype: CAS 58881 [ex IU 17288].

Prochilodus labeo Loubens, Lauzanne & Géry, 1991: 231, fig. 8. Type locality: Villa Tunari, rio Chaparé, bassin du Mamoré, Bolivia. Holotype: MNHN 1989-120.

Maximum length: 37 cm TL

Distribution: South America: Amazon and Tocantins River basins.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru

Remarks and references: Species definition, synonymy, and distribution based on personal observation and examination of types.

Common names: Boquichico (Peru), Corimatá (Brazil), Curimatá (Brazil), Grumatã (Brazil)

***Prochilodus reticulatus* Valenciennes, 1850**

Prochilodus reticulatus Valenciennes in Cuvier & Valenciennes, 1850: 92. Type locality: lagune de Maracaïbo [=Lago Maracaibo, Venezuela]. Syntypes: MNHN A. 8637-8640.

Prochilodus asper Lütken, 1875b: 226. Type locality: Caraccas [=Caracas, Venezuela]. Type locality questioned by Mago-Leccia (1967: 250; 1972: 54) and apparently erroneous.

Maximum length: 28 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Colombia, Venezuela

Remarks and references: See Mago-Leccia (1972: 53) for redescription of species.

Common names: Bocachico (Colombia), Bocochico del Maracaibo (Venezuela)

***Prochilodus rubrotaeniatus* Jardine & Schomburgk, 1841**

Prochilodus rubrotaeniatus Jardine & Schomburgk in Schomburgk, 1841: 258, pl. 28. Type locality: Rios Branco and Negro as in the Essequibo and its tributaries [=Branco, Negro, and Essequibo rivers]. No types known.

Prochilodus maripicru Eigenmann, 1912: 271, pl. 35 (fig. 2). Type locality: Maripicru Creek, a branch of the Ireng (River), British Guiana [=Guyana]. Holotype: FMNH 53597 [ex CM 2066].

Maximum length: 32 cm SL

Distribution: South America: Branco and Marauíó River basins in Brazil; Caroni River basin of Venezuela, and coastal rivers of the Guianas.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Remarks and references: Species definition, synonymy, and distribution based on personal observation and examination of types.

Common names: Alumasse (Suriname), Bocachica de Guianas (Venezuela), Boquichico (Peru), Colmata (French Guiana), Coulitata (French Guiana), Courimata (French Guiana), Curimatá (Brazil), Koonoomatta (Suriname)

***Prochilodus vimboides* Kner, 1859**

Prochilodus vimboides Kner, 1859: 148, pl. 2 [not 3] (fig. 4). Type locality: Ypanema, Brazil [=Ipanema (Varnhagen) São Paulo, Brazil]. Syntypes: NMW 79464-79466.

Salmo corimbata Natterer in Kner, 1859: 146; name in text. Type locality: Ypanema [= Ipanema, São Paulo, Brazil]. No types.

Prochilodus oligolepis Günther, 1864: 295. Type locality: Brazil [=Ipanema, São Paulo, Brazil]. Syntypes: NMW 56693-56695

Prochilodus steindachneri Fowler, 1906: 309, fig. 11. Type locality: Parahyba, Brazil [= Paraíba do Sul River, Brazil]. Holotype: ANSP 8207.

Maximum length: 33 cm SL

Distribution: South America: Coastal rivers of Brazil between Jequitinhonha River in S northwards to Paraíba River, E portions of upper Paraná River and São Francisco River basin.

Countries: Brazil

Remarks and references: Species definition, synonymy, and distribution based on personal observation and examination of types.

Common names: Corimbatá-de-lagoa (Brazil), Curimbatá (Brazil), Grumecha (Brazil), Grumexa (Brazil)

SEMAPROCHILODUS

Semaprochilodus Fowler, 1941: 171. Type species: *Prochilodus squamilentus* Fowler, 1941. Type by original designation. Gender: masculine. Type species cited as *Semaprochilodus squamilen-*

tis in species description on following page.

***Semaprochilodus brama* (Valenciennes, 1850)**

Prochilodus brama Valenciennes, in Cuvier & Valenciennes, 1850: 82. Type locality: l'Amazone [= Amazon River]. Holotype: MNHN A.1066 (dry).

Semaprochilodus squamilentus Fowler, 1941: 172, fig. 83. Type locality: Rio Parnahyba, Therezina, Piauí, eastern Brazil [=Terezina, Parnaíba River, Piauí, Brazil; locality apparently erroneous]. Holotype: ANSP 69480.

Maximum length: 28 cm SL

Distribution: South America: Tocantins and Xingu River basins.

Countries: Brazil

Remarks and references: Species definition, synonymy, and distribution based on personal observation and examination of types.

Common names: Jaraqui (Brazil)

***Semaprochilodus insignis* (Jardine & Schomburgk, 1841)**

Prochilodus insignis Jardine & Schomburgk in Schomburgk, 1841: 261, pl. 30. Type locality: Rio Branco [Roraima, Brazil]. Types unknown.

Prochilodus amazonensis Fowler, 1906: 316, fig. 15. Type locality: Lower Amazon. Holotype: ANSP 21350.

Prochilodus theraponura Fowler, 1906: 313, fig. 14. Type locality: Ambyiacu River Equador [= Ambiyacu River, Peru]. Holotype: ANSP 8033.

Maximum length: 27 cm TL

Distribution: South America: Central and western portions of the Amazon basin and tributary rivers.

Countries: Brazil, Colombia, Ecuador, Guyana, Peru

Remarks and references: Species definition, synonymy, and distribution based on personal observation and examination of types.

Common names: Jaraqui (Brazil), Jaraqui escama grossa (Brazil), Jaraqui-da-escama-grossa (Brazil), Yahuarachi (Peru)

***Semaprochilodus kneri* (Pellegrin, 1909)**

Prochilodus kneri Pellegrin, 1909: 155. Type locality: Orénoque [= Orinoco River, Venezuela]. Syntypes: MNHN 1887-708, 1887-709.

Maximum length: 28 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: See Mago-Leccia (1972: 11) for redescription.

Common names: Bocoichico del Orinoco (Venezuela)

***Semaprochilodus laticeps* (Steindachner, 1879)**

Prochilodus laticeps Steindachner, 1879: 150. Type locality: Orinoco bei Ciudad Bolívar [= Orinoco River at Ciudad Bolívar, Venezuela]. Holotype: NMW missing.

Maximum length: 44 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

Remarks and references: See Mago-Leccia (1972: 64) for redescription.

Common names: Sapuara del Orinoco (Venezuela), Zapoara (Venezuela)

***Semaprochilodus taeniurus* (Valenciennes, 1817)**

Curimatus taeniurus Valenciennes, in Humboldt & Valenciennes, 1817: 166. Type locality: l'Amérique Equinoxiale [=Equatorial America]. Holotype: MNHN A.8641.

Maximum length: 24 cm SL

Distribution: South America: Central portions of Amazon basin and tributary rivers.

Countries: Brazil

Remarks and references: Species definition, synonymy, and distribution based on personal observation and examination of types.

Common names: Jaraqui (Brazil), Jaraqui escama fina (Brazil)

***Semaprochilodus varii* Castro, 1988**

Semaprochilodus varii Castro, 1988: 504, fig. 1. Type locality: Surinam, Marowijne District, Marowijne River about 25 km south of Albina. Holotype: ZMA 106.222.

Maximum length: 28 cm SL

Distribution: South America: Marowijne (=Maroni) River basin.

Countries: French Guiana, Suriname

Common names: Colmata (French Guiana), Coullilata (French Guiana), Courimata (French Guiana)

SPECIES INQUIRENDAE

Prochilodus binotatus Jardine, in Schomburgk, 1841: 260, pl. 29. Type locality: Rio Branco. Nomen dubium - apparently a composite.

Prochilodus dobulinus Valenciennes, in Cuvier & Valenciennes, 1850: 81. Type locality: l'Amazone. Type missing, nomen dubium.

Family Anostomidae (Headstanders)

Júlio C. Garavello and Heraldo A. Britski

The Anostomidae are distinguishable from all other Characiformes by the presence of a unique series of only three or four teeth, or a combination of both, in each premaxillary or dentary, disposed as steps of a stair. The maxilla is small and excluded from the gape. The mouth is small, distant from the anterior orbital rim, and may be terminal, subinferior or almost superior. The circumorbital series is complete and with a supraorbital bone. The mouth is terminal or sub-inferior in the genera *Abramites*, *Leporinus*, *Schizodon*, *Leporellus*, *Rhythiodus*, and *Laemolyta*, and elevated, almost superior, in the genera *Gnathodolus*, *Synaptolaemus*, *Sartor*, *Anostomus*, *Anostomoides*, and *Pseudanos*. The body is entirely covered with large scales, with the perforated lateral series varying from 32-34 to 42-44 scales, and the circumpeduncular scales in 12 to 16 series. The position of the mouth in the genera *Leporinus*, *Schizodon*, and *Laemolyta* is variable with age (Garavello, 1979), ranging from the terminal position to sub-inferior in *Leporinus* or sub-terminal in *Schizodon* and *Laemolyta*, depending of the grow differentiation of premaxillary or dentary bones. Upper and lower pharyngeal dentition is enlarged, with two or more cusps on all pharyngeal teeth. The branchial opening is small, with the membranes firmly joined to isthmus. An adipose-fin is always present. Other internal osteological characters were reported in Winterbotton (1980) and Vari (1983). The genera of this family were reviewed by Myers (1950) and with exception of the genus *Pseudanos*, described by Winterbotton (1980), the generic division of Myers (1950) remained almost intact to the present.

Species of the family Anostomidae are broadly distributed, from southern Central America to tropical and sub-temperate regions of South America. No species of this family is cited from the Trans-Andean Pacific drainages. The anostomids occupy large river basins and their tributaries, including the Magdalena and Atrato rivers in Colombia, the Orinoco River and Maracaibo Lake system in Venezuela, to inner drainages of Brazil from the Amazon to south of Buenos Aires in Argentina. Fishes of genus *Leporinus*, for example, are known from Trinidad (Boeseman, 1960) to La Plata River in Argentina (Ringuelet, Arámburu & Alonso de Arámburu, 1967). The Anostomidae are most diverse in the Amazon, Orinoco, Paraguay, Paraná rivers and their tributaries, and with fewer species in isolated coastal rivers of the Guianas, the São Francisco basin, and remaining short coastal rivers from northeastern Brazil to Uruguay. The anostomids are all fusiform fishes, including species varying from 10 cm (small species from upper tributaries of Orinoco and Amazon system) to 80 cm SL (large species from the main tributaries of the Paraná River and Pantanal of Mato Grosso), and a large number of species of intermediate body size, from mostly of South American river basins.

Many anostomid species are known by their habit of feeding in an inclined position (Gery, 1977; Santos & Rosa, 1998) and they constitute a significant portion of the fish biomass in the diverse aquatic habitats. By their variable position of mouth and extended digestive tract, they are efficient in utilizing sponges, detritus, insects, and vegetal items like seeds, leaves, and filamentous algae (Santos & Rosa, 1998), all common in the forest habitats of Neotropical region. Some large members of the genera *Leporinus* and *Schizodon* are known to undergo spawning migrations in the Paraná-Paraguay system (Godoy, 1975) and in the Amazon and Orinoco basins (Goulding, 1981). Because of their annual migrations, these species are exploited in commercial and subsistence fisheries as an important food item for people in South America.

The generic relationships within the family Anostomidae and with other Characiformes was partially examined by Vari (1983). A revisionary study of *Anostomus*, *Gnathodolus*, *Sartor*, *Synaptolaemus*, and *Pseudanos* was presented by Winterbotton (1980). The species level taxonomy and geographic distribution of the genera *Leporinus* and *Schizodon* has been examined in a series of articles published by Britski (1976, 1997), Garavello (1988, 1989, 1990, 1994, 2000), Garavello & Santos (1981, 1992), Garavello & Britski (1987, 1988, 1990) and Britski & Garavello (1978, 1980, 1993). Taxonomic revisions of *Laemolyta*, *Leporellus*, and *Schizodon* are in progress. As for other Neotropical characiform families, the Anostomidae deserve more study because their relationships are not understood and an uncertain number of undescribed species are expected to be discovered with the continuing research.

ABRAMITES

Abramites Fowler, 1906: 331. Type species: *Leporinus hypselonotus* Günther, 1868b. Type by original designation. Gender: masculine.

***Abramites eques* (Steindachner, 1878)**

Leporinus eques Steindachner, 1878: 90. Type locality: Río Mag-

dalena, Colombia.

Maximum length: 15 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

Common names: Bonito (Colombia), Totumito (Colombia)

***Abramites hypselonotus* (Günther, 1868)**

Leporinus hypselonotus Günther, 1868b: 480. Type locality: Xebe-

Check List of the Freshwater Fishes of South and Central America

ros, Upper Amazon, Peru. Lectotype: BMNH 1867.6.13.40, designated by Vari & Williams (1987: 97).

Leporinus solaris Holmberg, 1891: 187. Type locality: Misiones, Río Alto Paraná, Argentina. No types known.

Abramites ternetzi Norman, 1926: 93. Type locality: Mato Grosso, se. Brazil.

Abramites microcephalus Norman, 1926: 92. Type locality: Near the mouth of the Amazon River, Brazil. Holotype: BMNH 1926.3.2.571.

Leporinus nigripinnis Meinken, 1935: 193, fig. 1. Type locality: Río Paraná, near Corrientes, Argentina.

Maximum length: 14 cm TL

Distribution: South America: Orinoco, Amazon, Paraguay, and lower Paraná River basins.

Countries: Argentina, Bolivia, Brazil, Colombia, Ecuador, Guyana, Paraguay, Peru, Venezuela

Common names: Jikii (Argentina), Picúo (Venezuela), San Pedrito (Peru)

ANOSTOMOIDES

Anostomoides Pellegrin, 1909: 346. Type species: *Anostomoides atrianalis* Pellegrin, 1909. Type by monotypy. Gender: masculine.

***Anostomoides atrianalis* Pellegrin, 1908**

Anostomoides atrianalis Pellegrin, 1908: 346. Type locality: Orénoque [Venezuela].

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Anostomoides laticeps* (Eigenmann, 1912)**

Schizodontopsis laticeps Eigenmann, 1912: 299, pl. 41 (fig. 4). Type locality: Crab Falls, Río Essequibo, Guyana. Holotype: FMNH 53359.

Distribution: South America: Essequibo, Orinoco, and Solimões River basins.

Countries: Brazil, Guyana, Venezuela

Common names: Araçu (Brazil), Piau (Brazil)

ANOSTOMUS

Anostomus Scopoli, 1777: 451. Type species: *Salmo anostomus* Linnaeus, 1758. Gender: masculine.

Anostomus Cuvier, 1816: 165. Type species: *Salmo anostomus* Linnaeus, 1758. Type by monotypy. Gender: masculine.

Mormyrinchus Swainson, 1839: 186, 291. Type species: *Mormyrinchus gronovii* Swainson, 1839. Type by monotypy. Gender: masculine.

Histiadromus Gistel, 1848: VIII. Type species: *Salmo anostomus* Linnaeus, 1758. Type by being a replacement name. Gender: masculine.

Pithecocharax Fowler, 1906: 319. Type species: *Salmo anostomus* Linnaeus, 1758. Type by being a replacement name. Gender: masculine.

***Anostomus anostomus* (Linnaeus, 1758)**

Salmo anostomus Linnaeus, 1758: 312. Type locality: South America. Holotype: ZMUC 89.

Mormyrinchus gronoveii Swainson, 1839: 291. Type locality: South America [Suriname].

Anostomus salmoneus Gronow in Gray, 1854: 153. Type locality: South America. No types known.

Maximum length: 16 cm TL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Brazil, Guyana, Peru

Common names: Anostomo (Brazil), Lisa (Peru)

***Anostomus brevior* Géry, 1961**

Anostomus brevior Géry, 1961: 499, fig. 1. Type locality: Río

Camopi, bassin du Oyapok, French Guiana. Holotype: MNHN 1901-405.

Maximum length: 12 cm SL

Distribution: South America: Oyapock River basin.

Countries: French Guiana

***Anostomus intermedius* Winterbottom, 1980**

Anostomus intermedius Winterbottom, 1980: 14, fig. 11. Type locality: Below the cataracts near Suya-Missu or Paranajuba, Río Xingu superior, Amazon basin, Brazil. Holotype: SMF 10651.

Distribution: South America: Xingu River Basin.

Countries: Brazil

***Anostomus longus* Géry, 1961**

Anostomus anostomus longus Géry, 1961: 502, fig. 1. Type locality: Río Nucuray, Peruvian Amazon, near its trib. to Río Marañon, vicinity of Concordia. Holotype: MHNG 2197.04.

Distribution: South America: Upper Amazon, recorded from Nucuray River, Peruvian Amazon, near its tributary to Marañon River, vicinity of Concordia.

Countries: Peru

***Anostomus plicatus* Eigenmann, 1912**

Anostomus plicatus Eigenmann, 1912: 296, pl. 41 (fig. 3). Type locality: Crab Falls, Río Essequibo Basin. Holotype: FMNH 53393.

Maximum length: 9.5 cm SL

Distribution: South America: Essequibo River Basin.

Countries: Guyana, Suriname

***Anostomus spiloclistron* Winterbottom, 1974**

Anostomus spiloclistron Winterbottom, 1974: 154, figs. 1, 5a-b, 6. Type locality: Río Fallawatra, at rapids, 5 km SSW of Stondansie Falls, Río Nickerie basin. Holotype: ZMA 112685.

Maximum length: 16 cm TL

Distribution: South America: Nickerie River Basin.

Countries: Suriname

***Anostomus ternetzi* Fernández-Yépez, 1949**

Anostomus ternetzi Fernández-Yépez, 1949: 293, fig. Type locality: Palital, Estado Guárico, Venezuela. Holotype: MHNLS 427.

Maximum length: 12 cm TL

Distribution: South America: Orinoco, Araguaia, and Amazon River basins; coastal rivers of Guianas.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Common names: Anostomo (Brazil)

GNATHODOLUS

Gnathodolus Myers, 1927: 108. Type species: *Gnathodolus bidens* Myers, 1927. Type by original designation. Gender: masculine.

***Gnathodolus bidens* Myers, 1927**

Gnathodolus bidens Myers, 1927: 108. Type locality: Chemoni, Río Casiquiare, Venezuela. Holotype: CAS 20087.

Distribution: South America: Orinoco and Casiquiare rivers.

Countries: Venezuela

LAEMOLYTA

Laemolyta Cope, 1872: 258. Type species: *Schizodon taeniatus* Kner, 1859. Type by monotypy. Gender: feminine.

Schizodontopsis Garman, 1890: 16, 18. Type species: *Schizodontopsis proximus* Garman, 1890. Type by subsequent designation by Jordan (1920: 451). Gender: feminine.

***Laemolyta fasciata* Pearson 1924**

Laemolyta fasciata Pearson, 1924: 29, pl. 10 (fig. 1). Type locality: Lagoons, Lake Rogoagua, Amazon system, Bolivia. Syn-types: CAS 61846.

Anostomus pearsoni Ahl, 1937: 136. Replacement name for *Lae-*

molyta fasciata Pearson, 1924, secondarily preoccupied by *Anostomus fasciatus* (Spix and Agassiz, 1829) when both were in *Anostomus*.

Distribution: South America: Amazon River basin.

Countries: Bolivia

***Laemolyta fernandesi* Myers, 1950**

Laemolyta fernandesi Myers, 1950: 197. Type locality: Río Orinoco superior, Venezuela. Holotype: SU 16126.

Maximum length: 15.26 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Laemolyta garmani* (Borodin, 1931)**

Anostomus garmani Borodin, 1931: 47, pl. 4 (fig. 1). Type locality: Lake Saracá at Silves, Amazonas, Brazil. Holotype: MCZ 19370.

Maximum length: 21.4 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Common names: Lisa (Peru)

***Laemolyta macra* Géry, 1974**

Laemolyta garmani macra Géry, 1974: 153, fig. 2. Type locality: Vicinity of Concordia, Río Nucuray, tributary of Río Marañon, Peru. Holotype: MHNG 2197.38.

Maximum length: 7.1 cm SL

Distribution: South America: Marañón River basin.

Countries: Peru

Remarks and references: Possible synonym of *Laemolyta garmani*.

***Laemolyta nitens* (Garman, 1890)**

Anostomus varius nitens Garman, 1890: 20. Type locality: Iça, Río Amazonas.

Distribution: South America: Amazon River basin.

Countries: Brazil

Remarks and references: Possible synonym of *Laemolyta proxima*.

***Laemolyta orinocensis* (Steindachner, 1879)**

Anostomus orinocensis Steindachner, 1879: 154. Type locality: Bolivar, Venezuela. Syntypes: NMW 62595, 62820.

Maximum length: 16.6 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Laemolyta petiti* Géry, 1964**

Laemolyta petiti Géry, 1964: 464, pl. 4b. Type locality: Ilha do Bananal, Río Araguaia supérieur, Brazil. Holotype: MHNG 2229.01.

Maximum length: 21.2 cm SL

Distribution: South America: Araguaia River basin.

Countries: Brazil

***Laemolyta proxima* (Garman, 1890)**

Anostomus proximus Garman, 1890: 19. Type locality: Villa Bella and Ueranduba, Brazil. Syntypes: MCZ 19331, 19339, 19379, 809, 19335, 19340, 19341, 19348, 19378, 19532. USNM: 120398, 120242.

Maximum length: 24.9 cm SL

Distribution: South America: Guaporé River basin.

Countries: Brazil

Common names: Aracú-caneta (Brazil)

***Laemolyta taeniata* (Kner, 1859)**

Schizodon taeniatus Kner, 1859: 159. Type locality: Rio Guapore, Manaus, Mato Grosso, Brazil. Syntypes: NMW 56988, ?58851, 62875, 81379.

Maximum length: 28.8 cm SL

Distribution: South America: Central Amazon basin at Negro River and Orinoco River basin.

Countries: Brazil, Peru, Venezuela

Common names: Aracú-caneta (Brazil), Lisa (Peru), Mije (Venezuela), Piau-vara (Brazil)

***Laemolyta varia* (Garman, 1890)**

Anostomus varius Garman, 1890: 19. Type locality: Gurupa; Jose Fernandez; Lake Hyanuary; Manaus; Obydos; Porto do Moz; and Rio Negro, Brazil. Syntypes: MCZ 809, 19335, 19340-41, 19348, 19374, 19378, 19532; USNM 120398, 120242.

Distribution: South America: Negro and Amazon River basin.

Countries: Brazil

Remarks and references: Possible synonym of *Laemolyta proxima*.

LEPORELLUS

Leporellus Lütken, 1875a: 129. Type species: *Leporinus pictus* Kner, 1859. Type by monotypy. Gender: masculine.

Leporinodus Eigenmann, 1922: 116. Type species: *Leporinodus retropinnis* Eigenmann, 1922. Type by original designation. Gender: masculine.

***Leporellus pictus* (Kner, 1858)**

Leporinus pictus Kner, 1858: 79. Type locality: Irisanga [= Orissanga], São Paulo State, Brazil. Syntype: NMW 81315.

Leporellus cartledgei Fowler, 1941: 177, fig. 89. Type locality: Penedo, Rio São Francisco, Pernambuco, Brazil. Holotype: ANSP 69522.

Distribution: South America: Paraná and São Francisco River basins.

Countries: Brazil

Remarks and references: Possible synonym of *Leporellus vittatus*.

***Leporellus retropinnis* (Eigenmann, 1922)**

Leporinodus retropinnis Eigenmann, 1922: 116. Type locality: Rio Piracicaba, Brazil. Holotype: FMNH 55174.

Distribution: South America: Paraná River basin.

Countries: Brazil

Remarks and references: Possible synonym of *Leporellus vittatus*.

***Leporellus vittatus* (Valenciennes, 1850)**

Leporinus vittatus Valenciennes in Cuvier & Valenciennes, 1850: 33. Type locality: Amazon River, Brazil. Holotype: MNHN A.9802.

Salmo cagoara Natterer, in Kner, 1859: 172. Type locality: Irisanga (= Orissanga), Brazil.

Leporinus maculifrons Lütken, 1875b: 204. Type locality:

Leporinodus sexdentatus Eigenmann, 1922: 117. Type locality: Cauca near Cáceres, Brazil. No types found.

Leporellus timbore Eigenmann, 1922: 117. Type locality: Rio das Velhas, MG, Brazil. Holotype: ?CM 3876.

Maximum length: 24.5 cm SL

Distribution: South America: Amazon, Paraná-Paraguay and São Francisco River basins.

Countries: Brazil, Paraguay, Peru

Common names: Lisa (Peru)

Species inquirenda

Salmo timbure Natterer, in Kner, 1859: 171. Type locality: Irisanga (= Orissanga), Brazil.

LEPORINUS

Leporinus Agassiz, in Spix & Agassiz, 1829: 58, 65. Type species: *Leporinus novemfasciatus* Spix & Agassiz, 1829. Type by monotypy. Gender: masculine.

Myocharax Fowler, 1914: 239. Type species: *Leporinus desmotes* Fowler, 1914. Type by original designation. Gender: masculine.

Hypomasticus Borodin, 1929: 272. Type species: *Leporinus mormyrops* Steindachner, 1876. Type by original designation. Gender: masculine.

Leporinops Géry, 1960: 308. Type species: *Leporinus moralesi*

- Fowler, 1942. Type by original designation. Gender: masculine. Countries: Brazil
- Leporinus affinis* Günther, 1864**
Leporinus affinis Günther, 1864: 308. Type locality: Rio Capim [Pará, Brazil]. Syntypes: BMNH 1849.11.8.52-53. Maximum length: 25 cm TL
 Distribution: South America: Amazon River basin
 Countries: Brazil, Colombia, Venezuela
 Common names: Araçu flamengo (Brazil), Araçu pinima (Brazil), Piau-flamengo (Brazil)
- Leporinus agassizi* Steindachner, 1876**
Leporinus agassizii Steindachner, 1876: 107, pl. 9 (fig. 4). Type locality: Amazon Flüsse, Tabatinga und Teffe, Iça, Brazil. Syntypes: NMW 68416-17.
Leporinus semivittatus Boulenger, 1895: 449. Type locality: Manaus, Rio Negro, Brazil. Holotype: BMNH 1893.4.24.39.
 Distribution: South America: Amazon River basin.
 Countries: Brazil, Venezuela
 Common names: Aracú (Brazil)
- Leporinus aguapeiensis* Campos, 1945**
Leporinus aguapeiensis Campos, 1945: 154, fig. Type locality: Rio Aguapeí, Estado de São Paulo, Brazil. Holotype: MZUSP 3040.
 Maximum length: 18.8 cm SL
 Distribution: South America: Paraná River basin.
 Countries: Brazil
 Remarks and references: Possibly a synonym of *Leporinus obtusidens* (Garavello, 1979).
 Common names: Piaussú (Brazil)
- Leporinus alternus* Eigenmann, 1912**
Leporinus alternus Eigenmann, 1912: 307. Type locality: Tukeit, Guyana. Holotype: FMNH 53361.
 Distribution: South America: Coastal rivers of the Guianas and the upper Amazon River basin.
 Countries: Brazil, Guyana, Venezuela
- Leporinus amae* Godoy, 1980**
Leporinus amae Godoy, 1980: 23, fig. 14. Type locality: Rio Apuaê, Brazil. Holotype: Mus. Hist. Nat. Pirassununga.
 Distribution: South America: Uruguay River basin.
 Countries: Brazil
 Common names: Perna-de-moça (Brazil)
- Leporinus amblyrhynchus* Garavello & Britski, 1987**
Leporinus amblyrhynchus Garavello & Britski, 1987: 154, fig. 1a. Type locality: Rio Tietê, Itu, Sao Paulo, Brazil. Holotype: MZUSP 14411.
 Maximum length: 19.6 cm SL
 Distribution: South America: Paraná River basin.
 Countries: Brazil
 Common names: Chimbore (Brazil)
- Leporinus arcus* Eigenmann, 1912**
Leporinus arcus Eigenmann, 1912: 300, pl. 42 (fig. 3). Type locality: Tukeit, Guyana. Holotype: FMNH 53366.
 Maximum length: 40 cm TL
 Distribution: South America: Coastal rivers of Guianas, Venezuela, and upper Amazon River basin.
 Countries: French Guiana, Guyana, Suriname, Venezuela
- Leporinus aripuanaensis* Garavello & Santos, 1992**
Leporinus aripuanaensis Garavello & Santos, 1992: 112, fig. 1B. Type locality: Igarapé do Aeroporto, tributary of Rio Aripuanã, Humboldt, Aripuanã, Mato Grosso State, Brazil. Holotype: MZUSP 14495.
 Maximum length: 9.3 cm SL
 Distribution: South America: Aripuanã River basin.
- Leporinus badueli* Puyo, 1948**
Leporinus badueli Puyo, 1948: 81, fig. 2. Type locality: Montagne Baduel et Île de Cayenne, Guyane Française. Holotype: ?
 Maximum length: 105 mm SL
 Distribution: South America: Coastal rivers in French Guiana
 Countries: French Guiana
- Leporinus bahiensis* Steindachner, 1875**
Leporinus bahiensis Steindachner, 1875: 231, pl. 2 (fig. 2). Type locality: Bahia, Brazil. Syntypes: not found at NMW.
 Distribution: South America: Bahia State.
 Countries: Brazil
- Leporinus bistriatus* Britski, 1997**
Leporinus bistriatus Britski, 1997: 28, fig. 1. Type locality: Igarapé Águas Claras, rio Itacaiúnas, Caldeirão, Serra dos Carajás, PA, Brazil. Holotype: MZUSP 31477.
 Maximum length: 110.5 mm SL.
 Distribution: South America: Tocantins River basin
 Countries: Brazil
- Leporinus bimaculatus* Castelnau, 1855**
Leporinus bimaculatus Castelnau, 1855: 58, pl. 29 (fig. 1). Type locality: Rio Vermelho, Goiás; San João das Duas Barras, Tocantins, Brazil. Syntypes: MNHN A.8620, ?A.9797.
 Distribution: South America: Tocantins River basin.
 Countries: Brazil
- Leporinus bleheri* Géry, 1999**
Leporinus bleheri Géry, 1999: 108, fig. 5. Type locality: Bolívia, Rio Verde, tributary of the Iténez (Guaporé), at the border with Brazil, ca 30 km from mouth, below cataract, 14°8'S; 60°30'W. Holotype MHNG 2599.60.
 Maximum length: 14.2 cm SL
 Distribution: South America: Iténez-Guaporé River basin.
 Countries: Bolivia, Brazil
- Leporinus boehlkei* Garavello, 1988**
Leporinus boehlkei Garavello, 1988: 144, fig. 1A. Type locality: Stream into Lago Mozambique, Río Meta system, Colombia, ca. 3°58'N, 73°04'W. Holotype: ANSP 136487.
 Maximum length: 15.8 cm SL
 Distribution: South America: Meta River basin
 Countries: Colombia
- Leporinus brunneus* Myers, 1950**
Leporinus brunneus Myers, 1950: 195. Type locality: Rio Negro at Cachoeira Camanaos, Amazonas, Brazil.
 Holotype: SU 16125.
 Maximum length: 25.6 cm SL
 Distribution: South America: Orinoco and Negro River basins.
 Countries: Brazil, Venezuela
- Leporinus conirostris* Steindachner, 1875**
Leporinus conirostris Steindachner, 1875: 233, pl. 4. Type locality: Rio Paraiba, auf Mendez, Juiz de Fora und Palmeira; Rio Doce; Rio Mucuri; Flüsse Paraiba do Sul, Brazil. Syntypes: MCZ 20371-73, 20407, 20411-13, 25690, 31599; MNHN 1913-131; NMW 68199, 68395-97, 68399-400, 68693-98; USNM 120275; ZMUC 970.
 Distribution: South America: Paraiba do Sul River basin.
 Countries: Brazil
- Leporinus copelandii* Steindachner, 1875**
Leporinus copelandii Steindachner, 1875: 236, pl. 5. Type locality: Rio Parahyba und nebenflüssen auf Mendez; Juiz de Fora; Rio Doce; Rio São Matheos; Rio Jequitinhonha; Rio Quenda auf Santa Cruz. Syntypes: MCZ 19773, 19775, 20359, 20408-410,

20420, 20460, 20490-91; MNHN 1913-134; NMW 68379-87, 68391-94, 69592; ZMUC 969.

Distribution: South America: Paraíba do Sul and Doce River basins.

Countries: Brazil

Common names: Piava-vermelha (Brazil)

***Leporinus crassilabris* Borodin, 1929**

Leporinus crassilabris Borodin, 1929: 274, pl. 4. Type locality: Rio Jequitinhonha, Brazil. Holotype: MCZ 20423.

Leporinus crassilabris breviceps Borodin 1929: 275. Type locality: Brazil. Holotype: MCZ 20419.

Distribution: South America: Jequitinhonha River basin.

Countries: Brazil

Remarks and references: A synonym of *Leporinus elongatus* according to Géry, Mahnert & Dlouhy (1987: 396).

***Leporinus cylindriciformis* Borodin, 1929**

Leporinus cylindriciformis Borodin, 1929: 288, pl. 10. Type locality: Porto de Moz, Brazil. Holotype: MCZ 20430.

Distribution: South America: Lower Amazon River basin.

Countries: Brazil

***Leporinus desmotes* Fowler, 1914**

Leporinus desmotes Fowler, 1914: 239, fig. 5. Type locality: Río Rupununi, Guiana, ca. 2°-3°N, 50°20'W. Holotype: ANSP 39324.

Maximum length: 18 cm TL

Distribution: South America: Rupununi River basin.

Countries: Guyana, Suriname

***Leporinus despaxi* Puyo, 1943**

Leporinus despaxi Puyo, 1943: 141, fig. 1. Type locality: Marge gauche of Rio Maroni supérieure, Guianne Francaise.

Maximum length: 16 cm TL

Distribution: South America: Coastal rivers of French Guiana, from Maroni to Oyapock River.

Countries: Brazil, French Guiana

Common names: Piau (Brazil)

***Leporinus ecuadorensis* Eigenmann & Henn, 1916**

Leporinus ecuadorensis Eigenmann & Henn, 1916: 88. Type locality: Río Barranca Alta, near Naranjito, west of Ecuador. Holotype: CAS 18396.

Maximum length: 25 cm TL

Distribution: South America: Barranca Alta River basin.

Countries: Ecuador

Common names: Ratón (Ecuador)

***Leporinus elongatus* Valenciennes, 1850**

Leporinus elongatus Valenciennes in Cuvier & Valenciennes, 1850: 37. Type locality: Rio São Francisco et La Plata, Brazil. Syntypes: MNHN A.8624 (Brazil), MNHN A.9800 (Argentina).

Distribution: South America: Paraná, La Plata, and São Francisco River basins.

Countries: Argentina, Brazil

Common names: Boga (Argentina), Piapara (Brazil)

***Leporinus falcipinnis* Mahnert, Géry & Muller, 1997**

Leporinus falcipinnis Mahnert, Géry & Muller, 1997: 838, fig. 1. Type locality: Rio Arapiuns, 1 hour by boat downstream of mouth of rio Aruá, small fazenda at right shore, lower Tapajós basin, Pará, Brazil, 2°04'S, 55°38'W. Holotype: MZUSP 51827.

Distribution: South America: Lower Tapajós River basin.

Countries: Brazil

***Leporinus fasciatus* (Bloch, 1794)**

Salmo fasciatus Bloch, 1794: 96, pl. 379. Type locality: Unknown locality [Suriname]. Holotype: ZMB 3543.

Leporinus novemfasciatus Spix & Agassiz, 1829: 65, pl. 37. Type

locality: Rivers of equatorial Brazil. No types known.

Leporinus fasciatus altipinnis Borodin 1929: 280, pl. 8. Type locality: Jaturana, e. Brazil. Syntypes: MCZ 20487.

Maximum length: 30 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil, French Guiana, Peru, Suriname

Remarks and references: Introduced in Oceania and Hawaii.

Common names: Aracú-flamengo (Brazil), Kalanalé (French Guiana), Kouana (French Guiana), Kwachimanman (French Guiana), Kwasimama (French Guiana), Leporinus à bandes (French Guiana), Leporinus de franjas (Peru), Leporinus listado (Peru), Lisa (Peru), Roujé (French Guiana), Wana (French Guiana)

***Leporinus acutidens* (Valenciennes, 1836)**

Curimatus acutidens Valenciennes, 1836: pl. 8 (fig. 1). Type locality: South America. No types known.

Maximum length: 33 cm TL

Distribution: South America: Amazon River basin and Guiana rivers.

Countries: Brazil, French Guiana

Remarks and references: Possible synonym of *Leporinus friderici*.

Common names: Piava de três pintas (Brazil)

***Leporinus friderici* (Bloch, 1794)**

Salmo friderici Bloch, 1794: 94, pl. 378. Type locality: Suriname. Holotype: ZMB 3552.

Maximum length: 40 cm SL

Distribution: South America: Suriname and Amazonia River basin.

Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago

Common names: Araçu cabeça gorda (Brazil), Kamenourou (French Guiana), Kaunali (French Guiana), Piau cabeça-gorda (Brazil), Taanali (French Guiana), Walakou (French Guiana), Warakoe (French Guiana, Suriname), Weti wakou (French Guiana)

***Leporinus garmani* Borodin, 1929**

Leporinus garmani Borodin, 1929: 272, pl. 3. Type locality: Arassuahy, Brazil. Holotype: MCZ 20420.

Distribution: South America: Jequitinhonha River basin.

Countries: Brazil

***Leporinus gomesi* Garavello & Santos, 1990**

Leporinus gomesi Garavello, 1990: 165, fig. 1. Type locality: Rio Aripuanã above the Cachoeira de Dardanelos, Humboldt, Aripuanã, Mato Grosso State, Brazil. Holotype: MZUSP 14436.

Maximum length: 16 cm SL

Distribution: South America: Aripuanã River basin.

Countries: Brazil

Remarks and references: Name first published as a *nomem nudum* in Garavello & Santos (1981: 181).

***Leporinus gossei* Géry, Planquette & Le Bail, 1991**

Leporinus gossei Géry, Planquette & Le Bail, 1991: 15, pl. 3 (fig. 2). Type locality: Crique Balaté, bassin du bas Maroni. Holotype: IRSNB 797.

Maximum length: 25 cm SL

Distribution: South America: Maroni River basin.

Countries: French Guiana, Suriname

Common names: Carpe (French Guiana), Karp-tanponnen (French Guiana)

***Leporinus granti* Eigenmann, 1912**

Leporinus granti Eigenmann, 1912: 307, pl. 43 (fig. 3). Type locality: Maripicru Creek, Guyana. Holotype: FMNH 53383.

Leporinus badueli Puyo, 1948: 81, fig. 2. Type locality: Crique a la proximité du Montagne Baduel et crique a la rive gauche du Rio Mana, Guianne Francaise.

Maximum length: 20 cm TL

Check List of the Freshwater Fishes of South and Central America

Distribution: South America: Mana River basin.

Countries: French Guiana, Guyana

Common names: Carpe crique (French Guiana), Carpe rouge (French Guiana), Karp-rouj (French Guiana), Karp-tanponnen (French Guiana)

***Leporinus holostictus* Cope, 1878**

Leporinus holostictus Cope, 1878: 690. Type locality: Peruvian Amazon. Lectotype: ANSP 21467, designated by Fowler (1906: 330).

Distribution: South America: Peruvian Amazon River basin.

Countries: Peru

Common names: Lisa (Peru)

***Leporinus jamesi* Garman, 1929**

Leporinus jamesi Garman in Borodin, 1929: 281, pl. 9. Type locality: Manacapuru, Brazil. Holotype: ?MCZ 20439.

Distribution: South America: Amazon River basin.

Countries: Brazil

***Leporinus jatuncochi* Ovchynnyk, 1971**

Leporinus jatuncochi Ovchynnyk, 1971: 100, figs. 8-9. Type locality: Lake Jatun Cocha, ca. 1°00'S, 75°27'W, Provincia del Rio Napo, Ecuador. Holotype: MSUM 5868.

Distribution: South America: Napo River basin.

Countries: Ecuador

Remarks and references: Possibly synonym of *Leporinus desmotes* (Garavello, 1979).

***Leporinus julii* Santos, Jégu & Lima, 1996**

Leporinus julii Santos, Jégu & Lima, 1996: 273, fig. 4. Type locality: Rio Xingu, cachoeira Kaituka, Amazonas, Brazil. Holotype: INPA 10987.

Maximum length: 170 mm SL

Distribution: South America: Xingu River basin.

Countries: Brazil

***Leporinus klausewitzii* Géry, 1960**

Leporinus klausewitzii Géry, 1960: 279, pl. 40 (fig. 2). Type locality: Mundurucú, Rio Manacapuru, Amazon basin, near Manaus, Brazil. Holotype: SMF 5090.

Distribution: South America: Central Amazon River basin.

Countries: Brazil

***Leporinus lacustris* Campos, 1945**

Leporinus lacustris Campos, 1945: 155, fig. Type locality: Pirassununga, Estado de São Paulo, Brazil. Holotype: MZUSP 3458.

Maximum length: 11.1 cm SL

Distribution: South America: Paraná River basin.

Countries: Brazil

Common names: Piava de lagoa (Brazil)

***Leporinus latofasciatus* Steindachner, 1910**

Leporinus latofasciatus Steindachner, 1910: 268. Type locality: Orinoco Flüsse, Venezuela. Holotype: NMW 68187.

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Leporinus lebaili* Géry & Planquette, 1983**

Leporinus lebaili Géry & Planquette, 1983: 66, fig. 1, 2, 5a. Type locality: Río Maroni, Laissé-Dédé Falls, French Guiana. Holotype: MHNG 2152.48.

Distribution: South America: Maroni River basin.

Countries: French Guiana, Suriname

Common names: Karp-blé (French Guiana), Karp-tanponnen (French Guiana)

***Leporinus leschenaulti* Valenciennes, 1850**

Leporinus leschenaulti Valenciennes in Cuvier & Valenciennes, 1850: 30, pl. 635. Type locality: La Mana, Guianne Francaise.

Holotype: MNHN 1694.

Leporinus parae Eigenmann, in Eigenmann & Ogle, 1908: 8, fig. 3. Type locality: Pará, Brazil. Holotype: USNM 34613.

Distribution: South America: Coastal rivers in French Guiana and northern Brazil

Countries: Brazil, French Guiana

***Leporinus macrocephalus* Garavello & Britski, 1988**

Leporinus macrocephalus Garavello & Britski, 1988: 68, fig. 1a.

Type locality: Rio Cuiabá, Barão de Melgaço, Mato Grosso, Brazil. Holotype: MZUSP 36586.

Maximum length: 40 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil

Common names: Piaussu (Brazil)

***Leporinus maculatus* Müller & Troschel, 1844**

Leporinus maculatus Müller & Troschel, 1844: 86. Type locality: Guiana.

Leporinus marcgravii Lütken, 1875a: 130. Type locality: Rio das Velhas und nebenflüssen, Brazil. Syntypes: USNM 44951; ZMB 9191; ZMUC 151, 155-156.

Maximum length: 18 cm TL

Distribution: South America: Coastal rivers of the Guianas and São Francisco River basin.

Countries: Brazil, French Guiana, Guyana, Suriname

Common names: Araçu pinima (Brazil), Karp (French Guiana)

***Leporinus marcgravii* Lütken, 1875**

Leporinus marcgravii Lütken, 1875b: 130. Type locality: Rio das Velhas und nebenflüssen, Brazil. Syntypes: USNM 44951; ZMB 9191; ZMUC 151, 155-156.

Distribution: South America: São Francisco River basin.

Countries: Brazil

***Leporinus megalepis* Günther, 1863**

Leporinus megalepis Günther, 1863: 443. Type locality: Río Essequibo, Guiana. Syntypes: BMNH 1864.1.21.43-45.

Maximum length: 6.8 cm SL

Distribution: South America: Essequibo River basin.

Countries: Guyana

***Leporinus melanopleura* Günther, 1864**

Leporinus melanopleura Günther, 1864: 310. Type locality: Rio Cipó, Bahia, Brazil. Syntypes: BMNH 1863.3.27.6-7, BMNH uncat.

Distribution: South America: Cipó River basin in Bahia State.

Countries: Brazil

***Leporinus melanostictus* Norman, 1926**

Leporinus melanostictus Norman, 1926: 94. Type locality: Río Approuague and Río Oyapock, French Guiana. Syntypes: BMNH 1926.3.2.566-567, BMNH 1926.3.2.568-569.

Maximum length: 28 cm SL

Distribution: South America: Approuague and Oyapock River basins.

Countries: Brazil, French Guiana

Common names: Araçu (Brazil), Carpe rouge (French Guiana), Karp-rouje (French Guiana)

***Leporinus microphthalmus* Garavello, 1989**

Leporinus microphthalmus Garavello, 1989: 498, fig. 1. Type locality: Rio Araguari, salto de Nova Ponte, Nova Ponte, Estado de Minas Gerais, Brazil. Holotype: MZUSP 38535.

Maximum length: 11.8 cm SL

Distribution: South America: Paraná River basin.

Countries: Brazil

***Leporinus moralesi* Fowler, 1942**

Leporinus muelleri Steindachner, 1876: 105, pl. 9 (fig. 5). Type

Check List of the Freshwater Fishes of South and Central America

- locality: Rio Amazonas, Tabatinga; Jose Fernandez; Rio Iça; Lago Alexo, Brazil. Syntypes: NMW 68348, NMW 77721, NMW 90680. Preoccupied by *Leporinus muelleri* Günther, 1859, replaced by *Leporinus moralesi* Fowler, 1942.
- Leporinus moralesi* Fowler, 1942: 18, fig. 42. Type locality: Rio Amazonas, Tabatinga, Jose Fernandes, Rio Iça, Lago Alexo, Brazil. Syntypes: NMW 68348, NMW 77721, NMW 90680.
- Maximum length: 30 cm TL
- Distribution: South America: Amazon River basin.
- Countries: Brazil, Peru
- Common names: Lisa (Peru)
- Leporinus mormyrops* Steindachner, 1875**
- Leporinus mormyrops* Steindachner, 1875: 240, pl. 6. Type locality: Rio Paraíba and Rio Piabanha, Brazil.
- Distribution: South America: Paraíba do Sul, Piabanha, and Doce River basins.
- Countries: Brazil
- Leporinus multifasciatus* Cope, 1878**
- Leporinus multifasciatus* Cope, 1878: 690. Type locality: Peruvian Amazon. Lectotype: ANSP 21448.
- Distribution: South America: Amazon River basin.
- Countries: Peru
- Common names: Lisa (Peru)
- Leporinus muyscorum* Steindachner, 1901**
- Leporinus muyscorum* Steindachner, 1901: 206. Type locality: Río Lebrija und Río Magdalena flüssen aus Santander, Colombia. Holotype: whereabouts unknown.
- Distribution: South America: Magdalena and Atrato River basins.
- Countries: Colombia
- Leporinus nattereri* Steindachner, 1876**
- Leporinus nattereri* Steindachner, 1876: 114, pl. 12 (fig. 1). Type locality: Rio Negro mouth; Tefé; Lago do Aleixo, Brazil. Syntypes: MCZ 20384 (Teffe); NMW 68344-46.
- Distribution: South America: Negro River, Aleixo Lake, Central Amazon basin.
- Countries: Brazil
- Leporinus niceforoi* Fowler, 1943**
- Leporinus niceforoi* Fowler, 1943: 227, fig. 9. Type locality: Río Ortegusa, Florencia, Caquetá Dept., Colombia. Holotype: ANSP 70491.
- Distribution: South America: Ortegusa River basin.
- Countries: Colombia
- Leporinus nigrotaeniatus* (Jardine, 1841)**
- Chalceus nigrotaeniatus* Jardine in Schomburgk, 1841: 213, pl. 13 (fig. 2). Type locality: Pedrero, Rio Negro.
- Leporinus margaritaceus* Günther, 1864: 309. Type locality: Guyana. Holotype: BMNH uncat.
- Maximum length: 40 cm TL
- Distribution: South America: Negro River basin and Guyana coastal drainages.
- Countries: Brazil, Guyana
- Leporinus nijsseni* Garavella, 1990**
- Leporinus nijsseni* Garavella, 1990: 163, fig. 1. Type locality: About 27 km south of Village Dam, Sara Creek, Brokopondo dist., Suriname. Holotype: ZMA 107562.
- Maximum length: 17 cm TL
- Distribution: South America: Saramacca creek and Suriname River basins.
- Countries: Brazil, French Guiana, Suriname
- Common names: Karp-rouj (French Guiana), Karp-tanponnen (French Guiana)
- Leporinus obtusidens* (Valenciennes, 1836)**
- Curimatus obtusidens* Valenciennes, 1836: no p., pl. 8 (fig. 2). Type locality: Buenos Aires, Argentina. Holotype: MNHN 1693.
- Maximum length: 40 cm SL
- Distribution: South America: Paraná, La Plata, and São Francisco River basins.
- Countries: Argentina, Brazil, Paraguay, Uruguay
- Common names: Boga (Argentina), Piapara (Brazil)
- Leporinus octofasciatus* Steindachner, 1915**
- Leporinus octofasciatus* Steindachner, 1915: 28, pl. 3 (figs. 1-2). Type locality: Joinville, Santa Catarina, Brazil. Syntypes: NMW.
- Maximum length: 23.5 cm SL
- Distribution: South America: Cubatão River (northern) in Santa Catarina State and upper Paraná River basin.
- Countries: Brazil
- Remarks and references: Redescription in Britski & Garavella (1978: 237-250).
- Common names: Ferreirinha (Brazil)
- Leporinus octomaculatus* Britski & Garavella, 1993**
- Leporinus octomaculatus* Britski & Garavella, 1993: 33, figs. 3-4. Type locality: Headwaters of Rio Arinos, Rio Tapajós basin, Mato Grosso, Brazil. Holotype: MZUSP 44794.
- Maximum length: 6.9 cm SL
- Distribution: South America: Arinos River basin in Tapajós River drainage.
- Countries: Brazil
- Leporinus ortomaculatus* Garavella, 2000**
- Leporinus ortomaculatus* Garavella, 2000: 196. Type locality: Rio Surumu, Roraima, Brazil. Holotype: MZUSP 5160.
- Distribution: South America: Negro and Orinoco River basins.
- Countries: Brazil, Venezuela
- Leporinus pachycheilus* Britski, 1976**
- Leporinus pachycheilus* Britski, 1976: 87, fig. 1. Type locality: Rio Aripuanã, Mato Grosso State, Brazil. Holotype: MZUSP 13074.
- Maximum length: 15.7 cm SL
- Distribution: South America: Aripuanã River basin.
- Countries: Brazil
- Leporinus pachyurus* Valenciennes, 1850**
- Leporinus pachyurus* Valenciennes, in Cuvier & Valenciennes, 1850: 36. Type locality: Amazonas. Holotype: Distribution: South America: Amazon River basin.
- Countries: Brazil
- Remarks and references:** Possible synonym of *Leporinus trifasciatus* (Britski & Garavella, 1988).
- Leporinus parae* Eigenmann, 1908**
- Leporinus parae* Eigenmann, in Eigenmann & Ogle, 1908: 8, fig. 3. Type locality: Pará, Brazil. Holotype: USNM 34613.
- Distribution: South America: River basins of Pará State, lower Amazon.
- Countries: Brazil
- Leporinus paralternus* Fowler, 1914**
- Leporinus paralternus* Fowler, 1914: 237, fig. 4. Type locality: Río Rupununi, Guiana, 2°-3°N, 50°20'W. Holotype: ANSP 39320.
- Distribution: South America: Guyana and Suriname rivers and upper Amazon River basin.
- Countries: Brazil, Guyana
- Leporinus paranensis* Garavella & Britski, 1987**
- Leporinus paranensis* Garavella & Britski, 1987: 156, fig. 1b. Type locality: Marimbondó, Rio Grande, São Paulo, Brazil. Holotype: MZUSP 14453.
- Maximum length: 16 cm SL
- Distribution: South America: Paraná River basin.

Check List of the Freshwater Fishes of South and Central America

Countries: Brazil

***Leporinus pearsoni* Fowler, 1940**

Leporinus pearsoni Fowler, 1940b: 84, figs. 44-45. Type locality: Boca Chapare, Río Chimore, Cochabamba, Bolivia. Holotype: ANSP 69069.

Distribution: South America: Chimore River, Cochabamba.

Countries: Bolivia, Ecuador

Common names: Septimo (Ecuador)

***Leporinus pellegrinii* Steindachner, 1910**

Leporinus pellegrinii Steindachner, 1910: 269. Type locality: Suriname. Syntypes: NMW 68174, 72624.

Maximum length: 12 cm TL

Distribution: South America: Coastal rivers of Guianas and upper Amazon River basin.

Countries: Brazil, French Guiana, Guyana, Suriname

***Leporinus piau* Fowler, 1941**

Leporinus piau Fowler, 1941: 176, fig. 87. Type locality: Rio Salgado, Icó, Ceará, Brazil. Holotype: ANSP 69502.

Distribution: South America: Salgado River, Ceará State.

Countries: Brazil

Common names: Piau (Brazil)

***Leporinus pitingai* Santos & Jegu, 1996**

Leporinus pitingai Santos & Jegu, 1996: 168, fig. 31. Type locality: Rio Pitinga, cachoeira 40 Ilhas, abaixo UHE Pitinga, Amazonas, Brazil. Holotype: INPA 10126.

Maximum length: 315 mm SL

Distribution: South America: Pitinga River, Amazonas State.

Countries: Brazil

***Leporinus punctatus* Garavello, 2000**

Leporinus punctatus Garavello, 2000: 194, fig. 1a. Type locality: Small caño tributary to Rio do Mato, Orinoco river system, 7°8'N, 65°10'W. Holotype: ANSP 174805.

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Leporinus reinhardti* Lütken, 1875**

Leporinus reinhardti Lütken, 1875b: 129. Type locality: Rio das Velhas, Minas Gerais, Brazil. Syntypes: MNHN 9590; NMW 68196; ZMB 9189; ZMUC 123, 126, 128, 131.

Maximum length: 17 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

***Leporinus reticulatus* Britski & Garavello, 1993**

Leporinus reticulatus Britski & Garavello, 1993: 30, figs. 1-2. Type locality: Headwaters of the Rio Arinos, Rio Tapajós basin, Mato Grosso, Brazil, 14°25'S, 55°50'W. Holotype: MZUSP 44781.

Maximum length: 7.3 cm SL

Distribution: South America: Arinos and Tapajós River basins.

Countries: Brazil

***Leporinus sexstriatus* Britski & Garavello, 1980**

Leporinus sexstriatus Britski & Garavello, 1980: 254, figs. 1-2. Type locality: Rio Papagaio, acima de Utariti, Mato Grosso, Brazil. Holotype: MZUSP 9232.

Maximum length: 8 cm SL

Distribution: South America: Papagaio and Tapajós River basins.

Countries: Brazil

***Leporinus silvestrii* Boulenger, 1902**

Leporinus silvestrii Boulenger, 1902: 284. Type locality: Rio Coxipó, Mato Grosso, Brazil. Syntypes: BMNH 1902.2.10.32; MSNG 14866.

Distribution: South America: Upper Paraguay River basin.

Countries: Brazil

Remarks and references: Possibly a synonym of *Leporinus obtusidens*.

***Leporinus spilopleura* Norman, 1926**

Leporinus spilopleura Norman, 1926: 24. Type locality: Oyapock River, French Guiana. Paratype BMNH 564532.

Distribution: South America: Oyapock River basin.

Countries: Brazil, French Guiana.

***Leporinus steindachneri* Eigenmann, 1907**

Leporinus affinis Steindachner, 1875: 228, pl. 3. Type locality: Rio Arassuahy, tributary of Rio Jequitinhonha, Minas Geraes, Brazil. Holotype: NMW 68405.

Leporinus steindachneri Eigenmann, in Eigenmann & Ogle, 1907: 9. Type locality: Arassuahy, trib. of Rio Jequitinhonha in Minas Geraes, Brazil. Replacement name for *Leporinus affinis* Steindachner, 1875, preoccupied by *Leporinus affinis* Günther, 1864.

Distribution: South America: Jequitinhonha River basin.

Countries: Brazil

***Leporinus steyermarki* Inger, 1956**

Leporinus steyermarki Inger, 1956: 431, fig. 93. Type locality: Río Abácapa, west side of Chimantá-tepui, Venezuela, elev. 1300 ft. Holotype: FMNH 45701.

Maximum length: 30 cm TL

Distribution: South America: Abácapa River basin.

Countries: Venezuela

***Leporinus striatus* Kner, 1858**

Leporinus striatus Kner, 1858: 79. Type locality: Irisanga and Caicara, Mato Grosso, Brazil. Syntypes: NMW 68048.

Salmo tiririca Natterer in Kner, 1859: 172. Type locality: Irisanga (= Orissanga) and Caicara, Mato Grosso, Brazil.

Maximum length: 25 cm TL

Distribution: South America: Orissanga, Paraná, and Paraguay River basins.

Countries: Bolivia, Brazil, Paraguay

Common names: Canivete (Brazil)

***Leporinus subniger* Fowler, 1943**

Leporinus subniger Fowler, 1943: 228, figs. 10-12. Type locality: Río Ortegusa, Florencia, Departamento Caquetá, Colombia. Holotype: ANSP 70493.

Distribution: South America: Ortegusa River basin.

Countries: Colombia

***Leporinus taeniatus* Lütken, 1875**

Leporinus taeniatus Lütken, 1875b: 129. Type locality: Rio das Velhas, Minas Gerais, Brazil. Syntypes: MNHN 9591; ZMB 9190; ZMUC 132-133, 139, 143, 150.

Distribution: South America: Das Velhas and São Francisco River basins.

Countries: Brazil

***Leporinus taeniofasciatus* Britski, 1997**

Leporinus taeniofasciatus Britski, 1997: 32, fig.3. Type locality: Rio Maranhão, na altura da Cachoeira do Machadinho, divisa dos municípios de Barro Alto e Niquelândia, Goiás State, Brazil. Holotype: MZUSP 51073

Maximum length: 129 mm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

***Leporinus thayeri* Borodin, 1929**

Leporinus thayeri Borodin 1929: 273, pl. 2. Type locality: Rio Paraiba, Brazil. Holotype: MCZ 20364.

Distribution: South America: Paraiba do Sul and Jequitinhonha River basins.

Countries: Brazil

***Leporinus tigrinus* Borodin, 1929**

Leporinus fasciatus tigrinus Borodin, 1929: 280. Type locality: Goiás, Brazil. Syntypes: MCZ 20446.
Distribution: South America: Tocantins River basin.
Countries: Brazil

***Leporinus trifasciatus* Steindachner, 1876**

Leporinus trifasciatus Steindachner, 1876: 112. Type locality: Rio Amazonas, Tefé, Amazonas, Brazil. Holotype: NMW.
Distribution: South America: Amazon River basin.
Countries: Brazil
Common names: Araçu cabeça gorda (Brazil)

***Leporinus trimaculatus* Garavello & Santos, 1992**

Leporinus trimaculatus Garavello & Santos, 1992: 111, fig. 1a.
Type locality: Rio Aripuanã, Humboldt, Aripuanã, Mato Grosso State, Amazonia, Brazil. Holotype: MZUSP 14459.
Maximum length: 23.2 cm SL
Distribution: South America: Aripuanã River basin.
Countries: Brazil

***Leporinus uatumaensis* Santos & Jegu, 1996**

Leporinus uatumaensis Santos & Jegu, 1996: 164, fig. 20. Type locality: Rio Uatumã, Cachoeira do Miriti, abaixo da cachoeira Balbina, Amazonas, Brazil. Holotype INPA 10087.
Maximum length: 102 mm SL
Distribution: South America: Uatumã River basin.
Countries: Brazil

***Leporinus wolfei* Fowler, 1940**

Leporinus wolfei Fowler, 1940a: 261, fig. 58. Type locality: Boca Chica, Río Ucayali basin, Peru. Holotype: ANSP 68674.
Maximum length: 30 cm TL
Distribution: South America: Ucayali and Amazon River basins.
Countries: Peru
Remarks and references: Possible synonym of *Leporinus trifasciatus* Steindachner, 1876.
Common names: Lisa (Peru)

***Leporinus yophorus* Eigenmann, 1922**

Leporinus y-ophorus Eigenmann, 1922: 233, pl. 20 (fig. 4). Type locality: Barrigón, Río Meta, Orinoco System, Colombia. Holotype: CAS 61680.
Distribution: South America: Meta and Orinoco River basins.
Countries: Colombia, Venezuela

Species inquirendae

Salmo biribiri Natterer in Kner, 1859: 170. Type locality: Manaus, Brazil; Rio Branco, South America.
Salmo boops Larrañaga, 1923: 377. Type locality: Uruguay.
Salmo undecimradiatus Larrañaga, 1923: 387. Type locality: Uruguay.

PSEUDANOS

Pseudanos Winterbottom, 1980: 24. Type species: *Schizodon trimaculatus* Kner, 1859. Type by original designation. Gender: masculine.

***Pseudanos gracilis* (Kner, 1858)**

Schizodon gracilis Kner, 1859: 160, pl. 5. Type locality: Rio Guaporé, Amazon system, Brazil.
Maximum length: 18 cm TL
Distribution: South America: Guaporé, Negro, and Orinoco River basins.
Countries: Brazil, Venezuela

***Pseudanos irinae* Winterbottom, 1980**

Pseudanos irinae Winterbottom, 1980: 27, figs. 7c, 21, 45b. Type locality: Río Orinoco at bifurcation with Río Casiquiare, Laja

Tama Tama, Venezuela. Holotype: SU 58809.
Distribution: South America: Orinoco River basin.
Countries: Venezuela

***Pseudanos trimaculatus* (Kner, 1858)**

Schizodon trimaculatus Kner, 1858: 78. Type locality: Brazil.
Syntype: NMW 62692.
Maximum length: 12 cm TL
Distribution: South America: Amazon River basin.
Countries: Brazil, Guyana, Peru
Common names: Lisa (Peru)

RHYTIODUS

Rhytiodus Kner, 1858: 78. Type species: *Rhytiodus microlepis* Kner, 1858. Type by subsequent designation. Gender: masculine.
Garmanina Fowler, 1906: 326. Type species: *Rhytiodus argenteofuscus* Kner, 1859. Type by original designation. Gender: feminine.

***Rhytiodus argenteofuscus* Kner, 1858**

Rhytiodus argenteofuscus Kner, 1858: 79. Type locality: Rio Negro, Brazil.
Schizodon sagittarius Cope, 1878: 689. Type locality: Peruvian Amazon. Holotype: ANSP 21474.
Rhytiodus argenteofuscus unifasciatus Steindachner, 1915: 24. Type locality: Rio Negro, Brazil. Holotype: NMW.
Distribution: South America: Amazon River basin.
Countries: Brazil, Peru
Common names: Araçu (Brazil), Lisa (Peru), Pau de negro (Brazil), Pau de vaqueiro (Brazil)

***Rhytiodus elongatus* (Steindachner, 1908)**

Anostomus elongatus Steindachner, 1908: 62. Type locality: Rio Puris, Brazil. Holotype: NMW 62612.
Distribution: South America: Purus River basin.
Countries: Brazil

***Rhytiodus lauzannei* Géry, 1987**

Rhytiodus lauzannei Géry, 1987: 367, figs. 1-2, 4 (upper). Type locality: Flood zone of Río Tijamuchi, near Trinidad, Río Mamoré basin, Bolivia. Holotype: MNHN 1987-1063.
Distribution: South America: Tijamuchi and Mamoré River basins.
Countries: Bolivia

***Rhytiodus microlepis* Kner, 1858**

Rhytiodus microlepis Kner, 1858: 79. Type locality: Manaus, Brazil.
Distribution: South America: Amazon River basin.
Countries: Brazil, Peru
Common names: Lisa (Peru)

SARTOR

Sartor Myers & Carvalho, 1959: 148. Type species: *Sartor respectus* Myers & Carvalho, 1959. Type by original designation. Gender: masculine.

***Sartor elongatus* Santos & Jégu, 1987**

Sartor elongatus Santos & Jégu, 1987: 183, fig. 1. Type locality: Rio Trombetas, Cachoeira Porteira, foz do rio Mapuera, Pará, Brazil, 1°06'S, 57°00'W. Holotype: INPA 1167.
Maximum length: 7.6 cm SL
Distribution: South America: Trombetas and Mapuera River basins.
Countries: Brazil

***Sartor respectus* Myers & Carvalho, 1959**

Sartor respectus Myers & Carvalho, 1959: 149, figs. 1-3. Type locality: Rio Kuluene (Culuene) at Jacaré at junction with Rio Tamitatoala, ca. 12°S, Mato Grosso, Brazil. Holotype: MNRJ.

Check List of the Freshwater Fishes of South and Central America

Distribution: South America: Upper Xingu River basin.

Countries: Brazil

***Sartor tucuruense* Santos & Jégu, 1987**

Sartor tucuruense Santos & Jégu, 1987: 184, fig. 3. Type locality: Rio Tocantins, Tucuruí, Pará, Brazil, 3°45'S, 49°12'W. Holotype: INPA 1165.

Maximum length: 11 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

SCHIZODON

Schizodon Spix & Agassiz, 1829: 58. Type species: *Schizodon fasciatus* Spix & Agassiz, 1829. Type by monotypy. Gender: masculine.

Lahilliella Eigenmann & Kennedy, in Eigenmann, 1903: 144. Type species: *Schizodon nasutus* Kner, 1859. Type by original designation. Gender: feminine.

***Schizodon altoparanae* Garavello & Britski, 1990**

Schizodon altoparanae Garavello & Britski, 1990: 158, fig. 1A. Type locality: Rio Paraná, em frente a Jupia, MT, Brazil. Holotype: MZUSP 41102.

Maximum length: 23 cm SL

Distribution: South America: Paraná River basin.

Countries: Brazil

***Schizodon australis* Garavello, 1994**

Schizodon australis Garavello, 1994: 182, fig. 1a. Type locality: Rio Uruguai, Porto de Santo Izidro, Município de São Nicolau, Rio Grande do Sul, Brazil. Holotype: MCP 12931.

Maximum length: 33.4 cm SL

Distribution: South America: Uruguay River basin.

Countries: Brazil

***Schizodon borellii* (Boulenger, 1900)**

Anostomus borellii Boulenger, 1900: 2. Type locality: Carandazinho [Carandazinho] near Corumbá, Rio Paraguay, Mato Grosso, Brazil. Holotype: BMNH.

Distribution: South America: Paraguay River basin.

Countries: Brazil

***Schizodon corti* Schultz, 1944**

Schizodon fasciatum corti Schultz, 1944: 269, fig. 30. Type locality: Río Palmar near Totuma, about 100 km southwest of Maracaibo, Venezuela. Holotype: USNM 121300.

Maximum length: 40 cm SL

Distribution: South America: Rivers draining into Lake Maracaibo.

Countries: Venezuela

***Schizodon dissimilis* (Garman, 1890)**

Anostomus dissimilis Garman, 1890: 22. Type locality: Rio Puty [Poti], Brazil. Syntypes: MCZ 19381, 19382, 19383, 19384; USNM 120238. Paratype MCZ examined. Valid as *Schizodon dissimilis* as cited by Eigenmann (1910: 425).

Distribution: South America: Poti River basin in Piauí State.

Countries: Brazil

***Schizodon fasciatus* Spix & Agassiz, 1829**

Schizodon fasciatus Spix & Agassiz, 1829: 66, pl. 36. Type locality: Rivers of Brazil.

Piabuca schizodon Valenciennes, in Cuvier & Valenciennes, 1850: 112. Type locality: Amazon, l'Essequibo, Surinam, Maracaibo. Syntypes: ? [Syntype from Maracaibo Lake is *Schizodon corti* (Vari & Raredon, 1991: 13)].

Maximum length: 40 cm TL

Distribution: South America: Upper Amazon River and French Guiana coastal basins.

Countries: Bolivia, Brazil, French Guiana, Peru, Venezuela

Common names: Acurupintado (Brazil), Karp-jonn (French Guiana), Karp-réyé (French Guiana), Lisa (Peru)

***Schizodon intermedius* Garavello & Britski, 1990**

Schizodon intermedius Garavello & Britski, 1990: 159, fig. 1B. Type locality: Ribeirão afluente do Rio Itaqueri, trib do Rio Piracicaba, Aguas de São Pedro, SP, Brazil. Holotype: MZUSP 41123.

Maximum length: 28.7 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

***Schizodon isognathus* Kner, 1858**

Schizodon isognathus Kner, 1858: 78. Type locality: Rio Cuiabá, Brazil.

Distribution: South America: Paraguay River basin.

Countries: Brazil

***Schizodon jacuiensis* Bergman, 1988**

Schizodon jacuiensis Bergmann, 1988: 15, fig. 1. Type locality: Rio Guafba, Ilha Balceira, Porto Alegre, s. Brazil. Holotype: MCP 5889.

Maximum length: 25 cm SL

Distribution: South America: Laguna dos Patos drainage.

Countries: Brazil

Common names: Voga (Brazil)

***Schizodon knerii* (Steindachner, 1875)**

Anostomus knerii Steindachner, 1875: 211, pl. 1. Type locality: Rio São Francisco, Brazil. Lectotype: NMW 26840: 2.

Distribution: South America: São Francisco River basin.

Countries: Brazil

***Schizodon nasutus* Kner, 1858**

Schizodon nasutus Kner, 1858: 78. Type locality: Irisanga (=Orissanga), Estado de São Paulo, Brazil.

Distribution: South America: Paraná, Paraguay, and Uruguay River basins.

Countries: Brazil

Common names: Taguara (Brazil)

***Schizodon platae* (Garman, 1890)**

Anostomus platae Garman, 1890: 23. Type locality: Rosario, La Plata system, Argentina. Holotype: MCZ 833.

Distribution: South America: La Plata River basin.

Countries: Argentina

Common names: Voga (Brazil)

***Schizodon rostratus* (Borodin, 1931)**

Anostomus rostratus Borodin, 1931: 50, pl. 4 (fig. 2). Type locality: Rio Puty at Teresina, Brazil. Holotype: MCZ 19380.

Distribution: South America: Parnaíba River basin.

Countries: Brazil

***Schizodon vittatus* (Valenciennes, 1850)**

Piabuca vittata Valenciennes in Cuvier & Valenciennes, 1850: 115. Type locality: Rio Araguay (=Araguaia), Brazil. Holotype: MNHN A.1067.

Distribution: South America: Amazon and Araguaia River basins.

Countries: Brazil

Common names: Araçu comum (Brazil), Araçu pororoca (Brazil)

Species inquirenda

Leporinus platycephalus Meinken, 1935: 196, fig. 3. Type locality: Río Paraná, near Corrientes, Argentina. Syntypes: (several) whereabouts unknown. Possibly a synonym of *Schizodon borellii* (Boulenger, 1900).

SYNAPTOLAEMUS

Synaptolaemus Myers & Fernández-Yépez, in Myers, 1950: 190. Type species: *Synaptolaemus cingulatus* Myers & Fernández-Yépez, 1950. Type by original designation. Gender: masculine.

***Synaptolaemus cingulatus* Myers & Fernández-Yépez, 1950**

Synaptolaemus cingulatus Myers & Fernández-Yépez in Myers, 1950: 190. Type locality: Laja Supira, Alto Río Orinoco, Venezuela. Holotype: SU 16122.

Distribution: South America: Upper Orinoco River, Casiquiare, and upper Xingu River basin.

Countries: Brazil, Venezuela

SPECIES INQUIRENDA

Pithecocharax ucayalensis Fowler, 1906: 320, fig. 16. Type locality: Río Ucayali or Peruvian Amazon, Peru. Holotype: ANSP 21997. Possible synonym of a *Leporinus* species.

Family Chilodontidae (Headstanders)

Richard P. Vari and Sandra J. Raredon

A single series of relatively small teeth movably attached to the lips of the upper jaw and, in most species, to the lower jaw together with a sixth lateral-line scale distinctly smaller than the other scales in that series serve to separate the Chilodontidae from other members of the Characiformes. The Chilodontidae are also distinguished within the Characiformes by a series of derived features in a number of body systems discussed by Vari (1983) and Vari et al. (1995). *Chilodus* was revised by Isbrücker and Nijssen (1988) and Vari and Ortega (1997) and *Caenotropus* by Vari et al. (1995). Phylogenetic relationships within *Caenotropus* and the phylogenetic biogeography of the Chilodontidae were discussed by Vari et al. (1995).

Chilodontids are broadly distributed east of the Andean Cordilleras in both the Orinoco and Amazon River basins, the series of independent rivers draining the Atlantic slope of the Guianas, and the Paraíba River basin of northeastern Brazil. Chilodontids have been collected in a diversity of water types. Some species (e.g., *Caenotropus mestomormatus*, *C. maculosus*) apparently live solely in black waters (Vari et al., 1995; Vari and Ortega, 1997) whereas others (*Chilodus frittillus*, Vari and Ortega, 1997) occur in black, white, and clear waters. *Caenotropus labyrinthicus* feeds on autochthonous invertebrates, detritus, and freshwater sponges and reproduces in May (Goulding et al., 1988; Vari et al., 1995; Ferreira et al., 1988).

Recent reviews of components of the Chilodontidae by Isbrücker and Nijssen (1988), Vari et al. (1995), and Vari and Ortega (1997) each described one new species, for a total of seven in the family, but it is not expected that many more species await discovery.

Species of *Chilodus* are exported from various locations for the aquarium trade in which they are known as headstanders.

CAENOTROPUS

Microodus Kner, 1858: 77. Type species: *Microodus labyrinthicus* Kner, 1858. Type by monotypy. Gender: masculine. Preoccupied by *Microodus* Nees, 1812, in Hymenoptera and *Microodus* Emmons, 1857, in fossil fishes.

Caenotropus Günther, 1864: 297. Type species: *Microodus labyrinthicus* Kner, 1858. Type by being a replacement name. Gender: masculine. Replacement for *Microodus* Kner, 1858. Revised by Vari et al. (1995) with species descriptions, geographic distribution and phylogenetic analysis.

Tylobronchus Eigenmann, 1912: 271. Type species: *Tylobronchus maculosus* Eigenmann, 1912. Type by monotypy. Gender: masculine.

Caenotropus labyrinthicus (Kner, 1858)

Microodus labyrinthicus Kner, 1858: 77. Type locality: Rio branco und Barra do Rio negro [=Branco River and mouth of Negro River, Brazil]. Lectotype: NMW 69289.1, designated by Vari et al. (1995: 24).

Chilodus labyrinthicus rupununi Fowler, 1914: 230, fig. 2. Type locality: Rupununi River, British Guiana [=Guyana], North Latitude 2° to 3° and West Longitude 50°20'. Holotype: ANSP 39316 [not 39306].

Maximum length: 15.2 cm SL

Distribution: South America: Amazon, Orinoco, and upper portions of Rupununi River, Suriname and Saramacca rivers, and Paraíba River in Piauí State.

Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru, Suriname, Venezuela

Remarks and references: See Vari et al. (1995: 21) for redescription.

Common names: Cabeça dura (Brazil), Cabeza pa'bajo (Venezuela), Casca grossa (Brazil), Cochúo (Venezuela)

ela), Casca grossa (Brazil), Cochúo (Venezuela)

Caenotropus maculosus (Eigenmann, 1912)

Tylobronchus maculosus Eigenmann, 1912: 272, pl. 35 (fig. 3).

Type locality: British Guiana [=Guyana] Creek below Potaro Landing. Holotype: FMNH 53449 [ex CM 1923].

Maximum length: 10.8 cm SL

Distribution: South America: Cuyuni River basin of eastern Venezuela, Essequibo and Cuyuni rivers of Guyana, Corantijn River of Suriname and Guyana, and Marowijne-Maroni River of Suriname and French Guiana.

Countries: French Guiana, Guyana, Suriname, Venezuela

Remarks and references: See Vari et al. (1995: 17) for redescription.

Common names: Koulou (French Guiana), Pilawili (French Guiana), Tête en bas rayé (French Guiana), Yaya (French Guiana)

Caenotropus mestomormatos Vari, Castro & Raredon, 1995

Caenotropus mestomormatos Vari, Castro & Raredon, 1995: 14, figs. 9-10. Type locality: Venezuela, Amazonas, Río Orinoco basin Río Iguapo, (tributary of Río Orinoco), ~ 1 hr above its mouth (3°09'N, 65°28'W). Holotype: MBUCV V-21750.

Maximum length: 16.3 cm SL

Distribution: South America: Upper portions of the Orinoco River and the upper portions of the Negro River basin.

Countries: Brazil, Venezuela

CHILODUS

Chilodus Müller & Troschel, 1844: 85. Type species: *Chilodus punctatus* Müller & Troschel, 1844. Type by monotypy. Gender:

Check List of the Freshwater Fishes of South and Central America

masculine. Revised by Isbrücker & Nijssen (1988) and Vari & Ortega (1997). Phylogenetic definition by Vari et al. (1995: 11).

***Chilodus fritillus* Vari & Ortega, 1997**

Chilodus fritillus Vari & Ortega, 1997: 72, fig. 1. Type locality: Peru, Madre de Dios, Provincia Tambopata, Santuario Nacional Pampas del Heath Río Palma Real, oxbow lagoon, near Puesto de Control Enahuipa (12°45'S, 69°03'W) 192 m elevation. Holotype: MUSM 7223.

Maximum length: 7.3 cm SL

Distribution: South America: Palma Real River and vicinity of Puerto Maldonado.

Countries: Peru

***Chilodus gracilis* Isbrücker & Nijssen, 1988**

Chilodus gracilis Isbrücker & Nijssen, 1988: 54, fig. 5. Type locality: Brazil. Est. Amazonas, right bank tributary to Rio Uaupés at Trovão (about 20 kilometers upstream of mouth of Rio Uaupés). Holotype: IRSNB 760.

Maximum length: 6.4 cm SL

Distribution: South America: Central portions of Amazon River basin.

Countries: Brazil

***Chilodus punctatus* Müller & Troschel, 1844**

Chilodus punctatus Müller & Troschel, 1844: 85. Type locality: Iacu Amucu Guianae [=Lake Amuku, Guyana]. Lectotype: ZMB 23599, designated by Isbrücker & Nijssen (1988: 48).

Maximum length: 7.9 cm SL

Distribution: South America: Amazon River basin, Apeú River, Pará State, Guyana, Suriname, and western Orinoco River basin.

Countries: Brazil, Colombia, Ecuador, Guyana, Peru, Suriname

Remarks and references: Redescription by Isbrücker & Nijssen (1988).

Common names: Mojara (Peru)

***Chilodus zunevei* Puyo, 1946**

Chilodus zunevei Puyo, 1946: 183, fig. 1. Type locality: Région des plateaux des Guyanes située dans le territoire de l'Inini à environ trois cent cinquante kilomètres à vol d'oiseau de l'Ile de Cayenne, sur les conforts de Monts Tumuc-Humac; ils furent recueillis dans une crique inconnue qui se déverse dans l'Itany [=plateau region of French Guiana situated in the territory of the Inini approximately three hundred and fifty kilometers as the bird flies from Ile de Cayenne, on the slopes of Monts Tumuc-Humac; they were collected in an unnamed creek which empties into the Itany]. Type unknown.

Maximum length: 7.7 cm SL

Distribution: South America: French Guiana, Sinnamary, Approuague, and Oyapock River basins.

Countries: French Guiana

Remarks and references: Redescription by Isbrücker & Nijssen (1988).

Common names: Atiknowaik (French Guiana), Koulou (French

Guiana), Pilawili (French Guiana), Tête en bas (French Guiana), Yaya (French Guiana)

Family Crenuchidae (South American darters)

Paulo A. Buckup

The Crenuchidae are relatively small (usually less than 10 cm SL) fishes. Crenuchids are diagnosed by the presence of paired foramina located in the frontal bones, posterodorsally to the orbits (Buckup, 1998a). These foramina are more easily recognizable in the three members of the subfamily Crenuchinae, where they are relatively large and associated with a distinct depression in the frontals which is located immediately in front of the foramina. These foramina, however, are very small in members of the Characidiinae, which encompass the majority of crenuchids. In these species the foramina usually can only be seen through careful examination of a cleared and stained specimen. Fortunately, most characidiine fishes can be easily recognized by their general external appearance. They are easily distinguished from most other characiform fishes, such as the ubiquitous Characidae, by the low number of anal-fin rays (fewer than 14 rays). However, the reduced number of anal-fin rays is a primitive feature present in various families of characiform fishes. These families usually can be distinguished by their specialized dentition. The Characidiinae have conic or tricuspid teeth on both jaws. In the upper jaw they are organized in a single row. In the lower jaw they usually form two rows (the inner one may be absent in some species).

The current composition of the family has been established relatively recently (Buckup, 1998a). Traditionally, the Crenuchidae used to include only three species belonging to the genera *Crenuchus* and *Poecilocharax*. The remainder of the species were included in the family Characidae, as Incertae Sedis taxa, or aligned with various other groups of characiform fishes, such as nannostomines, hemiodontids, and erythrinids (see history in Buckup, 1998a). Currently, *Crenuchus* and *Poecilocharax* are included in the subfamily Crenuchinae, and the other species are assigned to the Characidiinae. Monophyly of the Characidiinae was demonstrated by Buckup (1993a), based on 13 characters. Relationships among species of *Characidium* have been cladistically studied by Buckup (1993c).

Crenuchids are present in most freshwater drainages in tropical and subtropical areas of the Neotropical Region located between eastern Panama (*Characidium marshi*) and La Plata, Argentina (*Characidium rachovii*; Ringuélet et al., 1978). However, most of the taxic diversity of the family is situated in river drainages surrounding the Guiana Shield (including the Orinoco basin and the northern tributaries of the Amazon basin). All genera, except *Characidium*, are restricted to these northern basins. *Characidium*, on the other hand, is a widespread and species-rich taxon.

Most species of Crenuchidae are inhabitants of fast flowing small streams, where they hover around pebbles, rock and vegetation. Some occur in rapids and small waterfalls, where they are often found adhering to the substrate or clinging to aquatic plants such as *Podostemaceae*. Some species have been reported to cling to vertical walls (Buckup et al., 2000). Other species, such as *Characidium rachovii*, live in slow flowing lowland waters. A number of species are miniature species (*sensu* Weitzman & Vari, 1988), reaching maturity below 25 mm SL (Buckup, 1993c). Chromosome studies of four species of *Characidium* indicate that these fishes have a modal diploid number of $2n=50$ (Miyazawa & Galetti Jr., 1994).

Except for the genus *Characidium*, most species of Crenuchidae are relatively well known. The three species of Crenuchinae may be identified with reference to summaries presented by Géry (1965, 1970). No undescribed species of Crenuchinae has been reported in more than three decades, suggesting that species diversity of this subfamily is now entirely known. The diversity of the Characidiinae was reviewed by Buckup (1993b). Except for *Characidium*, most species and genera of Characidiinae may be identified by consulting that revision and a few subsequent descriptions of new taxa (Costa & Vicente, 1994; Presswell et al., 2000; Zarske, 1997). The genus *Characidium*, however, is still poorly known, including several still undescribed taxa. Buckup (1993b) presented a comprehensive list of known species of *Characidium* including new synonyms, and a few species have been described more recently (Buckup and Reis, 1997; Buckup and Hahn, 2000). Several additional species are currently being described and a great increase in the number of known species is expected over the next few years. Currently, only specimens captured near known type localities may be securely identified, and most identifications require consultation of original descriptions.

Species of Crenuchidae have no value as food or sport fish. The fish are often called “piaba” in a general category with more common small characids. Sometimes names such as “canivete” (jackknife) are mentioned in connection with species of *Characidium*, but this is likely a misnomer resulting from confusion with similar looking species of Parodontidae. Some species are well known in the aquarium trade, especially the crenuchines, but their presence in pet shops is irregular. Most characidiins that appear in the trade are usually shipped as incidental catch. Several species have restricted distributions in hillside streams and freshwater lakes. Human interference in these environments have wiped out some populations of Cha-

racidiinae in southeastern Brazil, resulting in their being listing as endangered species (Buckup, 1998b; Buckup et al., 2000; Mazzoni *et al.*, 2000). Major threats to the survival of Crenuchidae include water diversion for human consumption, habitat disruption (caused mostly by deforestation, sand mining, and sewage discharges), fish-farming, and introduction of non-native species.

SPECIES INCERTAE SEDIS IN CRENUCHIDAE

***Microcharacidium geryi* Zarske, 1997**

Microcharacidium geryi Zarske, 1997: 163, figs. 5-7. Type locality: Quebrada Manatai bei der Hazienda der Familie Ramirez an der Strasse Campoverde - Nueva Requena. Holotype: MTD F17355.

Maximum length: 2.4 cm SL

Distribution: South America: Ucayali River basin.

Countries: Peru

AMMOCRYPTOCHARAX

Ammocryptocharax Weitzman & Kanazawa, 1976: 326. Type species: *Ammocryptocharax elegans* Weitzman & Kanazawa, 1976. Type by original designation. Gender: masculine.

***Ammocryptocharax elegans* Weitzman & Kanazawa, 1976**

Ammocryptocharax elegans Weitzman & Kanazawa, 1976: 331, fig. 1. Type locality: Caño Muco, ca. 15 km west of Puerto Guitán, Río Vichada basin, State of Meta, Colombia. Holotype: USNM 210692.

Maximum length: 3.25 cm SL

Distribution: South America: Amazon River basin; upper Orinoco River basin.

Countries: Bolivia, Brazil, Colombia, Venezuela

***Ammocryptocharax lateralis* (Eigenmann, 1909)**

Characidium laterale Eigenmann, 1909: 36. Type locality: Amatuk, Guyana. Holotype: FMNH 72627.

Maximum length: 2.83 cm SL

Distribution: South America: Potaro and Mazaruni River basins.

Countries: Guyana

***Ammocryptocharax minutus* Buckup, 1993**

Ammocryptocharax minutus Buckup, 1993b: 109, fig. 4. Type locality: Rio Urubaxi, beach near confluence with Rio Negro, Estado do Amazonas, Brazil, 0°35'S, 64°45'W. Holotype: MZUSP 43671.

Maximum length: 2 cm SL

Distribution: South America: Upper Orinoco River basin; Amazon River basin, upper Negro River basin.

Countries: Brazil, Venezuela

***Ammocryptocharax vintonae* (Eigenmann, 1909)**

Characidium vintoni Eigenmann, 1909: 36. Type locality: Shrimp Creek, Guyana. Holotype: FMNH 52756.

Maximum length: 5.7 cm SL

Distribution: South America: Potaro River; Mazaruni River; Uia-aren River (tributary of Caroni River, Orinoco basin).

Countries: Guyana, Venezuela

CHARACIDIUM

Characidium Reinhardt, 1867: 55. Type species: *Characidium fasciatum* Reinhardt, 1867. Type by monotypy. Gender: neuter.

Chorimycerus Cope, 1894: 67. Type species: *Chorimycerus tenuis* Cope, 1894. Type by monotypy. Gender: masculine.

Nanognathus Boulenger, 1895: 2. Type species: *Nanognathus borellii* Boulenger, 1895. Type by monotypy. Gender: masculine.

Poecilosomatops Fowler, 1906: 323. Type species: *Characidium etheostoma* Cope, 1872. Type by original designation. Gender:

masculine.

Jobertina Pellegrin, 1909: 151. Type species: *Characidium (Jobertina) interruptum* Pellegrin, 1909. Type by monotypy. Gender: feminine. Proposed as a subgenus of *Characidium*.

Microcharax Eigenmann, 1909: 35. Type species: *Nannostomus lateralis* Boulenger, 1895. Type by original designation. Gender: masculine.

***Characidium alipioi* Travassos, 1955**

Characidium alipioi Travassos, 1955: 613, pl. 1 (fig. 6). Type locality: Ilha dos Pombos, Rio Paraíba, Estado do Rio, Brazil. Holotype: MNRJ 5550.

Maximum length: 5.15 cm SL

Distribution: South America: Paraíba do Sul River basin.

Countries: Brazil

***Characidium bahiense* Almeida, 1971**

Characidium (Jobertina) bahiensis Almeida, 1971: 112, fig. 1. Type locality: Arembepe, Bahia, Brazil. Holotype: MZUSP 8940.

Maximum length: 2.3 cm SL

Distribution: South America: Bahia State.

Countries: Brazil

Remarks and references: Name emended by Buckup (1993:101).

***Characidium bimaculatum* Fowler, 1941**

Characidium bimaculatum Fowler, 1941: 179, fig. 90. Type locality: Fortaleza, Ceará [Brazil]. Holotype: ANSP 69523.

Maximum length: 3.2 cm SL

Distribution: South America: Coastal streams of northeastern Brazil.

Countries: Brazil

***Characidium boeavistae* Steindachner, 1915**

Characidium fasciatum boavistae Steindachner, 1915: 30, pl. 3 (fig. 4). Type locality: Rio Branco, Rio Miang [Brazil]. Syntypes: NMW 62431, NMW 62432, NMW 62427.

Characidium voladorita Schultz, 1944: 280, fig. 32. Type locality: 4 km above Motatán in the Río Motatán, Maracaibo basin, Venezuela. Holotype: USNM 121407.

Maximum length: 5.27 cm SL

Distribution: South America: Tributaries of Lake Maracaibo; Orinoco River basin; northern tributaries of the Amazon basin.

Countries: Brazil, Venezuela

***Characidium boehlkei* Géry, 1972**

Characidium boehlkei Géry, 1972: 79, pl. 7 (fig. 1). Type locality: río Cururay, basin du río Napo basin [Ecuador]. Holotype: ZMH 1624.

Maximum length: 6.99 cm SL

Distribution: South America: Napo River basin.

Countries: Ecuador

***Characidium bolivianum* Pearson, 1924**

Characidium bolivianum Pearson, 1924: 31, pl. 9 (fig. 3). Type locality: Popoi River, Upper Río Beni system, Bolivia. Syntypes: CAS-IU 17301 (currently CAS 60253, UMMZ 66488, USNM 117553).

Maximum length: 5.34 cm SL

Distribution: South America: Upper Madeira River basin.

Countries: Bolivia

***Characidium borellii* (Boulenger, 1895)**

Nanognathus borellii Boulenger, 1895: 3. Type locality: S. Pablo,

prov. Tucuman, Argentina. Holotype: MZUT 1045.
 Maximum length: 6.55 cm SL
 Distribution: South America: Andean tributaries of Paraná River basin in northwestern Argentina.
 Countries: Argentina

***Characidium brevirostre* Pellegrin, 1908**

Characidium brevirostre Pellegrin, 1908: 345. Type locality: Nord du Brésil (Ancien Contesté franco-brésilien). Holotype: MNHN 1898-51.

Maximum length: 3.27 cm SL
 Distribution: South America: Coastal streams in Amapá State.
 Countries: Brazil

***Characidium caucanum* Eigenmann, 1912**

Characidium caucanum Eigenmann, 1912: 25. Type locality: Cali [Colombia]. Holotype: FMNH 56057.

Distribution: South America: Cuca River basin.
 Countries: Colombia

***Characidium chupa* Schultz, 1944**

Characidium chupa chupa Schultz, 1944: 283, fig. 33. Type locality: Río Chama at Estanques, Estado de Mérida, Venezuela. Holotype: USNM 121417.

Maximum length: 7.95 cm SL
 Distribution: South America: Lake Maracaibo basin; Orinoco River basin.
 Countries: Venezuela

***Characidium crandellii* Steindachner, 1915**

Characidium crandellii Steindachner, 1915: 32. Type locality: Miang flusse, einem Zufussesedes Cotingo, der, mit dem Tacutúve-reinig, oberhalb Boa Vista in den Rio Branco mündet [Brazil]. Syntypes: NMW 62673, 69260.

Maximum length: 6.44 cm SL
 Distribution: South America: Amazon River basin.
 Countries: Brazil

***Characidium declivirostre* Steindachner, 1915**

Characidium declivirostre Steindachner, 1915: 31. Type locality: Río Coquenán, einem Zuflusse des Río Caroni in Venezuela. Syntypes: NMW 62442.

Maximum length: 7.97 cm SL
 Distribution: South America: Orinoco River basin; Amazon River basin.
 Countries: Brazil, Venezuela

***Characidium etzeli* Zarske & Géry, 2001**

Characidium etzeli Zarske & Géry, 2001: 237, fig.6. Type locality: 4 km von Bella Vista (etwa 50 km nordöstlich Encarnación in Richtung Rio Parana), Paraguay. Holotype: MTD F 22650.

Maximum length: 5.59 cm SL
 Distribution: South America: Paraná River basin in Paraguay.
 Countries: Paraguay

***Characidium etheostoma* Cope, 1872**

Characidium etheostoma Cope, 1872: 259, pls. 13 (fig. 3). Type locality: Río Ambyiacu, Peru. Lectotype: ANSP 8152.

Maximum length: 3.58 cm SL
 Distribution: South America: Amazon River basin.
 Countries: Brazil, Peru
 Common names: Mojarita (Peru)

***Characidium fasciatum* Reinhardt, 1866**

Characidium fasciatum Reinhardt, 1866: 56, pl. 2 (fig. 1). Type locality: "Soumidouro Baekken" near Lagoa Santa, Minas, Gerais, Brazil]. Lectotype: ZMUC P241103, designated by Buckup (1992:1066) through application of Art. 74b on Nielsen's (1974) inference of holotype; Buckup refers some paralectotypes to other species.

Maximum length: 6.74 cm SL
 Distribution: South America: Das Velhas River in São Francisco River drainage, Paranaíba, Grande and Tietê rivers in upper Paraná River drainage.
 Countries: Brazil

***Characidium gomesi* Travassos, 1956**

Characidium gomesi Travassos, 1956: 3, fig. 1. Type locality: Córrego da Lazica, Ouro Fino, Minas Gerais, Bacia de Mogi-Guaçu [Brazil]. Holotype: MNRJ 8584.

Maximum length: 6.49 cm SL
 Distribution: South America: Grande, Tietê and Paranapanema rivers in upper Paraná River drainage.
 Countries: Brazil

***Characidium grajahuensis* Travassos, 1944**

Characidium grajahuensis Travassos, 1944: 2, pl. 1 (figs. 1-2). Type locality: riachu que abastece a caixa de água do Grajaú, Rio de Janeiro, Distrito Federal Brasil. Holotype: MNRJ 3855.

Maximum length: 8.81 cm
 Distribution: South America: Coastal streams between Guanabara Bay and Mangaratiba, Rio de Janeiro State.
 Countries: Brazil

***Characidium hasemani* Steindachner, 1915**

Characidium hasemani Steindachner, 1915: 201. Type locality: Rio Surumú at Serra do Mello [Brazil] and Rio Rupununi [Guyana]. Syntypes: NMW 69253, NMW 69254.

Characidium surumuense Steindachner, 1915: 202. Type locality: Rio Surumú, einem Neben flusse des Rio Branco bei Serra do Mello [Brazil]. Syntypes: Unaccounted for, but probably NMW 69253 labelled as syntypes of *C. hasemani*.

Maximum length: 6.76 cm SL
 Distribution: South America: Northern tributaries of Amazon River basin.
 Countries: Brazil

***Characidium heinianum* Zarske & Géry, 2001**

Characidium heinianum Zarske & Géry, 2001: 231, fig. 1. Type locality: Bolivien, Departamento Beni, Rio Ipurupuru, Nebenfluss des Rio Mamoré, umweit der Kreuzung des Flusses an der Strasse nach San Ramon, etwa 73 km nördlich Trinidad (14°12'53.8" S, 64°56'26.8" W). Holotypes: MTD F 24825.

Maximum length: 2.10 cm SL
 Distribution: South America: Upper Mamoré River basin.
 Countries: Bolivia

***Characidium interruptum* Pellegrin, 1909**

Characidium (Jobertina) interruptum Pellegrin, 1909: 151. Type locality: Serra d'Estrello [Brazil]. Holotype: MNHN 1909-309.

Characidium (Jobertina) dubia Travassos, 1952: 8, pl. 1 (fig. 2). Type locality: Estrada Velha de Petrópolis, Baixada Fluminense, Estado do Rio de Janeiro, Brazil. Holotype: MNRJ 5542.

Maximum length: 5.28 cm SL
 Distribution: South America: Coastal lowland streams of southeastern Brazil.
 Countries: Brazil

***Characidium japyhybense* Travassos, 1949**

Characidium japyhybense Travassos, 1949b: 229, figs. 1-4. Type locality: Japyhyba [Japuiba], Angra dos Reis, Estado do Rio de Janeiro, Brazil. Holotype: MNRJ 5194.

Maximum length: 5.54 cm SL
 Distribution: South America: Coastal streams of southeastern Brazil from Ilha Grande Bay to Ribeira de Iguape River basin.
 Countries: Brazil

***Characidium lagsantense* Travassos, 1947**

Characidium lagsantense Travassos, 1947: 23, pl. 6 (fig. 32). Type locality: Lagoa Santa, Estado de Minas Gerais, Brasil. Ho-

lotype: MNRJ 4582.

Maximum length: 4.13 cm SL

Distribution: South America: Das Velhas River basin in São Francisco River drainage.

Countries: Brazil

***Characidium lanei* Travassos, 1967**

Characidium lanei Travassos, 1967: 45, fig. 2. Type locality: Fazenda Poço Grande, Juquiá, São Paulo, Brazil. Holotype: MNRJ 6185.

Maximum length: 4.092 cm SL

Distribution: South America: Coastal basins of southeastern Brazil in Paraná State and Ribeira de Iguape River basin.

Countries: Brazil

***Characidium laterale* (Boulenger, 1895)**

Nannostomus lateralis Boulenger, 1895: 2. Type locality: Colonia Risso [Paraguay]. Syntypes: MZUT 2565

Distribution: South America: Paraná River basin in Paraguay.

Countries: Paraguay

***Characidium lauroi* Travassos, 1949**

Characidium lauroi Travassos, 1949a: 87, fig. 2. Type locality: Rio das Pedras, Fazenda Penedo, Agulhas Negras (Rezende), Estado do Rio de Janeiro, Brasil. Holotype: MNRJ 5529.

Maximum length: 7.12 cm SL

Distribution: South America: Middle and upper Paraíba do Sul River basin.

Countries: Brazil

***Characidium marshi* Breder, 1925**

Characidium marshi Breder, 1925: 5, fig. 5. Type locality: Río Sucubti, Darien, Panama. Holotype: AMNH 8405.

Maximum length: 4.4 cm SL

Distribution: Central America: Tuira River basin.

Countries: Panama

***Characidium occidentale* Buckup & Reis, 1997**

Characidium occidentale Buckup & Reis, 1997: 532, fig. 1A. Type locality: Arroio Canoín, approximately 28°07'S, 55°13'W, on road between Pirapó and São Nicolau mun. São Nicolau, Rio Grande do Sul, Brazil. Holotype: MCP 17585.

Maximum length: 4.83 cm SL

Distribution: South America: Left bank tributaries of middle Uruguay River basin.

Countries: Brazil

***Characidium oiticicai* Travassos, 1967**

Characidium oiticicai Travassos, 1967: 47, fig. 1. Type locality: Paranaipacaba, São Paulo, Brazil. Holotype: MNRJ 9480.

Maximum length: 6.75 cm SL

Distribution: South America: Upper Tietê and Ribeira de Iguape River basins.

Countries: Brazil

***Characidium orientale* Buckup & Reis, 1997**

Characidium orientale Buckup & Reis, 1997: 535, fig. 1B. Type locality: Arroio Chasqueiro on road (BR116) between Pelotas and Arroio Grande, mun. Arroio Grande, Rio Grande do sul, Brazil, approximately 32°09'S, 53°03'W. Holotype: MCP 16847.

Maximum length: 5.43 cm SL

Distribution: South America: Coastal basins of southern Brazil at western tributaries of Laguna do Patos basin.

Countries: Brazil

***Characidium pellucidum* Eigenmann, 1909**

Characidium pellucidum Eigenmann, 1909: 39. Type locality: Gluck Island, Guyana. Holotype: FMNH 52764.

Maximum length: 3.4 cm SL

Distribution: South America: Essequibo and Maroni River basins.

Countries: French Guiana, Guyana, Suriname

***Characidium phoxocephalum* Eigenmann, 1912**

Characidium phoxocephalum Eigenmann, 1912: 26. Type locality: Paila, Colombia. Holotype: FMNH 56061.

Maximum length: 6.8 cm TL

Distribution: South America: Cauca River basin.

Countries: Colombia

***Characidium pteroides* Eigenmann, 1909**

Characidium pteroides Eigenmann, 1909: 40. Type locality: Konawaruk [Guyana]. Holotype: FMNH 53548.

Maximum length: 2.11 cm SL

Distribution: South America: Essequibo River basin.

Countries: Guyana

***Characidium pterostictum* Gomes, 1947**

Characidium pterostictum Gomes, 1947: 18, pl. 1 (fig. 3). Type locality: Rio Maquiné, a tributary to Lagôa dos Quadros, Conceição do Arroio County, Rio Grande do Sul, Brazil. Holotype: UMMZ 143289.

Maximum length: 7.41 cm SL

Distribution: South America: Coastal basins from Ribeira de Iguape River basin Uruguay; Uruguay River basin.

Countries: Brazil

***Characidium purpuratum* Steindachner, 1882**

Characidium purpuratum Steindachner, 1882a: 142. Type locality: Canelos, Ecuador. Syntypes: NMW 69264. Species later described in more detail in Steindachner (1882b:78).

Maximum length: 5.3307 cm SL

Distribution: South America: Amazon River basin at Andean tributaries to the margin of the Amazon River.

Countries: Ecuador

***Characidium rachovii* Regan, 1913**

Characidium (Jobertina) rachovii Regan, 1913: 231. Type locality: Paranagua, Brazil [but probably Vila da Quinta, Município de Rio Grande, Brazil, 32°05'S, 52°17'W (see Buckup and Malabarba, 1990)]. Syntype: BMNH 1913.1.1.15.

Characidium (Jobertina) theageri Travassos, 1952: 22, pls. 1, 3 (fig. 9). Type locality: Paissandu, Uruguay. Holotype: MNRJ 4661.

Maximum length: 4.32 cm SL

Distribution: South America: Lower Paraná River basin; Uruguay River basin; coastal drainages from Rio Grande do Sul State to La Plata River.

Countries: Argentina, Brazil

***Characidium roesseli* Géry, 1965**

Characidium roesseli Géry, 1965: 201, pl. 18 (fig. 16). Type locality: Igarapé Prêto, collatéral de l'Amazone supérieure près de Belem, à environ 60 km en aval de Leticia [Amazonas, Brazil]. Holotype: SMF 7213.

Maximum length: 3.06 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil

***Characidium sanctjohanni* Dahl, 1960**

Characidium sanctjohanni Dahl, 1960: 477, fig. on p. 478. Type locality: Noanamá, Río San Juan [Colombia].

Maximum length: 4.65 cm SL

Distribution: South America: San Juan River basin.

Countries: Colombia

***Characidium schindleri* Zarske & Géry, 2001**

Characidium schindleri Zarske & Géry, 2001: 234, fig.4. Type locality: Bolivien, linker Nebenfluss zum Palmar, km 114. Holotype: MTD F 29470.

Maximum length: 6.68 cm SL

Distribution: South America: Bolivia (?).

Countries: Bolivia

***Characidium schubarti* Travassos, 1955**

Characidium schubarti Travassos, 1955: 365, fig. 1. Type locality: Córrego entre Murtinhos e Jaguariaíva, Paraná [Brazil]. Holotype: MNRJ 8853.

Maximum length: 51.3 cm SL

Distribution: South America: Paranapanema basin in upper Paraná River drainage and Ribeira de Iguape River basin.

Countries: Brazil

***Characidium serrano* Buckup & Reis, 1997**

Characidium serrano Buckup & Reis, 1997: 541, fig. 4a. Type locality: Rio Jacutinga on road (BR283) between Seara and Concórdia, mun. Concórdia, state of Santa Catarina, Brazil, (approximately 27°10'S, 52°09'W). Holotype: MCP 12488.

Maximum length: 5.4 cm SL

Distribution: South America: Upper Uruguay River basin.

Countries: Brazil

***Characidium steindachneri* Cope, 1878**

Characidium steindachneri Cope, 1878: 688. Type locality: Peru. Holotype: ANSP 21428.

Characidium catenatum Eigenmann, 1909: 40. Type locality: Warraputa, Guyana. Holotype: FMNH 52761.

Characidium ladigesi Géry, 1972: 77, pl. 6 (figs. 1-2). Type locality: Río Villano, Ecuador. Holotype: ZMH 1864.

Maximum length: 4.12 cm SL

Distribution: South America: Amazon and Orinoco River basins; freshwater basins of Guyana.

Countries: Brazil, Colombia, Ecuador, Guyana, Peru

Common names: Mojarita (Peru)

***Characidium stigmatosum* Melo & Buckup, 2002**

Characidium stigmatosum Melo & Buckup, 2002: 988, fig. 1. Type locality: small stream ("riacho") tributary of córrego Ave Maria, near Santo Antônio farm headquarters, 14 km north of Cavalcante, mun. Cavalcante, Goiás (47°30'W, 13°47'S; inferred by authors), Brazil. Holotype: MZUSP 40804.

Maximum length: 4.25 cm SL

Distribution: South America: Paraná River basin in upper Tocantins River drainage.

Countries: Brazil

***Characidium tenue* (Cope, 1894)**

Chorimycteris tenuis Cope, 1894: 67. Type locality: Upper waters of the Jacuhy River in the Brazilian State of Rio Grande do Sul, Brazil. Holotype: ANSP 21576.

Maximum length: 5.6 cm SL

Distribution: South America: Uruguay River basin; Laguna dos Patos basin.

Countries: Brazil

***Characidium timbuiense* Travassos, 1946**

Characidium timbuiensis Travassos, 1946: 1, pl. 1 (figs. 1-2). Type locality: Córrego Valsungana, tributário of Rio Timbuí, próximo a Santa Tereza, Município de Santa Tereza, Estado do Espírito Santo, Brasil, 785 m de altitude. Holotype: MNRJ 4285.

Maximum length: 5.583 cm SL

Distribution: South America: Timbuí River basin in Espírito Santo State.

Countries: Brazil

***Characidium vestigipinne* Buckup & Hahn, 2000**

Characidium vestigipinne Buckup & Hahn, 2000: 151, fig. 1. Type locality: Headwaters of rio Caraguatá, ca. 28°09'S, 52°18'W, ca. 200 m from RS-135 hwy, at Fazenda Dückel, Coxilla, Rio Grande do Sul, Brazil. Holotype: MCP 20317.

Maximum length: 5.1 cm SL

Distribution: South America: Known only from the type locality in the headwaters of Caraguatá River, upper Uruguay River drainage.

Countries: Brazil

***Characidium vidali* Travassos, 1967**

Characidium vidali Travassos, 1967: 49, fig. 4. Type locality: Rio Soberbo, Barreira (Parque Nacional da Serra dos Orgãos), elev. 400 m, distrito de Magé, Rio de Janeiro [Brazil]. Holotype: MNRJ 9757.

Maximum length: 6.4 cm SL

Distribution: South America: Northeastern tributaries of Guanabara Bay in Rio de Janeiro State.

Countries: Brazil

***Characidium zebra* Eigenmann, 1909**

Characidium zebra Eigenmann, 1909: 38. Type locality: Maripicru [Creek], a branch of the Ireng, Guyana. Holotype: FMNH 53547.

Characidium fasciadorsale Fowler, 1914: 233, fig. 3. Type locality: Rupununi River, British Guiana [Guyana], Coordinate incorrectly listed as 2°-3°N, 50°20'W by Fowler (1914: 229). Holotype: ANSP 39317.

Maximum length: 4.9 cm SL

Distribution: South America: Amazon and Essequibo River basins; coastal basins of Guiana Shield.

Countries: Brazil, French Guiana, Guyana, Suriname

Remarks and references: Several morphologically similar populations from Colombia to Uruguay may be referable to this species. This species used to be incorreccted listed as *Characidium fasciatum* (see discussion in Buckup, 1992: 1071).

Species inquirenda

Leporinus macrolepidotus Peters, 1868: 455. Type locality: Rio de Janeiro [Brazil]. Holotype: ZMB 6774. This species is a *Characidium* but it is not possible to assign it to any known species.

CRENUCHUS

Crenuchus Günther, 1863: 443. Type species: *Crenuchus spilurus* Günther, 1863. Type by monotypy. Gender: masculine.

***Crenuchus spilurus* Günther, 1863**

Crenuchus spilurus Günther, 1863: 443. Type locality: Essequibo [Guyana]. Holotype: BMNH 1864.1.21.92.

Maximum length: 5.7 cm TL

Distribution: South America: Orinoco and Amazon River basin, coastal rivers in the Guianas.

Countries: Brazil, Colombia, French Guiana, Guyana, Peru, Suriname, Venezuela

Common names: Yaya (French Guiana)

ELACHOCHARAX

Elachocharax Myers, 1927: 114. Type species: *Elachocharax pulcher* Myers, 1927. Type by original designation. Gender: masculine.

Geisleria Géry, 1971: 154. Type species: *Geisleria junki* Géry, 1971. Type by original designation. Gender: feminine.

***Elachocharax geryi* Weitzman & Kanazawa, 1978**

Elachocharax geryi Weitzman & Kanazawa, 1978: 173, fig. 9. Type locality: Lago Paricatuba, Rio Negro, Amazonas [Brazil] 3°07'S, 60°30'W. Holotype: MZUSP 13249.

Maximum length: 1.9 cm SL

Distribution: South America: Upper Orinoco and Negro River basins.

Countries: Brazil, Colombia, Venezuela

***Elachocharax junki* (Géry, 1971)**

Geisleria junki Géry, 1971: 154, fig. 2. Type locality: rio Novo,

affluent du rio Jamari à environ 45 km à l'est de Porto Velho sur le rio Madeira, Territorio Guaporé, Brésil, 8°46'S, 63°30'W. Holotype: MHNG 2229.7.

Maximum length: 2.31 cm SL

Distribution: South America: Madeira and Negro River basins.

Countries: Brazil

***Elachocharax mitopterus* Weitzman, 1986**

Elachocharax mitopterus Weitzman, 1986: 740, fig. 1. Type locality: Caño Chola, where crossed by road from San Carlos do Río Negro to Solano, about 1°58'N, 67°00'W, Departamento Río Negro, Territorio Federal Amazonas, Venezuela. Holotype: MBUCV-V-15270.

Maximum length: 1.39 cm SL

Distribution: South America: Negro and Casiquiare River basins.

Countries: Brazil, Venezuela

***Elachocharax pulcher* Myers, 1927**

Elachocharax pulcher Myers, 1927: 115. Type locality: Caño de Quiribana, near Caicara [Venezuela]. Holotype: CAS 44250.

Maximum length: 2.21 cm SL

Distribution: South America: Amazon and upper Orinoco River basins.

Countries: Brazil, Peru, Venezuela

GERYICHTHYS

Geryichthys Zarske, 1997: 158. Type species: *Geryichthys sterbai* Zarske, 1997. Type by original designation. Gender: masculine.

***Geryichthys sterbai* Zarske, 1997**

Geryichthys sterbai Zarske, 1997: 159, fig. 1. Type locality: Peru, Departamento Loreto, Río Huacamayo, nahe Aguaytia (etwa 09°00 S, 75°29'W). Holotype: MTD F17561.

Maximum length: 3 cm SL

Distribution: South America: Upper Amazon River basin at region of Iquitos and Ucayali River drainage.

Countries: Peru

KLAUSEWITZIA

Klausewitzia Géry, 1965: 199. Type species: *Klausewitzia ritae* Géry, 1965. Type by original designation. Gender: feminine.

***Klausewitzia ritae* Géry, 1965**

Klausewitzia ritae Géry 1965: 199, pl. 18 (fig. 17). Type locality: Igarapé Prêto, collatéral de l'Amazone supérieur près de Belem, à environ 60 km en aral de Leticia [Amazonas, Brazil]. Holotype: SMF 7201 (incorrectly listed as SMF 7202 in Backup 1993:102).

Maximum length: 2.5 cm SL

Distribution: South America: Upper Amazon River basin at border area between Brazil and Peru.

Countries: Brazil, Peru

LEPTOCHARACIDIUM

Leptocharacidium Backup, 1993b: 103. Type species: *Leptocharacidium omspilus* Backup, 1993. Type by original designation. Gender: neuter.

***Leptocharacidium omspilus* Backup, 1993**

Leptocharacidium omspilus Backup, 1993b: 103, fig. 2. Type locality: mouth of left bank tributary ('white river') of Río Marwinuma (= Río Baria), 5 km upstream of Neblina base camp (66°10'W, 0°55'N, 120 m elevation), Departamento Río Negro Territorio Federal del Amazonas, Venezuela. Holotype: AMNH 98287.

Maximum length: 6.96 cm SL

Distribution: South America: Negro and upper Orinoco River basins.

Countries: Venezuela

MELANOCHARACIDIUM

Melanocharacidium Backup, 1993b: 113. Type species: *Characidium blennioides* Eigenmann, 1909. Type by original designation. Gender: neuter.

***Melanocharacidium auroradiatum* Costa & Vicente, 1994**

Melanocharacidium auroradiatum Costa & Vicente, 1994: 68, fig. 1. Type locality: Brésil: Estado de Goiás, un petit affluent du rio Verde, bassin du rio Araguaia, 1 km S de São Miguel do Araguaia, 13°22'S, 50°15'W. Holotype: MNRJ 12444.

Maximum length: 4.33 cm SL

Distribution: South America: Araguaia River basin.

Countries: Brazil

***Melanocharacidium blennioides* (Eigenmann, 1909)**

Characidium blennioides Eigenmann, 1909: 37. Type locality: Erukin, tributary of the Potaro above Kangaruma [Mazaruni-Potaro Dist., Guyana]. Holotype: FMNH 71043.

Maximum length: 4 cm SL

Distribution: South America: Essequibo River basin, coastal streams of northern South America from Guyana to French Guiana.

Countries: French Guiana, Guyana, Suriname, Venezuela

Common names: Yaya (French Guiana)

***Melanocharacidium compressus* Backup, 1993**

Melanocharacidium compressus Backup, 1993b: 114, fig. 5. Type locality: backwater of Río Orinoco, 66°28'W, 3°04'N, circa 1/2 hour upstream from Isla Temblador, Territorio Federal del Amazonas, Venezuela. Holotype: ANSP 161666.

Maximum length: 3.06 cm SL

Distribution: South America: Upper Orinoco River basin, between Puerto Ayacucho and Casiquiare River.

Countries: Venezuela

***Melanocharacidium depressum* Backup, 1993**

Melanocharacidium depressum Backup, 1993b: 117, fig. 7. Type locality: cachoeira Morena Rio Uatumã, ca. 59°30'W, 2°10'S, Estado do Amazonas, Brazil. Holotype: INPA 1738.

Maximum length: 3.4 cm TL

Distribution: South America: Uatumã, Negro and upper Orinoco River basins.

Countries: Brazil, Venezuela

***Melanocharacidium dispilomma* Backup, 1993**

Melanocharacidium dispilomma Backup, 1993b: 120, fig. 8. Type locality: Cachoeira Morena [approximately 59°30'W, 2°10'S], Rio Uatumã, Estado do Amazonas, Brazil. Holotype: INPA 6628.

Maximum length: 5 cm TL

Distribution: South America: Amazon and Orinoco River basins; Essequibo River basin; coastal streams of northern South America from Guyana to French Guiana.

Countries: Brazil, French Guiana, Guyana (inferred), Suriname, Venezuela

***Melanocharacidium melanopteron* Backup, 1993**

Melanocharacidium melanopteron Backup, 1993b: 125, fig. 10. Type locality: Río Caroni, below Guri dam, ca. 63°W, 7°50'N, Estado Bolivar, Venezuela. Holotype: MCNG 26957.

Maximum length: 7.19 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Melanocharacidium pectorale* Backup, 1993**

Melanocharacidium pectorale Backup, 1993b: 130, fig. 13. Type locality: Cachoeira Morena [approximately 59°30'W, 2°10'S], Rio Uatumã, Estado do Amazonas, Brazil. Holotype: INPA

6629.

Maximum length: 4.36 cm TL

Distribution: South America: Amazon and Orinoco River basin.

Countries: Brazil, Venezuela

Melanocharacidium rex (Böhlke, 1958)

Characidium rex Böhlke, 1958: 92, pl. 5 (fig. 7). Type locality: Chicherota region, not far from the mouth of Río Bobonaza, Ecuador. Holotype: ANSP 75949.

Maximum length: 9.85 cm SL

Distribution: South America: Tigre and Pastaza River basins in upper Amazon drainage.

Countries: Ecuador

MICROCHARACIDIUM

Microcharacidium Buckup, 1993b: 137. Type species: *Jobertina eleotrioides* Géry, 1960. Type by original designation. Gender: neuter.

Microcharacidium eleotrioides (Géry, 1960)

Jobertina eleotrioides Géry, 1960: 4. photo p. 6. Type locality: Little brook between "St. Patawa" and "St. Grand Bacou", Middle-Mana, French Guiana, (between 53°W-54°W and 4-5° N). Holotype: MNHG 2201.13.

Maximum length: 2.1 cm SL

Distribution: South America: Coastal stream of northern South America in Suriname and French Guiana.

Countries: French Guiana, Suriname

Microcharacidium gnomus Buckup, 1993

Microcharacidium gnomus Buckup, 1993b: 137, fig. 16. Type locality: Small stream (Río Orinoco drainage), 67°36'W, 5°58'S, between Río Paraíba [=Pacia?] Grande and Puerto Ayacucho, ca. 25 km from Puerto Ayacucho, Departamento Ature, Territorio Federal del Amazonas, Amazonas, Venezuela. Holotype: MBUCV V-21790.

Maximum length: 2.2 cm SL

Distribution: South America: Negro River basin above Barcelos; Orinoco River basin above La Urbana.

Countries: Brazil, Venezuela

ODONTOCHARACIDIUM

Odontocharacidium Buckup, 1993b: 136. Type species: *Klausewitzia aphanes* Weitzman & Kanazawa, 1977. Type by original designation. Gender: neuter.

Odontocharacidium aphanes (Weitzman & Kanazawa, 1977)

Klausewitzia aphanes Weitzman & Kanazawa, 1977: 151, figs. 1-6. Type locality: Rio Negro, State of Amazonas, Brazil. Holotype: MZUSP 12978.

Maximum length: 1.65 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Peru, Venezuela

POECILOCHARAX

Poecilocharax Eigenmann, 1909: 34. Type species: *Poecilocharax bovalii* Eigenmann, 1909. Type by monotypy. Gender: masculine.

Poecilocharax bovalii Eigenmann, 1909

Poecilocharax bovalii Eigenmann, 1909: 34. Type locality: Creek at Savannah Landing, Guyana. Holotype: FMNH 53544.

Maximum length: 4.7 cm TL

Distribution: South America: Kaieteur Falls on the Potaro River.

Countries: Guyana

Poecilocharax weitzmani Géry, 1965

Poecilocharax weitzmani Géry, 1965: 207, pl. 18 (fig. 19); figs. 10-11. Type locality: Igarapé Prêto, collateral de l'Amazone supérieur près de Belem, a environ 60 km en aval de Leticia [Amazonas, Brazil]. Holotype: SMF 7332.

Maximum length: 4 cm TL

Distribution: South America: Upper Solimões, upper Negro and upper Orinoco River basins.

Countries: Brazil, Colombia, Peru, Venezuela

SKIOTOCHARAX

Skiocharax Preswell, Weitzman & Bergquist, 2000: 178. Type species: *Skiocharax meizon* Presswell, Weitzman & Bergquist, 2000. Gender: masculine.

Skiocharax meizon Presswell, Weitzman & Bergquist, 2000

Skiocharax meizon Presswell, Weitzman & Bergquist, 2000: 185-188, figs. 1-2. Type locality: Guyana: tributary of the Mazaruni River, upstream of Aruwai Falls; approximately 6°18'47"N 60°35'41"W. Holotype: UG uncat.

Maximum length: 3.21 cm SL

Distribution: South America: Mazaruni and Berbice River basins.

Countries: Guyana

Family Hemiodontidae (Hemiodontids)

Francisco Langeani

Hemiodontids are swift swimmers with a fusiform and streamlined body. Their adult size ranges from 7 to about 30 cm of standard length. An adipose, well-developed eyelid, a suprapectoral sulcus, and 9 to 11 branched pelvic-fin rays are some of the synapomorphies uniting all the species within the Hemiodontidae (Langeani, 1998). Most of its members can be distinguished from other Characiformes by the possession of a round, midlateral, body spot on the vertical through the posterior portion of the dorsal-fin base, and a longitudinal stripe on the lower lobe of the caudal fin.

Twenty eight species are recognized in the family, distributed among the Anodontinae, with *Anodus* (2 spp, and one new species from Amazon basin currently being described) and *Micromischodus* (1 sp), the Hemiodontinae with *Hemiodus* (18 spp, and 5 new species from Amazon and São Francisco River basins currently under description), and the Bivibranchiini, with *Argonectes* (2 spp) and *Bivibranchia* (5 spp). Species occur in most rivers and basins of northern South America, such as Amazon, Orinoco, Tocantins, Guyana, Surinam, French Guiana, some smaller independent drainages (Amapá, Araguari, Itaipucu, Mearim, and Parnaíba rivers), and also to the south in the Paraná-Paraguay basin.

Hemiodontids are pelagic, feeding on sand, detritus, mud, filamentous algae, higher plants, larvae of chironomid (Diptera), corixid (Heteroptera) and Ephemeroptera, and fish droppings, like *Argonectes*, *Bivibranchia*, *Hemiodus* and *Micromischodus* (Menezes & Silva, 1949; Roberts, 1971; Knöppel, 1972), while *Anodus* feeds on plankton, by filtering water with aid of very elongate, slender and numerous gill-rakers (Roberts, 1972). *Argonectes* and *Bivibranchia* are the only characiform fishes having protractile upper jaws (especially pronounced in *Bivibranchia*) and *Bivibranchia* also has apomorphies in the roof of the mouth, gill arches and gill chamber, used to sort food particles taken with sand (Eigenmann, 1912; Roberts, 1971; Vari, 1985). They form small or large schools (Roberts, 1971, 1974; Vari, 1985), and most inhabit open waters in lakes and large rivers (Roberts, 1972 and 1974; Britski, Silimon & Lopes, 1999), while others live in much smaller environments, like ribeirões and igarapés (Myers, 1927; Roberts, 1971; Langeani, 1999). Some *Hemiodus* species, called cruzeiros-do-sul, are enjoyed by aquarists, and some *Anodus*, *Argonectes* and *Hemiodus*, among those species that attain the largest sizes, are used as food (Santos et al., 1984).

Species living in the main channels of Amazon basin have been well studied; undescribed species from some headwater streams, however, have been found in museum collections, and more are likely to be uncovered in the future with new collections being made on those areas.

Information given below is mainly based on some phylogenetic and revisionary works in progress; synonymies are based on personal observation and examination of types. In order to avoid confusion about species recognition some lectotypes are designated here.

ANODUS

Anodus Cuvier, 1829: 309, footnote. Type species: *Anodus elongatus* Agassiz, 1829. Type by subsequent designation. Gender: masculine. Phylogenetic definition and synonymy in Langeani (1998: 157). Langeani (op.cit.) listed the type species as designated by Cope (1878: 683); that is incorrect, because author was apparently referring to *Anodus* Spix (=Agassiz) not to *Anodus* Cuvier and, as stated by Eschmeyer (1998: 1839), the type was designated by Kottelat (1988: 78).

Anodus Agassiz, in Spix & Agassiz, 1829: 57, 60. Type species: *Anodus elongatus* Agassiz, 1829. Type by subsequent designation. Gender: masculine.

Elopomorphus Gill, 1878: 167. Type species: *Elopomorphus jordani* Gill, 1878. Type by monotypy. Gender: masculine.

Eigenmannina Fowler, 1906: 307. Type species: *Anodus melanopogon* Cope, 1878. Type by original designation. Gender: feminine.

***Anodus elongatus* Agassiz, 1829**

Anodus elongatus Agassiz, in Spix & Agassiz, 1829: 61, pl. 40.

Type locality: Brazil. No types known.

Anodus melanopogon Cope, 1878: 682. Type locality: Nauta, Peru.

Lectotype: ANSP 21227.

Anodus steatops Cope, 1878: 683. Type locality: Pebas, Peru.

Lectotype: ANSP 21498.

Elopomorphus jordani Gill, 1878b: 168. Type locality: Río Marmoré, Amazon system, Bolivia. Holotype: USNM 5926.

Maximum length: 30.3 cm SL

Distribution: South America: Amazon River basin: Japurá, Trombetas, Purus, Jutai, Solimoes, Amazon, and Ucayali River basins. Countries: Brazil, Peru

Remarks and references: See Cope (1878: 682 and 683), under *A. melanopogon* and *A. steatops* for description; synonymy above based on personal observation and examination of types.

Common names: Charuto (Brazil), Cubiu orana (Brazil), Julilla (Peru), Orana (Brazil), Ubarana (Brazil)

***Anodus orinocensis* (Steindachner, 1887)**

Elopomorphus orinocensis Steindachner, 1887a: 231. Type locality: Río Orinoco. Lectotype: NMW 72619-1, by present designation.

Maximum length: 27.5 cm SL

Distribution: South America: Orinoco, Amazon, and Tocantins River basin.

Countries: Brazil, Venezuela

Remarks and references: See Steindachner (1887b: 66, pl. 2, figs. 2-2a) for a detailed description and figures; valid based on personal observation and examination of types.

Common names: Ubarana (Brazil)

ARGONECTES

Argonectes Böhlke & Myers, 1956: 2. Type species: *Argonectes scapularis* Böhlke & Myers, 1956.

Type by original designation. Gender: masculine. Phylogenetic definition and synonymy in Langeani (1998: 158); species descriptions and geographical distribution in Langeani (1999).

***Argonectes longiceps* (Kner, 1858)**

Hemiodus longiceps Kner, 1858: 77. Type locality: Rio Içanno [Içana River, Brazil]. Lectotype: NMW 68643.

Argonectes scapularis Böhlke & Myers, 1956: 2, fig. 1. Type locality: Mouth of Caño Massaua [Massagua], Río Orinoco, Venezuela. Holotype: SU 46382.

Maximum length: 24.5 cm SL

Distribution: South America: Amazon River at Japurá, Orinoco, Maroni, Negro, Trombetas, Tapajós, and Canumã River basins.

Countries: Brazil, French Guiana, Suriname

Remarks and references: See Langeani (1999a) for diagnoses, figure, distribution and comparison with *Argonectes robertsi*.

Common names: Jatuarana (Brazil), O-Oií-Apotira (Brazil)

***Argonectes robertsi* Langeani, 1999**

Argonectes robertsi Langeani, 1999a: 173, fig. 1a. Type locality: lago Dumbá Grande, Barra do Graças, Rio Araguaia. Holotype: MZUSP 21528.

Maximum length: 28.8 cm SL

Distribution: South America: Tapajós, Xingu, Tocantins, and Capim River basins.

Countries: Brazil

Remarks and references: Correct publication date is 1999 not 1998 as printed.

Common names: Jatuarana (Brazil)

BIVIBRANCHIA

Bivibranchia Eigenmann, 1912: 258. Type species: *Bivibranchia protractila* Eigenmann, 1912. Type by monotypy. Gender: feminine. Phylogenetic definition and synonymy in Langeani (1998: 158).

Atomaster Eigenmann & Myers, 1927: 565. Type species: *Atomaster velox* Eigenmann & Myers, 1927. Type by monotypy. Gender: masculine.

***Bivibranchia bimaculata* Vari, 1985**

Bivibranchia bimaculata Vari, 1985: 517, fig. 3. Type locality: Rocky pool in the center of Corantijn R. at "Camp Hydro", Nickerie District, Suriname, ca. 3°42'N, 57°58'W. Holotype: USNM 225974.

Maximum length: 12.9 cm SL

Distribution: South America: Corantijn, Suriname, and Maroni River basins.

Countries: French Guiana, Guyana, Suriname

Common names: Matoucrabe (French Guiana)

***Bivibranchia fowleri* (Steindachner, 1908)**

Hemiodus fowleri Steindachner, 1908b: 131. Type locality: Ama-

zonas. Holotype: NMW 68600.

Bivibranchia protractila Eigenmann, 1912: 259, pl. 33 (fig. 1-5). Type locality: Bartica sand bank, Guyana. Holotype: FMNH 53576.

Maximum length: 14.4 cm SL

Distribution: South America: Negro, Tocantins, Xingu, Tapajós, Madeira, Essequibo, and Orinoco River basins.

Countries: Brazil, Guyana, Venezuela

Remarks and references: See Eigenmann (1912: 259) for description; synonymy above is based on personal observation and examination of types.

***Bivibranchia notata* Vari & Goulding, 1985**

Bivibranchia notata Vari & Goulding, 1985: 1055, fig. 1. Type locality: Beach at Alter do Chão, Rio Tapajós, ca. 2°31'S, 54°57'W, Pará, Brazil. Holotype: MZUSP 28657.

Maximum length: 7.2 cm SL

Distribution: South America: Tapajós and Tocantins River basins.

Countries: Brazil

***Bivibranchia simulata* Géry, Planquette & Le Bail, 1991**

Bivibranchia simulata Géry, Planquette & Le Bail, 1991: 23, pl. 7 (fig. 1). Type locality: Panacupelu, Saut Moutouci, Wilapaleya, Oyapoque river, French Guiana. Holotype: MNHN 1981.0545.

Bivibranchia simulata surinamensis Géry, Planquette & Le Bail, 1991: 27. Type locality: Affluent de droite de la Nickerie Rivier, env. de ½ heure au-dessous de Blanche Marie Falls, Surinam. Holotype: RMNH.

Maximum length: 13.5 cm SL

Distribution: South America: Coppename, Nickerie, Suriname, and Oyapock River basins.

Countries: Brazil, French Guiana

Remarks and references: Synonymy above is based on personal observation and examination of types.

Common names: Matoucrabe (French Guiana)

***Bivibranchia velox* (Eigenmann & Myers, 1927)**

Atomaster velox Eigenmann & Myers, 1927: 565. Type locality: Riberão, Porto Nacional, Tocantins, Goyas. Holotype: CAS 39430.

Maximum length: 15.2 cm SL

Distribution: South America: Xingu and Tocantins River basins.

Countries: Brazil

HEMIODUS

Hemiodus Müller, 1842a: 206. Type species: *Hemiodus crenidens* Müller, 1842a. Type by monotypy. Gender: masculine. Phylogenetic definition and synonymy in Langeani (1998: 157); comments on evolution of color pattern and tooth shape in Langeani (1999: 721).

Anisitsia Eigenmann & Kennedy, in Eigenmann, 1903: 144. Type species: *Anodus notatus* Jardine, 1841. Type by original designation. Gender: feminine.

Hemiodopsis Fowler, 1906: 318. Type species: *Hemiodus microlepis* Kner, 1859. Type by original designation. Gender: feminine.

Pterohemiodus Fowler, 1940: 257. Type species: *Pterohemiodus atranalis* Fowler, 1940. Type by original designation. Gender: masculine.

***Hemiodus amazonum* (Humboldt, 1821)**

Curimatus amazonum Humboldt, in Humboldt & Valenciennes, 1821: 165, pl. 45 (fig. 2). Type locality: Rio Maranon, Cachoeira de Rentema, provincia de Saint-Jean de Bracamoros, Peru. No types known.

Prochilodus humboldti Valenciennes, in Cuvier & Valenciennes, 1850: 90. Type locality: "Maragnon, vis-à-vis de la cataracte de Rentema, dans la province de Saint Jean de Braeamoros".

Maximum length: 16.2 cm SL

Distribution: South America: Marañón and Ucayali River basins; Essequibo River basin.
 Countries: Guyana, Peru
 Common names: Julilla (Peru)

***Hemiodus argenteus* Pellegrin, 1908**

Hemiodus argenteus Pellegrin, 1908: 344. Type locality: Orenoque. Lectotype: MNHM 1887.770, by present designation.

Hemiodopsis ocellata Vari, 1982: 188, fig. 1. Type locality: Main stream of Dalbana Creek, approximately 150 m upstream of its junction with the Kabalebo river, Nickerie District, Surinam, ca. 4°47'N, 57°29'W. Holotype: USNM 221175.

Maximum length: 23.7 cm SL

Distribution: South America: Orinoco River basin; Japurá, Jutai, Negro, Tapajós, and Uatumã River basins; Rupununi, Corantijn, Itapecuru, and Mearim River basins.

Countries: Brazil, Guyana, Suriname, Venezuela

Remarks and references: See Vari (1982: 188) for a detailed description; synonymy above is based on personal observation and examination of types.

Common names: Charuto (Brazil), Flexeira (Brazil), Jatuarana (Brazil), Orana (Brazil)

***Hemiodus atranalis* (Fowler, 1940)**

Pterohemiodus atranalis Fowler, 1940: 258, fig. 57. Type locality: Contamana, Ucayali R. basin, Peru. Holotype: ANSP 68671.

Pterohemiodus luelingi Géry, 1962: 332, pl. 1. Type locality: Quisto Cocha, petit lac en bordure du Rio Itaya, affluent de la rive gauche de l'Amazonie peruvienne à environ 15 km à l'ouest d'Iquitos (Perou). Holotype: MKI/59-60/QC/12.

Maximum length: 9.2 cm SL

Distribution: South America: Essequibo, Negro, Trombetas, Madeira, Tefé, Solimões, and Amazon River basins.

Countries: Brazil, Guyana, Peru

Remarks and references: Synonymy above based on personal observation and examination of types.

Common names: Cruzeiro-do-sul (Brazil), Julilla (Peru)

***Hemiodus goeldii* Steindachner, 1908**

Hemiodus goeldii Steindachner, 1908a: 61. Type locality: wahrscheinlich aus dem Xingu stammend. Holotype: NMW 68642.

Maximum length: 16 cm SL

Distribution: South America: Amapá River basin.

Countries: Brazil

Remarks and references: Based on personal observation, this species is from Amapá River, a small coastal river at Amapá State, and does not occur in Xingu River, as in the original description.

***Hemiodus gracilis* Günther, 1864**

Hemiodus gracilis Günther, 1864: 299. Type locality: River Cupai [Brazil]. Lectotype: BMNH 1853.319.54, by present designation.

Maximum length: 16.3 cm SL

Distribution: South America: Negro, Tapajós, Madeira, Solimões, Amazon, and Orinoco River basins.

Countries: Brazil, Venezuela

Common names: Cruzeiro-do-sul (Brazil), Julilla (Peru)

***Hemiodus huraulti* (Géry, 1964)**

Hemiodopsis huraulti Géry, 1964: 69, fig. 2. Type locality: Upper part of the Maroni River, at about the Litani Falls, French Guiana. Holotype: MHNG 2151.14.

Maximum length: 11.4 cm SL

Distribution: South America: Maroni and Mana River basins.

Countries: French Guiana, Suriname

Common names: Karp-jonn (French Guiana), Parasi-so (French Guiana)

***Hemiodus immaculatus* Kner, 1858**

Hemiodus immaculatus Kner, 1858: 78. Type locality: Barra do

Rio Negro. Holotype: NMW 68641.

Maximum length: 24.7 cm SL

Distribution: South America: Japurá, Negro, Preto da Eva, Trombetas, Tapajós, Canumã, Jutai, and Orinoco River basins.

Countries: Brazil, Venezuela

Common names: Charuto (Brazil), Flexeira (Brazil), Jatuarana (Brazil), Orana (Brazil), Voador (Brazil)

***Hemiodus microlepis* Kner, 1858**

Hemiodus microlepis Kner, 1858: 77. Type locality: Rio Guapore in Mato Grosso und Barra do Rio Negro. Lectotype: NMW 79472, by present designation.

Maximum length: 23.9 cm SL

Distribution: South America: Madeira, Tocantins, and Orinoco River basins.

Countries: Brazil, Venezuela

Common names: Charuto (Brazil), Flexeira (Brazil), Jatuarana (Brazil), Orana (Brazil)

***Hemiodus orthonops* Eigenmann & Kennedy, 1903**

Hemiodus orthonops Eigenmann & Kennedy, 1903: 511. Type locality: Arroyo Trementina, Paraguay. Holotype: CAS 61476.

Maximum length: 25 cm SL

Distribution: South America: Paraguay and Paraná River basins.

Countries: Brazil, Paraguay

Remarks and references: See Britski; Silimon & Lopes (1999: 71) for a diagnosis.

Common names: Bananinha (Brazil), Piau-banana (Brazil), Piava-banana (Brazil)

***Hemiodus parnaguae* Eigenmann & Henn, 1916**

Hemiodus parnaguae Eigenmann & Henn, 1916: 87, pl. 17. Type locality: Lagoa de Parnagua, Brazil. Holotype: FMNH 56886.

Hemiodus rodolphoi Fowler, 1941: 174, fig. 84-85. Type locality: Rio Parnahyba, Therezina, Piahy. Holotype: ANSP 69483.

Maximum length: 14.6 cm SL

Distribution: South America: Parnaíba River basin.

Countries: Brazil

Remarks and references: Synonymy above based on personal observation and examination of types.

Common names: Avoador (Brazil), Doirado (Brazil), Voador (Brazil)

***Hemiodus quadrimaculatus* Pellegrin, 1908**

Hemiodus quadrimaculatus Pellegrin, 1908: 344. Type locality: Rivière Camopi (Guyane française). Lectotype: MNHN 1901-394.

Maximum length: 13.1 cm SL

Distribution: South America: Negro, Trombetas, Araguari, Nickerie, Coppename, and Oyapock River basins.

Countries: Brazil, French Guiana, Guyana, Suriname

Remarks and references: See Géry (1964: 13, 72 and 74) for redescription, key and comparison with other species.

Common names: Couachi mama (French Guiana), Karp-jonn (French Guiana), Parasi-so (French Guiana), Parassi saut (French Guiana), Rouget (French Guiana)

***Hemiodus semitaeniatus* Kner, 1858**

Hemiodus semitaeniatus Kner, 1858: 77. Type locality: Rio Guaporé. Lectotype: NMW 69489, by present designation.

Maximum length: 16 cm SL

Distribution: South America: Tapajós, Madeira, Capim, Essequibo, Orinoco, and Paraná River basins.

Countries: Brazil, Guyana, Paraguay, Venezuela

Common names: Bananinha (Brazil), Peixe-banana (Brazil), Piau-banana (Brazil)

***Hemiodus sterni* (Géry, 1964)**

Hemiodopsis sterni Géry, 1964: 70, fig. 3. Type locality: Amazon system, Alto Rio Juruena, not far from the road Cuiaba-Porto

Velho, Mato Grosso, Brazil. Holotype: USNM 194377.
Maximum length: 7.9 cm SL
Distribution: South America: Upper Juruena River basin, in Tapajós River drainage.
Countries: Brazil

***Hemiodus ternetzi* Myers, 1927**

Hemiodus ternetzi Myers, 1927: 110. Type locality: Brazil: Jausinho Brook, into the Tocantins, Goyaz. Holotype: CAS 61480 [IU 17691].
Maximum length: 7.6 cm SL
Distribution: South America: Tocantins River basin.
Countries: Brazil
Remarks and references: See Langeani (1999: 719 and Tab. 1) for some diagnostic characters and comparison with other species.

***Hemiodus thayeria* Böhlke, 1955**

Hemiodus thayeria Böhlke, 1955: 8, fig. 21. Type locality: sandbank in the Rio Negro on the Brazil-Colombia border, at approximately 1°12'N, 66°51'W. Holotype: SU 48146.
Maximum length: 8.9 cm SL
Distribution: South America: Solimões, Negro, and Orinoco River basins.
Countries: Brazil, Colombia, Venezuela
Remarks and references: See Langeani (1999: 719 and Tab. 1) for some diagnostic characters and comparison with other species.

***Hemiodus tocantinensis* Langeani, 1999**

Hemiodus tocantinensis Langeani, 1999b: 719, fig. 1. Type locality: Tributary stream of ribeirão Lajeado, below "cuesta," rio Araguaia, Alto Araguaia, Mato Grosso. Holotype: MZUSP 52628.
Maximum length: 9.7 cm SL
Distribution: South America: Araguaia and Tocantins River basins.
Countries: Brazil

***Hemiodus unimaculatus* (Bloch, 1794)**

Salmo unimaculatus Bloch, 1794: 105, pl. 381 (fig. 3). Type locality: Brazil; Suriname. No types known.
Anodus notatus Schomburgk, 1841: 218, pl. 15. Type locality: sandbank on the Rio Negro, South America.
Hemiodus crenidens Müller, 1842b: 324. Type locality: Brazil. No types known.
Hemiodus microcephalus Günther, 1864: 298. Type locality: River Capim [Capim], Brazil. Lectotype: BMNH 1849.11.8.39.
Hemiodus kappleri Günther, 1868b: 479. Type locality: Surinam. Lectotype: BMNH 1866.9.10.29.
Maximum length: 21.5 cm SL
Distribution: South America: Amazon, Tocantins, Capim, Suriname, Camopi, and Oyapock River basins.
Countries: Brazil, French Guiana, Guyana, Peru, Suriname
Remarks and references: See Géry, Planquette & Le Bail (1991: 22, pl. 6, fig. 1) and Santos et al. (1984: 30) for descriptions and figures; synonymy above is based on personal observation
Common names: Charuto (Brazil), Jatuarana (Brazil), Orana (Brazil), Pacu-banana (Brazil), Parizien (French Guiana), Peixe-rei (Brazil), Poson-bannann (French Guiana), Ubari (Brazil)

***Hemiodus vorderwinkleri* (Géry, 1964)**

Hemiodopsis vorderwinkleri Géry, 1964: 14, fig. 1. Type locality: Upper Amazon on the Brazilian-Colombian boundaries surrounding Leticia. Holotype: MHNG 2151.20.
Maximum length: 7.1 cm SL
Distribution: South America: Xingu, Solimões, and Potaro River basins.
Countries: Brazil, Colombia, Guyana

MICROMISCHODUS

Micromischodus Roberts, 1971: 4. Type species: *Micromischodus sugillatus* Roberts, 1971. Type by original designation. Gender: masculine. Phylogenetic definition in Langeani (1998: 157).

***Micromischodus sugillatus* Roberts, 1971**

Micromischodus sugillatus Roberts, 1971: 5, fig. 1. Type locality: Igarapé Tarumãzinho, 15 km northwest of Manaus, on the left bank of the Rio Negro, Estado do Amazonas, Brazil. Holotype: MZUSP 6773.
Maximum length: 17 cm SL
Distribution: South America: Amazon, Madeira, Negro, and Solimões River basins.
Countries: Brazil

Family Gasteropelecidae (Freshwater hatchetfishes)

Stanley H. Weitzman and Lisa Palmer

Fishes of the family Gasteropelecidae have the following characteristics: Frontal bone longitudinally corrugated, bearing a strong longitudinal ridge. Posttemporal and supracleithrum are fused into a single bone. The pelvic fins and associated bones are minute. They have an enlarged, strongly convex muscular pectoral girdle region, consisting of greatly expanded coracoids fused to a single fan-shaped and corrugated median bone. Their lateral line extends ventroposteriorly to approach the anterior termination of the anal fin, or they have 0 to 2 or 3 scales behind head and one or a very few scales on tail-fin base. Dorsal fin has 10 to 17 rays. Anal fin has 22 to 44 rays. An adipose fin is present in the larger species, but absent in the smaller species. All are capable of jumping relatively long or high distances by use of their modified, elongate pectoral fin rays and heavily-muscled, enlarged pectoral girdle. See Wiest (1995) and Weitzman & Palmer (1996) for discussions of their jumping abilities.

Freshwater hatchetfish are found in Panama and all countries of South America except Chile. The family consists of three genera and nine species, ranging in standard length from 21.5 - 68 mm. Central America contains only one species, *Gasteropelecus maculatus*. South America contains species in three genera: *Carnegiella*, *Gasteropelecus*, and *Thoracocharax*.

The species of the genera *Gasteropelecus* and *Thoracocharax* occur in open waters of larger rivers and streams and lakes, whereas species of *Carnegiella* occur in small creeks and streams (personal observations).

Morphology and function of some of the smaller members of this family have been well studied (Weitzman, 1954 and Wiest, 1995), but the larger species, especially in *Thoracocharax*, have not been subject to such investigations. Most species probably have been described; however species problems associated with comparisons of population samples from different localities may reveal some new species.

Members of this family are commercially collected for the aquarium trade.

CARNEGIELLA

Carnegiella Eigenmann, 1909: 13. Type species: *Gasteropelecus strigatus* Günther, 1864. Type by original designation. Gender: feminine.

***Carnegiella marthae* Myers, 1927**

Carnegiella marthae Myers, 1927: 119. Type locality: Caño de Quiribana, near Caicara, Venezuela. Holotype: CAS 20082.

Maximum length: 2.81 cm SL

Distribution: South America: Negro and upper Orinoco River basins.

Countries: Brazil, Venezuela

Remarks and references: See Weitzman (1960) for distribution.

Common names: Black-winged hatchetfish (USA), Schwarzschwinger-Beilbauchfisch (Germany)

***Carnegiella myersi* Fernández-Yépez, 1950**

Carnegiella myersi Fernández-Yépez, 1950: 175, fig. 3, 3a-d. Type locality: Creek near Yurimaguas, Peru. Holotype: SU 16120.

Maximum length: 2.15 cm SL

Distribution: South America: Amazon River basin.

Countries: Peru

Remarks and references: See Weitzman (1960) for distribution.

Common names: Dwarf hatchetfish (USA), Glas beilbauchfisch (Germany), Glass hatchetfish (USA), Pechito (Peru)

***Carnegiella schereri* Fernández-Yépez, 1950**

Carnegiella schereri Fernández-Yépez, 1950: 178, fig. 5, 5a-d. Type locality: Caño del Chanco at Pebas, Peru. Holotype: SU

36491.

Maximum length: 2.6 cm SL

Distribution: South America: Amazon River basin in Peru and Brazil.

Countries: Brazil, Peru

Remarks and references: See Weitzman (1960) for distribution.

Common names: Pechito (Peru), Scherer's hatchetfish (USA)

***Carnegiella strigata* (Günther, 1864)**

Gasteropelecus strigatus Günther, 1864: 343. Type locality: "Hab. ___ ?", but restricted to Manaus, Brazil by Hoedeman (1952: 5). Lectotype: BMNH 1969.10.29.1-2 (32 mm SL), designated by Fraser-Brunner (1950: 966).

Gasteropelecus fasciatus Garman, 1890: 9. Type locality: Lake Saraca, Cudajas, Manacapouru, Tabatinga [Brazil]. Lectotype: MCZ 21289a from Tabatinga, designated by Fernández-Yépez (1950: 180).

Carnegiella strigata vesca Fraser-Brunner, 1950: 966, fig. 3 A. Type locality: British Guiana. Holotype: BMNH 1934.9.12.289.

Carnegiella strigata surinamensis Hoedeman, 1952: 15. Type locality: Swamp about 50 km south of Paramaribo, Suriname. Holotype: ZMA 100316a.

Carnegiella strigata marowini Hoedeman, 1952: 14. Type locality: Marowini River System, Suriname. Holotype: RMNH 19341.

Maximum length: 3.5 cm SL

Distribution: South America: Lower, middle and upper Amazon River basin; south of Amazon; Caqueta River in Colombia.

Countries: Brazil, Colombia, Guyana, Peru, Suriname

Remarks and references: See Weitzman (1954), Weitzman (1960), Gery (1973), Gery (1977), and Weitzman and Weitzman (1982)

for distribution.

Common names: Gabel-Bellbauchfisch (Germany), Marbled hatchetfish (USA), Marmorierter Beilbauchfisch (Germany), Pechito (Peru), Poson rach (French Guiana), Yaya gro tjò (French Guiana), Yaya rach (French Guiana)

GASTEROPELECUS

Gasteropelecus Scopoli, 1777: 458. Type species: *Clupea sternicla* Linnaeus, 1758. Gender: masculine.

Gasteropelecys Agassiz, 1846: 159. Type species: *Clupea sternicla* Linnaeus, 1758. Type by being a replacement name. Gender: masculine.

Pterodiscus Eigenmann, 1909: 12. Type species: *Pterodiscus levis* Eigenmann, 1909. Type by original designation. Gender: masculine.

***Gasteropelecus levis* (Eigenmann, 1909)**

Pterodiscus levis Eigenmann, 1909: 12. Type locality: Para [Pará, Brazil]. Holotype: USNM 034454.

Maximum length: 3.53 cm SL

Distribution: South America: Lower Amazon River basin.

Countries: Brazil

Remarks and references: See Weitzman (1960) for distribution.

Common names: Silber beilbauchfisch (Germany), Silver hatchetfish (USA)

***Gasteropelecus maculatus* Steindachner, 1879**

Gasteropelecus maculatus Steindachner, 1879: 168. Type locality: Mamoni-Flusse bei Chepo [Panama]. Syntypes: (several) NMW.

Thoracocharax brevis Eigenmann, 1912: 25. Type locality: Raspadura [Colombia]. Holotype: FMNH 56055 [ex CM 4846].

Thoracocharax magdalenae Eigenmann, 1912: 25. Type locality: Girardot [Colombia]. Holotype: FMNH 56056.

Maximum length: 6.4 cm SL

Distribution: Central and South America: Eastern Panama through western Colombia.

Countries: Colombia, Panama

Common names: Gefleckter Beilbauchfisch (Germany), Spotted hatchetfish (USA)

***Gasteropelecus sternicla* (Linnaeus, 1758)**

Clupea sternicla Linnaeus, 1758: 319. Type locality: Surinam. Restricted to Paramaribo, Surinam by Hoedeman (1952). Syntypes: BMNH 1853.11.12.211 [Gronovius coll.] (1, skin).

Salmo gasteropelecus Pallas, 1770: 50. Type locality: Surinam. No types known.

Gasteropelecus argenteus La Cèpède, 1803: 476, 477. Type locality: Surinam.

Gasteropelecus coronatus Allen, in Eigenmann & Allen, 1942: 267, pl. 14 (fig. 4). Type locality: Brook, Río Itaya near Iquitos [Peru]. Holotype: CAS 20671.

Gasteropelecus sternicla morae Hoedeman, 1952: 11. Type locality: Mora Passage, Br. Guiana. Holotype: ZMA 100341.

Gasteropelecus sternicla marowini Hoedeman, 1952: 10. Type locality: Marowini basin, Suriname. Holotype: RMNH 19339.

Maximum length: 3.77 cm SL

Distribution: South America: Peruvian Amazon, middle Amazon, Guianas and Venezuela.

Countries: French Guiana, Guyana, Peru, Venezuela

Remarks and references: See Weitzman (1960) for distribution.

Common names: Pechito (Peru), Poson rach (French Guiana), Silber beilbauchfisch (Germany), Silver hatchet fish (Trinidad and Tobago), Silver hatchetfish (USA), Yaya gro tjò (French Guiana), Yaya hache (French Guiana), Yaya rach (French Guiana)

THORACOCHARAX

Thoracocharax Fowler, 1906: 452. Type species: *Gasteropelecus*

stellatus Kner, 1860. Type by original designation. Gender: masculine.

***Thoracocharax securis* De Filippi, 1853**

Gasteropelecus securis De Filippi, 1853: 165. Type locality: Rio Napo [Peru]. No types known.

Gasteropelecus pectorosus Garman, 1890: 9. Type locality: Cudajas, Lago Alexo, Obidos, Tabatinga, Manacapouru [Brazil]. Syntypes: MCZ 21281 (1), 21283 (orig. 7, now 4) + 21284 (3), 21294 (1), 21297 (2), 21302 (1); USNM 120412 [ex MCZ 21283] (2).

Maximum length: 6.8 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Remarks and references: See Weitzman (1960) for distribution.

Common names: Platin beilbauchfisch (Germany), Platinum hatchfish (USA), Silver hatchfish (USA)

***Thoracocharax stellatus* (Kner, 1858)**

Gasteropelecus stellatus Kner, 1858: 163. Type locality: Rio Cujaba [Cuiaba River, Brazil]. Syntypes: NMW 77722 (3).

Maximum length: 6.7 cm SL

Distribution: South America: Paraná, Amazon, and Orinoco River basins.

Countries: Argentina, Bolivia, Brazil, Colombia, Ecuador, Paraguay, Peru, Venezuela

Remarks and references: See Weitzman (1960) for distribution.

Common names: Pechito (Peru, Uruguay), Platin beilbauchfisch (Germany), Platinum hatchetfish (USA), Silver hatchetfish (USA)

Family Characidae (Characins, tetras)

Because of the extremely large size of the family Characidae and its highly heterogeneous nature, species are grouped by subfamilies with separate authorship. Only those subfamilies for which evidence of monophyly exists were retained, leaving a large portion of the characid diversity listed under *Incertae Sedis* genera. Again, given the enormous diversity and variation among these genera, several specialists served as revisers in a multi-authored effort to clear up the situation of the *Incertae Sedis* genera. These authors are listed in order of the number of species they revised.

SPECIES INCERTAE SEDIS IN CHARACIDAE

***Cheirodon jaguaribensis* Fowler, 1941**

Cheirodon jaguaribensis Fowler, 1941: 180, fig. 91. Type locality: Rio Jaguaribe, Russas, Ceará [Brazil]. Holotype: ANSP 69530
Maximum length: 3.8 cm SL
Distribution: South America: Jaguaribe River basin in northeastern Brazil.
Countries: Brazil
Remarks and references: This is a valid species, but not a *Cheirodon* or a *Cheirodontinae* (Malabarba, pers. comm).
Common names: Piabinha (Brazil)

***Cheirodon luelingi* Géry, 1964**

Cheirodon luelingi Géry, 1964a: 19, fig. 16. Type locality: petit ruisseau faisant communiquer le <<Zapote Cocha>> avec le <<Caño Yarina>>, em bordure du Rio Pacaya, affluent du canal de Puinahua (bras du bas Rio Ucayali) [Peru]. Holotype: not searched.
Maximum length: 1.76 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Peru

***Cheirodon macropterus* Fowler, 1941**

Cheirodon macropterus Fowler, 1941: 182, fig. 92. Type locality: Rio Jaguaribe, Russas, Ceará [Brazil]. Holotype: ANSP 69531.
Maximum length: 3.7 cm SL
Distribution: South America: Jaguaribe River basin in northeastern Brazil.
Countries: Brazil
Remarks and references: This is a valid species, but not a *Cheirodon* or a *Cheirodontinae* (Malabarba, pers. comm).

***Cheirodon ortegai* Vari & Géry, 1980**

Cheirodon ortegai Vari & Géry, 1980: 75, fig. 1. Type-locality: Woodland pool connected with the Río Ucayali at Cocha Lobo, 5 km downriver from Masisea, District of Masisea, Province Coronel Portillo, Department of Loreto, Peru (approx. Lat. 8°35'S, Long. 74°22'W). Holotype: AMNH 35950.
Maximum length: 3.43 cm SL
Distribution: South America: Ucayali River basin.
Countries: Peru
Remarks and references: This is a valid species, but not a *Cheirodon* or a *Cheirodontinae* (Malabarba, pers. comm).

***Cheirodon stenodon* Eigenmann, 1915**

Cheirodon stenodon Eigenmann, 1915: 82, pl. 14 (fig. 2). Type locality: Bebedouro, near Rio Grande and Rio Paraná [Brazil]. Holotype: FMNH 57865 (ex CM 6848a).

Maximum length: 3.3 cm SL

Distribution: South America: Paraná River basin.

Countries: Brazil

Remarks and references: This is a valid species, but not a *Cheirodon* or a *Cheirodontinae* (Malabarba, 1998).

***Deuterodon parahybae* Eigenmann, 1908**

Deuterodon parahybae Eigenmann, 1908: 99. Type locality: Itapemirim [rio Itapemirim, Espírito Santo, Brazil]. Syntypes: MCZ 20933 [syntypes number indicated later in Eigenmann 1927: 349].
Maximum length: 3.9 cm SL
Distribution: South America: Itapemirim River basin.
Countries: Brazil

***Deuterodon pedri* Eigenmann, 1908**

Deuterodon pedri Eigenmann, 1908: 98. Type locality: Rio San Antonio, Santa Anna de Ferros [Minas Gerais, Brazil]. Syntypes: MCZ 21081 [type locality and syntypes number indicated later in Eigenmann 1927: 348].
Maximum length: 7.8 cm SL
Distribution: South America: Santo Antônio River basin in upper Doce River drainage.
Countries: Brazil

***Deuterodon potaroensis* Eigenmann, 1909**

Deuterodon potaroensis Eigenmann, 1909a: 27. Type locality: Amatuk Cataract, Potaro River [Guyana]. Holotype: FMNH 52967 [ex CM 1053].
Maximum length: 6 cm SL
Distribution: South America: Potaro River basin.
Countries: Guyana

***Macropsobrycon xinguensis* Géry, 1973**

Macropsobrycon xinguensis Géry, 1973: 106, figs. 15-17. Type locality: rio Suia Missu (rio Xingù basin), about 12°40'S and 52°7'W, Brazil. Holotype: BMNH 1972.11.15.5.
Maximum length: 3.1 cm SL
Distribution: South America: Xingu River basin.
Countries: Brazil
Remarks and references: This is a valid species, but not a *Macropsobrycon* or a *Cheirodontinae* (Malabarba, 1998).
Common names: Piabinha (Brazil)

Genera Incertae Sedis in Characidae

Flávio C. T. Lima, Luiz R. Malabarba, Paulo A. Buckup, José F. Pezzi da Silva,
Richard P. Vari, Anthony Harold, Ricardo Benine, Osvaldo T. Oyakawa,
Carla S. Pavanelli, Naércio A. Menezes, Carlos A. S. Lucena,
Maria Cláudia S. L. Malabarba, Zilda Margarete S. Lucena,
Roberto E. Reis, Francisco Langeani, Lilian Cassati,
Vinicius A. Bertaco, Cristiano Moreira
and Paulo H. F. Lucinda

Characid genera listed below as Incertae Sedis constitute a largely heterogeneous assemblage of small to large-sized fishes. Most of these genera had been included in the subfamily Tetragonopterinae (see Géry, 1977). However, considering the lack of evidence that this subfamily constitutes a monophyletic assemblage (e.g., Weitzman & Fink, 1983; Weitzman & Malabarba, 1998), this classification was not adopted here. Instead, we preferred to emphasize the fact that interrelationships among the Characidae are poorly known, and only consider subfamilies for which some evidence of monophyly is available.

Eighty eight genera are listed as Incertae Sedis here, including 620 species. Among these, 64% or 399 species, are assigned to the speciose, taxonomically poorly known, and possibly not monophyletic genera of Characidae, *Hyphessobrycon* (97 species), *Astyanax* (86 species), *Moenkhausia* (58 species), *Bryconamericus* (51 species), and *Hemigrammus* (43 species), or to *Creagrutus* (64 species), a group recently revised and for which the taxonomic situation is now clear (Vari & Harold, 2001). In addition, more than 53% or 47 genera included as Incertae Sedis are monotypic and 26% or 23 genera contain only two or three species.

These mostly small fishes are abundant in rivers and other aquatic habitats throughout the Neotropical region and many have use as food or pets in the aquarium trade. Also is listed *Salminus*, the large dourados from the La Plata, São Francisco, Magdalena, and the periphery of Amazon/Orinoco basins. These predatory, ichthyophagous fishes are one of the main targets of the professional and amateur fishing in South America and are among the largest Neotropical characiforms. The bizarre lepidophagous *Roebioxodon geryi*, the herring-like *Triporthesus*, and the neon tetras of the genus *Paracheirodon* are also listed below as Incertae Sedis genera within the Characidae.

Authors to the species below are as follows: Carla S. Pavanelli (*Bryconacidnus*, *Carlasthanax*, *Genycharax*, *Gymnocharacinus*, *Gymnotichthys*, *Hasemania*, *Markiana*, *Nematobrycon*, *Oxybrycon*, *Parapristella*, *Parecbasis*, *Phenagoniates*, *Probolodus*, *Psalidodon*, *Schultzites*, *Xenagoniates*), Carlos A. S. Lucena (*Bryconexodon*, *Exodon*, *Serrabrycon*), Carlos A. S. Lucena & Paulo H. F. Lucinda (*Gnathoplax*, *Roebioxodon*), Flávio C. T. Lima (*Astyanacinus*, *Axelrodia*, *Chalceus*, *Coptobrycon*, *Engraulisoma*, *Inpaichthys*, *Lignobrycon*, *Petitella*, *Piabarchus*, *Rachoviscus*, *Salminus*, *Stygichthys*), Flávio C. T. Lima & Cristiano Moreira (*Thayeria*), Flávio C. T. Lima & Luiz R. Malabarba (*Hyphessobrycon*), Flávio C. T. Lima & Osvaldo T. Oyakawa (*Hemigrammus*), Francisco Langeani (*Bryconella*, *Microgenys*), José F. Pezzi da Silva (*Bryconamericus*, *Ceratobranchia*, *Knodus*), Luiz R. Malabarba (*Aphyocharacidium*, *Aphyodite*, *Atopomesus*, *Aulixidens*, *Boehlkea*, *Brittanichthys*, *Caiapobrycon*, *Grundulus*, *Hypobrycon*, *Leptagoniates*, *Leptobrycon*, *Microchemobrycon*, *Mixobrycon*, *Monotocheirodon*, *Odontostoechus*, *Othonocheirodon*, *Paracheirodon*, *Prionobrama*, *Pristella*, *Rhinobrycon*, *Rhinopetitia*, *Thrissobrycon*, *Tyttobrycon*), Maria Cláudia S. L. Malabarba & Flávio C. T. Lima (*Triporthesus*), Naércio A. Menezes (*Bramocharax*, *Nematocharax*, *Oligosarcus*), Osvaldo T. Oyakawa (*Hemibrycon*), Paulo A. Buckup (*Astyanax*, *Bryconops*, *Jupiaba*, *Oligobrycon*), Ricardo Benine (*Bario*, *Gymnocorymbus*, *Moenkhausia*), Ricardo Benine & Lilian Cassati (*Ctenobrycon*, *Psellogrammus*), Richard P. Vari & Antony Harold (*Creagrutus*, *Piabina*), Roberto E. Reis (*Attonitus*, *Paragoniates*, *Scissor*, *Stichonodon*, *Tucanoichthys*), Vinicius A. Bertaco (*Hollandichthys*, *Pseudochalceus*), Zilda Margarete S. Lucena & Carlos A. S. Lucena (*Deuterodon*).

APHYOCHARACIDIUM

Aphyocharacidium Géry, 1960b: 24. Type species: *Odontostilbe melandetus* Eigenmann, 1912. Type by original designation.
Gender: neuter. See comments on relationships in Malabarba (1998: 232).

***Aphyocharacidium bolivianum* Géry, 1973**

Aphyocharacidium bolivianum Géry, 1973: 101, fig. 12. Type

locality: brook between upper rios Chaparé and Chimoré (or Ichilo), Tributaries of the rio Mamoré into rio Madeira), east of Todos Santos, Central Bolivia, approximately 16°47'S, 65°W. Holotype: Museum A. Koenig, uncat.

Maximum length: 2.75 cm SL

Distribution: South America: Mamoré River basin.

Countries: Bolivia

***Aphyocharacidium melandetum* (Eigenmann, 1912)**

Odontostilbe melandetus Eigenmann, 1912b: 312, pl. 44, fig. 3.
Type locality: Guyana. Holotype: CM 1878 (missing from FMNH).

Maximum length: 3.5 cm

Distribution: South America: Essequibo River basin.

Countries: Guyana

APHYODITE

Aphyodite Eigenmann, 1912b: 314. Type species: *Aphyodite grammica* Eigenmann, 1912b. Type by original designation. Gender: feminine. See comments on relationships in Malabarba (1998: 230).

***Aphyodite grammica* Eigenmann, 1912**

Aphyodite grammica Eigenmann, 1912b: 314, pl. 44 (fig. 5). Type locality: Konawaruk [Guyana]. Holotype: FMNH 53408.

Maximum length: 3.2 cm

Distribution: South America: Essequibo River basin.

Countries: Guyana

ASTYANACINUS

Astyanacinus Eigenmann, 1907: 769. Type species: *Tetragonopterus moorii* Boulenger, 1892. Type by original designation. Gender: masculine. See Géry (1977: 415, 418).

***Astyanacinus goyanensis* Miranda Ribeiro, 1944**

Astyanacinus goyanensis Miranda Ribeiro, 1944: 1, fig. Type locality: Rio do Couro, Veadeiros, estado de Goias [Tocantins River basin, Brazil]. Holotype: MNRJ 4129.

Maximum length: 9 cm SL

Distribution: South America: Upper Tocantins River basin.

Countries: Brazil

***Astyanacinus moorii* (Boulenger, 1892)**

Tetragonopterus moorii Boulenger, 1892: 11, pl. 2 (fig. 1). Type locality: Chapala plateau [=Chapada dos Guimarães, upper Paraguay River basin, Mato Grosso, Brazil]. Syntypes: BMNH 1892.4.29.50-51 (2).

Maximum length: 7.5 cm SL

Distribution: South America: Upper Paraguay River basin.

Countries: Brazil

***Astyanacinus multidentis* Pearson, 1924**

Astyanacinus multidentis Pearson, 1924: 41, pl. 9 (fig. 4). Type locality: Rio Colorado, lower Bopi [Bolivia]. Syntypes: CAS 38955 (ex IU 17323) (16); ? MCZ 20826 (1), ? MCZ 21064 (1), ? MCZ 89559 (27), ? UMMZ 66510 (6).

Maximum length: 14 cm TL

Distribution: South America: Upper Madeira River basin.

Countries: Bolivia

ASTYANAX

Astyanax Baird & Girard, 1854: 26. Type species: *Astyanax argentatus* Baird & Girard, 1854. Type by monotypy. Gender: masculine.

Poecilurichthys Gill, 1858: 414, 417. Type species: *Poecilurichthys brevoortii* Gill, 1858. Type by subsequent designation by Eigenmann (1910: 432). Gender: masculine.

Zygogaster Eigenmann, 1913: 22. Type species: *Zygogaster filiferus* Eigenmann, 1913. Type by original designation. Gender: feminine.

Aequidens Steindachner, 1915a: 34. Type species: *Tetragonopterus (Aequidens) fasslii* Steindachner, 1915. Type by monotypy. Gender: masculine. Preoccupied by *Aequidens* Eigenmann & Bray, 1894, in fishes, replaced by *Evenichthys* Whitley, 1935.

Bertoniolus Fowler, 1918: 141. Type species: *Bertoniolus paraguayensis* Fowler, 1918. Type by original designation. Gender:

masculine.

Evenichthys Whitley, 1935: 250. Type species: *Tetragonopterus fasslii* Steindachner, 1915. Type by being a replacement name. Gender: masculine. Replacement for *Aequidens* Steindachner, 1915, preoccupied by *Aequidens* Eigenmann & Bray, 1894.

Anoptichthys Hubbs & Innes, 1936: 3. Type species: *Anoptichthys jordani* Hubbs & Innes, 1936. Type by original designation. Gender: masculine.

***Astyanax abramis* (Jenyns, 1842)**

Tetragonopterus abramis Jenyns, 1842: 123, pl. 23 (figs. 1, 1a). Type locality: Río Paraná, up to Rozario [Argentina]. No types known.

Maximum length: 5 cm TL

Distribution: South America: La Plata basin; upper Amazon and upper Meta River basins.

Countries: Argentina, Brazil, Peru

***Astyanax alburnus* (Hensel, 1870)**

Tetragonopterus alburnus Hensel, 1870: 85. Type locality: Rio Cadea [Rio Grande do Sul, Brazil]. Holotype: ZMB 7477.

Astyanax hasemani Eigenmann, in Eigenmann, Henn & Wilson, 1914: 10. Type locality: Porto Alegre [Brazil]. Holotype: FMNH 56659 [ex CM 5476].

Distribution: South America: Laguna dos Patos basin.

Countries: Brazil

***Astyanax altiparanae* Garutti & Britski, 2000**

Astyanax altiparanae Garutti & Britski, 2000: 67, fig. 1. Type locality: rio Grande, represa de Volta Grande, Miguelópolis, SP, Brasil (aproximadamente 20°10'S-48°03'W). Holotype: MZUSP 18592.

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

***Astyanax angustifrons* (Regan, 1908)**

Tetragonopterus angustifrons Regan, 1908b: 172, pl. 26 (fig. 5). Type locality: Mexico. Syntypes: (3) BMNH 1857.7.31.9 (1).

Distribution: North America: Mexico (?).

Countries: Mexico

***Astyanax anterior* Eigenmann, 1908**

Astyanax anterior Eigenmann, 1908: 95. Type locality: Tabatinga [Amazonas, Brazil]. Lectotype: MCZ 89556 [ex MCZ 20768a], designated by Eigenmann (1921: 247).

Distribution: South America: Upper Amazon basin.

Countries: Brazil

***Astyanax argyrimarginatus* Garutti, 1999**

Astyanax argyrimarginatus Garutti, 1999: 586, fig. 1. Type locality: Aragarças, Córrego Jaraguá, bacia do Rio Araguaia, GO (aproximadamente 15°55'S-52°15'W). Holotype: MZUSP 18592.

Distribution: South America: Amazon River basin.

Countries: Brazil

***Astyanax armandoi* Lozano-Vilano & Contreras-Balderas, 1990**

Astyanax armandoi Lozano-Vilano & Contreras-Balderas, 1990: 97, figs. 2 (top), 3a. Type locality: Penjamo, near palenque, Chiapas, Mexico. Holotype: UANL 6380.

Distribution: North America: Chiapas, Mexico (?).

Countries: Mexico

***Astyanax asuncionensis* Géry, 1972**

Astyanax (Poecilurichthys) bimaculatus paraguayensis Eigenmann, 1921: 256, pls. 62 (fig. 5), 92 (fig. 1). Type locality: Rio Paraguay and upper Rio Tocantins. Syntypes: (179) CAS 38987-96 and 38999 [ex IU 10005-10010, 10239, 10241-43, 10293] (44), 38997 [IU 10244] (1), 38998 [ex IU 10247] (1), 39000 [ex

- IU 11083] (1); FMNH 54643-49 [ex CM 3280-3286] (8, 9, 5, 2, 10, 1, 2); + CM 3274 and 3287 missing.
- Astyanax bimaculatus asuncionensis* Géry, 1972b: 3. Type locality: Rio Paraguay and Upper Rio Tocantins. Syntypes: (179) CAS 38987-96 and 38999 [ex IU 10005-10010, 10239, 10241-43, 10293] (44), 38997 [IU 10244] (1), 38998 [ex IU 10247] (1), 39000 [ex IU 11083] (1); FMNH 54643-49 [ex CM 3280-3286] (8, 9, 5, 2, 10, 1, 2); + CM 3274 and 3287 missing.
- Distribution: South America: Paraguay and lower Paraná River basin.
- Countries: Paraguay
- Astyanax atratoensis* Eigenmann, 1907**
- Astyanax atratoensis* Eigenmann in Eigenmann & Ogle, 1907: 28, fig. 5. Type locality: Truando, Colombia. Holotype: USNM 1659 (missing).
- Distribution: South America: Atrato River basin.
- Countries: Colombia
- Astyanax bimaculatus* (Linnaeus, 1758)**
- Salmo bimaculatus* Linnaeus, 1758: 311. Type locality: America Meridionali. Syntypes: BMNH 1853.11.12.34 (1), NRM 7236 (2).
- Tetragonopterus maculatus* Müller & Troschel, 1845: 14, pl. 3 (fig. 4). Type locality: Brasilia, Guiana et Surinam. Syntypes: MSNG 9226 [ex ZMB] (2).
- ?*Tetragonopterus gronovii* Valenciennes, in Cuvier & Valenciennes, 1850: 143. Type locality: Surinam; rivières de La Guyane. Syntypes: MNHN 4402 (1), 4414 (1), A.9810 (1), A.9812 (2). Provisional synonym.
- ?*Tetragonopterus linnaei* Valenciennes, in Cuvier & Valenciennes, 1850: 142. Type locality: Cayenne [French Guiana]. Holotype: MNHN A.9809. Provisional synonym.
- ?*Tetragonopterus wappi* Valenciennes, in Cuvier & Valenciennes, 1850: 153. Type locality: Not listed in original description [Essequibo River, Guyana]. Holotype: MNHN 2636. Provisional synonym.
- ?*Tetragonopterus vittatus* Castelnau, 1855: 66, pl. 33 (fig. 3). Type locality: Bahia [Brazil]. Provisional synonym.
- ?*Poecilurichthys brevoortii* Gill, 1858: 417. Type locality: [Island of] Trinidad. Syntypes: USNM 1113 (2). Provisional synonym.
- Tetragonopterus bartlettii* Günther, 1866: 30. Type locality: Upper Amazons. Syntypes: BMNH 1866.2.15.17-18 (2).
- ?*Tetragonopterus orientalis* Cope, 1870: 559. Type locality: Pará [Brazil]. Provisional synonym.
- ?*Tetragonopterus bahiensis* Steindachner, 1877: 571. Type locality: Bahia, Brazil. Syntypes: NMW 57251-52 (2, 1). Provisional synonym.
- Astyanax bimaculatus borealis* Eigenmann, 1908: 96. Type locality: Rio Magdalena and Cauca. Syntypes: 9 specimens, missing.
- Astyanax bimaculatus novae* Eigenmann, 1911b: 175, pl. 7 (fig. 2). Type locality: Rio Sapon, Prazeres, Bahia [Brazil]. Lectotype: FMNH 54641 [ex CM 3278, figured type].
- Astyanax rupununi* Fowler, 1914: 242, fig. 6. Type locality: Rupununi River, British Guiana, 2°-3°N, 50°20'W. Holotype: ANSP 39228 [or 39328].
- Astyanax bimaculatus incaicus* Tortonese, 1942: 62, pl. 3. Type locality: Rio Zamora, Ecuador. Holotype: MZUT 3560.
- Maximum length: 15 cm TL
- Distribution: South America: Panama to the Amazon basin.
- Countries: Brazil, Colombia, Ecuador, French Guiana, Guyana, Panama, Peru, Suriname, Trinidad and Tobago, Venezuela
- Astyanax bourgeti* Eigenmann, 1908**
- Astyanax bourgeti* Eigenmann, 1908: 95. Type locality: Tabatinga [Amazonas, Brazil]. Holotype: MCZ 89557 [ex MCZ 20768b].
- Distribution: South America: Upper Amazon basin.
- Countries: Brazil
- Astyanax brachypterygium* Bertaco & Malabarba, 2001**
- Astyanax brachypterygium* Bertaco & Malabarba, 2001: 228, fig. 9. Type locality: Brazil: Rio Grande do Sul: Bom Jesus, arroio Água Branca (28°36'S 50°24'W). Holotype: MCP 26094.
- Maximum length: 5.83 cm TL
- Distribution: South America: Upper Uruguay and Jacuí River basins.
- Countries: Brazil
- Astyanax brevihinus* Eigenmann, 1908**
- Astyanax brevihinus* Eigenmann, 1908: 96. Type locality: Rio Jequitinhonha [Brazil]. Holotype: MCZ 20905.
- Maximum length: 10 cm TL
- Distribution: South America: Jequitinhonha River basin.
- Countries: Brazil
- Astyanax caucanus* (Steindachner, 1879)**
- Tetragonopterus caucanus* Steindachner, 1879: 189. Type locality: Río Cauca, Colombia. Syntypes: ?NMW 57372-76 (2, 3, 2, 2, 2); ZMUC 993 (1).
- Distribution: South America: Cauca River basin
- Countries: Colombia
- Astyanax chaparae* Fowler, 1943**
- Astyanax chaparae* Fowler, 1943e: 3, fig. 2. Type locality: Todos Santos, Bolivia. Holotype: ANSP 69194.
- Distribution: South America: Bolivia (?).
- Countries: Bolivia
- Astyanax cordovae* (Günther, 1880)**
- Tetragonopterus cordovae* Günther, 1880: 12. Type locality: Río de Cordova [Argentina]. Syntypes: BMNH 1872.4.4.4-11 (8).
- Distribution: South America: Primero River in western Argentina.
- Countries: Argentina
- Astyanax cremnobates* Bertaco & Malabarba, 2001**
- Astyanax cremnobates* Bertaco & Malabarba, 2001: 224, fig. 2. Type locality: Brazil: Rio Grande do Sul: São Francisco de Paula, tributary of rio Santa Cruz (29°23'S 50°32'W). Holotype: MCP 26093.
- Maximum length: 8.91 cm SL
- Distribution: South America: Upper Jacuí and Maquiné River basins.
- Countries: Brazil
- Astyanax daguae* Eigenmann, 1913**
- Astyanax daguae* Eigenmann, 1913: 23. Type locality: Cordova [Colombia]. Holotype: FMNH 56251 [ex CM 5052].
- Maximum length: 4 cm TL
- Distribution: South America: Colombia (?).
- Countries: Colombia
- Astyanax eigenmanniorum* (Cope, 1894)**
- Tetragonopterus eigenmanniorum* Cope, 1894: 89, pl. 6 (fig. 8). Type locality: Rio Grande do Sul [Restricted to Laguna dos Patos system, Brazil, by Malabarba (1989)]. Holotype: ANSP 21598.
- Distribution: South America: Lower Paraná, Uruguay, and Laguna dos Patos drainage.
- Countries: Argentina, Brazil, Paraguay
- Astyanax erythropterus* (Holmberg, 1891)**
- Tetragonopterus erythropterus* Holmberg, 1891: 189. Type locality: Rio de la Plata, Paraná; Buenos Aires, Argentina.
- Distribution: South America: La Plata River basin.
- Countries: Argentina
- Astyanax fasciatus* (Cuvier, 1819)**
- Chalceus fasciatus* Cuvier, 1819: 352, pl. 26 (fig. 2). Type locality: Brésil. Syntypes: MNHN A.9896 (2), A.8653 and 8654 (2).

Check List of the Freshwater Fishes of South and Central America

- Tetragonopterus rutilus* Jenyns, 1842: 125, pl. 23 (fig. 2). Type locality: Río Paraná, South America. Holotype: BMNH 1917.7.14.14.
- ?*Tetragonopterus viejita* Valenciennes, in Cuvier & Valenciennes, 1850: 154. Type locality: Lagune de Maracaibo [Venezuela]. Syntypes: MNHN A.9820 (2, poor condition) Lake Maracaibo, A.8656 (1, dry) Brazil. Provisional synonym.
- Salmo lambari* Kner, 1859: 176. Type locality: Irisanga [Brazil]. Holotype: 1 specimen 4" long.
- Tetragonopterus aeneus* Günther, 1860a: 319. Type locality: Fresh waters of Oaxaca (Mexico). Syntypes: BMNH 1860.6.17.41-42 (2), 1907.4.10.3 (1).
- ?*Tetragonopterus microphthalmus* Günther, 1864: 324. Type locality: Pacific coast of Guatemala; Lake of Amatitlan; Río Rimac. Syntypes: 9 specimens, including BMNH 1864.1.26.349-350 (2) Panama. Provisional synonym.
- ?*Tetragonopterus humilis* Günther, 1864: 327. Type locality: Lake Amatitlan [Guatemala]. Syntypes: 4 specimens, but Eschmeyer reports BMNH 1865.4.29.45-50 (6). Provisional synonym.
- ?*Tetragonopterus panamensis* Günther, 1864: 324. Type locality: Pacific coast of Panama. Holotype: 1 specimen, but Eschmeyer lists syntypes as (4) BMNH 1864.1.26.415 (1), ZMB 6801 (2). Provisional synonym.
- ?*Tetragonopterus finitimus* Bocourt, 1868: 62. Type locality: environs d'Orizaba. Syntypes: MNHN 5223 (2). Provisional synonym.
- ?*Tetragonopterus cobanensis* Bocourt, 1868: 62. Type locality: Rivière de Coban, Guatemala. Syntypes: BMNH 1907.4.10.2 [ex MNHN] (1); MNHN 5219-5220 (19). Provisional synonym.
- ?*Tetragonopterus belizianus* Bocourt, 1868: 62. Type locality: environs de Belize. Syntypes: BMNH uncat. [ex MNHN] (1). MNHN 5224 and 5225 (13). Provisional synonym.
- ?*Tetragonopterus oaxacanensis* Bocourt, 1868: 62. Type locality: Oaxaca [Mexico]. Provisional synonym.
- ?*Astyanax carolinae* Gill, 1870: 92. Type locality: River Napo or Marañon. Holotype: USNM 8225. Provisional synonym.
- Tetragonopterus cuvieri* Lütken, 1875a: 131. Type locality: in fluminibus S. Francisco et Rio das Velhas cum affluentibus [Minas Gerais, Brazil]. Syntypes: MNHN 9581 (2); ZMB 9198 (2); ZMUC 306, 308, 310, 312, 314, 315, 328, 329, 363.
- ?*Tetragonopterus orstedii* Lütken, 1875b: 229. Type locality: flumine R. S. Juan Americae centralis. Syntypes: ZMUC 947-948 (2), 955-956 (2); ZMB 9197 (2). Provisional synonym.
- ?*Tetragonopterus rutilus jequitinhonhae* Steindachner, 1877: 693, pl. 2 (fig. 3). Type locality: Rio Jequitinhonha, Brazil. Syntypes: NMW 57759-61 (5, 3, 6). Provisional synonym.
- Astyanax albeolus* Eigenmann, 1908: 97. Type locality: Rio Machuca, Rio Siguire, Costa Rica. Holotype: FMNH 6241.
- ?*Tetragonopterus macrophthalmus* Regan, 1908b: 171, pl. 26 (fig. 4). Type locality: Mexico, Motzorongo in Veracruz. Syntypes: BMNH 1857.7.31.10 (1), 1905.12.6.19-22 (4), 1906.6.1.268 (1), 1906.6.1.269-278 (10?). Provisional synonym.
- ?*Astyanax regani* Meek, 1909: 207. Type locality: Las Cañas, Costa Rica. Holotype: FMNH 6257. Provisional synonym.
- ?*Astyanax grandis* Meek & Hildebrand, 1912: 67. Type locality: Río Juan Díaz, Panama. Holotype: FMNH 7571. Provisional synonym.
- ?*Astyanax aeneus costaricensis* Meek, 1914: 105. Type locality: La Junta; Guapilis; Parismina; Costa Rica River; Cuba River; Zent; La Victoria; Chitaria. Syntypes: FMNH 6349 (1), 7866-73 (5, 39, 15, 2, 6, 61, 49, 25); UMMZ 162475 (5). Provisional synonym.
- ?*Astyanax heterurus* Eigenmann & Wilson, in Eigenmann, Henn & Wilson, 1914: 11. Type locality: Turando [=Truando] [Colombia]. Holotype: FMNH 56577 [ex CM 5392]. Provisional synonym.
- ?*Astyanax fasciatus altior* Hubbs, 1936: 176, pl. 1 (fig. 1). Type locality: roadside pool 3 km. south of Progreso [Yucatán, se. Mexico]. Holotype: UMMZ 102144. Provisional synonym.
- ?*Astyanax hanstroemi* Dahl, 1943: 217, fig. Type locality: Río Batatal, trib. to Río San Jorge, Magdalena system, Munic. of Ayapel, Bolívar Dept., Colombia. Holotype: ZMUL. Provisional synonym.
- ?*Astyanax fasciatus orteguasae* Fowler, 1943a: 237, fig. 16. Type locality: Florencia, Río Ortegusa, Colombia. Holotype: ANSP 70498. Provisional synonym.
- Maximum length: 10 cm TL
Distribution: North, Central and South America: Most freshwater basins from Mexico to Argentina.
Countries: Argentina, Belize, Brazil, Colombia, Costa Rica, Mexico, Panama, Uruguay, Venezuela
- Astyanax fasslii* (Steindachner, 1915)**
Tetragonopterus (Aequidens) fasslii Steindachner, 1915a: 48, pl. 4 fig. 7. Type locality: Colombia. Holotype: NMW.
Distribution: South America: Western Colombia (?).
Countries: Colombia
- Astyanax festae* (Boulenger, 1898)**
Tetragonopterus festae Boulenger, 1898: 2. Type locality: Rio Vines [Ecuador]. Syntypes: BMNH 1898.11.4.65-70 (6), MSNG 34953 (1), MZUF 2698 (1), MZUT 1743 (1).
Distribution: South America: Upper Amazon River basin.
Countries: Ecuador, Peru
- Astyanax filiferus* (Eigenmann, 1913)**
Zygogaster filiferus Eigenmann, 1913: 23. Type locality: Apulo [Colombia]. Holotype: CAS 62258 [ex IU 12847].
Distribution: South America: Magdalena River basin.
Countries: Colombia
- Astyanax gisleni* Dahl, 1943**
Astyanax gisleni Dahl, 1943: 218, fig. Type locality: Río Aburrá, trib. via Río Porce to R. Nechí, Magdalena system, Medellín, Antioquia, Colombia, elev. ca. 1500 m. Syntypes: (13) ZMUL.
Distribution: South America: Magdalena River basin.
Countries: Colombia
- Astyanax giton* Eigenmann, 1908**
Astyanax giton Eigenmann, 1908: 97. Type locality: Rio Parahyba [Brazil]. Lectotype: MCZ 20936.
Maximum length: 8 cm TL
Distribution: South America: Paraíba do Sul River basin; coastal streams of Espírito Santo and Rio de Janeiro States.
Countries: Brazil
- Astyanax goyacensis* Eigenmann, 1908**
Astyanax goyacensis Eigenmann, 1908: 96. Type locality: Goyaz [= Goiás, Brazil]. Holotype: MCZ 89558.
Distribution: South America: Goiás State (?).
Countries: Brazil
- Astyanax gracilior* Eigenmann, 1908**
Astyanax gracilior Eigenmann, 1908: 98. Type locality: Obidos and Villa Bella [Brazil]. Syntypes: MCZ 20716 (1), 20838 (1), 21012 (1).
Distribution: South America: Amazon River basin.
Countries: Brazil
- Astyanax guaporensis* Eigenmann, 1911**
Astyanax guaporensis Eigenmann, 1911b: 176, pl. 7 (fig. 4). Type locality: Maciel, Rio Guaporé [Brazil]. Holotype: FMNH 54709 [ex CM 3351].
Distribution: South America: Guaporé River basin.
Countries: Brazil
- Astyanax guianensis* Eigenmann, 1909**
Astyanax guianensis Eigenmann, 1909a: 16. Type locality: Warraputa [Guyana]. Holotype: FMNH 53518 [ex CM 1013].

Check List of the Freshwater Fishes of South and Central America

- Maximum length: 6 cm TL
 Distribution: South America: Guyana and Venezuela (?).
 Countries: Guyana, Venezuela
- Astyanax gymnogenys* Eigenmann, 1911**
Astyanax gymnogenys Eigenmann, 1911b: 179, pl. 9. Type locality: Porto União, Rio Iguassú [Brazil]. Holotype: FMNH 54707 [ex CM 3350].
 Distribution: South America: Iguacu River basin.
 Countries: Brazil
- Astyanax hastatus* Myers, 1928**
Astyanax hastatus Myers, 1928: 87. Type locality: "The fishes were said to have been collected in the vicinity of [Rio de Janeiro], but there is a possibility of their having come from any of a number of places in south-eastern Brazil." Holotype: USNM 92952.
 Distribution: South America: Coastal streams in the vicinity of Rio de Janeiro.
 Countries: Brazil
- Astyanax integer* Myers, 1930**
Astyanax integer Myers, 1930: 67. Type locality: Guaicaramo, Rio Guavio, Colombia. Holotype: SU 23726.
 Distribution: South America: Upper Meta River.
 Countries: Colombia
- Astyanax intermedius* Eigenmann, 1908**
Astyanax scabripinnis intermedius Eigenmann, 1908: 98. Type locality: Rio Parahyba and Santa Clara [Brazil]. Lectotype: MCZ 20684.
 Distribution: South America: Paraíba do Sul River basin and coastal rivers of Rio de Janeiro State.
 Countries: Brazil
- Astyanax jacuhiensis* Cope, 1894**
Tetragonopterus jacuhiensis Cope, 1894: 88, pl. 6 (fig. 6). Type locality: Jacuhy [Rio Grande do Sul, Brazil]. Lectotype: ANSP 21912.
 Maximum length: 11 cm SL
 Distribution: South America: Jacui, Uruguay, and coastal river drainages of southern Brazil
 Countries: Argentina, Brazil, Uruguay
- Astyanax janeiroensis* Eigenmann, 1908**
Astyanax janeiroensis Eigenmann, 1908: 96. Type locality: Rio de Janeiro [Brazil]. Holotype: MCZ 21057.
 Distribution: South America: Eastern Brazil (?).
 Countries: Brazil
- Astyanax jenynsii* (Steindachner, 1877)**
Tetragonopterus jenynsii Steindachner, 1877: 580, pl. 3 (fig. 1). Type locality: Rio Parahyba [Brazil]. Syntypes: (7) NMW 57534-35 (3, 2).
 Maximum length: 7.62 cm SL
 Distribution: South America: Eastern Brazil (?).
 Countries: Brazil
- Astyanax jordani* (Hubbs & Innes, 1936)**
Anoptichthys jordani Hubbs & Innes, 1936: 5, pl. 1. Type locality: Subterranean stream in the forested mountain region of south-eastern San Luis Potosí, Mexico, in a region southwest of Valles drained by the Río Tampaón of the Río Panuco system. Holotype: UMMZ 113514.
Anoptichthys antrobius Alvarez, 1946: 278, figs. 16-23. Type locality: Cueva de El Pachón [San Luis Potosí, Tamaulipas, Mexico]. Holotype: whereabouts unknown.
Anoptichthys hubbsi Alvarez, 1947: 215, fig. 1. Type locality: Cueva de los Sabinos [San Luis Potosí, Mexico]. Holotype: whereabouts unknown.
- Distribution: North America: Mexico (?).
 Countries: Mexico
- Astyanax kennedyi* Géry, 1964**
Astyanax (Astyanax) kennedyi Géry, 1964e: 28, fig. 3. Type locality: Upper Amazon region, surrounding Iquitos, Peru. Holotype: USNM 200425 [ex Géry coll. 399.1].
 Distribution: South America: Upper Amazon River basin.
 Countries: Peru
- Astyanax kompi* Hildebrand, 1938**
Astyanax kompi Hildebrand, 1938: 260, fig. 3. Type locality: Laguna Gulnar or Grande, Volcán, Pacific slope, Panama. Holotype: USNM 106510.
 Distribution: Central America: Panama (?).
 Countries: Panama
- Astyanax kullanderi* Costa, 1995**
Astyanax kullanderi Costa, 1995: 258, fig. 1. Type locality: Brazil: Estado de Mato Grosso, stream tributary of rio Perdidos, rio das Mortes drainage, close to the road BR-070, about 10 km W of Primavera do Leste, 15°32'S, 54°18'W. Holotype: MNRJ 12427.
 Maximum length: 8.8 cm SL
 Distribution: South America: Upper Das Mortes River basin.
 Countries: Brazil
- Astyanax lacustris* (Lütken, 1875)**
Tetragonopterus lacustris Lütken, 1875a: 131. Type locality: lacu Lagoa Santa dicto nec non in rivulis nonnullis vicinis [Minas Gerais, Brazil].
 Distribution: South America: Eastern Brazil (?).
 Countries: Brazil
- Astyanax laticeps* (Cope, 1894)**
Tetragonopterus laticeps Cope, 1894: 89, pl. 6 (fig. 7). Type locality: Rio Grande do Sul [Restricted to Laguna dos Patos system, Brazil, by Malabarba (1989)]. Holotype: ANSP 21852.
 Maximum length: 5.41 cm SL
 Distribution: South America: Rio Grande do Sul State (?).
 Countries: Brazil
- Astyanax leopoldi* Géry, Planquette & Le Bail, 1988**
Astyanax leopoldi Géry, Planquette & Le Bail, 1988: 9, fig. 2. Type locality: Saut Alicoto en amont de Camopi, Moyen Oyapok [French Guiana]. Holotype: IRSNB 731.
 Maximum length: 6 cm TL
 Distribution: South America: Approuage and Oyapock River basins.
 Countries: Brazil, French Guiana
- Astyanax lineatus* (Perugia, 1891)**
Tetragonopterus lineatus Perugia, 1891: 644. Type locality: Villa María (Mato Grosso) Rio Paraguay, Brazil.
 Distribution: South America: La Plata River drainage.
 Countries: Argentina, Brazil
- Astyanax longior* (Cope, 1878)**
Tetragonopterus longior Cope, 1878: 691. Type locality: Moyabamba [Peru]. Lectotype: ANSP 21222, designated by Fowler (1906: 341).
 Distribution: South America: Upper Amazon River basin.
 Countries: Peru
- Astyanax maculisquamis* Garutti & Britski, 1997**
Astyanax maculisquamis Garutti & Britski, 1997: 220, fig. 1. Type locality: Pontes e Lacerda (aproximadamente 15°12'S-59°22'W), MT, poça em córrego afluente do rio Guaporé (cerca de 7 km da ponte), bacia do rio Madeira, bacia Amazônica [Brazil]. Holotype: MZUSP 37680.
 Distribution: South America: Upper Guaporé River basin.

Countries: Brazil

***Astyanax magdalenae* Eigenmann & Henn, 1916**

Astyanax magdalenae Eigenmann & Henn, 1916: 89. Type locality: Girardot [Colombia]. Holotype: FMNH 57006 [ex CM 5822]. Maximum length: 10 cm SL
Distribution: South America: Colombian rivers and the Catatumbo River basin.
Countries: Colombia

***Astyanax marionae* Eigenmann, 1911**

Astyanax marionae Eigenmann, 1911b: 175, pl. 7 (fig. 3). Type locality: Six miles from San Louiz de Caceres [Brazil]. Holotype: FMNH 54711 [ex CM 3353].
Distribution: South America: Paraguay River basin.
Countries: Brazil

***Astyanax maximus* (Steindachner, 1876)**

Tetragonopterus maximus Steindachner, 1876a: 593, pl. 7. Type locality: Tullumayo and Monterico, Peru. Syntypes: NMW 57662-63 (1, 2).

Tetragonopterus alosa Günther, 1876: 399. Type locality: Monterico, Peru. Syntypes: BMNH 1875.10.4.24-25 (2).

Astyanax metae Eigenmann in Eigenmann, Henn & Wilson, 1914: 11. Type locality: Río Negro, Villavicencio [Colombia]. Holotype: FMNH 56640 [ex CM 5457]. Provisional synonym.

Maximum length: 12.4 cm SL
Distribution: South America: Upper Amazon and Orinoco River basins.
Countries: Colombia, Peru, Venezuela

***Astyanax megaspilura* Fowler, 1944**

Astyanax megaspilura Fowler, 1944: 228, fig. 2. Type locality: A clear brook of Río Jurubidá, Nuquí, Colombia, elev. 3000 ft. Holotype: ANSP 71418.

Distribution: South America: Colombia (?).
Countries: Colombia

***Astyanax metae* Eigenmann, 1914**

Astyanax metae Eigenmann, in Eigenmann, Henn & Wilson, 1914: 11. Type locality: Río Negro, Villavicencio [Colombia]. Holotype: FMNH 56640 [ex CM 5457].

Maximum length: 16 cm TL
Distribution: South America: Orinoco River basins.
Countries: Colombia, Venezuela

Remarks and references: See Taphorn (1992: 116-117) for notes on habitat preferences and natural history.

***Astyanax mexicanus* (De Filippi, 1853)**

Tetragonopterus mexicanus De Filippi, 1853: 166. Type locality: Mexique [=Mexico]. Syntypes: MZUT 159 (3), ZMUC 941-942 (2).

Astyanax argentatus Baird & Girard, 1854: 27. Type locality: Upper tributaries of Río Nueces. Syntypes: BMNH 1883.12.14.107 [ex USNM] (1), MCZ 858 [ex USNM] (3), USNM 869 (28).

?*Tetragonopterus petenensis* Günther, 1864: 326. Type locality: Lake Peten [Petén Itza, Guatemala]; Western Ecuador. Syntypes: BMNH, 3 (Lake Peten); 1 (West Ecuador). Provisional synonym.

Tetragonopterus brevimanus Günther, 1864: 325. Type locality: Yzabal; Río S. Geronimo; Guatemala. Syntypes: 8 specimens, including BMNH 1861.8.12.20-21 (2) Guatemala, ?1864.1.24.177 (1) Río S. Geronimo, 1864.1.26.388 (1) Yzabal; MRAC 7057 (1).

Tetragonopterus fulgens Bocourt, 1868: 62. Type locality: Province of Cuernovaca [Mexico]. Syntypes: MNHN 5194 (2).

?*Tetragonopterus nitidus* Bocourt, 1868: 62. Type locality: Tasco. Syntypes: MNHN 5191 (3). Provisional synonym.

Tetragonopterus streetsii Cope, 1872a: 217. Type locality: Headwaters of the Coatzacoalcos River among the Cordilleras [Mex-

ico]. Syntypes: ANSP 15598-608 (11), 32371-74 (4).

Maximum length: 12 cm TL

Distribution: North America: Originally restricted to the Nueces, lower Río Grande and the lower Pecos River drainages in Texas, USA; now established elsewhere in Texas (primarily streams on Edwards Plateau) and New Mexico, USA (throughout Pecos River system); also in eastern and central Mexico.

Countries: Mexico, USA

***Astyanax microlepis* Eigenmann, 1913**

Astyanax microlepis Eigenmann, 1913: 24. Type locality: Piedra Moler [Colombia]. Holotype: FMNH 56209 [ex CM 5001].

Distribution: South America: Upper Cauca River basin.
Countries: Colombia

***Astyanax multidentis* Eigenmann, 1908**

Astyanax multidentis Eigenmann, 1908: 98. Type locality: Obidos, and Silva, Lake Saraca [Brazil]. Syntypes: USNM 120244 [ex MCZ 21064A = MCZ 89559] (6) Obidos.

Distribution: South America: Amazon River basin.
Countries: Brazil

***Astyanax mutator* Eigenmann, 1909**

Astyanax mutator Eigenmann, 1909a: 18. Type locality: Savannah Landing, Upper Potaro [Guyana]. Holotype: FMNH 52688 [ex CM 1023].

Distribution: South America: Guyana (?).
Countries: Guyana

***Astyanax myersi* (Fernández-Yépez, 1950)**

Poecilurichthys myersi Fernández-Yépez, 1950: 15, pl. 3 (fig. 1). Type locality: Río Autana, Hoya del Orinoco, Estado Amazonas, Venezuela. Holotype: AFY 48172.

Distribution: South America: Orinoco River basin.
Countries: Venezuela

***Astyanax nasutus* Meek, 1907**

Astyanax nasutus Meek, 1907: 108. Type locality: Lago Managua at Managua, Nicaragua. Holotype: FMNH 5909.

Distribution: Central America: Lake Managua basin.
Countries: Nicaragua

***Astyanax nicaraguensis* Eigenmann & Ogle, 1907**

Astyanax rutilus nicaraguensis Eigenmann & Ogle, 1907: 23. Type locality: Nicaragua. Holotype: USNM 55653.

Distribution: Central America: Nicaragua (?).
Countries: Nicaragua

***Astyanax obscurus* (Hensel, 1870)**

Tetragonopterus aeneus Hensel, 1870: 87. Type locality: Porto Alegre [Rio Grande do Sul, Brazil].

Tetragonopterus obscurus Hensel, 1870: 86. Type locality: Rio Cadea oberhalb des grossen Wasserfalles [Rio Grande do Sul, Brazil]. Syntypes: ZMB 7478 (3).

Distribution: South America: Laguna dos Patos drainage.
Countries: Brazil

***Astyanax ojiara* Azpelicueta & Garcia, 2000**

Astyanax ojiara Azpelicueta & Garcia, 2000: 246, fig. 1. Type locality: Argentina, province of Misiones, arroyo Benítez, headwaters of río Yaboty, an affluent of río Uruguay. Holotype: MLP 9470.

Distribution: South America: Upper Uruguay River basin.
Countries: Argentina

***Astyanax orbignyanus* (Valenciennes, 1850)**

Tetragonopterus orbignyanus Valenciennes in Cuvier & Valenciennes, 1850: 147. Type locality: La Plata [and presumably other localities in Argentina, where d'Orbigny obtained specimens, Argentina]. Syntypes: MNHN 4530 (1, poor condition), A.9816-

Check List of the Freshwater Fishes of South and Central America

- 18 (2, 1, 1).
Distribution: South America: Lower La Plata River basin.
Countries: Argentina
- Astyanax orthodus*** Eigenmann, 1907
Astyanax orthodus Eigenmann in Eigenmann & Ogle, 1907: 27.
Type locality: Truando, Colombia. Holotype: USNM 55655.
Distribution: South America: Atrato River basin.
Countries: Colombia
- Astyanax paraguayensis*** (Fowler, 1918)
Bertoniolus paraguayensis Fowler, 1918: 141, fig. Type locality:
Puerto Bertoni, Paraguay. Holotype: ANSP 47686.
Distribution: South America: Paraguay River basin.
Countries: Paraguay
- Astyanax parahybae*** (Eigenmann, 1908)
Astyanax fasciatus parahybae Eigenmann, 1908: 97. Type locality:
Rio Parahyba, Mendez, Miriahe, and Taubaté [Brazil – restricted
to Paraíba do Sul River between Barra do Pirai and Três Rios
(along the old Dom Pedro II Emperor's road)]. Lectotype: MCZ
20685.
Maximum length: 5.6 cm SL
Distribution: South America: Paraíba do Sul River basin and
coastal streams of Rio de Janeiro State.
Countries: Brazil
- Astyanax paranae*** Eigenmann, 1914
Astyanax scabripinnis paranae Eigenmann, 1914: 47. Type locali-
ty: Parana [Castro, Estado do Paraná according to Garutti &
Britski, 2000: 81], Brazil. Holotype: CAS 22555 [ex IU 11631].
Distribution: South America: Southern Brazil (?).
Countries: Brazil
- Astyanax paranahybae*** Eigenmann, 1911
Astyanax paranahybae Eigenmann, 1911b: 177, pl. 8 (fig. 1). Type
locality: Rio Paranahyba [Brazil]. Holotype: FMNH 54714 [ex
CM 3356].
Distribution: South America: Paraná River basin.
Countries: Brazil
- Astyanax paris*** Azpelicueta, Almirón & Casciotta,
2002
Astyanax paris Azpelicueta, Almirón & Casciotta, 2002: 1052, fig.
1. Type locality: Argentina, province of Misiones, río Uruguay
basin, headwater of arroyo Yabotí-Guazú, arroyo Fortaleza
(26°45'S, 54°10'W). Holotype: MLP 9584.
Maximum length: 8.58 mm SL
Distribution: South America: Upper Uruguay River basin in Mi-
siones Province.
Countries: Argentina
- Astyanax poetschkei*** Ahl, 1932
Astyanax (Poecilurichthys) poetschkei Ahl, 1932: 124, fig. Type
locality: Amazon R. Holotype: ZMB 20826.
Distribution: South America: Amazon River basin.
Countries:
- Astyanax ribeirae*** Eigenmann, 1911
Astyanax ribeirae Eigenmann, 1911b: 177, pl. 8 (fig. 2). Type
locality: Xiririca [Brazil]. Holotype: FMNH 54725 [ex CM
3368].
Maximum length: 8 cm TL
Distribution: South America: Southeastern Brazil (?).
Countries: Brazil
- Astyanax rivularis*** (Lütken, 1875)
Tetragonopterus rivularis Lütken, 1875a: 132. Type locality:
flumine Rio d. Velhas cum affluentibus [Minas Gerais, Brazil].
Syntypes: MNHN 9582 [ex ZUMC] (4), NMW 57707 (5), ZMB
9199 (4), ZMUC (49).
Distribution: South America: São Francisco River basin.
Countries: Brazil
- Astyanax robustus*** Meek, 1912
Astyanax robustus Meek, 1912: 69. Type locality: Virginia, Costa
Rica. Holotype: FMNH 7682.
Distribution: Central America: Costa Rica (?).
Countries: Costa Rica
- Astyanax ruberrimus*** Eigenmann, 1913
Astyanax ruberrimus Eigenmann, 1913: 25. Type locality: Istmina
[Colombia]. Holotype: FMNH 56122 [ex CM 4912].
Distribution: Central and South America: Panama and Colombia
(?).
Countries: Colombia, Panama
- Astyanax saltor*** Travassos, 1960
Astyanax saltor Travassos, 1960b: 17, fig. 1. Type locality: Rio
Cachimbo, abaixo do salto, Estado do Pará [Brazil]. Holotype:
MNRJ 9199.
Distribution: South America: Brazil (?).
Countries: Brazil
- Astyanax scabripinnis*** (Jenyns, 1842)
Tetragonopterus scabripinnis Jenyns, 1842: 125, pl. 23 (figs. 3,
3a). Type locality: Rio de Janeiro, Brazil. Holotype: BMNH
1917.7.14.15.
Maximum length: 6.86 cm SL
Distribution: South America: Rio de Janeiro State (?).
Countries: Argentina, Brazil
- Astyanax schubarti*** Britski, 1964
Astyanax schubarti Britski, 1964: 214, fig. Type locality: rio Mogi
Guassu em Emas, São Paulo, à jusante da barragem [Brazil]. Ho-
lotype: MZUSP 4263.
Maximum length: 9 cm SL
Distribution: South America: Upper Paraná River basin.
Countries: Brazil
- Astyanax scintillans*** Myers, 1928
Astyanax scintillans Myers, 1928: 88. Type locality: Playa Mate-
palma, Rio Orinoco, Venezuela. Syntypes: CAS 39493 [ex IU
uncat.] (2).
Distribution: South America: Orinoco River basin.
Countries: Venezuela
- Astyanax stilbe*** (Cope, 1870)
Tetragonopterus stilbe Cope, 1870: 559. Type locality: Para [Bra-
zil]. Holotype: ANSP 8085.
Distribution: South America: Lower Amazon and Atrato River
basins.
Countries: Brazil, Colombia
- Astyanax superbus*** Myers, 1942
Astyanax superbus Myers, 1942: 92, fig. 2. Type locality: small
brook tributary to the Rio Tamanaco (a tributary of the Rio Paye;
Rio Portuguesa drainage) at Camoruco, 20 km. northeast of San
Carlos, Venezuela. Holotype: SU 36489.
Distribution: South America: Portuguesa River basin.
Countries: Venezuela
- Astyanax symmetricus*** Eigenmann, 1908
Astyanax symmetricus Eigenmann, 1908: 95. Type locality: Taba-
tinga [Amazonas, Brazil]. Holotype: MCZ 20768.
Distribution: South America: Upper Amazon River basin.
Countries: Brazil
- Astyanax taeniatus*** (Jenyns, 1842)
Tetragonopterus taeniatus Jenyns, 1842: 126. Type locality: run-
ning brook at Socego, in the province of Rio de Janeiro [Brazil].

Syntypes: Cambridge University Museum V. 329(2).
 Distribution: South America: Paraíba do Sul River drainage and coastal rivers of Rio de Janeiro and Espírito Santo States.
 Countries: Brazil

***Astyanax trierythropterus* Godoy, 1970**

Astyanax (Astyanax) trierythropterus Godoy, 1970: 276, figs. 1-4.
 Type locality: Rio Mogi Guassu, Cachoeira de Emas, a juzante da barragem [São Paulo State, Brazil]. Holotype: EEBP 706, Coleção 8.22, possibly lost.
 Distribution: South America: Upper Paraná River basin.
 Countries: Brazil

***Astyanax unitaeniatus* Garutti, 1998**

Astyanax unitaeniatus Garutti, 1998: 116, fig. 1. Type locality: Brasil, Goiás: Iaciara, Ribeirão Macambira (aproximadamente 14°08'S-46°37'W), junto à ponte na rodovia GO-112. Holotype: MZUSP 40542.
 Distribution: South America: Paraná River basin in upper Tocantins River drainage.
 Countries: Brazil

***Astyanax validus* Géry, Planquette & Le Bail, 1991**

Astyanax validus Géry, Planquette & Le Bail, 1991: 46, pl. 15 (fig. 1). Type locality: Rivière Comté, Crique Blache [French Guiana]. Holotype: MHNG 2435.77.
 Maximum length: 15 cm TL
 Distribution: South America: French Guiana (?).
 Countries: French Guiana

***Astyanax venezuelae* Schultz, 1944**

Astyanax venezuelae Schultz, 1944: 359, fig. 54. Type locality: Río Torbes, 1 km above Táriba, Orinoco system [Venezuela]. Holotype: USNM 121449.
 Maximum length: 5 cm TL
 Distribution: South America: Venezuela (?).
 Countries: Venezuela

***Astyanax villwocki* Zarske & Géry, 1999**

Astyanax villwocki Zarske & Géry, 1999: 200, fig.1. Type locality: Rio Pacal, Rio Pachitea basin, Departamento Ucayali, Peru. Holotype: MTD F 22400.
 Maximum length: 11.4 cm SL
 Distribution: South America: Ucayali, Beni, and Mamoré River basins.
 Countries: Bolivia, Peru

Species inquirendae

Astyanax depressirostris Miranda Ribeiro, 1908: unnum. p. Type locality: Ribeira [Ribeira River, São Paulo, Brazil]. Lectotype: MNRJ 18241. [Lectotype designated by Miranda Ribeiro (1953: 396) as MNRJ 2621A, subsequently isolated and catalogued as MNRJ 18241; MNRJ 2621 are paralectotypes].
Tetragonopterus paucidens Ulrey, 1894: 610. Type locality: Itaituba [Brazil]. Holotype: whereabouts unknown.

ATOPOMESUS

Atopomesus Myers, 1927: 112. Type species: *Atopomesus pachyodus* Myers, 1927. Type by original designation. Gender: masculine. See comments on relationships in Malabarba (1998: 231).

***Atopomesus pachyodus* Myers, 1927**

Atopomesus pachyodus Myers, 1927: 112. Type locality: Brazil: Cucuhy, Rio Negro, on the Colombian border. Holotype: CAS 41736.
 Maximum length: 4.3 cm
 Distribution: South America: Negro River basin.
 Countries: Brazil

ATTONITUS

Attonitus Vari & Ortega, 2000: 114. Type species: *Attonitus irisae* Vari & Ortega, 2000. Type by original designation. Gender: masculine.

***Attonitus bounites* Vari & Ortega, 2000**

Attonitus bounites Vari & Ortega, 2000: 123, fig. 2. Type locality: Peru, Departamento de Puno, Provincia Carabaya, Zona Reservada Tambopata Candamo, Río Candamo (13°24'S 70°01'W). Holotype: MUSM 11840.
 Maximum length: 5.67 cm SL
 Distribution: South America: Madre de Dios River basin.
 Countries: Peru

***Attonitus ephimeros* Vari & Ortega, 2000**

Attonitus ephimeros Vari & Ortega, 2000: 129, fig. 4. Type locality: Peru, Departamento de Cusco, Provincia La Convencion, Río Urubamba basin, Río Picha, Puerto Huallana, Quebrada Mapichiriato (11°50'S 73°20'W). Holotype: MUSM 11501.
 Maximum length: 4.97 cm SL
 Distribution: South America: Aguaytia and Pachitea rivers in the Ucayali River basin.
 Countries: Peru

***Attonitus irisae* Vari & Ortega, 2000**

Attonitus irisae Vari & Ortega, 2000: 133, fig. 5. Type locality: Peru, Departamento de Huanuco, Provincia Pachitea, mouth of Río Huambo, where it empties into Río Pachitea (approximately 9°39'S 74°56'W). Holotype: MUSM 10759.
 Maximum length: 4.62 cm SL
 Distribution: South America: Aguaytia and Pachitea rivers in the Ucayali River basin.
 Countries: Peru

AULIXIDENS

Aulixidens Böhlke, 1952: 775. Type species: *Aulixidens eugeniae* Böhlke, 1952. Type by original designation. Gender: masculine. See comments on relationships in Malabarba (1998: 232).

***Aulixidens eugeniae* Böhlke, 1952**

Aulixidens eugeniae Böhlke, 1952: 775. Type locality: mouth of the Rio Curamoni (or Curamuni, as Ternetz notes his Indians pronounced it), Canal de Casiquiare, Venezuela, approximately 2°38'North Latitude, 66°12' West Longitude. Holotype: CAS 16940.
 Maximum length: 4.3 cm SL
 Distribution: South America: Orinoco River basin.
 Countries: Venezuela

AXELRODIA

Axelrodia Géry, 1965c: 31. Type species: *Axelrodia fowleri* Géry, 1965. Type by original designation. Gender: feminine. See Géry (1965c, 1966, 1973) for species descriptions and discussion on the genus.

***Axelrodia lindeae* Géry, 1973**

Axelrodia lindeae Géry, 1973: 111, figs. 18-19. Type locality: rio Curuçamba, about 9 km of Obidos (3 km from the Obidos-airport), lower Amazon basin [Pará, Brazil]. Holotype: MHNG 2229.08.
 Maximum length: 2.06 cm SL
 Distribution: South America: Curuçamba River on the lower Amazon basin, and middle Madeira River basin.
 Countries: Brazil

***Axelrodia riesei* Géry, 1966**

Axelrodia riesei Géry, 1966a: 112, fig. 4. Type locality: Upper Rio Méta basin, east of Villavicencio, Colombia. Holotype: USNM

207923.

Maximum length: 1.67 cm SL

Distribution: South America: Upper Meta River.

Countries: Colombia

***Axelrodia stigmatias* (Fowler, 1913)**

Hyphessobrycon stigmatias Fowler, 1913: 547, fig. 14. Type locality: Tributary of the Madeira River near Porto Velho, Brazil. Holotype: ANSP 39231.

Axelrodia fowleri Géry, 1965c: 33, pl. 4 (fig. 14). Type locality: environs de Iquitos, Haute Amazonie [Peru]. Holotype: SMF 7212.

Maximum length: 2.05 cm SL

Distribution: South America: Upper Amazon River basin in Brazil and Peru and middle Madeira River in Brazil.

Countries: Brazil, Peru

Remarks and references: See Géry (1966a: 112) for the synonym.

BARIO

Entomolepis Eigenmann, 1917: 63. Type species: *Tetragonopterus steindachneri* Eigenmann, 1893. Type by original designation. Gender: feminine. Preoccupied by *Entomolepis* Brady, 1889, in Crustacea; replaced by *Bario* Myers, 1940.

Bario Myers, 1940: 35. Type species: *Tetragonopterus steindachneri* Eigenmann, 1893. Type by being a replacement name. Gender: masculine. Replacement for *Entomolepis* Eigenmann, 1917, preoccupied by *Entomolepis* Brady, 1889, in Crustacea.

***Bario steindachneri* (Eigenmann, 1893)**

Tetragonopterus lineatus Steindachner, 1891a: 173. Type locality: Iquitos [Peru]. Species illustrated and described in more detail in Steindachner (1891b: 368, pl. 2, fig. 1). Permanently invalid, preoccupied by *Tetragonopterus lineatus* Perugia, 1891, replaced by *Tetragonopterus steindachneri* Eigenmann, 1893.

Tetragonopterus steindachneri Eigenmann, 1893: 53. Type locality: Iquitos [Peru]. Replacement name for *Tetragonopterus lineatus* Steindachner, 1891, preoccupied by *Tetragonopterus lineatus* Perugia, 1891.

Maximum length: 9 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Remarks and references: See Eigenmann (1917: 63) for description.

Common names: Lambari (Brazil), Mojara (Peru)

BOEHLKEA

Boehlkea Géry, 1966c: 212. Type species: *Boehlkea fredcochui* Géry, 1966c. Type by original designation. Gender: feminine.

***Boehlkea fredcochui* Géry, 1966**

Boehlkea fredcochui Géry, 1966c: 212, fig. 5. Type locality: brooks near Loreto Yacu, on the Colombian side of the Upper Amazon, about 45 miles west of Leticia [Colombia - Aquarium import]. Holotype: ANSP 111675 [ex Géry coll. 0124.1].

Maximum length: 4.12 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia

BRAMOCHARAX

Bramocharax Gill in Gill & Bransford, 1877: 189. Type species: *Bramocharax bransfordii* Gill, 1877. Type by monotypy. Gender: masculine.

Catemaco Contreras-Balderas & Rivera-Teillery, 1985: 9. Type species: *Bramocharax (Catemaco) caballeroi* Contreras-Balderas & Rivera-Teillery, 1985. Type by original designation. Gender: masculine.

***Bramocharax baileyi* Rosen, 1972**

Bramocharax baileyi Rosen, 1972: 4, fig. 3. Type locality: Río San Simon, 6 km. due west of Chiséc, Alta Verapaz, Guatemala. Holotype: AMNH 30197.

Maximum length: 6.8 cm SL

Distribution: Central America: Usumacinta River basin.

Countries: Guatemala

***Bramocharax bransfordii* Gill, 1877**

Bramocharax Bransfordii Gill, in Gill & Bransford, 1877: 190. Type locality: Lake Nicaragua [Nicaragua]. Syntypes: USNM 16885 (3).

Bramocharax elongatus Meek, 1907: 110. Type locality: Lake Managua, Managua, Nicaragua. Holotype: FMNH 5922.

Maximum length: 15 cm SL

Distribution: Central America: Nicaragua Lake and Managua Lake basins.

Countries: Costa Rica, Nicaragua

Remarks and references: See Rosen (1972) for relationships of species.

Common names: Sabalito (Nicaragua)

***Bramocharax caballeroi* Contreras-Balderas & Rivera-Teillery, 1985**

Bramocharax (Catemaco) caballeroi Contreras-Balderas & Rivera-Teillery, 1985: 10, fig. 1. Type locality: NW del Lago Catemaco, Veracruz, Mexico. Holotype: UANL 5681.

Maximum length: 13.8 cm SL

Distribution: North America: Catemaco Lake basin.

Countries: Mexico

Remarks and references: See Contreras-Balderas & Rivera Teillery (1985) for detailed description.

***Bramocharax dorioni* Rosen, 1970**

Bramocharax bransfordii dorioni Rosen, 1970: 3, fig. 2. Type locality: Río Semococh, tributary to the Río Chajmaic, a headwater source of the Río de la Pasión (Río Usumacinta Basin) 15 km by road south of Sebol, Alta Verapaz, Guatemala. Holotype: AMNH 29411.

Maximum length: 19.3 cm SL

Distribution: South America: Usumacinta River basin.

Countries: Guatemala

BRITTANICHTHYS

Brittanichthys Géry, 1965a: 13. Type species: *Brittanichthys axelrodi* Géry, 1965. Type by original designation. Gender: masculine. See comments on relationships in Malabarba (1998: 232).

***Brittanichthys axelrodi* Géry, 1965**

Brittanichthys axelrodi Géry, 1965a: 22, fig. 1. Type locality: Rio Negro basin (Brazil), Praia (= beach) Bulufu on the Rio Itu; the collecting place is about 80 km. upstream from the meeting with the Rio Negro, Lat. about 0°-30'S., Long. about 63°-30'W. Holotype: USNM 198132.

Maximum length: 2.8 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

***Brittanichthys myersi* Géry, 1965**

Brittanichthys myersi Géry, 1965a: 62, fig. 5. Type locality: Rio Negro, Brazil, unnamed inlet on shore, at about 13 km. west of junction with the Amazon, 10 km. of Manaus; Lat. about 3°10'S, Long. about 59°55'W. Holotype: USNM 198131.

Maximum length: 3.2 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

BRYCONACIDNUS

Bryconacidnus Myers in Eigenmann & Myers, 1929: 545. Type species: *Hyphessobrycon ellisi* Pearson, 1924. Type by original

designation. Gender: masculine.

***Bryconacidnus ellisi* (Pearson, 1924)**

Hypessobrycon ellisi Pearson, 1924: 39, pl. 10 (fig. 2). Type locality: Espia [...at the junction of the Miguilla and La Paz rivers, Bolivia]. Syntypes: (55) CAS 47167 [ex IU 17343] (37), SU 24660 [ex IU 17343] (3), UMMZ 66505 (14), USNM 117544 [ex UMMZ 66505, orig. IU 17343] (1). Plus additional material.

Maximum length: 3.8 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Bolivia, Ecuador, Peru

Remarks and references: See Géry (1972a: 62) for detailed description. Possibly synonym of *Microgenys weyrauchi* Fowler, 1945, according to Géry (1977: 398).

Common names: Mojarita (Peru)

***Bryconacidnus hemigrammus* (Pearson, 1924)**

Bryconamericus hemigrammus Pearson, 1924: 44. Type locality: Popoi River, Upper Beni [Bolivia]. Syntypes: CAS 39616 [ex IU 17353].

Maximum length: 4 cm SL

Distribution: South America: Upper Madeira River basin.

Countries: Bolivia

Remarks and references: See Géry (1977) for photograph.

***Bryconacidnus paipayensis* (Pearson, 1929)**

Hemigrammus paipayensis Pearson, in Eigenmann & Myers, 1929: 533. Type locality: Paipay, Rio Crisnejas [Andes of Northern Peru]. Syntypes: CAS 44467 [ex IU 17643] (now 1).

Maximum length: 5 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Common names: Mojarita (Peru)

BRYCONAMERICUS

Bryconamericus Eigenmann, in Eigenmann, McAtee & Ward, 1907: 139. Type species: *Bryconamericus exodon* Eigenmann, 1907. Type by monotypy. Gender: masculine.

Eretmobrycon Fink, 1976: 332. Type species: *Eretmobrycon bayano* Fink, 1976. Type by original designation. Gender: masculine.

***Bryconamericus agna* Azpelicueta & Almirón, 2001**

Bryconamericus agna Azpelicueta & Almirón, 2001: 276, fig. 1. Type locality: Argentina, Misiones, Municipio Libertador General San Martín, arroyo Tabay (55°10'W – 27°00'S), Paraná basin. Holotype: FML 3700.

Maximum length: 6.5 cm SL

Distribution: South America: Paraná River basin.

Countries: Argentina

***Bryconamericus alfredae* Eigenmann, 1927**

Bryconamericus alfredae Eigenmann, 1927: 394, pl. 99 (fig. 1). Type locality: Santa Ana, Rio Urubamba [Peru]. Holotype: MCZ 31564 [MCZ 30982 also listed as holotype in MCZ catalog].

Maximum length: 6.6 cm TL

Distribution: South America: Amazon River basin.

Countries: Peru

***Bryconamericus alpha* Eigenmann, 1914**

Bryconamericus alpha Eigenmann in Eigenmann, Henn & Wilson, 1914: 7. Type locality: Villavicencio, Oriente, Colombia [Orinoco River system]. Holotype: FMNH 56646 [ex CM 5463].

Maximum length: 7.6 cm TL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

***Bryconamericus bayano* (Fink, 1976)**

Eretmobrycon bayano Fink, 1976: 334, figs. 2-4. Type locality:

Panama, Bayano river basin, pool in small stream about 19 Km along road from El Llano to Carti, about 0.5 Km downstream from the road. Holotype: USNM 213842.

Maximum length: 5.7 cm SL

Distribution: Central America: Upper Bayano River basin.

Countries: Panama

***Bryconamericus beta* Eigenmann, 1914**

Bryconamericus beta Eigenmann, in Eigenmann, Henn & Wilson, 1914: 7. Type locality: Villavicencio [Orinoco system, Colombia]. Holotype: FMNH 56648 [ex CM 5465a].

Maximum length: 7.5 cm TL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

Remarks and references: See Taphorn (1992: 137-139) for notes on the species.

***Bryconamericus bolivianus* Pearson, 1924**

Bryconamericus bolivianus Pearson, 1924: 43, pl. 10 (fig. 4). Type locality: Río Colorado, Lower Bopi [Bolivia]. Syntypes: (9) CAS 39506 [ex IU 17349] (1), CAS 39507 [ex IU 17349] (4), ?UMMZ 66513 (3). Additional original material: CAS 39508 [ex IU 17350] (2) & CAS 39509 [ex IU 17351] (now 5).

Maximum length: 6.8 cm SL

Distribution: South America: Beni River basin.

Countries: Bolivia

***Bryconamericus brevirostris* (Günther, 1860)**

Chalceus brevirostris Günther, 1860b: 420. Type locality: Western Andes of Ecuador. Holotype: BMNH 1860.6.16.166 or 196.

Maximum length: 9.5 cm TL

Distribution: South America: Pacific coastal drainages of Ecuador and Peru.

Countries: Ecuador, Peru

Remarks and references: See Böhlke (1958: 13-14) for comments on the species.

***Bryconamericus caucanus* Eigenmann, 1913**

Bryconamericus caucanus Eigenmann, 1913: 17. Type locality: Piedra Moler [Colombia]. Holotype: FMNH 56229 [ex CM 5031a].

Maximum length: 8.8 cm TL

Distribution: South America: Magdalena River basin.

Countries: Colombia

Remarks and references: See Román-Valencia & Muñoz (2001) for observations on diet and reproduction.

***Bryconamericus cismontanus* Eigenmann, 1914**

Bryconamericus cismontanus Eigenmann, in Eigenmann, Henn & Wilson, 1914: 4. Type locality: Villavicencio [Orinoco River system, Colombia]. Holotype: FMNH 56642 [ex CM 5459].

Maximum length: 6 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

***Bryconamericus cristiani* Román-Valencia, 1998**

Bryconamericus cristiani Román-Valencia, 1998: 110, fig. 1. Type locality: Colombia, departamento del Meta, en la vía Villavicencio-Acacias, vereda Brisas de Guayuriba, cerca de la escuela cruzando el puente sobre el río Guayuriba, caño Cayupe, afluente del río Guayuriba, Alto Meta (4o 7' N y 74 15' W). Holotype: ICNMNH 3445.

Maximum length: 6.86 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia

***Bryconamericus dahli* Román-Valencia, 2000**

Bryconamericus dahli Román-Valencia, 2000: 451, fig. 1. Type locality: Colombia, Departamento de Nariño, sistema del río Patia, cuenca del río Telembi, Quebrada Babosa afluente do río

Sabune, em la vía a Tucmaco km. 98, a dos km de la margen derecha (aprox. 78° 23' W y los 1° 37' N). Holotype: ICNMNH 2722.

Maximum length: 7.983 cm SL

Distribution: South America: Patia and Mira River basins.

Countries: Colombia

***Bryconamericus deuterodonoides* Eigenmann, 1914**

Bryconamericus deuterodonoides Eigenmann, in Eigenmann, Henn & Wilson, 1914: 5. Type locality: Río Negro, Quebrada at Villavicencio [Colombia]. Holotype: FMNH 56644 [ex CM 5461].

Bryconamericus deuterodonoides euryodous Schultz, 1944: 344, fig. 51. Type locality: Río Guárico and tributaries between San Sebastián and San Casimiro, Estado de Aragua, Venezuela. Holotype: USNM 121437.

Bryconamericus deuterodonoides caudovittatus Inger, 1956: 435. Type locality: Río Abácapa on the west side of Chimantá-tepui [Venezuela]. Holotype: FMNH 45706.

Maximum length: 5 cm TL

Distribution: South America: Orinoco River and Maracaibo Lake basins.

Countries: Colombia, Venezuela

Remarks and references: See Taphorn (1992: 140-142) for notes on taxonomy and ecology, and Flecker et al. (1991) for notes on reproduction.

***Bryconamericus diaphanus* (Cope, 1878)**

Tetragonopterus diaphanus Cope, 1878: 691. Type locality: Río Huallaga at Moyabamba, Peru. Lectotype: ANSP 21216, designated by Fowler (1906: 339, fig. 27).

Maximum length: 5 cm TL

Distribution: South America: Amazon River basin.

Countries: Peru

***Bryconamericus eigenmanni* (Evermann & Kendall, 1906)**

Astyanax eigenmanni Evermann & Kendall, 1906: 83, fig. 1. Type locality: Río Primero, Province of Cordoba [Argentina]. Holotype: USNM 55570.

Maximum length: 6.1 cm SL

Distribution: South America: Primero River, tributary to Laguna Mar Chiquita.

Countries: Argentina

Remarks and references: Redescribed by Miquelarena & Aquino (1999).

***Bryconamericus emperador* (Eigenmann & Ogle, 1907)**

Astyanax emperador Eigenmann & Ogle, 1907: 26. Type locality: Empire Station, Panama. Holotype: USNM 55651.

Bryconamericus ortholepis Eigenmann, 1913: 15. Type locality: Boca de Raspadura [Colombia]. Holotype: CM 5088 (missing).

Bryconamericus scopiferus Eigenmann, 1913: 16. Type locality: Istmina, Río San Juan [Colombia]. Holotype: FMNH 56224 [ex. C.M. 5026].

Bryconamericus juanensis Regan, 1913: 464. Type locality: Southwestern Colombia. Holotype: ?.

Bryconamericus rubricauda Regan, 1913: 464. Type locality: Río Condoto, Colombia. Holotype: ?.

Bryconamericus cascajalensis Meek & Hildebrand, 1916: 284, pl. 19. Type locality: Río Cascajal, Porto Bello, Panama. Holotype: FMNH 8946.

Bryconamericus baudoensis Fowler, 1944: 231, figs. 3-4. Type locality: Río Baudó, Chocó Prov., Colombia, elev. 1200 ft. Holotype: ANSP 71425.

Maximum length: 10.4 cm SL

Distribution: South and Central America: Chagres, Tuira, Bayano, and Santa María River basins in Panamá and Baudó, San Juan,

Atrato and Pacific coastal drainages of Colombia

Countries: Colombia, Panama

Remarks and references: See Kramer (1978) for observations on reproduction, diet and preferred microhabitat. Synonymy according to Román-Valencia (2002).

***Bryconamericus exodon* Eigenmann, 1907**

Bryconamericus exodon Eigenmann, in Eigenmann, McAtee & Ward, 1907: 139. Type locality: Puerto Max [Paraguay]. Holotype: IU 10298a (lost).

Maximum length: 5.7 cm TL

Distribution: South America: Paraguay River basin.

Countries: Brazil, Paraguay

***Bryconamericus galvisi* Román-Valencia, 2000**

Bryconamericus galvisi Román-Valencia, 2000: 457, fig. 5. Type locality: Colombia, Departamento del Putumayo, municipio de Sibundoy, cuenca del Alto Río Putumayo, Valle Sibundoy (aprox. 77°23' W y los 5°00' N) [76°53'W - 1°10'N, bearings of Sibundoy city]. Holotype: ICNMNH 2720.

Maximum length: 7.63 cm SL

Distribution: South America: Putumayo River basin.

Countries: Colombia

***Bryconamericus gonzalezi* Román-Valencia, 2002**

Bryconamericus gonzalezi Román-Valencia, 2002: 180, fig. 2. Type locality: río Bongie (9°21'35"N y los 82°36'35"W) [Panama]. Holotype: IUQ 377.

Maximum length: 7.38 cm SL

Distribution: Central America: Sixaola, Cañaza, and Bongie River basins, in the Caribbean slope of Costa Rica and Panama.

Countries: Costa Rica, Panama

***Bryconamericus grosvenori* Eigenmann, 1927**

Bryconamericus grosvenori Eigenmann, 1927: 365, pl. 99 (fig. 2). Type locality: Río Comercio [Urubamba River basin, Peru]. Holotype: MCZ 31562.

Maximum length: 7 cm TL

Distribution: South America: Amazon River basin.

Countries: Peru

***Bryconamericus guaytarae* Eigenmann & Henn, 1914**

Bryconamericus scopiferus guaytarae Eigenmann & Henn, in Eigenmann, Henn & Wilson, 1914: 7. Type locality: Patia at the mouth of Río Guaitara [Colombia]. Holotype: FMNH 56657 (ex CM 5474).

Maximum length: 8.3 cm TL

Distribution: South America: Patía River basin.

Countries: Colombia

***Bryconamericus hyphesson* Eigenmann, 1909**

Bryconamericus hyphesson Eigenmann, 1909a: 32. Type locality: Tumatumari, Lower Potaro [Guyana]. Holotype: FMNH 52708 [ex CM 1070].

Maximum length: 3.7 cm TL

Distribution: South America: Potaro River basin.

Countries: Guyana

***Bryconamericus icelus* Dahl, 1964**

Bryconamericus icelus Dahl, in Dahl & Medem, 1964: 70. Type locality: Quebrada Guamural, tributary of Río Manso del Sinú, Colombia. Holotype: possibly lost.

Maximum length: 8 cm SL

Distribution: South America: Sinú River basin.

Countries: Colombia

***Bryconamericus ichoensis* Román-Valencia, 2000**

Bryconamericus ichoensis Román-Valencia, 2000: 455, fig. 3. Type locality: Colombia, Departamento del Chocó, municipio de San Francisco de Ichó, Alto Atrato, Quebrada Chaparraidó, afluo-

ente del río Ichó em la vía Tutunendo-San Francisco de Ichó (aprox. 76°38' W y los 5°38' N). Holotype: ICNMMH 2718.

Maximum length: 3.4 cm SL

Distribution: South America: Atrato River basin

Countries: Colombia

***Bryconamericus iheringii* (Boulenger, 1887)**

Tetragonopterus iheringii Boulenger, 1887b: 172. Type locality: San Lorenzo, Rio Grande do Sul [Brazil, Rio Grande do Sul, São Lourenço do Sul]. Lectotype: BMNH 1886.3.15.30, designated by Malabarba & Kindel (1995: 679).

Tetragonopterus pliodus Cope, 1894: 90, pl. 5 (fig. 5). Type locality: Rio Grande do Sul [restricted to Laguna dos Patos system, Brazil, by Malabarba (1989)]. Lectotype: ANSP 21578, designated by Fowler (1906: 347).

Bryconamericus boops Eigenmann, 1908: 105. Type locality: Maldonado [Uruguay]. Holotype: MCZ 20700. Deformed specimen of *Bryconamericus iheringii* (Boulenger 1887) (Malabarba & Kindel 1995: 684).

Maximum length: 7.3 cm SL

Distribution: South America: Laguna dos Patos and Uruguay River basin.

Countries: Brazil, Uruguay

Common names: Lambari (Brazil)

***Bryconamericus lambari* Malabarba & Kindel, 1995**

Bryconamericus lambari Malabarba & Kindel, 1995: 680, fig. 1. Type locality: Small creek flowing into arroio Feitoria, under bridge of avenida Ipiranga, município de Dois Irmãos, Rio Grande do Sul, Brazil, 51°07'S, 29°36'W [actually 29°36'S, 51°07'W]. Holotype: MCP 15448.

Maximum length: 5.6 cm SL

Distribution: South America: Feitoria Creek and tributaries in Caf River basin, Laguna dos Patos drainage.

Countries: Brazil

***Bryconamericus loisae* Géry, 1964**

Bryconamericus loisae Géry, 1964c: 46, fig. 12. Type locality: about 200 miles east of Bogota, Colombia, in the upper Rio Meta drainage. Holotype: USNM 198645.

Maximum length: 7.4 cm SL

Distribution: South America: Meta River basin.

Countries: Colombia

***Bryconamericus megalepis* Fowler, 1941**

Bryconamericus megalepis Fowler, 1941: 188, fig. 98. Type locality: Fortaleza, Ceará [Brazil]. Holotype: ANSP 69602.

Maximum length: 4.5 cm SL

Distribution: South America: Coastal drainages of northeastern Brazil.

Countries: Brazil

Remarks and references: Apparently a Cheirodontinae (H.A. Britski, pers. comm.)

***Bryconamericus mennii* Miquelarena, Protogino, Filiberto & López, 2002**

Bryconamericus mennii Miquelarena, Protogino, Filiberto & López, 2002: 71, fig. 1. Type locality: Cuña-Pirú creek (27°10'S-54°57'W), Departamento Canguá, Misiones province, Argentina. Holotype: ILPLA 1251.

Maximum length: 5.5 cm SL

Distribution: South America: Tributaries of the lower Paraná River in Misiones Province.

Countries: Argentina

***Bryconamericus microcephalus* (Miranda Ribeiro, 1908)**

Astyanax microcephalus Miranda Ribeiro, 1908: [3]. Type locality: Rio Bethary [Betari River, tributary of Ribeira de Iguape Riv-

er, São Paulo, Brazil]. Lectotype: MNRJ 2576A, designated by Miranda Ribeiro (1953: 396) [but perhaps specimen not isolated]; same specimen also selected by Bizerril & Peres-Neto (1995: 15).

Maximum length: 6.6 cm SL

Distribution: South America: Ribeira de Iguape River basin.

Countries: Brazil

Remarks and references: Redescribed by Bizeiril & Peres-Neto (1995).

***Bryconamericus miraensis* Fowler, 1945**

Bryconamericus miraensis Fowler, 1945b: 99, fig. 4. Type locality: Ricaurte on the Rio Guebo at 3900 feet elevation, in basin of Rio Mira, Nariño, Pacific Slope of Southwest Colombia. Holotype: ANSP 71686.

Maximum length: 9.3 cm TL

Distribution: South America: Mira River basin.

Countries: Colombia

***Bryconamericus motatanensis* Schultz, 1944**

Bryconamericus beta motatanensis Schultz, 1944: 341, fig. 50. Type locality: Río San Juan at bridge south of Mene Grande, Motatán system [Venezuela]. Holotype: USNM 121477.

Maximum length: 4.7 cm TL

Distribution: South America: Maracaibo Lake basin

Countries: Venezuela

***Bryconamericus multiradiatus* Dahl, 1960**

Bryconamericus multiradiatus Dahl, 1960a: 471, fig. Type locality: small brook in front of the village Riosucio, lower Atrato [Colombia]. Holotype: ICNMMH 82.

Maximum length: 2.7 cm TL

Distribution: South America: Atrato River basin.

Countries: Colombia

***Bryconamericus novae* Eigenmann & Henn, 1914**

Bryconamericus novae Eigenmann & Henn, 1914: 234. Type locality: Below Cachoeira da Velha near Piabana, Rio Novo of Rio Tocantins, Lower Amazon basin [Brazil]. Holotype: FMNH 54905 [ex CM 3568a].

Maximum length: 5.7 cm TL

Distribution: South America: Tocantins River basin.

Countries: Brazil

***Bryconamericus ornaticeps* Bizerril & Peres-Neto, 1995**

Bryconamericus ornaticeps Bizerril & Peres-Neto, 1995: 18, fig. 3. Type locality: Rio Macacu, city of Cachoeira de Macacu, State of Rio de Janeiro, Brazil. Holotype: MNRJ 12310.

Maximum length: 6.5 cm SL

Distribution: South America: Macacu River basin in Rio de Janeiro State.

Countries: Brazil

***Bryconamericus osgoodi* Eigenmann & Allen, 1942**

Bryconamericus osgoodi Eigenmann & Allen, 1942: 225, pl. 14 (fig. 6). Type locality: Moyobamba [Huallaga River basin, Upper Amazon, Peru]. Holotype: CAS 40828 [ex IU 15915].

Maximum length: 6.1 cm SL

Distribution: South America: Amazon River basin.

Countries: Peru

***Bryconamericus pachacuti* Eigenmann, 1927**

Bryconamericus pachacuti Eigenmann, 1927: 376, pl. 99 (fig. 3). Type locality: Santa Ana, Río Urubamba [Peru]. Holotype: MCZ 31563.

Maximum length: 7.5 cm TL

Distribution: South America: Upper Amazon River basin and the Urubamba River.

Countries: Peru

***Bryconamericus pectinatus* Vari & Siebert, 1990**

Bryconamericus pectinatus Vari & Siebert, 1990: 517, figs. 1-5. Type locality: Peru, Departamento Madre de Dios, Provincia Manú, Parque Nacional de Manú, second large quebrada along Trail 1 leading to the east from Pakitza, tributary of Río Manú (approx. 11°50'S, 71°21'W). Holotype: MHN-USM 2057.

Maximum length: 3.48 cm SL
Distribution: South America: Peru.
Countries: Peru

***Bryconamericus peruanus* (Müller & Troschel, 1845)**

Tetragonopterus peruanus Müller & Troschel, 1845: 28, pl. 8 (fig. 1). Type locality: Peru [Near Lima]. Syntypes: ZMB 3591-92 (2, 1).

Maximum length: 9.2 cm SL
Distribution: South America: Amazon River basin; Guayas, Esmeraldas, and Santiago River basins.
Countries: Ecuador, Peru
Remarks and references: See Böhlke (1958) for an extensive discussion about this species.

***Bryconamericus phoenicopterus* (Cope, 1872)**

Tetragonopterus phoenicopterus Cope, 1872b: 261. Type locality: [Ambyiacu River, Peru]. Holotype: ANSP 8093.

Maximum length: 6 cm TL
Distribution: South America: Amazon River basin.
Countries: Peru

***Bryconamericus plutarcoi* Román-Valencia, 2001**

Bryconamericus plutarcoi Román-Valencia, 2001: 470, fig. 1. Type locality: Colombia, Departamento de Santander, quebrada Santa Rosa, cuenca del río Suárez, sistema río Magdalena (6°26'09" N & 73°18'56" O). Holotype: ICMNH 4886.

Maximum length: 6.94 cm SL
Distribution: South America: Upper Suarez River in the Magdalena River drainage.
Countries: Colombia

***Bryconamericus rubropictus* (Berg, 1901)**

Tetragonopterus rubropictus Berg, 1901: 305. Type locality: Río Molinos, Territorio de los Andes (República Argentina), como a 3000 metros sobre el nivel del mar. Syntypes: MACN (8 specimens).

Distribution: South America: Pasaje-Juramento River basin in Paraná River drainage.
Countries: Argentina
Remarks and references: Transferred from *Astyanax* and redescribed by Braga (2000).

***Bryconamericus scleroparius* (Regan, 1908)**

Tetragonopterus scleroparius Regan, 1908a: 455. Type locality: Río Iroquois [Eastern slope of Costa Rica]. Syntypes: (11) BMNH 1909.3.13.30-39 (10). Additional material: BMNH (5) w. Ecuador, (2) Panama.

Bryconamericus peruanus ricao Eigenmann, 1908: 106. Type locality: Chitaria, Costa Rica [tributary of Revintazon River, Atlantic Slope]. Lectotype: FMNH 59523, designated by Grey (1947: 127).

Maximum length: 9.5 cm TL
Distribution: Central and South America: Coastal rivers in Costa Rica, Ecuador, and Panama.
Countries: Costa Rica, Ecuador, Panama
Remarks and references: See notes on the species by Bussing (1987).

***Bryconamericus simus* (Boulenger, 1898)**

Tetragonopterus simus Boulenger, 1898: 2. Type locality: vallée du Chota, Nord de l'Equateur. [Pacific slope north of Ecuador]. Syntypes: BMNH 1898.11.4.71-73 (3), MSNG 35974 (3),

MZUT 1527 (many).

Maximum length: 8.7 cm TL
Distribution: South America: Amazon River basin.
Countries: Ecuador, Peru

***Bryconamericus stramineus* Eigenmann, 1908**

Bryconamericus stramineus Eigenmann, 1908: 105. Type locality: Piracicaba and Uruguay River, restricted by Eigenmann (1927: 370) to Piracicaba [upper Paraná basin, São Paulo, Brazil]. Lectotype: CAS 40833 [ex IU 11519], designated by Eigenmann (1927).

Maximum length: 5.6 cm SL
Distribution: South America: La Plata and São Francisco River basins.
Countries: Argentina, Brazil, Paraguay, Uruguay
Common names: Lambari (Brazil)
Remarks and references: See Casatti & Castro (1998) for notes on natural history.

***Bryconamericus sylvicola* Braga, 1998**

Bryconamericus sylvicola Braga, 1998: 22, fig. 1. Type locality: Argentina, Provincia de Misiones, Departamento Gral. Manuel Belgrano, arroyo Central (em proximidades RN 101, aproximadamente 25°50'LS, 54°10'LO), tributario del río Uruguay-i, afluente del río Paraná. Holotype: MACN 8072.

Maximum length: 6.5 cm SL
Distribution: South America: Paraná River basin.
Countries: Argentina

***Bryconamericus tenuis* Bizerril & Auraujo, 1992**

Bryconamericus tenuis Bizerril & Auraujo, 1992: 65, fig. 1. Type locality: Etat de Rio de Janeiro, rio São João, Ville de Silva Jardim [Brazil]. Holotype: MNRJ 12230.

Maximum length: 3.8 cm SL
Distribution: South America: São João River basin in Rio de Janeiro State.
Countries: Brazil

***Bryconamericus ternetzi* Myers, 1928**

Bryconamericus ternetzi Myers, 1928: 89. Type locality: Camanáos Rapids, Rio Negro, Brazil. Holotype: CAS 44216 [ex IU].

Maximum length: 5.9 cm TL
Distribution: South America: Upper Negro River basin.
Countries: Brazil
Remarks and references: Illustration of the holotype in Géry (1977: 386).

***Bryconamericus terrabensis* Meek, 1914**

Bryconamericus terrabensis Meek, 1914: 108. Type locality: Río Grande de Térraba, Costa Rica. No types known.

Maximum length: 9.0 cm SL
Distribution: Central America: Costa Rica (?).
Countries: Costa Rica
Remarks and references: See notes on the species by Bussing (1987).

***Bryconamericus thomasi* Fowler, 1940**

Bryconamericus thomasi Fowler, 1940: 49, fig. 3. Type locality: Río Lipeo, Bolivia. Holotype: ANSP 68740.

Maximum length: 7 cm SL
Distribution: South America: Paraguay River basin.
Countries: Argentina, Bolivia
Remarks and references: Redescribed by Miquelarena & Aquino (1995).

***Bryconamericus uporas* Casciotta, Azpelicueta & Almirón, 2002**

Bryconamericus uporas Casciotta, Azpelicueta & Almirón, 2002: 156. Type locality: Argentina, Misiones, Municipio Leandro N.

Alen, arroyo Once Vueltas (27°38'S – 55°12'W), Uruguay basin.
 Holotype: MLP 9568
 Maximum length: 5.34 cm SL
 Distribution: South America: Uruguay River basin.
 Countries: Argentina, Brazil

***Bryconamericus zeteki* Hildebrand, 1938**

Bryconamericus zeteki Hildebrand, 1938: 265, fig. 4. Type locality: A creek in El Valle, Pacific slope, Panama. Holotype: USNM 106511.
 Maximum length: 8.8 cm TL
 Distribution: Central America: Panama (?).
 Countries: Panama

BRYCONELLA

Bryconella Géry, 1965c: 27. Type species: *Bryconella haraldi* Géry, 1965. Type by original designation. Gender: feminine.

***Bryconella pallidifrons* (Fowler, 1946)**

Cheirodon pallidifrons Fowler, 1946: 1, fig. Type locality: South American, supposedly from the Amazon R. Holotype: ANSP 71728.

Hyphessobrycon thompsoni Fowler, 1949b: 73, fig. Type locality: Aquarium fish; supposed to be South America, probably Brazil. Holotype: ANSP 71849.

Bryconella haraldi Géry, 1965c: 28, pl. 4 (fig. 13). Type locality: Igarapé Prêto, collateral de l'Amazone supérieure près de Belem, à environ 60 km en aval de Leticia [Brazil]. Holotype: SMF 7220.

Maximum length: 2.32 cm SL
 Distribution: South America: Amazon River basin.
 Countries: Brazil, Peru
 Remarks and references: See Géry (1972b) for a comparison among the three nominal species.
 Common names: Mojarrita (Peru)

BRYCONEXODON

Bryconexodon Géry, 1980b: 2. Type species: *Bryconexodon juruena* Géry, 1980. Type by original designation. Gender: masculine.

***Bryconexodon juruena* Géry, 1980**

Bryconexodon juruena Géry, 1980b: 2, fig. 1. Type locality: Haut rio Juruena, affluent du rio Tapajoz, Mato Grosso, Brésil, au voisinage de la route Cuiaba-Porto Velho. Holotype: MZUSP 14638.

Maximum length: 12.5 cm SL
 Distribution: South America: Upper Tapajós River basin.
 Countries: Brazil

***Bryconexodon trombetasi* Jégu, Santos & Ferreira, 1991**

Bryconexodon trombetasi Jégu, Santos & Ferreira, 1991: 774, fig. 2. Type locality: Rio Trombetas, em amont de la confluence avec l'Igarapé Caxipacoré, Parà, Brésil. Holotype: INPA 3103.

Maximum length: 11.7 cm SL
 Distribution: South America: Trombetas River basin.
 Countries: Brazil

BRYCONOPS

Bryconops Kner, 1858a: 80. Type species: *Bryconops alburnoides* Kner, 1858. Type by subsequent designation by Eigenmann (1910: 435). Gender: masculine.

Cretochanes Günther, 1864: 318. Type species: *Salmo melanurus* Bloch, 1794. Type by subsequent designation by Eigenmann (1910: 435). Gender: masculine.

Brycochandus Eigenmann, 1908: 106. Type species: *Brycochandus durbini* Eigenmann, 1908. Type by original designation.

Gender: masculine.

Autanichthys Fernández-Yépez, 1950: 11. Type species: *Autanichthys giacopinii* Fernández-Yépez, 1950. Type by original designation. Gender: masculine.

***Bryconops affinis* (Günther, 1864)**

Tetragonopterus affinis Günther, 1864: 329. Type locality: Guyana. Holotype: BMNH 1969.12.13. 1.

Maximum length: 12 cm TL
 Distribution: South America: Coastal streams of the Guiana Shield.
 Countries: French Guiana, Guyana, Suriname

***Bryconops alburnoides* Kner, 1858**

Bryconops lucidus Kner, 1858a: 80. Type locality: Rio Branco [Amazon system, Brazil]. Holotype: NMW 62847.

Bryconops alburnoides Kner, 1858a: 80. Type locality: Rio Guaporé [Madeira River basin, Brazil]. Syntypes: NMW 5994 (1), 16170 (1, dry), 62843-45 (2, 2, 2).

Maximum length: over 10 cm SL
 Distribution: South America: Orinoco and Amazon River basin.
 Countries: Brazil, Venezuela

***Bryconops caudomaculatus* (Günther, 1864)**

Tetragonopterus caudomaculatus Günther, 1864: 330. Type locality: South America. Holotype: BMNH 1852.9.13.74.

Maximum length: 7 cm TL
 Distribution: South America: Coastal streams of the Guiana Shield, Orinoco and Amazon River basins.
 Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

***Bryconops colanegra* Chernoff & Machado-Allison, 1999**

Bryconops colanegra Chernoff & Machado-Allison, 1999: 365, fig. 5. Type locality: Río Carrao near base camp at Angel Falls, Bolívar, Venezuela. Holotype: MBUCV-V-27716.

Maximum length: 8.78 cm SL
 Distribution: South America: Caroní River basin.
 Countries: Venezuela

***Bryconops colaroja* Chernoff & Machado-Allison, 1999**

Bryconops colaroja Chernoff & Machado-Allison, 1999: 363, fig. 4. Type locality: Río las Clariats at Puente Las Claritas, at km 86 on the El Dorado-Sta. Elena Hwy, 6°10'16.4"N, 61°25'33.9"W, Estado Bolívar, Venezuela.

Maximum length: 7.79 cm SL
 Distribution: South America: Cuyuní River basin in the vicinity of the Venezuelan-Guyanese border.
 Countries: Venezuela

***Bryconops cyrtogaster* (Norman, 1926)**

Cretochanes cyrtogaster Norman, 1926: 91. Type locality: Oya-pock River, French Guiana. Syntypes: BMNH 1926.3.2.515-524.

Maximum length: 12 cm TL
 Distribution: South America: Oyapock River between French Guiana and Brazil.
 Countries: Brazil, French Guiana

***Bryconops disruptus* Machado-Allison & Chernoff, 1997**

Bryconops disruptus Machado-Allison & Chernoff, 1997: 68, fig. 2. Type locality: Pozos y Playa en la boca del Caño Darigua 7 Km Sur de San Carlos de Río Negro, Amazonas, Venezuela. Holotype: MBUCV-V-25003.

Maximum length: 6.41 cm SL
 Distribution: South America: Negro River basin.
 Countries: Brazil, Venezuela

***Bryconops durbini* (Eigenmann, 1908)**

Brycochandus durbini Eigenmann, 1908: 106. Type locality: Rio Tapajos [Brazil]. Syntypes: MCZ 20862 (2).
Maximum length: 3.06 cm SL
Distribution: South America: Tapajós River basin.
Countries: Brazil

***Bryconops giacopinii* (Fernández-Yépez, 1950)**

Autanichthys giacopinii Fernández-Yépez, 1950: 12, pl. 1 (fig. 3).
Type locality: Río Autana, ca. 8 km above confluence in Río Sipapo, ca. 4°44'N, 67°37'W, Fed. Terr. of Amazonas, Venezuela. Neotype: MBUCV 21510. Holotype (AFY 48171) and paratypes (AFY 48235) apparently lost; neotype designated by Chernoff et al. (1994: 239).
Distribution: South America: Autana River basin in upper Orinoco River drainage.
Countries: Venezuela

***Bryconops gracilis* (Eigenmann, 1908)**

Cretochanes gracilis Eigenmann, 1908: 106. Type locality: Rio Tapajos [Brazil]. Holotype: whereabouts unknown.
Distribution: South America: Tapajós River basin.
Countries: Brazil

***Bryconops humeralis* Machado-Allison, Chernoff & Buckup, 1996**

Bryconops humeralis Machado-Allison, Chernoff & Buckup, 1996: 46, fig. 3. Type locality: Río Cua, AM [Venezuela]. Holotype: MBUCV-V-25000.
Maximum length: 8.6 cm SL
Distribution: South America: Upper Orinoco, Casiquiare, and Negro River basins.
Countries: Venezuela

***Bryconops imitator* Chernoff & Machado-Allison, 2002**

Bryconops imitator Chernoff & Machado-Allison, in Chernoff, et al., 2002: 195, fig. 2. Type locality: Venezuela: Bolívar: Río Caura, small branch of Río Caura at Raudal Cejiato, 5°33'28"N 64°18'49"W. Holotype: MBUCV-V-29605.
Maximum length: 7.56 cm SL
Distribution: South America: Caura River basin.
Countries: Venezuela

***Bryconops inpai* Knöppel, Junk & Géry, 1968**

Bryconops (Cretochanes) inpai Knöppel, Junk & Géry, 1968: 231, fig. 1b. Type locality: Lower Rio Negro region, Igarapé Barro Branco, a brook in the "Reserva Ducke" (INPA) about 30 km from Manaus [Brazil]. Holotype: INPA 10978.
Maximum length: 10 cm TL
Distribution: South America: Negro River and Casiquiare basins.
Countries: Brazil, Venezuela

***Bryconops melanurus* (Bloch, 1794)**

Salmo melanurus Bloch, 1794: 104, pl. 381 (fig. 2). Type locality: Suriname. Syntypes: ZMB 3588 (2).
Maximum length: 12 cm SL
Distribution: South America: Coastal streams of the Guiana Shield.
Countries: Guyana, French Guiana, Suriname

***Bryconops transitoria* Steindachner, 1915**

Bryconops melanurus transitoria Steindachner, 1915a: 49, pl. 1 (fig. 5). Type locality: Río Tapajos [Brazil]. Syntypes: NMW 68532 (4), 68939 (3), 69213 (6).
Distribution: South America: Tapajós River basin.
Countries: Brazil

***Bryconops vibex* Machado-Allison, Chernoff &**

Buckup, 1996

Bryconops vibex Machado-Allison, Chernoff & Buckup, 1996: 47, fig. 6. Type locality: Río Cataniapo, Salto Nieves, AM [Venezuela]. Holotype: MBUCV-V-25002.
Maximum length: 6.77 cm SL
Distribution: South America: Cataniapo River basin.
Countries: Venezuela

CAIAPOBRYCON

Caiaopobrycon Malabarba & Vari, 2000: 316. Type species: *Caiaopobrycon tucurui* Malabarba & Vari, 2000. Type by original designation. Gender: masculine.

***Caiaopobrycon tucurui* Malabarba & Vari, 2000**

Caiaopobrycon tucurui Malabarba & Vari, 2000: 316, fig. 2. Type locality: Brazil, Goiás, rio do Peixe, tributary of rio Maranhão, Niquelândia (14°28'S 48°45'W). Holotype: MNRJ 14546.
Maximum length: 4.53 cm SL
Distribution: South America: Tocantins River basin.
Countries: Brazil
Remarks and references: Relationships discussed in Malabarba & Vari (2000).

CARLASTYANAX

Carlastyanax Géry, 1972a: 16. Type species: *Astyanax aurocaudatus* Eigenmann, 1913. Type by original designation. Gender: masculine.

***Carlastyanax aurocaudatus* (Eigenmann, 1913)**

Astyanax aurocaudatus Eigenmann, 1913: 26. Type locality: Boquia [Cauca River basin, Colombia]. Holotype: FMNH 56882 [ex CM 5162].
Maximum length: 6 cm SL
Distribution: South America: Cauca River basin.
Countries: Colombia
Remarks and references: See Géry, 1977: 379 for comments and description of color pattern in life.
Common names: Gold-tailed tetra (USA)

CERATOBANCHIA

Ceratobranchia Eigenmann, in Eigenmann, Henn & Wilson, 1914: 3. Type species: *Ceratobranchia obtusirostris* Eigenmann, 1914. Type by monotypy. Gender: feminine. Reviewed by Chernoff & Machado-Allison (1990).

***Ceratobranchia binghami* Eigenmann, 1927**

Ceratobranchia binghami Eigenmann, 1927: 357, pl. 96 (fig. 1).
Type locality: Santa Ana, Rio Urubamba [Depto. Cuzco, Peru]. Holotype: MCZ 31561.
Maximum length: 5.3 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Peru

***Ceratobranchia delotaenia* Chernoff & Machado-Allison, 1990**

Ceratobranchia delotaenia Chernoff & Machado-Allison, 1990: 283, figs. 20-21. Type locality: Cuzco/Madre de Dios border, mouth of Río Carbon, below Atalaya in vicinity of road ford on north/south hwy, 12°53'S, 71°20'W [Depto. de Cuzco, Peru]. Holotype: ANSP 163721 [ex ANSP 143770].
Maximum length: 3.79 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Peru

***Ceratobranchia elatior* Tortonese, 1942**

Ceratobranchia elatior Tortonese, 1942: 67, pl. 4 (fig. 1). Type locality: Río Zamora, Ecuador. Holotype: MZUT 3558.
Maximum length: 5.2 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Ecuador

***Ceratobranchia joanae* Chernoff & Machado-Allison, 1990**

Ceratobranchia joanae Chernoff & Machado-Allison, 1990: 286, fig. 22. Type locality: Venezuela, Bolivar, Río Maniapure at crossing of Caicara-Puerto Ayacucho Hwy, 6°55'48"N, 66°33'22"W. Holotype: MBUCV 18616 [ex ANSP 159214].

Maximum length: 3.4 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Ceratobranchia obtusirostris* Eigenmann, 1914**

Ceratobranchia obtusirostris Eigenmann, in Eigenmann, Henn & Wilson, 1914: 4. Type locality: Chauchamago, Peru [=Chanchamayo, now Pueblo Nuevo, Depto. Junín, 11°15'S, 75°15'W]. Holotype: CAS 40848 [ex IU 13154].

Maximum length: 5.5 cm SL

Distribution: South America: Amazon River basin.

Countries: Peru

CHALCEUS

Chalceus Cuvier, 1816: 454. Type species: *Chalceus macrolepidotus* Cuvier, 1816. Type by monotypy. Gender: masculine. Most recent appraisal on the taxonomy of the genus is Géry (1977: 342). The synonymy mentioned below was suggested by A. Zanata and M. Toledo-Piza (pers. comm.), who are reviewing the genus.

Plethodectes Cope, 1870: 563. Type species: *Plethodectes erythrurus* Cope, 1870. Type by monotypy. Gender: masculine.

Pellegrinina Fowler, 1907: 442. Type species: *Pellegrinina heterolepis* Fowler, 1907. Type by original designation. Gender: feminine.

***Chalceus erythrurus* (Cope, 1870)**

Plethodectes erythrurus Cope, 1870: 563, figs. Type locality: Pebas, Equador [Amazon system, Peru]. Holotype: ANSP 8032.

Pellegrinina heterolepis Fowler, 1907: 442, fig. 39. Type locality: Probably some part of West Africa. Holotype: ANSP 8150 (caudal damaged).

Chalceus macrolepidotus iquitensis Nakashima, 1941: 76, fig. Type locality: Cercanías del puerto de Iquitos [Amazon system, Peru]. Type specimen(s) lost (H. Ortega, pers. comm.).

Maximum length: 21.35 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil, Peru

Common names: Sardina (Peru)

***Chalceus macrolepidotus* Cuvier, 1816**

Chalceus macrolepidotus Cuvier, 1816: 454, pl. 21 (fig. 1). Type locality: Brésil. Holotype: MNHN 2634.

Chalceus ararapeera Valenciennes, in Cuvier & Valenciennes, 1850: 244. Type locality: l'Essequibo [Guiana]. Syntypes: MNHN 5402 (2), A.9836 (1), A.9916.

Creagrutus pellegrini Puyo, 1943: 143, fig. 2. Type locality: haut Itany... cours supérieur du Marouini [French Guiana]. Type specimen (s) lost (see Géry, 1959c: 345-346; Géry & Planquette, 1982: 68).

Maximum length: 24.46 cm SL

Distribution: South America: Negro and Orinoco River basins and coastal rivers in Guyana, Suriname, and French Guiana.

Countries: Brazil, Colombia, French Guiana, Guyana, Suriname, Venezuela

Common names: Alampia (French Guiana), Arari-pirá (Brazil), Douanier (French Guiana), Douanier caca (French Guiana), Kalala (French Guiana), Mopéaki (French Guiana), Rabirrojo (Colombia)

COPTOBRYCON

Coptobrycon Géry, 1966c: 226. Type species: *Hasemanian bilineata* Ellis, 1911. Type by original designation. Gender: masculine.

***Coptobrycon bilineatus* (Ellis, 1911)**

Hasemanian bilineata Ellis, 1911: 150, pl. 1 (fig. 3). Type locality: Alto da Serra, São Paulo, in a creek [upper Paraná River basin, São Paulo, Brazil]. Holotype: FMNH 54383 [ex CM 2937 or 3004].

Maximum length: 4.1 cm TL

Distribution: South America: Upper Tietê River basin.

Countries: Brazil

Remarks and references: See Géry (1966: 226) for remarks.

CREAGRUTUS

Creagrutus Günther, 1864: 339. Type species: *Leporinus muelleri* Günther, 1859. Type by monotypy. Gender: masculine.

Creagrudite Myers, 1927: 117. Type species: *Creagrudite maxillaris* Myers, 1927. Type by original designation. Gender: masculine.

Creagrutops Schultz, 1944: 327. Type species: *Creagrutops maracaiboensis* Schultz, 1944. Type by original designation. Gender: masculine.

***Creagrutus affinis* Steindachner, 1880**

Creagrutus affinis Steindachner, 1880: 79. Type locality: Río Cauca, Colombia. Lectotype: NMW 67120.1, designated by Harold & Vari (1994: 25).

Creagrutus notropoides Meek & Hildebrand, 1912: 68. Type locality: R. Indio, Panama. Holotype: FMNH 7574.

Creagrutus leuciscus Regan, 1913: 463. Type locality: R. Lisa and R. Condoto, San Juan River, Colombia. Lectotype: BMNH 1913.10.1.6, designated by Harold & Vari (1994: 26).

Creagrutus simus Meek & Hildebrand, 1913: 85. Type locality: Río Cupe, Cituro, Panama. Holotype: FMNH 7591.

Creagrutus londonoi Fowler, 1945d: 3, figs. 1-3. Type locality: Honda, Colombia. Holotype: ANSP 71610.

Maximum length: 7.8 cm SL

Distribution: Central and South America: Caribbean drainages of Colombia from the Magdalena River basin west to coastal basins of Chocó Department, Pacific slope rivers of Panama from Bayano to Tuira River, Chagres River system of Atlantic slope of Panama, and Baudo and San Juan rivers of Pacific slopes of Colombia.

Countries: Colombia, Panama

***Creagrutus amoenus* Fowler, 1943**

Creagrutus amoenus Fowler, 1943a: 239, fig. 18. Type locality: Florencia, Río Ortegusa, Caquetá, Colombia. Holotype: ANSP 70499.

Creagrutus boehlkei Géry, 1972a: 63, pl. 4 (fig. 2). Type locality: Oriente del Ecuador (=eastern Ecuador). Holotype: ZSM 28428.

Maximum length: 9.1 cm SL

Distribution: South America: Andean foothill rivers of eastern Ecuador and southeastern Colombia.

Countries: Colombia, Ecuador

Remarks and references: See Vari & Harold (2001: 58) for detailed redescription.

***Creagrutus anary* Fowler, 1913**

Creagrutus anary Fowler, 1913: 552, fig. 16. Type locality: Madeira River, about 200 miles east of long. 62°20'W, Brazil. Holotype: ANSP 39290 (missing). Type locality apparently erroneous (Böhlke 1955: 8).

Maximum length: 4.5 cm SL

Distribution: South America: Madeira River basin.

Countries: Brazil

Remarks and references: See Vari & Harold (2001: 63) for de-

tailed redescription.

***Creagrutus atratus* Vari & Harold, 2001**

Creagrutus atratus Vari & Harold, 2001: 66, fig. 24-25. Type locality: Colombia, Cundinamarca, Río Meta basin, Río Caqueza, tributary to Río Negro, about 2 km upstream of village of Caqueza (latter at 4°25'N, 73°57'W). Holotype: ICNMHN 4158.

Maximum length: 7.01 cm SL

Distribution: South America: western portions of Orinoco River basin.

Countries: Colombia

***Creagrutus atrisignum* Myers, 1927**

Creagrutus atrisignum Myers, 1927: 116. Type locality: Upper Río Maranhão (upper Tocantins), Goyaz (=Goiás), Brazil. Holotype: CAS 41339.

Maximum length: 5.5 cm SL

Distribution: South America: Maranhão River basin in Tocantins River drainage.

Countries: Brazil

Remarks and references: See Vari & Harold (2001: 69) for detailed redescription.

***Creagrutus barrigai* Vari & Harold, 2001**

Creagrutus barrigai Vari & Harold, 2001: 71, fig. 27. Type locality: Ecuador, Sucumbíos, Río Aguatico, near San Pablo de Kante-siya (0°15'18"S, 76°25'30"W). Holotype: MEPN 4621.

Maximum length: 5.3 cm SL

Distribution: South America: Western Amazon River basin in northeastern Peru, northeastern Ecuador, and western Brazil.

Countries: Brazil, Ecuador, Peru

***Creagrutus beni* Eigenmann, 1911**

Creagrutus beni Eigenmann, 1911b: 172, pl. 6 (fig. 2). Type locality: Villa Bella on Río Beni (Bolivia). Holotype: FMNH 54585 (poor condition).

Maximum length: 7.3 cm SL

Distribution: South America: Upper Madeira River basin in northeastern Bolivia.

Countries: Bolivia

Remarks and references: See Vari & Harold (2001: 75) for detailed redescription.

***Creagrutus bolivari* Schultz, 1944**

Creagrutus bolivari Schultz, 1944: 334, fig. 49. Type locality: Río Guárico and tributaries between San Sebastián and San Casimiro, State of Aragua, Venezuela. Holotype: USNM 121497.

Maximum length: 5.2 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

Remarks and references: See Vari & Harold (2001: 79) for detailed redescription.

***Creagrutus brevipinnis* Eigenmann, 1913**

Creagrutus brevipinnis Eigenmann, 1913: 10. Type locality: Piedra de Moler, Colombia. Holotype: FMNH 56095.

Maximum length: 4.8 cm SL

Distribution: South America: Upper Cauca River basin.

Countries: Colombia

Remarks and references: See Harold & Vari (1994: 18) for detailed redescription.

***Creagrutus britskii* Vari & Harold, 2001**

Creagrutus britskii Vari & Harold, 2001: 83, fig. 31. Type locality: Brazil, Goiás, Iaciara, Ribeirão Macambira (approximately 14°20'S, 46°45'W), near bridge on highway GO 112. Holotype: MZUSP 40537.

Maximum length: 5.25 cm SL

Distribution: South America: Upper Tocantins River basin.

Countries: Brazil

***Creagrutus calai* Vari & Harold, 2001**

Creagrutus calai Vari & Harold, 2001: 85, fig. 32. Type locality: Colombia, Meta, unnamed stream on Rancho El Viento, across Río Meta from Puerto Lopez (4°08'N, 72°39'W). Holotype: ANSP 130527.

Maximum length: 6.6 cm SL

Distribution: South America: Western Meta River basin in eastern Colombia.

Countries: Colombia

***Creagrutus caucanus* Eigenmann, 1913**

Creagrutus caucanus Eigenmann, 1913: 9. Type locality: Paila, Colombia. Holotype: FMNH 56104.

Maximum length: 8.3 cm SL

Distribution: South America: Upper Cauca River basin.

Countries: Colombia

Remarks and references: See Harold & Vari (1994: 5) for detailed redescription.

***Creagrutus changae* Vari & Harold, 2001**

Creagrutus changae Vari & Harold, 2001: 88, fig. 34. Type locality: Peru, Huanuco, Provincia Pachitea, Río San Alejandro, a tributary of Río Sungarayacu, just above junction with Río Sungarayacu (approximately 9°23'S, 75°11'W). Holotype: MUSM 8858.

Maximum length: 6.69 cm SL

Distribution: South America: Western tributaries of Ucayali River in departments of Junin, Pasco, and Huanuco, Peru.

Countries: Peru

***Creagrutus cochui* Géry, 1964**

Creagrutus cochui Géry, 1964e: 56, fig. 12. Type locality: Upper Amazon region surrounding Iquitos, Peru. Holotype: USNM 200426.

Maximum length: 7.9 cm SL

Distribution: South America: Western Amazon River basin.

Countries: Brazil, Peru

Remarks and references: See Vari & Harold (2001: 91) for detailed redescription.

Common names: Mojarita (Peru)

***Creagrutus cracentis* Vari & Harold, 2001**

Creagrutus cracentis Vari & Harold, 2001: 93, fig. 36. Type locality: Brazil, Pará, Rio Tapajós, sandy beaches on an island located 5 km S of Itaituba (latter locality at 4°17'S, 55°59'W). Holotype: MCP 15213.

Maximum length: 3.83 cm SL

Distribution: South America: Lower portions of Tapajós River basin.

Countries: Brazil

***Creagrutus crenatus* Vari & Harold, 2001**

Creagrutus crenatus Vari & Harold, 2001: 95, fig. 37. Type locality: Venezuela, Lara, Quebrada Sanare in Yay (9°45'N, 69°43'W). Holotype: MHNLS 505.

Maximum length: 7.02 cm SL

Distribution: South America: Upper Tocuyo River, Caribbean versant, north central Venezuela.

Countries: Venezuela

***Creagrutus ephippiatus* Vari & Harold, 2001**

Creagrutus ephippiatus Vari & Harold, 2001: 98, fig. 39. Type locality: Venezuela, Amazonas, Upper Río Siapa, Campamento Siapa (Siapa Base Camp). Holotype: MBUCV V-29068.

Maximum length: 5.84 cm SL

Distribution: South America: Siapa River, southern tributary of Casiquiare River, upper Negro River basin.

Countries: Venezuela

***Creagrutus figueiredoi* Vari & Harold, 2001**

- Creagrutus figueiredoi* Vari & Harold, 2001: 101, fig. 40. Type locality: Brazil, Distrito Federal, Rio Maranhão, upper Rio Tocantins basin, approximately 35 air km N of Brasília (approximately 15°32'S, 47°49'W). Holotype: MZUSP 50542.
Maximum length: 6.33 cm SL
Distribution: South America: Tocantins River drainage in both upper Tocantins and Araguaia River basins.
Countries: Brazil
- Creagrutus flavescens* Vari & Harold, 2001**
Creagrutus flavescens Vari & Harold, 2001: 104, fig. 41. Type locality: Ecuador, Pastaza, Río Tiguino basin, Río Tiguino No. 3 (unnamed tributary of Río Tiguino; 1°07'35"S, 76°56'52"W). Holotype: MEPN 4622.
Maximum length: 9.38 cm SL
Distribution: South America: Eastern slopes of the Andean piedmont.
Countries: Colombia, Ecuador, Peru
- Creagrutus gephyrus* Böhlke & Saul, 1975**
Creagrutus gephyrus Böhlke & Saul, 1975: 25, figs. 1-4. Type locality: Río Aguarico at Santa Cecilia, Napo Province, Ecuador. Holotype: ANSP 130516.
Maximum length: 6.5 cm SL
Distribution: South America: Andean piedmont rivers of eastern Ecuador and northeastern Peru.
Countries: Ecuador, Peru
Remarks and references: See Vari & Harold (2001: 108) for detailed redescription.
- Creagrutus gracilis* Vari & Harold, 2001**
Creagrutus gracilis Vari & Harold, 2001: 111, fig. 44. Type locality: Peru, Amazonas, Provincia Condorcanqui, Río Santiago, at La Poza (4°01'S, 77°47'W). Holotype: LACM 41724-27.
Maximum length: 7.7 cm SL
Distribution: South America: Amazonas and Loreto States of Peru and various localities along eastern slope of Andean Cordilleras in Ecuador.
Countries: Ecuador, Peru
- Creagrutus gyrospilus* Vari & Harold, 2001**
Creagrutus gyrospilus Vari & Harold, 2001: 113, fig. 45. Type locality: Venezuela, Portuguesa, Río Saguaz, Río Guanare-Apure drainage, bridge near park on road to Chabasquen (= Paraíso de Chabasquén; 9°23'30"N, 70°00'30"W). Holotype: INHS 69479.
Maximum length: 6.23 cm SL
Distribution: South America: Western Orinoco River basin in Venezuela.
Countries: Venezuela
- Creagrutus hildebrandi* Schultz, 1944**
Creagrutus hildebrandi Schultz, 1944: 330, figs. 47-48. Type locality: Río Táchira, 7 km north of San Antonio, Catatumbo system, Venezuela. Holotype: USNM 121482.
Maximum length: 6.3 cm SL
Distribution: South America: Maracaibo Lake basin and Gulf of Venezuela.
Countries: Venezuela
Remarks and references: See Harold & Vari (1994: 20) for detailed redescription.
- Creagrutus holmi* Vari & Harold, 2001**
Creagrutus holmi Vari & Harold, 2001: 116, fig. 46. Type locality: Peru, Amazonas, Provincia Utcubamba, Bagua Grande, San Antonio, Quebrada Jaimito (approximately 5°47'S, 78°23'W). Holotype: MUSM 5670.
Maximum length: 9.2 cm SL
Distribution: South America: Marañón River basin above Pongo de Manseriche, in northeastern Peru.
Countries: Peru
- Creagrutus hysginus* Harold, Vari, Machado-Allison & Provenzano, 1994**
Creagrutus hysginus Harold, Vari, Machado-Allison & Provenzano, 1994: 975, fig. 1. Type locality: Venezuela, Estado Sucre, Río Güiría, near La Toma. Holotype: MBUCV V-20310.
Maximum length: 5.6 cm SL
Distribution: South America: Rivers draining into Gulf of Paria, Estados Sucre and Monagas.
Countries: Venezuela
Remarks and references: See Vari & Harold (2001: 119) for detailed redescription.
- Creagrutus ignotus* Vari & Harold, 2001**
Creagrutus ignotus Vari & Harold, 2001: 122, fig. 48. Type locality: Brazil, Mato Grosso, Riacho (small stream) 1, tributary to Rio Preto at road to San Francisco, Município de Diamantino (Rio Arinos basin). Holotype: MZUSP 45310.
Maximum length: 5.3 cm SL
Distribution: South America: Upper Tapajós River basin.
Countries: Brazil
- Creagrutus kunturus* Vari, Harold & Ortega, 1995**
Creagrutus kunturus Vari, Harold & Ortega, 1995: 290, figs. 1-2. Type locality: Peru, Departamento Amazonas, Provincia Condorcanqui, Cordillera del Condor, upper Río Comainas, 20 m upriver of Puesto de Vigilancia No.22 (3°56'30"S, 78°24'20"W). Holotype: MUSM 5667.
Maximum length: 9.6 cm SL
Distribution: South America: Upper Marañón River in northeastern Peru, upper Pastaza River and southwestern portion of Napo River in southeastern Ecuador.
Countries: Ecuador, Peru
Remarks and references: See Vari & Harold (2001: 125) for detailed redescription.
- Creagrutus lassoi* Vari & Harold, 2001**
Creagrutus lassoi Vari & Harold, 2001: 128, fig. 52. Type locality: Venezuela, Yaracuy, Río Tupe, Río Aroa drainage, approximately 12 km N of Aroa, on Highway 3 (10°30'19"N, 68°52'33"W). Holotype: INHS 60094.
Maximum length: 7.54 cm SL
Distribution: South America: Aroa and Yaracuy River basins, Caribbean versant drainages of north central Venezuela.
Countries: Venezuela
- Creagrutus lepidus* Vari, Harold, Lasso & Machado-Allison, 1993**
Creagrutus lepidus Vari, Harold, Lasso & Machado-Allison, 1993: 352, fig. 1. Type locality: Río Aroa basin, Quebrada El Charal, Finca El Jaguar, Sierra de Aroa, State of Yaracuy, Venezuela (approx. 10°32'N, 68°32'W). Holotype: MHNS 9659.
Maximum length: 4.7 cm SL
Distribution: South America: Aroa and Urama River basins, Caribbean versant drainages of Venezuela.
Countries: Venezuela
Remarks and references: See Vari & Harold (2001: 131) for detailed redescription.
- Creagrutus machadoi* Vari & Harold, 2001**
Creagrutus machadoi Vari & Harold, 2001: 134, fig. 54. Type locality: Venezuela, Bolívar, Departamento Cedeño, upper Río Caura, Caño Yumucukenã, within 4 km of its mouth. Holotype: MCNG 18852.
Maximum length: 4.45 cm SL
Distribution: South America: Caura River basin.
Countries: Venezuela
- Creagrutus magdalenae* Eigenmann, 1913**
Creagrutus magdalenae Eigenmann, 1913: 8. Type locality: Gi-

rardot, Colombia. Holotype: FMNH 56088.
 Maximum length: 5.6 cm SL
 Distribution: South America: Magdalena River basin.
 Countries: Colombia
 Remarks and references: See Harold & Vari (1994: 16) for detailed redescription.

***Creagrutus magoi* Vari & Harold, 2001**

Creagrutus magoi Vari & Harold, 2001: 137, fig. 55. Type locality: Venezuela, Bolivar, Río Chaviripa, where crossed by bridge on road from Caicara to San Fernando de Atabapo (approximately 7°11'N, 66°18'W). Holotype: UF 80477.
 Maximum length: 6.48 cm SL
 Distribution: South America: Chaviripa and Parguaza River basins, right bank tributaries to the Orinoco River.
 Countries: Venezuela

***Creagrutus manu* Vari & Harold, 2001**

Creagrutus manu Vari & Harold, 2001: 140, fig. 56. Type locality: Peru, Madre de Dios, Provincia Manu, Río Manu basin, Parque Nacional Manu, Quebrada Agua Clara, first major quebrada on trail 1 leading from Pakitza (approximately 11°57'S, 71°17'W). Holotype: MUSM 8867.
 Maximum length: 3.97 cm SL
 Distribution: South America: Upper Manu River basin in southeastern Peru.
 Countries: Peru

***Creagrutus maracaiboensis* (Schultz, 1944)**

Creagrutops maracaiboensis Schultz, 1944: 327, figs. 45-46. Type locality: Río Negro below mouth of Río Yasa, Lago Maracaibo basin, Venezuela. Holotype: USNM 121531.
 Maximum length: 2.2 cm SL
 Distribution: South America: Maracaibo Lake basin.
 Countries: Venezuela
 Remarks and references: See Harold & Vari (1994: 10) for detailed redescription.

***Creagrutus maxillaris* (Myers, 1927)**

Creagrudite maxillaris Myers, 1927: 118. Type locality: Sandbank on the Colombian border, Río Negro, Cucuhú (=Cucuf) (Brazil). Holotype: CAS 30419.
 Maximum length: 7.2 cm SL
 Distribution: South America: Orinoco River basin and rivers draining the Guyana shield, upper Negro River in Venezuela and Brazil, and perhaps upper Madeira River basin along Brazilian-Bolivian border.
 Countries: Brazil, Venezuela
 Remarks and references: See Vari & Harold (2001: 142) for detailed redescription.

***Creagrutus melanzonus* Eigenmann, 1909**

Creagrutus melanzonus Eigenmann, 1909a: 30. Type locality: Crab Falls, British Guiana (=Guyana). Holotype: FMNH 52705.
 Maximum length: 3.6 cm SL
 Distribution: South America: Cuyuni River of eastern Venezuela to Sinnamary River basin of French Guiana.
 Countries: French Guiana, Guyana, Venezuela
 Remarks and references: See Vari & Harold (2001: 146) for detailed redescription.

***Creagrutus melasma* Vari, Harold & Taphorn, 1994**

Creagrutus melasma Vari, Harold & Taphorn, 1994: 91, fig. 1. Type locality: Venezuela, Estado Guarico, Parque Nacional Guatopo, Río Orituco, first bridge along road from Santa Teresa to Altagracia. Holotype: MBUCV V-22198.
 Maximum length: 4 cm SL
 Distribution: South America: Orinoco River basin and Tuy and Neveri rivers of Caribbean Sea versant of Venezuela.
 Countries: Venezuela

Remarks and references: See Vari & Harold (2001: 149) for detailed redescription.

***Creagrutus menezesi* Vari & Harold, 2001**

Creagrutus menezesi Vari & Harold, 2001: 153, figs. 63-64. Type locality: Brazil, Mato Grosso, Ribeirão Chiqueirão (tributary of Río Jangada, which, in turn, drains into the Río Cuiabá), approximately 21 km W of Jangada (latter locality at 15°14'S, 56°29'W) on road to Barra do Bugres, Município de Jangada. Holotype: MZUSP 50546.
 Maximum length: 7.52 cm SL
 Distribution: South America: Tocantins River basin and tentatively Branco and Negro River near mouth of Branco.
 Countries: Brazil

***Creagrutus meridionalis* Vari & Harold, 2001**

Creagrutus meridionalis Vari & Harold, 2001: 157, fig. 65. Type locality: Brazil, Mato Grosso, Ribeirão Chiqueirão (tributary of Río Jangada, which, in turn, drains into the Río Cuiabá), approximately 21 km W of Jangada (latter locality at 15°14'S, 56°29'W) on road to Barra do Bugres, Município de Jangada. Holotype: MZUSP 50546.
 Maximum length: 6.2 cm SL
 Distribution: South America: Upper Paraguay River basin in Mato Grosso State, and eastern tributaries to Paraguay River in Paraguay.
 Countries: Brazil, Paraguay

***Creagrutus molinus* Vari & Harold, 2001**

Creagrutus molinus Vari & Harold, 2001: 159, fig. 66. Type locality: Brazil, Mato Grosso, Rio Araguaia basin, riacho (small stream) tributary to Ribeirão Lajeado, Município de Alto Araguaia (approximately 17°19'S, 53°12'W). Holotype: MZUSP 41461.
 Maximum length: 5.58 cm SL
 Distribution: South America: Upper Araguaia River basin.
 Countries: Brazil

***Creagrutus mucipu* Vari & Harold, 2001**

Creagrutus mucipu Vari & Harold, 2001: 162, fig. 68. Type locality: Brazil, Goiás, Município de Minaçu, Rio Tocantins, at port of Rubao (13°44'31"S, 48°08'29"W). Holotype: MCP 19511.
 Maximum length: 5.61 cm SL
 Distribution: South America: Upper Tocantins River basin.
 Countries: Brazil

***Creagrutus muelleri* (Günther, 1859)**

Leporinus muelleri Günther, 1859: 92. Type locality: Andes of western Ecuador. Syntypes: BMNH 1858.7.25.42-43.
 Maximum length: 10.8 cm SL
 Distribution: South America: Rivers of eastern slope of the Andean piedmont in Ecuador.
 Countries: Ecuador
 Remarks and references: See Vari & Harold (2001: 165) for detailed redescription.

***Creagrutus nigrostigmatus* Dahl, 1960**

Creagrutus nigrostigmatus Dahl, 1960b: 353. Type locality: Pozo aproximadamente 200 metros corriente arriba del puente de carretera entre Sincelejo y Tolú, en el arroyo Pechilín, municipio de Toluviejo, departamento de Bolívar, Colombia [=pool approx. 200 m upriver of bridge along road between Sincelejo and Tolú]. Neotype: ICNMHN 989, designated by Harold & Vari (1994: 10).
 Maximum length: 2.3 cm SL
 Distribution: South America: Caño Pechilín and Caño Zaragocilla in Colombia.
 Countries: Colombia
 Remarks and references: See Harold & Vari (1994: 7) for detailed redescription.

***Creagrutus occidaneus* Vari & Harold, 2001**

Creagrutus occidaneus Vari & Harold, 2001: 167, fig. 70. Type locality: Peru, Madre de Dios, Provincia Manu, Parque Nacional Manu, Pakitza, beach along Río Manu close to mouth of Quebrada Pachija (approximately 11°57'S, 71°17'W). Holotype: MUSM 8869.

Maximum length: 6.59 cm SL

Distribution: South America: Foothills and lowlands of eastern Peru in the Manu River basin of Department of Madre de Dios and in upper Purus River basin in states of Acre and Amazonas, Brazil and Department of Ucayali, Peru.

Countries: Brazil, Peru

***Creagrutus ortegai* Vari & Harold, 2001**

Creagrutus ortegai Vari & Harold, 2001: 170, fig. 71. Type locality: Peru, San Martín, Provincia San Martín, Banda de Shilcayo, upper portions of Quebrada Choclin, tributary to Río Huallaga, near town of Shapaja (latter locality at 6°36'S, 76°16'W). Holotype: MUSM 7498.

Maximum length: 7.11 cm SL

Distribution: South America: Huallaga River basin and headwaters of the Aguaytia River.

Countries: Peru

***Creagrutus ouranonastes* Vari & Harold, 2001**

Creagrutus ouranonastes Vari & Harold, 2001: 173, fig. 72. Type locality: Peru, Apurímac, Provincia Aymaraes, Río Chalhuanca (approximately 14°01'S, 73°11'W). Holotype: MUSM 8872.

Maximum length: 10 cm SL

Distribution: South America: Upper Apurímac River basin.

Countries: Peru

***Creagrutus paraguayensis* Mahnert & Géry, 1988**

Creagrutus paraguayensis Mahnert & Géry, 1988: 5, figs. 4-5; pl. 3. Type locality: Río Azotey à Cororo, près de l'embouchure du Río Ypané Province Concepción, Paraguay (=Río Azotey at Cororo, near mouth of Río Ypané, Concepción Province, Paraguay). Holotype: MHNG 2386.01.

Maximum length: 5.8 cm SL

Distribution: South America: Paraguay River basin in central and northern Paraguay.

Countries: Paraguay

Remarks and references: See Vari & Harold (2001: 175) for detailed redescription.

***Creagrutus paralacus* Harold & Vari, 1994**

Creagrutus paralacus Harold & Vari, 1994: 13, fig. 8. Type locality: Río Catatumbo basin, Río Táchira, 7 km N of San Antonio, Venezuela. Holotype: USNM 121504.

Maximum length: 6.7 cm SL

Distribution: South America: Southern and southeastern tributaries to Maracaibo Lake.

Countries: Venezuela

***Creagrutus pearsoni* Mahnert & Géry, 1988**

Piabina beni Pearson, 1924: 45, pl. 10 (fig. 5). Type locality: Popoi River, upper Beni. Syntypes: CAS 87389, UMMZ 66 495.

Creagrutus pearsoni Mahnert & Géry, 1988: 5. Type locality: Río Beni at Villa Bella, Amazon system, Bolivia. Holotype: FMNH 54585 (poor condition).

Maximum length: 3.4 cm SL

Distribution: South America: Upper Madeira River basin in northeastern Bolivia and southeastern Peru.

Countries: Bolivia, Peru

Remarks and references: See Vari & Harold (2001: 178) for detailed redescription.

***Creagrutus peruanus* (Steindachner, 1875)**

Piabina peruana Steindachner, 1875: 596. Type locality: Monteri-

co, Peru [=Montericco, Ayacucho, Peru]. Syntypes: NMW 19852-19854, 19867-19871.

Creagrutus nasutus Günther, 1876: 400. Type locality: Monterico, Peru [=Monterrico, Ayacucho, Peru]. Syntypes: BMNH 1875.10.14.26-33.

Maximum length: 8.7 cm SL

Distribution: South America: Apurímac and Urubamba River basins.

Countries: Peru

Remarks and references: See Vari & Harold (2001: 181) for detailed redescription.

Common names: Mojarita (Peru)

***Creagrutus petilus* Vari & Harold, 2001**

Creagrutus petilus Vari & Harold, 2001: 184, fig. 78. Type locality: Brazil, Rondônia, Rio Marco Rondon, Pimenta Bueno (approximately 11°29'S, 61°12'W). Holotype: MNRJ 14807.

Maximum length: 4.88 cm SL

Distribution: South America: Upper Machado River, right bank tributary of Madeira River.

Countries: Brazil

***Creagrutus phasma* Myers, 1927**

Creagrutus phasma Myers, 1927: 117. Type locality: Venezuela, mouth of Curamuni, Río Cassiquiare. Syntypes: CAS 209192.

Maximum length: 6.6 cm SL

Distribution: South America: Upper Negro River north to Orinoco River basin.

Countries: Brazil, Colombia, Venezuela

Remarks and references: See Vari & Harold (2001: 186) for detailed redescription.

***Creagrutus pila* Vari & Harold, 2001**

Creagrutus pila Vari & Harold, 2001: 189, fig. 80. Type locality: Peru, Ucayali, Provincia Padre Abad, Río Huacamayo, km 155 on Highway (Carratera Federico Basadre) from Pucallpa to Tingo Maria. Holotype: MUSM 8874.

Maximum length: 7.05 cm SL

Distribution: South America: Smaller rivers draining into Aguaytia River, left bank tributary of Ucayali River.

Countries: Peru

***Creagrutus planquettei* Géry & Renno, 1989**

Creagrutus planquettei Géry & Renno, 1989: 1, figs. 1-5. Type locality: Crique Japigny, Arataye, affluent de l'Approuague, en amont de Pierrette, Guyane (=crique Japigny, Arataye, tributary of Approuague River, above Pierrette, French Guiana). Holotype: MNHN 1989-31.

Maximum length: 6.7 cm SL

Distribution: South America: Middle and upper Approuague River basin.

Countries: French Guiana

Remarks and references: See Vari & Harold (2001: 191) for detailed redescription.

Common names: Yaya (French Guiana)

***Creagrutus provenzanoi* Vari & Harold, 2001**

Creagrutus provenzanoi Vari & Harold, 2001: 195, fig. 84. Type locality: Venezuela, Amazonas, Upper Río Cataniapo basin, small caño above Saramã Sota. Holotype: MBUCV V-14392.

Maximum length: 5.76 cm SL

Distribution: South America: Cataniapo River basin, right bank tributary of Orinoco River.

Countries: Venezuela

***Creagrutus runa* Vari & Harold, 2001**

Creagrutus runa Vari & Harold, 2001: 198, fig. 85. Type locality: Brazil, Amazonas, Rio Negro, Paraná do Jacaré (approximately 0°30'S, 66°30'W). Holotype: MZUSP 29888.

Maximum length: 6.27 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Brazil, Venezuela

***Creagrutus saxatilis* Vari & Harold, 2001**

Creagrutus saxatilis Vari & Harold, 2001: 200, fig. 86. Type locality: Brazil, Goiás, Niquelândia, Rio Indaial, left bank tributary of Rio Maranhão, upper Rio Tocantins basin. Holotype: MNRJ 14544.

Maximum length: 8.17 cm SL

Distribution: South America: Upper Tocantins River basin in Goiás State and Distrito Federal.

Countries: Brazil

***Creagrutus seductus* Vari & Harold, 2001**

Creagrutus seductus Vari & Harold, 2001: 202, fig. 87. Type locality: Brazil, Mato Grosso, Upper Rio Araguaia basin, Córrego Fundo, Município de Barra do Garças (approximately 15°53'S, 52°15'W). Holotype: MZUSP 51026.

Maximum length: 7.03 cm SL

Distribution: South America: Upper Araguaia River basin.

Countries: Brazil

***Creagrutus taphorni* Vari & Harold, 2001**

Creagrutus taphorni Vari & Harold, 2001: 205, fig. 88. Type locality: Venezuela, Guarico, Río Orituco, Parque Nacional Guatopo, first bridge along road from Santa Teresa to Altigracia. Holotype: MBUCV V-29288.

Maximum length: 7.41 cm SL

Distribution: South America: Piedmont streams of north central Venezuela, east of Andean Cordilleras, largely in Orinoco River and Tuy River basin of Caribbean versant.

Countries: Venezuela

***Creagrutus unguis* Vari & Harold, 2001**

Creagrutus unguis Vari & Harold, 2001: 209, fig. 89. Type locality: Peru, Madre de Dios, Provincia Manu, Quebrada Soga, tributary of Río Alto Madre de Dios, 1 km upstream from Erika (opposite Salvacion; approximately 12°53'S, 71°12'W). Holotype: MUSM 8878.

Maximum length: 7.49 cm SL

Distribution: South America: Madre de Dios River basin.

Countries: Peru

***Creagrutus veruina* Vari & Harold, 2001**

Creagrutus veruina Vari & Harold, 2001: 213, fig. 91. Type locality: Venezuela, Amazonas, Río Cataniapo, 200 m above Las Pavas. Holotype: MBUCV V-29072.

Maximum length: 4.47 cm SL

Distribution: South America: Cataniapo River basin, east bank tributary of middle Orinoco River.

Countries: Venezuela

***Creagrutus vexillapinnus* Vari & Harold, 2001**

Creagrutus vexillapinnus Vari & Harold, 2001: 215, fig. 92. Type locality: Brazil, Amazonas, Rio Negro, Cachoeira de São Gabriel (0°08'S, 67°05'W). Holotype: MZUSP 29894.

Maximum length: 5.04 cm SL

Distribution: South America: Upper Negro and upper Orinoco River basins.

Countries: Brazil, Venezuela

***Creagrutus xiphos* Vari & Harold, 2001**

Creagrutus xiphos Vari & Harold, 2001: 218, fig. 93. Type locality: Venezuela, Bolivar, Sand bank along Río Mato (7°02'N, 65°13'W). Holotype: ANSP 165815.

Maximum length: 2.77 cm SL

Distribution: South America: Mato River in the Caura River basin, Orinoco River drainage.

Countries: Venezuela

***Creagrutus zephyrus* Vari & Harold, 2001**

Creagrutus zephyrus Vari & Harold, 2001: 220, fig. 94. Type locality: Venezuela, Amazonas, Río Casiquiare, playa and backwater about 2 km downstream from mouth of Río Pamoni (2°48'N, 65°57'W). Holotype: ANSP 161238.

Maximum length: 3.98 cm SL

Distribution: South America: Central and upper Negro River.

Countries: Brazil, Venezuela

CTENOBRYCON

Ctenobrycon Eigenmann, 1908: 94. Type species: *Tetragonopterus hauxwellianus* Cope, 1870. Type by original designation. Gender: masculine.

Apodastyanax Fowler, 1911: 422. Type species: *Apodastyanax stewardsoni* Fowler, 1911. Type by original designation. Gender: masculine.

***Ctenobrycon alleni* (Eigenmann & McAtee, 1907)**

Tetragonopterus alleni Eigenmann & McAtee, in Eigenmann, McAtee & Ward, 1907: 126, pl. 40 (fig. 2). Type locality: Corumba [Rio Paraguay basin, Mato Grosso do Sul, Brazil]. Holotype: CAS 57616 [ex IU 10158].

Maximum length: 8 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil, Paraguay

Remarks and references: See Britski et. al. (1999: 32) for description.

Common names: Lambari (Brazil)

***Ctenobrycon hauxwellianus* (Cope, 1870)**

Tetragonopterus hauxwellianus Cope, 1870: 560. Type locality: Pebas, Ecuador [now Peru]. Syntypes: ANSP 8157 [incorrectly considered as the holotype by Böhlke (1984)], ANSP 8138-42 (5).

Ctenobrycon rhabdops Fowler, 1913: 537, fig. 10. Type locality: Igarapé de Candelaria (about two miles from the Madeira River, into which it empties), in Lat. S. 8°45', Long. W 63°54', Brazil. Holotype: ANSP 39220.

Maximum length: 8 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Common names: Lambari (Brazil), Mojara (Peru)

***Ctenobrycon spilurus* (Valenciennes, 1850)**

Tetragonopterus spilurus Valenciennes, in Cuvier & Valenciennes, 1850: 156. Type locality: Surinam. Syntypes: MHNH 5341 (ex RMNH).

Apodastyanax stewardsoni Fowler, 1911: 422, fig. 2. Type locality: Corisal, Venezuela [Orinoco River basin]. Holotype: ANSP 37867.

Maximum length: 8 cm SL

Distribution: South America: Orinoco River basin; coastal river basins of Guiana, Suriname, and french Guiana.

Countries: French Guiana, Guyana, Suriname, Venezuela

Remarks and references: See Taphorn (1992) for notes on ecology and synonymy.

Common names: Bobita (Venezuela)

Species inquirendae

Tetragonopterus multiradiatus Steindachner, 1876b: 92. Type locality: Amazonenstrom bei Teffé [Brazil]. Syntypes not found at NMW.

Tetragonopterus correntinus Holmberg, 1891: 188. Type locality: Corrientes, Río Paraná, Argentina. No types known.

Astyanax pelegri Eigenmann, in Eigenmann, McAtee & Ward, 1907: 136, pl. 40 (fig. 3). Type locality: Paraguay Basin and Bahia Negra.

Tetragonopterus gibbicervix Pellegrin, 1909: 152. Type locality: Tabatinga Tonnantins Teffé [Amazon River, Brazil]. Syntypes:

MNHN 1909-182 (1), MNHN 1909-320 (1), MNHN 1909-321 (2), NMW 57516 (1).

Remarks and references: Redescribed in Travassos (1957: 87).
Common names: Lambari (Brazil)

DEUTERODON

Deuterodon Eigenmann in Eigenmann, McAtee & Ward, 1907: 140. Type species: *Deuterodon iguape* Eigenmann, 1907. Type by monotypy. Gender: masculine. Species of coastal river drainages of southern Brazil revised by Lucena & Lucena (1992), with species descriptions, geographical distribution and comments on diagnostic characters.

Joinvillea Steindachner, 1908: 29. Type species: *Joinvillea rosae* Steindachner, 1908. Type by monotypy. Gender: feminine.

Distoechus Gomes, 1947: 12. Type species: *Distoechus stigmaturus* Gomes, 1947. Type by original designation. Gender: masculine.

Deuterodon iguape Eigenmann, 1907

Deuterodon iguape Eigenmann, in Eigenmann, McAtee & Ward, 1907: 140, pl. 41 (fig. 3). Type locality: Iguape [São Paulo, Brazil]. Holotype: CAS 44226 [ex IU 9265].

Maximum length: 9.84 cm SL

Distribution: South America: Ribeira de Iguape River basin.

Countries: Brazil

Remarks and references: Redescribed with synonymy in Eigenmann (1927: 346); see Lucena & Lucena (1992: 152) for comments about species description.

Common names: Lambari (Brazil)

Deuterodon langei Travassos, 1957

Deuterodon langei Travassos, 1957: 81, fig. 9. Type locality: Córrego da Divisa - Pôrto de Cima - Paraná [Morretes, Brazil]. Holotype: MNRJ 8534.

Deuterodon amniculus Lucena & Lucena, 1992: 127, fig. 5. Type locality: Santa Catarina: arroio Lindo, ao lado da SC 301 próximo do entroncamento com a Br 101, Pirabeiraba, Joinville (aprox. 48°57'W 26°10'S). Holotype: MCP 14755.

Deuterodon garujo Lucena & Lucena, 1992: 130, fig. 5. Type locality: Santa Catarina: rio Garuvá, sob a ponte na Br 101 cerca de 2 Km da divisa Santa Catarina/Paraná, Garuvá (aprox. 48°55'W 25°59'S). Holotype: MCP 14754.

Maximum length: 9.4 cm SL

Distribution: South America: Coastal basins between Cubatão (northern) River, Santa Catarina State and the Nhundiaquara River basin in Paraná State.

Countries: Brazil

Remarks and references: see Lucena & Lucena (1992: 137) for comments about distribution.

Common names: Lambari (Brazil)

Deuterodon longirostris (Steindachner, 1907)

Tetragonopterus fasciatus longirostris Steindachner, 1907: 481. Type locality: Flusse Cubatão [Águas Mornas, Santa Catarina State, Brazil]. Syntypes: (23) NMW 57508 (2), 57633 (4).

Maximum length: 9.13 cm SL

Distribution: South America: Cubatão (southern) River in Santa Catarina State.

Countries: Brazil

Remarks and references: For information regarding the type locality see Lucena & Lucena (1990).

Common names: Lambari (Brazil)

Deuterodon rosae (Steindachner, 1908)

Joinvillea rosae Steindachner, 1908: 30. Type locality: Rio Jaraçuá bei Joinville im Staate S. Catarina (Brasilien). Lectotype: NMW 69596 (105 mm SL), designated by Lucena & Lucena (1992: 138).

Maximum length: 11.7 cm SL

Distribution: South America: Itapocú River basin.

Countries: Brazil

Deuterodon singularis Lucena & Lucena, 1992

Deuterodon singularis Lucena & Lucena, 1992: 141, fig. 11. Type locality: Santa Catarina: rio Sanga de Areia, Gravatal (aprox. 49°06'W 28°33'S) [Brazil]. Holotype: MCP 14753.

Maximum length: 8.8 cm SL

Distribution: South America: Tubarão River basin and coastal drainages between its mouth and Da Madre River.

Countries: Brazil

Common names: Lambari (Brazil)

Deuterodon stigmaturus (Gomes, 1947)

Distoechus stigmaturus Gomes, 1947: 13, fig. 2; pl. 1 (fig. 2). Type locality: backwater of Rio Maquiné, a tributary to Lagôa dos Quadros, Conceição do Arroio County, Rio Grande do Sul, Brazil. Holotype: UMMZ 143273.

Maximum length: 10.7 cm SL

Distribution: South America: Maquiné, Três Forquilhas and Mampituba River basins in Rio Grande do Sul State.

Countries: Brazil

Common names: Lambari (Brazil)

Deuterodon supparis Lucena & Lucena, 1992

Deuterodon supparis Lucena & Lucena, 1992: 148, fig. 12. Type locality: Santa Catarina: afluente do Rio Itajaí-Açu, estrada Blumenau-Rio do Sul (Br 470), próximo a Ibirama (aprox. 49°33' W 27°04'S) [Brazil]. Holotype: MCP 14752.

Maximum length: 10.24 cm SL

Distribution: South America: Itajaí-Açu River basin in Santa Catarina State.

Countries: Brazil

Common names: Lambari (Brazil)

ENGRAULISOMA

Engraulisoma Castro, 1981: 135. Type species: *Engraulisoma taeniatum* Castro, 1981. Type by original designation. Gender: neuter.

Engraulisoma taeniatum Castro, 1981

Engraulisoma taeniatum Castro, 1981: 137, fig. 1. Type locality: Brasil. Mato Grosso: Rio Cuiabá, Município de Poconé. Holotype: MZUSP 14704.

Maximum length: 4.2 cm SL

Distribution: South America: Upper Paraguay and Napo River basins.

Countries: Brazil, Ecuador, Peru

EXODON

Exodon Müller & Troschel, 1844: 31. Type species: *Exodon paradoxus* Müller & Troschel, 1844. Type by monotypy. Gender: masculine.

Hystricodon Günther, 1864: 349. Type species: *Exodon paradoxus* Müller & Troschel, 1844. Type by being a replacement name. Gender: masculine.

Exodon paradoxus Müller & Troschel, 1844

Exodon paradoxus Müller & Troschel, 1844: 91, pl. 4 (fig. 1). Type locality: Guiana. Syntypes: ZMB 3609 (2).

Epicyrthus exodon Valenciennes in Cuvier & Valenciennes, 1850: 46. Type locality: l'Amazone.

Maximum length: 7.5 cm SL

Distribution: South America: Amazon River basin; Tocantins River basin; Guyana.

Countries: Brazil, Guyana

Common names: Miguelinho (Brazil)

GENYCHARAX

Genycharax Eigenmann, 1912a: 22. Type species: *Genycharax tarpon* Eigenmann, 1912. Type by original designation. Gender: masculine.

Genycharax tarpon Eigenmann, 1912

Genycharax tarpon Eigenmann, 1912a: 22. Type locality: Cartago [Cauca River basin, Colombia]. Holotype: FMNH 56018 [ex CM 4808].

Maximum length: 17.4 cm SL

Distribution: South America: Upper Cauca River basin.

Countries: Colombia

Remarks and references: Game fish (Eigenmann, 1912a: 22; Dahl, 1971: 129). See Géry (1977: 531) for comments.

GRUNDULUS

Grundulus Valenciennes, in Cuvier & Valenciennes, 1846: 216. Type species: *Poecilia bogotensis* Humboldt, 1821. Type by monotypy. Gender: masculine. See Malabarba (1998: 228-229) for comments on the status of *Grundulus*, *Rhodeoides* and *Ctenocharax*.

Rhodeoides Thominot, 1884: 149. Type species: *Rhodeoides vaillanti* Thominot, 1884. Type by monotypy. Gender: masculine.

Ctenocharax Regan, 1907: 403. Type species: *Ctenocharax bogotensis* Regan, 1907. Type by monotypy. Gender: masculine.

Grundulus bogotensis (Humboldt, 1821)

Poecilia bogotensis Humboldt in Humboldt & Valenciennes, 1821: 154, 159, pl. 45 (fig. 1). Type locality: Plains of Bogota, Colombia. Holotype: unknown.

Ctenocharax bogotensis Regan, 1907: 403. Type locality: Bogota [Colombia]. Holotype: BMNH 1868.3.4.1.

Distribution: South America: Magdalena River basin.

Countries: Colombia

Remarks and references: *Ctenocharax bogotensis* Regan is a junior homonym of the type species of *Grundulus*, *Poecilia bogotensis* Humboldt, 1821 - see Malabarba (1998: 229) for comments.

Species inquirenda

Rhodeoides vaillanti Thominot, 1884: 150. Type locality: Río Chénéché, affluent of Río Magdalena, Bolivia, elev. ca. 2000 m. Holotype: unknown.

GYMNOCHARACINUS

Gymnocharacinus Steindachner, 1903b: 6. Type species: *Gymnocharacinus bergii* Steindachner, 1903. Type by monotypy. Gender: masculine.

Gymnocharacinus bergii Steindachner, 1903

Gymnocharacinus bergii Steindachner, 1903a: 17. Type locality: Bache des südlichen Argentinien, der nach kurzem Laufe in der Ebene verschwindet [Argentina]. Syntypes: NMW 69429 (1), uncat (1, skeleton).

Maximum length: 7.5 cm TL

Distribution: South America: Valcheta River basin in Negro River drainage of southern Argentina.

Countries: Argentina

Remarks and references: Illustrated and described in more detail in Steindachner (1903b: 6, pl. 1, fig. 2). See Géry, (1977: 535) for comments. Threatened species according to Ortubay & Cussac (2000: 144).

Common names: Mojarra bronceada (Argentina), Mojarra desnuda (Argentina), Naked Characin (USA), Naked Tetra (USA)

GYMNOCORYMBUS

Gymnocorymbus Eigenmann, 1908: 93. Type species: *Gymnocorymbus thayeri* Eigenmann, 1908. Type by original designation. Gender: masculine.

Gymnocorymbus bondi (Fowler, 1911)

Phenacogaster bondi Fowler, 1911: 419, fig. 1. Type locality: Corisal, Venezuela. Holotype: ANSP 37863.

Gymnocorymbus socolofi Géry, 1964c: 25, fig. 1. Type locality: about 200 miles east of Bogota, Colombia, in the upper Rio Meta drainage. Holotype: USNM 198646.

Maximum length: 5 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

Remarks and references: Synonymy above is based on personal observation and examination of types.

Common names: Bobita (Venezuela)

Gymnocorymbus ternetzi (Boulenger, 1895)

Tetragonopterus ternetzi Boulenger, 1895: 528. Type locality: Descalvados, Matto Grosso [Brazil]. Syntypes: BMNH 1885.5.163-7.

Maximum length: 6 cm SL

Distribution: South America: Paraguay and Guaporé River basins.

Countries: Argentina, Bolivia, Brazil, Colombia (introduced)

Remarks and references: See Britski et. al. (1999: 32) for description.

Common names: Black tetra (USA), Tetra preto (Brazil)

Gymnocorymbus thayeri Eigenmann, 1908

Gymnocorymbus thayeri Eigenmann, 1908: 93. Type locality: Amazons from Tabatinga to Gurupa [Brazil].

Moenkhausia profunda Eigenmann, 1912b: 322, pl. 46 (fig. 1). Type locality: Cloaca trenches, Issora Rubber Plantation [Guyana]. Holotype: FMNH 53717 [ex CM 2207].

Maximum length: 5 cm SL

Distribution: South America: Upper Amazon River basin (Bolivia and Colombia). Recorded from the Orinoco River, Guyana, and Trinidad and Tobago.

Countries: Bolivia, Colombia, Guyana, Trinidad and Tobago

Remarks and references: See Eigenmann (1918: 125) for description.

Common names: False black tetra (USA), Lambari (Brazil), Sardinita (Ecuador)

GYMNOTICHTHYS

Gymnotichthys Fernández-Yépez, 1950: 9. Type species: *Gymnotichthys hildae* Fernández-Yépez, 1950. Type by original designation. Gender: masculine.

Gymnotichthys hildae Fernández-Yépez, 1950

Gymnotichthys hildae Fernández-Yépez, 1950: 10, pl. 2 (fig. 1). Type locality: Río Autana [Orinoco River basin, Venezuela]. Holotype: MHNLS 963 [ex AFY 48164].

Maximum length: 7.1 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: See Géry (1977: 451) for comments.

HASEMANIA

Hasemanian Ellis, 1911: 148. Type species: *Hasemanian melanura* Ellis, 1911. Type by original designation. Gender: feminine.

Pristicharax Fowler, 1949a: 1. Type species: *Pristicharax hanseni* Fowler, 1949a. Type by original designation. Gender: masculine.

Hasemanian crenuchoides Zarske & Géry, 1999

Hasemanian crenuchoides Zarske & Géry, 1999: 91, fig. 1. Type locality: Corrego Planaltina, oberer Rio São Bartolomeu (mündend in den Rio Corumba, Nebenfluss des Rio Paranaíba, La-Plata system), 1050 m über NN, nahe Planaltina, nordöstl. von Brasília, Distrito Federal, Bundesstaat Goias, Brasilien, etwa 15°38' südl. Breite und 47°40' westl. Länge. Holotype: MZUSP 52732.

Maximum length: 6.72 cm SL
 Distribution: South America: Upper Paraná River basin in Distrito Federal.
 Countries: Brazil

***Hasemania hanseni* (Fowler, 1949)**

Pristicharax hanseni Fowler, 1949a: 1, fig. 2. Type locality: Goiaz, Brazil. Holotype: ANSP 72104.
 Maximum length: 3.1 cm SL
 Distribution: South America: Goiás State (exact locality unknown).
 Countries: Brazil
 Remarks and references: See Böhlke (1958: 46-49) for a redescription of the species.

***Hasemania maxillaris* Ellis, 1911**

Hasemania maxillaris Ellis, 1911: 148, pl. 1 (fig. 1). Type locality: Porto União, Rio Iguassú [Iguaçu River, Paraná River basin, Paraná, Brazil]. Holotype: FMNH 54303 [ex CM 2937].
 Maximum length: 2.9 cm TL
 Distribution: South America: Iguaçu River basin.
 Countries: Brazil

***Hasemania melanura* Ellis, 1911**

Hasemania melanura Ellis, 1911: 149, pl. 1 (fig. 2). Type locality: Porto União, Rio Iguassú [Iguaçu, Paraná River basin, Paraná, Brazil]. Holotype: FMNH 54384 [ex CM 3002].
 Maximum length: 4.4 cm TL
 Distribution: South America: Iguaçu River basin.
 Countries: Brazil

***Hasemania nana* (Lütken, 1875)**

Tetragonopterus nanus Lütken, 1875a: 133. Type locality: Iacu Lagoa Santa [São Francisco River basin, Minas Gerais, Brazil]. Syntypes: USNM 44958 (4), MNHN 9584 (5), ZMB 9202 (5), ZMUC 664-678 (15), ZMUC 900-916 (17).
Hasemania marginata Meinken, 1938: 225, fig. Type locality: Südöstliches Brasilien, genauer Fangplatz unbekannt.
 Maximum length: 2.66 cm SL
 Distribution: South America: São Francisco River basin in Minas Gerais State.
 Countries: Brazil
 Remarks and references: See Géry (1972: 9) and Lima & Gerhard (2001: 112) for notes on taxonomy.

HEMIBRYCON

Hemibrycon Günther, 1864: 330. Type species: *Tetragonopterus polyodon* Günther, 1864. Type by monotypy. Gender: masculine.

***Hemibrycon boquiae* (Eigenmann, 1913)**

Bryconamericus boquiae Eigenmann, 1913: 20. Type locality: Boquia [at western base of Mount Tolima, Colombia]. Holotype: FMNH 56259 [ex CM 5059]. Name originally published as *Bryconamericus* or *Hemibrycon boquiae* spec. nov.?
Hemibrycon boquillae Eigenmann, 1922b: 153. Type locality: Boquia [at western base of Mount Tolima, Colombia]. Holotype: FMNH 56259 [ex CM 5059].
 Maximum length: 4.8 cm SL
 Distribution: South America: Upper Cauca River basin.
 Countries: Colombia
 Remarks and references: Misspelled or unjustifiably emended to *Hemibrycon boquillae* by Eigenmann (1922: 153) with same types. See Dahl (1971) for identification key and distribution and list of species from Colombia.
 Common names: Sardina (Colombia)

***Hemibrycon carrilloi* Dahl, 1960**

Hemibrycon carrilloi Dahl, 1960a: 467, fig. Type locality: Quebrada La Noche, tributary to the upper Atrato [Colombia]. Holo-

type: whereabouts unknown.
 Maximum length: 6.67 cm SL
 Distribution: South America: Upper Atrato River basin.
 Countries: Colombia
 Common names: Sardina (Colombia)

***Hemibrycon colombianus* Eigenmann, 1914**

Hemibrycon colombianus Eigenmann, in Eigenmann, Henn & Wilson, 1914: 8. Type locality: Rio San Gil, Santander, Colombia. Holotype: FMNH 56653 [ex CM 5470].
 Maximum length: 10.6 cm SL
 Distribution: South America: San Gil River, Santander.
 Countries: Colombia
 Remarks and references: See Dahl, (1971) for identification key and distribution and list of species from Colombia.
 Common names: Golosa (Colombia), Sardina (Colombia)

***Hemibrycon dariensis* Meek & Hildebrand, 1916**

Hemibrycon dariensis Meek & Hildebrand, 1916: 285, pl. 20. Type locality: Rio Yape, Rio Tuyra Basin, Panama. Holotype: FMNH 8947.
 Maximum length: 6.5 cm SL
 Distribution: Central America: Yape River in Tuira River basin.
 Countries: Panama

***Hemibrycon decurrens* (Eigenmann, 1913)**

Bryconamericus decurrens Eigenmann, 1913: 20. Type locality: Soplaviento [Colombia]. Holotype: FMNH 56255 [ex CM 5055].
 Maximum length: 5.7 cm SL
 Distribution: South America: Lower Magdalena River basin.
 Countries: Colombia
 Remarks and references: See Dahl (1971) for identification key and distribution and list of species from Colombia.
 Common names: Galocha (Colombia), Sardinita (Colombia)

***Hemibrycon dentatus* (Eigenmann, 1913)**

Bryconamericus dentatus Eigenmann, 1913: 19. Type locality: Piedra Moler [Colombia]. Holotype: FMNH 56253 [ex CM 5054a].
 Maximum length: 11.8 cm SL
 Distribution: South America: Cauca River basin, upper San Jorge, Cesar, and Orihueca Rivers.
 Countries: Colombia
 Remarks and references: See Dahl (1971) for identification key and distribution and list of species from Colombia.
 Common names: Sardina (Colombia)

***Hemibrycon guppyi* (Regan, 1906)**

Tetragonopterus guppyi Regan, 1906: 384, pl. 21 (fig. 1). Type locality: Glenside Estate stream, at the foot of the range of hills, Trinidad Island, West Indies.
 Maximum length: 8.5 cm SL
 Distribution: South America: Glenside Estate Stream, Trinidad Island.
 Countries: Trinidad and Tobago
 Common names: Mountain-stream Sardine (Trinidad and Tobago)

***Hemibrycon helleri* Eigenmann, 1927**

Hemibrycon helleri Eigenmann, 1927b: 406, pl. 96 (fig. 2). Type locality: Rio Comerciato [Peru]. Holotype: ?MCZ 31565 (1) or 30980 (1).
 Maximum length: 10 cm SL
 Distribution: South America: Amazon River basin, Urubamba, Comerciato, and Crisnejas rivers in Peru.
 Countries: Peru

***Hemibrycon huambonicus* (Steindachner, 1882)**

Tetragonopterus huambonicus Steindachner, 1882a: 177. Type locality: Huambo [Peru]. Syntypes: NMW 57531. Species later illustrated and described in more detail in Steindachner (1882b:

25, pl. 5, fig. 1).
 Maximum length: 11.9 cm SL
 Distribution: South America: Amazon River basin, mountain streams of the eastern slope of Peru and the Beni River basin.
 Countries: Peru

***Hemibrycon jaborero* Schultz, 1944**

Hemibrycon dentatus jaborero Schultz, 1944: 363, fig. 55. Type locality: Río Chama at Estanques, Estado de Mérida, Venezuela.
 Holotype: USNM 121455.
 Maximum length: 11.5 cm SL
 Distribution: South America: Maracaibo Lake basin.
 Countries: Venezuela

***Hemibrycon jelskii* (Steindachner, 1877)**

Tetragonopterus jelskii Steindachner, 1876a: 590. Type locality: Monterico [Peru].
 Maximum length: 4 cm SL
 Distribution: South America: Remac River basin near Lima.
 Countries: Peru

***Hemibrycon metae* Myers, 1930**

Hemibrycon metae Myers, 1930: 68. Type locality: Guaicaramo, Río Guavio, Colombia. Holotype: SU 23727.
 Maximum length: 8 cm SL
 Distribution: South America: Upper Meta River basin.
 Countries: Colombia

***Hemibrycon orcesi* Böhlke, 1958**

Hemibrycon orcési Böhlke, 1958b: 25, pl. 2 (fig. 4). Type locality: Río Macuna [northern tributary of upper Morona River, upper Amazon, 2°7-13' S, 77°35-47' W, prov. Santiago-Zamora, Ecuador]. Holotype: USNM 164064.
 Maximum length: 5 cm SL
 Distribution: South America: Macuma River basin.
 Countries: Ecuador

***Hemibrycon polyodon* (Günther, 1864)**

Tetragonopterus polyodon Günther, 1864: 330. Type locality: Guayaquil [Ecuador]. Holotype: BMNH 1858.7.25.41.
 ?*Hemibrycon coxei* Fowler, 1943d: 1, fig. 1(1). Type locality: Hacienda Las Mascota, mouth of the Río Pastaza, basin of the Río Marañón, Ecuador. Holotype: ANSP 70155. Provisional synonym.
 Maximum length: 16.8 cm SL
 Distribution: South America: Amazon River basin.
 Countries: Ecuador
 Remarks and references: See Eigenmann (1927: 410), Fowler (1943: 2), and Géry (1977: 379) for distribution of *Hemibrycon* species in Ecuador and possibly synonym of *H. coxei* with *H. polyodon*. The type locality of *H. coxei* given by Fowler (1943) is not in accordance with the original label of the holotype (M.H. Sabaj, pers.comm.) or the information given by Brown (1941: 834) on the position of the Hacienda Mascota (see also Böhlke, 1958b: 24-25). Type locality should be amended to "Ecuador, Napo-Pastaza, Hacienda Mascota, río Topo, a tributary of río Pastaza, 1°25'S, 78°11'W".

***Hemibrycon surinamensis* Géry, 1962**

Hemibrycon surinamensis Géry, 1962: 71, fig. 2. Type locality: Browns creek, -km. 114 of the railroad Paramaribo-Dam, Paramacca river basin, Surinam. Holotype: ZMA 104188 [ex Géry M.107.1].
 Maximum length: 7.08 cm SL
 Distribution: South America: Coastal drainages of French Guiana and Suriname.
 Countries: French Guiana, Suriname

***Hemibrycon taeniurus* (Gill, 1858)**

Poecilurichthys taeniurus Gill, 1858: 418. Type locality: Western

portion of the Island of Trinidad, W.I. [Trinidad and Tobago]
 Maximum length: 6.4 cm SL
 Distribution: Central America: Western Trinidad Island.
 Countries: Trinidad and Tobago
 Common names: Mountain stream sardine (Trinidad and Tobago), Sardine (Trinidad and Tobago)

***Hemibrycon tolimae* (Eigenmann, 1913)**

Bryconamericus tolimae Eigenmann, 1913: 18. Type locality: Ibagué [Colombia]. Holotype: FMNH 56257 [ex CM 5057].
 Maximum length: 11.8 cm SL
 Distribution: South America: Upper Magdalena River basin.
 Countries: Colombia
 Remarks and references: See Dahl (1971) for identification key and distribution and list of species from Colombia.
 Common names: Pintona (Colombia), Sardina pintada (Colombia), Sardinita pintada (Colombia)

***Hemibrycon tridens* Eigenmann, 1922**

Hemibrycon tridens Eigenmann, 1922b: 152. Type locality: Río Apurimac at Uruhuasi [Peru]. Holotype: CAS 44358 [ex IU 13723]. Description in key.
 Maximum length: 6.5 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Peru
 Remarks and references: See Eigenmann (1927: 403-404) for detailed description.

***Hemibrycon velox* Dahl, 1964**

Hemibrycon velox Dahl, in Dahl & Medem, 1964: 68, fig. Type locality: Quebrada Caña Fina, Río Verde del Sinu [Colombia].
 Holotype: not researched.
 Maximum length: 11 cm SL
 Distribution: South America: Sinu River basin.
 Countries: Colombia
 Remarks and references: See Dahl (1971) for identification key and distribution and list of species from Colombia.
 Common names: Sardina (Colombia)

HEMIGRAMMUS

Hemigrammus Gill, 1858: 420. Type species: *Poecilurichthys (Hemigrammus) unilineatus* Gill, 1858. Type by monotypy in subgenus. Gender: masculine. More recent appraisal is Géry (1977: 490-510). See Taphorn (1992: 221) for synonymization of *Ramizerella*.

Holopristis Eigenmann, 1903: 145. Type species: *Tetragonopterus ocellifer* Steindachner, 1883. Type by original designation. Gender: feminine. Unjustifiably emended or misspelled *Holopristes* by Eigenmann & Ogle (1907: 11).

Ramirezella Fernández-Yépez, 1949: unnumbered. Type species: *Ramirezella newboldi* Fernández-Yépez, 1949. Type by original designation. Gender: feminine.

***Hemigrammus aereus* Géry, 1959**

Hemigrammus aereus Géry, 1959a: 257, fig. 5. Type locality: crique Nancibo, basin de la Conté, un des formateurs du Mahury [French Guiana]. Holotype: MHNG 2181.86.
 Maximum length: 2.4 cm SL
 Distribution: South America: Known only from the type locality in Comté River basin.
 Countries: French Guiana
 Remarks and references: Planquette et al. (1996: 295) suggested that probably *Hemigrammus aereus* is a synonym of either *Moenkhausia colletii* or *Hemigrammus bellottii*.

***Hemigrammus analis* Durbin, 1909**

Hemigrammus analis Durbin, 1909: 64. Type locality: Rockstone [Essequibo River, Guyana]. Holotype: FMNH 53041 [ex CM 1466].

Maximum length: 3.6 cm TL

Distribution: South America: Essequibo and Demerara rivers; Apure River basin, Orinoco River basin, lower Tapajós and Negro River basins.

Countries: Brazil, Guyana, Venezuela

Remarks and references: Goulding et al. (1988) and Taphorn (1992: 200-202) provided information on taxonomy and ecology.

***Hemigrammus barrigonae* Eigenmann & Henn, 1914**

Hemigrammus barrigonae Eigenmann & Henn, 1914: 232. Type locality: Barrigona, Rio Meta [Colombia]. Holotype: CAS 44368 [ex IU 13423].

Maximum length: 4 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

Remarks and references: See Taphorn (1992: 203-205) for redescription and ecological notes.

Common names: Sardinita dos líneas (Venezuela)

***Hemigrammus belottii* (Steindachner, 1882)**

Tetragonopterus belottii Steindachner, 1882a: 179. Type locality: Tabatinga [Solimões River at Tabatinga, Amazonas, Brazil]. Syntypes: NMW 57253 (13), NMW 57524 (9), NMW 57525 (9). Described in more detail in Steindachner (1882b: 34-35).

Maximum length: 2.63 cm SL

Distribution: South America: Solimões and Negro River basins and Maroni River basin.

Countries: Brazil, French Guiana

Remarks and references: See Géry (1963) and Planquette et al. (1996: 274-275) for redescription and figures.

***Hemigrammus bleheri* Géry & Mahnert, 1986**

Hemigrammus bleheri Géry & Mahnert, 1986: 41, fig. unnumb. Type locality: Middle Rio Negro, Brazil, probably near Rio Jufaris. Holotype: MZUSP 37369.

Maximum length: 3.6 cm SL

Distribution: South America: Negro and Meta River basins.

Countries: Brazil, Colombia

Remarks and references: Ornamental fish.

***Hemigrammus boesemani* Géry, 1959**

Hemigrammus micropterus boesemani Géry, 1959a: 251, fig. 2. Type locality: Crique vers Sinnamary, Guyane fse [French Guiana]. Holotype: MHNG 2181.80.

Maximum length: 2.65 cm SL

Distribution: South America: Maroni, Mana, Iracoubo, Sinnamary, Kourou, Comté, and Kaw rivers, French Guiana; Suriname; upper Amazon in Peru.

Countries: French Guiana, Peru, Suriname

Remarks and references: See Planquette et al. (1996: 275) for notes on taxonomy, ecology and distribution.

***Hemigrammus brevis* Ellis, 1911**

Hemigrammus brevis Ellis, 1911: 161, pl. 3 (fig. 4). Type locality: Barreiras. Lagôas do Rio Grande [São Francisco River basin, Bahia, Brazil]. Holotype: FMNH 54444 [ex CM 3068].

Maximum length: 3.6 cm TL

Distribution: South America: Rio São Francisco basin, Brazil.

Countries: Brazil

***Hemigrammus coeruleus* Durbin, 1908**

Hemigrammus coeruleus Durbin, in Eigenmann, 1908: 99. Type locality: Manacapuru [Solimões River, Amazonas, Brazil]. Syntypes: MCZ 20801 (97); original says 103 specimens, the type 46.

Maximum length: 5.8 cm TL

Distribution: South America: Solimões River and lower Negro River basins in Brazil.

Countries: Brazil

***Hemigrammus cupreus* Durbin, 1918**

Hemigrammus cupreus Durbin, in Eigenmann, 1918: 168, pl. 20 (fig. 3). Type locality: Jatuarana [probably near Parintins, Amazonas, Brazil], Silva, Lake Saraca [Silves, Lago Saracá, Amazonas, Brazil]. Syntypes: MCZ 21067 (6), MCZ 89964 (11), CAS 42675 (2).

Maximum length: 5.3 cm TL

Distribution: South America: Solimões River basin in Brazil.

Countries: Brazil

***Hemigrammus cylindricus* Durbin, 1909**

Hemigrammus cylindricus Durbin, 1909: 62. Type locality: Tumatumari [Guyana]. Holotype: FMNH 53426 [ex CM 1461].

Maximum length: 10.8 cm TL

Distribution: South America: Essequibo River, Guyana.

Countries: Guyana

***Hemigrammus elegans* (Steindachner, 1882)**

Tetragonopterus elegans Steindachner, 1882a: 179. Type locality: Obidos [Amazon River at Óbidos, Pará, Brazil]. Syntypes: NMW 57390 (8), ?MCZ 90014 (2). Described in more detail in Steindachner (1882b: 36, pl. 7, fig. 4).

Maximum length: 4 cm SL

Distribution: South America: Amazon and Tapajós River basins in Brazil; Apure and Aguaro River basins in Venezuela.

Countries: Brazil, Venezuela

Remarks and references: Taphorn (1992: 206-207) provided taxonomical/ecological remarks.

***Hemigrammus erythrozonus* Durbin, 1909**

Hemigrammus erythrozonus Durbin, 1909: 56. Type locality: Erukin [Essequibo River, Guyana]. Holotype: FMNH 53546 [ex CM 1448].

Maximum length: 3.3 cm TL

Distribution: South America: Essequibo River, Guyana.

Countries: Guyana

***Hemigrammus gracilis* (Lütken, 1875)**

Tetragonopterus gracilis Lütken, 1875a: 133. Type locality: Lagoa Santa [São Francisco River basin, Minas Gerais, Brazil]. Syntypes: MNHN 9583 (4), NMW 68066 (5), ZMB 9201 (1), ZMUC 522-529 (8), ZMUC 539 (1), ZMUC 650 (1), ZMUC 651 (1), ZMUC 661 (1), ZMUC 662 (1).

Maximum length: 4.4 cm SL

Distribution: South America: São Francisco and Amazon River basins, Brazil.

Countries: Brazil

Remarks and references: Considered a *Hyphessobrycon* previous to Géry (1977).

***Hemigrammus guyanensis* Géry, 1959**

Hemigrammus guyanensis Géry, 1959a: 254, fig. 3. Type locality: crique Sable (Hte Mana) [French Guiana]. Holotype: MHNG 2181.23.

Maximum length: 3.5 cm SL

Distribution: South America: Maroni, Mana, Approuague, and Oyapock Rivers, French Guiana.

Countries: French Guiana

Remarks and references: See Planquette et al. (1996: 276-277) for notes on taxonomy, ecology and distribution.

***Hemigrammus haraldi* Géry, 1961**

Hemigrammus pulcher haraldi Géry, 1961a: 44, fig. 2. Type locality: Upper Solimões, environs of Sao Paulo de Olivença (Brazil), in an inland-lake midst the thick forest between Paraná-Paraná and the Paraná-Camatia. Holotype: USNM 196672.

Maximum length: 2.73 cm SL

Distribution: South America: Upper Amazon River basin in western Brazil.

Countries: Brazil

***Hemigrammus hyanuary* Durbin, 1918**

Hemigrammus hyanuary Durbin in Eigenmann, 1918: 151, pl. 18 (fig. 4). Type locality: Lake Hyanuary [= Lago Januari, Amazonas, Brazil]. Syntypes: MCZ 20955 (4), CAS 42676 (2).

Maximum length: 4.4 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

***Hemigrammus iota* Durbin, 1909**

Hemigrammus iota Durbin, 1909: 60. Type locality: Gluck Island [Essequibo River, Guyana]. Holotype: FMNH 53034 [ex CM 1458].

Maximum length: 2.1 cm TL

Distribution: South America: Essequibo River basin.

Countries: Guyana

***Hemigrammus levis* Durbin, 1908**

Hemigrammus levis Durbin, in Eigenmann, 1908: 100. Type locality: Lago do Maximo, Obidos, Villa Bella, Lake Jose Assu [Amazon River basin, Brazil]. Syntypes: MCZ 20738 (194), MCZ 20749 (28), MCZ 20829 (3), MCZ 89961 (64), MCZ 89962 (18), USNM 120266 (6), CAS 42677 (5), CAS 42678 (7). Lectotype designated as MCZ 20738 by Eigenmann (1918: 149) but lot with more than one specimen so lectotype designation is not valid.

Maximum length: 4.8 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

Remarks and references: See Araújo-Lima et al. (1986) to observations on diet and microhabitat preferences.

***Hemigrammus luelingi* Géry, 1964**

Hemigrammus luelingi Géry, 1964a: 7, fig. 5. Type locality: petit ruisseau faisant communiquer le Zapote Cocha avec le Caño Yarina, en bordure du Rio Pacaya, affluent du canal de Puinahua (bras du bas Rio Ucayali). Holotype: ZFMK?

Maximum length: 2.51 cm SL

Distribution: South America: Pacaya River basin.

Countries: Peru

***Hemigrammus lunatus* Durbin, 1918**

Hemigrammus lunatus Durbin, in Eigenmann, 1918: 164. Type locality: Amazon. Holotype: MCZ 20964 (1 of 3).

Maximum length: 4.8 cm TL

Distribution: South America: Amazon, Paraguay, and Suriname River basins.

Countries: Brazil, Peru, Suriname

Remarks and references: For taxonomic remarks, see Géry (1964: 9-10).

***Hemigrammus mahnerti* Uj & Géry, 1989**

Hemigrammus mahnerti Uj & Géry, 1989: 154, figs. 5-7. Type locality: Paraguay, dépt. Misiones, marais près de Panchito Lopez à 4 km de Yabebyry. Holotype: MHNG 2412.82.

Maximum length: 2.75 cm SL

Distribution: South America: Paraná and Paraguay River basins in Paraguay.

Countries: Paraguay

***Hemigrammus marginatus* Ellis, 1911**

Hemigrammus marginatus Ellis, 1911: 159, pl. 3 (fig. 3). Type locality: Queimadas, Rio Itapicurú [Bahia, Brazil]. Holotype: FMNH 54430 [ex CM 3053].

Maximum length: 4.5 cm SL

Distribution: South America: São Francisco, Itapicuru, Paraná, and Paraguay River basins; Guaporé and Amazon River basins; Orinoco River basin.

Countries: Brazil, Colombia, Peru, Venezuela

Remarks and references: See Taphorn (1992: 209-210) for taxonomic remarks.

***Hemigrammus matei* Eigenmann, 1918**

Hemigrammus matei Eigenmann, 1918: 152, pl. 19 (fig. 1). Type locality: Argentina. Holotype: CAS 44436 [ex IU 11438].

Maximum length: 4.3 cm TL

Distribution: South America: Argentina (exact locality unknown).

Countries: Argentina

***Hemigrammus maxillaris* (Fowler, 1932)**

Hyphessobrycon maxillaris Fowler, 1932: 354, fig. p. 350. Type locality: Descavaldos, Matto Grosso [Brazil]. Holotype: ANSP 53660.

Maximum length: 3.8 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil

Remarks and references: Transferred from *Hyphessobrycon* to *Hemigrammus* by Weitzman (1985).

***Hemigrammus megaceps* Fowler, 1945**

Hemigrammus megaceps Fowler, 1945c: 1, fig. 3. Type locality: Ninabamba near Ayacucho, at 1900 meters elevation, Rio Ucayali basin, Peru. Holotype: ANSP 71624.

Maximum length: 2.8 cm TL

Distribution: South America: Upper Ucayali River basin.

Countries: Peru

***Hemigrammus melanochrous* Fowler, 1913**

Hemigrammus melanochrous Fowler, 1913: 543, fig. 12. Type locality: Tributary of Madeira River near Porto Velho, Brazil. Holotype: ANSP 39228.

Maximum length: 3 cm TL

Distribution: South America: Middle Madeira River basin.

Countries: Brazil

***Hemigrammus micropterus* Meek, 1907**

Hemigrammus micropterus Meek, in Eigenmann & Ogle, 1907: 15. Type locality: Los Castillos, Venezuela. Holotype: CAS 44438 [ex IU 10802].

Maximum length: 4 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: See Taphorn (1992: 212-214) for taxonomical/ecological remarks.

***Hemigrammus microstomus* Durbin, 1918**

Hemigrammus microstomus Durbin, in Eigenmann, 1918: 165. Type locality: Santarem [Amazon basin, Pará, Brazil]. Holotype: MCZ 20782 (1 of 9).

Maximum length: 4 cm SL

Distribution: South America: Central Amazon and Orinoco River basins.

Countries: Brazil, Venezuela

Remarks and references: See Taphorn (1992: 215-216) for taxonomical/ecological remarks.

***Hemigrammus minus* Böhlke, 1955**

Hemigrammus minus Böhlke, 1955: 229, fig. 2. Type locality: rapids at Camanáos on the Rio Negro, Brazil... Camanáos is down river from São Gabriel, at approximately 0°10'S South Latitude, 66°25' West Longitude. Holotype: SU 47759.

Maximum length: 2.83 cm SL

Distribution: South America: Middle Negro and Amazon basins; upper Orinoco River basin.

Countries: Brazil, Colombia, Venezuela

Remarks and references: See Taphorn (1992: 218-219) for taxonomical/ecological remarks.

***Hemigrammus neptunus* Zarske & Géry, 2002**

- Hemigrammus neptunus* Zarske & Géry, 2002a: 24, fig. 3. Type locality: Bolivien, Dep. Pando, Río Manuripi, unweit des Zusammenflusses mit dem Río Tahamanu, mehrere Fundorte Zwischen Alméndrillo (11°11'687"S, 67°34'269"W) und Bolima (11°16'890" S, 67°36'246"). Holotype: MTD F 25536. Maximum length: 3.19 cm SL. Distribution: South America: Amazon River basin in Bolivia. Countries: Bolivia
- Hemigrammus newboldi* (Fernández-Yépez, 1949)**
Ramirezella newboldi Fernández-Yépez, 1949: [2], fig. Type locality: Palital, Edo. Guárico, Venezuela [Orinoco River basin]. Holotype: AFY 45019. Maximum length: 5 cm SL. Distribution: South America: Orinoco River basin. Countries: Venezuela. Remarks and references: See Taphorn (1992: 221-222) for taxonomical/ecological remarks.
- Hemigrammus ocellifer* (Steindachner, 1882)**
Tetragonopterus ocellifer Steindachner, 1882a: 179. Type locality: Villa bella, Cudajas [= Vila Bela, now Parintins, and Cudajas = Codajás, Amazon basin, Brazil]. Syntypes: ?MCZ 20969 (5), MSNM 4 (1), NMW 57689 (6). Species later illustrated and described in more detail in Steindachner (1882b: 32, pl. 7, fig. 5). ?*Hemigrammus ocellifer falsus* Meinken, 1958: 232. Type locality: Amazonas. Holotype: ZMH H1183. Maximum length: 4.4 cm TL. Distribution: South America: Rivers of Guyana, Suriname, French Guiana, and Amazon basin in Brazil and Peru. Countries: Brazil, French Guiana, Guyana, Peru, Suriname, Trinidad and Tobago (introduced). Remarks and references: See Géry (1959, 1964) and Planquette et al. (1996: 278-279) for taxonomical, distributional and ecological remarks.
- Hemigrammus orthus* Durbin, 1909**
Hemigrammus orthus Durbin, 1909: 61. Type locality: Tukeit [upper Essequibo River, Guyana]. Holotype: FMNH 53052 [ex CM 1477]. Maximum length: 3.4 cm TL. Distribution: South America: Essequibo River in Guyana; lower Tapajós River. Countries: Brazil, Guyana. Remarks and references: Géry (1977: 494) and Planquette et al. (1996: 274) consider *Hemigrammus orthus* as being possibly a synonym of *Hemigrammus bellotii*.
- Hemigrammus pretoensis* Géry, 1965**
Hemigrammus pretoensis Géry, 1965c: 19, pl. 2 (fig. 7). Type locality: Igarapé Prêto, collatéral de l'Amazone supérieure près de Belem, à environ 60 km en aval de Leticia [Brazil]. Holotype: SMF 7237. Maximum length: 4.54 cm SL. Distribution: South America: Upper Solimões River basin. Countries: Brazil
- Hemigrammus pulcher* Ladiges, 1938**
Hemigrammus pulcher Ladiges, 1938: 49. Type locality: dem Stromgebiet zwischen Tabatinga und Iquitos. Lectotype: ZMH H61 [ex 17757, in part], designated by Ladiges et al. (1958: 157). Maximum length: 3.28 cm SL. Distribution: South America: Upper Amazon River basin. Countries: Peru. Remarks and references: See Géry (1961) for remarks on the taxonomy.
- Hemigrammus rhodostomus* Ahl, 1924**
Hemigrammus rhodostomus Ahl, 1924: 405, fig. Type locality: Pará [Brazil]. Lectotype: ZMB 22626 [apparently not 22616], designated by Zarske & Géry (1995: 112). Maximum length: 5 cm TL. Distribution: South America: Lower Amazon River basin in Pará State, and Orinoco River basin. Countries: Brazil, Venezuela. Remarks and references: See Géry & Uj (1986) and Taphorn (1992: 224-225) for taxonomic remarks.
- Hemigrammus rodwayi* Durbin, 1909**
Hemigrammus rodwayi Durbin, 1909: 58. Type locality: Georgetown trenches [Guyana]. Holotype: FMNH 53026 [ex CM 1450]. *Hemigrammus armstrongi* Schultz & Axelrod, 1955: 5, fig. (p. 4). Type locality: From near Georgetown, British Guyana. Holotype: USNM 163868. Maximum length: 5.3 cm TL. Distribution: South America: Rivers of Guyana, Suriname, French Guiana, and Amazon River basin. Countries: Brazil, French Guiana, Guyana, Peru, Suriname. Remarks and references: See Géry (1964: 32) and Planquette et al. (1996: 280-281) for taxonomic, distributional, and ecological remarks.
- Hemigrammus schmardae* (Steindachner, 1882)**
Tetragonopterus schmardae Steindachner, 1882a: 179. Type locality: Tabatinga [upper Amazon basin, Brazil]. Syntypes: NMW 57809 (3), NMW 57979 (22), NMW 81255 (2). Described in more detail in Steindachner (1882b: 37, pl. 7, fig. 6). *Hemigrammus proneki* Géry, 1963b: 14, fig. 2. Type locality: near Tapurucuara, upper Rio Negro [Amazonas, Brazil]. Holotype: USNM 198648. Maximum length: 3.68 cm SL. Distribution: South America: Amazon, Negro and Orinoco River basins. Countries: Brazil, Venezuela. Remarks and references: See Géry (1977: 506) for the synonym, Taphorn (1992: 227-228) for notes on the taxonomy and ecology.
- Hemigrammus stictus* (Durbin, 1909)**
Hyphessobrycon stictus Durbin, 1909: 71. Type locality: Lama Stop-Off [Guyana]. Holotype: FMNH 52798 [ex CM 1197]. Maximum length: 4.3 cm TL. Distribution: South America: Amazon and Negro River basins, Orinoco River basin, and coastal rivers in Guyana. Countries: Brazil, Guyana, Venezuela. Remarks and references: See Taphorn (1992: 233-234) for an account on the taxonomy.
- Hemigrammus tridens* Eigenmann, 1907**
Hemigrammus tridens Eigenmann, in Eigenmann & Ogle, 1907: 15. Type locality: Arroyo Pypucu, Paraguay basin [Paraguay]. Holotype: CAS 58609 [ex IU 11262]. Maximum length: 2 cm TL. Distribution: South America: Paraguay River basin. Countries: Paraguay
- Hemigrammus ulreyi* (Boulenger, 1895)**
Tetragonopterus ulreyi Boulenger, 1895: 529. Type locality: Descalvados, Matto Grosso [Paraguay basin, Mato Grosso, Brazil]. Syntypes: BMNH 1895.5.17.194-199 (6). Maximum length: 4.4 cm TL. Distribution: South America: Paraguay River basin. Countries: Brazil
- Hemigrammus unilineatus* (Gill, 1858)**
Poecilurichthys unilineatus Gill, 1858: 420. Type locality: Western Portion of the Island of Trinidad, W. I. [Trinidad and Tobago]. No types known. *Hemigrammus unilineatus cayennensis* Géry, 1959a: 248, fig. 1. Type locality: crique d'eau douce de l'île de Cayenne [French Guiana]. Holotype: MHNG 2179.61.

Maximum length: 5.3 cm TL

Distribution: Central to South America: River basins of Trinidad, coastal river basins of Venezuela, rivers of Guyana, Suriname, French Guiana; Guaporé and Amazon River basins.

Countries: Brazil, French Guiana, Guyana, Peru, Suriname, Trinidad and Tobago, Venezuela

Remarks and references: See Géry (1959, 1966), Planquette et al. (1996: 282-283), and Weitzman & Palmer (1997a: 237) for taxonomic remarks.

***Hemigrammus vorderwinkleri* Géry, 1963**

Hemigrammus vorderwinkleri Géry, 1963b: 11, fig. 1. Type locality: near Tapurucuara, upper Rio Negro [Amazonas, Brazil]. Holotype: USNM 198643.

Maximum length: 3.3 cm SL

Distribution: South America: Middle Negro River basin.

Countries: Brazil

HOLLANDICHTHYS

Hollandichthys Eigenmann, 1909b: 257. Type species: *Tetragonopterus multifasciatus* Eigenmann & Norris, 1900. Type by monotypy. Gender: masculine.

***Hollandichthys multifasciatus* (Eigenmann & Norris, 1900)**

Tetragonopterus multifasciatus Eigenmann & Norris, 1900: 358. Type locality: Cubatão [São Paulo, Brazil]. Syntypes: CAS 61483 [ex IU 9288].

Pseudochalceus perstriatus Miranda Ribeiro, 1908: [4], fig. 5. Type locality: Corregos de Iporanga [São Paulo, Brazil].

Pseudochalceus affinis Steindachner, 1908: 29. Type locality: Rio Jaraguá bei Joinville, Staate S. Catharina (Brasilien). Syntypes: NMW 56736-37 (6-3).

Maximum length: 9.64 cm SL

Distribution: South America: Coastal rivers from Rio de Janeiro to Rio Grande do Sul.

Countries: Brazil

Remarks and references: See Eigenmann (1921) for a detailed description; Sabino & Castro (1990) for ecological observations and biological information. Probably a species complex including several species.

Common names: Lambari-listrado (Brazil)

HYPHESSOBRYCON

Hyphessobrycon Durbin, in Eigenmann, 1908: 100. Type species: *Hemigrammus compressus* Meek, 1908. Type by original designation. Gender: masculine. More recent appraisal is Géry (1977: 458-486). See Weitzman & Palmer (1997a) for synonymization of *Megalampodus* and *Pseudopristella*. Probably not monophyletic (Weitzman & Fink, 1983; Weitzman & Palmer, 1997a).

Dermatocheir Durbin, 1909: 55. Type species: *Dermatocheir catablepta* Durbin, 1909. Type by original designation. Gender: feminine.

Megalampodus Eigenmann, 1915: 49. Type species: *Megalampodus megalopterus* Eigenmann, 1915. Type by original designation. Gender: masculine.

Ectreopterus Fowler, 1943c: 313. Type species: *Megalampodus uruguayensis* Fowler, 1943c. Type by original designation. Gender: masculine.

Pseudopristella Géry, 1960b: 18. Type species: *Pseudopristella simulata* Géry, 1960b. Type by original designation. Gender: feminine.

***Hyphessobrycon agulha* Fowler, 1913**

Hyphessobrycon agulha Fowler, 1913: 549, fig. 15. Type locality: Madeira River, about 200 miles east of W. Long. 62°20', Brazil. Holotype: ANSP 39232.

Maximum length: 4.2 cm SL

Distribution: South America: Madeira River basin.

Countries: Brazil

Remarks and references: See Géry (1965: 23-24; 1972: 8) for remarks on the taxonomy of the species.

***Hyphessobrycon albolineatum* Fernández-Yépez, 1950**

Hyphessobrycon albolineatum Fernández-Yépez, 1950: 17, pl. 3 (fig. 3). Type locality: Rio Autana, Venezuela. Holotype: AFY 48169.

Maximum length: 2.58 cm SL

Distribution: South America: Autana River in the Orinoco River basin.

Countries: Venezuela

***Hyphessobrycon amandae* Géry & Uj, 1987**

Hyphessobrycon amandae Géry & Uj, 1987b: 59, figs. Type locality: Rio das Mortes, Brazil, some 100 km before its confluence with the Braço Maior of the Rio Araguaia (the western border of the Ilha do Bananal), State of Mato Grosso. Holotype: MZUSP 37367 [ex Géry no. G.799.1].

Maximum length: 1.95 cm SL

Distribution: South America: Araguaia River basin.

Countries: Brazil

Remarks and references: See Weitzman & Palmer (1997a: 239) for taxonomical remarks.

***Hyphessobrycon amapaensis* Zarske & Géry, 1998**

Hyphessobrycon amapaensis Zarske & Géry, 1998: 20, fig. 1. Type locality: Brasilien, Amapa, etwa 45 km nördlich Macapa. Kleiner Savannenbach an der B 156 von Sitio Camaipi nach Santa Clara, etwa 11 km von Sitio Camaipi (Rio-Preto-Gebiet). Holotype: MZUSP 52730.

Maximum length: 2.99 cm SL

Distribution: South America: Amapa State (known only from the type locality).

Countries: Brazil

***Hyphessobrycon anisitsi* (Eigenmann, 1907)**

Hemigrammus anisitsi Eigenmann in Eigenmann & Ogle, 1907: 16. Type locality: Villa Rica [Paraguay]. Holotype: CAS 11984 [ex IU 10182] (1 of 3).

Hemigrammus caudovittatus Ahl, 1923: 261, fig. Type locality: Buenos Aires [Argentina]. Syntypes not found in ZMB (Zarske & Géry, 1995: 110).

Hyphessobrycon erythrurus Ahl, 1928: 319. Type locality: Probably Brazil. Syntypes: (5) ZMB 20828 (1).

Maximum length: 5.7 cm TL

Distribution: South America: Paraná and Uruguay River basins.

Countries: Argentina, Brazil, Paraguay

***Hyphessobrycon arianae* Uj & Géry, 1989**

Hyphessobrycon arianae Uj & Géry, 1989: 148, figs. 2-4. Type locality: Paraguay, dépt. Caaguazu, Rio Güyraugua, affl. du Rio Monday à 3 km E de Juan Frutos. Holotype: MHNG 2412.79.

Maximum length: 2.4 cm SL

Distribution: South America: Paraná River basin.

Countries: Paraguay

Remarks and references: This species is possibly a synonym of *Cheirodon stenodon* Eigenmann, 1915 (Malabarba, 1998).

***Hyphessobrycon axelrodi* (Travassos, 1959)**

Aphyocharax axelrodi Travassos, 1959: 5, figs. unnumb. p. 6. Type locality: Trinidad, T.W.I. near Piarco. Holotype: MNRJ 9120.

Maximum length: 2.2 cm SL

Distribution: South America: Island of Trinidad.

Countries: Trinidad and Tobago

Remarks and references: See Weitzman & Palmer (1997a: 234;

1998: 130-131) for remarks.

***Hypessobrycon balbus* Myers, 1927**

Hypessobrycon balbus Myers, 1927: 115. Type locality: Planaltina, Lagoa Fervedeira, Goyaz [Distrito Federal, Alto Paraná River basin, Brazil]. Holotype: CAS 51789 [ex IU 17678a].

Maximum length: 6 cm TL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

***Hypessobrycon bentosi* Durbin, 1908**

Hypessobrycon bentosi Durbin, in Eigenmann, 1908: 101. Type locality: Obidos [Amazon River basin, Pará, Brazil]. Syntypes: CAS 42682 (3), MCZ 20842 (15), USNM 120270 (3).

Hypessobrycon robertsi Anonymous [H. R. Axelrod], 1958: 76. Not available as above, no distinguishing features provided; as pointed out by Weitzman & Palmer (1997a: 226) and Weitzman & Palmer (1997b: 153), "Numerous subsequent references to *H. robertsi* in the aquarium literature appear to refer to *H. bentosi* and may have made the name *H. robertsi* available."

Maximum length: 4.32 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Remarks and references: See Weitzman & Palmer (1997a: 226-227; 1997d) for taxonomic comments.

***Hypessobrycon bifasciatus* Ellis, 1911**

Hypessobrycon bifasciatus Ellis, 1911: 156, pls. 2 (fig. 4), 3 (fig. 1). Type locality: Campos [Paraíba do Sul River, Rio de Janeiro, Brazil]. Holotype: FMNH 54404 [ex CM 3026].

Maximum length: 4.7 cm TL

Distribution: South America: Coastal river drainages from Espírito Santo to Rio Grande do Sul States and upper Paraná River basin.

Countries: Brazil

***Hypessobrycon boulengeri* (Eigenmann, 1907)**

Hemigrammus boulengeri Eigenmann in Eigenmann & Ogle, 1907: 15. Type locality: Rio Grande do Sul, Brazil [restricted to Laguna dos Patos system by Malabarba, 1989]. Holotype: CAS 44379 [ex IU 11073].

Maximum length: 4.5 cm TL

Distribution: South America: Coastal river drainages of Rio Grande do Sul State.

Countries: Brazil

Remarks and references: See Malabarba (1989: 134-135) for comments.

***Hypessobrycon cachimbensis* Travassos, 1964**

Hypessobrycon cachimbensis Travassos, 1964: 542, fig. 5. Type locality: Rio Cachimbo - Cachimbo - Aeroporto da FAB. Abaixo do Salto - Estado do Pará. Lat. 9°22'S e Long. 54°55'W [Brazil]. Holotype: MNRJ 9196.

Maximum length: 4.2 cm SL

Distribution: South America: Cachimbo River, Tapajós River basin.

Countries: Brazil

***Hypessobrycon catableptus* (Durbin, 1909)**

Dermatocheir catablepta Durbin, 1909: 55. Type locality: Tumatumari, above the falls [Guyana]. Holotype: FMNH 53553 [ex CM 1198].

Maximum length: 1.8 cm TL

Distribution: South America: Essequibo River basin.

Countries: Guyana

Remarks and references: See Weitzman & Vari (1987: 650-651; 1988: 650-651) for comments on the species.

***Hypessobrycon coelestinus* Myers, 1929**

Hypessobrycon coelestinus Myers in Eigenmann & Myers, 1929: 535. Type locality: Lagoa Bonita, into São Bartholomeu, Goyaz,

Brazil. Holotype: CAS 60476 [ex IU 17665].

Maximum length: 2.9 cm TL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

***Hypessobrycon columbianus* Zarske & Géry, 2001**

Hypessobrycon columbianus Zarske & Géry, 2001: 23, fig. 1.

Type locality: Kolumbien, Darien, kleiner Bach etwa 6 km flussaufwärts von Acandi, Einzugsgebiet des Rio Acandi, Atlantikküste. Holotype MTD F 25 497.

Max length: 4.6 cm SL (7 cm TL)

Distribution: South America: Acandi River basin.

Countries: Colombia

***Hypessobrycon compressus* (Meek, 1904)**

Hemigrammus compressus Meek, 1904: 87, fig. 25. Type locality: El Hule, Oaxaca. Basin of the Rio Papaloapam [Mexico]. Holotype: FMNH 4641.

Maximum length: 4.4 cm TL

Distribution: North and Central America: Papaloapam River basin.

Countries: Belize, Mexico

***Hypessobrycon condotensis* Regan, 1913**

Hypessobrycon condotensis Regan, 1913: 465. Type locality: Rio Condoto and the Rio San Juan. Syntypes: BMNH 1913.10.1.19-21 (3).

Maximum length: 4 cm TL

Distribution: South America: Condoto and San Juan River basins.

Countries: Colombia

***Hypessobrycon copelandi* Durbin, 1908**

Hypessobrycon copelandi Durbin, in Eigenmann, 1908: 101. Type locality: Tabatinga [Amazon River basin, Amazonas, Brazil]. Syntypes: CAS 42683 (5), MCZ 20771 (88), USNM 120271 (6).

Maximum length: 3.46 cm SL

Distribution: South America: Upper Solimões, Mana and Approuague River basins.

Countries: Brazil, French Guiana

Remarks and references: See Weitzman & Palmer (1997a: 226) and Planquette et al. (1996: 288-289) for comments.

***Hypessobrycon diancistrus* Weitzman, 1977**

Hypessobrycon diancistrus Weitzman, 1977b: 349, figs. 1-5. Type locality: Colombia, State of Vichada, Río Vichada, about 50 km west of San José de Ocumé (70°20'W, 4°14'S), Orinoco river basin. Holotype: USNM 216607.

Maximum length: 3 cm SL

Distribution: South America: Orinoco and Negro River basins.

Countries: Brazil, Colombia

***Hypessobrycon duragenys* Ellis, 1911**

Hypessobrycon duragenys Ellis, 1911: 155, pl. 2 (fig. 3). Type locality: Mogy das Cruzes, Rio Tietê [upper Paraná River basin, São Paulo, Brazil]. Holotype: FMNH [ex CM 3023] (missing).

Maximum length: 6.8 cm TL

Distribution: South America: Upper Tietê and Paraíba do Sul River basins.

Countries: Brazil

***Hypessobrycon ecuadorensis* (Eigenmann, 1915)**

Megalampodus ecuadorensis Eigenmann, 1915: 99. Type locality: "Naranjito, Río Chan Chan, Ecuador". Holotype: CAS [ex IU 13628] (apparently lost).

Maximum length: 2.05 cm SL

Distribution: South America: Guayas River basin.

Countries: Ecuador

Remarks and references: Weitzman & Palmer (1998: 129-130) noted that *Megalampodus ecuadorensis* Eigenmann is a secondary homonym of *Hypessobrycon ecuadoriensis* Eigenmann &

Henn. They decided to not propose a new name in view of the uncertainties involving the taxonomic status of the species. We agree that an analysis of the species of the "rosy tetra" complex occurring in trans-Andean rivers of South America and Central America is needed before any nomenclatural action could be made.

***Hyphessobrycon ecuadoriensis* Eigenmann & Henn, 1914**

Hyphessobrycon ecuadoriensis Eigenmann & Henn, in Eigenmann, Henn & Wilson, 1914: 9. Type locality: Vincés, Ecuador [Los Ríos, forest pool near Vincés, w. Ecuador (ca. 1°33'S, 79°44'W)]. Holotype: CAS 61602 [ex IU 13105a].
Maximum length: 3.1 cm TL
Distribution: South America: Only known from the type locality.
Countries: Ecuador

***Hyphessobrycon elachys* Weitzman, 1984**

Hyphessobrycon elachys Weitzman, 1984: 800, figs. 1-5. Type locality: Paraguay, Departamento San Pedro, swamp 3 km northwest of Lima, Río Aguaray-guazu system, 23°55'S, 56°29'W. Holotype: USNM 232393.
Maximum length: 1.79 cm SL
Distribution: South America: Paraguay River basin.
Countries: Brazil, Paraguay

***Hyphessobrycon eos* Durbin, 1909**

Hyphessobrycon eos Durbin, 1909: 69. Type locality: Creek between Potaro Landing and Kangaruma [Guyana]. Holotype: FMNH 52795 [ex CM 1194].
Maximum length: 4.2 cm TL
Distribution: South America: Guyana (?).
Countries: Guyana

***Hyphessobrycon epicharis* Weitzman & Palmer, 1997**

Hyphessobrycon epicharis Weitzman & Palmer, 1997a: 214, figs. 1-4. Type locality: Venezuela, State of Amazonas, head waters of Río Baria (= Río Mawarinuma...), tributary mouth, 3 km downstream from Neblina base camp on left bank, 0°55'N, 66°10'W. Holotype: MBUCV-V 20800.
Maximum length: 3.3 cm SL
Distribution: South America: Upper Orinoco and upper Negro River basins.
Countries: Brazil, Venezuela

***Hyphessobrycon eques* (Steindachner, 1882)**

Chirodon eques Steindachner, 1882a: 179. Type locality: Villa Bella, Obidos [Villa Bella = Parintins, Amazon River basin, Brazil]. Syntypes: NMW 62693: 1-4

Tetragonopterus callistus Boulenger, 1900: 2. Type locality: Carandosiño [= Carandazinho, near Corumbá, Paraguay River system, Mato Grosso do Sul, Brazil]. Syntypes: BMNH 1900.4.4.63-68.

Hemigrammus melasopterus Eigenmann & Kennedy, 1903: 518. Type locality: Type locality: Aguada, near Arroyo Trementina [Paraguay]. Holotype: CAS 44381 [ex IU 10039].

Hyphessobrycon serpae Durbin in Eigenmann, 1908: 100. Type locality: Serpa [Serpa = Itacoatiara, Amazon River basin, Amazonas, Brazil]. Syntypes: CAS 42684 (5), MCZ 20985 (34), USNM 120269 (6).

Maximum length: 3.13 cm SL
Distribution: South America: Amazon and Guaporé River basin; Paraguay River basin.
Countries: Brazil, French Guiana (introduced), Paraguay
Remarks and references: See Weitzman & Palmer (1997a, b) for notes on the taxonomy and synonyms.
Common names: Mato grosso (Brazil)

***Hyphessobrycon erythrostigma* (Fowler, 1943)**

Hemigrammus erythrostigma Fowler, 1943b: 33, fig. Type locality: without locality, supposed to have been secured in Brazil. Holotype: ANSP 70208.

Hyphessobrycon rubrostigma Hoedeman, 1956: 312, fig. Type locality: Colombia. Holotype: ZMA 101935a.

Maximum length: 6.06 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Brazil, Colombia, Peru
Remarks and references: See Weitzman (1977) for redescription, and Weitzman & Palmer (1997c) for general comments.

***Hyphessobrycon fernandezi* Fernández-Yépez, 1950**

Hyphessobrycon fernandezi Fernández-Yépez, 1972: 20, pl. 20. Type locality: Río Yaracuy [Venezuela]. Holotype: no repository stated.
Maximum length: 3.66 cm SL
Distribution: South America: Yaracuy River basin.
Countries: Venezuela

***Hyphessobrycon flammeus* Myers, 1924**

Hyphessobrycon flammeus Myers, 1924: 330, fig. Type locality: Rio de Janeiro, Brazil. Syntypes: USNM 92629 (2).

Maximum length: 2.5 cm SL
Distribution: South America: Coastal rivers of Rio de Janeiro State.
Countries: Brazil
Remarks and references: See Weitzman et al. (1988) for comments on the distribution.

***Hyphessobrycon frankei* Zarske & Géry, 1997**

Hyphessobrycon frankei Zarske & Géry, 1997: 309, fig. 3. Type locality: Bach an der Carretera Central, zehn Kilometer westlich Aguaytia [Ucayali River basin, Depto. Loreto, Peru]. Holotype: MTDf 17706.

Maximum length: 3.35 cm SL
Distribution: South America: Ucayali River basin.
Countries: Peru

***Hyphessobrycon georgettae* Géry, 1961**

Hyphessobrycon georgetti Géry, 1961d: 121, figs. 1-3. Type locality: swamprecreek in Paru savannah [Suriname]. Holotype: ZMA 103269. Originally as *georgetti* but named after a woman so emended to *georgettae*.

Maximum length: 3.2 cm SL
Distribution: South America: Suriname (?).
Countries: Suriname

***Hyphessobrycon gracilior* Géry, 1964**

Hyphessobrycon gracilior Géry, 1964a: 12, figs. 10-11. Type locality: petit ruisseau faisant communiquer le Zapote Cocha avec le Caño Yarina, en bordure du Río Pacaya, affluent du Canal de Puinahua (bras du Río Ucayali) [Peru]. Holotype: not researched.

Maximum length: 2.15 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Peru

***Hyphessobrycon griemi* Hoedeman, 1957**

Hyphessobrycon griemi Hoedeman, 1957: 87, figs. 1-3. Type locality: Gojas, Brasilien. Holotype: ZMA 101936a.

Hyphessobrycon flammeus guabirubae Godoy, 1987: 220, unnumbered fig. on p. 220. Type locality: lagoa entre Brusque e Guabiruba, SC [Brazil].

Maximum length: 2.57 cm SL
Distribution: South America: Eastern coastal rivers from São Paulo to northern Santa Catarina States.
Countries: Brazil
Remarks and references: See Weitzman et al. (1988) for comments on the distribution.

***Hyphessobrycon guarani* Mahnert & Géry, 1987**

Hyphessobrycon guarani Mahnert & Géry, 1987: 307, figs. 1-2.
Type locality: Paraguay, dept. Alto Parana, Rio Alto Parana à Puerto Bertoni (25°38 S, 54°40'W), dans um brás mort du fleuve. Holotype: MHNG 2366.99.
Maximum length: 3.05 cm SL
Distribution: South America: Upper Paraná River basin.
Countries: Paraguay

***Hyphessobrycon haraldschultzi* Travassos, 1960**

Hyphessobrycon haraldschultzi Travassos, 1960a: 5, fig. 1. Type locality: Ilha do Bananal, Goyaz-Brazil [Araguaia River basin, Tocantins State]. Holotype: MNRJ 9207.
Maximum length: 2.1 cm TL
Distribution: South America: Araguaia River basin.
Countries: Brazil

***Hyphessobrycon hasemani* Fowler, 1913**

Hyphessobrycon hasemani Fowler, 1913: 545, fig. 13. Type locality: Madeira River above Falls of Guajaramirim, approximately in Lat. S. 10°47'S, Long. W. 65°23'W, Brazil. Holotype: ANSP 39230.
Maximum length: 2.8 cm SL
Distribution: South America: Madeira River (only known from type locality).
Countries: Brazil
Remarks and references: See Weitzman & Palmer (1997a: 238) for remarks on the taxonomy.

***Hyphessobrycon heliacus* Moreira, Landim & Costa, 2002**

Hyphessobrycon heliacus Moreira, Landim & Costa, 2002: 428, fig. 1. Type locality: ribeirão Macuco (= córrego-Duas Bocas), tributary of the rio Teles Pires, rio Tapajós basin, 71.9 km north from Sinop, município de Cláudia, at the BR-163 road in direction to Santarém, Estado de Mato Grosso, Brasil, 55°19'W, 11°15'S. Holotype: MZUSP 52891.
Maximum length: 2.78 cm SL
Distribution: South America: Teles Pires River in the upper Tapajós basin.
Countries: Brazil

***Hyphessobrycon herbertaxelrodi* Géry, 1961**

Hyphessobrycon herbertaxelrodi Géry, 1961c: 29, fig. 4. Type locality: Coxim on the Rio Taquary (Rio Paraguay Basin), State of Mato Grosso, Brazil. Holotype: USNM 196089.
Maximum length: 3.23 cm SL
Distribution: South America: Paraguay River basin.
Countries: Brazil
Common names: Neon-negro (Brazil)

***Hyphessobrycon heteresthes* (Ulrey, 1894)**

Aphyocara heteresthes Ulrey, 1894: 612. Type locality: Brazil. Syntypes: CAS 76377 (4), SU 2161 (1). Species was also described as new in Ulrey (1895: 293).
Maximum length: 1.7 cm TL
Distribution: South America: Only known from type locality.
Countries: Brazil
Remarks and references: See Weitzman & Palmer (1998: 125-126) for comments.

***Hyphessobrycon heterorhabdus* (Ulrey, 1894)**

Tetragonopterus heterorhabdus Ulrey, 1894: 610. Type locality: Brazil. Syntypes: CAS 44415 (9), CAS 44416 (6), SU 2174 (1).
Maximum length: 3.3 cm TL
Distribution: South America: Lower Amazon River basin.
Countries: Brazil

***Hyphessobrycon hildae* Fernández-Yépez, 1950**

Hyphessobrycon hildae Fernández-Yépez, 1950: 18, pl. 3 (fig. 4).
Type locality: Rio Autana, Venezuela. Holotype: MHNSL 989 [ex AFY 48170].
Maximum length: 1.88 cm SL
Distribution: South America: Autana River basin.
Countries: Venezuela

***Hyphessobrycon igneus* Miquelarena, Menni, Lopez & Casciotta, 1980**

Hyphessobrycon igneus Miquelarena, Menni, Lopez & Casciotta, 1980: 237, fig. 1a. Type locality: Laguna frente a Escuela N°12, camino Bella Vista-San Roque, Corrientes [Argentina]. Holotype: ILPLA 23-IX-80-7.
Maximum length: 3.4 cm SL
Distribution: South America: Paraná River basin.
Countries: Argentina

***Hyphessobrycon iheringi* Fowler, 1941**

Hyphessobrycon iheringi Fowler, 1941: 186, fig. 96. Type locality: Fortelesa, Ceará [= Fortaleza, Brazil]. Holotype: ANSP 69579.
Maximum length: 4.2 cm SL
Distribution: South America: Fortaleza, Ceará State (only known from type locality).
Countries: Brazil

***Hyphessobrycon inconstans* (Eigenmann & Ogle, 1907)**

Hemigrammus inconstans Eigenmann & Ogle, 1907: 17, fig. 4. Type locality: Para (?), Brazil. Holotype: USNM 34591 [not 55652].
Maximum length: 4.5 cm TL
Distribution: South America: Pará (exact locality unknown).
Countries: Brazil

***Hyphessobrycon itaparicensis* Lima & Costa, 2001**

Hyphessobrycon itaparicensis Lima & Costa, 2001: 234, fig. 1. Type locality: Brazil: Estado da Bahia, small stream in Ilha de Itaparica. Holotype: MZUSP 57539.
Maximum length: 3.84 cm SL
Distribution: South America: Coastal streams in eastern Brazil.
Countries: Brazil

***Hyphessobrycon loretoensis* Ladiges, 1938**

Hyphessobrycon loretoensis Ladiges, 1938: 51. Type locality: Loretogebiet am peruanischen Teil des Amazonas. Lectotype: ZMH H59 [ex 17759 in part], designated by Ladiges et al. (1958: 157).
Maximum length: 2.4 cm SL
Distribution: South America: Upper Amazon River.
Countries: Peru

***Hyphessobrycon loweae* Costa & Géry, 1994**

Hyphessobrycon loweae Costa & Géry, 1994: 71, figs. 1-2. Type locality: Brazil: Estado de Mato Grosso, córrego Xavante, a tributary of rio Culuene, rio Xingú basin, 40 km S of Paranatinga, 15°01'S, 54°03'W. Holotype: MNRJ 12437.
Maximum length: 3.16 cm SL
Distribution: South America: Upper Xingu River basin.
Countries: Brazil
Remarks and references: See Weitzman & Palmer (1997a: 236) for taxonomical remarks.

***Hyphessobrycon luetkenii* (Boulenger, 1887)**

Tetragonopterus luetkenii Boulenger, 1887b: 173. Type locality: San Lorenzo, Rio Grande do Sul [Brazil]. Syntypes: BMNH 1885.2.3.78-80 (3), BMNH 1886.3.15.35-38 (4).
Maximum length: 6.9 cm TL
Distribution: South America: Coastal river drainages and Uruguay River basin in Rio Grande do Sul State; Paraíba do Sul River in

Rio de Janeiro State; Paraguay River basin.

Countries: Brazil, Paraguay

***Hyphessobrycon maculicauda* Ahl, 1936**

Hyphessobrycon maculicauda Ahl, 1936: 22. Type locality: Mittelbrasilien. Holotype: ZMB (not found).

Maximum length: 4.3 cm TL

Distribution: South America: Central Brazil (exact locality unknown).

Countries: Brazil

***Hyphessobrycon megalopterus* (Eigenmann, 1915)**

Megalampodus megalopterus Eigenmann, 1915: 50, fig. 14; pl. 7.

Type locality: Cáceres [=Cáceres, Mato Grosso, Brazil]. Holotype: FMNH 57823 [ex CM 6806].

Megalampodus rogoaguae Pearson, 1924: 33, pl. 10 (fig. 3).

Type locality: Lagoons, Lake Rogoagua [ca. 13°58'S, 66°53'W, Beni, Bolivia]. Holotype: CAS 98917 [ex IU 17348].

Maximum length: 3.64 cm SL

Distribution: South America: Upper Paraguay and Guaporé River basins.

Countries: Bolivia, Brazil

Remarks and references: See Weitzman & Palmer (1997a: 231-232; 1998: 126-129) for notes on the taxonomy.

***Hyphessobrycon melanopleurus* Ellis, 1911**

Hyphessobrycon melanopleurus Ellis, 1911: 157, pl. 3 (fig. 2).

Type locality: Alto da Serra, São Paulo [Brazil]. Holotype: FMNH 54413 [ex CM 3035].

Maximum length: 3.5 cm TL

Distribution: South America: Upper Tietê River.

Countries: Brazil

***Hyphessobrycon melasemion* Fowler, 1945**

Hyphessobrycon melasemion Fowler, 1945a: 57, fig. Type locality: Locality unknown (supposed to be the lower Amazon?). Holotype: ANSP 71584.

Maximum length: 3.88 cm SL

Distribution: South America: Unknown.

Countries: Brazil (?)

Remarks and references: See Weitzman & Palmer (1997a: 234) for taxonomical remarks.

***Hyphessobrycon melazonatus* Durbin, 1908**

Hyphessobrycon melazonatus Durbin, in Eigenmann, 1908: 101.

Type locality: Lago do Maximo [near Parintins, Amazonas, Brazil]. Lectotype: MCZ 20737.

Maximum length: 3.8 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Hyphessobrycon meridionalis* Ringuelet, Miquelarena & Menni, 1978**

Hyphessobrycon meridionalis Ringuelet, Miquelarena & Menni, 1978: 248, figs. 2-3. Type locality: Cantera sobre ruta provincial N°15, 70 m al sur del canal Delgado, a 30 m del camino en dirección al Río de la Plata (Los Talas, Pcia. de Buenos Aires) [Argentina]. Holotype: ILPLA 30.3.77.1.

Maximum length: 4.55 cm SL

Distribution: South America: Lower Paraná River and coastal river basins of Rio Grande do Sul State.

Countries: Argentina, Brazil

***Hyphessobrycon metae* Eigenmann & Henn, 1914**

Hyphessobrycon metae Eigenmann & Henn, 1914: 233. Type locality: Barrigona, Río Meta [Colombia]. Holotype: CAS 61751 [ex IU 13421].

Maximum length: 4 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

Remarks and references: See Taphorn (1992: 242-243) for comments on taxonomy and ecology.

***Hyphessobrycon micropterus* (Eigenmann, 1915)**

Megalampodus micropterus Eigenmann, 1915: 54, fig. 16; pl. 8

(fig. 1). Type locality: Lagoa do Porto [São Francisco River basin, Bahia, Brazil]. Holotype: FMNH 57916 [ex CM 6900a].

Maximum length: 2.7 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Remarks and references: See Weitzman & Palmer (1997a: 232-233; 1998: 129) for remarks on the taxonomy.

***Hyphessobrycon milleri* Durbin, 1908**

Hyphessobrycon compressus milleri Durbin in Eigenmann, 1908:

100. Type locality: Los Amates, Guatemala [Zacapa, Río Motagua drainage, 15°16'N, 89°6'W]. Holotype: whereabouts unknown.

Maximum length: 2.92 cm SL

Distribution: Central America: Motagua River basin.

Countries: Guatemala

***Hyphessobrycon minimus* Durbin, 1909**

Hyphessobrycon minimus Durbin, 1909: 68. Type locality: Cane

Grove Corner [mouth of the Mahaica River, Guyana]. Holotype: FMNH 52794 [ex CM 1193].

Maximum length: 2.1 cm TL

Distribution: South America: Mahaica River basin.

Countries: Guyana

***Hyphessobrycon minor* Durbin, 1909**

Hyphessobrycon minor Durbin, 1909: 65. Type locality: Konawaruk

[Konawaruk River, tributary of the Essequibo River, approx. 6°42'N, 58°54'W, Guyana]. Holotype: FMNH 52789 [ex CM 1189] (missing).

Maximum length: 3.12 cm SL

Distribution: South America: Essequibo River basin.

Countries: Guyana

Remarks and references: See Weitzman & Palmer (1997a: 229) for notes on taxonomy.

***Hyphessobrycon moniliger* Moreira, Lima & Costa, 2002**

Hyphessobrycon moniliger Moreira, Lima & Costa, 2002: 74, fig.

1. Type locality: Brazil: Tocantins: município de Araguaçu, farm Praia Alta 2, Araguaçu to Barreira do Piqui road, 27 km N from Araguaçu, pool behind farm's house, rio Água Fria basin, 12°42'S 49°55'W. Holotype: MZUSP 67466.

Maximum length: 2.88 cm SL

Distribution: South America: Araguaia-Tocantins River and upper Tapajós River basins.

Countries: Brazil

***Hyphessobrycon mutabilis* Costa & Géry, 1994**

Hyphessobrycon mutabilis Costa & Géry, 1994: 74, figs. 6-7. Type

locality: Brazil: Estado de Mato Grosso, tributary of rio Sete de Setembro, rio Xingu basin, 107 km SW of Canarana, 13°51'S, 52°40'W. Holotype: MNRJ 12438.

Maximum length: 2.69 cm SL

Distribution: South America: Upper Xingu River basin.

Countries: Brazil

***Hyphessobrycon negodagua* Lima & Gerhard, 2001**

Hyphessobrycon negodagua Lima & Gerhard, 2001: 106, fig. 1.

Type locality: Brazil: Bahia; município de Iraquara, rio Pratinha at fazenda Pratinha, 12°21'13''S 41°32'51''W. Holotype: MZUSP 53989.

Maximum length: 2.82 cm SL

Distribution: South America: Upper Paraguaçu River basin.

Countries: Brazil

***Hyphessobrycon panamensis* Durbin, 1908**

Hyphessobrycon panamensis Durbin in Eigenmann, 1908: 101. Type locality: Panama Boqueron River, Panama. Syntypes: MCZ 20688 (5), USNM 120416 (1).

Hemigrammus minutus Meek & Hildebrand, 1912: 67. Type locality: Rio Agua Clara, C.Z., Panama. Holotype: FMNH 7572 (missing).

Hyphessobrycon panamensis daguae Eigenmann, 1922: 141. Type locality: Dagua and Patia Basins [Colombia]. Syntypes: FMNH ?56516 (1), FMNH 56526-56529 (1,2,2,2), FMNH 58316 (2).

Maximum length: 4.41 cm SL

Distribution: South and Central America: Atlantic slope of southern Costa Rica; atlantic coastal streams of Panama; San Juan, Atrato, Dagua, and Patia Rivers, and around the mouth of the Magdalena River; Esmeraldas River.

Countries: Colombia, Costa Rica, Ecuador, Panama

Remarks and references: See Weitzman & Palmer (1997a: 227-229) for notes on taxonomy, and Kramer (1978) for observations on reproduction.

***Hyphessobrycon parvillus* Ellis, 1911**

Hyphessobrycon parvillus Ellis, 1911: 153, pl. 2 (fig. 1). Type locality: Alagoinhas, Rio Catú [Bahia, Brazil]. Holotype: FMNH 54392 [ex CM 3011].

Maximum length: 2.16 cm SL

Distribution: South America: Catu and Itapicuru Rivers in northeastern Bahia.

Countries: Brazil

Remarks and references: See Lima & Gerhard (2001: 110-111) for comments on the taxonomy.

***Hyphessobrycon peruvianus* Ladiges, 1938**

Hyphessobrycon peruvianus Ladiges, 1938: 50. Type locality: der peruanische Teil des Amazonenstromes zwischen Tabatinga und Iquitos angegeben. Lectotype: ZMH H60 [ex 17758 in part].

Maximum length: 2.81 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

***Hyphessobrycon piabinhas* Fowler, 1941**

Hyphessobrycon piabinhas Fowler, 1941: 187, fig. 97. Type locality: Fortaleza, Ceará [=Fortaleza, Brazil]. Holotype: ANSP 69580.

Maximum length: 3.2 cm SL

Distribution: South America: Fortaleza, Ceará (only known from type locality).

Countries: Brazil

Remarks and references: See notes on the type material by Géry (1972: 8-9).

***Hyphessobrycon poecilioides* Eigenmann, 1913**

Hyphessobrycon poecilioides Eigenmann, 1913: 29. Type locality: Cali [Colombia]. Holotype: FMNH 56290 [ex CM 5091].

Maximum length: 6.9 cm TL

Distribution: South America: Cauca River basin.

Countries: Colombia

***Hyphessobrycon procerus* Mahnert & Géry, 1987**

Hyphessobrycon procerus Mahnert & Géry, 1987: 311, figs. 3-4. Type locality: Paraguay, dept. Caaguazu, Rio Guyrau-gua à Ltr. Juan M. Frutos. Holotype: MHNG 2385.68.

Maximum length: 3.3 cm SL

Distribution: South America: Guyrau-gua River basin.

Countries: Paraguay

***Hyphessobrycon proteus* Eigenmann, 1913**

Hyphessobrycon proteus Eigenmann, 1913: 28. Type locality: Quibdo [Colombia]. Holotype: FMNH 56293 [ex CM 5094].

Maximum length: 7.4 cm TL

Distribution: South America: Atrato, Sinú, and lower portions of Magdalena River basins.

Countries: Colombia

Remarks and references: Generally considered a synonym of *Hyphessobrycon inconstans* (Eigenmann & Ogle), see Eigenmann (1918: 199), but probably a valid species.

Common names: Galocha (Colombia), Sardinita (Colombia)

***Hyphessobrycon pulchripinnis* Ahl, 1937**

Hyphessobrycon pulchripinnis Ahl, 1937a: 235. Type locality: vermutlich Amazonas [Brasil]. Holotype: ZMB 20849 (male).

Maximum length: 3.6 cm TL

Distribution: South America: Tapajós River basin.

Countries: Brazil

Remarks and references: See Géry (1980a) for a redescription, and Burt et al. (1988) for comments on the reproduction.

***Hyphessobrycon pyrrhonotus* Burgess, 1993**

Hyphessobrycon pyrrhonotus Burgess, 1993: 157, figs. Type locality: Rio Erere, a tributary to the Rio Negro, Brazil. Holotype: MZUSP 45714.

Maximum length: 4.54 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

Remarks and references: See Weitzman & Palmer (1997c) for general comments.

***Hyphessobrycon pytai* Géry & Mahnert, 1993**

Hyphessobrycon pytai Géry & Mahnert, 1993: 33, fig. 1. Type locality: Paraguay, Caaguazu: petit affluent du Rio Güyraugua sur la route Asuncion-Cde del Este, près de Juan Frutos, bassin du Rio Monday (Parana). Holotype: MHNG 2543.86.

Maximum length: 3.8 cm SL

Distribution: South America: Güyraugua River basin (only known from type locality).

Countries: Paraguay

***Hyphessobrycon reticulatus* Ellis, 1911**

Hyphessobrycon reticulatus Ellis, 1911: 153, pl. 2 (fig. 2). Type locality: Campos [Paraíba do Sul River, Rio de Janeiro, Brazil]. Holotype: FMNH 54397 [ex CM 3018].

Maximum length: 4.9 cm SL

Distribution: South America: Coastal river drainages from Rio de Janeiro to northern Santa Catarina States.

Countries: Brazil

Remarks and references: Possibly a junior synonym of *Hyphessobrycon boulengeri* (Malabarba, 1989: 135).

***Hyphessobrycon robustulus* (Cope, 1870)**

Hemigrammus robustulus Cope, 1870: 561. Type locality: Pebas, Equador [actually Peru]. Syntypes: ANSP 8037 (1), ANSP 8038-8052 (15).

Maximum length: 4.4 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Remarks and references: Holotype redescribed and figured by Fowler (1906: 335-336).

***Hyphessobrycon rosaceus* Durbin, 1909**

Hyphessobrycon rosaceus Durbin, 1909: 67. Type locality: Gluck I., Essequibo R., Guyana (a river island at ca 6°00' to 6°05'N, 58°36'W). Holotype: FMNH 52791 [ex CM 1190].

Hyphessobrycon ornatus Ahl, 1934: 238, figs. Type locality: Pará, Brazil [probably in error for Guyana]. Syntypes: ZMB 20781 (1 or 3), ZMB 20805 (7).

Cheirodon troemneri Fowler, 1942: 1. Type locality: Aquarium fish without locality, thought to have been obtained in Brazil. Holotype: lost (Weitzman & Palmer, 1997a: 234).

Maximum length: 3.42 cm SL

Distribution: South America: Essequibo, Corantijn and Suriname

River basins.

Countries: Guyana, Suriname

Remarks and references: See Weitzman & Palmer (1997a: 229-231; 1997b) for notes on taxonomy. See Weitzman & Palmer (1997a: 233-234) for possible synonymy of *C. troemneri*.

***Hyphessobrycon roseus* (Géry, 1960)**

Megalampodus roseus Géry, 1960b: 26, pl. 2 (fig. 3); figs. 10-11. Type locality: criques near Gaa Kaba, Maroni [French Guiana]. Holotype: SMF 4784.

Maximum length: 1.93 cm SL

Distribution: South America: Maroni and Oyapock River basins.

Countries: French Guiana

Remarks and references: See Planquette et al. (1996: 332-333) and Weitzman & Palmer (1998: 131) for notes on taxonomy, biology and distribution.

***Hyphessobrycon saizi* Géry, 1964**

Hyphessobrycon saizi Géry, 1964c: 46, fig. 11. Type locality: About 200 miles east of Bogota, Colombia, in the upper Rio Meta drainage. Holotype: USNM 198647.

Maximum length: 23 mm SL

Distribution: South America: Upper Meta River basin.

Countries: Colombia

***Hyphessobrycon santae* (Eigenmann, 1907)**

Hemigrammus santae Eigenmann in Eigenmann & Ogle, 1907: 16. Type locality: Lagoa Santa [São Francisco River basin, Minas Gerais, Brazil]. Holotype: USNM 55652.

Tetragonopterus rivularis var. *interrupta* Lütken, 1875b: 215. Name not available, published in the synonymy of *Tetragonopterus rivularis* Lütken. Also a junior homonym of *Tetragonopterus interruptus* Jenyns.

Maximum length: 4.2 cm TL

Distribution: South America: São Francisco River basin.

Countries: Brazil

***Hyphessobrycon savagei* Bussing, 1967**

Hyphessobrycon savagei Bussing, 1967: 215, fig. 2. Type locality: Puntarenas: Río Ceibo (260 m) at IH [=Interamerican Highway], 4 km NW of Buenos Aires turnoff [Costa Rica]. Holotype: LACM 9237-1.

Maximum length: 3.72 cm SL

Distribution: Central America: Pacific drainages between Jicote River near Parrita and Esquinas River basin.

Countries: Costa Rica

***Hyphessobrycon schauenseei* Fowler, 1926**

Hyphessobrycon schauenseei Fowler, 1926: 254, fig. Type locality: Rio Inhangpy, Pará, Brazil [= Inhangapi River]. Holotype: ANSP 90878.

Maximum length: 3.1 cm SL

Distribution: South America: Inhangapi River basin (only known from type locality).

Countries: Brazil

***Hyphessobrycon scholzei* Ahl, 1937**

Hyphessobrycon scholzei Ahl, 1937b: 445. Type locality: Amazonas bei Para [Brazil]. Lectotype: ZMB 20798, designated by Zarske & Géry (1995: 116).

Maximum length: 4 cm TL

Distribution: South America: Lower Amazon River basin.

Countries: Brazil

***Hyphessobrycon simulatus* (Géry, 1960)**

Pseudopristella simulata Géry, 1960b: 18, pl. 2 (fig. 1); figs. 3-4. Type locality: Kourou River (coast) [French Guiana]. Holotype: SMF 4786.

Maximum length: 3 cm SL

Distribution: South America: Maroni, Mana, Sinnamary, Kourou,

Comté, Approuague and Oyapock River basins.

Countries: French Guiana

Remarks and references: See Planquette et al. (1996: 336-337) and Weitzman & Palmer (1997a: 235) for notes on taxonomy, biology and distribution.

***Hyphessobrycon socolofi* Weitzman, 1977**

Hyphessobrycon socolofi Weitzman, 1977a: 327, figs. 1-3. Type locality: Brazil, State of Amazonas, Rio Negro, Barcelos (62°57'W, 0°58'S). Holotype: MZUSP 13181.

Maximum length: 5.63 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

Remarks and references: See Weitzman & Palmer (1997c) for general comments.

***Hyphessobrycon sovichthys* Schultz, 1944**

Hyphessobrycon sovichthys Schultz, 1944: 350, fig. 53. Type locality: Ciénaga del Guanavana, about 10 km. north of Sinamaica, Maracaibo Basin, Venezuela. Holotype: USNM 121534.

Maximum length: 3 cm SL

Distribution: South America: Maracaibo Lake basin.

Countries: Venezuela

***Hyphessobrycon stegemanni* Géry, 1961**

Hyphessobrycon stegemanni Géry, 1961b: 7, fig. 1. Type locality: originally savannahs of northeastern Brazil, between the lower Rio Tocantins and the rio Capim corrected to Brazil, Estado do Tocantins... município de Itacajá, between rio Manoel Alves Pequeno and rio Vermelho, rio Tocantins basin, approx. 8°19'S, 47°25'W (Lima & Géry, 2001: 96). Holotype: USNM 195942.

Maximum length: 3.12 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Remarks and references: See Lima & Géry (2001) for the correction of the type locality, and Seegers & Géry (1989) for notes on distribution.

***Hyphessobrycon stramineus* Durbin, 1918**

Hyphessobrycon stramineus Durbin, in Eigenmann, 1918: 190. Type locality: Tabatinga [Amazon River basin, Amazonas, Brazil]. Holotype: MCZ 20772.

Maximum length: 3.8 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Hyphessobrycon sweglesi* (Géry, 1961)**

Megalampodus sweglesi Géry, 1961c: 36, fig. 7. Type locality: Surroundings of Leticia, Upper Amazon, corrected to Río Muco and upper Meta (Géry, 1966c: 232) [Orinoco River basin, Colombia]. Holotype: USNM 196090.

Maximum length: 3.2 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia

Remarks and references: Taphorn (1992: 239) suggested that *H. sweglesi* could be a synonym of *H. bentosi*. However, see Weitzman & Palmer (1997d; 1998: 131).

***Hyphessobrycon takasei* Géry, 1964**

Hyphessobrycon takasei Géry, 1964d: 15, fig. 2. Type locality: Serra do Navio above Macapa, Amapa Territorio, lower Amazon basin [Brazil]. Holotype: USNM 198138.

Maximum length: 3.02 cm SL

Distribution: South America: Araguari and Oyapock River basins.

Countries: Brazil, French Guiana

Remarks and references: See Planquette et al. (1996: 290-291) for notes on taxonomy, ecology, and distribution.

***Hyphessobrycon taurocephalus* Ellis, 1911**

Hyphessobrycon taurocephalus Ellis, 1911: 151 [footnote], pl. 1

(fig. 4). Type locality: Serrinha Paraná, Rio Iguassú [=Iguaçu River, Brazil]. Holotype: FMNH 54389 [ex CM 3007].
 Maximum length: 5.5 cm TL
 Distribution: South America: Iguacu River basin.
 Countries: Brazil
 Remarks and references: See Lima & Gerhard (2001: 159) for notes on taxonomy.

***Hyphessobrycon tenuis* Géry, 1964**

Hyphessobrycon tenuis Géry, 1964a: 10, fig. 8. Type locality: petit ruisseau faisant communiquer le Zapote Cocha avec le Caño Yarina, en bordure du Rio Pacaya, affluent du canal de Puinahua (bras du bas Rio Ucayali) [Peru]. Holotype: not researched.
 Maximum length: 2.6 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Peru

***Hyphessobrycon tortuguerae* Böhlke, 1958**

Hyphessobrycon tortuguerae Böhlke, 1958a: 173, fig. 1. Type locality: Tortuguero River (Lagoon) at Tortuguero, 2 miles from ocean inlet, Costa Rica. Holotype: UF 5741.
 Maximum length: 3.9 cm SL
 Distribution: Central America: Atlantic versant between the Patuca River in Honduras and rivers San Juan and Tortuguero in northern Costa Rica.
 Countries: Costa Rica, Honduras

***Hyphessobrycon tropis* Géry, 1963**

Hyphessobrycon tropis Géry, 1963b: 57, fig. 5. Type locality: Tapurucua, upper Rio Negro [Brazil]. Holotype: USNM 198639 [ex Géry coll. M.336,1].
 Maximum length: 2.13 cm SL
 Distribution: South America: Middle Negro River basin.
 Countries: Brazil

***Hyphessobrycon tukunai* Géry, 1965**

Hyphessobrycon tukunai Géry, 1965c: 25, pl. 4 (fig. 12). Type locality: Igarapé Prêto, collatéral de l'Amazone supérieure près de Belem, à environ 60 km en aval de Leticia [Solimões River, Amazonas, Brazil]. Holotype: SMF 7209.
 Maximum length: 2.06 cm SL
 Distribution: South America: Upper Solimões River basin.
 Countries: Brazil

***Hyphessobrycon uruguayensis* (Fowler, 1943)**

Megalampodus uruguayensis Fowler, 1943c: 313, fig. 2. Type locality: Uruguay. Holotype: ANSP 70331.
 Maximum length: 3.74 cm SL
 Distribution: South America: Uruguay River basin.
 Countries: Uruguay
 Remarks and references: See Weitzman & Palmer (1997a: 234; 1998: 129) for notes on taxonomy.

***Hyphessobrycon vilmae* Géry, 1966**

Hyphessobrycon vilmae Géry, 1966b: 64, fig. 1. Type locality: Upper Arinos-Juruena basin, Brazil. Holotype: MHNG 2229.04.
 Maximum length: 2.94 cm SL
 Distribution: South America: Upper Tapajós River basin.
 Countries: Brazil

***Hyphessobrycon wajat* Almiron & Casciotta, 1999**

Hyphessobrycon wajat Almiron & Casciotta, 1999: 340, fig. 1. Type locality: Argentina, Corrientes province, Laguna Brava (58°44'W-27°33'S). Holotype: MLP 9321.
 Maximum length: 3.1 cm SL
 Distribution: South America: Paraná River basin.
 Countries: Argentina

***Hyphessobrycon weneri* Géry & Uj, 1987**

Hyphessobrycon weneri Géry & Uj, 1987a: 546, fig. Unnumb. p.546. Type locality: Estado do Para, Brasilien, Einzugsgebiet des Rio Guama, Waldbach zwischen Santa Maria do Para und Sao Miguel do Guama, etwa 120 Kilometer von Belem (Para) auf der strasse BR 010. Holotype: MZUSP 42365.
 Maximum length: 3.2 cm SL
 Distribution: South America: Guamá River basin.
 Countries: Brazil
 Remarks and references: See Weitzman & Palmer (1997a: 215, 222) for notes on taxonomy.

HYPOBRYCON

Hypobrycon Malabarba & Malabarba, 1994: 20. Type species: *Hypobrycon maromba* Malabarba & Malabarba, 1994. Type by original designation. Gender: masculine.

***Hypobrycon leptorhynchus* Silva & Malabarba, 1996**

Hypobrycon leptorhynchus Silva & Malabarba, 1996: 46, fig. 1. Type locality: Brazil: Santa Catarina: Campos Novos: rio Ibicuí, about 10 km from its mouth in the rio Canoas, rio Uruguai drainage, near the Celulose Iguacu pulp mill plant (approx. 27°33'S, 51°12'W). Holotype: MCP 18862.
 Maximum length: 4.76 cm SL
 Distribution: South America: Upper Uruguay River basin.
 Countries: Brazil

***Hypobrycon maromba* Malabarba & Malabarba, 1994**

Hypobrycon maromba Malabarba & Malabarba, 1994: 20, fig. 2. Type locality: Brazil: Santa Catarina: rio das Marombas, under Irineu Bornhausen bridge, on the old road to Campos Novos (approx. 27°11'S, 50°38'W). Holotype: MCP 15757.
 Maximum length: 4.84 cm SL
 Distribution: South America: Upper Uruguay River basin.
 Countries: Brazil

***Hypobrycon poi* Almirón, Casciotta & Cione, 2001**

Hypobrycon poi Almirón, Casciotta, Azpelicueta & Cione, 2001: 35, fig. 1. Type locality: Argentina, Misiones, Municipio Leandro N. Alem, arroyo Once Vueltas (27°38'S - 55°12'W), Uruguay basin. Holotype: MLP 9573.
 Distribution: South America: Uruguay River basin.
 Countries: Argentina

INPAICHTHYS

Inpaichthys Géry & Junk, 1977: 417. Type species: *Inpaichthys kerri* Géry & Junk, 1977. Type by original designation. Gender: masculine.

***Inpaichthys kerri* Géry & Junk, 1977**

Inpaichthys kerri Géry & Junk, 1977: 418, fig. 5. Type locality: pequeno igarapé pertencente ao sistema do igarapé Queimada (atualmente igarapé do Aeroporto), cerca de duas horas da Cidade de Humboldt (Núcleo Aripuanã), na futura estrada para Juruena, alto rio Aripuanã [Madeira River system, Mato Grosso, Brazil]. Holotype: INPA 10408.
 Maximum length: 2.8 cm SL
 Distribution: South America: Aripuanã River, upper Madeira River basin in Mato Grosso State.
 Countries: Brazil
 Common names: Puxa-puxa (Brazil)

JUPIABA

Jupiaba Zanata, 1997: 102. Type species: *Jupiaba poranga* Zanata, 1997. Gender: feminine.

***Jupiaba abramoides* (Eigenmann, 1909)**

Astyanax abramoides Eigenmann, 1909a: 21. Type locality: Tumatari, Potaro River [Guyana]. Holotype: FMNH 52863 [ex CM

1028].
 Maximum length: 12 cm SL
 Distribution: South America: Orinoco River basin and coastal drainages in the Guianas
 Countries: French Guiana, Guyana, Suriname, Venezuela

***Jupiaba acanthogaster* (Eigenmann, 1911)**

Deuterodon acanthogaster Eigenmann, 1911b: 179, pl. 8 (fig. 3).
 Type locality: Corumbá [Brazil]. Holotype: FMNH 54748 [ex CM 3395a].

Distribution: South America: Paraguay River basin in Brazil, upper Tapajós and Tocantins River basins.
 Countries: Brazil

***Jupiaba anteroides* (Géry, 1965)**

Astyanax (Poecilirichthys) anteroides Géry, 1965c: 16, pl. 1 (figs. 3-4). Type locality: Igarapé Prêto, collatéral de l'Amazone supérieure près de Belem, à environ 60 km en aval de Leticia, Brazil. Holotype: SMF 7255.

Distribution: South America: Upper Amazon and Curuá-Una River basins.
 Countries: Brazil

***Jupiaba apenina* Zanata, 1997**

Jupiaba apenina Zanata, 1997: 108, fig. 7. Type locality: Brasil. Mato Grosso: Cachimbo, rio Peixoto de Azevedo. Holotype: MZUSP 48458.

Distribution: South America: Peixoto de Azevedo and Noedori River basins.
 Countries: Brazil

***Jupiaba asymmetrica* (Eigenmann, 1908)**

Astyanax asymmetricus Eigenmann, 1908: 94. Type locality: Tabatinga [Amazonas, Brazil].

?*Astyanax asymmetricus colombiensis* Fowler, 1945b: 97, fig. 2. Type locality: Morelia, Río Caquetá drainage, Colombia. Holotype: ANSP 71672. Provisional synonym.

Distribution: South America: Upper Amazon River basin
 Countries: Brazil, Colombia, Ecuador, Peru

***Jupiaba atypindi* Zanata, 1997**

Jupiaba atypindi Zanata, 1997: 111, fig. 8. Type locality: Brasil. Pará: (igarapé Jaramucu, affluente do rio Cuminá). Holotype: MZUSP 17809.

Distribution: South America: Negro River and some of its tributaries: Uraricoera, Surumu, and Cuminá rivers.
 Countries: Brazil

***Jupiaba essequibensis* (Eigenmann, 1909)**

Astyanax essequibensis Eigenmann, 1909a: 17. Type locality: Tumatumari, Potaro River [Guyana]. Holotype: FMNH 53519 [ex CM 1018].

Distribution: South America: Essequibo River basin.
 Countries: Guyana

***Jupiaba keithi* (Géry, Planquette & Le Bail, 1996)**

Astyanax keithi Géry, Planquette & Le Bail, 1996: 26, fig. 10; pl. 1c. Type locality: Maroni, Crique Balaté [French Guiana]. Holotype: MNHN 1995-1087.

Maximum length: 10 cm SL
 Distribution: South America: Coastal rivers in French Guiana.
 Countries: French Guiana

***Jupiaba maroniensis* (Géry, Planquette & Le Bail, 1996)**

Astyanax maroniensis Géry, Planquette & Le Bail, 1996: 17, pl. 2a. Type locality: Antecume Pata, village indien au confluent du Litani et du Marouini, formateurs du Maroni [French Guiana]. Holotype: MNHN 1995-1091.

Maximum length: 6 cm TL

Distribution: South America: Coastal rivers in French Guiana.
 Countries: French Guiana

***Jupiaba meunieri* (Géry, Planquette & Le Bail, 1996)**

Astyanax meunieri Géry, Planquette & Le Bail, 1996: 21, pl. 2b.

Type locality: Approuague, Rivière Arataye au Saut Japigny [French Guiana]. Holotype: MNHN 1995-1086.

Maximum length: 9 cm SL
 Distribution: South America: Coastal rivers in French Guiana and Suriname.

Countries: French Guiana, Suriname

***Jupiaba minor* (Travassos, 1964)**

Deuterodon minor Travassos, 1964: 11, fig. 1. Type locality: Rio Cachimbo - Cachimbo - Aeroporto da FAB. Abaixo do Salto - Estado do Pará. Lat. 9°22'S e Long. 54°55'W [Brasil]. Holotype: MNRJ 9196.

Distribution: South America: Cachimbo River basin, Pará State.
 Countries: Brazil

***Jupiaba mucronata* (Eigenmann, 1909)**

Astyanax mucronatus Eigenmann, 1909a: 19. Type locality: Tumatumari above fall [Guyana]. Holotype: FMNH 53520 [ex CM 1025].

Maximum length: 4.2 cm SL
 Distribution: South America: Coastal rivers in Guyana.
 Countries: Guyana

***Jupiaba ocellata* (Géry, Planquette & Le Bail, 1996)**

Astyanax ocellatus Géry, Planquette & Le Bail, 1996: 12, pl. 1a.

Type locality: Oyapock entre Saut Maripa et Camopi [French Guiana]. Holotype: MNHN 1995-1090.

Maximum length: 12 cm TL
 Distribution: South America: Coastal rivers of northeastern South America.

Countries: Brazil, French Guiana

***Jupiaba pinnata* (Eigenmann, 1909)**

Deuterodon pinnatus Eigenmann, 1909a: 25. Type locality: Amatuk, Lower Potaro River [Guyana]. Holotype: FMNH 53525 [ex CM 1046].

Maximum length: 5.82 cm SL
 Distribution: South America: Coastal rivers in Guyana and Suriname.

Countries: Guyana, Suriname

***Jupiaba pirana* Zanata, 1997**

Jupiaba pirana Zanata, 1997: 114, fig. 9. Type locality: Brasil. Pará: (rio Tapajós, igarapé Pimenta, Parque Nacional da Amazônia). Holotype: MZUSP 25389.

Maximum length: 4.35 cm SL
 Distribution: South America: Tapajós River basin.
 Countries: Brazil

***Jupiaba polylepis* (Günther, 1864)**

Tetragonopterus polylepis Günther, 1864: 320. Type locality: British Guiana. Holotype: BMNH 1845.3.5.33.

Maximum length: 6.12 cm SL
 Distribution: South America: Paru de Oeste, Xingu, Tocantins, and Araguaia River basins and coastal rivers in Suriname and Guyana.

Countries: Brazil, Guyana, Suriname

***Jupiaba poranga* Zanata, 1997**

Jupiaba poranga Zanata, 1997: 115, fig. 10. Type locality: Brasil. Mato Grosso: Diamantino (rio Arinos, riacho Monjolinho). Holotype: MZUSP 45324.

Maximum length: 7.9 cm SL
 Distribution: South America: Peixoto de Azevedo and Arinos River basins in Tapajós River drainage.

Countries: Brazil

***Jupiaba potaroensis* (Eigenmann, 1909)**

Astyanax potaroensis Eigenmann, 1909a: 22. Type locality: Amatum Cataract, Potaro River [Guyana]. Holotype: FMNH 52695 [ex CM 1037].

Maximum length: 4.64 cm SL

Distribution: South America: Potaro River basin.

Countries: Guyana

***Jupiaba scologaster* (Weitzman & Vari, 1986)**

Astyanax scologaster Weitzman & Vari, 1986: 709, figs. 1, 3. Type locality: Venezuela, Territorio Federal Amazonas, lower portion of Caño Manu, which drains into the Casiquiare about 250 m upstream of Solano (approx. 02°00'N, 66°57'W). Holotype: MBUCV V-15249.

Maximum length: 3.7 cm SL

Distribution: South America: Upper Negro and Orinoco River basins.

Countries: Brazil, Venezuela

***Jupiaba yarina* Zanata, 1997**

Jupiaba yarina Zanata, 1997: 119, fig. 11. Type locality: Brasil. Mato Grosso: (rio Arinos, riacho Monjolinho). Holotype: MZUSP 45323.

Maximum length: 7.73 cm SL

Distribution: South America: Arinos River basin in Tapajós River drainage.

Countries: Brazil

***Jupiaba zonata* (Eigenmann, 1908)**

Astyanax zonatus Eigenmann, 1908: 95. Type locality: Tabatinga [Amazonas, Brazil]. Lectotype: MCZ 89560 (1 of 2).

Maximum length: 4.71 cm SL

Distribution: South America: Upper Amazon and Negro River basins.

Countries: Brazil

KNODUS

Knodus Eigenmann, 1911a: 216. Type species: *Knodus meridae* Eigenmann, 1911. Type by monotypy. Gender: masculine. Also appeared as new genus in Eigenmann (1918: 114) but with type given as *Bryconamericus breviceps* Eigenmann.

***Knodus breviceps* (Eigenmann, 1908)**

Bryconamericus breviceps Eigenmann, 1908: 105. Type locality: Goyaz [Goiás, Tocantins or Paraná River basin, Brazil]. Syntypes: (many) MCZ 20692 (20, USNM 120274 [ex MCZ 20692] (4).

Maximum length: 8.7 cm TL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Common names: Piaba (Brazil)

***Knodus caquetae* Fowler, 1945**

Knodus caquetae Fowler, 1945b: 94, fig. 1. Type locality: Morelia, Rio Caquetá drainage, Colombia. Holotype: ANSP 71670.

Maximum length: 6.5 cm SL

Distribution: South America: Amazon and Caquetá River basins.

Countries: Colombia

***Knodus chapadae* (Fowler, 1906)**

Astyanax chapadae Fowler, 1906: 349, fig. 33. Type locality: Near Santa Anna da Chapada, in Matto Grosso, Brazil, from the headwaters of the Paraguay. Holotype: ANSP 21828.

Maximum length: 4.4 cm SL

Distribution: South America: Upper Paraguay River basin.

Countries: Brazil

***Knodus delta* Géry, 1972**

Knodus delta Géry, 1972a: 56, pl. 3 (fig. 2). Type locality: Ruisseau près de Puerto Napo, haut Río Napo [Ecuador]. Holotype: ZMH H1473.

Maximum length: 3.61 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Ecuador

***Knodus gamma* Géry, 1972**

Knodus gamma Géry, 1972a: 52, pl. 2 (fig. 3). Type locality: Río Villano, affluent du rio Cururay [Ecuador]. Holotype: ZMH H1861.

Maximum length: 4.84 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Ecuador

***Knodus heteresthes* (Eigenmann, 1908)**

Bryconamericus heteresthes Eigenmann, 1908: 105. Type locality: Tapajos [Brazil]. Syntypes: (many) MCZ 89966 [ex MCZ 20862a] (34), USNM 120247 [ex MCZ 20862a] (6).

Maximum length: 5.1 cm TL

Distribution: South America: Tapajós River basin.

Countries: Brazil

***Knodus hypopterus* (Fowler, 1943)**

Bryconamericus hypopterus Fowler, 1943a: 242, fig. 20. Type locality: Florencia, Rio Ortegusa, Colombia. Holotype: ANSP 70505.

Maximum length: 4.4 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Colombia

***Knodus megalops* Myers, 1929**

Knodus megalops Myers in Eigenmann & Myers, 1929: 527. Type locality: Rio Pichis, Puerto Bermudez [Peru]. Holotype: CAS 61845 [ex IU 17668].

Maximum length: 5.9 cm TL

Distribution: South America: Amazon River River basin.

Countries: Peru

***Knodus meridae* Eigenmann, 1911**

Knodus meridae Eigenmann, 1911b: 216. Type locality: Merida, Venezuela. Holotype: BMNH 1911.5.29.148.

Maximum length: 4.5 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Knodus mizquae* (Fowler, 1943)**

Astyanax mizquae Fowler, 1943e: 4, fig. 3. Type locality: Ele Ele, 5000 feet elevation, Río Mizque, Department of Cochabamba, Bolivia. Holotype: ANSP 69176.

Distribution: South America: Bolivia (?).

Countries: Bolivia

***Knodus moenkhausii* (Eigenmann & Kennedy, 1903)**

Poecilurichthys moenkhausii Eigenmann & Kennedy, 1903: 522. Type locality: a brook near Arroyo Trementina [Paraguay]. Holotype: CAS 55102 [ex IU 10001].

Maximum length: 4.5 cm TL

Distribution: South America: Paraguay River basin.

Countries: Paraguay, Peru

***Knodus orteguasae* (Fowler, 1943)**

Bryconamericus orteguasae Fowler, 1943a: 240, fig. 19. Type locality: Florencia, Rio Ortegusa, Colombia. Holotype: ANSP 70504.

Distribution: South America: Caquetá River basin.

Countries: Colombia

***Knodus savannensis* Géry, 1961**

Knodus savannensis Géry, 1961c: 26, fig. 1. Type locality: savan-

nahs of northeastern Brazil, between the lower Rio Tocantins and the rio Capim [Brazil], corrected to "Brazil, Estado do Tocantins.. município de Itacajá, between rio Manoel Alves Pequeno and rio Vermelho, rio Tocantins basin, approx. 8°19'S, 47°25'W or Brasil, estado do Tocantins, rio Javaés, Ilha do Bananal, approx. 11° S, 51° W" by Lima & Géry (2001: 96). Holotype: USNM 196088.

Maximum length: 3.37 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

***Knodus septentrionalis* Géry, 1972**

Knodus victoriae septentrionalis Géry, 1972a: 49, pl. 2, fig. 1. Type locality: rio Capotazo, affluent du haut rio Paltaza [Ecuador]. Holotype: ZMH 2261.

Maximum length: 5.05 cm SL

Distribution: South America: Upper Pastaza River basin.

Countries: Ecuador

***Knodus smithi* (Fowler, 1913)**

Bryconamericus smithi Fowler, 1913: 557, fig. 18. Type locality: Tributary of the Madeira River near Porto Velho, Brazil. Holotype: ANSP 39293.

Bryconamericus jacunda Fowler, 1913: 555, fig. 17. Type locality: Madeira River, about 200 miles east of W. Long. 62°20', Brazil. Holotype: ANSP 39292.

Maximum length: 3.5 cm TL

Distribution: South America: Madeira River basin.

Countries: Bolivia, Brazil

***Knodus victoriae* (Steindachner, 1907)**

Tetragonopterus victoriae Steindachner, 1907: 83. Type locality: einem kleinen Bache nächst seiner Mündung in den Parnahyba bei dem Städtchen Victoria [Maranhão, Brazil]. Syntypes: (several) NMW 57823-25 (16, 13, 18).

Distribution: South America: Parnaíba River basin.

Countries: Brazil

LEPTAGONIATES

Leptagoniates Boulenger, 1887a: 281. Type species: *Leptagoniates steindachneri* Boulenger, 1887a. Type by monotypy. Gender: masculine. See Malabarba (1998: 229) for comments.

***Leptagoniates pi* Vari, 1978**

Leptagoniates pi Vari, 1978: 185, fig. 1. Type locality: Bolivia, Río Mamoré, 10 km west of San Pedro, lagoons communicating with river. Holotype: AMNH 35952.

Maximum length: 3.1 cm SL

Distribution: South America: Mamoré River basin.

Countries: Bolivia

***Leptagoniates steindachneri* Boulenger, 1887**

Leptagoniates steindachneri Boulenger, 1887a: 282, pl. 23, fig. 3. Type locality: Sarayacu [eastern Ecuador]. Holotype: BMNH 1880.12.5.252.

Maximum length: 7.6 cm SL

Distribution: South America: Amazon River basin.

Countries: Ecuador, Peru

LEPTOBRYCON

Leptobrycon Eigenmann, 1915: 46. Type species: *Leptobrycon jatuaranae* Eigenmann, 1915. Type by original designation. Gender: masculine. See Malabarba (1998: 230) for comments.

***Leptobrycon jatuaranae* Eigenmann, 1915**

Leptobrycon jatuaranae Eigenmann, 1915: 46, pl. 6 (fig. 1). Type locality: Jatuarana [Amazonas, Brazil]. Holotype: MCZ 20952.

Maximum length: 2.9 cm

Distribution: South America: Amazon River basin.

Countries: Brazil

LIGNOBRYCON

Lignobrycon Eigenmann & Myers, 1929: 513. Type species: *Tetragonopterus ligniticus* Woodward, 1898. Type by original designation. Gender: masculine. Type is a fossil species.

Moojenichthys Miranda Ribeiro, 1956: 546. Type species: *Moojenichthys myersi* Miranda Ribeiro, 1956. Type by original designation. Gender: masculine.

***Lignobrycon myersi* (Miranda Ribeiro, 1956)**

Moojenichthys myersi Miranda Ribeiro, 1956: 546, fig. Type locality: Rio Braço, Ilhéos [Ilhéus], Bahia, Brazil. Holotype: MNRJ 4127.

Maximum length: 8.48 cm SL

Distribution: South America: Do Braço River basin in Bahia State.

Countries: Brazil

Remarks and references: See Castro & Vari (1990) for redescription and comments on relationships.

Common names: Canivete (Brazil), Mossarupê (Brazil), Piabafaca (Brazil)

MARKIANA

Markiana Eigenmann, 1903: 145. Type species: *Tetragonopterus nigripinnis* Perugia, 1891. Type by original designation. Gender: feminine.

***Markiana geayi* (Pellegrin, 1908)**

Tetragonopterus (Markiana) nigripinnis geayi Pellegrin, 1908: 347. Type locality: Río Apuré (Vénézuéla) [Orinoco River basin]. Holotype: MNHN 98-17.

Maximum length: 10.4 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: See Eigenmann (1918: 123) for key.

***Markiana nigripinnis* (Perugia, 1891)**

Tetragonopterus nigripinnis Perugia, 1891: 643. Type locality: Río della Plata [Argentina]. Syntypes: MSNG 9222 (3).

Maximum length: 10.4 cm SL

Distribution: South America: Paraná, Paraguay, and Mamoré River basins.

Countries: Argentina, Bolivia, Brazil, Paraguay

Remarks and references: See Eigenmann (1918: 123) for key.

Common names: Lambari-campo (Brazil), Sardina (Bolivia)

MICROGENYS

Microgenys Eigenmann, 1913: 22. Type species: *Microgenys minutus* Eigenmann, 1913. Type by original designation. Gender: feminine.

***Microgenys lativirgata* Pearson, 1927**

Microgenys lativirgatus Pearson, in Eigenmann, 1927: 355. Type locality: Río Pusoc, above Balsas, Peru. Syntypes: CAS 47171 [ex IU 17642].

Maximum length: 7.1 cm SL

Distribution: South America: Amazon River basin.

Countries: Peru

Remarks and references: see Eigenmann (1927: 354) for a comparison with *M. minuta* (in key).

Common names: Mojarrita (Peru)

***Microgenys minuta* Eigenmann, 1913**

Microgenys minutus Eigenmann, 1913: 22. Type locality: Piedra Moler [upper Cauca basin, Colombia]. Holotype: FMNH 56215 [ex CM 5007].

Maximum length: 4.5 cm SL

Distribution: South America: Cauca River basin.

Countries: Colombia

Remarks and references: see Eigenmann (1927: 354) for a redescription, figure and comparison with *M. lativirgata*.

***Microgenys weyrauchi* Fowler, 1945**

Microgenys weyrauchi Fowler, 1945c: 3, fig. 4. Type locality: Ninabamba near Ayacucho, at 1900 meters elevation, Rio Ucayali basin, Peru. Holotype: ANSP 71627.

Maximum length: 2.8 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Peru

Remarks and references: possibly a junior synonym of *Bryconacidnus ellisi* (Pearson, 1924), as suggested by Géry (1977: 398).

Common names: Mojarrita (Peru)

MICROSHEMOBRYCON

Microchemobrycon Eigenmann, 1915: 56. Type species: *Microchemobrycon guaporensis* Eigenmann, 1915. Type by original designation. Gender: masculine. See reviews by Böhlke (1953) and Géry (1973).

***Microchemobrycon callops* Böhlke, 1953**

Microchemobrycon callops Böhlke, 1953b: 846, pl. 20 (fig. 2). Type locality: Rio Negro at Camanaos Rapids, Brazil... Camanaos is just down river from São Gabriel, at approximately 0°10' North Latitude, 66°55' West Longitude. Holotype: SU 17491.

Maximum length: 3 cm SL

Distribution: South America: Negro, Orinoco, and Paru do Oeste River basins.

Countries: Brazil, Venezuela

***Microchemobrycon casiquiare* Böhlke, 1953**

Microchemobrycon casiquiare Böhlke, 1953b: 843, pl. 20 (fig. 1). Type locality: São Gabriel Rapids of the Rio Negro, Brazil, shortly down river from 0°08'03" South Latitude, 67°03'28" West Longitude, where the village of São Gabriel is situated. Holotype: SU 17497.

Maximum length: 3 cm SL

Distribution: South America: Negro, Casiquiare, and Madeira Rivers basins.

Countries: Brazil, Venezuela

***Microchemobrycon elongatus* Géry, 1973**

Microchemobrycon elongatus Géry, 1973: 97, fig. 9. Type locality: Rio Suiazinho (rio Xingù basin)... place North-West of Base Camp, which is 256 km North of Xavantina by road, 12°49'S, 51°46'W [Brazil]. Holotype: BMNH 1972.11.15.1.

Maximum length: 2.5 cm SL

Distribution: South America: Xingu River basin.

Countries: Brazil

***Microchemobrycon geisleri* Géry, 1973**

Microchemobrycon geisleri Géry, 1973: 93, fig. 7. Type locality: Igarapé about 35 km N.-W. from Obidos, rio Curuçamba drainage, lower Amazon basin [Brazil]. Holotype: MHNG 2229.09 [ex Géry coll. 0672].

Maximum length: 2.7 cm SL

Distribution: South America: Lower Amazon River basin.

Countries: Brazil

***Microchemobrycon guaporensis* Eigenmann, 1915**

Microchemobrycon guaporensis Eigenmann, 1915: 56, pl. 8 (fig. 2). Type locality: Maciél, Rio Guaporé [Madeira River basin, Brazil]. Holotype: FMNH 57926 [ex CM 6910a].

Maximum length: 3 cm SL

Distribution: South America: Guapore River basin.

Countries: Brazil

***Microchemobrycon melanotus* (Eigenmann, 1912)**

Aphyocharax melanotus Eigenmann, 1912b: 312. Type locality: Rockstone sand-bank [Essequibo River, Guyana]. Holotype: FMNH 53578.

Maximum length: 4.3 cm TL

Distribution: South America: Essequibo and Negro River basins.

Countries: Brazil, Guyana.

***Microchemobrycon meyburgi* Meinken, 1975**

Microchemobrycon meyburgi Meinken, 1975: 217, fig. 1. Type locality: Rio Xeriuni, Brasilien. Holotype: SMF 12271.

Maximum length: 2.2 cm SL

Distribution: South America: Branco River basin.

Countries: Brazil

MIXOBRYCON

Mixobrycon Eigenmann, 1915: 62. Type species: *Cheirodon ribeiroi* Eigenmann, 1907. Type by original designation. Gender: masculine. See Malabarba 1998: 231.

***Mixobrycon ribeiroi* (Eigenmann, 1907)**

Cheirodon ribeiroi Eigenmann in Eigenmann & Ogle, 1907: 9. Type locality: Puerto Max, Paraguay Basin. Holotype: CAS 59778 [ex IU 10229].

Maximum length: 3.5 cm SL

Distribution: South America: Paraguay River basin.

Countries: Paraguay

Remarks and references: See Malabarba (1998: 231) for comments on type specimen. Described in more detail by Eigenmann (1915: 62-64, pl. 10, fig. 2).

MOENKHAUSIA

Moenkhausia Eigenmann, 1903: 145. Type species: *Tetragonopterus xinguensis* Steindachner, 1882. Type by original designation. Gender: feminine.

Opisthanodus Ahl, 1935: 46. Type species: *Opisthanodus haerteli* Ahl, 1935. Type by original designation. Gender: Masculine.

***Moenkhausia affinis* Steindachner, 1915**

Moenkhausia affinis Steindachner, 1915b: 348. Type locality: Mündung des Rio Negro. Syntypes: NMW (3)

Maximum length: 6 cm SL

Distribution: South America: Lower Negro River basin.

Countries: Brazil

Common names: Lambari (Brazil)

***Moenkhausia agnesae* Géry, 1965**

Moenkhausia agnesae Géry, 1965c: 14, pl. 1 (fig. 1). Type locality: Igarapé Preto, collatéral de l'Amazonie supérieure près de Belém, à environ 60 km en aval de Leticia. Holotype: SMF 7238.

Maximum length: 6.9 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil

Common names: Lambari (Brazil)

***Moenkhausia atahualpiana* (Fowler, 1907)**

Astyanax atahualpianus Fowler, 1907: 436, fig. 36. Type locality: Near Pebas, Peru. Holotype: ANSP 21435.

Distribution: South America: Amazon River basin.

Countries: Peru

Common names: Mojara (Peru)

***Moenkhausia barbouri* Eigenmann, 1908**

Moenkhausia barbouri Eigenmann, 1908: 103. Type locality: Villa Bella [now Parintins, Amazonas, Brazil]. Syntypes: MCZ 20708 (2).

Maximum length: 6.5 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil)

***Moenkhausia browni* Eigenmann, 1909**

Moenkhausia browni Eigenmann, 1909a: 13. Type locality: Aruaitaima Falls, Potaro River [Guyana]. Holotype: FMNH 52732 [ex CM].

Maximum length: 8.2 cm TL

Distribution: South America: Potaro River basin.

Countries: Guyana

Remarks and references: See Géry (1977: 446) for identification key.

***Moenkhausia ceros* Eigenmann, 1908**

Moenkhausia ceros Eigenmann, 1908: 104. Type locality: Lake Hyanuary [= Paraná do Januári, Amazonas, Brazil]. Holotype: MCZ 49161.

Maximum length: 5 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil), Mojara (Peru)

***Moenkhausia chrysargyrea* (Günther, 1864)**

Tetragonopterus chrysargyreus Günther, 1864: 328. Type locality: Essequebo [Guyana]. Holotype: BMNH 1864.1.21.69.

Moenkhausia chrysargyrea leucopomis Fowler, 1914: 244, fig. 7. Type locality: Rupununi River, British Guyana. Holotype: ANSP 39330.

Maximum length: 10 cm SL

Distribution: South America: Guianas coastal rivers and Amazon River basin.

Countries: Brazil, French Guiana, Guyana, Venezuela

Remarks and references: See Eigenmann (1917: 75, pl. 6, fig. 3) for a detailed redescription. Notes on taxonomy and ecology by Taphorn (1992: 266) and Planquette et al. (1996: 294). See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil), Mojara (Peru), Sardinita (Ecuador), Palometa Aro de Oro (Venezuela),

***Moenkhausia collettii* (Steindachner, 1882)**

Tetragonopterus collettii Steindachner, 1882a: 179. Type locality: Rio Hyavary. Obidos [Javari River, tributary of Solimões River at the Brazilian-border, c. 4°21'S, 70°02'W; Brazil, Pará, Amazon River at Óbidos, 1°52'S, 55°30'W]. Syntypes: MCZ 20483 (42) Obidos, ? MCZ 90154 [ex MCZ 20480a] (3) Obidos; NMW 57379-82 (3, 3, 2, 5).

Maximum length: 4.5 cm SL

Distribution: South America: Amazon River basin from Peru to the Guianas.

Countries: Brazil, Colombia, French Guiana, Guyana, Peru, Suriname, Venezuela

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Bobita (Venezuela), Lambari (Brazil), Mojara (Peru), Sardinita (Ecuador)

***Moenkhausia comma* Eigenmann, 1908**

Moenkhausia comma Eigenmann, 1908: 102. Type locality: Cudajás [Solimões River at Codajás, near Ilha Codajás, Amazonas, Brazil, 3°55'S, 62°0'W]. Syntypes: MCZ 20972 (2). Eigenmann (1917: 77) writes "One specimen 20972 part Type 77 mm", but this does not constitute a lectotype designation.

Maximum length: 7.4 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil), Mojara (Peru)

***Moenkhausia copei* (Steindachner, 1882)**

Tetragonopterus copei Steindachner, 1882a: 179. Type locality: Santarem [Brazil, Pará, Santarém and environs, 2°26'S, 54°51'W]. Syntypes (several): ?MCZ 89960 (30) Obidos; NMW 57383 (5).

Maximum length: 6 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Brazil, Venezuela.

Remarks and references: See notes on taxonomy and ecology by Taphorn (1992: 269-270).

Common names: bobita, sardinita (Venezuela).

***Moenkhausia costae* (Steindachner, 1907)**

Tetragonopterus costae Steindachner, 1907: 84. Type locality: Rio San Francisco, Rio grande do Norte und Rio Preto bei Joazeiro, Barra, Sa Rita [Brazil]. Syntypes: MNHN 1907-178 [ex NMW] (4); MZUT 1682 (3); NMW 57391-98 (8?), NMW 57401-06 (6?), NMW 57408-09 (2?), NMW 57411 (1).

Maximum length: 5.9 cm SL

Distribution: South America: Sao Francisco and Itapicuru River basins.

Countries: Brazil

Remarks and references: See redescription and figures by Eigenmann (1917: 93-95, pl. 14, fig. 2) and Britski et al. (1984: 46, fig.35). See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil), Piaba (Brazil)

***Moenkhausia cotinho* Eigenmann, 1908**

Moenkhausia cotinho Eigenmann, 1908: 104. Type locality: Para [Belém and environs, Pará, Brazil, 1°27'S, 48°29'W]. Syntypes: MCZ 21013 (2), MCZ 21070 (3).

Maximum length: 5.1 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Venezuela

Remarks and references: Syntypes collected by Dr. Justa presumably from Brazil, Paraíba, rio Paraíba do Norte at João Pessoa, 7°6'S, 34°53'W, a locality outside the known range of the species. See Géry (1977: 446) for identification key.

Common names: Bobita (Venezuela), Lambari (Brazil), Mojara (Peru)

***Moenkhausia crisnejas* Pearson, 1929**

Moenkhausia crisnejas Pearson, in Eigenmann & Myers, 1929: 524. Type locality: Paipay, Rio Crisnejas, Peru. Syntypes: CAS 60477 (24) (ex IU 17641).

Maximum length: 4.4 cm SL

Distribution: South America: Crisnejas River basin.

Countries: Peru

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Mojara (Peru)

***Moenkhausia dichrourea* (Kner, 1858)**

Tetragonopterus dichrourus Kner, 1858a: 80. Type locality: Rio Guaporé...Caicara...Rio Paraguay [Guaporé and Paraguay River basins, Brazil]. Syntypes: NMW 56219 (4), NMW 57593 (2).

Maximum length: 10 cm SL

Distribution: South America: Amazon, Paraguay, and Orinoco River basins.

Countries: Brazil, Paraguay, Peru, Venezuela

Remarks and references: See Géry (1977: 446) for identification key. Notes on taxonomy and ecology by Taphorn (1992: 272-273).

Common names: Lambari (Brazil), Lambari-corintiano (Brazil), Mojara (Peru), sardinita tijeras (Venezuela)

***Moenkhausia diktyota* Lima & Toledo-Piza, 2001**

Moenkhausia diktyota Lima & Toledo-Piza, 2001: 1058, fig. 1.

Type locality: Brazil, Amazonas, rio Negro, igarapé at São João, near Santa Isabel do Rio Negro, 0°24'S; 65°02'W. Holotype: MZUSP 62614

Maximum length: 5.2 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Brazil

Common names: Lambari (Brazil), Tuniupe (Tukano Indians in upper rio Negro, Brazil), Tumuapé (Tuyuka Indians in upper rio Negro, Brazil).

***Moenkhausia doceana* (Steindachner, 1877)**

Tetragonopterus doceanus Steindachner, 1877: 572. Type locality: Rio Doce [eastern Brazil]. Syntypes: MNHN 1913-135 and 136 (2); NMW 57389 (2), NMW 57591 (2).

Maximum length: 7.7 cm SL

Distribution: South America: Mucuri and Doce River basins.

Countries: Brazil

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil)

***Moenkhausia dorsinuda* Zarske & Géry, 2002**

Moenkhausia dorsinuda Zarske & Géry, 2002b: 13, fig. 1. Type locality: Bolivien, Departamento Beni, Río Ipurupuru, unweit der Kreuzung des Flusses an der Strasse nach San Ramón, etwa 73km nördlich Trinidad (14°12'538"S, 64°56'268"W). Holotype: MTD F 24833.

Maximum length: 7.09 cm SL

Distribution: South America: Amazon River basin in Bolivia.

Countries: Bolivia

***Moenkhausia eigenmanni* Géry, 1964**

Moenkhausia eigenmanni Géry, 1964c: 30, fig. 5. Type locality: about 200 miles east of Bogota, Colombia, in the upper Rio Meta drainage. Holotype: USNM 198640.

Maximum length: 5.25 cm SL

Distribution: South America: Upper Meta River basin.

Countries: Colombia

Remarks and references: See Géry (1977: 446) for identification key.

***Moenkhausia georgiae* Géry, 1965**

Moenkhausia georgiae Géry, 1965b: 104, pl. 1 (fig. 3). Type locality: between "Saut-Chien" and "Saut-Topi-Topi", middle Mana River, French Guiana. Holotype: ZMA 104223.

Maximum length: 6.9 cm SL

Distribution: South America: Sipaliwini, Maroni, Mana, Sinnamary, Comté, Approuague, and Oyapock River basins.

Countries: French Guiana, Suriname

Remarks and references: See Géry (1977: 446) for identification key. See Planquette et al. (1996: 296-297) for notes on ecology, taxonomy and distribution.

***Moenkhausia gracilima* (Eigenmann, 1908)**

Moenkhausia lepidurus gracilimus Eigenmann, 1908: 104. Type locality: Villa Bella; Serpa [Amazon River at Parintins, Amazonas, Brazil, 2°38'S, 56°45'W; Brazil, Amazonas, Amazon River at Itacoatiara, 3°06'S, 58°22'W]. Syntypes: MCZ 20983 (now 13), USNM 120279 [ex MCZ 20983] (4).

Maximum length: 5.9 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

Remarks and references: See Géry (1977: 446) for identification key; Géry (1992: 71) for notes on taxonomy and distribution.

Common names: Lambari (Brazil)

***Moenkhausia grandisquamis* (Müller & Troschel, 1845)**

Tetragonopterus grandisquamis Müller & Troschel, 1845: 27, pl. 8

(fig. 2). Type locality: Surinam.

Maximum length: 6.4 cm SL

Distribution: South America: Amazon, Orinoco and coastal river drainages of the Guianas.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil), Sardina (Ecuador), Weti fisa, Sriba, Piki pilélou (French Guiana)

***Moenkhausia hasemani* Eigenmann, 1917**

Moenkhausia lepidura hasemani Eigenmann, 1917: 102, pls. 15 (fig. 3), 101 (fig. 5). Type locality: Santarem [Pará, Brazil]. Holotype: FNNH 55055 [ex CM 3746].

Maximum length: 4.5 cm SL

Distribution: South America: Lower Tapajós River basin.

Countries: Brazil

Remarks and references: See Géry (1977: 446) for identification key; Géry (1992: 73) for notes on taxonomy.

Common names: Lambari (Brazil)

***Moenkhausia hemigrammoides* Géry, 1965**

Moenkhausia hemigrammoides Géry, 1965b: 109, fig. 6. Type locality: Weyne, Matoekasie creek, on the road Albina-Moengo, Cottica River basin [Suriname]. Holotype: ZMA 104227.

Maximum length: 4 cm SL

Distribution: South America: Coastal rivers in Suriname and French Guiana.

Countries: French Guiana, Suriname

Remarks and references: See Géry (1977: 446) for identification key; Planquette et al. (1996: 302-303) for notes, ecology, and distribution.

***Moenkhausia icae* Eigenmann, 1908**

Moenkhausia lepidurus icae Eigenmann, 1908: 103. Type locality: Iça [Brazil, Amazonas, Iça River, tributary of Solimões River, near the Brazilian-Colombian border, 3°07'S, 67°58'W]. Syntypes: MCZ MCZ 20810 (1, missing), MCZ 20812 (30).

Maximum length: 5 cm SL

Distribution: South America: Solimões and Iça River basins.

Countries: Brazil

Remarks and references: See Géry (1992: 73) for notes on the species.

***Moenkhausia inrai* Géry, 1992**

Moenkhausia inrai Géry, 1992: 74, fig. 7. Type locality: "crique Roche au-dessus du Saut Grand Canori, Approuague" [French Guiana]. Holotype: MNHN 1992-0943.

Maximum length: 6.45 cm SL

Distribution: South America: Maroni and Approuague River basins.

Countries: French Guiana

Common names: Pikili (French Guiana).

***Moenkhausia intermedia* Eigenmann, 1908**

Moenkhausia dichrourus intermedius Eigenmann, 1908: 103. Type locality: Tabatinga [Amazonas, Brazil]. Syntypes: MCZ 20762 (2).

Moenkhausia lepidura madeirae Fowler, 1913: 540, fig. 11. Type locality: Tributary of Rio Madeira near Porto Velho, Brazil. Holotype: ANSP 39224.

Astyanax bipunctialbicaudalis Godoy, 1977: 666, fig. 7. Type locality: Rio Mogi Guassu, Cachoeira de Emas, Pirassununga (SP), mais ou menos 500 m abaixo da ponte. Holotype: EEBP-Pirassununga 8109.

Maximum length: 8 cm SL

Distribution: South America: Amazon, Orinoco, La Plata, Approuague, Maroni and Mana River basins.

Countries: Argentina, Bolivia, Brazil, French Guiana, Paraguay, Venezuela

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil), Lambari-corintiano (Brazil)

***Moenkhausia jamesi* Eigenmann, 1908**

Moenkhausia jamesi Eigenmann, 1908: 102. Type locality: Içá; Obidos; Lago do Maximo, Tajapurú [Brazil, Amazonas, Içá River, tributary of Solimões River, near the Brazilian-Colombian border, 3°07'S, 67°58'W; Brazil, Pará, Amazon River at Óbidos, 1°52'S, 55°30'W; Lake Maximo, near Parintins, 2°40'S, 56°45'W, Amazonas, Brazil; Furo Tajapurú at Tajapurú, Ilha de Marajó, 1°50'S, 50°25'W, Pará, Brazil]. Syntypes: MCZ 20734 (1), MCZ 20742 (1), MCZ 20816 (2), MCZ 20827 (1).

Maximum length: 6.8 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

Remarks and references: See Eigenmann (1917: 72-73, pl. 5, fig. 1) for a more detailed description and figure; See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil)

***Moenkhausia justae* Eigenmann, 1908**

Moenkhausia justae Eigenmann, 1908: 102. Type locality: Not provided in the original description; Eigenmann (1917: 73) suggested "probably... neighborhood of Manaus". Eschmeyer et al. (1998: 822), based on undisclosed evidence, suggested Paraíba do Norte River, João Pessoa, Paraíba. However, recent collections at João Pessoa and other sites in northeastern Brazil did not reveal specimens which could be assigned to that species (R.S. Rosa, H.A. Britski, pers. comm.). As a consequence, the type-locality should be still considered uncertain, but more probably lies in Amazon basin in Brazil. Holotype: MCZ 21014.

Maximum length: 6 cm SL

Distribution: South America: Amazon River basin in Brazil.

Countries: Brazil

Remarks and references: Very similar and doubtfully diagnosable from *M. jamesi* (Eigenmann, 1917: 73; Géry, 1977: 447).

Common names: Lambari (Brazil)

***Moenkhausia lata* Eigenmann, 1908**

Moenkhausia lepidurus latus Eigenmann, 1908: 103. Type locality: Rio Tapajós [Brazil, Pará, approx. 2°24'S, 54°51'W]. Syn-types: (many) CAS 42670 [ex IU 15259 & MCZ 20860] (5, missing), MCZ 20860 (2), USNM 120278 [ex MCZ 20860] (4).

Maximum length: 8 cm SL

Distribution: South America: Tapajós and Oyapock River basins.

Countries: Brazil, French Guiana

Remarks and references: See Géry (1977: 446) for identification key. See Géry (1992: 72) and Planquette et al. (1996: 308-309) for notes on the species.

Common names: Lambari (Brazil), Pilaki (French Guiana)

***Moenkhausia latissima* Eigenmann, 1908**

Moenkhausia latissimus Eigenmann, 1908: 101. Type locality: Tabatinga [Brazil, Amazonas, Solimões River at Tabatinga and environs, 4°14'S, 69°44'W]. Syntypes: MCZ 20767 (9), MCZ 20769 (now 9), USNM 120277 [ex MCZ 20769] (3).

Maximum length: 9.2 cm SL

Distribution: South America: Upper Amazon River near Tabatinga.

Countries: Brazil

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil), Sardina (Ecuador)

***Moenkhausia lepidura* (Kner, 1858)**

Tetragonopterus lepidurus Kner, 1858a: 80. Type locality: Rio Guaporé [Rondônia, Brazil; provided by Kner, 1859: 41]. Syn-types: presumably at NMW.

Knodus calliurus Ahl, 1931: 208, fig. 2. Type locality: Rio Capim

[Pará, Brazil]. Holotype: ZMB 23684.

Maximum length: 8.4 cm SL

Distribution: South America: Amazon, Orinoco, and coastal rivers in Guyana and Suriname.

Countries: Brazil, Guyana, Peru, Suriname, Venezuela

Remarks and references: See Géry (1992) for taxonomic remarks on the species; Taphorn (1992: 275-276) and Araújo-Lima et al. (1986) for observations on diet and microhabitat preferences.

Common names: Mojara (Peru)

***Moenkhausia levidorsa* Benine, 2002**

Moenkhausia levidorsa Benine, 2002: 290, fig. 1. Type locality: Brazil: State of Mato Grosso: Núcleo Aripuanã, Igarapé do Aeroporto, Furo Bahia, above cachoeira de Dardanelos (approximately 10°10'S 59°25'W). Holotype: INPA 16774.

Maximum length: 6.4 cm SL

Distribution: South America: Middle Tapajós River basin.

Countries: Brazil.

***Moenkhausia lopezi* Britski & Silimon, 2001**

Moenkhausia lopezi Britski & Silimon, 2001: 113, fig. 2. Type locality: Ribeirão Sozinho na rodovia BR 163, entre Rondonópolis e Coxim (aproximadamente 17°30'S 55°10'W), município de Rondonópolis, Estado do Mato Grosso do Sul. Holotype: MZUSP 64480.

Distribution: South America: Paraguay River basin.

Countries: Brazil.

***Moenkhausia loweae* Géry, 1992**

Moenkhausia loweae Géry, 1992: 73, fig. 6. Type locality: Rio das Mortes à Xavantina [Brazil]. Holotype: MZUSP 44560.

Maximum length: 5.25 cm SL

Distribution: South America: Araguaia River basin.

Countries: Brazil

Common names: Lambari (Brazil)

***Moenkhausia margitae* Zarske & Géry, 2001**

Moenkhausia margitae Zarske & Géry, 2001: 7, fig. 1. Type locality: Peru, Ucayali, Quebrada an der Straße Campo Verde - Nueva Requena (etwa auf halber Strecke). Holotype: MTD F 17256.

Maximum length: 6.4 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Common names: Mojara (Peru)

***Moenkhausia megalops* (Eigenmann, 1907)**

Astyanax megalops Eigenmann in Eigenmann & Ogle, 1907: 29. Type locality: Itaituba, Brazil. Holotype: CAS 71433 [ex IU 5192].

Maximum length: 5 cm SL

Distribution: South America: Amazon River basin and coastal rivers in French Guiana.

Countries: Brazil, French Guiana

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil)

***Moenkhausia melogramma* Eigenmann, 1908**

Moenkhausia melogrammus Eigenmann, 1908: 102. Type locality: Tabatinga [Amazonas, Brazil]. Holotype: MCZ 20825.

Maximum length: 4 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil)

***Moenkhausia metae* Eigenmann, 1922**

Moenkhausia metae Eigenmann, 1922b: 234, pl. 34 (fig. 3). Type locality: Barrigón, Río Meta [Orinoco System, Colombia]. Holo-

type: CAS 55610 [ex IU 15026a].
 Maximum length: 7.4 cm SL
 Distribution: South America: Upper Meta River basin.
 Countries: Colombia
 Remarks and references: See Géry (1977: 446) for identification key.

***Moenkhausia miangi* Steindachner, 1915**

Moenkhausia miangi Steindachner, 1915a: 43, pl. 3 (fig. 5). Type locality: aus dem Miang an der Grenze von Venezuela.
 Maximum length: 8.9 cm SL
 Distribution: South America: Upper Branco and upper Caroni River basins
 Countries: Brazil, Venezuela
 Remarks and references: See Géry (1977: 446) for identification key; Lasso (1990: 222) for remarks on the species.
 Common names: Bobita (Venezuela), Curuku (Venezuela)

***Moenkhausia moisae* Géry, Planquette & Le Bail, 1995**

Moenkhausia moisae Gery, Planquette, & Le Bail, 1995: 67, fig. 2. Type locality: Crique Blaté, Bas Maroni. Holotype: MNHN 1995-1073.
 Maximum length: 9.5 cm SL
 Distribution: South America: Maroni and Mana River basins.
 Countries: French Guiana

***Moenkhausia naponis* Böhlke, 1958**

Moenkhausia naponis Böhlke, 1958b: 14, fig. 1. Type locality: from headwaters of Río Arajuno [Ecuador, 1°24' to 1°26'S, 77°50' to 77°55'W]. Holotype: USNM 164067.
 Maximum length: 5.4 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Ecuador
 Remarks and references: See Géry (1977: 446) for identification key.
 Common names: Sardinita (Ecuador)

***Moenkhausia newtoni* Travassos, 1964**

Moenkhausia newtoni Travassos, 1964: 543, fig. 6-9. Type locality: Rio Cachimbo, Cachimbo, Aeroporto da FAB. Abaixo do Salto, Estado do Pará. Lat. 9°22'S e Long. 54°55'W [Brazil]. Holotype: MNRJ 9177.
 Maximum length: 2.7 cm SL
 Distribution: South America: Amazon River basin in Pará State.
 Countries: Brazil
 Common names: Lambari (Brazil)

***Moenkhausia nigromarginata* Costa, 1994**

Moenkhausia nigromarginata Costa, 1994: 22, fig. 1. Type locality: Brazil, Estado do Mato Grosso, small stream, tributary to Rio Cravari, near the road MT-170, about 10 km N of Campo Novo do Parecis, rio Tapajós basin. Holotype: MNRJ 12429.
 Maximum length: 5.3 cm SL
 Distribution: South America: Upper Tapajós River basin
 Countries: Brazil
 Common names: Lambari (Brazil)

***Moenkhausia oligolepis* (Günther, 1864)**

Tetragonopterus oligolepis Günther, 1864: 327. Type locality: British Guyana. Holotype: BMNH 1969.12.19.2.
Tetragonopterus agassizii Steindachner, 1876b: 89, pl. 6, fig. 2. Type locality: Amazonenstrom bei Tabatinga [Brazil]. Syntypes: ZMUC 42 (1); NMW 57176-79 (2, 2, 3, 2).
 Maximum length: 10 cm SL
 Distribution: South America: Venezuela, the Guianas and the Amazon River basin.
 Countries: Brazil, French Guiana, Guyana, Peru, Suriname, Venezuela

Remarks and references: See Géry (1977: 446) for identification key; Planquette et al. (1996: 312-313) for notes.
 Common names: Bobita (Venezuela), Lambari olho-de-fogo (Brazil), Mojara (Peru), Pequirá (Brazil), Tetra de vidro (Peru), Tetra espejo (Peru)

***Moenkhausia orteguasae* Fowler, 1943**

Moenkhausia orteguasae Fowler, 1943a: 233, fig. 14. Type locality: Florencia, Rio Orteguasa, Colombia. Holotype: ANSP 70496.
 Maximum length: 7.3 cm TL
 Distribution: South America: Orteguasa River basin.
 Countries: Colombia
 Remarks and references: See Géry (1977: 446) for identification key.

***Moenkhausia ovalis* (Günther, 1868)**

Tetragonopterus ovalis Günther, 1868: 480. Type locality: Xeberos [Peru]. Holotype: BMNH 1867.6.13.87.
 Maximum length: 8 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Peru
 Remarks and references: See Géry (1977: 446) for identification key.
 Common names: Mojara (Peru)

***Moenkhausia phaeonota* Fink, 1979**

Moenkhausia phaeonota Fink, 1979: 2, fig. 1. Type locality: Brazil, Mato Grosso, from the shores of an island "below Rio dos Peixes", Rio Arinos, Juruena-Tapajós drainage. Holotype: MZUSP 13793.
 Maximum length: 5.6 cm SL
 Distribution: South America: Upper Tapajós River basin.
 Countries: Brazil
 Common names: Lambari (Brazil), Piaba (Brazil)

***Moenkhausia pittieri* Eigenmann, 1920**

Moenkhausia pittieri Eigenmann, 1920: 10, pl. 3. Type locality: Concejo, Rio Tiquirito [Venezuela]. Holotype: CAS 62059 [ex IU 15136].
Opisthanodus haerteli Ahl, 1935: 47. Type locality: Amazonas bei Para [Brazil]. Lectotype: ZMB 20793.
 Maximum length: 6 cm SL
 Distribution: South America: Lake Valencia basin.
 Countries: Venezuela
 Remarks and references: See Géry (1977: 446) for identification key and Zarske & Géry (1995: 117) for synonymy.
 Common names: Bobita (Venezuela)

***Moenkhausia pyrophthalma* Costa, 1994**

Moenkhausia pyrophthalma Costa, 1994: 25, figs. 3-4. Type locality: Brazil: Estado do Mato Grosso, stream crossing the road between Água Boa and Cocalinho, 13 km W of the point where the road reaches rio das Mortes, rio Araguaia-Tocantins basin, 14°03'S, 51°47'W. Holotype: MNRJ 12431.
 Maximum length: 3.4 cm SL
 Distribution: South America: Araguaia River basin.
 Countries: Brazil
 Common names: Lambari olho-de-fogo (Brazil)

***Moenkhausia robertsi* Géry, 1964**

Moenkhausia robertsi Géry, 1964: 21, fig. 1. Type locality: Upper Amazon region surrounding Iquitos [Peru]. Holotype: USNM 200427 [ex Géry coll. 398.1].
 Maximum length: 4.9 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Peru
 Remarks and references: See Géry (1977: 446) for identification key.
 Common names: Mojara (Peru)

***Moenkhausia sanctaefilomenae* (Steindachner, 1907)**

Tetragonopterus sanctae Filomenae Steindachner, 1907: 82. Type locality: Lagune bei Sa. Filomena am Rio Parnahyba [Brazil]. Syntypes: NMW 57513 (5), NMW 57514 (7), NMW 57515 (2).

Moenkhausia australe Eigenmann, 1908: 103. Type locality: Arroyos Trementina and Chagalalina [Paraguay]. Syntypes: Probably MCZ (2).

Maximum length: 7 cm SL

Distribution: South America: Parnaíba, São Francisco, upper Paraná, Paraguay and Uruguay River basins.

Countries: Argentina, Brazil, Paraguay

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Lambari olho-de-fogo (Brazil), Pequirá (Brazil)

***Moenkhausia shideleri* Eigenmann, 1909**

Moenkhausia shideleri Eigenmann, 1909a: 15. Type locality: Bartica [Guyana]. Holotype: FMNH 52961 [ex CM 1012].

Maximum length: 7.3 cm SL

Distribution: South America: Guyana (?).

Countries: Guyana

Remarks and references: See Géry (1977: 446) for identification key.

***Moenkhausia simulata* (Eigenmann, 1924)**

Astyanax simulatus Eigenmann in Pearson, 1924: 41. Type locality: Creek at Puerto Burmedez [Peru]. Syntypes: MCZ 31875 [ex IU 16860] (2), USNM 167811 [ex IU 15860] (2), CAS 62100 [ex IU 15860] (orig. 10, now 6), USNM 167811 [ex IU 15860] (2).

Maximum length: 7.2 cm SL

Distribution: South America: Upper Amazon, Pachitea, and Maroni River basins.

Countries: French Guiana, Peru, Suriname

Remarks and references: See Géry (1977: 446) for identification key; Planquette et al. (1996: 316-317) for record in French Guiana and Suriname.

Common names: Mojara (Peru)

***Moenkhausia surinamensis* Géry, 1965**

Moenkhausia surinamensis Géry, 1965b: 102, fig. 2. Type locality: Browns creek, km 114 from Paramaribo on the Paramaribo-Dam railroad, between Saramacca and Suriname River systems [Suriname]. Holotype: ZMA 104221.

Maximum length: 10 cm SL

Distribution: South America: Suriname, Saramacca, Oyapock, Approuague, Comté, and Sinnamary River basins.

Countries: Brazil, French Guiana, Suriname

Remarks and references: See Géry (1977: 446) for identification key; Planquette et al. (1996: 314-315) for notes on the species.

***Moenkhausia takasei* Géry, 1964**

Moenkhausia takasei Géry, 1964d: 13, fig. 1. Type locality: creek close to Belem do Para, Rio Guama basin, lower Amazon [Brazil]. Holotype: USNM 198136.

Maximum length: 3.3 cm SL

Distribution: South America: Lower Amazon River basin.

Countries: Brazil

Remarks and references: See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil)

***Moenkhausia tergimacula* Lucena & Lucena, 1999**

Moenkhausia tergimacula Lucena & Lucena, 1999: 232, fig. 1. Type locality: Brazil: Goiás: Minaçu: rio Tocantins, 3 km downstream of Serra da Mesa Dam, 13°50'51"S 48°16'60". Holotype: MCP 20560.

Maximum length: 5.2 cm SL

Distribution: South America: Upper Tocantins River basin.

Countries: Brazil

Common names: Lambari (Brazil), Piaba (Brazil)

***Moenkhausia xinguensis* (Steindachner, 1882)**

Tetragonopterus xinguensis Steindachner, 1882a: 178. Type locality: Xingu [Xingu River, Pará, Brazil]. Holotype: NMW.

Maximum length: 5 cm SL

Distribution: South America: Xingu River basin.

Countries: Brazil

Remarks and references: Species later described in more detail by Steindachner (1882b: 32). See Géry (1977: 446) for identification key.

Common names: Lambari (Brazil), Piaba (Brazil)

Species inquirendae

Moenkhausia tridentata Holly, 1929: 1. Type locality: Piquirão (Amazonasgebiet) [Brazil]. Holotype: whereabouts unknown.

Moenkhausia lepidura ocoae Fowler, 1943a: 234, fig. 15. Type locality: Rio Ocoá, Rio Meta basin, Colombia. Holotype: ANSP 70497.

Moenkhausia schultzi Fernández-Yépez, 1950: 13, pl. 2 (fig. 4). Type locality: Rio Autana, Venezuela. Holotype: AFY 48166.

MONOTOCHEIRODON

Monotocheirodon Eigenmann & Pearson, in Pearson, 1924: 34. Type species: *Monotocheirodon pearsoni* Eigenmann, 1924. Type by monotypy. Gender: masculine.

***Monotocheirodon pearsoni* Eigenmann, 1924**

Monotocheirodon pearsoni Eigenmann, in Pearson, 1924: 34, pl. 11, fig. 1. Type locality: Espia [Beni River basin, Bolivia]. Syntypes: (10) CAS 59792 [ex IU 15348] (7), UMMZ 66484 (4). Additional original material: CAS 70832 [ex IU 17334] (3), 70833 [ex IU 17333] (now 5), 70835 [ex IU 17335] (2).

Maximum length: 4.4 cm

Distribution: South America: Beni River basin.

Countries: Bolivia

NEMATOBRYCON

Nematobrycon Eigenmann, 1911a: 215. Type species: *Nematobrycon palmeri* Eigenmann, 1911. Type by monotypy. Gender: masculine. See Weitzman & Fink (1971: 57) for comments and discussion about species of this genus.

***Nematobrycon lacortei* Weitzman & Fink, 1971**

Nematobrycon lacortei Weitzman & Fink, 1971: 59, fig. 1. Type locality: Probably from Rio Calima, Colombia. Holotype: USNM 205594.

Maximum length: 3.6 cm SL

Distribution: South America: San Juan River basin.

Countries: Colombia

Remarks and references: See Weitzman & Fink (1971: 57) for detailed synonymy and Géry (1977: 386) for comments.

Common names: Rainbow tetra (USA)

***Nematobrycon palmeri* Eigenmann, 1911**

Nematobrycon palmeri Eigenmann, 1911a: 215. Type locality: Condoto, Rio Condoto, and Novita, Rio Tamana, S.W. Colombia [restricted to Colombia, Condoto River, by Weitzman & Fink (1971: 68)]. Lectotype: BMNH 1910.7.11.96, designated by Weitzman & Fink (1971: 68).

Nematobrycon amphiloxus Eigenmann & Wilson, in Eigenmann, Henn & Wilson, 1914: 13. Type locality: Boca de Raspadura [Colombia]. Holotype: CM 5050 (apparently lost).

Maximum length: 4.2 cm SL

Distribution: South America: Atrato and San Juan River basins.

Countries: Colombia

Remarks and references: See Weitzman & Fink (1971) for detailed synonymy and Géry (1977: 386) for comments.

Common names: Emperor tetra (USA)

NEMATOCHARAX

Nematocharax Weitzman, Menezes & Britski, 1986: 335. Type species: *Nematocharax venustus* Weitzman, Menezes & Britski, 1986. Type by original designation. Gender: masculine.

***Nematocharax venustus* Weitzman, Menezes & Britski, 1986**

Nematocharax venustus Weitzman, Menezes & Britski, 1986: 336, fig. 1. Type locality: Brazil; Minas Gerais, Município Medina, Rio Jequitinhonha at Itaobim, about 16°40'S, 41°23'W. Holotype: MZUSP 5131.

Maximum length: 5.1 cm SL

Distribution: South America: Jequitinhonha River basin.

Countries: Brazil

ODONTOSTOECHUS

Odontostoechus Gomes, 1947: 7. Type species: *Odontostoechus lethostigmus* Gomes, 1947. Type by original designation. Gender: masculine.

***Odontostoechus lethostigmus* Gomes, 1947**

Odontostoechus lethostigmus Gomes, 1947: 8, fig. 1; pl. 1 (fig. 1). Type locality: backwater of Rio Maquiné, a tributary to Lagôa dos Quadros, Conceição do Arroio County, Rio Grande do Sul, Brazil. Holotype: UMMZ 143272.

Maximum length: 6.65 cm SL

Distribution: South America: Maquiné, Três Forquilhas and Mapi-tuba River basins in southern Brazil.

Countries: Brazil

Remarks and references: See comments on possible relationships in Malabarba (1998: 231-232).

OLIGOBRYCON

Oligobrycon Eigenmann, 1915: 56. Type species: *Oligobrycon microstomus* Eigenmann, 1915. Type by original designation. Gender: masculine.

***Oligobrycon microstomus* Eigenmann, 1915**

Oligobrycon microstomus Eigenmann, 1915: 57, fig. 17; pl. 9 (fig. 1). Type locality: Jacarehy, Rio Parahyba [Brazil]. Holotype: FMNH 57913 [ex CM 6898].

Maximum length: 3.9 cm TL

Distribution: South America: Upper and middle Paraíba do Sul River basin.

Countries: Brazil

Remarks and references: Known only from type specimens.

OLIGOSARCUS

Oligosarcus Günther, 1864: 353. Type species: *Oligosarcus argenteus* Günther, 1864. Type by monotypy. Gender: masculine.

Acestrorhamphus Eigenmann & Kennedy, 1903: 527. Type species: *Hydrocyon hepsetus* Cuvier, 1816. Type by monotypy. Gender: masculine.

Paroligosarcus Campos & Trewavas, 1949: 157. Type species: *Oligosarcus pintoii* Campos, 1945. Type by monotypy. Gender: masculine. Originally proposed as a subgenus of *Oligosarcus*.

***Oligosarcus acutirostris* Menezes, 1987**

Oligosarcus acutirostris Menezes, 1987: 15, fig. 3. Type locality: Rio Itapemirim, Fazenda Boa Esperança, entre Pacotuba e Coutinho, Espírito Santo (aproximadamente 21°S, 41°W) [Brazil]. Holotype: MZUSP 37525.

Maximum length: 16 cm SL

Distribution: South America: Eastern coastal rivers between Espírito Santo and Bahia States.

Countries: Brazil

***Oligosarcus argenteus* Günther, 1864**

Oligosarcus argenteus Günther, 1864: 353. Type locality: Brazil. Lectotype: BMNH 1967.1.24.2.

Oligosarcus meadi Menezes, 1969: 31 fig. 21. Type locality: União de Caeté, Minas Gerais, Rio das Velhas basin. Holotype: MZUSP 4618.

Maximum length: 10.5 cm SL

Distribution: South America: Doce and Das Velhas River basins.

Countries: Brazil

Remarks and references: See Menezes (1987: 22) for diagnosis.

***Oligosarcus bolivianus* (Fowler, 1940)**

Acestrorhamphus bolivianus Fowler, 1940: 53, fig. 7. Type locality: Río Lipeo, Bolivia. Holotype: ANSP 68814.

Maximum length: 14.7 cm SL

Distribution: South America: Lipeo River in the Paraguay River basin.

Countries: Bolivia

Remarks and references: See Menezes (1987: 26) for diagnosis.

***Oligosarcus brevioris* Menezes, 1987**

Oligosarcus brevioris Menezes, 1987: 10, fig. 2. Type locality: Arroio Cachoeirinha, bacia do Rio Pelotas, estrada Vacaria-Bom Jesus, município de Vacaria, Rio Grande do Sul (ca. 28°40'S, 50°40'W) [Brazil]. Holotype: MZUSP 37508.

Maximum length: 16.6 cm SL

Distribution: South America: Upper Uruguay River basin.

Countries: Brazil

***Oligosarcus hepsetus* (Cuvier, 1829)**

Hydrocyon hepsetus Cuvier, 1829: 312. Type locality: Unknown. No types known.

Maximum length: 23.8 cm SL

Distribution: South America: Southeastern Brazil and La Plata River basin.

Countries: Argentina, Brazil

Remarks and references: See Menezes (1987: 31) for diagnosis.

Common names: Tajibucu (Brazil), Tambicu (Brazil)

***Oligosarcus jenynsii* (Günther, 1864)**

Xiphorhamphus jenynsii Günther, 1864: 356. Type locality: Freshwater Lake of Maldonado [Uruguay]. Types apparently not preserved.

Xiphorhamphus brachycephalus Cope, 1894: 84, pl. 4. Type locality: Rio Grande do Sul [restricted to Laguna dos Patos system, Brazil, by Malabarba (1989)]. Lectotype: ANSP 21728, designated by Fowler (1907: 460).

Acestrorhamphus purpureus Messner, 1962: 1. Type locality: Río Olimar, near the mouth of Arroyo de las Piedras, Uruguay. Holotype: MNHN 79.

Maximum length: 22.2 cm SL

Distribution: South America: Streams, rivers and lagoons of coastal areas and interior plains of Rio Grande do Sul State, Uruguay and Argentina.

Countries: Argentina, Brazil, Uruguay

Remarks and references: See Menezes (1987: 23) for diagnosis.

Common names: Branca (Brazil), Tambica (Brazil), Tambicu (Brazil)

***Oligosarcus macrolepis* (Steindachner, 1877)**

Xiphorhamphus macrolepis Steindachner, 1877: 594. Type locality: Rio Jequitinhonha. Syntypes: not found at NMW.

Maximum length: 7.7 cm SL

Distribution: South America: Jequitinhonha River basin.

Countries: Brazil

Remarks and references: See Menezes (1987: 21) for diagnosis.

Common names: Tambicu (Brazil)

***Oligosarcus menezesi* Miquelarena & Protogino, 1996**

Check List of the Freshwater Fishes of South and Central America

- Oligosarcus menezesi* Miquelarena & Protogino, 1996: 112, fig. Type locality: Arroyo Urugua-í, arriba de Salto de Uruguaú, em terrenos de la Cia. "Alto Parana" [Paraná River basin, Misiones, Argentina]. Holotype: ILPLA 299.
Maximum length: 13.8 cm SL
Distribution: South America: Upper Urugua-í creek, upper Paraná River basin in Misiones.
Countries: Argentina
Remarks and references: See Miquelarena & Protogino (1996) for detailed description.
- Oligosarcus oligolepis* (Steindachner, 1867)**
Xiphorhamphus oligolepis Steindachner, 1867: 339. Type locality: Río de la Plata. Holotype: NMW.
Maximum length: 2.5 cm SL
Distribution: South America: Paraguay, lower Paraná, Uruguay and La Plata River basins.
Countries: Brazil, Argentina, Uruguay and Paraguay
Remarks and references: See Menezes (1987: 28) for diagnosis.
- Oligosarcus paranensis* Menezes & Géry, 1983**
Oligosarcus paranensis Menezes & Géry, 1983: 572, fig. 3. Type locality: Represa de Salesópolis (Tietê river system), State of São Paulo, Brazil. Holotype: MZUSP 25721.
Maximum length: 20.5 cm SL
Distribution: South America: Upper Paraná River basin.
Countries: Brazil, Paraguay
Remarks and references: See Menezes (1987: 27) for diagnosis.
Common names: Tambicu (Brazil)
- Oligosarcus pintoí* Campos, 1945**
Oligosarcus pintoí Campos, 1945: 456, fig. 9. Type locality: Rio Mogi-Guaçu [upper Paraná River basin, São Paulo, Brazil]. Holotype: MZUSP 3465.
Hemibrycon marciae Godoy, 1971: 155, fig. 2. Type locality: tanque da EEBP-Pirassununga (SP), bacia do Rio Mogi Guassa [upper Paraná River basin, São Paulo, Brazil]. Holotype: EEBP 710.
Maximum length: 8.4 cm SL
Distribution: South America: Upper Paraná River basin.
Countries: Brazil, Paraguay
Remarks and references: See Menezes (1987: 20) for diagnosis.
Common names: Lambari (Brazil)
- Oligosarcus planaltinae* Menezes & Géry, 1983**
Oligosarcus planaltinae Menezes & Géry, 1983: 564, fig. 1. Type locality: Córrego Planaltina, a tributary of Rio São Bartolomeu (Paraná river system) near Brasília, State of Goiás, Brazil. Holotype: MZUSP 26718 or 25718.
Maximum length: 9.9 cm SL
Distribution: South America: Paranaíba River basin in Goiás State.
Countries: Brazil
Remarks and references: See Menezes (1987: 33) for diagnosis.
- Oligosarcus robustus* Menezes, 1969**
Oligosarcus robustus Menezes, 1969: 26, fig. 18. Type locality: Rio Caí in Montenegro, Rio Grande do Sul, Brazil (Guaíba River basin). Holotype: MZUSP 4917.
Maximum length: 22 cm SL
Distribution: South America: Coastal drainages of Rio Grande do Sul State.
Countries: Brazil
Remarks and references: See Menezes (1987: 30) for diagnosis.
Common names: Branca (Brazil), Tambica (Brazil), Tambicu (Brazil)
- Oligosarcus schindleri* Menezes & Géry, 1983**
Oligosarcus schindleri Menezes & Géry, 1983: 566, fig. 2. Type locality: San Francisco de Chipiriri in a small tributary of the Río Chapare (Rio Madeira basin), about 100 km east of Cochabamba, Bolivia. Holotype: ZSM 26095.
Maximum length: 8.2 cm SL
Distribution: South America: Chapare River basin and lagoons near Cochabamba.
Countries: Bolivia
Remarks and references: See Menezes (1987: 27) for diagnosis.
- Oligosarcus solitarius* Menezes, 1987**
Oligosarcus solitarius Menezes, 1987: 6, fig. 1. Type locality: Lagoa Carioca, Vale do Rio Doce, Minas Gérias, aproximadamente (20°S, 43°W). Holotype: MZUSP 37377.
Maximum length: 16.2 cm SL
Distribution: South America: Doce River basin.
Countries: Brazil
- Species inquirenda***
Xiphorhamphus pericoptes Muller & Troschel, 1844: 93. Type locality: Brasilia. No types known. Either a synonym of *Oligosarcus hepsetus* or *Oligosarcus robustus* (see Menezes, 1987: 32).
- OTHONOCHEIRODUS**
Othonocheirodus Myers, 1927: 113. Type species: *Othonocheirodus eigenmanni* Myers, 1927. Type by original designation. Gender: masculine.
- Othonocheirodus eigenmanni* Myers, 1927**
Othonocheirodus eigenmanni Myers, 1927: 114. Type locality: Peru: Rio Cayumba [tributary of Huallaga River]. Holotype: IU 17674.
Maximum length: 4.7 cm
Distribution: South America: Amazon River basin.
Countries: Peru
Remarks and references: See comments on possible relationships in Malabarba (1998: 231-232).
- OXYBRYCON**
Oxybrycon Géry, 1964a: 15. Type species: *Oxybrycon parvulus* Géry, 1964. Type by original designation. Gender: masculine.
- Oxybrycon parvulus* Géry, 1964**
Oxybrycon parvulus Géry, 1964a: 16, fig. 13. Type locality: petit ruisseau faisant communiquer le <<Zapote Cocha>> avec le <<Caño Yarina>>, en bordure du Rio Pacaya, affluent du canal de Puinahua (bras du bas Rio Ucayali) [Peru]. Holotype: unnumbered; not researched.
Maximum length: 1.6 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Peru
Common names: Mojara (Peru)
- PARACHEIRODON**
Lamprocheirodon Géry, 1960a: 13. Type species: *Cheirodon axelrodi* Schultz, 1956. Type by original designation. Gender: masculine.
Paracheirodon Géry, 1960a: 12. Type species: *Hyphessobrycon innesi* Myers, 1936. Type by original designation. Gender: masculine. Phylogeny, species description and key in Weitzman & Fink (1983).
- Paracheirodon axelrodi* (Schultz, 1956)**
Cheirodon axelrodi Schultz, 1956: 42, unnumbered fig. Type locality: near Porto Velho, Brazil; corrected in Weitzman & Fink (1983) to "Brazil, Amazonas, stream near Tomar (=Thomar) (0°25'S, 63°55'W), Rio Negro". Holotype: USNM 164483.
Hyphessobrycon cardinalis Myers & Weitzman, 1956: 1. Type locality: Rio Negro, Amazonas, Brazil [aquarium import]; corrected in Weitzman & Fink (1983) to "Brazil, Amazonas, rio

Check List of the Freshwater Fishes of South and Central America

Negro near Tomar (0°25'S, 63°55'W)". Holotype: SU 48710.
Maximum length: 2.51 cm SL
Distribution: South America: Upper Orinoco and Negro River basins.
Countries: Brazil, Colombia, Venezuela
Remarks and references: Synonym, redescription, figures and discussion of type locality in Weitzman & Fink (1983)
Common names: Neon (Brazil, USA), Neon tetra (USA)

***Paracheirodon innesi* (Myers, 1936)**

Hyphessobrycon innesi Myers, 1936: 97. Type locality: Peruvian Amazon [Aquarium import]. Holotype: USNM 102109.
Maximum length: 2.2 cm SL
Distribution: South America: Blackwater or clearwater streams tributaries of the Solimões River.
Countries: Brazil, Colombia, Peru
Remarks and references: Redescribed and figured in Weitzman & Fink (1983).

***Paracheirodon simulans* (Géry, 1963)**

Hyphessobrycon simulans Géry, 1963a: 15, fig. 1. Type locality: Rio Purus [Brazil] [corrected by Géry (1966: 231) to Rio Jufaris (or Tupari), which empties into the Rio Negro just above Rio Branco]. Holotype: USNM 197510 [ex Géry coll. M.332.1].
Maximum length: 2.02 cm SL
Distribution: South America: Upper Negro and Orinoco River basins.
Countries: Brazil, Colombia, Venezuela
Remarks and references: Redescribed and figured in Weitzman & Fink (1983).
Common names: Neon (Brazil, USA), Neon tetra (USA)

PARAGONIATES

Paragoniates Steindachner, 1876b: 117. Type species: *Paragoniates alburnus* Steindachner, 1876b. Type by subsequent designation by Eigenmann (1910: 441). Gender: masculine.

***Paragoniates alburnus* Steindachner, 1876**

Paragoniates alburnus Steindachner, 1876b: 117, pl. 8 (fig. 3).
Type locality: Amazonenstrom bei Teffé [Brazil]. Holotype: NMW 73544.
Maximum length: 6 cm TL
Distribution: South America: Middle and upper Amazon and Orinoco River basins.
Countries: Brazil, Peru, Venezuela
Remarks and references: See Taphorn (1992: 289-290) for remarks on the species.

Species inquirenda

Paragoniates muelleri Steindachner, 1876b: 120. Type locality: Amazonenstrom bei Obidos [Brazil]. Holotype: NMW 56535.

PARAPRISTELLA

Parapristella Géry, 1964c: 41. Type species: *Pristella aubynei* Eigenmann, 1909a. Type by original designation. Gender: feminine.

***Parapristella aubynei* (Eigenmann, 1909)**

Pristella aubynei Eigenmann, 1909a: 24. Type locality: Lama Stop-off [coastal basin, about twenty-five miles east of Georgetown, Guyana]. Holotype: FMNH 52698 [ex CM 1042].
Maximum length: 5 cm SL
Distribution: South America: Coastal drainages of Guyana.
Countries: Guyana
Remarks and references: Valid as *Parapristella aubynei* according to Géry (1964c: 41). See Géry (1977: 487) for comments.

***Parapristella georgiae* Géry, 1964**

Parapristella georgiae Géry, 1964c: 44, fig. 9. Type locality:

about 200 miles east of Bogota, Colombia, in the upper Rio Meta drainage. Holotype: USNM 198641.
Maximum length: 5 cm SL
Distribution: South America: Meta and Aguaro River basins.
Countries: Colombia, Venezuela
Remarks and references: See Géry (1977: 487) and Taphorn (1992: 292-293) for remarks on the species.
Common names: Plain Jane (USA)

PARECBASIS

Parecbasis Eigenmann, 1914: 45. Type species: *Parecbasis cyclolepis* Eigenmann, 1914. Type by monotypy. Gender: feminine.

***Parecbasis cyclolepis* Eigenmann, 1914**

Parecbasis cyclolepis Eigenmann, 1914: 45. Type locality: San Antonio, de Rio Madeira [Rondônia, Brazil]. Holotype: FMNH 56677 [ex CM 5495].
Maximum length: 8 cm SL
Distribution: South America: Madeira-Mamoré River basin.
Countries: Bolivia, Brazil, Peru
Common names: Mojara (Peru)

PETITELLA

Petitella Géry & Boutière, 1964: 474. Type species: *Petitella georgiae* Géry & Boutière, 1964. Type by original designation. Gender: feminine.

***Petitella georgiae* Géry & Boutière, 1964**

Petitella georgiae Géry & Boutière, 1964: 474, fig. 1. Type locality: village de Lagunas, bas Rio Huallaga, Loreto District, Pérou. Holotype: MHNG 2150.28.
Maximum length: 3.86 cm SL
Distribution: South America: Upper Amazon River basin in Peru; Purus, Negro, and Madeira River basins.
Countries: Brazil, Peru
Remarks and references: See Géry & Mahnert (1986) for remarks on taxonomy and distribution.

PHENAGONIATES

Phenagoniates Eigenmann & Wilson, in Eigenmann, Henn & Wilson, 1914: 2. Type species: *Phenagoniates wilsoni* Eigenmann, 1914. Type by monotypy. Gender: masculine.

***Phenagoniates macrolepis* (Meek & Hildebrand, 1913)**

Roeboides macrolepis Meek & Hildebrand, 1913: 84. Type locality: Rio Cupe, Boca de Cupe, Panama [Tuirá River basin]. Holotype: FMNH 7590.

Phenagoniates wilsoni Eigenmann, in Eigenmann, Henn & Wilson, 1914: 2. Type locality: Manigru [Colombia]. Holotype: FMNH 56540 [ex CM 5354].

Maximum length: 4.5 cm SL

Distribution: Central and South America: Chucunaque and Atrato Rivers and Lake Maracaibo basins.

Countries: Colombia, Panama, Venezuela

Remarks and references: See Fink & Weitzman (1974: 30) for detailed synonymy and Géry (1977: 347) for key and comments.

Common names: Barred glass tetra (USA)

PIABARCHUS

Piabarchus Myers, 1928: 90. Type species: *Piabina analis* Eigenmann, 1914. Type by original designation. Gender: masculine.

***Piabarchus analis* (Eigenmann, 1914)**

Piabina analis Eigenmann, in Eigenmann, Henn & Wilson, 1914: 8. Type locality: Cáceres [=Cáceres, upper Paraguay River basin, Mato Grosso, Brazil]. Holotype: FMNH 56661 [ex CM 5478].

Maximum length: 3.09 cm SL
 Distribution: South America: Paraguay River basin; upper Amazon River basin in Peru.
 Countries: Brazil, Paraguay, Peru
 Remarks and references: See Mahnert & Géry (1988) for remarks on taxonomy.

***Piabarchus torrenticola* Mahnert & Géry, 1988**

Piabarchus torrenticola Mahnert & Géry, 1988: 3, fig. 2; pl. 2.
 Type locality: Salto Pirareta, prov. Cordillera, Paraguay. Holotype: MHNG 2385-70.
 Maximum length: 7.7 cm SL
 Distribution: South America: Paraguay River basin.
 Countries: Brazil, Paraguay

PIABINA

Piabina Reinhardt, 1867: 49. Type species: *Piabina argentea* Reinhardt, 1867. Type by monotypy. Gender: feminine.

***Piabina argentea* Reinhardt, 1867**

Piabina argentea Reinhardt, 1867: 50, pl. 1 figs. 1,2. Type locality: Rio das Velhas, Brazil. Syntypes: ZMUC 253, 254.
Piabina piquira Eigenmann, 1910: 434. Type locality: Piracicaba. Placed as a synonym of *Piabina argentea* by Eigenmann and Myers (1929: 430).
 Maximum length: 6.8 cm SL
 Distribution: South America: Upper Paraná River basin in northeastern Paraguay and southern Brazil, São Francisco, Itapicuru, Paraíba, and Itapemirim River basins.
 Countries: Brazil, Paraguay
 Remarks and references: See Vari & Harold (2001: 224) for detailed redescription.

PRIONOBAMA

Prionobrama Fowler, 1913: 534. Type species: *Prionobrama madeirae* Fowler, 1913. Type by original designation. Gender: feminine.
Bleptonema Eigenmann, 1914: 44. Type species: *Bleptonema paraguayensis* Eigenmann, 1914. Type by subsequent designation by Jordan (1920: 535). Gender: neuter.

***Prionobrama filigera* (Cope, 1870)**

Aphyocharax filigerus Cope, 1870: 564. Type locality: Pebas, Eastern Ecuador [actually Peru]. Holotype: ANSP 8073.
Prionobrama madeirae Fowler, 1913: 535, fig. 9. Type locality: Tributary of the Madeira River, near Porto Velho, Brazil. Holotype: ANSP 39218.
Bleptonema amazonae Eigenmann, 1914: 44. Type locality: Santarém [Brazil]. Holotype: FMNH 56679 [ex CM 5497a].
Aphyocharax analis Nichols, 1915: 127. fig. 1. Type locality: Manaus ["an aquarium fish said to come from Manaus"; Amazonas, Brazil]. Holotype: AMNH 5073.
 Maximum length: 6 cm TL
 Distribution: South America: Amazon River basin.
 Countries: Bolivia, Brazil, Colombia, Ecuador, Peru

***Prionobrama paraguayensis* (Eigenmann, 1914)**

Bleptonema paraguayensis Eigenmann, 1914: 44. Type locality: Corumba [Paraguay River, Brazil]. Holotype: FMNH 56681 [ex CM 5499a].
 Maximum length: 5 cm TL
 Distribution: South America: Paraguay and lower Paraná River basins.
 Countries: Argentina, Bolivia, Brazil, Paraguay

PRISTELLA

Pristella Eigenmann, 1908: 99. Type species: *Holopristis riddlei* Meek, 1907. Type by original designation. Gender: feminine.

***Pristella maxillaris* (Ulrey, 1894)**

Aphyocharax maxillaris Ulrey, 1894: 611. Type locality: Brazil. Syntypes: SU 2170 (1), 47059 (2).
Holopristis riddlei Meek, in Eigenmann & Ogle, 1907: 11. Type locality: Los Castillas, Venezuela. Holotype: CAS 57151.
 Maximum length: 4.5 cm TL
 Distribution: South America: Amazon, Orinoco, and coastal river drainages of the Guianas.
 Countries: Brazil, French Guiana, Guyana, Venezuela
 Remarks and references: See Planquette et al. (1996: 334-335) for notes on the species.

PROBOLODUS

Probolodus Eigenmann, 1911b: 164. Type species: *Probolodus heterostomus* Eigenmann, 1911. Type by original designation. Gender: masculine.

***Probolodus heterostomus* Eigenmann, 1911**

Probolodus heterostomus Eigenmann, 1911b: 164, pl. 4 (fig. 1).
 Type locality: Campos [on Parahyba do Sul River, Rio de Janeiro, Brazil]. Holotype: FMNH 54328 [ex CM 2973].
 Maximum length: 8.1 cm SL
 Distribution: South America: Coastal basins of southeastern Brazil.
 Countries: Brazil
 Remarks and references: See Géry (1977: 579) for comments and Bizerril (1994: 65) for key.

PSALIDODON

Psalidodon Eigenmann, 1911b: 165. Type species: *Psalidodon gymnodontus* Eigenmann, 1911. Type by original designation. Gender: masculine.

***Psalidodon gymnodontus* Eigenmann, 1911**

Psalidodon gymnodontus Eigenmann, 1911b: 166, pl. 4 (figs. 2-3).
 Type locality: Porto União, Rio Iguassú [Paraná, Brazil]. Holotype: FMNH 54574 [ex CM 3204].
 Maximum length: 17 cm SL
 Distribution: South America: Iguazu River basin.
 Countries: Brazil
 Remarks and references: See comments in Garavello et al. (1977: 75).
 Common names: Lambari (Brazil)

PSELLOGRAMMUS

Psellogrammus Eigenmann, 1908: 99. Type species: *Hemigrammus kennedyi* Eigenmann, 1903. Type by original designation. Gender: masculine.

***Psellogrammus kennedyi* (Eigenmann, 1903)**

Hemigrammus kennedyi Eigenmann, in Eigenmann & Kennedy, 1903: 520. Type locality: Campo Grande [Lagunitas, five kilometers from Asuncion, Paraguay River basin, Paraguay]. Holotype: CAS 44420 [ex IU 10016].
 Maximum length: 5.9 cm SL
 Distribution: South America: Paraguay and São Francisco River basins.
 Countries: Brazil, Paraguay
 Remarks and references: See Britski et. al. (1999: 32) for description.
 Common names: Lambari (Brazil)

PSEUDOCHALCEUS

Pseudochalceus Kner, 1863: 225. Type species: *Pseudochalceus lineatus* Kner, 1863. Type by monotypy. Gender: masculine. Also appeared as new in Kner & Steindachner (1864: 35).

***Pseudochalceus kyburzi* Schultz, 1966**

Pseudochalceus kyburzi Schultz, 1966: 27, fig. p. 25. Type locality: Río Calima, Cauca Valley, Colombia. Holotype: USNM 231738 [ex USNM 257403-F27].

Maximum length: 7.8 cm SL

Distribution: South America: Coastal rivers in Pacific versant of Colombia.

Countries: Colombia

Remarks and references: See Schultz (1966) for description and ecological observations; Géry (1972: 941) for comparison with other species.

***Pseudochalceus lineatus* Kner, 1863**

Pseudochalceus lineatus Kner, 1863: 225, fig. 11. Type locality: Vom Westabhange der Anden in Staate Ecuador. Syntypes: NMW 56738-9. Also appeared as new in Kner & Steindachner (1864: 35, pl. 5, fig. 1).

Maximum length: 7.5 cm TL

Distribution: South America: Coastal rivers in Pacific versant of Ecuador.

Countries: Ecuador

Remarks and references: See Kner & Steindachner (1864) for a detailed description; Géry (1972: 941) for comparison with other species.

***Pseudochalceus longianalis* Géry, 1972**

Pseudochalceus (Pseudochalceus) longianalis Géry, 1972c: 933, fig. 1. Type locality: Sud de la Colombie, près de la frontière avec l'Equateur, versant pacifique: rio Guiza, affluent du rio Mira, à la Guayacana, Province Narino, altitude 240 m, coordonnées 1°27'N et 78°27'O. Holotype: MHNG 1226.90.

Maximum length: 7.85 cm SL

Distribution: South America: Coastal rivers in Pacific versant of Colombia and Ecuador.

Countries: Colombia, Ecuador

Remarks and references: See Géry (1972: 941) for comparison with other species.

RACHOVISCUS

Rachoviscus Myers, 1926: 1. Type species: *Rachoviscus crassiceps* Myers, 1926. Type by monotypy. Gender: neuter.

***Rachoviscus crassiceps* Myers, 1926**

Rachoviscus crassiceps Myers, 1926: 1, fig. unnumbered. Type locality: Rio de Janeiro. Lectotype: USNM 92971, designated by Weitzman & Cruz (1981: 1009); they also suggest type locality probably is the region of Paranaguá, Paraná, Brazil.

Maximum length: 3.85 cm SL

Distribution: South America: Coastal river basins of Paraná and northern Santa Catarina States.

Countries: Brazil

Remarks and references: See Weitzman & Cruz (1981) for redescription.

***Rachoviscus graciliceps* Weitzman & Cruz, 1981**

Rachoviscus graciliceps Weitzman & Cruz, 1981: 1003, figs. 1-2. Type locality: Brazil, State of Bahia:... one of three small creeks about 1 km north of Prado and about 500 meters from Atlantic Ocean, 39°14'W, 17°19'S. Holotype: MZUSP 14387.

Maximum length: 4.76 cm SL

Distribution: South America: Coastal river basins of southern Bahia State.

Countries: Brazil

RHINOBYRYCON

Rhinobrycon Myers, 1944: 587. Type species: *Rhinobrycon negrensis* Myers, 1944. Type by original designation. Gender: masculine.

***Rhinobrycon negrensis* Myers, 1944**

Rhinobrycon negrensis Myers, 1944: 589, fig. Type locality: Santa Isabel, Rio Negro, Amazonas, Brazil. Holotype: CAS 11089.

Maximum length: 3.9 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

RHINOPETITIA

Rhinopetitia Géry, 1964b: 454. Type species: *Rhinopetitia myersi* Géry, 1964b. Type by original designation. Gender: feminine.

***Rhinopetitia myersi* Géry, 1964**

Rhinopetitia myersi Géry, 1964b: 454, fig. 3; pl. 4a. Type locality: Ilha do Bananal, haut Rio Araguaia, Brésil. Holotype: MHNG 2229.03 [ex Géry coll. M.194,1].

Maximum length: 3.04 cm SL

Distribution: South America: Araguaia River basin.

Countries: Brazil

ROEBOEXODON

Roeboexodon Géry, 1959c: 346. Type species: *Roeboexodon geryi* Myers, 1960. Type by subsequent designation by Myers (1960: 210). Gender: masculine

***Roeboexodon geryi* Myers, 1960**

Roeboexodon geryi Myers, 1960: 209. Type locality: Confluent du Ouaqui et du Tampoc, bassin du Haut-Maroni, Guyane Française. Holotype: MNHN 59-38, established by Myers (1960: 210) based in the type-specimens of *Exodon guyanensis* sensu Géry (1959c).

Maximum length: 15 cm SL

Distribution: South America: Amazon, Tocantins, Xingu, and Tapajós River basins.

Countries: Brazil.

Remarks and references: See color photo in Planquette et al. (1996). Puyo (1948) on the basis of three specimens collected in French Guyana, described *Exodon guyanensis*. Géry (1959) designated a neotype and proposed the new genus *Roeboexodon* for Puyo's species. Myers (1960) indicated differences between Géry's and Puyo's descriptions, stating that the former did not corresponded to *E. guyanensis*. For this reason, Myers (1) erected a new genus, *Gnathoplax* in order to house the species of Puyo, (2) maintained the name *Roeboexodon* for the specimens of Géry and, (3) provided a specific epithet for *Roeboexodon*: *R. geryi*. We herein keep the name *Roeboexodon geryi* and regard the neotype designation by Géry invalid in accordance with the arguments mentioned by Myers (1960). Moreover, Géry (1959) doesn't say that there are controversies concerning Puyo's species identification or even that the taxon is involved in nomenclatural problems, basic premises for a neotype designation following the ICZN Art. 75.1. Contrarily, Géry statement: "l'espèce, bien que clairement définie et figurée par Puyo, l'était toutefois incomplètement et aucun type était désigné...." enforces the incompleteness of Puyo's description but no difficulties on the identification. Besides, Géry (p. 346) cited his objectives: "... désigner un néotype de *Exodon guyanensis* et d'en faire une redescription figurée (...) le tout en application des Règles de la nomenclature, ...", which allow us to exclusively view his action as a procedure to satisfy the "need" of replacement of the missing type-specimens. It characterizes this procedure as merely curatorial, and not as a reason for a neotype designation. On the contrary, it automatically invalidates the neotype designation (ICZN Art 75.2). It seems that Myers' procedure is nomenclaturally correct in spite of the presence of some questionable diagnostic characters cited by Puyo (1948). We considered the names *Gnathoplax* Myers and *Exodon guyanensis* (Puyo), respectively Genus and Species inquirenda.

SALMINUS

Salminus Agassiz, in Spix & Agassiz, 1829: 76. Type species: *Hydrocyon brevidens* Cuvier, 1819. Type by monotypy. Gender: masculine.

***Salminus affinis* Steindachner, 1880**

Salminus affinis Steindachner, 1880: 80, pl. 7 (fig. 2). Type locality: Cauca [Colombia]. Lectotype: NMW 78042.02, designated by Géry & Lauzanne (1990: 123).

Maximum length: 100 cm SL

Distribution: South America: Magdalena River basin and Santiago River basin in Ecuador.

Countries: Colombia, Ecuador

Common names: Dorada (Colombia), Picuda (Colombia), Rubia (Colombia), Rubio (Colombia)

***Salminus brasiliensis* (Cuvier, 1816)**

Hydrocynus brasiliensis Cuvier, 1816: 167. Type locality: Brésil. Holotype: MNHN A.8555 (dry).

Hydrocyon brevidens Cuvier, 1819: 364, pl. 27 (fig. 1). Type locality: Brésil. Holotype: MNHN A.8555 (dry). Objective synonym of *Salminus brasiliensis* (Cuvier, 1816) (Géry & Lauzanne, 1990: 117).

Salminus maxillosus Valenciennes, in Cuvier & Valenciennes, 1850: 62. Type locality: l'Amazone [Brazil]. Holotype: MNHN A.8550 (dry). Possibly a synonym of *Salminus brasiliensis* (Cuvier, 1816) (Géry & Lauzanne 1990: 122).

Salminus cuvieri Valenciennes, in Cuvier & Valenciennes, 1850: 56. Type locality: Brésil. Holotype: MNHN A.8555. Objective synonym of *Salminus brasiliensis* (Cuvier, 1816) (Géry & Lauzanne, 1990: 117).

Salminus orbignyanus Valenciennes, in Cuvier & Valenciennes, 1850: 65. Type locality: les Missions jusqu'à Buénos Ayres, Argentina; dans tous les affluents du Parana ou de l'Uruguay. Holotype: MNHN A.8551. Possible synonym of *Salminus brasiliensis* (Cuvier, 1816) (Géry & Lauzanne 1990: 122).

Salmo auratus Larrañaga, 1923: 378. Type locality: Uruguay.

Salmo 27-radiatus Larrañaga, 1923: 388. Type locality: Uruguay. Originally as *Salmo auratus* vel *27-radiatus*.

Maximum length: 100 cm SL

Distribution: South America: Paraná, Paraguay, and Uruguay River basins; Laguna dos Patos drainage, upper Chaparé and Mamoré River basin in Bolivia. Occurrence in the remaining Amazon River basin highly doubtful.

Countries: Argentina, Bolivia, Brazil, Paraguay, Uruguay

Remarks and references: See Géry & Lauzanne (1990) for remarks on taxonomy.

Common names: Dorado (Argentina, Uruguay), Dourado (Brazil), Pirayú (Argentina, Uruguay)

***Salminus hilarii* Valenciennes, 1850**

Salminus hilarii Valenciennes, in Cuvier & Valenciennes, 1850: 64. Type locality: Rio San Francisco [Brazil]. Lectotype: MNHN A.8658, designated by Géry & Lauzanne (1990: 117).

Brycon erythrura Fowler, 1941: 191, fig. 101. Type locality: Rio Jaguaribe, Orós, Ceará [Brazil]. Holotype: ANSP 69608.

Holobrycon iquitensis Nakashima, 1941: 72, fig. Type locality: Cercanías del Puerto de Iquitos [Peru]. Probably a synonym of *Salminus hilarii* (Géry & Lauzanne, 1990: 116). Type material lost (H. Ortega, pers. comm.).

Maximum length: 50 cm SL

Distribution: South America: Upper Paraná, São Francisco, and Tocantins River basins; upper Amazon River basin; Orinoco River basin.

Countries: Brazil, Colombia, Ecuador, Peru, Venezuela

Remarks and references: See Géry & Lauzanne (1990) for remarks on taxonomy.

Common names: Dorada (Venezuela), Dorado (Colombia), Dourado (Brazil), Sábalo (Peru), Saltador (Venezuela), Saltadora

(Venezuela), Sauta (Venezuela), Tabarana (Brazil), Tubarana (Brazil), Tuburana (Brazil)

SCHULTZITES

Schultzites Géry, 1964c: 31. Type species: *Schultzites axelrodi* Géry, 1964. Type by original designation. Gender: masculine.

***Schultzites axelrodi* Géry, 1964**

Schultzites axelrodi Géry, 1964c: 32, fig. 7. Type locality: about 200 miles east of Bogota, Colombia, in the upper Rio Meta drainage [Colombia]. Holotype: USNM 198642.

Maximum length: 3.4 cm SL

Distribution: South America: Upper Meta River basin.

Countries: Colombia

Remarks and references: See Géry (1977: 450) for comments.

Common names: Axelrod's Moenkhausia (USA)

SCISSOR

Scissor Günther, 1864: 331. Type species: *Scissor macrocephalus* Günther, 1864. Type by monotypy. Gender: masculine.

***Scissor macrocephalus* Günther, 1864**

Scissor macrocephalus Günther, 1864: 331. Type locality: ...as all the specimens from the same source were from Surinam, it is probable that this species also comes from that country. Holotype: BMNH 1858.6.14.1.

Distribution: South America: Suriname (?).

Countries: Suriname

Remarks and references: See Rosen (1972: 16-17) for notes on the species.

SERRABRYCON

Serrabrycon Vari, 1986: 329. Type species: *Serrabrycon magoi* Vari, 1986. Type by original designation. Gender: masculine.

***Serrabrycon magoi* Vari, 1986**

Serrabrycon magoi Vari, 1986: 329, figs. 1-3. Type locality: Venezuela, Territorio Federal Amazonas, Departamento Rio Negro, lower portion of Caño Manu, which drains into the Casiquiare about 250 m upstream of Solano (approx. 02°00'N 66°57'W). Holotype: MBUCV 14270.

Maximum length: 3.1 cm SL

Distribution: South America: Upper Negro, Casiquiare, and Orinoco River basins.

Countries: Brazil, Venezuela

Remarks and references: See Taphorn (1992: 292, 324-325) for remarks on the species.

STICHONODON

Lütkenia Steindachner, 1876b: 85. Type species: *Lütkenia insignis* Steindachner, 1876. Type by monotypy. Gender: feminine. Apparently preoccupied by *Lütkenia* Claus, 1864, in Crustacea [not investigated], replaced by *Stichonodon* Eigenmann, 1903.

Stichonodon Eigenmann, 1903: 146. Type species: *Lütkenia insignis* Steindachner, 1876. Type by being a replacement name. Gender: masculine. Replacement for *Lütkenia* Steindachner 1877, preoccupied by *Lutkenia* Claus, 1864, in Crustacea [original spelling not investigated].

***Stichonodon insignis* (Steindachner, 1876)**

Lütkenia insignis Steindachner, 1876b: 86, pl. 8 (fig. 1). Type locality: Amazonenstrom bei Tabatinga und Santarem [Brazil]. Syntypes: (several) NMW; ZSM (1).

Maximum length: 8 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

STYGICHTHYS

Stygichthys Brittan & Böhlke, 1965: 1. Type species: *Stygichthys typhlops* Brittan & Böhlke, 1965. Type by original designation. Gender: masculine.

***Stygichthys typhlops* Brittan & Böhlke, 1965**

Stygichthys typhlops Brittan & Böhlke, 1965: 2, figs. 1-2. Type locality: Jaiba, state of Minas Gerais, Brazil. Holotype: ANSP 100891.

Maximum length: 2.36 cm SL

Distribution: South America: Upper São Francisco River basin in Minas Gerais State.

Countries: Brazil

Remarks and references: Threatened species (Romero & McLeran, 2000).

THAYERIA

Thayeria Eigenmann, 1908: 94. Type species: *Thayeria obliquus* Eigenmann, 1908. Type by original designation. Gender: feminine.

***Thayeria boehlkei* Weitzman, 1957**

Thayeria boehlkei Weitzman, 1957: 391, fig. 1. Type locality: No definite locality. Holotype: CAS (ex SU) 149907.

Maximum length: 3.15 cm SL

Distribution: South America: Upper Amazon River basin in Peru and Araguaia River in Brazil.

Countries: Brazil, Peru

Remarks and references: See Géry (1960, 1964) for notes on taxonomy and distribution.

***Thayeria ifati* Géry, 1959**

Thayeria ifati Géry, 1959b: 128, figs. 1-3. Type locality: Gaa Kaba, Maroni, Guiana, north of the 4th parallel. Holotype: MHNG 2173.42 (ex Géry 25T05a).

Maximum length: 3.5 cm SL

Distribution: South America: Maroni and Approuague River basins in French Guiana.

Countries: French Guiana

***Thayeria obliqua* Eigenmann, 1908**

Thayeria obliquus Eigenmann, 1908: 94. Type locality: Obidos [Amazon River basin, Pará, Brazil]. Syntypes: USNM 120295 (6), MCZ 20841 (20).

Thayeria sanctae-mariae Ladiges, 1951: 129, fig. Type locality: Staate Goyaz (Brasilien) südlich Carolina bei der Ortschaft St. Maria [Tocantins River basin, Brazil]. Holotype: ZSM.

Maximum length: 7.6 cm SL

Distribution: South America: Middle Amazon, middle Tocantins, and Guaporé River basins, Brazil.

Countries: Brazil

Remarks and references: See Géry (1960) for notes on taxonomy and distribution.

THRISOBRYCON

Thrissobrycon Böhlke, 1953a: 168. Type species: *Thrissobrycon pectinifer* Böhlke, 1953. Type by original designation. Gender: masculine.

***Thrissobrycon pectinifer* Böhlke, 1953**

Thrissobrycon pectinifer Böhlke, 1953a: 169, fig. 1. Type locality: Upper Rio Negro at Cucuhy (São Antonio), Brazil... approximately 1°12' North Latitude, 66°51' West Longitude. Holotype: SU 16944.

Maximum length: 2.85 cm SL

Distribution: South America Upper Negro River basin.

Countries: Brazil

TRIPORTHEUS

Chalcinus Valenciennes, in Cuvier & Valenciennes, 1849: 258.

Type species: *Chalcinus brachipomus* Valenciennes, 1849. Type by subsequent designation. Gender: masculine.

Triporthus Cope, 1872b: 263. Type species: *Triporthus albus* Cope, 1872b. Type by subsequent designation. Gender: masculine.

Coscinoxyron Fowler, 1907: 450. Type species: *Chalcinus culter* Cope, 1872b. Type by original designation. Gender: neuter.

***Triporthus albus* Cope, 1872**

Triporthus albus Cope, 1872b: 264. Type locality: Ambyiacu [Peru]. Holotype: ANSP 21234.

Maximum length: 15.1 cm SL

Distribution: South America: Amazon River basin, Tocantins-Araguaia basin.

Countries: Bolivia, Brazil, Ecuador, Peru

Common names: Sardina (Peru)

***Triporthus angulatus* (Spix & Agassiz, 1829)**

Chalceus angulatus Spix & Agassiz, 1829: 67, pl. 34. Type locality: in Brasiliae aequinoctialis fluviis. Type specimens (2) probably lost (Kotellat, 1988).

Triporthus flavus Cope, 1872b: 264, pl. 14 (fig. 1). Type locality: Ambyiacu [Peru]. Lectotype: ANSP 8077 designated by Fowler (1907: 448).

Chalcinus angulatus fuscus Garman, 1890: 4. Type locality: Villa Bella and Lake Hyanuary [Brazil]. Syntypes: MCZ 21175, MCZ 21202, MCZ 21239, MCZ 21201, MCZ 21241 (22), MCZ 21183, MCZ 21187, MCZ 21189 (10), MCZ 21190, MCZ 21186, MCZ 21191 (15), MCZ 21224 (33), MCZ 21216 (3), USNM 120253 (3).

Chalcinus angulatus vittatus Garman, 1890: 4. Type locality: José Fernandez, Villa Bella, Porto do Moz, and Santarem [Brazil]. Syntypes: MCZ 21175 (22), MCZ 21183 (10), MCZ 21186, MCZ 21190, MCZ 21191 (10), MCZ 21270 (18).

Maximum length: 16.3 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Ecuador, Peru, Venezuela

Common names: Sardinha (Brazil), Sardinha chata (Brazil)

***Triporthus culter* (Cope, 1872)**

Chalcinus culter Cope, 1872b: 265, pl. 14 (fig. 3). Type locality: Ambyiacu [Peru]. Holotype: ANSP 16672.

Maximum length: 24.5 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Common names: Sardina (Peru)

***Triporthus curtus* (Garman, 1890)**

Chalcinus angulatus curtus Garman, 1890: 4. Type locality: Pará and Arary [Brazil]. Syntypes: MCZ 21264 (1), MCZ 21272 (2).

Maximum length: 10.68 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

***Triporthus elongatus* (Günther, 1864)**

Chalcinus elongatus Günther, 1864: 342. Type locality: Unknown. Holotype: BMNH 1852.9.13.10.

Chalcinus cruzi Miranda Ribeiro, 1941: 173, fig. 5. Type locality: Not given. Holotype: MNRJ 2775.

Chalcinus amazonensis Miranda Ribeiro, 1941: 174. Type locality: Rio Amazonas [Brazil]. Holotype: MNRJ 2771.

Chalcinus elongatus iquitensis Nakashima, 1941: 63, fig. Type locality: Cercanias del puerto de Iquitos [Amazon system, Peru]. Type material lost.

Maximum length: 24.2 cm SL

Distribution: South America: Trinidad Island; Amazon, Orinoco, and Essequibo River basins.

Check List of the Freshwater Fishes of South and Central America

Countries: Brazil, Ecuador, Guiana, Peru, Trinidad and Tobago, Venezuela.

***Triportheus guentheri* (Garman, 1890)**

Chalcinus guentheri Garman, 1890: 4. Type locality: San Francisco River [Minas Gerais, Brazil]. Holotype: MCZ 21173. Eschmeyer et al. (1998: 686) add material from BMNH as being part of a syntypical series, but Garman (1890: 5) stated: "Taking one from the San Francisco river as a typical specimen", which suggests that Garman designated only a specimen from MCZ as typical.

Maximum length: 13.4 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Common name: sardinha, peituda (Brazil)

***Triportheus magdalenae* (Steindachner, 1878)**

Chalcinus magdalenae Steindachner, 1878: 91. Type locality: Cienaga... Magdalena-strom [Colombia]. Syntypes: NMW 69151-54, ZMUC 87.

Maximum length: 19 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

***Triportheus nematurus* (Kner, 1858)**

Chalcinus nematurus Kner, 1858b: 163. Type locality: not mentioned in original description [Cujaba, Suaguragua und Caiçara Brazil]. Syntypes: NMW 16171 (1), NMW 62689 (2), NMW 69034 (1), NMW 69694 (2). Type locality provided by Kner (1860: 7).

Salmo clupeoides Kner, 1860: 15. Name not available, published in the synonymy of *Triportheus nematurus*.

Maximum length: 15.8 cm SL

Distribution: South America: Paraná-Paraguay River basin.

Countries: Brazil, Paraguay

***Triportheus paranensis* (Günther, 1874)**

Chalcinus paranensis Günther, 1874: 454. Type locality: River Parana. Holotype: BMNH 1872.5.6.32.

Maximum length: 15.9 cm SL

Distribution: South America: La Plata and Paraná-Paraguay River basins.

Countries: Argentina, Brazil, Paraguay

***Triportheus pictus* (Garman, 1890)**

Chalcinus pictus Garman, 1890: 5. Type locality: Jutahy [tributary of Solimões River, Amazonas, Brazil].

Holotype: MCZ 21261.

Maximum length: 10.74 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

***Triportheus rotundatus* (Jardine, 1841)**

Chalceus rotundatus Jardine in Schomburgk, 1841: 209. Type locality: River Padauri [Padauri River, a tributary of the Negro River, Amazonas, Brazil]. Types unknown.

Chalcinus brachipomus Valenciennes in Cuvier & Valenciennes, 1850: 259. Type locality: La Mana, l'Esséquiabo R. Syntypes: MNHN 5402 (2), MNHN A.9836 (1), MNHN A.9916 (5).

Chalcinus rotundatus Nakashima, 1941: 65. Type locality: Cercanias del puerto de Iquitos [Amazon system, Peru]. Type material lost. Appeared as *Chalcinus rotundatus* in main heading and as *Chalcinus rotundatus iquitensis* in figure caption; intention of author unclear.

Chalcinus rotundatus iquitensis Nakashima, 1941: 65. Type locality: Cercanias del puerto de Iquitos [Amazon system, Peru]. Type material lost. (See remarks of *Chalcinus rotundatus*).

Maximum length: 17.8 cm SL

Distribution: South America: Amazon River basin and coastal rivers of the Guianas.

Countries: Brazil, French Guiana, Guyana, Peru, Suriname

Common names: Moroyo (French Guiana), Sardina (Peru), Sardinha (Brazil), Zareng blanc (French Guiana)

***Triportheus signatus* (Garman, 1890)**

Chalcinus angulatus signatus Garman, 1890: 4. Type locality: Rio Puty [Parnaíba River basin, Piauí, Brazil]. Syntypes: MCZ 21267 (17).

Maximum length: 15.8 cm SL

Distribution: South America: Parnaíba River basin and some northerly coastal drainages in Brazil.

Countries: Brazil

***Triportheus trifurcatus* (Castelnau, 1855)**

Chalcinus trifurcatus Castelnau, 1855: 70, pl. 37 (fig. 1). Type locality: l'Araguay [Brazil]. Holotype: MNHN A.9837. Possibly a synonym of *Triportheus angulatus* (Spix & Agassiz, 1829) (Garman, 1890: 3).

Maximum length: 16.5 cm SL

Distribution: South America: Tocantins-Araguaia River basin.

Countries: Brazil

Species inquirendae

Chalcinus auritus Valenciennes in Cuvier & Valenciennes, 1850: 262. Type locality: l'Amazone [Brazil]. Types unknown.

Chalcinus muellerii De Filippi, 1853: 165. Type locality: Rio Napo. Holotype: MZUT 160. Name emended as *Chalcinus muellerii*. Possibly a synonym of *Triportheus angulatus* (Spix & Agassiz, 1829) (Garman, 1890: 3).

Chalcinus knerii Steindachner, 1876b: 98, pl. 12 (fig. 4). Type locality: Amazonestrom (bei Teffé?) [Brazil]. Possibly a synonym of *Triportheus albus* Cope, 1872 (Garman, 1890: 6). Syntypes not found at NMW.

TUCANOICHTHYS

Tucanoichthys Géry & Römer, 1997: 66. Type species: *Tucanoichthys tucano* Géry & Römer, 1997. Type by original designation. Gender: masculine.

***Tucanoichthys tucano* Géry & Römer, 1997**

Tucanoichthys tucano Géry & Römer, 1997: 66, fig. 1. Type locality: brook emptying into Igarapé Yavuari, a tributary of Rio Uaupés, upper Rio Negro basin, Amazonas, Brazil, 0°14'31"N, 68°03'48"W. Holotype: MZUSP 51321.

Maximum length: 1.655 cm SL

Distribution: South America: Uaupés River in upper Negro River basin.

Countries: Brazil

TYTTOBRYCON

Tyttobrycon Géry, 1973: 117. Type species: *Tyttobrycon xerui* Géry, 1973. Type by original designation. Gender: masculine.

***Tyttobrycon dorsimaculatus* Géry, 1973**

Tyttobrycon dorsimaculatus Géry, 1973: 118, fig. 20. Type locality: "Hoffmann Lagune" on the rio Chaparé, tributary of the rio Mamoré (into rio Madeira) below Todos Santos, Central Bolivia, approximately 16°45'S. and 65°07'. Holotype: Museum A. Koenig, uncat.

Maximum length: 1.95 cm SL

Distribution: South America: Chapare River basin.

Countries: Bolivia

***Tyttobrycon hamatus* Géry, 1973**

Tyttobrycon hamatus Géry, 1973: 129, fig. 31. Type locality: Upper Amazon basin, Loreto District of Peru, in some tributary of the Marañon not far from Iquitos (precise locality unknown). Holotype: MHNG 2172.30.

Maximum length: 1.69 cm SL

Distribution: South America: Amazon River basin.

Countries: Peru

***Tyttobrycon spinosus* Géry, 1973**

Tyttobrycon spinosus Géry, 1973: 121, fig. 23. Type locality: brook between upper rios Chaparé and Chimoré (or Ichilo), tributaries of the rio Mamoré (into rio Madeira), east of Todos Santos, Central Bolivia, approximately 16°47'S and 65°W. Holotype: Museum A. Koenig, uncat.

Maximum length: 2.05 cm SL

Distribution: South America: Mamoré River basin.

Countries: Bolivia

***Tyttobrycon xeruii* Géry, 1973**

Tyttobrycon xeruii Géry, 1973: 126, fig. 27. Type locality: Middle rio Negro basin, rio Novo, tributary of the rio Xeruii [Brazil]. Holotype: MHNG 2229.10.

Maximum length: 2.26 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

XENAGONIATES

Xenagoniates Myers, 1942: 90. Type species: *Xenagoniates bondi* Myers, 1942. Type by original designation. Gender: masculine.

***Xenagoniates bondi* Myers, 1942**

Xenagoniates bondi Myers, 1942: 90, fig. 1. Type locality: Rio Amana, 6 km. east of Santa Barbara and 35 km. west of Maturin, Venezuela. Holotype: SU 36486.

Maximum length: 6 cm SL

Distribution: South America: Orinoco River basin and coastal drainages of Venezuela and Colombia.

Countries: Colombia, Venezuela

Remarks and references: See Taphorn (1992: 355-356) for notes on ecology of the species.

Common names: Long-finned glass tetra (USA)

GENUS INQUIRENDUM

Gnathoplax Myers, 1960: 209. Type species: *Exodon guyanensis* Puyo, 1948. Type by original designation. Gender: feminine.

SPECIES INQUIRENDAE

Astyanax notemigonoides Fowler, 1911b: 506, fig. 4. Type locality: Affluent of the Chimbo River near Bucay, Province of Guayas, Ecuador. Holotype: ANSP 39110.

Astyanax scierus Fowler, 1911b: 509, fig. 5. Type locality: Affluent of the Chimbo River near Bucay, Province of Guayas, Ecuador. Holotype: ANSP 39065.

Chalceus fasciatus Jardine & Schomburgk in Schomburgk, 1841: 215. Type locality: Rio Padauri...also in the Curantu. Holotype: ?.

Chalceus latus Jardine & Schomburgk in Schomburgk, 1841: 214. Type locality: Padauri, a tributary of the Rio Negro. Holotype: ?.

Chalceus taeniatus Jardine & Schomburgk in Schomburgk, 1841: 210. Type locality: River Essequibo...Rios Negro and Branco. Holotype: ?.

Characinus curimata La Cepède, 1803: 271. Type locality: Surinam. Holotype: ?.

Characinus piabucu La Cepède, 1803: 269. Type locality: South America. Holotype: ?.

Charax cyprinoides Meuschen, 1778: 38. [Not available, published in a rejected work (Opinion 260)].

Charax fasciata Swainson, 1839: 222. Type locality: ?. Holotype: ? [Based on Cuvier & Valenciennes, 1839 pl. 144].

Charax gracilis Gronow in Gray, 1854: 154. Type locality: Tropical America. Holotype: ?.

Charax leucometopon Zuiew, 1786: 275. Type locality: ?. Holotype: ?.

Charax notatus Meuschen, 1778: 38. Type locality: ?. Holotype: ? [Not available, published in a rejected work (Opinion 260)].

Charax serratus Gronow in Gray, 1854: 155. Type locality: Surinam. Holotype: ?.

Ctenobrycon multifasciatus Steindachner in Eigenmann, 1910: 435. [Not available, name and locality but no description; a supposed Steindachner species, but no reference cited].

Exodon guyanensis Puyo, 1948: 78, fig. 1. Type locality: not specified [French Guiana]. Three syntypes probably lost. Neotype designation by Géry (1959c: 347) invalid (ICZN Art. 75.2).

Knodus albolineatus Holly, 1929: 117. Type locality: Piquirão, Amazonas, Brazil. Holotype: ?.

Hyphessobrycon latus Fowler, 1941: 185, fig. 95. Type locality: Forteleza, Ceará [= Fortaleza, Ceará, Brazil]. Holotype: ANSP 69578. Apparently a Cheirodontinae (H.A. Britski, pers. comm.)

Salmo (dentado) denticulosus Larrañaga, 1923: 378. Type Locality: Uruguay. Holotype: ?.

Salmo denticulosus vel *26-radiatus* Larrañaga, 1923: 388. Type-locality: Uruguay. Holotype: ?.

Salmo ovatus Larrañaga, 1923: 388. Type locality; Uruguay. Holotype: ?.

Salmo sachicanga Kner, 1860: 51. Not available, name mentioned in passing under *Cynopotamus humeralis* Valenciennes.

Salmo sau-à Netterer in Kner, 1859: 174: Type locality: Cuiaba und Gujana. Holotype: ?.

Salmo 30-radiatus Larrañaga, 1923: 388. Type-locality: Uruguay. Holotype: ?.

Tetragonopterus (Astyanax) riveti Pellegrin, 1907: 25. Type locality: Rio Pove, Santo Domingo de los Colorados (560 mètres d'altitud, versant du Pacifique) [Équateur]. Holotype: MNHN 1904-22.

Tetragonopterus anomalus Steindachner, 1891a: 173. Type locality: Río Paraná at Corrientes, Argentina. Holotype: NMW 57643.

Tetragonopterus artedii Valenciennes in Cuvier & Valenciennes, 1850: 128. Type locality: not stated in original description. Syntypes: MNHN (ex. "Cabinet du Stathouder"; "Musée de Leyde").

Tetragonopterus astictus Ulrey, 1894: 611. Type locality: Brazil. Holotype: whereabouts unknown.

Tetragonopterus branickii Steindachner, 1879c: 151. Type locality: Zurumilla [Ecuador]. Syntypes: NMW 57258 (2).

Tetragonopterus fischeri Steindachner, 1879c: 151. Type locality: Río Mamoni, Panama.

Tetragonopterus fuscoauratus Castelnau, 1855: 66, pl. 33 (fig. 2). Type locality: environs de Bahia [Brazil]. Syntypes: MNHN A-9821 (8).

Tetragonopterus gibbosus Steindachner, 1877: 562, pl. 1 (fig. 1). Type locality: Parahyaba [Brazil]. Holotype: ?

Tetragonopterus (Hemibrycon) trinitatis Lütken, 1875b: 234. Type locality: Trinidad Island, West Indies.

Tetragonopterus huberi Steindachner, 1909: 172. Type locality: Purus, Amazonas [Brazil]. Holotype: ?

Tetragonopterus microstoma Günther, 1864: 323. Type locality: Bahia [Brazil].

Tetragonopterus ortonii Gill, 1870: 92. Type locality: Unlisted locality from "Maranon, or Upper Amazon, and Río Napo Rivers".

Tetragonopterus ortonii Gill in Cope, 1870: 566. [Name only, not available].

Tetragonopterus rhomboidalis Posada, 1909: 302. Type locality: Medellín, Colombia. No types known.

Tetragonopterus rufipes Valenciennes, 1842: no p., pl. 11 (fig. 1). Type locality: Not listed in original description (plate) [Buenos Aires, Argentina]. Syntypes: MNHN A-9808 (3).

Tetragonopterus santaremensis Ulrey, 1894: 610. Type locality: Santarém [Brazil]. Syntypes: 10 specimens, SU 2167 (2).

Tetragonopterus sardina Posada, 1909: 302. Type locality: Medellín, Colombia. No types known.

Tetragonopterus sawa Castelnau, 1855: 65, pl. 33 (fig. 1). Type locality: rio Crixas qui se jette dans L'Araguay [Brazil]. Holo-

type: MNHN A.9819.

Tetragonopterus schomburgkii Valenciennes in Cuvier & Valenciennes, 1850: 137. Type locality: Essequibo [Guyana]. Holotype: MNHN A.9812 (poor condition).

Subfamily Agoniatinae (Characins)

Flávio C.T. Lima and Angela Zanata

The subfamily Agoniatinae includes two species of elongated, medium-sized fishes, which resemble clupeiform fishes in the shape of body and in coloration. They possess a combination of unusual features in Characidae, such as a well-developed coracoid bone, conic teeth alternating with canine teeth on the dentary and tricuspidate teeth on the premaxilla. Relationships of the genus were unknown until Zanata (2000) provided compelling evidence that *Agoniat*es is closely related to *Triporth*eus and *Lignobry*con.

Both *Agoniat*es species occurs primarily in the Amazon basin (*Agoniat*es *halecin*us was also recorded from Guyana). *Agoniat*es *halecin*us was reported as being piscivore (Goulding et al., 1988, as *Agoniat*es sp.). Zarske and Géry (1997) recently reviewed the genus, recognizing two valid species: *Agoniat*es *halecin*us, widespread in Amazon basin, and *A. anch*ovia, apparently occurring primarily in the upper Amazon. *Agoniat*es species have no special economic interest, except for being occasionally used as food.

AGONIATES

*Agoniat*es Müller & Troschel, 1845: 33. Type species: *Agoniat*es *halecin*us Müller & Troschel, 1845. Type by monotypy. Gender: masculine.

*Agoniat*es *anch*ovia Eigenmann, 1914

*Agoniat*es *anch*ovia Eigenmann, 1914: 46. Type locality: Villa Bela [Beni River, upper Amazon River basin, Bolivia]. Holotype: FMNH 56401 [ex CM 5216].

*Agoniat*es *ladig*esi Géry, 1963: 266, fig. 1. Type locality: Amazon zone péruvienne, district de Loreto entre Iquitos et Leticia. Holotype: ZMH 1565.

Maximum length: 14.8 cm SL

Distribution: South America: Beni River; Trombetas, Tapajós, Negro, and Solimões River basins; Amazon River basin in Peru; Napo River basin.

Countries: Bolivia, Brazil, Ecuador, Peru

Remarks and references: For a recent redescription of the species and comparison with *A. halecin*us, see Zarske & Géry (1997).

Common names: Mojarita (Peru), Sardina (Ecuador)

*Agoniat*es *halecin*us Müller & Troschel, 1845

*Agoniat*es *halecin*us Müller & Troschel, 1845: 33, pl. 7 (fig. 2). Type locality: Guiana. Holotype: ZMB 3618.

Maximum length: 21.5 cm SL

Distribution: South America: Essequibo, Branco, Araguari, Capim, Tocantins, Xingu, Tapajós, Trombetas, Negro, Casiquiare, and Tefé River basins.

Countries: Brazil, Guyana, Venezuela

Remarks and references: For a recent redescription of the species and comparison with *A. anch*ovia, see Zarske & Géry (1997).

Common names: Maiaca (Brazil)

Subfamily Clupeacharacinae (Characins)

Flávio C. T. Lima

The subfamily Clupeacharacinae is monotypic, including only *Clupeacharax anchoveoides* Pearson. This small-sized characid fish displays a striking combination of features, such as an elongated body, a well-developed coracoid bone, the presence of a mid-ventral keel, a long anal fin with its origin anterior to the dorsal fin, and the dentary and premaxilla with tri- to pentacuspoid teeth. Its relationships are unknown, but Castro (1981) and Castro & Vari (1990) suggested that it might be related to the characid genus *Engraulisoma* Castro. This rare fish is known from a handful of localities in the upper Amazon basin, Paraguay and Paraná rivers. Nothing is known about its ecology.

CLUPEACHARAX

Clupeacharax Pearson, 1924: 46. Type species: *Clupeacharax anchoveoides* Pearson, 1924. Type by monotypy. Gender: masculine.

Clupeacharax anchoveoides Pearson, 1924

Clupeacharax anchoveoides Pearson, 1924: 47, pls. 7 (fig. 3).
Type locality: Cachuela Esperanza [upper Beni River, Bolivia].
Holotype: CAS 41312 [ex IU 17356].

Maximum length: 6.55 cm SL

Distribution: South America: Upper Amazon River basin; Paraná River basin in Corrientes Province; Paraguay River basin..

Countries: Argentina, Bolivia, Brazil, Ecuador, Peru

Remarks and references: See Castro & Vari (1990: 530) for comments on its possible relationships.

Subfamily Iguanodectinae (Characins, tetras)

Cristiano Moreira

The Iguanodectinae is a small characid subfamily composed of 11 valid species in two genera, *Iguanodectes* Cope and *Piabucus* Oken. Fishes of this subfamily are characterized by elongated bodies, with basally-contracted, multicuspid teeth, gill-membranes united and free from the isthmus, the posterior end of the maxilla not extending to the eye, the dorsal-fin origin generally posterior to the middle of the body (located at middle of the body in *Iguanodectes geisleri*), and anal fin long (except for *I. geisleri*). Moreover, some characters of the internal morphology are also diagnostic, such as the presence of a process on the internal face of the dentary, the first proximal anal-fin pterygiophore expanded and recurved posteriorly (except in *I. geisleri*), and the anterior portion of the posterior chamber of the swimbladder thinner than its posterior portion. The genus *Piabucus* is distinguished from *Iguanodectes* by the presence of a long pectoral fin, and a well-developed pectoral keel.

The subfamily is distributed in the Amazon (including its main tributaries), Orinoco, Paraguay, and Tocantins river basins, as well as the coastal drainages from the Gulf of Pária (Venezuela) to immediately south of the mouth of the Amazon River (including Capim River basin). The group is well studied taxonomically (Böhlke, 1954; Géry, 1970 and 1993; Vari, 1977), although some species remain to be described. Despite of some characters proposed as supporting the monophyly of the Iguanodectinae (Vari, 1977), hypotheses on the phylogenetic relationships of the Iguanodectinae with other groups of the Characiformes are still very tentative (Lucena, 1993), and nothing is known about the phylogenetic relationships among its species. *Iguanodectes* species are probably primarily herbivorous, feeding occasionally on allochthonous insects (Knöppel, 1970; Goulding et al. 1988; pers. obs.). Besides that, little information is known on their ecology. Some of its species are used as ornamental fishes.

IGUANODECTES

Iguanodectes Cope, 1872: 260. Type species: *Iguanodectes tenuis* Cope, 1872. Type by monotypy. Gender: masculine. Revised by Géry (1970). New additional species and geographic distribution by Géry (1993).

Piabucidium Myers, in Eigenmann & Myers, 1929: 496. Type species: *Piabuca spilurus* Günther, 1864. Type by original designation. Gender: neuter.

Iguanobrycon Géry, 1970: 424. Type species: *Iguanodectes geisleri* Géry, 1970. Type by original designation. Gender: masculine.

***Iguanodectes adujai* Géry, 1970**

Iguanodectes adujai Géry, 1970: 419, fig. 2 (no. 2). Type locality: Rio Adujá, Rio Itú, (affluent du Rio Negro moyen) [Itu River, tributary of Araçá River, Negro River basin, Amazonas, Brazil]. Holotype: MHNG 2229.06 [ex Géry coll. 0616].

Maximum length: 6.2 cm SL

Distribution: South America: Negro and Orinoco River basins.

Countries: Brazil, Venezuela

***Iguanodectes geisleri* Géry, 1970**

Iguanodectes geisleri Géry, 1970: 422, fig. 2 (no. 4). Type locality: Igarapé de Paricá, Rio Jufaris (approximativement 1°05' Lat. S. et 62°10' Long. O.), affluent du cours moyen du Rio Negro [Jufari River, tributary of Negro River, Amazonas, Brazil]. Holotype: MHNG 2229.02 [ex Géry coll. 0617].

Maximum length: 5.52 cm SL

Distribution: South America: Madeira, Negro, and Orinoco River basins.

Countries: Brazil, Venezuela

***Iguanodectes gracilis* Géry, 1993**

Iguanodectes gracilis Géry, 1993: 100, fig. 7. Type locality: Rio

Mamolé, affluent of Rio Cuiuni, bassin du Rio Negro moyen [near Barcelos, Amazonas, Brazil]. Holotype: MZUSP 45682.

Maximum length: 4.64 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

***Iguanodectes polylepis* Géry, 1993**

Iguanodectes polylepis Géry, 1993: 103, fig. 10. Type locality: Affluent du Rio Ituxiou (ou Pixuna), bassin du Rio Purus à l'O de Humaitá [Ituxi ou Ipixuna River (Paraná Pixuna), tributary of the Purus River, Amazonas, Brazil]. Holotype: MZUSP 45684.

Maximum length: 8.45 cm SL

Distribution: South America: Madeira and Purus River basins.

Countries: Brazil

***Iguanodectes purusii* (Steindachner, 1908)**

Piabuca purusii Steindachner, 1908: 63. Type locality: Rio Purús [Brazil]. Holotype: NMW 56584.

Maximum length: 7.5 cm SL

Distribution: South America: Amazon, Guaporé, Madeira, Pastaza, and Purus River basins.

Countries: Brazil, Peru

Remarks and references: Géry (1970 and 1993) transferred to *Iguanodectes*. See Géry (1993) for redescription.

***Iguanodectes rachovii* Regan, 1912**

Iguanodectes rachovii Regan, 1912: 682. Type locality: The Amazon at Manãos [Manaus, Amazonas, Brazil]. Syntypes: BMNH 1912.3.1.38-39 (4).

Maximum length: 6.21 cm SL

Distribution: South America: Amazon River from Manaus to Belém, and coastal rivers close to Belém (north and south of the mouth of the Amazon River, including the Capim River).

Countries: Brazil

Remarks and references: Included in the synonymy of *Iguanodectes tenuis* (synonym of *Iguanodectes spilurus*) by Eigenmann and Myers (1929: 494) and subsequently reaffirmed by Böhlke (1954: 98 and 100). Revalidation is based on personal examination of the types of *Iguanodectes rachovii* and *Iguanodectes spilurus*.

***Iguanodectes spilurus* (Günther, 1864)**

Piabuca spilurus Günther, 1864: 344. Type locality: River Cupai [Cupari River, Tapajós River basin, Pará, Brazil]. Holotype: BMNH 1853.3.19.70.

Iguanodectes tenuis Cope, 1872: 260. Type locality: The Ambyiacu river...near Pebas, in Eastern Ecuador, some distance east of the Napo [depto. of Loreto, Peru]. Holotype: lost.

Maximum length: 10.15 cm SL

Distribution: South America: Amazon, Essequibo, Orinoco, and Tocantins River basins.

Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru, Venezuela

Remarks and references: Transferred from *Piabucus* and considered as senior synonym of *Iguanodectes tenuis* by Böhlke (1954). See Weber (1992: 29) for the correction of the type locality.

Common names: Mojarita (Peru), Sardina, Sardinita (Venezuela)

***Iguanodectes variatus* Géry, 1993**

Iguanodectes variatus Géry, 1993: 101, fig. 8. Type locality: Igarapé Jaturana, 5 km em amont de Samuel, Rio Guaporé, Território de Rondonia, Brésil [5 km from Samuel dam/fall, Madeira River, Rondônia, Brazil]. Holotype: MZUSP 45683.

Maximum length: 10.3 cm SL

Distribution: South America: Branco, Guaporé, Trombetas, and Urubu River basins.

Countries: Brazil

PIABUCUS

Piabucus Oken, 1817: 1183. Type species: *Salmo argentinus* Linnaeus, 1766. Type by subsequent designation by Eigenmann 1910: 440. Gender: masculine. Revised by Böhlke (1954).

Piabuca Müller & Troschel, 1844: 84. Type species: *Salmo argentinus* Linnaeus, 1766. Type by monotypy. Gender: masculine.

***Piabucus caudomaculatus* Vari, 1977**

Piabucus caudomaculatus Vari, 1977: 2, fig. 1. Type locality: Rio Matucare, a small muddy stream (1 m. wide, flow 3m³ per sec.) just above its junction with the Rio Mamoré at Puerto Siles, Department of Beni, Bolivia (approx. lat. 12°49'S, long. 65°04'W). Holotype: AMNH 32490.

Maximum length: 9.6 cm SL

Distribution: South America: Mamoré River basin.

Countries: Bolivia

***Piabucus dentatus* (Koelreuter, 1763)**

Trutta dentata Koelreuter, 1763: 413, fig. 4. Type locality: unknown. No types known.

Salmo argentinus Linnaeus, 1766: 511. Type locality: Brasilia [=Brazil]. No types known.

Maximum length: 12.9 cm SL

Distribution: South America: Coastal drainages from Paría Gulf in Venezuela to south of the mouth of the Amazon River, including the lower Amazon basin. Erroneously cited from Peru by Eigenmann (1910).

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Common names: Bongoni (Brazil), Sardine (French Guiana)

***Piabucus melanostomus* Holmberg, 1891**

Piabuca melanostoma Holmberg, 1891: 192. Type locality: República Argentina, Cuenca del Plata, Rio Paraguay, Formosa (Chaco), III-IV, 1885 (Solari); Paraguay, Asuncion, IV, 85 (Sola-

ri). Holotype: Unknown.

Maximum length: 10.52 cm SL

Distribution: South America: Madeira and Paraguay River basins.

Countries: Argentina, Bolivia, Brazil, Paraguay, Peru

Common names: Mojarita boca negra (Peru)

Subfamily Bryconinae (Characins, tetras)

Flávio C. T. Lima

The subfamily Bryconinae includes about 40 valid species, plus several undescribed. The delimitation of the subfamily followed here is based mainly in Zanata (2000). That author did not find evidence for a close relationship between *Brycon* species and genera that were previously considered putatively related (e.g. *Salminus*, *Chalceus* or *Triportheus*). On the other hand, two monotypic genera are herein included in Bryconinae: *Chilobrycon* Géry & Rham and *Henochilus* Garman. The first genus was considered to be part of the Bryconinae when first proposed (Géry & Rham, 1981). *Chilobrycon* was examined by Zanata (2000), who concluded that it is very probably a synonym of *Brycon*. Zanata (2000), however, preferred not to synonymize *Chilobrycon* with *Brycon* until a more encompassing analysis of the species of *Brycon* was available. *Henochilus* was considered to be species of Cheirodontinae (e.g. Géry, 1977), but recently Malabarba (1998) excluded *Henochilus* and several other genera from a rediagnosed Cheirodontinae. Following the rediscovery of *Henochilus wheatlandii* (Vieira et al., 2000), I was able to examine a specimen of the species. *Henochilus wheatlandii* is strikingly similar to *Chilobrycon deuterodon*, sharing with it the absence of the upper lip and the spatulated, trilobated teeth (compare figs. 3 and 4 of Géry & Rham [1981], with figs. 1 and 2 of Vieira et al. [2000]). Therefore, we consider *Henochilus* as being a species of the Bryconinae. An objective analysis of the problem must, however, await a detailed comparison among *Chilobrycon*, *Henochilus* and the remaining members of the Bryconinae.

The species of the subfamily Bryconinae are medium to large-sized characid fishes, reaching a maximum standard length from 15 cm (*Brycon pesu*) to about 70 cm (*Brycon orbygnianus* and *Brycon amazonicus*). The Bryconinae could not be diagnosed by a unique set of characters, but the combination of three (rarely four) rows of teeth on the premaxilla, the presence of larger teeth in the inner row of the premaxilla, and the presence of a symphyseal tooth behind the main dentary tooth row are uncommon among the remaining Characidae. The Bryconinae occurs from southern Mexico to Panama, across the trans-Andean South American river basins from northern Peru to the Maracaibo system in Venezuela, and in cis-Andean South America in all major river drainages and most Atlantic and Caribbean coastal river basins. The genus *Brycon* is particularly diverse in the rivers of Panama, and in the trans-Andean river basins of Colombia and Ecuador. The systematics of the genus is still very confusing. Species occurring in Panama and trans-Andean rivers of northern South America were studied in some detail by Eigenmann (1922), Hildebrand (1938), and Dahl (1971), and were consequently better known than the species occurring in the cis-Andean river basins, which never received a comprehensive treatment. Howes (1982) and Géry & Mahnert (1992) provided the most recent and useful accounts on the systematics of the genus. The cis-Andean species of the genus *Brycon* are being reviewed by the author, and the synonymy proposed below for those species is a result of this ongoing revisionary study.

Members of the genus *Brycon* are important food fishes throughout Central and South America. Species of the genus are important in commercial fisheries in many river systems and are also being cultivated in several South American countries. *Brycon* species are omnivorous, relying more heavily on allochthonous items, such as fallen fruits, seeds, and insects (see Goulding, 1980; Horn, 1997; Sabino & Sazima, 1999; and Lima & Castro, 2000, for a short review). Some species are known to perform long-range reproductive migrations (Godoy, 1975; Goulding, 1980). *Brycon petrosus* and *B. guatemalensis* were reported to make terrestrial spawning (Kramer, 1978; Bussing, 1993). In the rivers of eastern Brazil, *Brycon* species are becoming very rare due to the severe anthropogenic disturbances (Lima & Castro, 2000).

BRYCON

Brycon Müller & Troschel, 1844: 90. Type species: *Brycon falcatulus* Müller & Troschel, 1844. Type by subsequent designation. Gender: masculine.

Chalcinopsis Kner, 1863: 226. Type species: *Chalcinopsis striatulus* Kner, 1863. Type by subsequent designation. Gender: feminine.

Megalobrycon Günther, 1869: 423. Type species: *Megalobrycon cephalus* Günther, 1869. Type by monotypy. Gender: masculine.

Catabasis Eigenmann & Norris, 1900: 358. Type species: *Catabasis acuminatus* Eigenmann & Norris, 1900. Type by original designation. Gender: feminine.

Bryconodon Eigenmann, 1903: 146. Type species: *Brycon orthotaenia* Günther, 1864. Type by original designation. Gender: masculine.

Othonophanes Eigenmann, 1903: 145. Type species: *Brycon labiatus* Steindachner, 1879. Type by original designation. Gender: masculine.

Holobrycon Eigenmann, 1909: 33. Type species: *Brycon pesu* Müller & Troschel, 1845. Type by original designation. Gender: masculine.

Triurobrycon Eigenmann, 1909: 33. Type species: *Brycon lundii* Lütken, 1875. Type by original designation. Gender: masculine.

***Brycon alburnus* (Günther, 1860)**

Check List of the Freshwater Fishes of South and Central America

- Chalceus alburnus* Günther, 1860: 419. Type locality: Western Andes of Ecuador. Syntypes: BMNH 1860.6.16: 167; 180; 201-202; 204 (5).
- Brycon acutus* Böhlke, 1958: 67, pl. 4 (fig. 1). Type locality: Near the mouth of Río Quinindé at 60 m [Ecuador]. Holotype: SU 49757.
- Maximum length: 32.6 cm SL
Distribution: South America: Trans-Andean river basins of Ecuador.
Countries: Ecuador
Remarks and references: See Howes (1982: 6-8) for taxonomic remarks.
Common names: Sábalo (Ecuador)
- Brycon amazonicus* (Spix & Agassiz, 1829)**
Chalceus amazonicus Spix & Agassiz, 1829: 68, pl. 35. Type locality: In fluvio Amazonum [=Amazon River, Brazil]. Holotype probably lost (Kottelat, 1988).
- Chalceus carpophaga* Valenciennes, in Cuvier & Valenciennes, 1850: 252. Type locality: l'Esséquibo (restricted by Géry & Mahnert, 1992: 816). Lectotype: MNHN A.9832, designated by Géry & Mahnert (1992: 816).
- Brycon longiceps* Steindachner, 1879: 150. Type locality: Orinoco bei Ciudad Bolívar [Venezuela]. Syntypes: NMW 62944 (3).
- Brycon siebenthalae* Eigenmann, 1912: 372, pl. 54 (fig. 3). Type locality: Mud Creek, Aruka River [Guyana]. Holotype: FMNH 53353.
- Brycon pellegrini* Holly, 1929: 208. Type locality: Manaos [Brazil]. Holotype: NMW 8963.
- Maximum length: 46.2 cm SL
Distribution: South America: Amazon River and its main tributaries in Brazil; Orinoco and Essequibo River basins.
Countries: Brazil, Colombia, Guyana, Venezuela
Remarks and references: Synonym above is based on Lima (2001). Important food fish.
Common names: Bocón (Colombia, Venezuela), Jatuarana (Brazil), Matrinchá (Brazil), Palambra (Venezuela), Yamú (Colombia)
- Brycon argenteus* Meek & Hildebrand, 1913**
Brycon argenteus Meek & Hildebrand, 1913: 84. Type locality: Río Aruza, Aruza, Panama. Holotype: FMNH 7588.
- Maximum length: 23 cm SL
Distribution: Central America: Pacific and Atlantic slopes of Panama.
Countries: Panama
Remarks and references: See Meek (1938) for taxonomic remarks.
Common names: Sábalo pipon (Panama)
- Brycon atrocaudatus* (Kner, 1863)**
Chalceus atrocaudatus Kner, 1863: 227, fig. 14. Type locality: Westabhänge der Andes in Staate Ecuador [Ecuador]. Holotype: whereabouts unknown (perhaps NMW).
- Brycon scapularis* Fowler, 1911: 502, fig. 3. Type locality: Affluent of the Chimbo River near Bucay, Province of Guayas, Ecuador. Holotype: ANSP 39105.
- Brycon ecuadoriensis* Eigenmann & Henn, in Eigenmann, 1918: 687. Type locality: Río Barranca Alta from Naranjito, Ecuador. Holotype: CAS 39436.
- Maximum length: 27.3 cm SL
Distribution: South America: Trans-Andean river basins in Peru and Ecuador.
Countries: Ecuador, Peru
Remarks and references: See Howes (1982: 10) for taxonomic remarks.
Common names: Cascafe (Peru), Sábalo (Ecuador)
- Brycon behreae* Hildebrand, 1938**
Brycon behreae Hildebrand, 1938: 278, fig. 5. Type locality: Río Chiriquí del Tíre, above Caldera, Pacific slope, western Panama. Holotype: CAS 5582.
- Maximum length: 26.5 cm SL
Distribution: Central America: Chiriquí del Tíre and Chagres River basins, Pacific and Atlantic slopes of Panama; Quepos, Pacific slope of Costa Rica.
Countries: Costa Rica, Panama
Common names: Machaca (Costa Rica), Sábalo (Costa Rica), Sábalo pipon (Panama)
- Brycon bicolor* Pellegrin, 1909**
Brycon bicolor Pellegrin, 1909: 12. Type locality: Orénoque [Venezuela]. Syntypes: MNHN 87746 (1), MNHN 87747 (1), MNHN 87748 (1).
- Maximum length: 11.85 cm SL
Distribution: South America: Orinoco River basin.
Countries: Venezuela
Remarks and references: Possibly a synonym of *Brycon melanopterus* (Lima, 2001). See remarks on taxonomy and ecology by Taphorn (1992: 128-129).
Common names: Bocón (Venezuela), Palambra (Venezuela)
- Brycon cephalus* (Günther, 1869)**
Megalobrycon cephalus Günther, 1869: 423, fig. 1. Type locality: Upper Amazon [Peru]. Syntypes: BMNH 1869.5.21.1, BMNH 1869.5.21.2.
- Brycon capito* Cope, 1872: 261. Type locality: Ambyiacu [Peru]. Holotype: ANSP 8058.
- Megalobrycon erythropterus* Cope, 1872: 263, pl. 10 (fig. 2). Type locality: Ambyiacu [Peru]. Holotype: ANSP (not found).
- Brycon siebenthalae iquitensis* Nakashima, 1941: 69, fig. Type locality: Cercanías del Puerto de Iquitos [Peru]. Type material lost (H. Ortega, pers. comm.).
- Maximum length: 22 cm SL
Distribution: South America: Upper Amazon River basin in Peru and Bolivia.
Countries: Bolivia, Peru
Remarks and references: See Géry & Mahnert (1992: 800) for taxonomic remarks on the species (as *Brycon erythropterus*). Synonym above is based on personal observation. Food fish.
Common names: Sábalo cola roja (Peru)
- Brycon chagrensis* (Kner, 1863)**
Chalcinopsis chagrensis Kner, 1863: 226, fig. 13. Type locality: Río Chagres an der Nordseite von Panama. Syntypes: NMW 62661 (2), NMW 22106 (1).
- Maximum length: 50 cm SL
Distribution: Central America: Chagres River basin, Atlantic slope of Panama.
Countries: Panama
Common names: Sábalo pipon (Panama)
- Brycon coquenani* Steindachner, 1915**
Brycon coquenani Steindachner, 1915: 37, pl. 1 (fig. 1). Type locality: Coquenánflusse in Venezuela. Syntypes: NMW 62703 (12).
- Maximum length: 17.06 cm SL
Distribution: South America: Kuquenán River, upper Caroní River in Orinoco River basin.
Countries: Venezuela
Common names: Aruma (Venezuela)
- Brycon coxeyi* Fowler, 1943**
Brycon coxeyi Fowler, 1943: 3, fig. 2. Type locality: Hacienda las mascotas, mouth of Río Pastaza, basin of the Río Marañón, Ecuador. Holotype: ANSP 70156.
- Maximum length: 16.8 cm SL
Distribution: South America: Upper Pastaza River basin.
Countries: Ecuador
Remarks and references: The type locality given by Fowler (1943)

is not in accordance with the original label of the holotype (M.H. Sabaj, pers.comm.) or the information given by Brown (1941: 834) on the position of the Hacienda Mascota (see also Böhlke, 1958: 24-25). Type locality should be amended to "Ecuador, Napo-Pastaza, Hacienda Mascota, río Topo, a tributary of río Pastaza, 1°25'S, 78°11'W."

Common names: Sábalo (Ecuador)

***Brycon dentex* Günther, 1860**

Brycon dentex Günther, 1860: 240. Type locality: Freshwaters of Esmeraldas [Ecuador]. Syntypes: BMNH 1860.6.16.156-159 (4). Maximum length: 34 cm SL
Distribution: South America: Trans-Andean river basins of Ecuador.

Countries: Ecuador

Remarks and references: See Howes (1982: 21, 24) for taxonomic remarks.

Common names: Sábalo (Ecuador)

***Brycon devillei* (Castelnau, 1855)**

Chalceus devillei Castelnau, 1855: 69, pl. 36 (fig. 2). Type locality: Bahia [Brazil]. Holotype: MNHN 4517.
Maximum length: 14.3 cm SL

Distribution: South America: Bahia State (exact locality unknown).

Countries: Brazil

***Brycon falcatus* Müller & Troschel, 1844**

Brycon falcatus Müller & Troschel, 1844: 90. Type locality: Guyana; Surinam. Syntypes: ZMB 3601 (2), ZMB 3602 (1), ZMB 3603 (1). Mention of BMNH 1969.12.12.1-3(3) as being part of syntype series in Eschmeyer (1998: 58) is incorrect.

Brycon schomburgkii Müller & Troschel, 1844: 91. Type locality: Guiana. Holotype: ZMB 3604.

Brycon brevicauda Günther, 1864: 335. Type locality: Rio Jocintins, River Capin [Pará, Brazil]. Syntypes: BMNH 1864.4.20.13, BMNH 1849.9.8.42, BMNH 1849.9.8.49.

Brycon stübelii Steindachner, 1882: 176. Type locality: Amazonenstrom, later Rio Amazonas (Iquitos) [Peru]. Holotype: MTD F380.

Brycon matrinchao Fowler, 1941: 192, fig. 102. Type locality: Rio Parahyba, Therezina, Piauí [=Parnaíba River, Teresina, Piauí, Brazil]. Holotype: ANSP 69619.

Maximum length: 37 cm TL

Distribution: South America: Rivers in Guyana, Suriname and French Guiana. Amazon and Orinoco River basins.

Countries: Brazil, Colombia, French Guiana, Guyana, Peru, Suriname, Venezuela

Remarks and references: See Planquette et al. (1996: 226-227) for a short redescription, and Howes (1982: 26, 28) for miscellaneous notes. Synonym above is based on Lima (2001). Food fish.

Common names: Maloko (French Guiana), Matrinchã (Brazil), Mbooko (French Guiana), Moloko blanc (French Guiana), Molo-koimo (French Guiana), Sábalo (Peru)

***Brycon ferox* Steindachner, 1877**

Brycon ferox Steindachner, 1877: 583, pl. 4 (fig. 2). Type locality: Rio Mucuri [eastern Brazil]. Syntypes: NMW 62930 (1), NMW 62937 (2).

Maximum length: 31 cm SL

Distribution: South America: Mucuri River basin.

Countries: Brazil

Remarks and references: See Lima & Castro (2000: 156-157, 161) for notes on taxonomy and ecology. Food fish.

Common names: Piabanha (Brazil)

***Brycon fowleri* Dahl, 1955**

Brycon fowleri Dahl, 1955: 19. Type locality: Chibogadó, Colombia. Holotype: Lost (Cala, 1981, 1987).

Maximum length: 30 cm TL

Distribution: South America: Sinu River basin.

Countries: Colombia

Remarks and references: See Dahl (1971: 125) for notes on ecology. Food fish.

Common names: Sabaleta (Colombia)

***Brycon guatemalensis* Regan, 1908**

Brycon guatemalensis Regan, 1908: 168. Type locality: Guatemala, Río Chisoy, Río Usumancita, Río Motagua and Lake Yzabal. Syntypes: BMNH 1864.1.26.226-9 (4), BMNH 1864.1.26.387 (1), BMNH 1869.2.23.8 (1), BMNH 1865.4.29.40 (1).

Maximum length: 50 cm SL

Distribution: North and Central America: Atlantic slope from Grijalva River, Mexico to eastern Panama; in the Pacific slope, only in Choluteca River basin of Honduras.

Countries: Belize, Costa Rica, Guatemala, Honduras, Mexico, Nicaragua, Panama

Remarks and references: See Howes (1982: 29-30) for remarks on taxonomy, Burcham (1988), Bussing (1993), and Horn (1997) for observations on ecology of the species. Food fish.

Common names: Machaca (Costa Rica), Sabaleta (Costa Rica)

***Brycon henni* Eigenmann, 1913**

Brycon henni Eigenmann, 1913: 26. Type locality: Caldas [Colombia]. Holotype: FMNH 56384.

Maximum length: 35 cm SL

Distribution: South America: Trans-Andean river basins of Colombia.

Countries: Colombia

Remarks and references: See Dahl (1971: 124-125) for notes on ecology.

Common names: Sabaleta (Colombia)

***Brycon hilarii* (Valenciennes, 1850)**

Chalceus hilarii Valenciennes, in Cuvier & Valenciennes, 1850: 246. Type locality: Río San Francisco [Brazil] (restricted by Géry & Mahnert, 1992: 815). Type locality probably very erroneous. Lectotype: MNHN A.8616-81-25-71, designated by Géry and Mahnert (1992: 815).

?*Brycon melanoxanthus* Kner, 1860: 12. Type locality: Río Guaporé. Not available, name mentioned in passing under *Chalceus orbignianus* Valenciennes.

Brycon microlepis Perugia, 1897: 149. Type locality: Puerto 14 de Mayo, dipartimento di Bahia Negra, nel Chaco boreale [Paraguay River, Paraguay]. Holotype: MSNG 36916.

Maximum length: 41.5 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil, Paraguay

Remarks and references: See Géry & Mahnert (1992: 803-803-806) for notes on taxonomy; Sabino & Sazima (1999) for notes on natural history. Synonym above is based on Lima (2001). Food fish.

Common names: Piraputanga (Brazil)

***Brycon insignis* Steindachner, 1877**

Brycon insignis Steindachner, 1877: 587, pl. 4 (fig. 1). Type locality: Rio Parahyba bei Campos und Mendez; Rio Jequitinhonha [Brazil]. Syntypes not yet found in NMW (Eschmeyer, 1998: 779).

Catabasis acuminatus Eigenmann & Norris, 1900: 358. Type locality: Rio Tieté [upper Paraná River, São Paulo, Brazil]. Holotype: CAS 11894. Type locality very probably erroneous (holotype was probably collected in the Paraíba do Sul River; see Howes, 1982: 4).

Megalobrycon piabanha Miranda Ribeiro, 1902: 5. Type locality: Cataguazes, rio Pomba [Paraíba do Sul River basin, Minas Gerais, Brazil]. Holotype: MNRJ (not found).

Maximum length: 36.9 cm SL

Distribution: South America: Paraíba do Sul River basin.

Countries: Brazil

Remarks and references: Synonym above is based on Lima (2001).

Common names: Piabanha (Brazil)

***Brycon labiatus* Steindachner, 1879**

Brycon labiatus Steindachner, 1879: 195. Type locality: der Cauca, der grösste Nebenfluss des Magdalenan-Stromes [Colombia].

Holotype: NMW.

Distribution: South America: Magdalena River basin.

Countries: Colombia

***Brycon medemi* Dahl, 1960**

Brycon medemi Dahl, 1960: 461, fig. Type locality: Quebrada La Noche, upper Atrato [Colombia]. Holotype: ICNMFN 41.

Maximum length: 15 cm SL

Distribution: South America: Atrato River basin.

Countries: Colombia

***Brycon meeki* Eigenmann & Hildebrand, 1918**

Brycon meeki Eigenmann & Hildebrand, in Eigenmann, 1918: 688.

Type locality: Ríos San Juan, Dagua, Patia, western Colombia. Syntypes: CAS 61208 (2), CAS 61209 (12), CAS 61217 (24), CAS 61214 (40), CAS 13460 (2), CAS 13467 (1), CAS 39437 (12), CAS 13461 (3), CAS 54945 (33), CAS 18537 (25), CAS 61210 (33), CAS 61211 (38), CAS 61215 (13), CAS 61218 (24), CAS 18542 (9), CAS 61212 (1). Contrary to that stated by Eschmeyer (1998: 1044), Eigenmann (1922) did not select a lectotype for the species.

Brycon juanensis Rendahl, 1941: 10, fig. 2. Type locality: Río San Juan, Cabeceras [Pacific slope of Colombia]. Holotype: NRM 10688.

Brycon juradoensis Fowler, 1944: 232, fig. 6. Type locality: Río Juradó, Chocó Province, Colombia. Holotype: ANSP 71426.

Brycon tovari Dahl, 1960: 465, fig. Type locality: Mouth of Río Sandó, tributary to the Baudó [Colombia]. Holotype: ICNMFN 110.

Maximum length: 32.2 cm SL

Distribution: South America: Trans-Andean river basins of Colombia.

Countries: Colombia

***Brycon melanopterus* (Cope, 1872)**

Megalobrycon melanopterus Cope, 1872: 262, pl. 13 (fig. 1). Type locality: Ambyiacu [Peru]. Holotype: ANSP 8035.

Maximum length: 30 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Ecuador, Peru

Remarks and references: See Goulding (1980: 73-75) for notes on ecology.

Common names: Jatuarana (Brazil), Matrinchão (Brazil), Sábalo (Ecuador), Sábalo cola negra (Peru)

***Brycon moorei* Steindachner, 1878**

Brycon moorei Steindachner, 1878: 91. Type locality: Cienaga, Magdalenan-Strom [Colombia].

Othonophanes bolivarensis Dahl, 1943: 216, fig. Type locality: Pool communicating with Río Batatal (also called Río Uré) tributary to Río San Jorge, Magdalena system. Altitude approximately 800 m. Municipal of Ayapel, department of Bolívar, Republic of Colombia. Holotype: ZMUL.

Maximum length: 50 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

Remarks and references: See Dahl (1971: 123-124) for notes on ecology. Food fish.

Common names: Dorada (Colombia), Dorada playera (Colombia), Mueluda (Colombia), Sardinata (Colombia)

***Brycon nattereri* Günther, 1864**

Brycon nattereri Günther, 1864: 334. Type locality: Irisanga [up-

per Paraná River basin, São Paulo, Brazil]. Holotype: NMW 18396.

Brycon reinhardti Lütken, 1875: 134. Type locality: Flumine Rio das Velhas [Minas Gerais, Brazil]. Syntypes: SMNS 2049, BMNH 1878.1.10.36, ZMUC 216, 222, 224-225, MNHN 9589, ZMB 9194 (1), NMW 59761 (2).

Maximum length: 28.98 cm SL

Distribution: South America: Upper Paraná and São Francisco River basins.

Countries: Brazil

Remarks and references: Synonym above is based on Lima (2001).

Common names: Pirapitinga (Brazil)

***Brycon obscurus* Hildebrand, 1938**

Brycon obscurus Hildebrand, 1938: 283, fig. 6. Type locality: Creek in El Valle, Pacific slope, Panama. Holotype: USNM 106512.

Maximum length: 9.6 cm SL

Distribution: Central America: Pacific slope of Panama.

Countries: Panama

Common names: Sábalo pipon (Panama)

***Brycon oligolepis* Regan, 1913**

Brycon oligolepis Regan, 1913: 462. Type locality: Río Condoto and western Ecuador. Syntypes: BMNH 1913.10.1.8-9 (2).

Maximum length: 24.1 cm SL

Distribution: South America: Trans-Andean river basins in Ecuador and Colombia.

Countries: Colombia, Ecuador

Remarks and references: See Howes (1982: 37-38) for notes on taxonomy.

Common names: Sábalo (Ecuador)

***Brycon opalinus* (Cuvier, 1819)**

Chalceus opalinus Cuvier, 1819: 351, pl. 26 (fig. 1). Type locality: Brésil [restricted by Eigenmann (1921: 294-5) to Rio de Janeiro]. Holotype: MNHN A.8613 (dry).

Brycon bahiensis Günther, 1864: 334. Type locality: Bahia [Brazil]. Holotype: BMNH 1862.11.23.26.

Maximum length: 26.3 cm SL

Distribution: South America: Paraíba do Sul River basin.

Countries: Brazil

Remarks and references: Synonym above is based on Lima (2001). Food fish.

Common names: Pirapitinga (Brazil)

***Brycon orbignyanus* (Valenciennes, 1850)**

Chalceus rodopterus Valenciennes, in Cuvier & Valenciennes, 1850: 249. Type locality: Buénos-Ayres [Argentina]. Syntypes: MNHN A.9834 (2).

Chalceus orbignyanus Valenciennes, in Cuvier & Valenciennes, 1850: 249. Type locality: Buénos-Ayres, la Plata. Lectotype: MNHN A9835, designated by Géry and Mahnert (1992: 811).

Brycon lineatus Steindachner, 1866: 19. Type locality: La Plata-Strom [Argentina]. Holotype: NMW 62943.

Brycon travassosi Campos, 1950: 141, fig. 1. Type locality: Rio Bodoquena, Est. Mato Grosso [Brazil]. Holotype: MZUSP 3811.

Maximum length: 79.5 cm TL

Distribution: South America: La Plata River basin.

Countries: Argentina, Brazil, Uruguay

Remarks and references: See Géry & Mahnert (1992: 806-811) for notes on taxonomy and synonym. Synonymy based on Lima (2001). Food fish.

Common names: Bracanjuba (Brazil), Piracanjuba (Brazil), Piracanjuba (Brazil), Pirapitá (Argentina, Uruguay), Pracanjuba (Brazil), Salmão-crioulo (Brazil), Salmón (Argentina, Uruguay), Salmón criollo (Argentina, Uruguay), Salmón del Paraná (Argentina), Salmonete (Argentina)

***Brycon orthotaenia* Günther, 1864**

Check List of the Freshwater Fishes of South and Central America

- Brycon orthotaenia* Günther, 1864: 335. Type locality: River Cipo [São Francisco River basin, Minas Gerais, Brazil]. Holotype: BMNH 1861.5.16.71 (half skin).
- Brycon lundii* Lütken, 1875: 135. Type locality: Fluminense Rio das Velhas [Brazil]. Syntypes: ZMUC 227 (1), ZMUC 228-229 (skulls), ZMUC 232 (1).
Maximum length: 33 cm SL
Distribution: South America: São Francisco River basin.
Countries: Brazil
Remarks and references: Synonymy based on Lima (2001).
Common names: Matrinchã (Brazil)
- Brycon pesu* Müller & Troschel, 1845**
Brycon pesu Müller & Troschel, 1845: 16, 30, pl. 7 (fig. 1). Type locality: Guiana. Holotype: ZMB 3605.
Maximum length: 12 cm SL
Distribution: South America: Amazon River basin; rivers from Guyana, Suriname, and French Guiana; Orinoco River basin.
Countries: Brazil, Ecuador, French Guiana, Guyana, Peru, Suriname, Venezuela
Common names: Abongoni (French Guiana), Pesu (Guyana), Sabalito (Peru), Sábalo (Ecuador), Tolobouga (French Guiana)
- Brycon petrosus* Meek & Hildebrand, 1913**
Brycon petrosus Meek & Hildebrand, 1913: 84. Type locality: Upper Chagres [Panama]. Holotype: FMNH 7589.
Maximum length: 28.5 cm SL
Distribution: Central America: Atlantic and Pacific slopes of Panama.
Countries: Panama
Remarks and references: See Hildebrand (1938: 282-283) for notes on taxonomy, and Kramer (1978a,b) for observations on reproduction.
Common names: Sábalo pipon (Panama)
- Brycon polylepis* Mosco Morales, 1988**
Brycon polylepis Mosco Morales, 1988: 9, fig. 2. Type locality: Río Yasa, afluente del Río Negro, estación biomédica Kasmera, Sierra de Perijá, zona de reserva de los indios Pariríes, Estado Zulia, Venezuela. Holotype: MBLUZ 1273.
Maximum length: 22.37 cm SL
Distribution: South America: Lake Maracaibo basin.
Countries: Venezuela
Common names: Palambra, diénton (Venezuela)
- Brycon posadae* Fowler, 1945**
Brycon posadae Fowler, 1945: 103, fig. 5. Type locality: Ricaurte, on the Río Guebo, tributary of the Río Mira, Nariño, at 3000 feet elevation, Pacific Slope of Colombia. Holotype: ANSP 71695.
Maximum length: 14.8 cm SL
Distribution: South America: Trans-Andean river basins of Ecuador and Colombia.
Countries: Colombia, Ecuador
- Brycon rubricauda* Steindachner, 1879**
Brycon rubricauda Steindachner, 1879: 195. Type locality: Der Cauca, der grösste nebenfluss des Magdalena-Stromes [Colombia]. Holotype: NMW.
Chalceus rodopterus Posada, 1909: 303. Type locality: Medellín, Colombia. Homonym of *Chalceus rodopterus* Valenciennes, 1850.
Maximum length: 35 cm SL
Distribution: South America: Magdalena River basin.
Countries: Colombia
Remarks and references: See Dahl (1971: 123-124) for notes on ecology and economic importance. Food fish.
Common names: Sabaleta (Colombia), Sardinata (Colombia)
- Brycon sinuensis* Dahl, 1955**
Brycon moorei sinuensis Dahl, 1955: 18, fig. Type locality: Specimens from Lorica, Cereté, Betancí, Tierra Alta and the mouth of Nain [Colombia]. Syntypes: Lost (Cala, 1981, 1987).
Maximum length: 18 cm SL
Distribution: South America: Sinu River basin.
Countries: Colombia
Remarks and references: See Dahl (1971: 124) for notes on ecology and economic importance. Food fish.
Common names: Charúa (Colombia), Dorada (Colombia), Mulata (Colombia)
- Brycon stolzmanni* Steindachner, 1879**
Brycon stolzmanni Steindachner, 1879: 152. Type locality: Chota [Marañón River, Amazon system, Peru]. Syntypes: (2) NMW.
Maximum length: 20.6 cm SL
Distribution: South America: Upper Marañón River basin.
Countries: Peru
Common names: Sábalo (Peru)
- Brycon striatulus* (Kner, 1863)**
Chalcinopsis striatulus Kner, 1863: 226, fig. 12. Type locality: Panama.
Maximum length: 36.5 cm SL
Distribution: Central America: Pacific slope of Panama.
Countries: Panama
Remarks and references: See Hildebrand (1938: 276-278) for taxonomic remarks. Food fish.
Common names: Sábalo pipon (Panama)
- Brycon unicolor* Mosco Morales, 1988**
Brycon unicolor Mosco Morales, 1988: 16, fig. 4. Type locality: Lagunas de piscicultura del Centro de Aprendizaje Agropecuaria Don Bosco, Carrasquero, Estado Zulia, Venezuela. Holotype: MBLUZ 1254.
Maximum length: 34.55 cm SL
Distribution: South America: Lake Maracaibo basin.
Countries: Venezuela
- Brycon vermelha* Lima & Castro, 2000**
Brycon vermelha Lima & Castro, 2000: 156, fig. 1. Type locality: Brazil. Minas Gerais, município de Carlos Chagas, rio Mucuri, approximately 9 km W of village of Presidente Pena, along a dirt road on Fazenda Gavião (17°42'S 40°58'W). Holotype: MZUSP 53303.
Maximum length: 39.5 cm SL
Distribution: South America: Mucuri River basin.
Countries: Brazil
Remarks and references: Food fish.
Common names: Vermelha (Brazil)
- Brycon whitei* Myers & Weitzman, 1960**
Brycon whitei Myers & Weitzman, 1960: 99, fig. 1. Type locality: Vicinity of Los Micos, and the north end of the Cordillera Macarena, at approximately 3°20'N, 73°56'W. This locality is the headwaters of the Río Guaviare (Río Orinoco system) just east of the Cordillera Oriental in Colombia. Holotype: SU 48818.
Maximum length: 38 cm SL
Distribution: South America: Upper Orinoco River basin.
Countries: Colombia, Venezuela
Remarks and references: See Taphorn (1992: 131-132) and Lilyestrom & Taphorn (1983) for notes on ecology. Food fish.
Common names: Bocón (Colombia, Venezuela), Palambra (Venezuela)
- Species inquirendae***
Chalceus labrosus Jardine & Schomburgk in Schomburgk, 1841: 212, pl. 13 (fig. 1). Type locality: River Paduirí [Guyana].
Chalceus flavicollis Posada, 1909: 303. Type locality: Cauca [Colombia]. No types known.

CHILOBRYCON

Chilobrycon Géry & de Rham, 1981: 7. Type species: *Chilobrycon deuterodon* Géry & de Rham, 1981. Type by original designation. Gender: masculine.

***Chilobrycon deuterodon* Géry & de Rham, 1981**

Chilobrycon deuterodon Géry & de Rham, 1981: 8, fig. 3. Type locality: Nord du Péron, Département Tumbès, Río Trapazol, petite rivière affluente du Río Tumbès. Holotype: MHNG 2045.13.

Maximum length: 10.8 cm SL

Distribution: South America: Tumbes River, Pacific slope of northern Peru.

Countries: Peru

HENOCHILUS

Henochilus Garman, 1890: 49. Type species: *Henochilus wheatlandii* Garman, 1890. Type by monotypy. Gender: masculine.

***Henochilus wheatlandii* Garman, 1890**

Henochilus wheatlandii Garman, 1890: pl. 1. Type locality: Santa Clara on the Rio Mucury, Brazil. Holotype: MCZ 21109.

Maximum length: 41.3 cm SL

Distribution: South America: Mucuri and Doce River basins.

Countries: Brazil

Remarks and references: Vieira et al. (2000) rediscovered and provided habitat information on the species. These authors put in doubt the correctness of the type-locality. Threatened species (Vieira et al., 2000; Vieira & Alves, 2001).

Common names: Andirá (Brazil)

Subfamily Serrasalminae (Pacus and piranhas)

Michel Jégu

Serrasalminae have a deep, laterally compressed body with a series of mid-ventral abdominal spines and, except in *Colossoma*, *Piaractus*, and *Mylossoma*, an anteriorly-directed spine just before the dorsal fin. Some species possess only one row of teeth on each jaw. These teeth are interlocking, sharp and pointed; tricuspid in *Pygocentrus*, *Pristobrycon* and *Serrasalmus*, pentacuspoid in *Pygopristis*. Teeth are mammiliform and pointed out of the mouth in *Catoprion*. All other species have two rows of teeth on the upper jaw and often a pair of conical teeth just behind the main row of the lower jaw. In *Acnodon*, *Colossoma*, *Piaractus*, *Metynnis*, *Myleus*, *Mylossoma*, and *Utiaritichthys*, teeth are molariform, heavily attached to the jaw, and mainly used to grind fruits and seeds. In *Mylesinus*, *Ossubtus* and *Tometes*, teeth are incisiform and tricuspid, weakly attached to the jaw and mainly used to cut leaves. During breeding period, *Acnodon*, *Metynnis*, *Myleus*, *Mylesinus*, *Ossubtus*, *Tometes*, and *Utiaritichthys* exhibit sexual dimorphism in the form of a supplementary lobe of the anal fin, dorsal fin rays elongated into long filaments or a red pattern on the body.

During the two last decades, several works were devoted to species or generic revisions (Géry, 1986, Machado-Allison & Fink, 1991, Machado-Allison & Castillo, 1992, Fink, 1993, Fink & Zelditch, 1997, Zarske & Géry, 1999), to regional revisions (Géry, 1972, Jégu & Santos, 1988a, Machado-Allison & Fink, 1996, Géry, Manhart & Dlouhy, 1987, Britski, Silomon & Lopes, 1999) and to the description of new taxon (Fink & Machado-Allison, 1992, 2001, Jégu 1992, Jégu & Santos 1988b, 1990, Machado-Allison, Fink, Lopez Rojas & Rodenas, 1993, Merckx, Jégu & Santos, 2000). Recent works on anatomy, morphology and biological development (Machado-Allison 1982, 1986, Machado-Allison, Fink & Antonio, 1989, Fink & Zelditch, 1996) made very important progress in Serrasalminae systematics (Machado-Allison, 1983, 1985, Machado-Allison, Fink & Antonio, 1989). New data from cytotaxonomy (Porto et al., 1989, 1992), host-parasites relationships (Van Every & Kritsky, 1992), shape analysis (Fink & Zelditch, 1996) and molecular data (Orti et al., 1996) have been applied to the study of the phylogenetic relationships within Serrasalminae.

Serrasalminae include 80 valid species, (of which 8 are Incertae Sedis), and 15 genera. *Serrasalmus* (28 species), *Myleus* (15 species) and *Metynnis* (11 species) are the largest genera, whereas *Catoprion*, *Colossoma*, *Ossubtus*, *Pygopristis*, and *Tometes* are each monotypic. The longest species of Serrasalminae, reaching about 70 to 80 cm in standard length, belong to *Colossoma* and *Piaractus* and the shortest species reach about 18 to 20 cm SL. The primary body-shape variability concerns body depth, which varies from one-third to greater than 100 % standard length.

The distribution of Serrasalminae is strictly Neotropical and their presence everywhere else in the world is the result of introduction. The Amazon basin harbors all the serrasalmin genera but only six occur in Paraguay-Paraná basin and three in São Francisco basin. Distribution areas of *Acnodon*, *Colossoma*, *Mylesinus*, *Ossubtus*, *Pristobrycon*, *Pygopristis*, *Utiaritichthys*, and *Tometes* are limited to Amazon basin, Orinoco basin and coastal drainages of the Guianas. Serrasalmine species occur in all freshwater biotopes, except in very narrow forest brooks and benthic areas of deep rivers.

The development of commercial fisheries and farming of serrasalmines has resulted in an increase of knowledge on biology of commercial species (Araujo Lima & Goulding, 1997), on growth biology (Loubens & Panfili, 1997, 2001, Le Comte et al., 1993), on respiratory metabolism (Almeida-Val et al., 1992), on foods habits (Boujard et al., 1990, Santos et al., 1997, Leite & Araujo Lima, 2000), on reproduction biology (Le Bail et al., 1989, Lamas & Godinho, 1996, Viera et al., 1999), on parasitology (Kritsky et al., 1996, 1997, Thatcher, 1991, 1993) and on cytogenetic (Cestari & Galetti Jr., 1992, Nakayama et al., 2000, 2001).

This subfamily has been well studied in the floodplains and easily accessible areas along the main rivers. During the past thirty years, surveys in more difficult areas, such as rapids of the headwater streams, have broadened the known distribution of poorly known species or genera and led to the discovery of additional species. Several undescribed species of Guiana and the Central Brazilian shields can be found in museum collections and additional ones are likely to be captured. New techniques, such as cytogenetics or population genetics, may reveal new data on species distinctiveness and distribution limits in supposedly well-known areas.

Colossoma, *Piaractus* and *Mylossoma* species are widely regarded as a high-quality food fish in South America. These are the most important species of the subfamily in commercial fishing and in farming.

Tometes, *Mylesinus* and some *Myleus* species are among the most important fishes for Amerindian people of the Guianian

Shield. *Metynnis* species are recognized as aquarium fishes. Victims of their bad reputation, piranhas, mainly *Serrasalmus* and *Pygocentrus* species, are caught and dried to be sold as souvenirs.

ACNODON

Acnodon Eigenmann, 1903: 147. Type species: *Myleus oligacanthus* Müller & Troschel, 1844. Type by original designation. Gender: masculine.

Acnodon normani Gosline, 1951

Acnodon normani Gosline, 1951: 43, pl. 3; fig. 5b. Type locality: Rio Santa Teresa, a western tributary of the upper Rio Tocantins, State of Goiaz, Brazil. Holotype: CAS 20223.

Maximum length: 13.5 cm SL

Distribution: South America: Amazon, Xingu and Tocantins River basins.

Countries: Brazil

Remarks and references: See Leite & Jégu (1990) for food habits.

Common names: Pacu (Brazil)

Acnodon oligacanthus (Müller & Trochel, 1844)

Myleus oligacanthus Müller & Troschel, 1844: 98. Type locality: Surinam. Holotype: ZMB 3635. Appeared with more details in Müller & Troschel (1845: 40, pl. 8, fig. 4).

Maximum length: 20 cm TL

Distribution: South America: North Guiana Shield rivers.

Countries: French Guiana, Guyana, Suriname

Remarks and references: See Géry (1972: 197-203, figs. 30-33) for detailed description on allometry. See Planquette et al. (1996) and Ouboter & Mol (1993) for detail distribution.

Common names: Agouéti (French Guiana), Apinpélé (French Guiana), Laku (French Guiana), Pakusin (French Guiana), Stone fisi (French Guiana)

Acnodon senai Jégu & Santos, 1990

Acnodon senai Jégu & Santos, 1990: 195, fig. 6D. Type locality: Plage à la pointe de l'île de Carapatinho, rio Jari, Amapá, Brésil (0°35'45"S, 52°38'20"W) [= Beach at downstream Carapatinho Island, Jari River, Amapá, Brazil]. Holotype: INPA 2680.

Maximum length: 13.2 cm SL

Distribution: South America: Jari River basin.

Countries: Brazil

Remarks and references: See Leite & Jégu (1990) for food habits.

CATOPRION

Catoprion Müller & Troschel, 1844: 96. Type species: *Serrasalmus mento* Cuvier, 1819. Type by monotypy. Gender: masculine.

Catoprion mento (Cuvier, 1819)

Serrasalmus mento Cuvier, 1819: 369, pl. 28 (fig. 3). Type locality: Venu de Lisbonne, probablement du Brésil. Holotype: MNHN A.9869 (poor condition).

Mylesinus macropterus Ulrey, 1894: 611. Type locality: Brazil. CU 3267 Originally described on a single specimen as above, later described as new based on two specimens in Ulrey (1895: 296).

Maximum length: 15 cm SL

Distribution: South America: Amazon, Orinoco, Essequibo, and upper Paraguay River basins.

Countries: Bolivia, Brazil, Colombia, Guyana, Venezuela

Remarks and references: See Nelson (1961: 610) for swim bladder morphology. See Viera & Géry (1979) and Sazima (1983) for scale-eating.

Common names: Catirina (Brazil), Pacu-piranha (Brazil), Palometa caribe (Venezuela)

COLOSSOMA

Colossoma Eigenmann & Kennedy, 1903: 530. Type species: *Myletes oculus* Cope, 1872. Type by original designation (in

footnote) Gender: neuter. Also appeared in Eigenmann (1903: 148).

Waiteina Fowler, 1907: 473. Type species: *Myletes nigripinnis* Cope, 1878. Type by original designation. Gender: feminine. See Machado-Allison (1982: 42) and (Géry 1986: 99) for synonymy.

Melloina Campos, 1946: 219. Type species: *Melloina tambaqui* Campos, 1946. Type by original designation. Gender: feminine.

Colossoma macropomum (Cuvier, 1818)

Myletes macropomus Cuvier, 1818: 453, pl. 21 (fig. 3). Type locality: très probablement originaire des rivières du Brésil. Holotype: MNHN A.8626 (dry).

Salmo tambaqui Kner, 1860: 21. Not available, mentioned in passing under *Myletes macropomus* Cuvier.

Myletes oculus Cope, 1872: 268, pl. 12 (fig. 2). Type locality: Río Ambyiacu, Peru. Lectotype: ANSP 7991, designated by Fowler (1907: 472).

Myletes nigripinnis Cope, 1878: 693. Type locality: probably from Nauta, Peruvian Amazon, Peru. Lectotype: ANSP 21124, designated by Fowler (1907: 473, fig. 55).

Melloina tambaqui Campos, 1946: 220, fig. 3. Type locality: Rio Tapajós, Taperinha, Pará, Brazil. Holotype: MPEG unnumbered. Maximum length: 99.5 cm TL

Distribution: South America: Amazon and Orinoco basins as wild form; pisciculture form largely distributed in South America.

Countries: Bolivia, Brazil, Colombia, Cuba (introduced), Dominican Republic (introduced), Honduras (introduced), Jamaica (introduced), Panama (introduced), Peru, Venezuela

Remarks and references: See Machado-Allison (1982: 42), Géry (1986: 97) and Machado-Allison (1986: 2) for detailed description. See Goulding & Carvalho (1982) and Araujo Lima & Goulding (1997) for general biology and management. See Loubens & Panfili (1997) for growth biology.

Common names: Bocó (Brazil), Cachama (Venezuela), Cachama negra (Colombia, Venezuela), Gamitana (Colombia), Pacu (Bolivia), Ruelo (Brazil), Tambaqui (Brazil)

METYNNIS

Metynnis Cope, 1878: 692. Type species: *Metynnis luna* Cope, 1878. Type by monotypy. Gender: .

Myleocollops Eigenmann, 1903: 147. Type species: *Metynnis goeldii* Eigenmann, 1903. Type by original designation. Gender: masculine. Proposed as subgenus of *Metynnis*.

Sealeina Fowler, 1907: 478. Type species: *Myletes lippincottianus* Cope, 1870. Type by original designation. Gender: feminine.

Metynnis altidorsalis Ahl, 1923

Metynnis altidorsalis Ahl, 1923a: 22. Type locality: Paramaribo, Suriname. Holotype: ZMB 19626.

Maximum length: 11.2 cm SL

Distribution: South America: North and eastern Guiana Shield rivers.

Countries: French Guiana, Guyana, Suriname

Metynnis argenteus Ahl, 1923

Metynnis argenteus Ahl, 1923a: 24. Type locality: Rio Tapajós, b. Borin [= b. Borim, Amazon system, Brazil]. Holotype: ZMB 20676. Holotype figured in Zarske & Géry 1999: fig. 25. See Zarske & Géry (1999: 200) for detailed description.

Metynnis eigenmanni Ahl, 1923a: 25. Type locality: Rio Tapajós, b. Borin [= near by Borim, Amazon system, Brazil]. Holotype: ZMB 20677. Holotype figured in Zarske & Géry (1999: fig. 26). See Zarske & Géry (1999: 201, 213) for detailed description and synonymy.

Maximum length: 14 cm TL

Distribution: South America: Tapajós River basin.

Countries: Brazil

Common names: Pacu (Brazil), Pacu-marreca (Brazil)

***Metynnis fasciatus* Ahl, 1931**

Metynnis fasciatus Ahl, 1931: 407, fig. p. 409. Type locality: Rio Capiuru, Amazon system, Brazil. Holotype: ZMB lost.

Maximum length: 5.8 cm SL

Distribution: South America: Capiuru River basin in middle Amazon River drainage.

Countries: Brazil

Remarks and references: See Zarske & Géry (1999: 211) for detailed description.

Common names: Pacu (Brazil), Pacu-marreca (Brazil)

***Metynnis guaporensis* Eigenmann, 1915**

Metynnis guaporensis Eigenmann, 1915: 267, pl. 54. Type locality: Rio Guaporé at Maciél, Brazil. Holotype: FMNH 56913 [ex CM 5729].

Maximum length: 15.4 cm SL

Distribution: South America: Guaporé River basin.

Countries: Bolivia (?), Brazil

Remarks and references: See Zarske & Géry (1999: 192) for detailed description.

Common names: Pacu (Brazil), Pacu-marreca (Brazil), Pacupeba (Bolivia)

***Metynnis hypsauchen* (Müller & Troschel, 1844)**

Myletes hypsauchen Müller & Troschel, 1844: 97. Type locality: Guiana. Lectotype: ZMH H 2865, designated by Géry (1972: 190). Appeared in more detail in Müller & Troschel (1845: 38, pl. 10 (fig. 1)). Lectotype figured in Zarske & Géry (1999: fig. 1).

Metynnis calichromus schreitmülleri Ahl, in Schreitmüller & Ahl, 1923: 265, fig. 1. Type locality: Amazon R., South America. Holotype: ZMB 20664. Holotype figured in Zarske & Géry (1999: fig. 21).

Metynnis calichromus Ahl, 1923a: 18, fig. 1. Type locality: Lago de Faro, Jamunda, lower Amazon, Brazil. Holotype: ZMB 20674. Holotype figured in Zarske & Géry (1999: fig. 22).

Metynnis ehrhardti Ahl, 1927: 273. Type locality: Mundurucú, Rio Manacapuru, Solimoes, Amazonas, Brazil. Lectotype: ZMB 23685, designated by Zarske & Géry (1999: 210). Paralectotype figured in Zarske & Géry (1999: fig. 33).

Maximum length: 15 cm TL

Distribution: South America: Amazon and Paraguay River basins, north Guiana Shield rivers.

Countries: Bolivia, Brazil, Guyana, Peru

Remarks and references: See in Zarske & Géry (1999) for detailed description and synonymy.

Common names: Pacu (Brazil), Pacu-marreca (Brazil), Pacupeba (Bolivia), Palometa (Peru, Venezuela)

***Metynnis lippincottianus* (Cope, 1870)**

Myletes lippincottianus Cope, 1870: 561, fig. on p. 561. Type locality: Pará, Brazil. Syntypes: ANSP 8024. Fowler (1907: 478) redescribed the species as *Sealina lippincottianus* Fowler, 1907, from one specimen designed as cotype. Mentioned as syntype in Böhlke (1984: 49) and Zarske & Géry (1999: 179). Syntype figured in Zarske & Géry (1999: fig. 8).

Myletes (Myleus) orbicularis Steindachner, 1908b: 364. Type locality: Santarem, Amazon basin, Brazil. Lectotype: NMW 56428, designated and figured in Zarske & Géry (1999: 188, fig. 16). Paralectotypes are from Parnaíba River at Victoria and Santa Filomena, Lake on Medonho River, Brazil.

Metynnis goeldii Eigenmann, 1903: 147. Type locality: Brazil. No types known. Based on *Myletes lippincottianus* of Ulrey (1895: 299).

Metynnis roosevelti Eigenmann, 1915: 268, pl. 55. Type locality:

Manaus, Brazil. Holotype: FMNH 56925 [ex CM 5740, smallest of 3].

Metynnis snethlageae Ahl, 1923a: 30. Type locality: don Aquarium, Zoo, Berlin, probably from Amazon basin. Holotype: ZMB 19722. Holotype figured in Zarske & Géry (1999: fig. 31).

Metynnis anisurus Ahl, 1923a: 27, fig. 2. Type locality: Rio Tapajós, b. Borin [= near by Borim, Tapajós River, Amazon system, Brazil]. Holotype: ZMB 20678. Holotype figured in Zarske & Géry (1999: fig. 28).

Metynnis heinrothi Ahl, 1923a: 29, fig. 3. Type locality: don Aquarium, Zoo, Berlin, probably from Amazon basin. Holotype: ZMB 20662. Holotype figured in Zarske & Géry 1999: fig. 30.

Metynnis seitzii Ahl, 1923a: 28. Type locality: don Aquarium, Zoo, Berlin, probably from Amazon basin. Holotype: ZMB 20663. Holotype figured in Zarske & Géry (1999: fig. 29).

Metynnis dungerni Ahl, 1923b: 108. Type locality: Amazon R. at Pará, Brazil. Holotype: ZMB 23683. Holotype figured in Zarske & Géry (1999: fig. 31).

Maximum length: 13 cm TL

Distribution: South America: Amazon River basin, northeastern Guiana Shield rivers.

Countries: Brazil, French Guiana

Remarks and references: See Zarske & Géry (1999) for detailed description and synonymy.

Common names: Lime (French Guiana), Pacu (Brazil), Pacu-marreca (Brazil), San sou (French Guiana), Yaya kumarou (French Guiana), Yaya soley (French Guiana)

***Metynnis luna* Cope, 1878**

Metynnis luna Cope, 1878: 692. Type locality: Amazon R. basin, Peru. Holotype: ANSP 21443. Type illustrated by Fowler (1907: 479, fig. 58.)

Maximum length: 7.9 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Peru

Common names: Palometa (Peru)

***Metynnis maculatus* (Kner, 1858)**

Serrasalmus maculatus Kner, 1858: 164. Type locality: Rio Guaporé [Mato Grosso, Brazil]. Lectotype: NMW 56396, designated and figured in Zarske & Géry (1999: 176, fig. 5). BMNH 1928.1.24.10, listed as syntype in Eschmeyer (1998) but not mentioned by Zarske & Géry (1999: 176). Appeared in more detail in Kner (1860: 26, pl. 2, fig. 5).

Maximum length: 18 cm TL

Distribution: South America: Amazon and Paraguay River basins.

Countries: Bolivia (?), Brazil, Paraguay (?), Peru (?)

Remarks and references: See Zarske & Géry (1999: 176) for detailed description.

Common names: *Metynnis manchada* (Peru), *Pacu peva* (Brazil), *Palometa* (Peru), *Palometa moteada* (Peru)

***Metynnis mola* Eigenmann & Kennedy, 1903**

Metynnis mola Eigenmann & Kennedy, 1903: 528. Type locality: Arroyo Trementina, Paraguay. Holotype: CAS 60784 [ex IU 10049]. Zarske & Géry (1999: 187) mentioned ZMB 16978 (1), ZMB 16979 (1) and FMNH 52575 without type status. Holotype figured in Zarske & Géry (1999: fig. 14).

Maximum length: 15 cm TL

Distribution: South America: Paraguay-Paraná River basin.

Countries: Brazil, Paraguay

Remarks and references: See Zarske & Géry (1999: 186) for detailed description.

Common names: *Pacu peva* (Brazil)

***Metynnis orinocensis* (Steindachner, 1908)**

Myletes (Myleus) orinocensis Steindachner, 1908b: 365. Type locality: Río Orinoco at Ciudad Bolívar, Venezuela. Types probably lost.

Distribution: South America: Orinoco River basin.
 Remarks and references: See Zarske & Géry (1999: 192) for detailed description of topotype specimens
 Countries: Venezuela

***Metynnis otuquensis* Ahl, 1923**

Metynnis otuquensis Ahl, 1923a: 26. Type locality: Bahia Negra, Río Otuquis, Bolivia or Paraguay. Holotype: ZMB 16980. Holotype figured in Zarske & Géry (1999, fig. 27).

Maximum length: 8.7 cm SL

Distribution: South America: Otuquis River in Paraguay River basin.

Countries: Bolivia, Paraguay

Remarks and references: See Zarske & Géry (1999: 202) for detailed description.

MYLESINUS

Mylesinus Valenciennes, in Cuvier & Valenciennes, 1850: 234. Type species: *Mylesinus schomburgkii* Valenciennes, 1850. Type by monotypy. Gender: masculine.

***Mylesinus paraschomburgkii* Jégu, Santos & Ferreira, 1989**

Mylesinus paraschomburgkii Jégu, Santos & Ferreira, 1989: 53, pl. 1 (fig. a). Type locality: Rio Trombetas, en aval de Cachoeira Vira-Mundo, PA [Pará, Brazil]. Holotype: INPA 1226.

Maximum length: 35 cm SL

Distribution: South America: Left tributaries of the lower Amazon River, Araguari River.

Countries: Brazil

Remarks and references: See Thatcher & Jégu (1996) for intestinal parasitology. See Santos, Pinto & Jégu (1997) for food habits. See Jégu, Belmont-Jégu & Zuanon (1992) for distribution pattern.

Common names: Pacu (Brazil), Pacu cana (Brazil)

***Mylesinus paucisquamatus* Jégu & Santos, 1988**

Mylesinus paucisquamatus Jégu & Santos, 1988b: 332, pl. 1 (fig. a). Type locality: Jatobal, Rio Tocantins [Pará, Brazil]. Holotype: INPA 1808.

Maximum length: 22 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Common names: Curupeté (Brazil)

***Mylesinus schomburgkii* Valenciennes, 1850**

Mylesinus schomburgkii Valenciennes, in Cuvier & Valenciennes, 1850: 235, pl. 644. Type locality: not mentioned in the original description [Essequibo River, Guyana following Bertin (1948)]. Holotype: MNHN A.9855 (head).

Distribution: South America: Essequibo and Orinoco River basins.

Countries: Guyana, Venezuela

Remarks and references: Species only known from Essequibo river by the type specimen.

Common names: Surapira (Venezuela)

MYLEUS

Myleus Müller & Troschel, 1844: 98. Type species: *Myleus setiger* Müller & Troschel, 1844. Type by subsequent designation by Eigenmann 1910: 443. Gender: masculine.

Myloplus Gill, 1896: 214. Type species: *Myletes asterias* Müller & Troschel, 1844. Type by subsequent designation by Jordan (1920: 467). Gender: masculine. Proposed as a subgenus of *Myletes*. Treated by Müller & Troschel 1844, not *Myletes* Cuvier, type species *Salmo niloticus*.

Orthomyleus Eigenmann, 1903: 148. Type species: *Myletes ellipticus* Günther, 1864. Type by original designation. Gender: masculine.

Paramyloplus Norman, 1929: 828. Type species: *Paramyloplus ternetzi* Norman, 1929. Type by monotypy. Gender: masculine.
Prosomyleus Géry, 1972: 182. Type species: *Myletes rhomboidalis* Cuvier, 1818. Type by original designation. Gender: masculine.

***Myleus altipinnis* (Valenciennes, 1850)**

Tometes altipinnis Valenciennes in Cuvier & Valenciennes, 1850: 230. p. 643. Type locality: Rio São Francisco, Brazil. Holotype: MNHN A.8652 (dry).

Distribution: South America: São Francisco River basin.

Countries: Brazil

***Myleus arnoldi* (Ahl, 1936)**

Myloplus arnoldi Ahl, 1936: 25. Type locality: Amazon R. Syntypes: ZMB 20812 (1).

Maximum length: 15.7 cm SL

Distribution: South America: Amazon, Xingu, and Tocantins River basins.

Countries: Brazil

Common names: Pacu branco (Brazil)

***Myleus asterias* (Müller & Troschel, 1844)**

Myletes asterias Müller & Troschel, 1844: 98. Type locality: Essequibo R., Guyana. Syntypes: ZMB 3646 (1), ZMB 3645 (1), BMNH 1971.5.10.61-62 (2). Appeared in more detail in Müller & Troschel (1845: 36, pl. 10, fig. 2).

Myletes ellipticus Günther, 1864: 375. Type locality: Essequibo River, Guyana. Syntypes: BMNH 1971.5.10.63 (1), BMNH 1864.1.21.33 (1).

Myleus gurupyensis Steindachner, 1911: 342. Type locality: Rio Gurupi at Chatão, Brazil. Syntypes: (2) NMW 10589 (1). Only one syntype found at NMW in August 1999.

Myloplus schulzei Ahl, 1938: 191. Type locality: South America. Holotype: ZMB 20814.

Tomete maculatus Campos, 1944: 211, fig. p. 214. Type locality: Amazon R., Brazil. Holotype: MZUSP 3356.

Maximum length: 25 cm TL

Distribution: South America: Amazon River basin, north and eastern Guiana Shield rivers.

Countries: Brazil, Guyana

Common names: Pacu (Brazil), Pacu branco (Brazil)

***Myleus knerii* (Steindachner, 1881)**

Myletes knerii Steindachner, 1881: 127, pl. 7 (fig. 2). Type locality: Maroni R., Guiana. Holotype: NMW 56394.

Maximum length: 12.1 cm SL

Distribution: South America: Maroni River basin.

Countries: French Guiana

Remarks and references: Species only known by type specimen.

***Myleus levis* Eigenmann & McAtee, 1907**

Myleus levis Eigenmann & McAtee, in Eigenmann, McAtee & Ward, 1907: 142, pl. 42 (fig. 2). Type locality: Bahia Negra, Paraguay. Holotype: CAS 62107 [ex IU 10156].

Distribution: South America: Paraguay-Paraná River basin.

Countries: Brazil, Paraguay

Remarks and references: Synonymy with *Myleus tiete* (Eigenmann & Norris, 1900) is mentioned by Gosline (1951: 42).

Common names: Coxa de negro (Brazil), Pacu peva (Brazil), Palometa (Peru)

***Myleus lobatus* (Valenciennes, 1850)**

Myletes lobatus Valenciennes, in Cuvier & Valenciennes, 1850: 212. Type locality: Fleuve Amazone, Brésil. Syntypes: MNHN 5244 (the two other syntypes are lost).

Myletes discoideus Kner, 1860: 30. Type locality: Bananeira, Rio Branco, Mato Grosso, Brazil. Syntypes: NMW 16407 (1, dry). Erroneous Syntype designation of NMW 92799 by Eschmeyer (1998). Name first used in Kner (1858: 165).

Myletes parma Günther, 1864: 374. Type locality: Rio Capin, Para

state, Brazil. Syntypes: BMNH 1869.11.8.32-33 (2).
 Maximum length: 24.5 cm SL
 Distribution: South America: Amazon and Orinoco River basins.
 Countries: Brazil, Peru, Venezuela
 Remarks and references: Synonymy above is based on personal observation and examination of types.

***Myleus micans* (Lütken, 1875)**

Myletes (Tometes) micans Lütken, 1875a: 137. Type locality: Rio das Velhas and Rio Taquaruçu, Rio São Francisco basin, Brazil. Syntypes: ZMUC 260 (1), ZMUC 261 (1). Also described in Lütken (1875c: 241; XVIII and figured p. 243).
 Maximum length: 27.6 cm SL
 Distribution: South America: São Francisco River basin.
 Countries: Brazil
 Common names: Pacu (Brazil)

***Myleus rhomboidalis* (Cuvier, 1818)**

Myletes rhomboidalis Cuvier, 1818: 449, pl. 22 (fig. 3). Type locality:...du Brésil ou de Lisbonne à notre Muséum. Holotype: lost.
Myletes latus Müller & Troschel, 1844: 97. Type locality: Essequibo Riv., Guyana. Specimens mentioned: ZMB 3643 (1), ZMB 3644 (1). Described as synonym of *Tetragonopterus latus* Jardine & Schomburgk, in Schomburgk, 1841.
Salmo pacupeba Kner, 1860: 23. Not available, name mentioned in passing under *Myletes rhomboidalis* Cuvier; from Maribitanos, Paraná River, Brazil.
 Maximum length: 37 cm SL
 Distribution: South America: Amazon River basin; north and eastern Guiana Shield rivers.
 Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela
 Remarks and references: Specimens mentioned by Valenciennes, (in Cuvier & Valenciennes, 1850: 211) and Bertin (1948: 26) are not types, all collected after original description by Cuvier (1818). See Boujard et al. (1990) for details on foods habits. See Le Comte et al. (1993) for details on growth biology. Synonymy above is based on personal observation and examination of types.
 Common names: Asitau (French Guiana), Beagba (French Guiana), Kambai (French Guiana), Koumarou (French Guiana), Kumalu (French Guiana), Pacu (Brazil), Palometa (Venezuela), Pampano (Venezuela), Weti koemaloe (French Guiana)

***Myleus rubripinnis* (Müller & Troschel, 1844)**

Myletes rubripinnis Müller & Troschel, 1844: 97. Type locality: Essequibo River, Guyana. Syntypes: ZMB 3636 (1), ZMB 3637 (1), ZMB 23686 (1), BMNH 1971.1.5.10.64 (1). Appeared in more detail in Müller & Troschel (1845: 38, pl. 9, fig. 3).
Myletes luna Valenciennes, in Cuvier & Valenciennes, 1850: 221. Type locality: Cayenne, French Guiana; Indies. Lectotype: MNHN A 9870, designated by Géry (1972: 163).
 Maximum length: 30 cm SL
 Distribution: South America: Amazon and Orinoco River basins; north and eastern Guiana Shield rivers.
 Countries: Brazil, Colombia, Ecuador, French Guiana, Guyana, Peru, Suriname, Venezuela
 Common names: Gancho rojo (Colombia), Garopa (Colombia), Mabé (French Guiana), Pacu (Brazil), Pacu branco (Brazil), Pakoesi (French Guiana), Pakousi (French Guiana), Palometa (Venezuela), Pampano (Venezuela), Pasina tanakem (French Guiana), Pasina tikolokem (French Guiana), Poukoupitane (French Guiana), Yapinan (French Guiana)

***Myleus schomburgkii* (Jardine & Schomburgk, 1841)**

Tetragonopterus schomburgkii Jardine & Schomburgk, in Schomburgk, 1841: 243, pl. 22. Type locality: Rio Negro, Brazil. No type preserved.
Myletes schomburgkii Valenciennes, in Cuvier & Valenciennes, 1850: 212. Type locality: Surinam. No type known.

Myletes palometa Valenciennes, in Cuvier & Valenciennes, 1850: 214. Type locality: "Haut Orénoque... confluent du rio Jao" [Venezuela]. No type. Described from Humboldt (in Humboldt & Valenciennes 1821: 177) and Jardine & Schomburgk (in Schomburgk 1841: pl. 22).

Maximum length: 42 cm SL
 Distribution: South America: Middle and lower Amazon River basin, Nanay River, upper Orinoco River basin, Suriname (?).
 Countries: Brazil, Peru, Suriname (?), Venezuela
 Remarks and references: The locality "Surinam" mentioned by Valenciennes in Cuvier & Valenciennes (1850: 214) for *Myletes schomburgkii* is doubtful. No specimen from Guianas was seen in collections.
 Common names: Pacu (Brazil), Pacu cadete (Brazil), Pacu ferrado (Brazil), Pacu jumento (Brazil), Palometa (Venezuela), Pampano (Venezuela)

***Myleus setiger* Müller & Troschel, 1844**

Myleus setiger Müller & Troschel, 1844: 98. Type locality: Essequibo R., Guyana. Syntypes: ZMB 3634 (1), BMNH 1971-5-10.65 (1). Appeared in more detail in Müller & Troschel (1845: 39, pl. 11, fig. 1).
Myletes divaricatus Valenciennes, in Cuvier & Valenciennes, 1850: 215. Type locality: Essequibo River, Guyana. Holotype: MNHN A 8629 (dry).
Myletes doidyxodon Valenciennes, in Cuvier & Valenciennes, 1850: 222. Type locality: Amazon R. Holotype: MNHN A 9868.
Myletes filusus Kner, 1860: 27. Not available, name mentioned in synonymy of *Myleus setiger* Müller & Troschel, 1844; from Mato Grosso, Brazil.
 Maximum length: 27 cm SL
 Distribution: South America: Tributaries of low and middle Amazon River, Orinoco basin, upper Orinoco River and tributaries, north and eastern Guiana Shield rivers.
 Countries: Brazil, Guyana, Suriname, Venezuela
 Remarks and references: Recent observations indicate that *Myleus setiger* Müller & Troschel, 1844, differs from *Myletes pacu* Jardine & Schomburgk, 1841 by the number of anal rays. Synonymy above is based on personal observation and examination of types.
 Common names: Pacu (Brazil), Pacu dente-seco (Brazil), Palometa (Peru)

***Myleus ternetzi* (Norman, 1929)**

Paramyloplus ternetzi Norman, 1929: 828, pl. 1. Type locality: Maparú Rapids, Approuague R., French Guiana. Syntypes: BMNH 1926.3.2.551-552 (2).
Myleus (Paramyloplus) ternetzi goslinei Géry, 1972: 171, pl. 4 (figs. 1-2). Type locality: Brokopondo, Suriname R., Suriname. Holotype: RMNH 26467. See Géry, Planquette & Le Bail (1991: 36) for synonymy.
 Maximum length: 23.1 cm SL
 Distribution: South America: East and northeast Guiana Shield rivers.
 Countries: Brazil, French Guiana, Suriname
 Remarks and references: See Le Bail et al. (1989) for reproductive biology.
 Common names: Mabé (French Guiana), Mambe (French Guiana), Pakoesi (French Guiana), Pakousi (French Guiana), Pasina taliliman (French Guiana), Pasina tetakloyem (French Guiana)

***Myleus tiete* (Eigenmann & Norris, 1900)**

Myletes tiete Eigenmann & Norris, 1900: 359. Type locality: Piracicaba, São Paulo, Brazil. Holotype: not found.
 Maximum length: 15.2 cm SL
 Distribution: South America: Paraguay-Paraná River basin.
 Countries: Argentina (?), Brazil, Paraguay
 Common names: Pacu peva (Brazil)

***Myleus torquatus* (Kner, 1858)**

Myletes torquatus Kner, 1858: 164. Type locality: Rio Branco, Marabitanos [Negro River basin, Amazonas, Brazil]. Syntypes: (3) NMW 5640 (1), NMW 56449 (1). Appeared in more detail in Kner (1860: 24, pl. 1, fig. 4). Only two syntypes found at the NMW on August 1999.

Distribution: South America: Amazon, Negro and Orinoco River basins.

Countries: Brazil, Venezuela

Common names: Pacu branco (Brazil), Palometa (Venezuela), Pampano (Venezuela)

Species inquirenda

Myletes pacu Jardine & Schomburgk, in Schomburgk, 1841: 236, pl. 20. Type locality: Essequibo R., Guyana. No types known.

MYLOSSOMA

Mylossoma Eigenmann & Kennedy, 1903: 530. Type species: *Myletes albiscopus* Cope, 1872. Type by original designation (in footnote). Gender: neuter. Revised by Machado-Allison and Castillo (1992).

Starksina Fowler, 1907: 476. Type species: *Myletes herniarius* Cope, 1872. Type by original designation. Gender: feminine. See Machado-Allison & Castillo (1992: 4) for synonymy.

***Mylossoma acanthogaster* (Valenciennes, 1850)**

Myletes acanthogaster Valenciennes, in Cuvier & Valenciennes, 1850: 209. Type locality: Lagune de Maracaibo, Venezuela. Holotype: MNHN A.1065 (dry).

Maximum length: 28.5 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

Remarks and references: See Machado-Allison & Castillo (1992: 17) for detailed morphology.

Common names: Palometa (Venezuela)

***Mylossoma aureum* (Agassiz, 1829)**

Myletes aureus Agassiz, in Spix & Agassiz, 1829: 74, pl. 31. Type locality: Equatorial rivers of Brazil. Potential syntypes: MHNN 787 (1), MHNN 788 (2) according to Kottelat (1984: 146; 1988: 84). Named as *Tetragonopterus aureus* Spix on plate. See Kottelat (1988: 79) for detail on authorship.

Myletes herniarius Cope, 1872: 268, pl. 12 (fig. 3). Type locality: Río Ambyiacu, Peru. Lectotype: ANSP 8025, designated by Fowler (1907: 476). Figured as holotype and paratype in Böhlke (1984: 48). Lectotype illustrated by Fowler (1907: fig. 58) according to Böhlke (1984: 48). See Machado-Allison & Castillo (1992: 17) for synonymy.

Mylossoma ventriosa Norman, 1929: 815, fig. 20. Type locality: Solimoes, Amazon R. Holotype: BMNH 1923.10.28.263. See Machado-Allison & Castillo (1992: 17) for synonymy.

Maximum length: 20 cm TL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru, Venezuela

Remarks and references: See Nelson (1961: 609) for swim bladder morphology. See Machado-Allison & Castillo (1992: 17) for detailed morphology. See Leite & Araujo Lima (2000) for larval diet.

Common names: Garopita (Colombia), Pacu comum (Brazil), Pacu manteiga (Brazil), Pacupeba (Bolivia), Palometa (Peru), Palometa de rio (Venezuela)

***Mylossoma duriventre* (Cuvier, 1818)**

Myletes duriventris Cuvier, 1818: 451, pl. 22 (fig. 2). Type locality: Brazil. Holotype: MNHN A 9891. Valenciennes in Cuvier & Valenciennes (1850: 206) specifies that "M. Cuvier a fait connaître, d'après un animal empaillé, une espèce" MNHN A 9864 and MNHN A 9780 (captured in 1847 by Castelnau), are incorrectly considered as paratypes by Bertin (1948: 28).

Myletes orbignyianus Valenciennes in Cuvier & Valenciennes, 1850: 220. Type locality: Corrientes, Rio Paraná, Brazil. Lectotype: MNHN A 9863, designated by Géry et al. (1987: 444). See Machado-Allison & Castillo (1992: 19) for synonymy.

Myletes albiscopus Cope, 1872: 267, pl. 12 (fig. 1). Type locality: Río Ambyiacu, Peru. Lectotype: ANSP 8021, designated by Fowler (1907: 475). Appeared first as name only in Cope (1871: 55). See Machado-Allison & Castillo (1992: 19) for synonymy.

Metynnis unimaculatus Steindachner, 1908a: 326. Type locality: Lake at Rio Medonho, trib. of Rio Parnahyba north of Santa Filomena, Brazil. Syntypes: NMW 56451 (3). See Zarske & Géry (1999: 188) for synonymy.

Mylosoma ocellatum Eigenmann, 1915: 265. Type locality: Villa Hays, Paraguay. Holotype: FMNH 56816 [ex CM 5629]. See Géry et al., (1987: 443) and Machado-Allison & Castillo (1992: 19) for synonymy.

Salmo 30-radiatus Larrañaga, 1923: 388. Type locality: Uruguay. No type known.

Mylossoma argenteum Ahl, 1928: 192. Type locality: Amazon R. Syntypes: ZMB 20854 (2). Appeared first in Ahl (1928) as above, then in Ahl (1929: 273).

Mylossoma paraguayensis Norman, 1929: 814, fig. 19. Type locality: Río Paraguay. Syntypes: BMNH 1895.5.17.254-255 (2), BMNH 1910.5.26.47-48 (2), BMNH 1910.5.26.46 (1). See Géry et al., (1987: 443) for synonymy with *Mylossoma duriventris orbignyianum* and Machado-Allison & Castillo (1992: 19) for synonymy with *Mylossoma duriventris* Cuvier, 1818.

Maximum length: 25 cm SL

Distribution: South America: Amazon, Orinoco, and Paraguay-Paraná River basins.

Countries: Argentina, Bolivia, Brazil, Colombia, Ecuador, Paraguay, Peru, Venezuela

Remarks and references: See Machado-Allison & Castillo (1992: 19) for detailed morphology. See Leite & Araujo Lima (2000) for larval diet.

Common names: Garopa (Colombia), Pacu comum (Brazil), Pacu manteiga (Brazil), Pacu peva (Brazil), Pacupeba (Bolivia), Palometa (Peru, Venezuela)

OSSUBTUS

Ossubtus Jégu, 1992: 240. Type species: *Ossubtus xinguense* Jégu, 1992. Type by original designation. Gender: neuter.

***Ossubtus xinguense* Jégu, 1992**

Ossubtus xinguense Jégu, 1992: 240, fig. 4a. Type locality: Altamira, Rio Xingu, Pará, Brésil. Holotype: INPA 6535.

Maximum length: 17.6 cm SL

Distribution: South America: Xingu River basin.

Countries: Brazil

PIARACTUS

Piaractus Eigenmann, 1903: 148. Type species: *Myletes brachypomus* Cuvier, 1818. Type by original designation. Gender: masculine.

Reganina Fowler, 1907: 475. Type species: *Myletes bidens* Spix & Agassiz, 1829. Type by original designation. Gender: feminine. See Machado-Allison (1982: 46) for synonymy.

***Piaractus brachypomus* (Cuvier, 1818)**

Myletes brachypomus Cuvier, 1818: 452, pl. 22 (fig. 1). Type locality: Brésil. Holotype: MNHN A.8627 (dry).

Myletes paco Humboldt, in Humboldt & Valenciennes, 1821: 175, pl. 47 (fig. 2). Type locality: Upper Río Marañon, Amazon R. basin. No types known. See Machado-Allison (1982: 47) for synonymy.

Myletes bidens Spix & Agassiz, 1829: 75, pl. 32. Type locality: Rivers of equatorial Brazil. Lectotype: MHNN 789, designated by Géry (1986: 98). See Kottelat (1988: 79) for detail on author-

ship.

Wateina fowleri Campos, 1946: 219, fig. 2. Type locality: Rio Tapajós, Amazon basin, Pará, Brazil. Holotype: MZUSP 3572. See Machado-Allison (1982: 48) for synonymy.

Maximum length: 71 cm TL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Bolivia, Brazil, Colombia, Peru, Venezuela

Remarks and references: See Loubens & Panfili (2001: 51) for growth biology.

Common names: Caranha (Brazil), Morocoto (Venezuela), Paco (Colombia, Peru), Pirapitinga (Brazil), Tambaqui (Bolivia, Brazil)

***Piaractus mesopotamicus* (Holmberg, 1887)**

Myletes edulis Castelnau, 1855: 68. Type locality: Paraguay. No types known. Nomen nudum according to Géry 1986: 102.

Myletes (Myleus) mesopotamicus Holmberg, 1887: 387. Type locality: Rio Parana, Uruguay. No type known. Appeared in more detail in Holmberg (1891: 193). Holmberg (1882) citation listed as name only by Fowler, not investigated.

Myletes mitrei Berg, 1895: 149. Type locality: San Pedro, Río Paraná, Buenos Aires, Argentina. Syntypes: BMNH 1928.1.25.6-7 (2). See Géry (1986: 102) for synonymy based on principle of priority.

Colosoma canterai Devincenzi, in Devincenzi & Teague, 1942: 74, text-fig. Type locality: Río Uruguay, Uruguay. Holotype: whereabouts unknown.

Maximum length: 40.5 cm SL

Distribution: South America: Paraguay-Paraná River basin.

Countries: Argentina, Bolivia, Brazil, Paraguay, Uruguay

Remarks and references: See Géry (1986: 102) for more detail.

Common names: Caranha (Brazil), Pacu (Brazil), Pacu caranha (Brazil)

PRISTOBRYCON

Pristobrycon Eigenmann, 1915: 245. Type species: *Serrasalmo (Pygocentrus) calmoni* Steindachner, 1908. Type by original designation. Gender: masculine. See Machado-Allison (1985) for generic status and phylogenetic relationships.

***Pristobrycon aureus* (Spix & Agassiz, 1829)**

Serrasalmo aureus Spix & Agassiz, 1829: 72, pl. 29. Type locality: Equatorial lakes and rivers of Brazil. No types known according to Kottelat (1988). See Kottelat (1988: 79) for details on authorship.

Salmo erythrophthalmus Kner, 1860: 43. Not available, name mentioned in passing under *Serrasalmo aureus* Spix, from Vaupé River, Mato Grosso, Brazil.

Serrasalmo gymnogenys Günther, 1864: 371. Type locality: Guyana and River Capim, Brazil. Syntypes: (3) BMNH 1849.11.3.33 (1), BMNH 1971.5.10.59 (1).

Distribution: South America: Lower portion of tributaries of lower Amazon River, Guyana rivers.

Countries: Brazil, Guyana

Common names: Piranha (Brazil)

***Pristobrycon calmoni* (Steindachner, 1908)**

Serrasalmo (Pygocentrus) calmoni Steindachner, 1908b: 361. Type locality: Rio Pará, Brazil. Syntypes: lost

Pygocentrus bilineatus Eigenmann, 1909: 47. Type locality: Aruka R., Guyana. Holotype: FMNH 58075 [ex CM 1072]. See Machado-Allison & Fink (1996: 20) for synonymy.

Serrasalmus coccogenis Fowler, 1911: 428, fig. 4. Type locality: La Pedrita, Caño Uracoa, Venezuela. Holotype: ANSP 37870. See Machado-Allison & Fink (1996: 20) for current synonymy.

Pygopristis gibbosus Starks, 1913: 17, pl. 3. Type locality: Market at Pará, Brazil. Holotype: SU 22226. See Jégu & Santos (1988a: 243) for synonymy.

Maximum length: 15 cm TL

Distribution: South America: Lower and middle Amazon and Orinoco River basins; coastal rivers of Guyana.

Countries: Brazil, Guyana, Venezuela

Remarks and references: See Jégu & Santos (1988a: 243) and Machado-Allison & Fink (1996: 20) for detailed description. See Machado-Allison & Fink (1996: 21) for distribution in Venezuela.

Common names: Caribito (Venezuela), Piranha (Brazil), Piranha branca (Brazil)

***Pristobrycon careospinus* Fink & Machado-Allison, 1992**

Pristobrycon careospinus Fink & Machado-Allison, 1992: 69, fig. 20. Type locality: El Loro lagoon, Atabapo Riv., 1 km from San Fernando de Atabapo, Venezuela, 4°00'N, 67°50'W. Holotype: MBUCV 8145.

Maximum length: 11.05 cm SL

Distribution: South America: Atabapo River in Orinoco River basin.

Countries: Venezuela

Common names: Caribe (Venezuela)

***Pristobrycon maculipinnis* Fink & Machado-Allison, 1992**

Pristobrycon maculipinnis Fink & Machado-Allison, 1992: 66, fig. 19. Type locality: Caño Doyotomoni, trib. of Pamoni Riv., 4 km south of the confluence with Casiquiare Riv., Venezuela, 2°48'N, 64°54'W. Holotype: MBUCV 16421.

Maximum length: 24.8 cm SL

Distribution: South America: Blackwater areas in a tributary of the Casiquiare River and a tributary of the Atabapo River.

Countries: Venezuela

Remarks and references: See Machado-Allison & Fink (1996: 31) for distribution in Venezuela.

Common names: Caribe (Venezuela)

***Pristobrycon striolatus* (Steindachner, 1908)**

Serrasalmo scapularis Günther, 1864: 368. Type locality: Esse-quiho R., Guyana. Syntypes: BMNH 1971.5.10.58 (1), BMNH 1964.1.21.34-36 (3). Norman (1929: 793) reduced the syntypes at BMNH 1964.1.21.34-36 (3). See Géry (1976: 53) for synonymy.

Serrasalmo (Pygocentrus) striolatus Steindachner, 1908b: 360. Type locality: Rio Pará, Brazil. Syntypes: NMW 10583 (1), NMW 10584 (1)

Pristobrycon baratai Campos, 1946: 218, fig. 1. Type locality: Rio Tapajós, Santarém, Pará, Brazil. Holotype: MZUSP [ex DZSASP] 3630. See Géry (1976: 53) for synonymy.

Pygopristis antoni Fernández-Yépez, 1965b: [1], fig. 1. Type locality: Río San José, Estado Guárico, Venezuela. Holotype: MACLPI 65635-A. See Machado-Allison et al. (1989: 146) for synonymy.

Maximum length: 15 cm TL

Distribution: South America: Amazon and Orinoco River basins; north and eastern Guiana Shield rivers.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Remarks and references: See Machado-Allison et al., (1989: 146), Fink (1993: 671) and Machado-Allison & Fink (1996: 27) for further detail on genus status. See Machado-Allison & Fink (1996: 26) for distribution in Venezuela. See Nico & Taphorn (1988: 317) for food habits.

Common names: Caribito (Venezuela), Ipilay (French Guiana), Jetudo (Venezuela), Pêne nipima (French Guiana), Pilay (French Guiana), Pílin (French Guiana), Piranha (Brazil), Piranha mafura (Brazil), Piray (French Guiana), Pireng (French Guiana), Poson cizo (French Guiana)

PYGOCENTRUS

Pygocentrus Müller & Troschel, 1844: 94. Type species: *Serrasalmo piraya* Cuvier, 1819. Type by subsequent designation by Eigenmann (1910: 442). Gender: masculine. See Machado-Allison (1985) for generic status and phylogenetic relationships. Genus revised by Machado-Allison and Fink (1991) and Fink (1993).

Gastropriestis Eigenmann, 1915: 238. Type species: *Serrasalmo (Pygocentrus) ternetzi* Steindachner, 1908. Type by original designation. Gender: feminine.

Rooseveltiella Eigenmann, 1915: 240. Type species: *Pygocentrus nattereri* Kner, 1858. Type by original designation. Gender: feminine. Preoccupied by *Rooseveltiella* Fox, in Siphonoptera; replaced by *Taddyella* Ihering, 1928

Taddyella Ihering, 1928: 45. Type species: *Pygocentrus nattereri* Kner, 1858. Type by being a replacement name. Gender: feminine. Replacement for *Rooseveltiella* Eigenmann, 1915, preoccupied by *Rooseveltiella* Fox, 1914, in Siphonoptera.

***Pygocentrus cariba* (Humboldt & Valenciennes, 1821)**

Serrasalmo albus, dorso Humboldt & Valenciennes, 1821: 173. Not available; should have been *Serrasalmo Cariba, albus...* according to Fink (1993: 669).

Serrasalmo cariba Humboldt & Valenciennes, 1821: 216, pl. 47 (fig. 1). Type locality: Apuré and Orinoco rivers, South America. No types known. Name available from plate and caption on p. 216. Description is on p. 173, as *Serrasalmo albus, dorso*; if *albus* is regarded as an available name, Fink (1993: 669) serves as first reviser selecting *cariba*.

Serrasalmus caribe Valenciennes in Cuvier & Valenciennes, 1850: 279. Type locality: Orinoco [Venezuela]. ZMUC 517 (1) Appeared first as *Serrasalmo cariba* Humboldt (in Humboldt & Valenciennes 1821: pl. 27, fig. 1). See Fink (1993: 684) for synonymy.

Serrasalmo (Pygocentrus) notatus Lütken, 1875b: 238. Type locality: Caracas, Venezuela. Syntypes: ZMUC 517 (1) Puerto Cabello.

Pygocentrus stigmaterythraeus Fowler, 1911: 424, fig. 3. Type locality: La Pedrita, Caño Uracoa, Venezuela. Holotype: ANSP 37868. Types figured as *Serrasalmus coccogenis* in Machado-Allison & Fink 1996: 148. See Fink (1993: 684) and Machado-Allison & Fink (1996: 20) for synonymy.

Maximum length: 27.9 cm TL

Distribution: South America: Widely distributed in the Orinoco River basin lowlands and tributaries.

Countries: Colombia, Venezuela

Remarks and references: Valid as *Pygocentrus caribe* in Machado-Allison & Fink (1991: 122). Synonymy of *Pygocentrus cariba* (Humboldt & Valenciennes 1821) in Fink (1993: 684). See Nico & Taphorn (1988: 314) for food habits. See Machado-Allison & Fink (1996: 39) for distribution in Venezuela.

Common names: Capaburro (Venezuela), Caribe colorado (Venezuela), Piraña (Colombia)

***Pygocentrus nattereri* Kner, 1858**

Pygocentrus nattereri Kner, 1858: 166. Type locality: Cuiabá and Mato Grosso, Brazil. Syntypes: NMW 10585 (1), NMW 105587 (1), MNW 16167 (1, dry). Appeared in more detail in Kner (1860: 28, pl. 3, fig. 8). See Fink (1993: 672) for type locality comments.

Pygocentrus altus Gill, 1870: 93. Type locality: Río Marañón or Río Napo, Amazon system, Peru or Ecuador. Holotype: USNM 21432. See Fink (1993: 679) for synonymy.

Serrasalmo (Pygocentrus) ternetzi Steindachner, 1908b: 359. Type locality: Río Paraguay at Descalvados, Mato Grosso, Brazil. Holotype: lost according to Fink (1993: 671). See Fink (1993: 679) for synonymy.

Maximum length: 33.3 cm SL

Distribution: South America: Amazon River basin, Paraguay-Paraná River basin, northeastern Brazilian coastal rivers, Essequibo River basin.

Countries: Argentina, Bolivia, Brazil, Colombia, Ecuador, Guyana, Paraguay, Peru, Uruguay

Remarks and references: Recent observation reveal NMW 16167 dry specimen as possible syntype. See Fink & Zelditch (1997: 179) for taxonomic status. See Zbinden (1973) and Sazima and Machado (1990) for details on behaviour.

Common names: Palometa (Bolivia), Paña (Peru), Piraña (Colombia), Piranha caju (Brazil), Piranha vermelha (Brazil)

***Pygocentrus palometa* Valenciennes, 1850**

Pygocentrus palometa Valenciennes, in Cuvier & Valenciennes, 1850: 296. Type locality: Río Apuré, Río Guarico, Lower Río Orinoco, Venezuela. No types mentioned. Nomen dubium.

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: Doubtful species because too brief description, no specimen mentioned and no drawn representation.

***Pygocentrus piraya* (Cuvier, 1819)**

Serrasalmus piraya Cuvier, 1819: 368, pl. 28 (fig. 4). Type locality: Brazil. Holotype: MNHN A.8630 (dry, missing from 1988).

Serrasalmo piranha Agassiz, in Spix & Agassiz, 1829: 71, pl. 28.

Type locality: Rio São Francisco lakes, Brazil. No type known. See Fink (1993: 670) for synonymy.

Serrasalmo ferox Swainson, 1838: 254. Type locality: No type locality known. Based on *Serrasalmo piranha* Agassiz, 1829, pl. 28.

Pygocentrus bidorsalis Kner, 1860: 36. Not available, name mentioned in text under *Pygocentrus piraya* Müller and Troschel, 1848.

Maximum length: 34 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Remarks and references: See Fink (1993) for detailed description.

Common names: Piranha (Brazil)

PYGOPRISTIS

Pygopristsis Müller & Troschel, 1844: 95. Type species: *Pygopristsis fumarius* Müller & Troschel, 1844. Type by subsequent designation. Gender: feminine. See Machado-Allison (1985) for generic status and phylogenetic relationships.

***Pygopristsis denticulata* (Cuvier, 1819)**

Serrasalmus denticulatus Cuvier, 1819: 371. Type locality: unknown. Type lost. Described from a small skeleton.

Serrasalmus punctatus Jardine & Schomburgk in Schomburgk, 1841: 223, pl. 17. Type locality: Guyana. No types known. See Machado-Allison & Fink (1996: 13) for synonymy.

Pygopristsis fumarius Müller & Troschel, 1844: 95. Type locality: Guiana. Syntypes: ZMB 3622 (2), ZMB 6252 (2). Appeared with more details in Müller & Troschel 1845: 35, pl. 9 (fig. 2). See Machado-Allison & Fink (1996: 13) for synonymy.

Maximum length: 20 cm TL

Distribution: South America: Orinoco River basin, north and eastern Guiana Shield rivers; tributaries of the lower Amazon River.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Remarks and references: See Géry (1972: 209), Jégu & Santos (1988a: 242) and Machado-Allison & Fink (1996: 13) for detailed morphology. See Machado-Allison & Fink (1996: 14) for distribution in Venezuela.

Common names: Palometa caribe (Venezuela), Pilin (French Guiana), Piranha (Brazil), Piray (French Guiana), Pireng (French Guiana), Poson sizo (French Guiana)

SERRASALMUS

Serrasalmus La Cepède, 1803: 283. Type species: *Salmo rhombus* Linnaeus, 1766. Type by monotypy. Gender: masculine. See Machado-Allison (1985) for generic status and phylogenetic relationships.

Serrasalmo Duméril, 1806: 342. Type species: *Salmo rhombus* Linnaeus, 1766. Type by subsequent designation by Fowler (1950: 279). Gender: masculine. Perhaps not intended as a new name -- *Serrasalmo* La Cepède in parentheses; apparently can be regarded as an incorrect subsequent spelling.

***Serrasalmus altispinis* Merckx, Jégu & Santos, 2000**

Serrasalmus altispinis Merckx, Jégu & Santos, 2000: 191, fig. 4b. Type locality: Rapides Quarenta Ilhas, Fl. Pitinga, Bassin de l'Uatumã, Amazonas, Brésil. Holotype: INPA 14434.

Maximum length: 19 cm SL

Distribution: South America: Amazon River basin, Uatumã River.

Countries: Brazil

Common names: Piranha (Brazil)

***Serrasalmus altuvei* Ramírez, 1965**

Serrasalmus altuvei Ramírez, 1965a: 1, fig. (p. 3). Type locality: El Polvero, Río San José, Edo. Guárico, Venezuela. Holotype: MAC 65639. Holotype missing according to Jégu & Santos (1987: 408).

Maximum length: 17.3 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: See Machado-Allison & Fink (1996: 55) and Fink & Machado-Allison (2001: 11) for distribution. See Nico & Taphorn (1988: 317) for food habits.

Common names: Caribe azul (Venezuela)

***Serrasalmus brandti* (Lütken, 1875)**

Serrasalmo brandtii Lütken, 1875a: 137. Type locality: Lagoa Santa, Minas Gerais, Brazil. Syntypes: NMW 5708 (2), ZMB 9195 (2), USNM 44964 (1), ZMUC 268 (1), ZMUC 269 (1), ZMUC 273 (1), ZMUC 276a (1), ZMUC 279 (1), ZMUC 280 (1), ZMUC 290 (1), ZMUC 295 (1), ZMUC 297 (1), ZMUC 278 (1, skel). Also described in Lütken (1875c: 237), Lütken (1875c: XVIII and figured p. 238).

Maximum length: 21.2 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Common names: Pirambeba (Brazil)

***Serrasalmus compressus* Jégu, Leão & Santos, 1991**

Serrasalmus compressus Jégu, Leão & Santos, 1991: 102, fig. 2b. Type locality: Laguna Mocovi, río Mocovi, affluent Mamoré, province du Béni, Bolivie Holotype: MNHN 1986-615.

Maximum length: 19 cm SL

Distribution: South America: Middle Amazon River basin.

Countries: Bolivia, Brazil, Peru

Remarks and references: See Jégu et al. (1991: 107) for fertility rate.

Common names: Piraña (Bolivia), Piranha (Brazil)

***Serrasalmus eigenmanni* Norman, 1929**

Serrasalmus eigenmanni Norman, 1929: 804, fig. 16. Type locality: Rockstone, Guyana. Holotype: BMNH 1911.10.31.496.

Maximum length: 18 cm SL

Distribution: South America: Amazon River basin, north and eastern Guiana Shield rivers.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Remarks and references: See Machado-Allison & Fink (1996: 86) for distribution in Venezuela.

Common names: Ipilay (French Guiana), Pêne nipima (French Guiana), Piranha (Brazil), Piranha branca (Brazil), Piray coupeur (French Guiana), Pireng (French Guiana), Poson sizo (French

Guiana), Umayka kaigwa (French Guiana)

***Serrasalmus elongatus* Kner, 1858**

Serrasalmus elongatus Kner, 1858: 167. Type locality: Rio Guapore, Mato Grosso, Brazil. Possible syntypes: NMW 18903 (1), NMW 904 (1), NMW 57016 (1), NMW 16343 (1, dry), NMW 16345 (1, dry), NMW 16240 (1, dry). More detailed description in Kner (1860: 44, pl. 5, fig. 12).

Serrasalmus pingke Fernández-Yépez, 1951: [1], fig. on third unnumbered page. Type locality: Río Apure, La Defensa, suroeste de San Fernando de Apure, Estado Apure, Venezuela. Holotype: MHNLS 1903 [ex AFY 51060]. According to Machado-Allison & Fink (1996: 67), current holotype number is MCNLS 1021. See Machado-Allison & Fink (1996: 67) for synonymy.

Maximum length: 30 cm TL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Bolivia, Brazil, Ecuador, Peru, Venezuela

Remarks and references: See Machado-Allison & Fink (1996: 70) for distribution in Venezuela. See Nico & Taphorn (1988: 316) for food habits.

Common names: Caribe pinche (Venezuela), Paña (Peru), Piraña (Bolivia), Piranha comprida (Brazil), Piranha mucura (Brazil)

***Serrasalmus geryi* Jégu & Santos, 1988**

Serrasalmus geryi Jégu & Santos, 1988a: 248, pl. 8 (fig. 2). Type locality: Araguacema, Rio Araguaia [Brazil]. Holotype: INPA 999.

Maximum length: 18.1 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

***Serrasalmus gibbus* Castelnau, 1855**

Serrasalmus gibbus Castelnau, 1855: 71, pl. 38 (fig. 1). Type locality: Rio Araguay, Brazil. Holotype: MNHN A.8648 (dry).

Maximum length: 21 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Remarks and references: See Jégu & Santos (1988a: 253) for detailed description.

Common names: Piranha (Brazil)

***Serrasalmus gouldingi* Fink & Machado-Allison, 1992**

Serrasalmus gouldingi Fink & Machado-Allison, 1992: 58, fig. 13. Type locality: Anavilhanas, R. Negro, Brazil, 2°50'S, 61°00'W. Holotype: MZUSP 42363.

Maximum length: 27.94 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Brazil, Venezuela

Remarks and references: See Machado-Allison & Fink (1996: 77) for distribution in Venezuela.

Common names: Caribe negro (Venezuela), Fula preto (Brazil), Piranha (Brazil)

***Serrasalmus hastatus* Fink & Machado-Allison, 2001**

Serrasalmus hastatus Fink & Machado-Allison, 2001: 4, fig. 2. Type locality: Beach, Marara, Rio Branco, Brazil. Holotype: MZUSP 66893.

Maximum length: 15.45 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

Remarks and references: See Jégu et al. (1991: 107) for fertility rate under *Serrasalmus altuvei*.

Common names: Piranha (Brazil)

***Serrasalmus hollandi* Eigenmann, 1915**

Serrasalmo hollandi Eigenmann, 1915: 251, pl. 48. Type locality: Rio Guaporé at Maciél, Brazil. Holotype: FMNH 56978 [ex CM 5792].

Maximum length: 18.5 cm SL

Distribution: South America: Madeira River basin, and ? Guyana rivers.

Countries: Bolivia, Guyana (?)

Common names: Piraña (Bolivia)

***Serrasalmus humeralis* Valenciennes, 1850**

Serrasalmus humeralis Valenciennes in Cuvier & Valenciennes, 1850: 279. Type locality: Amazone [Brazil]. (erroneous locality; according to Castelnau (1855: 71, pl. 37 fig. 2), from Araguay [= Araguaia riv. Tocantins basin]). Holotype: MNHN A.9735.

Salmo tizoura Kner, 1860: 40. Not available, name mentioned in passing under *Serrasalmus humeralis* Valenciennes; from Paraguay River. Also mentioned in Kner (1860: 41) in passing under *Serrasalmus marginatus* Valenciennes, 1837 in d'Orbigny (1847).

Serrasalmus iridopsis Cope, 1872: 268, pl. 9 (fig. 2). Type locality: Río Ambyiacu, Peru. Holotype: ANSP 7913. Questionably a synonym of *Serrasalmus humeralis* (Valenciennes, 1850) in Géry (1977: 283).

Maximum length: 20 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Peru

Remarks and references: See Jégu & Santos 1988a: 246 for detailed description and validation.

Common names: Piranha (Brazil)

***Serrasalmus irritans* Peters, 1877**

Serrasalmus irritans Peters, 1877: 472. Type locality: San Fernando Apure, Venezuela. Holotype: ZMB 10045.

Serrasalmus fernandezii Fernández-Yépez, 1965a: [1], fig. Type locality: El Polvero, Río San José, Estado Guárico, Venezuela. Holotype: MACLPI 65637. See Machado-Allison & Fink (1996: 78) for synonymy.

Maximum length: 13.8 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: See Machado-Allison & Fink (1996: 82) for distribution in Venezuela. See Nico & Taphorn (1988: 314) for food habits.

Common names: Caribe pinche (Venezuela)

***Serrasalmus maculatus* Kner, 1858**

Serrasalmus maculatus Kner, 1858: 166. Type locality: Mato Grosso, Brazil. Lectotype: NMW 17995 (1), designated and figured by Jégu & Santos (2001: 125). More detailed description in Kner (1860: 41, pl. 4, fig. 10). See Jégu & Santos (2001: 129) for detailed morphology.

Pygocentrus melanurus Kner, 1860: 42. Not available, name mentioned in passing under *Serrasalmus maculatus* Kner.

Serrasalmus aesopus Cope, 1872: 269. Type locality: Marañon between mouths of Río Negro, Brazil and Río Huallaga, Peru. Holotype: ANSP 7914.

Maximum length: 20.2 cm SL

Distribution: South America: Amazon and Paraguay-Paraná River basins.

Countries: Argentina, Bolivia, Brazil, Colombia, Paraguay, Peru, Uruguay

Remarks and references: Eschmeyer's (1998: 994) syntype report of BMNH 1928.1.24.10 for *Myletes maculatus* Kner 1858 currently placed under *Metynnis*, is erroneous. Syntype reports of NMW 57058 collected from the Negro River, Brazil are erroneous. See Jégu & Santos (2001) for detailed morphology and distribution. See Santos et al. (1994) and Nakayama et al. (2000) for cytogenetic study.

Common names: Catirina (Brazil), Paña (Peru), Pirambeba (Brazil), Piraña (Colombia), Piranha (Brazil), Piranha amarela (Brazil), Piranha mafura (Brazil)

***Serrasalmus manueli* (Fernández-Yépez & Ramírez,**

1967)

Pygocentrus manueli Fernández-Yépez & Ramírez, 1967: 11, fig. 4. Type locality: Río Paraguaza, afluyente de la Margen Derecha del Orinoco medio [Venezuela]. Holotype: MACLPI 57247.

Maximum length: 36 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Brazil, Venezuela

Remarks and references: See Machado-Allison & Fink (1996: 71) for detailed morphology. See Machado-Allison & Fink (1996: 74) for distribution in Venezuela.

Common names: Caribe cachamero (Venezuela), Caribe parguase-ro (Venezuela), Piranha (Brazil)

***Serrasalmus marginatus* Valenciennes, 1837**

Serrasalmus marginatus Valenciennes, 1837 in d'Orbigny, 1847: 10. Type locality: Río Paraná, Brazil. Syntypes: MNHN A.9734 (3). Name available from plate, description by Valenciennes in d'Orbigny (1847: 10).

Maximum length: 22.1 cm SL

Distribution: South America: Paraguay-Paraná River basin.

Countries: Argentina, Brazil, Paraguay, Uruguay

Common names: Catirina (Brazil), Pirambeba (Brazil), Piranha (Brazil)

***Serrasalmus medinai* Ramírez, 1965**

Serrasalmus medinai Ramírez, 1965b: 1, fig. on p. 2. Type locality: El Polvero, Río San José, Guárico, Venezuela. Holotype: MAC 65622.

Maximum length: 14.8 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: See Machado-Allison et al. (1993: 50) and Machado-Allison & Fink (1996: 60) for detailed description. See Machado-Allison & Fink (1996: 62) for distribution in Venezuela.

Common names: Caribe morichalero (Venezuela)

***Serrasalmus nalseni* Fernández-Yépez, 1969**

Serrasalmus nalseni Fernández-Yépez, 1969: unnumbered p. 3. Type locality: Río Uracoa, entre Temblador y Barrancas [Venezuela]. Holotype: MACLPI 68697-A.

Maximum length: 12.6 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: See Machado-Allison & Fink (1996: 87) for detailed description.

Common names: Caribe pintado (Venezuela)

***Serrasalmus neveriensis* Machado-Allison, Fink, López Rojas & Rodenas, 1993**

Serrasalmus neveriensis Machado-Allison, Fink, López Rojas & Rodenas, 1993: 48, fig. 4. Type locality: Río Querechual, trib. Río Neveri, Querechual, Anzoátegui, Venezuela. Holotype: MBUCV 15439.

Maximum length: 18 cm SL

Distribution: South America: Coastal rivers of Venezuela.

Countries: Venezuela

Remarks and references: See Machado-Allison & Fink (1996: 42) for distribution in Venezuela.

***Serrasalmus nigricans* (Agassiz, 1829)**

Serrasalmus nigricans Agassiz, in Spix & Agassiz, 1829: 72, pl. 30. Type locality: Equatorial rivers of Brazil. No types known according to Kottelat (1988). See Kottelat (1988: 79) for details on authorship.

Distribution: South America: Amazon River basin.

Countries: Brazil

***Serrasalmus rhombeus* (Linnaeus, 1766)**

Salmo rhombeus Linnaeus, 1766: 514. Type locality: Suriname. Neotype: RMNH 26192, selected by Géry (1972: 228).

Serrasalmus niger Jardine & Schomburgk, in Schomburgk, 1841: 225, pl. 18. Type locality: Guyana. No type known. See Fink (1993: 679) for synonymy.

Serrasalmo immaculatus Cope, 1878: 692. Type locality: Peruvian Amazon. Lectotype: ANSP 21503, designated by Fowler (1907: 471, fig. 54).

?*Serrasalmo (Serrasalmo) paraense* Steindachner, 1908b: 362. Type locality: Rio Pará, Brazil. Syntypes: NMW 57067 (1), NMW 10587 (1).

Serrasalmo humeralis gracilior Eigenmann, 1915: 257, fig. 9. Type locality: Rio Guaporé at Maciél, Brazil. Syntypes: FMNH 56977 [ex CM 5791] (2 of 3 specimens). Henn (1928: 69) reports 2 syntypes in CM 5791, and Ibarra & Stewart (1987: 79) point out 3 specimens in FMNH 56977. See Norman (1929: 800) for synonymy.

Serrasalmus boekeri Ahl, 1931: 406, fig. p. 408. Type locality: Amazon R. Holotype: ZMB (not found).

Serrasalmus (Taddyella) normani Géry, 1963: 614, fig. 4. Type locality: Suriname, Paramaribo area. Holotype: ZMH H1601. See Géry (1972: 228) for synonymy.

Maximum length: 41.5 cm SL

Distribution: South America: Amazon and Orinoco River basins, north and eastern Guiana Shield rivers, northeastern Brazilian coastal rivers.

Countries: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Peru, Suriname, Venezuela

Remarks and references: See Géry (1972: 227) and Merckx et al. (2000: 185) for detailed description. See Jégu & Keith (1999) and Machado-Allison & Fink (1996: 58) for detailed distribution. See Nico & Taphorn (1988: 316) for food habits. See Cohen et al. (1999) for detailed pattern activity. Nakayama et al. (2001) for cytogenetic study.

Common names: Caribe pinche (Venezuela), Ibab (French Guiana), Paña (Peru), Pêne (French Guiana), Pilay (French Guiana), Pilin (French Guiana), Piraña negra (Colombia), Piranha preta (Brazil), Piray de nuit (French Guiana), Pireng (French Guiana), Poson sizo (French Guiana)

***Serrasalmus sanchezi* Géry, 1964**

Serrasalmus (Serrasalmus) sanchezi Géry, 1964: 27, fig. 22. Type locality: "Caño Yarina", on edge of Río Pacaya, trib. of Puinahua Canal, branch of lower Río Ucayali, Peru. Holotype: ZFMK 1216.

Maximum length: 11.4 cm SL

Distribution: South America: Ucayali River basin.

Countries: Peru

Common names: Paña (Peru)

***Serrasalmus serrulatus* (Valenciennes, 1850)**

Pygopristis serrulatus Valenciennes in Cuvier & Valenciennes, 1850: 300. Type locality: Amazon basin, Brazil in Castelnau 1855: 74, also Araguay [= Araguaia Riv., Tocantins Basin]. Holotype: MNHN A.9898.

Maximum length: 19 cm SL

Distribution: South America: Amazon River basin, ? Essequibo River basin.

Countries: Brazil, Guyana (?), Peru

Common names: Paña (Peru), Piranha (Brazil)

***Serrasalmus spilopleura* Kner, 1858**

Serrasalmus spilopleura Kner, 1858: 166. Type locality: Mato Grosso, Rio Guapore, Bogota, Brazil. Lectotype: NMW 57085, designated and figured by Jégu & Santos (2001: 122). More detailed description in Kner (1860: 43, pl. 5, fig. 11).

Pygocentrus dulcis Kner, 1860: 44. Not available, name mentioned in passing under *Serrasalmo spilopleura* Kner.

Maximum length: 21 cm SL

Distribution: South America: Guaporé River basin.

Countries: Brazil

Remarks and references: See Jégu & Santos (2001: 133) for detailed morphology and distribution.

Species inquirendae

Serrasalmo emarginatus Jardine in Schomburgk, 1841: 231, pl. 19. Type locality: Essequibo River, Guyana. No type known.

Serrasalmo scotopterus Jardine in Schomburgk, 1841: 233. Type locality: Rio Branco, South America. No type known.

Serrasalmo stagnatilis Jardine & Schomburgk in Schomburgk, 1841: 222. Type locality: Upper Essequibo R., Guyana.

Serrasalmo undulatus Jardine & Schomburgk in Schomburgk, 1841: 232. Type locality: Rio Padauri.

TOMETES

Tometes Valenciennes, in Cuvier & Valenciennes, 1850: 226. Type species: *Tometes trilobatus* Valenciennes, 1850. Type by subsequent designation by Jordan (1919: 242). Gender: masculine.

***Tometes makue* Jégu, Santos & Belmont-Jégu, 2002**

Tometes makue Jégu, Santos & Belmont-Jégu, 2002: 254, fig. 2a. Type locality: Brésil: Amazonas: Ile d'Acara, en aval de São Gabriel da Cachoeira, rio Negro. Holotype: INPA 7344.

Maximum length: 30.5cm SL

Distribution: South America: Middle and upper Negro River and Orinoco River basins.

Countries: Brazil, Venezuela

***Tometes trilobatus* Valenciennes, 1850**

Tometes unilobatus Valenciennes, in Cuvier & Valenciennes, 1850: 228. Type locality: Cayenne, French Guiana. Holotype: MNHN A.8651 (dry).

Tometes trilobatus Valenciennes, in Cuvier & Valenciennes, 1850: 226. Type locality: Cayenne, French Guiana. Syntypes: MNHN A.8650 (1, dry) and MNHN A.8649 (1, dry) - holotype designation of MNHN A 8650 in Bertin (1948: 27) is erroneous.

Maximum length: 43 cm SL

Distribution: South America: Northeastern Guiana Shield rivers.

Countries: Brazil, French Guiana

Remarks and references: Synonymy above is based on personal observation and types examination.

Common names: Baka kumalu (French Guiana), Kumaru (French Guiana), Pacu (Brazil), Pakou (French Guiana)

UTIARITICHTHYS

Utiaritchthys Miranda Ribeiro, 1937: 58. Type species: *Utiaritchthys sennaebregai* Miranda Ribeiro, 1937. Type by monotypy. Gender: masculine.

***Utiaritchthys longidorsalis* Jégu, Tito de Morais, & Santos, 1992**

Utiaritchthys longidorsalis Jégu, Tito de Morais & Santos, 1992: 114, fig. 7a. Type locality: Rio Aripuana, 3 km from above the Dardanellos Fall, Madeira basin, 60°40'W, 9°10'S, Brazil. Holotype: INPA 3638.

Maximum length: 20.3 cm SL

Distribution: South America: Madeira River basin.

Countries: Brazil

***Utiaritchthys sennaebregai* Miranda Ribeiro, 1937**

Utiaritchthys sennae-bragai Miranda Ribeiro, 1937: 58. Type locality: Upstream of Salto Utiarity, 13°S, 58°15'W, Affluent of Rio Papagaio, Mato Grosso, Brazil. Lectotype: MNRJ 12154 [ex MNRJ 3407A], designated by Miranda Ribeiro (1953: 397).

Maximum length: 25 cm TL

Distribution: South America: Right tributaries of middle and lower

Amazon River, Orinoco River basin.
Countries: Brazil, Venezuela
Common names: Pacu (Brazil)

SPECIES INQUIRENDA

Tetragonopterus latus Jardine in Schomburgk, 1841: 241. Type locality: Rivers of Guiana [Guyana]. No type known.

Subfamily Aphyocharacinae (Characins)

Rosana S. Lima

The subfamily Aphyocharacinae was proposed by Eigenmann (1909) to include fishes with a single series of well developed teeth on the premaxilla, mandible and maxilla. They were also characterized by having large parietal and frontal fontanelles, gill-membranes free from isthmus and from each other, and adipose fin always present. It included six genera: *Coeurichthys*, *Odontostilbe*, *Holoshesthes*, *Cheirodon*, *Aphyocharax* and *Holoprion*. However, since that time, this subfamily has been successively considered as valid or included in the Cheirodontinae. Nowadays the Aphyocharacinae is apparently a monophyletic group that comprises only one genus, *Aphyocharax*, and is defined by the reduction of the second infraorbital and the development of its third and fourth infraorbital bones, which together cover the whole cheek. They are usually small, except for *A. dentatus* and *A. alburnus*, which can reach almost 70 and 80 mm standard length, respectively. They have an incomplete lateral line and a short anal fin (12–22 rays). Males exhibit sexual hooks on all or on the first ventral- and anal-fin rays. The maxilla can be short or very short in *A. rathbuni*, forming a small mouth with only a few teeth on the proximal portion of the bone; or the maxilla can be longer, reaching almost the vertical through the middle of the eye and the third infraorbital, and is completely toothed. The mouth is terminal or superior. The teeth are always tricuspid, the median cusp much bigger than the others.

There are 10 valid species attributed to *Aphyocharax*. Many species have been described by aquarists, based in one or two specimens, and this contributes to the high number of species in this group. Twenty two species were originally described as belonging to the genus *Aphyocharax*, three were first placed in the genus *Cheirodon*, one in *Notropocharax*, and one in *Phoxinopsis*. The last review was by Eigenmann (1915), and now the genus is being subject of my PhD Thesis at the University of São Paulo.

They inhabit the Amazon, Guianas, and La Plata River basins. In alcohol they can exhibit a humeral spot, and fins plain or with dark spots or bands. They are known by aquarists as bloodfins because most species have dorsal, ventral, anal or caudal fins bright red in life.

APHYOCHARAX

Aphyocharax Günther, 1868a: 480. Type species: *Aphyocharax pusillus* Günther, 1868. Type by monotypy. Gender: masculine. Also published as new in Günther (1868b: 245).

Holoprion Eigenmann, 1903: 145. Type species: *Chirodon agassizii* Steindachner, 1882. Type by original designation. Gender: masculine.

Phoxinopsis Regan, 1907: 262. Type species: *Phoxinopsis typicus* Regan, 1907. Type by monotypy. Gender: feminine. The type species, *Phoxinopsis typicus* Regan, is a junior synonym of *Aphyocharax anisitsi* - see Malabarba (1998: 229) and Weitzman & Malabarba (1999) for comments.

Notropocharax Marini, Nichols & La Monte, 1933: 6. Type species: *Notropocharax difficilis* Marini, Nichols & La Monte, 1933. Type by monotypy. Gender: masculine.

Aphyocharax agassizii (Steindachner, 1882)

Chirodon agassizii Steindachner, 1882a: 180. Type locality: Jatuarana [Brazil]. Syntypes: NMW 62686 (2). Species later described in more detail in Steindachner (1882b: 38).

Maximum length: 3.32 cm SL

Distribution: South America: Amazon River basin in Brazil.

Countries: Brazil

Remarks and references: Known only from the syntypes.

Aphyocharax alburnus (Günther, 1869)

Chirodon alburnus Günther, 1869: 424. fig. 2. Type locality: Amazon River (Upper Amazons) [Peru]. Syntypes: BMNH 1869.5.21.10-13 (4).

Aphyocharax avary Fowler, 1913: 532. fig. 8. Type locality: Madeira River, about 200 miles east of Long. 62°20'W., Brazil. Holotype: ANSP 39217.

Maximum length: 8 cm

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Peru

Remarks and references: recent redescription and ecological observations in Taphorn (1992: 107-109).

Common names: Bloodfin tetra (USA), Sardinita coliroja (Venezuela)

Aphyocharax anisitsi Eigenmann & Kennedy, 1903

Aphyocharax anisitsi Eigenmann & Kennedy, 1903: 517. Type locality: Asuncion [Paraguay]. Holotype: CAS 59697 [ex IU 10028].

Phoxinopsis typicus Regan, 1907: 262. fig. 2. Type locality: aquarium fishes from Argentina. Holotype: BMNH 1907.6.28.51. See Malabarba (1998: 229) and Weitzman & Malabarba (1999) for comments.

Aphyocharax rubropinnis Pappenheim, 1922: 36. Type locality: Rosario, Argentina. Syntypes: ZMB 20497 (4).

Aphyocharax affinis Ahl, 1923: 33. Type locality: Unknown. Lectotype: ZMB 31645, designated by Zarske & Géry (1995: 103).

Aphyocharax ipacarayensis Ahl, 1923: 32. Type locality: Laguna Ipacaray, Paraguay. Holotype: ZMB 20605 [or 23605].

Maximum length: 5.5 cm TL

Distribution: South America: Paraná River basin.

Countries: Argentina, Brazil, Paraguay

Common names: Bloodfin (USA), True bloodfin (USA)

***Aphyocharax colifax* Taphorn & Thomerson, 1991**

Aphyocharax colifax Taphorn & Thomerson, 1991: 113. fig. 1. Type locality: Venezuela, Estado Bolívar, Distrito Heres, parte media del Río Oris, un afluente del Río Paraguá, en el Campamento Turumbán de la CVG (aprox. 06°18'N, 63°54'W). Holotype: MCNG 17127.

Maximum length: 5.02 cm

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Common names: Aletas de sangre (Venezuela)

***Aphyocharax dentatus* Eigenmann & Kennedy, 1903**

Aphyocharax dentatus Eigenmann & Kennedy, 1903: 516. Type locality: Laguna, Río Paraguay, Asuncion [Paraguay]. Holotype: CAS 59722 [ex IU 10032].

Aphyocharax pappenheimi Ahl, 1923: 33. Type locality: Asuncion, Paraguay. Lectotype: ZMB 23607, designated by Zarske & Géry (1995: 107).

Notropocharax difficilis Marini, Nichols & La Monte, 1933: 6, fig. 3. Type locality: Rio Mogy-Guassú, southeastern Brazil [São Paulo]. Holotype: AMNH 12247.

Aphyocharax nasutus Ahl, 1936: 20. Type locality: Rosario de Sante Fé, Argentinien. Lectotype: ZMB 20795, designated by Zarske & Géry (1995: 106).

Maximum length: 6.9 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil, Paraguay

***Aphyocharax erythrurus* Eigenmann, 1912**

Aphyocharax erythrurus Eigenmann, 1912: 313. pl. 44 fig. 4. Type locality: Rockstone sand-bank [Guyana]. Holotype: FMNH 53579 [ex CM 1879].

Maximum length: 5.8 cm

Distribution: South America: Essequibo River basin.

Countries: Guyana

Common names: Flame tail tetra (USA)

***Aphyocharax gracilis* Fowler, 1940**

Aphyocharax gracilis Fowler, 1940: 61. fig. 17. Type locality: Río Pilcomayo, Villa Montes, Bolivia. Holotype: ANSP 68864.

Maximum length: 5.4 cm SL

Distribution: South America: Paraguay River basin.

Countries: Bolivia

***Aphyocharax nattereri* (Steindachner, 1882)**

Chirodon nattereri Steindachner, 1882a: 180. Type locality: Villa Bella [now Parintins, AM, Amazon basin, Brazil]. Species described in abstract only, not included in main work (Steindachner 1882b); may be based on same specimens as *Chirodon pulcher* that is found in main work but not in Steindachner (1882a).

Chirodon pulcher Steindachner, 1882b: 39. Type locality: Villa Bella, Amazonenstrom [now Parintins, AM, Amazon basin, Brazil]. Syntypes: (several) NMW 62541-42 (6, 4), 77969 (3). Species not included in original abstract (Steindachner, 1882a); is possibly based on the same specimens as *Chirodon nattereri* described in abstract but not covered in the main work (Steindachner, 1882b).

Cheirodon steindachneri Eigenmann & Eigenmann, 1891: 54. Type locality: The authors proposed this new name as a replacement name for *Cheirodon pulcher* Steindachner, that would be secondarily preoccupied by *Tetragonopterus pulcher* Gill, 1883, when both were in the genus *Cheirodon*.

Aphyocharax paraguayensis Eigenmann, 1915: 33. fig. 10; pl. 2 (fig. 2). Type locality: Cáceres, Río Paraguay [Mato Grosso, Brazil]. Holotype: FMNH 57922 [ex CM 6906].

Maximum length: 3.1 cm SL

Distribution: South America: Amazon and Paraguay River basins.

Countries: Bolivia, Brazil, Paraguay

Common names: Dawn tetra (USA), White spot tetra (USA)

***Aphyocharax pusillus* Günther, 1868**

Aphyocharax pusillus Günther, 1868a: 480. Type locality: Huallaga and Xeberos [Amazon basin, Peru]. Syntypes: BMNH 1867. Also published as new in Günther (1868b: 245).

Maximum length: 6.35 cm SL

Distribution: South America: Amazon River basin.

Countries: Peru

***Aphyocharax rathbuni* Eigenmann, 1907**

Aphyocharax rathbuni Eigenmann in Eigenmann & Ogle, 1907: 10. Type locality: Arroyo Chagalalina, Paraguay basin. Holotype: CAS 76467 [ex IU 10025].

Aphyocharax stramineus Eigenmann in Eigenmann & Ogle, 1907: 11. Type locality: Arroyo Trementina [Paraguay]. Holotype: CAS 76472 [ex IU 10030].

Maximum length: 2.69 cm SL

Distribution: South America: Paraguay River basin.

Countries: Paraguay

Common names: Rathbun's bloodfin (USA)

Subfamily Characinae (Characins, tetras)

Carlos A. S. Lucena and Naércio A. Menezes

The subfamily Characinae includes a number of characid genera whose phylogenetic relationships have not been adequately studied. The only work showing that the subfamily might be monophyletic is that of Lucena (1998) and the following characteristics are based on a morphological survey of the included genera. The body is relatively deep especially anteriorly where a predorsal gibbosity is typical of most genera (except *Priocharax*, *Hoplocharax*, *Gnathocharax*, *Lonchogenys*, *Heterocharax*, *Phenacogaster*, and *Acestrocephalus*). There are more than 20 conical teeth on the maxilla (except in *Roeboides*), a pseudotympanum is present in front of the first pleural rib (except in *Gnathocharax*, *Hoplocharax*, and *Lonchogenys*) and a larval pectoral fin is retained in specimens up to 41.0 mm SL (except in *Gnathocharax*, *Heterocharax*, *Hoplocharax*, and *Lonchogenys*).

Twelve genera and 70 species are currently recognized but the number of species might increase considerably when population samples in museums are adequately studied. The subfamily is represented in practically all cis- and trans-Andean drainages from the Pacific coast of southern Mexico to the la Plata basin in South America. It is absent from the Pacific coastal drainages south of the Cayapas River in Ecuador.

The size ranges from 17.0 mm SL in miniature species of the genus *Priocharax* up to 240.0 mm SL in specimens of the genus *Cynopotamus*. Most species include fishes and insects (both adults and larvae) in their diets, but species of *Roeboides* have typical scale-eating behavior feeding on scales. For this they have mamilliform specialized teeth outside the mouth pointing forward to remove scales from other fishes (see Sazima, 1984 and Sazima & Machado, 1982 for details).

ACANTHOCHARAX

Acanthocharax Eigenmann, 1912: 404. Type species: *Acanthocharax microlepis* Eigenmann, 1912. Type by original designation. Gender: masculine.

***Acanthocharax microlepis* Eigenmann, 1912**

Acanthocharax microlepis Eigenmann, 1912: 405, pl. 61 (fig. 1). Type locality: Tumatumari [Guyana]. Holotype: FMNH 54475. Maximum length: 8.5 cm SL. Distribution: South America: Essequibo River basin. Countries: Guyana. Remarks and references: No recent work.

ACESTROCEPHALUS

Acestrocephalus Eigenmann, 1910: 447. Type species: *Xiphorhamphus anomalus* Steindachner, 1880. Type by original designation. Gender: masculine. Revised by Menezes (1976), with species descriptions and geographical distributions.

***Acestrocephalus anomalus* (Steindachner, 1880)**

Xiphorhamphus anomalus Steindachner, 1880: 84. Type locality: Río Cauca, Colombia. Holotype: NMW 57983. Maximum length: 20 cm SL. Distribution: South America: Magdalena River basin. Countries: Colombia. Remarks and references: See Menezes (1976: 37) for detailed description. Common names: Cachás (Colombia)

***Acestrocephalus boehlkei* Menezes, 1977**

Acestrocephalus boehlkei Menezes, 1977: 186, fig. 1. Type locality: Río Punino, tributary of Río Payamino (Napo River system), above Coca, Ecuador. Holotype: MCZ 51473. Maximum length: 13.5 cm SL

Distribution: South America: Upper Amazon River basin. Countries: Ecuador, Peru, Venezuela

***Acestrocephalus ginesi* Lasso & Taphorn, 2000**

Acestrocephalus ginesi Lasso & Taphorn, 2000: 443, fig. 1. Type locality: Venezuela, Apure State, Río Cinaruco, playa en frente de Laguna Larga, Distrito Muñoz (06°33'45"N- 67°24'W). Holotype: MCNG 34681. Maximum length: 13.5 cm SL. Distribution: South America: Orinoco River basin. Countries: Venezuela. Remarks and references: See Lasso & Taphorn (2000: 443) for detailed description.

***Acestrocephalus sardina* (Fowler, 1913)**

Charax sardina Fowler, 1913: 566, fig. 21. Type locality: Madeira River, about 200 miles east of W. Long 60°20'W, Brazil. Holotype: ANSP 39307. Maximum length: 10.2 cm SL. Distribution: South America: Madeira and Das Mortes River basin. Countries: Brazil. Remarks and references: See Menezes (1976: 39) for detailed description.

CHARAX

Charax Gronow, 1763: 123. Type species: not mentioned. Gender: masculine. *Charax* Scopoli, 1777: 455. Type species: *Salmo gibbosus* Linnaeus, 1758. Type by subsequent designation. Gender: masculine. Revised by Lucena (1987). *Characinus* La Cépède, 1803: 269. Type species: *Salmo gibbosus* Linnaeus, 1758. Type by subsequent designation. Gender: masculine. *Epicyrthus* Müller & Troschel, 1844: 17. Type species: *Salmo*

gibbosus Linnaeus, 1758. Type by monotypy. Gender: masculine.

Anacyrtus Günther, 1864: 345. Type species: *Salmo gibbosus* Linnaeus, 1758. Type by being a replacement name. Gender: masculine.

Asiphonichthys Cope, 1894: 67. Type species: *Asiphonichthys stenopterus* Cope, 1894. Type by monotypy. Gender: masculine.

Moralesia Fowler, 1943: 96. Type species: *Anacyrtus tectifer* Cope, 1870. Type by original designation. Gender: feminine.

Charaxodon Fernández-Yépez, 1947: no page number. Type species: *Charax metae* Eigenmann, 1922. Type by original designation. Gender: masculine.

Moralesicus Fowler, 1958: 9. Type species: *Anacyrtus tectifer* Cope, 1870. Type by being a replacement name. Gender: masculine.

***Charax apurensis* Lucena, 1987**

Charax apurensis Lucena, 1987: 30, fig. 2. Type locality: rio el Canito, onde é atravessado pela estrada que une San Fernando a Cunaviche (07°28'N 067°39'W), Estado de Apure, Venezuela. Holotype: MBUCV-V-15400.

Maximum length: 11.8 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Charax caudimaculatus* Lucena, 1987**

Charax caudimaculatus Lucena, 1987: 32, fig. 3. Type locality: Laguna Chica, Reserva Natural de Tambopatá (12°50'30"S 069°17'30"W), Madre de Dios, Peru. Holotype: USNM 280291.

Maximum length: 9.7 cm SL

Distribution: South America: Madeira River basin.

Countries: Brazil, Peru

Common names: Saicanga (Mato Grosso, Brazil)

***Charax condei* (Géry & Knöppel, 1976)**

Asiphonichthys condei Géry & Knöppel, 1976: 48, fig. 2. Type locality: rio Tarumazinho, affluent de la rive gauche du bas rio Negro au-dessus de Manaus [Brazil]. Holotype: particular collection of J. Gery, number 728.

Maximum length: 5.38 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

***Charax gibbosus* (Linnaeus, 1758)**

Salmo gibbosus Linnaeus, 1758: 311. Type locality: Surinam. Holotype: BMNH 1853.11.12.35 (left halfskin).

Cynopotamus gibbosus Valenciennes, in Cuvier & Valenciennes, 1850: 321, pl. 645. Type locality: Mana, Essequibo, Amazon. Holotype: ?

Maximum length: 12.5 cm SL

Distribution: South America: Essequibo River basin; coastal rivers of Suriname.

Countries: Guyana, Suriname

***Charax hemigrammus* (Eigenmann, 1912)**

Asiphonichthys hemigrammus Eigenmann, 1912: 403, pl. 60 (fig. 4). Type locality: Gluck Island [Guyana]. Holotype: FMNH 53665.

Maximum length: 3.3 cm SL

Distribution: South America: Muiá Lake, Amazon and Essequibo River basins.

Countries: Brazil, Guyana

***Charax leticiae* Lucena, 1987**

Charax leticiae Lucena, 1987: 40, fig. 7. Type locality: Igarapé Urubu, perto do posto de Trocara, Rio Tocantins, Pará, Brazil. Holotype: MZUSP 28660.

Maximum length: 10 cm SL

Distribution: South America: Tocantins and upper Paraguay River basins.

Countries: Brazil, Paraguay

***Charax macrolepis* (Kner, 1858)**

Epicyrthus macrolepis Kner, 1858: 167. Type locality: Rio Guaporé, Cujaba, Caiçara, Marabitanos, Surinam; ohne Provinziannamen. Lectotype: NMW 62668-6 (78 mm), designated by Lucena (1987: 42).

Maximum length: 9.5 cm SL

Distribution: South America: Guaporé River basin, upper Madeira River drainage.

Countries: Brazil

***Charax metae* Eigenmann, 1922**

Charax metae Eigenmann, 1922: 238, pl. 25 (fig. 1). Type locality: Barrigón [Meta River, Orinoco System, Colombia]. Holotype: CAS 41300.

Maximum length: 11 cm SL

Distribution: South America: Upper Meta River basin.

Countries: Colombia, Venezuela

***Charax michaeli* Lucena, 1989**

Charax michaeli Lucena, 1989: 98, fig. 2. Type locality: Igarapé do Cujobim, rio Branco (em face de l'île de Maraca), Roraima, Brazil. Holotype: MZUSP 37276.

Maximum length: 11.3 cm SL

Distribution: South America: Branco River basin.

Countries: Brazil

***Charax niger* Lucena, 1989**

Charax niger Lucena, 1989: 99, fig. 3. Type locality: Rio Amapá (canal do rio), Cachoeira Grande, Amapá, Brazil. Holotype: MZUSP 33422.

Maximum length: 12.8 cm SL

Distribution: South America: Coastal rivers of Amapá State.

Countries: Brazil

***Charax notulatus* Lucena, 1987**

Charax notulatus Lucena, 1987: 46, fig. 10. Type locality: pequeno córrego próximo a desembocadura do córrego Socoroco, rio Orinoco, Venezuela. Holotype: MBUCV-V-15000.

Maximum length: 6.3 cm SL

Distribution: South America: Lower Orinoco River basin.

Countries: Venezuela

***Charax pauciradiatus* (Günther, 1864)**

Anacyrtus pauciradiatus Günther, 1864: 346. Type locality: River Capin [Pará State, Brazil]. Syntypes: BMNH 1849.11.8.47, 1849.11.8.51.

Maximum length: 10.1 cm SL

Distribution: South America: Lower Amazon River basin.

Countries: Brazil

***Charax rupununi* Eigenmann, 1912**

Charax rupununi Eigenmann, 1912: 402. Type locality: Rupununi [Guyana]. Holotype: FMNH 53663.

Maximum length: 4.5 cm SL

Distribution: South America: Jacaré Lake, Essequibo and Trombetas River basins.

Countries: Brazil, Guyana

***Charax stenopterus* (Cope, 1894)**

Asiphonichthys stenopterus Cope, 1894: 67. Type locality: Upper Jacuhy River, Rio Grande do Sul [Brazil]. Holotype: ANSP 21559.

Maximum length: 9.4 cm SL

Distribution: South America: Paraguay and Uruguay River basins and eastern rivers of Rio Grande do Sul State and Uruguay.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: See Lucena (1987) for populational analysis.

Common names: Corcunda (Brazil), Lambari-vidro (Brazil)

***Charax tectifer* (Cope, 1870)**

Anacyrtus tectifer Cope, 1870: 565. Type locality: Pebas, Ecuador [actually Pebas, Peru]. Holotype: ANSP 8175.

Anacyrtus sanguineus Cope, 1872: 266, pl. 9 (fig. 1). Type locality: Ambyiacu [Peru]. Lectotype: ANSP 8176, designated by Fowler (1907: 453).

Maximum length: 10 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

***Charax unimaculatus* Lucena, 1989**

Charax unimaculatus Lucena, 1989: 101, fig. 4. Type locality: Lago Manacapuru, Amazonia, Brazil. Holotype: MZUSP 6534.

Maximum length: 8.6 cm SL

Distribution: South America: Middle Amazon River basin.

Countries: Brazil

CYNOPOTAMUS

Cynopotamus Valenciennes, in Cuvier & Valenciennes, 1850: 317. Type species: *Hydrocyon argenteus* Valenciennes, 1836. Type by subsequent designation by Eigenmann (1912: 403). Gender: masculine. Revised by Menezes (1976), with species descriptions and geographical distributions.

Cyrtocharax Fowler, 1907: 454. Type species: *Anacyrtus limaesquamis* Cope, 1878. Type by original designation. Gender: masculine.

Hybocharax Géry & Vu-Tân-Tuê, 1963: 240. Type species: *Cynopotamus bipunctatus* Pellegrin, 1909. Type by original designation. Gender: masculine.

***Cynopotamus amazonus* (Günther, 1868)**

Anacyrtus (Cynopotamus) amazonum Günther, 1868b: 481. Type locality: Xeberos, Peru. Syntypes: BMNH 1867.6.13.69-70 (2).

Anacyrtus limaesquamis Cope, 1878: 686. Type locality: Pebas, Peru. Lectotype: ANSP 21460, designated by Fowler (1907: 454).

Maximum length: 17 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Remarks and references: See Menezes (1976: 28) for detailed description.

Common names: Cacunda (Pará, Brazil)

***Cynopotamus argenteus* (Valenciennes, 1836)**

Hydrocyon argenteum Valenciennes, 1836: pl. 9 (fig. 1). Type locality: Buenos Aires, Argentina. Holotype: MNHN A.9846.

Characinus squamosus Eigenmann & Kennedy, 1903: 525. Type locality: Laguna Pasito, Paraguay. Holotype: CAS 27615.

Charax caliurus Eigenmann & Kennedy, in Eigenmann, McAtee & Ward, 1907: 142, pl. 43 (fig. 1). Type locality: Laguna Pasito, Paraguay. Holotype: CAS 15682.

Maximum length: 21 cm SL

Distribution: South America: Paraguay, lower Paraná, and Uruguay River basins.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: See Menezes (1976: 23) for detailed description.

Common names: Dientudo jorobado (Argentina, Uruguay), Saicanga (Mato Grosso, Brazil)

***Cynopotamus atratoensis* (Eigenmann, 1907)**

Charax atratoensis Eigenmann, in Eigenmann & Ogle, 1907: 33, fig. 8. Type locality: Truando, Colombia. Holotype: USNM 1664.

Maximum length: 35 cm SL

Distribution: South America: Atrato and Sinu River basins.

Countries: Colombia

Remarks and references: See Menezes (1976: 36) for detailed description.

Common names: Cachana (Colombia)

***Cynopotamus bipunctatus* Pellegrin, 1909**

Cynopotamus bipunctatus Pellegrin, 1909: 13. Type locality: Embruchure du Suripa, Venezuela. Holotype: MNHN 1898-21.

Maximum length: 17.5 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: See Menezes (1976: 31) for detailed description.

Common names: Dientón (Venezuela), Jibao (Venezuela)

***Cynopotamus essequibensis* Eigenmann, 1912**

Cynopotamus essequibensis Eigenmann, 1912: 403. Type locality: Potaro Landing, Guyana. Holotype: FMNH 53673.

Maximum length: 16 cm SL

Distribution: South America: Coastal drainages of Amapá State, Guyana, Suriname, and French Guiana.

Countries: Brazil, French Guiana, Guyana, Suriname

Remarks and references: See Menezes (1976: 30) for detailed description.

***Cynopotamus gouldingi* Menezes, 1987**

Cynopotamus gouldingi Menezes, 1987: 2, fig. 1. Type locality: Rio Madeira at Calama, Territory of Rondônia, Brazil. Holotype: MZUSP 35474.

Maximum length: 16.5 cm SL

Distribution: South America: Madeira River basin.

Countries: Brazil

***Cynopotamus juruena* Menezes, 1987**

Cynopotamus juruena Menezes, 1987: 3, fig. 2. Type locality: Upper Rio Juruena, Mato Grosso, Brazil. Holotype: MZUSP 35475.

Maximum length: 8.5 cm SL

Distribution: South America: Juruena River basin.

Countries: Brazil

***Cynopotamus kincaidi* (Schultz, 1950)**

Cyrtocharax kincaidi Schultz, 1950: 60. Type locality: Paraguay. Holotype: USNM 1694.

Maximum length: 17.4 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil, Paraguay

Remarks and references: See Menezes (1976: 26) for detailed description.

Common names: Saicanga (Mato Grosso, Brazil)

***Cynopotamus magdalena* (Steindachner, 1879)**

Anacyrtus (Cynopotamus) magdalena Steindachner, 1879a: 78, pl. 12 (fig. 2). Type locality: Magdalenaen-Stromes, Colombia. Syntypes: NMW 62501-02, 62504-05, 77769.

Maximum length: 40 cm SL

Distribution: South America: Magdalena and Cauca River basins.

Countries: Colombia

Remarks and references: See Menezes (1976: 32) for detailed description.

Common names: Chachás (Colombia), Chango (Colombia)

***Cynopotamus tocantinensis* Menezes, 1987**

Cynopotamus tocantinensis Menezes, 1987: 5, fig. 3. Type locality: Igarapé Pojuca, Rio Itacaiunas, Serra dos Carajás, Pará, Brazil. Holotype: MZUSP 35492.

Maximum length: 21 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Common names: Cacunda (Brazil)

***Cynopotamus venezuelae* (Schultz, 1944)**

Cyrtocharax magdalenae venezuelae Schultz, 1944: 298, fig. 37.
Type locality: Río Negro below mouth of Río Yasa, Lake Maracaibo basin, Venezuela. Holotype: USNM 1213490.

Maximum length: 23.7 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

Remarks and references: See Menezes (1976: 34) for detailed description.

GALEOCHARAX

Galeocharax Fowler, 1910: 790. Type species: *Cynopotamus gulo* Cope, 1870. Type by original designation. Gender: masculine. Revised by Menezes (1976), with species descriptions and geographical distributions.

***Galeocharax gulo* (Cope, 1870)**

Cynopotamus gulo Cope, 1870: 565. Type locality: Pebas, Eastern Peru. Syntypes: ANSP 8053 (Böhlke holotype), ANSP 8054-55.

Charax goeldii Fowler, 1913: 568, fig. 22. Type locality: Tributary of the Madeira River near Porto Velho, Brazil. Holotype: ANSP 39308.

Maximum length: 22 cm SL

Distribution: South America: Amazon and São Francisco River basins.

Countries: Brazil, Peru

Remarks and references: See Menezes (1976: 43) for detailed description.

Common names: Cacunda (Amazonas and Pará, Brazil)

***Galeocharax humeralis* (Valenciennes, 1834)**

Hydrocyon humeralis Valenciennes, 1834: pl. 11 (fig. 2). Type locality: America Meridionalis. Holotype: MNHN A.9848.

Maximum length: 13.7 cm SL

Distribution: South America: Paraguay and lower Paraná River basins.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: See Menezes (1976: 41) for detailed description.

Common names: Dientudo (Argentina, Uruguay), Saicanga (Mato Grosso, Brazil)

***Galeocharax knerii* (Steindachner, 1879)**

Anacyrtus (Cynopotamus) knerii Steindachner, 1879b: 65. Type locality: Cuiabá, Río Paraguay, Irisanga, Brazil. Holotype: NMW (uncat.). Holotype in NMW, designated and selected but not catalogued and type locality restricted to Oriçanga, Mogi-Guacu River, São Paulo. See Menezes (1976: 45) for detailed description.

Maximum length: 22 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

Remarks and references: See Menezes (1976: 45) for detailed description.

Common names: Peixe-cadela (São Paulo, Brazil), Peixe-cigarra (São Paulo, Brazil)

GNATHOCHARAX

Gnathocharax Fowler, 1913: 560. Type species: *Gnathocharax steindachneri* Fowler, 1913. Type by original designation. Gender: masculine.

***Gnathocharax steindachneri* Fowler, 1913**

Gnathocharax steindachneri Fowler, 1913: 561, fig. 19. Type locality: Igarapé de Candelaria, tributary of Madeira River, and approximately two miles distant, in Lat. S. 8°45', W Long 63°54', Brazil. Holotype: ANSP 39309.

Maximum length: 5 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Brazil, Guyana, Venezuela

Remarks and references: See Böhlke (1955) for studies of population variation.

HETEROCHARAX

Heterocharax Eigenmann, 1912: 405. Type species: *Heterocharax macrolepis* Eigenmann, 1912. Type by original designation. Gender: masculine. Revised by Toledo-Piza (2000).

***Heterocharax leptogrammus* Toledo-Piza, 2000**

Heterocharax leptogrammus Toledo-Piza, 2000: 301, fig. 13. Type locality: rio Arirará, near mouth, Amazonas, Brazil, 0°20'S 63°40'W. Holotype: MZUSP 29229.

Maximum length: 3.39 cm SL

Distribution: South America: Negro River and upper portion of Orinoco River basin.

Countries: Brazil, Venezuela

***Heterocharax macrolepis* Eigenmann, 1912**

Heterocharax macrolepis Eigenmann, 1912: 406, pl. 61 (fig. 2). Type locality: Rockstone [Guyana]. Holotype: FMNH 53669.

Maximum length: 4.75 cm SL

Distribution: South America: Essequibo and Demarara River basins; Amazon River basin and tributaries between Tapajós and Tefé Rivers; upper Amazon River basin, Orinoco River basin.

Countries: Brazil, Ecuador, Guyana, Peru, Venezuela

***Heterocharax virgulatus* Toledo-Piza, 2000**

Heterocharax virgulatus Toledo-Piza, 2000: 298, fig. 10. Type locality: rio Negro at confluence with rio Urubaxi, Amazonas, 0°35'S 64°45'W.

Maximum length: 4.14 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Brazil, Venezuela

HOPLOCHARAX

Hoplocharax Géry, 1966: 286. Type species: *Hoplocharax goethei* Géry, 1966. Type by original designation. Gender: masculine.

***Hoplocharax goethei* Géry, 1966**

Hoplocharax goethei Géry, 1966: 291, fig. 11. Type locality: "Igarapé da Mae Joana", near Manaus, lower Rio Negro, Brazil. Holotype: SU 56478.

Maximum length: 3 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

LONCHOGENYS

Lonchogenys Myers, 1927: 121. Type species: *Lonchogenys ilisha* Myers, 1927. Type by original designation. Gender: feminine.

***Lonchogenys ilisha* Myers, 1927**

Lonchogenys ilisha Myers, 1927: 122. Type locality: Sandbank on the Colombian border, Rio Negro, Cucuy [Brazil]. Holotype: CAS 61719.

Maximum length: 6 cm SL

Distribution: South America: Upper and middle Negro River basin.

Countries: Brazil, Colombia

PHENACOGASTER

Phenacogaster Eigenmann, 1907: 769. Type species: *Tetragonopterus pectinatus* Cope, 1870. Type by original designation. Gender: feminine. See Malabarba & Lucena (1995) for comments on genus-level synonymy.

Vesicatrurus Eigenmann, 1911: 174. Type species: *Vesicatrurus tegatus* Eigenmann, 1911. Type by original designation. Gender:

masculine.

Grammabrycon Fowler, 1941a: 190. Type species: *Grammabrycon calverti* Fowler, 1941. Type by original designation. Gender: masculine.

***Phenacogaster beni* Eigenmann, 1911**

Phenacogaster beni Eigenmann, 1911: 174, pl. 6 (fig. 4). Type locality: Río Beni at Villa Bella [Bolivia]. Holotype: FMNH 54597.

Maximum length: 3.68 cm SL

Distribution: South America: Guapore and Beni River basins.

Countries: Bolivia, Brazil

***Phenacogaster calverti* (Fowler, 1941)**

Grammabrycon calverti Fowler, 1941a: 190, fig. 100. Type locality: Forteleza, Ceará [Brazil]. Holotype: ANSP 69606.

Maximum length: 6 cm SL

Distribution: South America: Coastal drainages of Ceará and Paraíba States.

Countries: Brazil

Remarks and references: See Géry (1972) for change of generic status.

***Phenacogaster carteri* (Norman, 1934)**

Vesicatrurus carteri Norman, 1934: 336, figs. A-C. Type locality: tributary to the Cuyuni River, British Guiana [actually Guyana; Essequibo River basin]. Holotype: BMNH 1934.9.12.216-217 (larger of 2).

Maximum length: 4 cm SL

Distribution: South America: Cuyuni River basin.

Countries: Guyana

***Phenacogaster franciscoensis* Eigenmann, 1911**

Phenacogaster franciscoensis Eigenmann, 1911: 173, pl. 6 (fig. 3). Type locality: Boqueiras, near mouth of Rio Porto [Brazil]. Holotype: FMNH 54599.

Maximum length: 4.2 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Common names: Lambari (Brazil)

***Phenacogaster jancupa* Malabarba & Lucena, 1995**

Phenacogaster jancupa Malabarba & Lucena, 1995: 339, fig. 1. Type locality: Ribeirão Espinheiro, crossing road BR364, Rio Cuiabá drainage, 15°24'S, 56°23'W, Jangada, Mato Grosso, Brazil. Holotype: MCP 17279.

Maximum length: 4.7 cm SL

Distribution: South America: Known only from Espinheiro creek, a tributary of the Cuiabá River, upper Paraguay River drainage.

Countries: Brazil

Common names: Lambari (Brazil)

***Phenacogaster megalostictus* Eigenmann, 1909**

Phenacogaster megalostictus Eigenmann, 1909: 28. Type locality: Tumatumari, Lower Potaro River [British Guyana=Guyana]. Holotype: FMNH 53530.

Maximum length: 3.7 cm SL

Distribution: South America: Essequibo River basin.

Countries: Guyana

***Phenacogaster microstictus* Eigenmann, 1909**

Phenacogaster microstictus Eigenmann, 1909: 30. Type locality: Tumatumari, Lower Potaro [British Guyana =Guyana]. Holotype: FMNH 52970.

Maximum length: 4.2 cm SL

Distribution: South America: Essequibo and Demerara River basins.

Countries: Guyana, Suriname

***Phenacogaster pectinatus* (Cope, 1870)**

Tetragonopterus pectinatus Cope, 1870: 560. Type locality: Pebas, Ecuador [actually Pebas, Peru]. Holotype: ANSP 8090.

Tetragonopterus tabatingae Steindachner, 1876: 91. Type locality: Amazonas at Tabatinga [Brazil]. Syntypes: (several) whereabouts unknown.

Tetragonopterus bairdii Steindachner, 1882a: 179. Type locality: Tabatinga [Brazil]. Syntypes: NMW 57250.

Maximum length: 4.5 cm SL

Distribution: South America: Middle and upper Amazon River basin.

Countries: Brazil, Peru

***Phenacogaster suborbitalis* Ahl, 1936**

Phenacogaster suborbitalis Ahl, 1936: 24. Type locality: East coast of Brazil. Holotype: ZMB 20806.

Maximum length: 5.5 cm SL

Distribution: South America: Eastern coast of Brazil (?).

Countries: Brazil (?)

***Phenacogaster tegatus* (Eigenmann, 1911)**

Vesicatrurus tegatus Eigenmann, 1911: 174, pl. 7 (fig. 1). Type locality: Rio Jaurú, upper Rio Paraguay basin [Brazil]. Holotype: FMNH [ex CM 3201] (missing or never at FMNH).

Maximum length: 3.2 cm SL

Distribution: South America: Upper Paraguay River basin.

Countries: Brazil, Paraguay

Remarks and references: See Malabarba & Lucena (1995) for change of generic status.

PRIOCHARAX

Priocharax Weitzman & Vari, 1987: 641. Type species: *Priocharax ariel* Weitzman & Vari, 1987. Type by original designation. Gender: masculine.

***Priocharax ariel* Weitzman & Vari, 1987**

Priocharax ariel Weitzman & Vari, 1987: 641, figs. 1-5. Type locality: Caño Manu, tributary of Rio Casiquiare, approximately 250 m upstream from Solano, Departamento Río Negro, Territorio Federal Amazonas, Venezuela, 2°00'N, 66°57'W. Holotype: MBUCV V-15340.

Maximum length: 1.51 cm SL

Distribution: South America: Upper Negro and Orinoco River basins.

Countries: Venezuela

***Priocharax pygmaeus* Weitzman & Vari, 1987**

Priocharax pygmaeus Weitzman & Vari, 1987: 646, fig. 6. Type locality: Quebrada Pajarito in Departamento Amazonas, tributary of Quebrada Bacada, tributary of Quebrada Matamata, a tributary of Rio Amazonas, northwest of Leticia, about 4°41'S, 69°57'W, Colombia. Holotype: NRM 15048.

Maximum length: 1.64 cm SL

Distribution: South America: Upper Amazon River basin in Colombia.

Countries: Colombia

ROEBOIDES

Roeboides Günther, 1864: 345. Type species: *Epicyrthus microlepis* Reinhardt, 1849. Type by subsequent designation. Gender: masculine. See Lucena (1988) for phylogenetic studies and definition of the genus.

Evermannella Eigenmann, 1903: 146. Type species: *Cynopotamus biserialis* Garman, 1890. Type by original designation. Gender: feminine.

Eucynopotamus Fowler, 1904: 119. Type species: *Cynopotamus biserialis* Garman, 1890. Type by being a replacement name. Gender: masculine.

Cynocharax Fowler, 1907: 457. Type species: *Anacyrtus affinis*

Günther, 1868. Type by original designation. Gender: masculine.
Evermannolus Eigenmann in Eigenmann & Ogle, 1907: 2. Type species: *Cynopotamus biserialis* Garman, 1890. Type by being a replacement name. Gender: masculine.

***Roeboides affinis* (Günther, 1868)**

Anacyrtus affinis Günther, 1868a: 481. Type locality: Huallaga. Syntypes: BMNH 1867.6.13.61-62.
Roeboides bicornis Cope, 1870: 564, fig. Type locality: Pebas, Eastern Equador [actually Pebas, Peru]. Holotype: ANSP 8151.
 Maximum length: 11 cm SL
 Distribution: South America: Amazon and Parnaíba River basins.
 Countries: Brazil, Peru, Venezuela
 Remarks and references: Tentative key for cis-Andean species and synonym above in Lucena (1988).
 Common names: Cacunda (Brazil), Dientudo (Venezuela)

***Roeboides biserialis* (Garman, 1890)**

Cynopotamus biserialis Garman, 1890: 14. Type locality: Lago do Maximo; Obydos; and Villa Bella [Brazil]. Syntypes: MCZ 21327, 21335, 21360; USNM 120180.
 Maximum length: 4.8 cm SL
 Distribution: South America: Middle Amazon River basin.
 Countries: Brazil
 Remarks and references: See Lucena (1988) for comments about taxonomic status.

***Roeboides bonariensis* (Steindachner, 1879)**

Anacyrtus (Rhaeboides) bonariensis Steindachner, 1879b: 23, pl. 8 (fig. 1). Type locality: La Plata, Buenos Aires [Argentina]. Holotype: NMW 62498.
 Maximum length: 18 cm SL
 Distribution: South America: Paraguay and lower Paraná River basins.
 Countries: Argentina, Brazil, Paraguay, Uruguay
 Remarks and references: Tentative key for cis-Andean species see Lucena (1988).
 Common names: Cacunda (Brazil), Corcunda (Brazil), Dientudo (Argentina, Paraguay)

***Roeboides bouchellei* Fowler, 1923**

Roeboides bouchellei Fowler, 1923: 25. Type locality: Pis Pis River, Great Falls, Nicaragua. Holotype: ANSP 51218.
Roeboides salvadoris Hildebrand, 1925: 246, fig. 9. Type locality: Río Sucio, Sitio del Niño [El Salvador]. Holotype: USNM 87215.
 Maximum length: 8.2 cm SL
 Distribution: North and Central America: Pacific slope rivers from west of Sona Peninsula in Panama, to Coto River, north through the Parrita-Quepos region of Costa Rica to extreme west Mexico, and on the Atlantic slope from rivers of Nicaragua (Managua Lake) and Honduras.
 Countries: Costa Rica, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama
 Remarks and references: See Lucena (2000a) for taxonomic revision of the trans-Andean species.

***Roeboides carti* Lucena, 2000**

Roeboides carti Lucena, 2000a: 47, fig. 22a, b and c. Type locality: Río Carti Grande, Comarca de San Blas, 7°26'N 78°58'W, Panama. Holotype: USNM 359076.
 Maximum length: 8.3 cm SL
 Distribution: Central America: Coastal drainages of Comarca de San Blas.
 Countries: Panama
 Remarks and references: See Lucena (2000) for taxonomic revision of the trans-Andean species.

***Roeboides dayi* (Steindachner, 1878)**

Anacyrtus (Rhaeboides) dayi Steindachner, 1878: 91. Type local-

ity: Río Magdalena, Colombia. Holotype: NMW 67132.

Roeboides caucea Eigenmann, 1922: 162. Type locality: Cartago [Colombia]. Holotype: CAS 71099.

Roeboides magdalenae Eigenmann, 1922: 161. Type locality: Soplaviento, Colombia. Syntypes: FMNH [ex CM 5202] (?); CAS 71123.

Roeboides meeki Eigenmann, 1922: 163, pl. 25 (fig. 4). Type locality: Quibdo, Colombia. Holotype: FMNH 55148 [ex CM 3849].

Roeboides romeroi Fowler, 1941b: 6, fig. 9. Type locality: Honda, Colombia. Holotype: ANSP 69336.

Maximum length: 10.9 cm SL

Distribution: Central and South America: Rivers of the Atlantic versant of extreme northeast of Panama, through San Blas region and the Atrato River basin to the Magdalena-Cauca drainage basin.

Countries: Colombia, Panama

Remarks and references: See Lucena (2000a) for taxonomic revision of the trans-Andean species.

***Roeboides descavadensis* Fowler, 1932**

Roeboides descavadensis Fowler, 1932: 359, fig. Type locality: Descalvados, Matto Grosso, Brazil. Holotype: ANSP 53718.

Maximum length: 8.9 cm SL

Distribution: South America: Upper Paraguay River basin.

Countries: Brazil, Paraguay

Remarks and references: Tentative key for cis-Andean species in Lucena (1988).

Common names: Dientudo (Paraguay)

***Roeboides dientonito* Schultz, 1944**

Roeboides dayi dientonito Schultz, 1944: 304, fig. 39. Type locality: Río Palmar at the bridge, 70 km southwest of Maracaibo [Venezuela]. Holotype: USNM 121370.

Maximum length: 6.8 cm SL

Distribution: South America: Lake Maracaibo and Orinoco River basin, and rivers of the northwestern portion of Guyana.

Countries: Guyana, Venezuela

Remarks and references: See Lucena (2000a) for taxonomy of the trans-Andean species.

Common names: Dientonito (Venezuela)

***Roeboides dispar* Lucena, 2001**

Roeboides dispar Lucena, 2001: 63, fig. 1. Type locality: foz do Arara [River], bacia do rio Juruá, Reserva Extrativista Alto Juruá. Holotype: MZUSP 63600

Maximum length: 8.11 cm SL

Distribution: South America: Upper portions of the Madeira, Juruá, and Ucayali River basins.

Countries: Bolívia, Brazil, Perú

Common names: Madalena (Brazil)

***Roeboides guatemalensis* (Günther, 1864)**

Anacyrtus guatemalensis Günther, 1864: 347. Type locality: rio Chagres, Panama [restricted by Miller & Carr (1974: 121)]. Lectotype: BM 1864.1.26: 310, designated by Miller & Carr (1974: 121).

Maximum length: 13 cm SL

Distribution: Central America: Atlantic slope drainages of Panama from Gatun Lake including the basin of the Chagres River and to the east of the Cascajal River.

Countries: Panama

Remarks and references: See Lucena (2000a) for taxonomy of the trans-Andean species.

Common names: Anchobeta (Panama), Anchovata (Panama)

***Roeboides ilseae* Bussing, 1986**

Roeboides ilseae Bussing, 1986: 45, fig. 1. Type locality: Quebrada Bonita, S of Damas and 9 km NW of Quepos [Costa Rica]. Holotype: LACM 43754-1.

Maximum length: 7.6 cm SL
 Distribution: Central America: Southeastern Pacific versant rivers of Costa Rica.
 Countries: Costa Rica
 Remarks and references: See Lucena (2000a) for taxonomy of the trans-Andean species.

***Roeboides microlepis* (Reinhardt, 1851)**

Epicyrthus microlepis Reinhardt, 1851: 46. Type locality: Brazil. Holotype: MNHN A.8657 (dry).
Epicyrthus microlepis Kner, 1858: 167. Type locality: Brazil. No types known.
 Maximum length: 16.7 cm SL
 Distribution: South America: Araguaia River basin.
 Countries: Brazil
 Remarks and references: Tentative key for cis-Andean species see Lucena (1988).

***Roeboides myersi* Gill, 1870**

Roeboides myersi Gill, 1870: 92. Type locality: Río Marañon or Río Napo, Amazon system, Peru or Ecuador. Holotype: USNM 21426.

Roeboides rubrivertex Cope, 1872: 265. Type locality: Between the mouth of Río Negro and the Peruvian Amazon or Ucayale River. Holotype: ANSP 8190.

Charax hasemani Steindachner, 1915a: 589. Type locality: Mündung des Rio negro [Amazonas, Brazil]. Syntypes: (several) NMW.

Maximum length: 18 cm SL
 Distribution: South America: Amazon and Orinoco River basins; Parnaíba River basin.
 Countries: Brazil, Peru, Venezuela
 Remarks and references: Tentative key for cis-Andean species and synonym above in Lucena (1988).

***Roeboides numerosus* Lucena, 2000**

Roeboides numerosus Lucena, 2000b: 154, fig. 1. Type locality: estrada San Fernando de Apure-Arichuna, (bacia do rio Apure), aprox. 16 Km a sudoeste de San Fernando de Apure, Apure, Venezuela. Holotype: MZUSP 27886.

Maximum length: 6.1 cm SL
 Distribution: South America: Orinoco River basin.
 Countries: Venezuela

***Roeboides occidentalis* Meek & Hildebrand, 1916**

Roeboides occidentalis Meek & Hildebrand, 1916: 293, pl. 23. Type locality: Río Cardenas, Corozal, Panama. Holotype: FMNH 8948 (missing).

Roeboides hildebrandi Eigenmann, 1922: 162, pl. 25 (fig. 3). Type locality: Istmina, Colombia. Holotype: FMNH 56884.

Maximum length: 13 cm SL
 Distribution: Central and South America: Pacific versant rivers of Panama, and Colombia to north of Ecuador.
 Countries: Colombia, Ecuador, Panama
 Remarks and references: See Lucena (2000a) for taxonomy of the trans-Andean species.
 Common names: Anchobeta (Panama), Anchovata (Panama)

***Roeboides oligistos* Lucena, 2000**

Roeboides oligistos Lucena, 2000b: 157, fig. 2. Type locality: braço morto do rio Tapajós, bairro de Piracuna, Itaituba, Pará, Brazil. Holotype: MCP 25254.

Maximum length: 7 cm SL
 Distribution: South America: Amazon, Negro, Branco, Tapajós, and Trombetas River basins.
 Countries: Brazil

***Roeboides paranensis* Pignalberi, 1975**

Roeboides paranensis Pignalberi, 1975: 152. Type locality: Nangañui Island (Corrientes), 29°10'S, 59°20'W [Río Paraná, Argentin].

Holotype: INALI 2.
 Maximum length: 8.9 cm SL
 Distribution: South America: Paraguay and lower Paraná River basins.
 Countries: Argentina, Brazil, Paraguay, Uruguay
 Remarks and references: See Hahn et al. (2000) for dental development and ontogenetic diet shifts.
 Common names: Dentudo (Brazil), Dientudo (Argentina, Paraguay)

***Roeboides prognathus* (Boulenger, 1895)**

Anacyrtus prognathus Boulenger, 1895: 529. Type locality: Matto Grosso, Brazil and Paraguay. Holotype: BMNH 1895.5.17.238.
 Maximum length: 14 cm SL
 Distribution: South America: Paraguay, middle and lower Paraná, and Uruguay River basins.
 Countries: Argentina, Brazil, Paraguay, Uruguay
 Remarks and references: Tentative key for cis-Andean species in Lucena (1988).
 Common names: Dientudo (Argentina, Paraguay)

***Roeboides thurni* Eigenmann, 1912**

Roeboides thurni Eigenmann, 1912: 399, pl. 60 (fig. 2). Type locality: Rockstone sand-bank [Guyana]. Holotype: FMNH 53676.

Maximum length: 8 cm SL
 Distribution: South America: Coastal rivers of Guyana, French Guiana, and Suriname.
 Countries: French Guiana, Guyana, Suriname

***Roeboides xenodon* (Reinhardt, 1851)**

Epicyrthus xenodon Reinhardt, 1851: 37. Type locality: Ribeiro do mato em lille Flod i Naerheden af lagoa santa; Rio das Velhas [São Francisco River, Brazil]. Syntypes: MNHN 9585; ZMB 9193; ?ZMUC 203, 206, 211-212.

Roeboides francisci Steindachner, 1908: 192. Type locality: den Lagunen bei Barra (Lagoa Viana, Lagoa do Porto), die mit dem Rio San Francisco im Zusammenhang stehen und den Tümpeln und Ausstanden des Rio grande do Norte sowie des Rio Preto bis Sa. Rita [Brazil]. Syntypes: (several) NMW 56891-94, 56896, ?56898-900, 56920-22, 56895, 56897.

Maximum length: 8.2 cm SL
 Distribution: South America: São Francisco River basin.
 Countries: Brazil
 Remarks and references: Tentative key for cis-Andean species and synonym above in Lucena (1988).

Subfamily Stethaprioninae (Silver dollar tetras)

Roberto E. Reis

Members of the subfamily Stethaprioninae can be readily distinguished from other characids by their deep, sometimes discoidal, body shape and by having an anteriorly directed bony spine preceding the first dorsal-fin ray. Mature male stethaprionines have very small, thin anal-fin hooks, varying from one to six per ray segment, that face in all directions (Reis, 1989). The phylogenetic relationships within the subfamily were studied by Reis (1989), who demonstrated that *Brachyhalcinus* and *Stethaprion* are sister-groups to each other, *Orthospinus* is sister to that clade, and *Poptella* is the most basal genus. The relationships of stethaprionines to other characids is mostly unknown, but deep-bodied genera as *Gymnocorymbus*, *Tetragonopterus*, *Ctenobrycon*, some *Moenkhausia*, and *Stichonodon* may be their closest relative.

Fishes in this subfamily are very homogeneous in terms of body size and shape; the maximum standard length varying from 6.5 cm in *Brachichalcinus retrospina* to 9.0 cm in *B. orbicularis*. Stethaprionine species are usually found in small to large rivers, where the current is not very strong. They are distributed in all major river drainages of cis-Andean South America, from lower Paraná River in Argentina to tributaries of the Orinoco River in Colombia. Three areas of the continent lack representatives of this subfamily, the coastal drainages emptying into the Atlantic between the La Plata River and the São Francisco River, the Paraná River basin upstream the Sete Quedas Falls, and the trans-Andean river basins, including the Magdalena River and Maracaibo Lake.

The present status of knowledge of species diversity and taxonomy is apparently good in this small group, as no additional species were detected since Reis' (1989) revision. It is possible, however, that faunal surveys in upper Amazon basin in Peru and Colombia and in Central Brazil eventually reveal additional species of *Brachyhalcinus* or *Poptella*. Commercial interest on stethaprionines is small and restricted to the aquarium trade.

BRACHYHALCINUS

Brachyhalcinus Boulenger, 1892: 11. Type species: *Brachyhalcinus retrospina* Boulenger, 1892. Type by monotypy. Gender: masculine.

***Brachyhalcinus copei* (Steindachner, 1882)**

Stethaprion copei Steindachner, 1882: 180. Type locality: Tabatinga, Rio Amazon, Brazil. Syntypes: NMW (3, apparently lost). Maximum length: 7.3 cm SL
Distribution: South America: Solimões and Madeira River basins.
Countries: Bolivia, Brazil, Peru
Remarks and references: See Reis (1989) for phylogeny, description, figure, and comparison with other species.
Common names: Mojara (Peru)

***Brachyhalcinus nummus* Böhlke, 1958**

Brachyhalcinus nummus Böhlke, 1958: 74, pl. 4 (fig. 5). Type locality: Chicherota [Lower Bobonaza River, Prov. Napo-Pastaza, 2°23'S, 76°30'W, Ecuador, elev. 270 m]. Holotype: USNM 164019.
Maximum length: 8.4 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Colombia, Ecuador, Peru
Common names: Mojara (Peru)

***Brachyhalcinus orbicularis* (Valenciennes, 1850)**

Tetragonopterus orbicularis Valenciennes in Cuvier & Valenciennes, 1850: 138. Type locality: l'Essequibo [Guyana]. Lectotype: MNHN 6343, designated by Reis (1989: 62).
Brachyhalcinus guianensis Boeseman, 1952: 303. Type locality: Itabu Creek, New River drainage, British Guiana. Lectotype: FMNH 51535, designated by Böhlke (1958).
Maximum length: 9 cm SL

Distribution: South America: Coastal drainages of Suriname and Guyana.

Countries: Guyana, Suriname

Remarks and references: See Reis (1989) for phylogeny, description, figure, and comparison with other species.

***Brachyhalcinus parnaibae* Reis, 1989**

Brachyhalcinus parnaibae Reis, 1989: 77, fig. 38. Type locality: Lagoas, Serra das Confusões, rio Parnaíba system, Caracol, Piauí, Brazil. Holotype: MZUSP 36594.
Maximum length: 7.2 cm SL
Distribution: South America: Parnaíba River basin.
Countries: Brazil
Remarks and references: See Reis (1989) for phylogeny, description, figure, and comparison with other species.

***Brachyhalcinus retrospina* Boulenger, 1892**

Brachyhalcinus retrospina Boulenger, 1892: 12, pl. 2 (fig. 2). Type locality: Santa Cruz. [Mato Grosso, Brazil]. Lectotype: BMNH 1892.4.20.36, designated by Eigenmann & Myers (1929: 508).
Maximum length: 6.5 cm SL
Distribution: South America: Paraguay River basin.
Countries: Brazil, Paraguay
Remarks and references: See Reis (1989) for phylogeny, description, figure, and comparison with other species.

ORTHOSPINUS

Buritia Brant, 1974: 148. Type species: *Buritia cisalpinoi* Brant, 1974. Type by original designation. Gender: feminine. Preoccupied by *Buritia* Young, 1952, in Hemiptera.
Orthospinus Reis, 1989: 42. Type species: *Buritia cisalpinoi*

Brant, 1974. Type by being a replacement name. Gender: masculine.

***Orthospinus franciscensis* (Eigenmann, 1914)**

Fowlerina franciscensis Eigenmann, 1914: 45. Type locality: Barreiras, Lagoas of Rio Grande [São Francisco River system, Bahia, Brazil]. Holotype: FMNH 56426 [ex CM 5240].

Ephippicharax franciscoensis Eigenmann, in Eigenmann & Myers, 1929: 506, pl. 70 (figs. 3 & 5). Type locality: Barreiras, Lagoas of Rio Grande [São Francisco River system, Bahia, Brazil]. Holotype: FMNH 56426 [ex CM 5240].

Buritia cisalpinoi Brant, 1974: 148, fig. 1 (unnumbered). Type locality: Barra do Pimenta, Faz. Buruti do Meio, Rio São Francisco, Pompeu, MG. [Brazil]. Holotype: MHNI 141.

Maximum length: 7.4 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Remarks and references: See Reis (1989) for phylogeny, description, figure, and comparison with other species.

POPTELLA

Fowlerina Eigenmann, 1907: 771. Type species: *Tetragonopterus compressus* Günther, 1864. Type by monotypy. Gender: feminine. Preoccupied by *Fowlerina* Pelseneer, 1906, in Mollusca, replaced by *Ephippicharax* Fowler, 1913.

Poptella Eigenmann, 1908: 106. Type species: *Tetragonopterus longipinnis* Popta, 1901. Type by original designation. Gender: feminine.

Ephippicharax Fowler, 1913: 51. Type species: *Tetragonopterus compressus* Günther, 1864. Type by being a replacement name. Gender: masculine. Replacement for *Fowlerina* Eigenmann 1907, preoccupied by *Fowlerina* Pelseneer, 1906, in Mollusca.

***Poptella brevispina* Reis, 1989**

Poptella brevispina Reis, 1989: 37, fig. 22. Type locality: Igarapé Apeu, Boa Vista, Castanhal, Pará, Brazil. Holotype: MZUSP 38562.

Maximum length: 7.6 cm SL

Distribution: South America: Trombetas, upper Branco, and lower Tocantins River basins; coastal drainages of Guyana, Suriname and Pará State.

Countries: Brazil, Guyana, Suriname

Remarks and references: See Reis (1989) for phylogeny, description, figure, and comparison with other species.

Common names: Piaba (Brazil)

***Poptella compressa* (Günther, 1864)**

Tetragonopterus compressus Günther, 1864: 319. Type locality: Essequibo. [Guyana]. Lectotype: BMNH 1864.1.21.67, designated by Reis (1989: 23).

Maximum length: 6.8 cm SL

Distribution: South America: Orinoco and Amazon River basins; coastal drainages of Venezuela, Guyana, and northeastern Brazil. Countries: Bolivia, Brazil, Colombia, Guyana, Venezuela

Remarks and references: See Reis (1989) for phylogeny, description, figure, and comparison with other species.

***Poptella longipinnis* (Popta, 1901)**

Tetragonopterus longipinnis Popta, 1901: 85, fig. 1 (unnumbered). Type locality: Beneden-Nickerie, entre le Manilie-kreek et l'Arrawarra [Suriname]. Lectotype: RMNH 13033, designated by Reis (1989: 28).

Gymnocorymbus nemopterus Fowler, 1914: 247, fig. 8. Type locality: Rupununi River, British Guiana [2°-3°N, 50°20'W]. Holotype: ANSP 39332.

Maximum length: 6.9 cm SL

Distribution: South America: Orinoco River basin; coastal drainages of Suriname, and lower Tocantins River.

Countries: Brazil, Colombia, Suriname, Venezuela

Remarks and references: See Reis (1989) for phylogeny, description, figure, and comparison with other species.

***Poptella paraguayensis* (Eigenmann, 1907)**

Fowlerina paraguayensis Eigenmann in Eigenmann, McAtee & Ward, 1907: 153. Type locality: Descalvados. [Mato Grosso, Brazil]. Lectotype: BMNH 1895.5.17.200, designated by Reis (1989: 33).

Maximum length: 6.6 cm SL

Distribution: South America: Paraguay and lower Paraná River basins.

Countries: Argentina, Brazil, Paraguay

STETHAPRION

Stethaprion Cope, 1870: 562. Type species: *Stethaprion erythropros* Cope, 1870. Type by monotypy. Gender: masculine.

***Stethaprion crenatum* Eigenmann, 1916**

Stethaprion crenatus Eigenmann, 1916: 80, pl. 16. Type locality: San Joaquin, Bolivia. Holotype: FMNH 56413 [ex CM 5228a].

Stethaprion innesi Myers, 1932: 149, fig. (unnumbered). Type locality: Lower Amazon [Brazil]. Holotype: SU 25228.

Maximum length: 8.5 cm SL

Distribution: South America: Upper Purus, Madeira, and lower Amazon River basins.

Countries: Bolivia, Brazil

Remarks and references: See Reis (1989) for phylogeny, description, figure, and comparison with other species.

***Stethaprion erythropros* Cope, 1870**

Stethaprion erythropros Cope, 1870: 562, unnumbered fig. Type locality: Pebas. [Amazon system, Peru]. Holotype: ANSP 8031.

Stethaprion chryseum Cope, 1872: 261. Type locality: Ambyiacu, Peru. Holotype: ANSP 8030.

Maximum length: 8.8 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil, Peru

Remarks and references: See Reis (1989) for phylogeny, description, figure, and comparison with other species.

Common names: Palometa (Peru)

Subfamily Tetragonopterinae (Characins, tetras)

Roberto E. Reis

Members of the subfamily Tetragonopterinae can be distinguished from other characids by their deep and lozenge-shaped body, flat preventral area, and long anal fin base. The phylogenetic relationships of this subfamily to other characids is unstudied. The Tetragonopterinae has been treated for many years (e.g. Géry, 1977) as a very large, all-encompassing subfamily, into which most genera herein listed as Incertae Sedis in Characidae used to be allocated. Because of the lack of evidence that such a large Tetragonopterinae constitutes a monophyletic assemblage (Weitzman & Malabarba, 1998), this classification was not adopted here. Instead, we preferred to emphasize that interrelationships among the Characidae are poorly known, and only recognized *Tetragonopterus* as belonging to the Tetragonopterinae.

Tetragonopterus is composed of two species, usually found in small to large rivers, with slow to moderately strong water current. They are distributed in all major river drainages of cis-Andean South America, from lower Paraná River in Argentina, the Amazon basin, the São Francisco River, the Orinoco River, and the coastal drainages of the Guianas. Commercial interest on *Tetragonopterus* is small and restricted to the aquarium trade.

TETRAGONOPTERUS

Tetragonopterus Cuvier, 1816: 166. Type species: *Tetragonopterus argenteus* Cuvier, 1816. Type by monotypy. Gender: masculine.

***Tetragonopterus argenteus* Cuvier, 1816**

Tetragonopterus argenteus Cuvier, 1816: 166. Type locality: No locality. No types known.

Maximum length: 11.2 cm SL

Distribution: South America: Amazon and La Plata River basins.

Countries: Argentina, Brazil, Peru, Paraguay, Uruguay

Remarks and references: This species was based on Seba (1758: 106, pl. 34, fig. 3). Specimen apparently examined by Cuvier is MNHN A-9807 (1).

***Tetragonopterus chalceus* Spix & Agassiz, 1829**

Tetragonopterus chalceus Spix & Agassiz, 1829: 70, pl. 33 (fig. 1). Type locality: Brasiliae aequinoctialis fluviis. Holotype: MHNN 785 [This specimen potential holotype, 82 mm SL and 108 mm TL, but Agassiz gave 102 mm (Kottelat, 1988)].

Maximum length: 9.7 cm SL

Distribution: South America: Amazon, São Francisco, and Orinoco River basins; coastal drainages of the Guianas.

Countries: Brazil, French Guiana, Guyana, Peru, Suriname, Vene-

zuela

Subfamily Rhoadsiinae (Characins, tetras)

Alexandre R. Cardoso

Members of the subfamily Rhoadsiinae can be distinguished from other Characidae by having a single tooth series in the premaxilla (as Cheirodontinae) when young, and a double series (as most characids) when adults - (except for *Carlana*, which maintains the inner series only). The outer series of teeth in the premaxilla is composed of two conical teeth, while the inner series consists of five multicuspid teeth. Also remarkable is the fact that the longest dorsal-fin ray may reach the caudal fin in adult males.

There are three nominal genera in the Rhoadsiinae: *Rhoadsia*, *Parastremma*, and *Carlana*. The first two genera can be easily distinguished by the number of scales in the longitudinal series and the number of perforated scales in the lateral line. *Rhoadsia* has 37-41 scales in the longitudinal series and an incomplete lateral lines (10-20 perforated scales), while *Parastremma* has 55-64 scales in the longitudinal series, with a complete lateral line. The classification of *Carlana*, however, has been problematic. Some authors (e.g. Eigenmann & Myers, 1929 and Géry, 1977) regard *Carlana* as a junior synonym of *Rhoadsia*. Fink & Weitzman (1974), on the other hand, considered *Carlana* valid and more closely related to the Cheirodontinae than to other Rhoadsiinae.

Parastremma includes three species (*P. sadina*, *P. alba*, and *P. pulchra*), *Rhoadsia* has two (*R. altipinna* and *R. minor*), and *Carlana eigenmanni* is the only species in this last genus. Species of this subfamily are distributed in Central and South America, in both Atlantic and Pacific drainages of Nicaragua, Costa Rica, and Panama and in the trans-Andean, Pacific basins of Colombia, Ecuador and Peru. Because of their small size (maximum SL 136 mm), commercial importance is restricted to aquarium interest to the colorful species like *R. minor*, which has red and yellow fins. All six species have a general rhomboidal body shape in lateral view, and are popularly known as “sardina” or “blanca” in Colombia and “dora-dillo” in Ecuador.

CARLANA

Carlina Meek, 1914: 108. Type species: *Cheirodon eigenmanni* Meek, 1912. Type by original designation. Gender: feminine. Preoccupied by *Carlina* Gray, 1854, replaced by *Carlana* Strand, 1928.

Carlana Strand, 1928: 54. Type species: *Cheirodon eigenmanni* Meek, 1912. Type by being a replacement name. Gender: feminine. Replacement for *Carlina* Meek, 1914, apparently preoccupied by *Carlina* Gray, 1854.

***Carlana eigenmanni* (Meek, 1912)**

Cheirodon eigenmanni Meek, 1912: 70. Type locality: La Junta, Costa Rica. Holotype: FMNH 7683 [not 7583].

Maximum length: 5.39 cm SL

Distribution: Central America: Pacific and Atlantic drainages from Nicaragua to Panama.

Countries: Costa Rica, Nicaragua, Panama

Remarks and references: See Fink & Weitzman (1974: 28) for a detailed description.

PARASTREMMA

Parastremma Eigenmann, 1912: 20. Type species: *Parastremma sadina* Eigenmann, 1912. Type by monotypy. Gender: neuter.

***Parastremma album* Dahl, 1960**

Parastremma alba Dahl, 1960: 475, fig. on p. 476. Type locality: Río Sandó, Baudó [Colombia]. Holotype: ICNMHN 147.

Maximum length: 9.5 cm SL

Distribution: South America: Sandó River basin in Pacific versant of Colombia.

Countries: Colombia

Remarks and references: See Géry (1977: 538) for a comparison among species.

Common names: Blanca

***Parastremma pulchrum* Dahl, 1960**

Parastremma pulchra Dahl, 1960: 472, fig. on p. 473. Type locality: Becordó, Río San Juan [Colombia]. Holotype: ICNMHN 204.

Maximum length: 10 cm SL

Distribution: South America: Atrato River basin in Atlantic versant of Colombia.

Countries: Colombia

Remarks and references: See Géry (1977: 538) for a comparison among species. Type locality probably in error as species is only found in the Atrato River basin.

Common names: Sardina

***Parastremma sadina* Eigenmann, 1912**

Parastremma sadina Eigenmann, 1912: 20. Type locality: Istmina [Colombia]. Holotype: FMNH 56022 [ex CM 4812].

Maximum length: 18 cm SL

Distribution: South America: Pacific drainages of Colombia.

Countries: Colombia

Remarks and references: See Eigenmann (1912: 20) for a detailed description; Géry (1977: 538) for a comparison among species.

Common names: Sardina

RHOADSIA

Rhoadsia Fowler, 1911: 497. Type species: *Rhoadsia altipinna* Fowler, 1911. Type by original designation. Gender: feminine.

***Rhoadsia altipinna* Fowler, 1911**

Check List of the Freshwater Fishes of South and Central America

Rhoadsia altipinna Fowler, 1911: 498, fig. 2. Type locality: Affluent of the Chimbo River near Bucay, Province of Guayas, Ecuador. Holotype: ANSP 39106.

Maximum length: 17 cm SL

Distribution: South America: Pacific drainage basins in western Ecuador.

Countries: Ecuador

Remarks and references: See Géry (1977: 538) for a comparison among species.

Rhoadsia minor Eigenmann & Henn, 1914

Rhoadsia minor Eigenmann & Henn, 1914: 231. Type locality: Mindo, Province of Pichincha, Ecuador. Rio Blanco of Rio Esmeraldas system, elevation 4,000 feet. Holotype: CAS 62221 [ex IU 13419].

Maximum length: 10.4 cm TL

Distribution: South America: Pacific drainage basins in western Ecuador.

Countries: Ecuador

Remarks and references: See Géry (1977: 538) for a comparison among species.

Common names: Doradillo

Subfamily Cheirodontinae (Characins, tetras)

Luiz R. Malabarba

Members of the subfamily Cheirodontinae can be distinguished from all other Characiformes by the following characters: A characteristically structured pseudotympanum, represented by a gap or a reduction on the muscles covering the anterior portion of the swim bladder, anterolaterally on the body, between the first and second pleural ribs; lack of a humeral spot; jaw teeth with a basal peduncle or pedicle and a highly compressed and expanded distal tip, usually with several cusps; and a single tooth series on the premaxilla with teeth perfectly aligned and similar in shape and cusp number (Malabarba, 1998).

Cheirodontine species are found in most river drainages of Central and South America, occurring from Costa Rica to central Chile and Argentina, in both Atlantic and Pacific drainages of the Andes. They have not been found in Pacific drainages of Northern Chile, Peru, Ecuador and Colombia, or in the Argentine Patagonia, but one genus (*Cheirodon*) and four species are the only characiforms found in the waters of the western slope of the Andes in Chile.

The species of the Cheirodontinae are usually abundant in lentic and lowland waters. Most species are small, with adults reaching 30–40 mm maximum in standard length. Some are miniature fishes (e.g. *Spintherobolus broccae*, Weitzman & Vari, 1988) and the largest known species, *Spintherobolus papilliferus*, attains approximately 60 mm in standard length (Weitzman & Malabarba, 1999).

Species of the Cheirodontinae are arranged in two tribes and five Incertae Sedis genera. The fishes of the tribe Cheirodontini are characterized by an elevated number of ventral procurrent caudal-fin rays (11 to 30) and by remarkable secondary sexual specializations of the ventral procurrent caudal-fin rays and anal-fin rays of males (Malabarba, 1998). Fishes of the tribe Compsurini are inseminating characids, characterized by the transference of sperm from the testis of mature males to the ovaries of mature females. Such a specialization has been discovered mostly from the histological examination and observation of spermatozoa in females ovaries (Burns et al., 1997), instead of through the observation of courtship and active sperm transfer from males. They can also be recognized by the presence of specialized scales, fin-ray hooks and apparently glandular tissues in the caudal fins of males (Malabarba & Weitzman, 1999; 2000). The remaining cheirodontine genera *Prodontocharax*, *Pseudocheirodon*, *Cheirodontops*, *Aphyocheirodon*, and *Odontostilbe* have little secondary sexual dimorphism and are mostly characterized by specializations in mouth and tooth shape (Malabarba, 1998).

Some species, particularly of the genus *Serrapinnus* (e.g. *S. notomelas* and *S. kriegi*, formerly listed under the generic names *Cheirodon* or *Odontostilbe*) are known in the aquarium trade. Based on their gross tooth morphology these fishes have long been considered mostly herbivorous, but few data are available from field studies of dietary habits of wild populations. Reproductive aspects are unknown for most species. Studies on *Serrapinnus calliurus* (Gelain et al., 1999) show it is a parceled spawners, i.e., females lay eggs several times along the same reproductive period.

ACINOCHEIRODON

Acinocheirodon Malabarba & Weitzman, 1999: 413. Type species: *Acinocheirodon melanogramma* Malabarba & Weitzman, 1999. Type by original designation. Gender: masculine. Phylogenetic relationships in Malabarba (1998), as “new genus and species B”. Phylogenetic diagnosis in Malabarba & Weitzman (1999).

Acinocheirodon melanogramma Malabarba & Weitzman, 1999

Acinocheirodon melanogramma Malabarba & Weitzman, 1999: 413, fig. 1. Type locality: município de Bocaiúva, córrego Cachoeira, tributary to rio Jequitaiá, km 413 of highway BR 135, approximately 17°28'S, 44°02'W. Holotype: MNRJ 16455.

Maximum length: 3.77 cm SL

Distribution: South America: São Francisco and Jequitinhonha River basins.

Countries: Brazil

Remarks and references: Morphological differences between Jequitinhonha and São Francisco River populations described

and discussed in Malabarba & Weitzman (1999).
Common names: Lambari (Brazil), Piabinha (Brazil)

APHYOCHEIRODON

Aphyocheirodon Eigenmann, 1915: 58. Type species: *Aphyocheirodon hemigrammus* Eigenmann, 1915. Type by original designation. Gender: masculine. Phylogenetic relationships and diagnosis in Malabarba (1998).

Aphyocheirodon hemigrammus Eigenmann, 1915

Aphyocheirodon hemigrammus Eigenmann, 1915: 59, pl. 9 (fig. 2). Type locality: Jaquara [Jaguara, Minas Gerais, Brazil]. Holotype: FMNH 57819.

Maximum length: 4.8 cm TL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

Remarks and references: See Eigenmann (1915: 59) for detailed description.

Common names: Lambari (Brazil), Piabinha (Brazil)

CHEIRODON

Cheirodon Girard, 1855: 199. Type species: *Cheirodon pisciculus* Girard, 1855. Type by monotypy. Gender: masculine. Phylogenetic relationships and diagnosis in Malabarba (1998).
Pedalibrycon Fowler, 1943: 314. Type species: *Pedalibrycon felipponei* Fowler, 1943. Type by original designation. Gender: masculine.

Cheirodon australe Eigenmann, 1927

Cheirodon australe Eigenmann, 1927: 44, pl. 9 (fig. 3). Type locality: Puerto Varas, mostly from a creek flowing through the town into Lake Llanquihue, Chile. Holotype: CAS 59762.

Maximum length: 4 cm SL

Distribution: South America: Pacific versant basins in southern Chile.

Countries: Chile

Remarks and references: Redescribed in Campos (1982: 146).

Common names: Pocha (Chile)

Cheirodon galusdae Eigenmann, 1927

Cheirodon galusdae Eigenmann, 1927: 44, pl. 9 (fig. 2). Type locality: San Xavier [Chile]. Holotype: CAS 59760.

Maximum length: 5.94 cm SL

Distribution: South America: Pacific versant basins in middle Chile.

Countries: Chile

Remarks and references: Redescribed in Campos (1982: 141).

Common names: Pocha (Chile)

Cheirodon ibicuihensis Eigenmann, 1915

Cheirodon interruptus ibicuihensis Eigenmann, 1915: 74. Type locality: Cacequy [Cacequi], Rio Ibicuihy [Ibicuí River], into Rio Uruguay [Rio Grande do Sul, Brazil]. Lectotype: FMNH 57833.

Maximum length: 4.19 cm SL

Distribution: South America: Laguna dos Patos, Uruguay and Tramandaí River basins.

Countries: Argentina, Brazil, Uruguay

Common names: Lambari (Brazil), Mojarrita (Argentina, Uruguay)

Cheirodon interruptus (Jenyns, 1842)

Tetragonopterus interruptus Jenyns, 1842: 127, pl. 23 (fig. 4). Type locality: Maldonado, Uruguay. Syntypes: BMNH 1917.7.14.16-17.

Chirodon monodon Cope, 1894: 91, pl. 6 (fig. 9). Type locality: Rio Grande do Sul [Restricted in Malabarba (1989) to Laguna dos Patos system, Brazil]. Lectotype: ANSP 21561, designated by Fowler (1906: 332).

Cheirodon meinken Ahl, 1928: 320. Type locality: Ostküste Südamerikas zwischen Rio de Janeiro und Bahia [Brazil]. Lectotype: ZMB 20786, designated by Zarske & Géry (1995: 109).

Cheirodon leuciscus Ahl, 1936: 19. Type locality: Rosario de Sta. Fé, Argentinien. Lectotype: ZMB 20802, designated by Zarske & Géry (1995: 108).

Hypheosobrycon nigrifrons Ahl, 1936: 23. Type locality: Pará, Amazonas [Brazil]. Holotype: ZMB 20800.

Pedalibrycon felipponei Fowler, 1943: 314, fig. 6. Type locality: Río Gi, Departamento del Iluranto, Uruguay. Holotype: ANSP 70332.

Maximum length: 5.78 cm SL

Distribution: South America: Atlantic versant rivers from Colorado River (Argentina) to Tramandaí River drainage (Brazil), including lower Paraná and Uruguay River basin, and Laguna dos Patos drainage. Introduced in Pacific versant rivers of Chile, including Choapa, and Quilimari Rivers, Estero Quintero, Estero Catapilco, and Estero Casablanca, and Lake Peñuelas.

Countries: Argentina, Brazil, Chile (introduced), Uruguay

Remarks and references: See Eigenmann (1927: 44) for detailed description.

Common names: Lambari (Brazil), Mojarra lilácea (Uruguay), Mojarrita (Argentina, Uruguay)

Cheirodon kiliani Campos, 1982

Cheirodon kiliani Campos, 1982: 154, fig. 10. Type locality: Río Cau Cau [Chile]. Holotype: IZUA 2340.

Maximum length: 2.99 cm SL

Distribution: South America: Pacific versant rivers of Chile from Lake Lanalhue drainage (north) to Calle Calle River basin (South).

Countries: Chile

Common names: Pocha (Chile)

Cheirodon parahybae Eigenmann, 1915

Cheirodon parahybae Eigenmann, 1915: 70, pl. 11 (fig. 2). Type locality: Campos [Brazil]. Holotype: FMNH 57857.

Maximum length: 3.9 cm TL

Distribution: South America: Paraíba do Sul River basin.

Countries: Brazil

Common names: Lambari (Brazil)

Cheirodon pisciculus Girard, 1855

Cheirodon pisciculus Girard, 1855: 45, pl. 34 (fig. 4). Type locality: Inhabits the ponds in the vicinity of Santiago, Chili [Chile]. No types known. (Full description and illustration in Girard (1855: 45, pl. 34, fig. 4).

Cheirodon annae McAtee in Eigenmann & Kennedy, 1903: 515. Type locality: South America. Holotype: CAS 59758 (holotype and 9 paratypes mixed).

Maximum length: 5.45 cm SL

Distribution: South America: Pacific versant of the Maipo, Aconcagua, and Huasco River basins, and Estero Quintero.

Countries: Chile

Remarks and references: Redescribed in Campos (1982: 135).

Common names: Pocha (Chile)

CHEIRODONTOPS

Cheirodontops Schultz, 1944: 319. Type species: *Cheirodontops geayi* Schultz, 1944. Type by original designation. Gender: masculine. Phylogenetic relationships and diagnosis in Malabarba (1998).

Cheirodontops geayi Schultz, 1944

Cheirodontops geayi Schultz, 1944: 319, fig. 42. Type locality: Río Guárico and tributaries between San Sebastián and San Casimiro, Estado de Aragua, Venezuela. Holotype: USNM 121507.

Maximum length: 4 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: See Schultz (1944: 319) for detailed description.

COMPSURA

Compsura Eigenmann, 1915: 60. Type species: *Compsura heterura* Eigenmann, 1915. Type by original designation. Gender: feminine. Phylogenetic relationships and diagnosis in Malabarba (1998).

Compsura gorgonae (Evermann & Goldsborough, 1909)

Cheirodon gorgonae Evermann & Goldsborough, 1909: 99, fig. 1. Type locality: From a small seepage pool below the spillway of the reservoir dam at Gorgona, Canal Zone. Holotype: USNM 64094.

Maximum length: 2.94 cm SL

Distribution: Central America: Pacific and Atlantic versant rivers of Panama.

Countries: Panama

Remarks and references: Redescribed and diagnosed in key in Fink & Weitzman (1974).

Compsura heterura Eigenmann, 1915

Compsura heterura Eigenmann, 1915: 61, pl. 10 (fig. 1). Type locality: Queimadas, Rio Itapicuru [Brazil]. Holotype: FMNH 57825.

Maximum length: 3.7 cm TL

Distribution: South America: São Francisco and Paraíba River basins, and Atlantic versant rivers of Ceará, Rio Grande do Norte, Paraíba, and Pernambuco States.

Countries: Brazil

Common names: Piabinha (Brazil)

HETEROCHEIRODON

Heterocheirodon Malabarba, 1998: 213. Type species: *Odontostilbe yatai* Casciotta, Miquelarena & Protogino, 1992. Type by original designation. Gender: masculine. Phylogenetic relationships and diagnosis in Malabarba (1998). Species descriptions, geographical distribution and diagnosis in Malabarba & Bertaco (1999).

Heterocheirodon jacuiensis Malabarba & Bertaco, 1999

Heterocheirodon jacuiensis Malabarba & Bertaco, 1999: 95, fig. 3-5. Type locality: lagoon at left margin of rio Jacui, near bridge of road BR 290, Cachoeira do Sul [Rio Grande do Sul, Brazil]. Holotype: MCP 23670.

Maximum length: 3.98 cm SL

Distribution: South America: Laguna dos Patos drainage.

Countries: Brazil, Uruguay

Common names: Lambari (Brazil)

Heterocheirodon yatai (Casciotta, Miquelarena & Protogino, 1992)

Odontostilbe yatai Casciotta, Miquelarena & Protogino, 1992: 3, fig. 1. Type locality: Arroyo El Palmar, Paraje La Glorieta, Parque Nacional El Palmar, Entre Ríos, Argentina. Holotype: MLP 8726.

Maximum length: 4.18 cm SL

Distribution: South America: Uruguay River basin.

Countries: Argentina, Brazil, Uruguay

Remarks and references: Redescribed in Malabarba & Bertaco (1999).

Common names: Lambari (Brazil), Mojarrita (Argentina)

KOLPOTOCHEIRODON

Kolpotocheirodon Malabarba & Weitzman, 2000: 270. Type species: *Kolpotocheirodon theloura* Malabarba & Weitzman, 2000. Type by original designation. Gender: masculine. Phylogenetic diagnosis in Malabarba & Weitzman (2000).

Kolpotocheirodon theloura Malabarba & Weitzman, 2000

Kolpotocheirodon theloura Malabarba & Weitzman, 2000: 271, fig. 1. Type locality: small marsh at Curva da Morte, Goiás [Brazil]. Holotype: MZUSP 55194.

Maximum length: 2.99 cm SL

Distribution: South America: Uppermost tributaries of the São Francisco and Paraná Rivers near Brasília.

Countries: Brazil

Remarks and references: Relationships discussed in Malabarba & Weitzman (1999).

Common names: Lambari (Brazil), Piabinha (Brazil)

MACROPSOBRYCON

Macropsobrycon Eigenmann, 1915: 48. Type species: *Macropsobrycon uruguayanae* Eigenmann, 1915. Type by original designation. Gender: masculine. Phylogenetic relationships and diagnosis in Malabarba (1998).

brycon uruguayanae Eigenmann, 1915. Type by original designation. Gender: masculine. Phylogenetic relationships and diagnosis in Malabarba (1998).

Macropsobrycon uruguayanae Eigenmann, 1915

Macropsobrycon uruguayanae Eigenmann, 1915: 48, pl. 6 (fig. 2).

Type locality: not listed [FMNH catalog information: Cacequi [Cacequi], Rio Grande do Sul, Brazil]. Holotype: FMNH 57910.

Maximum length: 4.6 cm TL

Distribution: South America: Laguna dos Patos, Uruguay and Tramandaí River basins.

Countries: Argentina, Brazil, Uruguay

Remarks and references: Sexually dimorphic characters of the caudal fin of males described and compared to other Compsurini Cheirodontines in Malabarba & Weitzman (1999, 2000).

Common names: Lambari (Brazil), Mojarrita (Argentina, Uruguay)

NANOCHEIRODON

Nanocheirodon Malabarba, 1998: 210. Type species: *Cheirodon insignis* Steindachner, 1880. Type by original designation. Gender: masculine. Phylogenetic relationships and diagnosis in Malabarba (1998).

Nanocheirodon insignis (Steindachner, 1880)

Cheirodon insignis Steindachner, 1880: 74, pl. 6 (fig. 3). Type locality: Cauca und Flüsse bei Guayaquil [Colombia]. Syntypes: NMW 62544: 1-8, NMW 62543: 1-6.

Maximum length: 2.44 cm SL

Distribution: South America: Maracaibo Lake and Magdalena River basins.

Countries: Colombia

ODONTOSTILBE

Odontostilbe Cope, 1870: 566. Type species: *Odontostilbe fugitiva* Cope, 1870. Type by monotypy. Gender: feminine. Phylogenetic relationships discussed in Malabarba (1998). The genus needs a revision at species level, diversity and relationships.

Holoshesthes Eigenmann, 1903: 144. Type species: *Cheirodon pequirá* Steindachner, 1882. Type by original designation. Gender: feminine.

Holesthes Eigenmann, 1915: 83. Type species: *Cheirodon pequirá* Steindachner, 1882. Gender: feminine. Unjustified emendation of *Holoshesthes* Eigenmann, 1903.

Lobodeuterodon Fowler, 1945: 100. Type species: *Deuterodon euspilurus* Fowler, 1945. Gender: masculine. Described as a sub-genus of *Deuterodon*.

Odontostilbe dialeptura (Fink & Weitzman, 1974)

Cheirodon dialepturus Fink & Weitzman, 1974: 5, fig. 1. Type locality: Veraguas Province, Rio San Pedro basin, creek at bridge 12 mi w of Santiago on Road to Sona [Panama]. Holotype: USNM 208524.

Maximum length: 3.43 cm SL

Distribution: Central America: Pacific versant rivers from Coclé Province (Panama) to Puntarenas Province (Costa Rica).

Countries: Costa Rica, Panama

Remarks and references: Redescribed in Fink & Weitzman (1974: 5). Malabarba (1998) and Malabarba & Weitzman (1999) discuss phylogenetic relationships and considered this species more related to Compsurini Cheirodontines than to *Odontostilbe* species. A new generic assignment is necessary for this species.

Odontostilbe dierythrura Fowler, 1940

Odontostilbe dierythrura Fowler, 1940: 68, fig. 24. Type locality: Todos Santos, Rio Chapare, Bolivia. Holotype: ANSP 68915.

Odontostilbe hasemani Fowler, 1940: 89, fig. 50. Type locality: Boca Chapare, Río Chimore, Cochabamba, Bolivia. Holotype:

ANSP 69100.

Distribution: South America: Amazon River basin in Bolivia.

Countries: Bolivia

***Odontostilbe fugitiva* Cope, 1870**

Odontostilbe fugitiva Cope, 1870: 566, fig. Type locality: Pebas, Eastern Ecuador [Pebas, Peru]. Holotype: probably lost [ANSP 8059. Referred by Böhlke (1894: 46) as the holotype is a specimen of *Prionobrama filigera*].

Odontostilbe madeirae Fowler, 1913: 527, fig. 6. Type locality: Tributary of Rio Madeira near Porto Velho, Brazil. Holotype: ANSP 39193.

Odontostilbe drepanon Fowler, 1913: 529, fig. 7. Type locality: Tributary of the Madeira river, near Porto Velho, Brazil. Holotype: ANSP 39210.

Odontostilbe caquetae Fowler, 1943: 230, fig. 13. Type locality: Florencia, Río Ortegusa, Colombia. Holotype: ANSP 70495.

Deuterodon (Lobodeuterodon) euspilurus Fowler, 1945: 102, fig. 3. Type locality: Morelia, Rio Caquetá drainage, Colombia. Holotype: ANSP 71679.

Maximum length: 3.68 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Colombia, Peru

Remarks and references: Species diversity among the so-called *Odontostilbe fugitiva* populations needs revision.

Common names: Mojara (Peru)

***Odontostilbe gracilis* (Géry, 1960)**

Cheirodon gracilis Géry, 1960: 29, pl. 2 (fig. 4). Type locality: Crique Sable, Upper Mana, French Guiana. Holotype: SMF 4785.

Maximum length: 2.35 cm SL

Distribution: South America: Maroni and Mana River basins.

Countries: French Guiana

***Odontostilbe littoris* Géry, 1960**

Cheirodon gracilis littoris Géry, 1960: 31. Type locality: "Dégrad Cacao" Comté River [French Guiana]. Holotype: SMF 4783.

Maximum length: 1.8 cm SL

Distribution: South America: Comté River basin.

Countries: French Guiana

***Odontostilbe microcephala* Eigenmann, 1907**

Odontostilbe microcephalus Eigenmann, in Eigenmann & Ogle, 1907: 10. Type locality: Río Pilcomayo, Bolivia. Holotype: CAS 59790.

Maximum length: 4.6 cm SL

Distribution: South America: Pilcomayo River basin.

Countries: Bolivia

***Odontostilbe mitoptera* (Fink & Weitzman, 1974)**

Cheirodon mitopterus Fink & Weitzman, 1974: 12, fig. 6. Type locality: Cocle Province, Rio Cocle del Norte basin, Rio Tucue at junction of river and road between Tucue and Tambo [Panama]. Holotype: USNM 208539.

Maximum length: 3.68 cm SL

Distribution: Central America: Cocle del Norte River basin.

Countries: Panama

Remarks and references: Redescribed in Fink & Weitzman (1974: 12). Malabarba (1998) and Malabarba & Weitzman (2000) discuss phylogenetic relationships and considered this species more related to Compsurini Cheirodontines than to *Odontostilbe* species. A new generic assignment is necessary for this species.

***Odontostilbe paraguayensis* Eigenmann & Kennedy, 1903**

Odontostilbe paraguayensis Eigenmann & Kennedy, 1903: 512. Type locality: Asuncion, Paraguay. Holotype: CAS 59785.

Maximum length: 3.65 cm SL

Distribution: South America: Paraguay and lower Paraná River basins.

Countries: Argentina, Brazil, Paraguay

Remarks and references: See Eigenmann (1915: 96) for detailed description.

***Odontostilbe pequirá* (Steindachner, 1882)**

Chirodon pequirá Steindachner, 1882: 180. Type locality: Rio Guaporé [Brazil]. Syntypes: NMW 57160, 6 ex., NMW 62633, 4 ex.

Odontostilbe trementinae Eigenmann & Kennedy, 1903: 513. Type locality: Arroyo Trementina, Paraguay. Holotype: CAS 59787.

Maximum length: 4.5 cm SL

Distribution: South America: Paraguay and lower Paraná River basin.

Countries: Argentina, Brazil, Paraguay

Common names: Lambari (Brazil), Piabinha (Brazil)

***Odontostilbe roloffii* Géry, 1972**

Odontostilbe roloffii Géry, 1972: 69, pl. 5 (figs. 1-2). Type locality: Creek near Puerto Napo, upper Río Napo, Ecuador. Holotype: ZMH H1482.

Maximum length: 4.21 cm SL

Distribution: South America: Napo River basin.

Countries: Ecuador

PRODONTOCHARAX

Prodontocharax Eigenmann & Pearson, in Pearson, 1924: 35.

Type species: *Prodontocharax melanotus* Pearson, 1924. Type by monotypy. Gender: masculine. Phylogenetic relationships and diagnosis in Malabarba (1998).

Amblystilbe Fowler, 1940: 85. Type species: *Amblystilbe howesi* Fowler, 1940. Type by original designation. Gender: feminine.

***Prodontocharax alleni* Böhlke, 1953**

Prodontocharax alleni Böhlke, 1953: 661. Type locality: Cashiboya, Peru on the Río Ucayali. Holotype: SU 17472.

Maximum length: 4.44 cm SL

Distribution: South America: Amazon and Ucayali River basins.

Countries: Brazil, Peru

Common names: Mojarita (Peru)

***Prodontocharax howesi* (Fowler, 1940)**

Amblystilbe howesi Fowler, 1940: 85, fig. 47. Type locality: Boca Chapare, Río Chimore, Cochabamba, Amazon system, Bolivia. Holotype: ANSP 69070.

Maximum length: 4.17 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia

***Prodontocharax melanotus* Pearson, 1924**

Prodontocharax melanotus Pearson, 1924: 36, pl. 12 (fig. 1). Type locality: Tumupasa, rio Beni basin, Bolivia. Lectotype: CAS 59793.

Maximum length: 4.84 cm SL

Distribution: South America: Beni, Itenez, and upper Madre de Dios River basins.

Countries: Bolivia, Brazil, Peru

Common names: Mojarita (Peru)

PSEUDOCHEIRODON

Pseudocheirodon Meek & Hildebrand, 1916: 275. Type species:

Pseudocheirodon affinis Meek & Hildebrand, 1916. Type by original designation. Gender: masculine. Phylogenetic relationships and diagnosis in Malabarba (1998).

***Pseudocheirodon arnoldi* (Boulenger, 1909)**

Chirodon arnoldi Boulenger, 1909: 497. Type locality: imported

from Puerto Mexico, on the north coast of the Isthmus of Tehuantepec. Holotype: BMNH 1909.10.5.1. [probably collected in the Canal Zone (Fink & Miller, 1985: 1058)].

Pseudocheirodon affinis Meek & Hildebrand, 1916: 275, pl. 18. Type locality: Río Gatun, Monte Liria, Canal Zone [Panama]. Holotype: FMNH 8944.

Maximum length: 4.28 cm SL

Distribution: Central America: Atlantic and Pacific versant rivers of Panama.

Countries: Panama

Remarks and references: Redescribed (as *Cheirodon affinis*) in Fink & Weitzman (1974).

***Pseudocheirodon terrabae* Bussing, 1967**

Pseudocheirodon terrabae Bussing, 1967: 212, fig. 1. Type locality: Puntarenas (260 m) at IM, 6 km w of Buenos Aires turnoff, Costa Rica. Holotype: LACM 9238-1.

Maximum length: 5.05 cm SL

Distribution: Central America: Grande de Terraba, Jicote, and Pirris River basins.

Countries: Costa Rica

Remarks and references: Redescribed (as *Cheirodon terrabae*) in Fink & Weitzman (1974).

SACCODERMA

Saccoderma Schultz, 1944: 314. Type species: *Saccoderma melanostigma* Schultz, 1944. Type by original designation. Gender: neuter. Phylogenetic relationships and diagnosis in Malabarba (1998).

***Saccoderma hastatus* (Eigenmann, 1913)**

Odontostilbe hastatus Eigenmann, 1913: 27. Type locality: Sopla-viento, Colombia. Holotype: FMNH 56383.

Maximum length: 4 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

***Saccoderma melanostigma* Schultz, 1944**

Saccoderma melanostigma Schultz, 1944: 315, fig. 40. Type locality: Río San Juan near bridge, south of Mene Grande, Motatán system, Venezuela. Holotype: USNM 121519.

Distribution: South America: Maracaibo Lake basin.

Countries: Venezuela

***Saccoderma robusta* Dahl, 1955**

Saccoderma robusta Dahl, 1955: 18. Type locality: Nain, Colombia. Holotype: not researched.

Distribution: South America: Sinu River basin.

Countries: Colombia

SERRAPINNUS

Serrapinnus Malabarba, 1998: 214. Type species: *Cheirodon piaba* Lütken, 1874. Type by original designation. Gender: masculine. Phylogenetic relationships and diagnosis in Malabarba (1998).

***Serrapinnus calliurus* (Boulenger, 1900)**

Chirodon calliurus Boulenger, 1900: 3. Type locality: Corandasiño, Brazil; San Lorenzo, Jujuy Prov., Argentina. Syntypes: BMNH 1900.4.14.78-82 (5); MSNG 37719; MZUT 1368; NMW 60345, 77966

Maximum length: 3.24 cm SL

Distribution: South America: Laguna dos Patos, Paraná-Paraguay and Uruguay River basins.

Countries: Argentina, Brazil, Paraguay, Uruguay

Common names: Lambari (Brazil), Piabinha (Brazil)

***Serrapinnus heterodon* (Eigenmann, 1915)**

Holesthes heterodon Eigenmann, 1915: 87, fig. 32; pl. 15 (fig. 2).

Type locality: Jaguará, Rio Grande emptying into Rio Paraná, Brazil. Holotype: FMNH 57890.

Odontostilbe iheringi Fowler, 1941: 183, fig. 93. Type locality: Rio Jaguaribe, Russas, Ceará, Brazil. Holotype: ANSP 69539.

Maximum length: 4.1 cm SL

Distribution: South America: Upper Paraná and São Francisco River basins.

Countries: Brazil, Paraguay

Common names: Lambari (Brazil), Mojarita (Peru), Piabinha (Brazil)

***Serrapinnus kriegi* (Schindler, 1937)**

Cheirodon kriegi Schindler, 1937: 106. Type locality: Centurion, (Nordostparaguay). Syntypes: ZSM 5859; ZSM 5860; ZSM 5867-5892.

Maximum length: 2.36 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil, Paraguay

Common names: Lambari (Brazil), Piabinha (Brazil)

***Serrapinnus microdon* (Eigenmann, 1915)**

Cheirodon microdon Eigenmann, 1915: 80, fig. 29; pl. 14 (fig. 1). Type locality: Cáceres, Upper Paraguay [Brazil]. Holotype: FMNH 57867.

Maximum length: 3.29 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil, Paraguay

Common names: Lambari (Brazil), Piabinha (Brazil)

***Serrapinnus micropterus* (Eigenmann, 1907)**

Cheirodon micropterus Eigenmann, 1907: 9. Type locality: Santarém, Pará, Brazil. Holotype: CAS 59780.

Cheirodon madeirae Eigenmann, 1915: 76, pl. 13 (fig. 1). Type locality: San Joaquin, Bolivia. Holotype: FMNH 57864.

Maximum length: 2.63 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil

Common names: Lambari (Brazil), Piabinha (Brazil)

***Serrapinnus notomelas* (Eigenmann, 1915)**

Cheirodon notomelas Eigenmann, 1915: 74, pl. 12 (fig. 2). Type locality: collected in a lake, four miles from Miguel Calmone, Tieté basin [Brazil]. Holotype: FMNH 57829.

Maximum length: 3.56 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

Common names: Lambari (Brazil), Piabinha (Brazil)

***Serrapinnus piaba* (Lütken, 1875)**

Chirodon piaba Lütken, 1875a: 134. Type locality: In rivulu Flumini Rio das Velhas affluentu captum [Minas Gerais, Brazil].

Types: lost. Also described in Lütken (1875b: 219, and p. XIV of summary).

Maximum length: 3.5 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Common names: Lambari (Brazil), Piabinha (Brazil)

SPINTHEROBOLUS

Spintherobolus Eigenmann, 1911: 167. Type species: *Spintherobolus papilliferus* Eigenmann, 1911. Type by original designation. Gender: masculine. Phylogenetic relationships and diagnosis in Malabarba (1998), Weitzman & Malabarba (1999).

***Spintherobolus ankoseion* Weitzman & Malabarba, 1999**

Spintherobolus ankoseion Weitzman & Malabarba, 1999: 26, fig. 29. Type locality: creek in the forest, near Barra do Sai, between Barra do Sai and Itapema, northern Santa Catarina, Brazil. Holo-

type: MZUSP 35430.
 Maximum length: 2.79 cm SL
 Distribution: South America: Atlantic versant rivers from northern Santa Catarina southern Paraná States.
 Countries: Brazil
 Remarks and references: Relationships discussed in Weitzman & Malabarba (1999).
 Common names: Lambari (Brazil), Piabinha (Brazil)

***Spintherobolus broccae* Myers, 1925**

Spintherobolus broccae Myers, 1925: 143, pl. 10. Type locality: Hills behind Rio de Janeiro [Brazil]. Holotype: FMNH 58863.
 Maximum length: 2.56 cm SL
 Distribution: South America: Lowlands around and to the east and west of the Guanabara Bay, Rio de Janeiro and lowlands around Santos, São Paulo State.
 Countries: Brazil
 Remarks and references: Redescription and relationships in Weitzman & Malabarba (1999).
 Common names: Lambari (Brazil), Piabinha (Brazil)

***Spintherobolus leptoura* Weitzman & Malabarba, 1999**

Spintherobolus leptoura Weitzman & Malabarba, 1999: 35, fig. 36. Type locality: rio Quilombo, fazenda Dalila, Registro, São Paulo, Brazil. Holotype: MZUSP 41854.
 Maximum length: 2.72 cm SL
 Distribution: South America: Lowlands around the Ribeira de Iguape River.
 Countries: Brazil
 Remarks and references: Relationships discussed in Weitzman & Malabarba (1999).
 Common names: Lambari (Brazil), Piabinha (Brazil)

***Spintherobolus papilliferus* Eigenmann, 1911**

Spintherobolus papilliferus Eigenmann, 1911: 167, pl. 5 (fig. 1). Type locality: Alto da Serra, São Paulo [Brazil]. Holotype: FMNH 104802. Comments on the status of the holotype in Weitzman & Malabarba (1999).
 Maximum length: 6.08 cm SL
 Distribution: South America: Headwaters of Tietê River basin.
 Countries: Brazil
 Remarks and references: Redescription and relationships in Weitzman & Malabarba (1999).
 Common names: Lambari (Brazil), Piaba (Brazil)

SPECIES INQUIRENDA

Poecilurichthys pulcher Gill, 1858: 419. Type locality: Western Portion of the Island of Trinidad.

Subfamily Glandulocaudinae (Characins, tetras)

Stanley H. Weitzman

Fishes of the subfamily Glandulocaudinae have the following characteristics: In sexually mature males glandulocaudines bear a basal caudal-fin organ that is apparently pheromone-producing in nature. This organ may consist of modified caudal-fin rays, modified caudal-fin scales, a derived hypural fan, and/or modified caudal-fin musculature. In species of some tribes and genera two to all of these derived features may be present. In males almost always some kind of derived glandular cells are present in association with large derived caudal-fin scales and/or modified fin rays. In so far as known, all species are inseminating in that the female is inseminated by the male and retains live sperm cells in her ovary, sometimes at least for many months. No fertilization of the oocytes takes place in the ovaries and presumably fertilization takes place when the eggs and sperm cells are shed at the same time. Nearly all species have elongate sperm cell bodies (nuclei) and these, at least for the many species and genera for which current information is available, have sperm cells with an elongate cytoplasmic collar binding the flagellum to the elongate nucleus at least at some stage of spermiogenesis. There are other inseminating characids. For example, the tribe Compsurini of the subfamily Cheirodontinae has inseminating species and also often complex caudal organs in the male. These caudal organs are structured differently than those found in the Glandulocaudinae and the histology and fine structure of the sperm cells of the Compsurini are not structured the same way as in the glandulocaudines. Furthermore there is evidence that the Compsurini forms a derived clade within the Cheirodontinae. See Burns et al. (1995), Burns et al. (1997), Burns, et al. (1998), Burns et al. (2000), Malabarba (1998), Menezes & Weitzman (1990), Weitzman & Fink (1985), Weitzman et al. (1994), and Weitzman & Menezes (1998).

The Glandulocaudinae is a morphologically diverse characid group consisting of 19 genera divided among seven tribes, each derived in a different way. The number of valid species currently recognized is 50. Most glandulocaudine fishes are relatively small, between about 30 and 60 millimeters in standard length, but some are considerably smaller, between about 11 and 30 millimeters in standard length when mature. See Weitzman & Fink (1985), Weitzman et al. (1994), and Weitzman & Menezes (1998).

Glandulocaudine species are found almost throughout Central and South America, from Costa Rica in the north, southward to northern Argentina. They are found in every country, including the island of Trinidad, except Chile.

The ecology and life history of glandulocaudines is complex, but little studied so far. Many occur in small to modest sized streams tributary to larger rivers such as the Amazon, Orinoco and Paraguay Rivers. Nearly all glandulocaudines are tropical in distribution with a few being subtropical and are known from coastal streams of Central and South America tributary to the Atlantic and Pacific Oceans and the Caribbean Sea. A few species are known from elevations as high as about 500 to 600 meters, but most occur at elevations considerably below that, down to sea level. Some species are confined to acid black rainforest waters with an acidic pH, others are found in neutral to somewhat alkaline waters that are clear or seasonally turbid due to sediment load. A few species are adapted to both kinds of waters. No species are known from brackish waters of coastal lagoons or river mouths under the influence of tides. The courtship behaviors of those species and genera that have been studied in detail using scientific procedures have been described as having complicated courtship procedures preceding insemination. Aquarists have published many articles about the behavior of glandulocaudines maintained in aquaria during the last 90 years. These articles describe in varying detail and accuracy the complex courtship activities of several glandulocaudine species and genera. This literature was last evaluated by Nelson (1964a). Personal observations, Azevedo et al. (2000), Nelson (1964b, & c), Weitzman & Fink (1985), Weitzman (1987), and Weitzman et al. (1994) all confirm the brief evaluation of this literature given above. Additional behavioral observations similar to those of Nelson (1964a, b, & c) are needed for many genera and species in order to be able to use behavioral data as evidence for phylogeny.

Although 50 species are currently recognized, there are many undescribed species represented by population samples in museums that await descriptions. Each of the seven tribes appears monophyletic although additional studies are needed to confirm this for a few of these tribes. On the other hand the validity of the monophyly of the subfamily needs much further investigation. A few outgroup inseminating characids lack a caudal organ, but have some of the other glandulocaudine synapomorphies that were reported recently by Weitzman & Menezes (1998). It may well be that at least some of the glandulocaudine tribes are independently derived from plesiomorphic extinct relatives of these outgroup characids such as the species of *Brittanichthys*, some species of *Knodus* and *Attonitus*. See Burns et al. (2000).

Members of this subfamily form food for larger fishes that are important for both commercial and subsistence reasons in the rivers of Central and South America. Several species are moderately important for the aquarium trade and may be exported especially from Argentina, Brazil, Paraguay, Trinidad, and Venezuela.

ACROBRYCON

Acrobrycon Eigenmann & Pearson, in Pearson, 1924: 44. Type species: *Tetragonopterus ipanquianus* Cope, 1878. Type by original designation. Gender: masculine. See Weitzman and Menezes (1998) for relationships.

***Acrobrycon ipanquianus* (Cope, 1877)**

Tetragonopterus ipanquianus Cope, 1877: 44. Type locality:... the upper waters of the Urubamba, one of the sources of the Ucayale [Peru.] Syntypes: ANSP 21114 (1), 21115-16 (2).

Maximum length: 10 cm SL

Distribution: South America: Urubamba River basin in Ucayali River drainage.

Countries: Peru

Remarks and references: See Cope (1877, 1894), Weitzman & Fink (1985). Burns et al. (1995) record insemination in an unidentified species of *Acrobrycon*.

Common names: Mojara (Peru)

***Acrobrycon tarijae* Fowler, 1940**

Acrobrycon tarijae Fowler, 1940: 50, fig. 5. Type locality: Rio Lipeo, Bolivia. Holotype: ANSP 68775.

Maximum length: 6.4 cm SL

Distribution: South America: Southern Bolivia, Depto. Tarija, northern Argentina, Depto. Salta & Jujuy.

Countries: Argentina, Bolivia

Remarks and references: Ringuelet et al. (1967) records the species from Argentina. Géry (1977) doubts the distinctness of the two described species in this genus.

ARGOPLEURA

Argopleura Eigenmann, 1913: 10. Type species: *Bryconamericus magdalenensis* Eigenmann, 1913. Type by original designation. Gender: feminine. See Weitzman and Menezes (1998) for relationships.

Xenurocharax Regan, 1913: 463. Type species: *Xenurocharax spurrellii* Regan, 1913. Type by monotypy. Gender: masculine. Synonym of *Argopleura* Eigenmann (June) 1913; *Xenurocharax* published in Nov. (Eigenmann 1927: 395).

***Argopleura chocoensis* (Eigenmann, 1913)**

Bryconamericus chocoensis Eigenmann, 1913: 14. Type locality: Istmia [Colombia]. Holotype: FMNH 56235.

Xenurocharax spurrellii Regan, 1913: 463. Type locality: from the Candoto [a tributary of the San

Juan, a river of the Pacific slope in S. W. Colombia]. Holotype: BMNH 1913.10.1.33.

Maximum length: 5.28 cm SL

Distribution: South America: San Juan River basin.

Countries: Colombia

Remarks and references: See Burns et al. (1995) for information on insemination.

Common names: Galocha (Colombia), Sardinita (Colombia)

***Argopleura conventus* (Eigenmann, 1913)**

Bryconamericus conventus Eigenmann, 1913: 13. Type locality: Soplaviento [Colombia]. Holotype: FMNH 56261.

Maximum length: 3.6 cm SL

Distribution: South America: Colombia, Depto. Atlantico, Dique de Cartagena.

Countries: Colombia

Common names: Galocha (Colombia), Sardinita (Colombia)

***Argopleura diquensis* (Eigenmann, 1913)**

Bryconamericus diquensis Eigenmann, 1913: 14. Type locality: Soplaviento [Colombia]. Holotype: FMNH 56272.

Maximum length: 4.69 cm SL

Distribution: South America: Colombia, Depto. Atlantico, Dique de Cartagena.

Countries: Colombia

Remarks and references: See Weitzman & Fink (1985) for comments.

Common names: Galocha (Colombia), Sardinita (Colombia)

***Argopleura magdalenensis* (Eigenmann, 1913)**

Bryconamericus magdalenensis Eigenmann, 1913: 14. Type locality: Girardot [Colombia]. Holotype: FMNH 56263.

Maximum length: 4.85 cm

Distribution: South America: Magdalena River basin.

Countries: Colombia

Remarks and references: No recent description. See Burns et al. (1995) for information on insemination.

Common names: Sardina (Colombia)

CHRYSOBRYCON

Chrysobrycon Weitzman & Menezes, 1998: 187. Type species: *Hysteronotus hesperus* Böhlke, 1958b. Type by original designation. Gender: masculine.

***Chrysobrycon hesperus* (Böhlke, 1958)**

Hysteronotus hesperus Böhlke, 1958b: 35, pl. 3 (fig. 2). Type locality: Río Pucuno, Napo-Pastaza, tributary of upper Río Napo, Province of Napo-Pastaza, Ecuador, approx. 0°46'S, 77°12'W. Holotype: USNM 164056. See Weitzman and Menezes (1998) for relationships.

Maximum length: 8.18 cm SL

Distribution: South America: Napo River basin.

Countries: Peru

Remarks and references: See Weitzman & Fink (1985) and Weitzman & Menezes (1998) for comments on relationships. See Burns et al. (1995) for information on insemination.

Common names: Mojara (Peru)

***Chrysobrycon myersi* (Weitzman & Thomerson, 1970)**

Hysteronotus myersi Weitzman & Thomerson, 1970: 140, fig. 1. Type locality: Small stream directly tributary to Pachitea River (itself tributary to Ucayali River) at northeastern outskirts of Tournavista, Huanuco Province, Peru. Holotype: USNM 203697.

Maximum length: 4.9 cm SL

Distribution: South America: Pachitea River basin (known only from type locality).

Countries: Peru

Remarks and references: See Weitzman & Menezes (1998) for comments about relationships and Burns et al. (1995) for information on insemination.

Common names: Mojara (Peru)

CORYNOPOMA

Corynopoma Gill, 1858: 425. Type species: *Corynopoma riisei* Gill, 1858. Type by subsequent designation by Günther (1864). Gender: neuter. See Weitzman and Menezes (1998) for relationships and Weitzman and Fink (1985) for comments on name priority.

Nematopoma Gill, 1858: 428. Type species: *Nematopoma searlesii* Gill, 1858. Type by monotypy. Gender: neuter.

Stevardia Gill, 1858: 425. Type species: *Stevardia albiginnis* Gill, 1858. Type by monotypy. Gender: feminine.

***Corynopoma riisei* Gill, 1858**

Stevardia albipinnis Gill, 1858: 425. Type locality: Western portions of the Island of Trinidad, W.I.

Corynopoma riisei Gill, 1858: 426. Type locality: Western portions of the Island of Trinidad, W.I.

Nematopoma searlesii Gill, 1858: 429. Type locality: Western portion of the Island of Trinidad, W.I.

Corynopoma veedonii Gill, 1858: 427. Type locality: Western portions of the Island of Trinidad, W.I.

Stevardia aliata Eigenmann, 1914: 37. Type locality: Rio Negro at Villavicencio [Colombia]. Holotype: FMNH 56400.

Maximum length: 4.82 cm SL

Distribution: South America: Coastal rivers of Trinidad and northern Venezuela and Meta River basin.

Countries: Colombia, Trinidad and Tobago, Venezuela

Remarks and references: Type locality not given under Gill's species descriptions, but all species included in Gill's paper are designated in the title to have the locality as given above. No recent description. See Weitzman & Fink (1985) for localities, Weitzman & Menezes (1998) for comments about relationships, Burns et al. (1995) for information on insemination, and Nelson (1964 a) for discussions of courtship behavior.

Common names: Sardinita cachete de espada (Venezuela), Sword-tail characin (USA), Sword-tailed sardine (Trinidad and Tobago), Zwergdrachenflosser (Germany)

DIAPOMA

Diapoma Cope, 1894: 67. Type species: *Diapoma speculiferum* Cope, 1894. Type by monotypy. Gender: neuter. See Weitzman and Menezes (1998) for relationships.

***Diapoma speculiferum* Cope, 1894**

Diapoma speculiferum Cope, 1894: 67. Type locality: "... in the upper waters of the Jacuhy [Jacu] River in the Brazilian State of Rio Grande do Sul, Brazil." Holotype: ANSP 21580.

Maximum length: 4.55 cm SL

Distribution: South America: Lower elevation tributaries to Laguna dos Patos basin.

Countries: Brazil, Uruguay

Remarks and references: See Weitzman & Menezes (1998) for comments about relationships. See Azevedo et al. (2000) for information on reproductive biology and Burns et al. (1995) for information on insemination.

Common names: Lambari (Brazil)

***Diapoma terofali* (Géry, 1964)**

Glandulocauda terofali Géry, 1964: 2, fig. 1. Type locality: Canal "El Cazador", Rio Lujan (affluent du Rio de la Plata), Province de Buenos-Ayres, République Argentine. Holotype: ZSM 22503a.

Maximum length: 4.83 cm SL

Distribution: South America: Lower Paraná and Uruguay River basins.

Countries: Argentina, Brazil, Uruguay

Remarks and references: See Weitzman & Fink (1985) regarding generic allocation and Weitzman & Menezes (1998) for comments about relationships. See Burns et al. (1995) for information on insemination.

Common names: Lambari (Brazil)

GEPHYROCHARAX

Gephyrocharax Eigenmann, 1912: 23. Type species: *Gephyrocharax chocoensis* Eigenmann, 1912. Type by original designation. Gender: masculine. See Weitzman & Menezes (1998) for relationships.

Corynopomops Fowler, 1943: 6. Type species: *Corynopomops opisthopterus* Fowler, 1943. Type by original designation. Gender: masculine.

***Gephyrocharax atracaudata* (Meek & Hildebrand, 1912)**

Deuterodon atracaudata Meek & Hildebrand, 1912: 68. Type locality: Rio Frijoles, C. Z., Panama. Holotype: FMNH 7573.

Maximum length: 4.74 cm SL

Distribution: Central America: Panama, Prov. Cerro-Azul and former Canal Zone, Frijoles River basin.

Countries: Panama

Remarks and references: See Weitzman & Fink (1985), for clarification of type locality and Burns et al. (1995) for information on insemination.

Common names: Sardinita (Panama)

***Gephyrocharax caucanus* Eigenmann, 1912**

Gephyrocharax caucanus Eigenmann, 1912: 24. Type locality: Cartago [Colombia]. Holotype: FMNH 56012 [ex CM 4802].

Maximum length: 5.01 cm SL

Distribution: South America: Upper Cauca River basin.

Countries: Colombia

Common names: Sardina (Colombia)

***Gephyrocharax chaparae* Fowler, 1940**

Gephyrocharax chaparae Fowler, 1940: 70, 91, fig. 26. Type locality: Todos Santos, Rio Chapare, Bolivia. Holotype: ANSP 68967.

Corynopomops opisthopterus Fowler, 1943: 6, fig. 4. Type locality: Todos Santos, Bolivia. Holotype: ANSP 69195.

Maximum length: 4.75 cm SL

Distribution: South America: Chapare River basin.

Countries: Bolivia

Remarks and references: See Loubens et al. (1992) for ecology of area surrounding Chapare River.

Common names: Chapare-Drüsensalmmler (Germany)

***Gephyrocharax chocoensis* Eigenmann, 1912**

Gephyrocharax chocoensis Eigenmann, 1912: 23. Type locality: Istmina [Colombia]. Holotype: FMNH 56016.

Maximum length: 5.16 cm SL

Distribution: South America: Upper San Juan River basin.

Countries: Colombia

Remarks and references: See Burns et al. (1995) for information on insemination.

Common names: Sardina (Colombia)

***Gephyrocharax intermedius* Meek & Hildebrand, 1916**

Gephyrocharax intermedius Meek & Hildebrand, 1916: 278. Type locality: Rio Chame, Panama [08°34'N, 79°53'W for type locality]. Holotype: FMNH 8945.

Maximum length: 4.42 cm SL

Distribution: Central America: Chamae River basin.

Countries: Panama

Remarks and references: See Weitzman & Fink (1985), for clarification of type locality and Burns et al. (1995) for information on insemination.

Common names: Sardinita (Panama)

***Gephyrocharax major* Myers, 1929**

Gephyrocharax major Myers in Eigenmann & Myers, 1929: 479. Type locality: Popoi R., Upper Beni [Bolivia]. Syntypes: CAS 44286 [ex IU 17291] (9).

Maximum length: 5.41 cm SL

Distribution: South America: Beni River basin.

Countries: Bolivia

***Gephyrocharax martae* Dahl, 1943**

Gephyrocharax martae Dahl, 1943: 218, fig. Type locality: Rio Batatal, tributary to Rio San Jorge, Magdalena system, Municipio of Ayapel, departement Bolivar, Republic of Colombia. Altitude

approx. 800 m. Holotype: Location unknown.
 Maximum length: 3.66 cm SL
 Distribution: South America: Upper Magdalena River basin.
 Countries: Colombia
 Common names: Brinconcita (Colombia)

***Gephyrocharax melanocheir* Eigenmann, 1912**

Gephyrocharax melanocheir Eigenmann, 1912: 24. Type locality: Bernal Creek [Colombia]. Holotype: FMNH 56049.
 Maximum length: 3.98 cm SL
 Distribution: South America: Tributary to Magdalena River near Honda; Cauca and San Jorge River basins.
 Countries: Venezuela
 Remarks and references: See Dahl (1971) & Weitzman & Fink (1985) for up-dated locality information.
 Common names: Brinconcita (Colombia), Tota (Colombia)

***Gephyrocharax sinuensis* Dahl, 1964**

Gephyrocharax sinuensis Dahl in Dahl & Medem, 1964: 64, fig. Type locality:... de Esmeraldas, Alto Sinú... [Colombia]. Holotype: ICNMHN (apparently destroyed).
 Maximum length: 4.5 cm SL
 Distribution: South America: Upper Sinú River basin.
 Countries: Colombia
 Remarks and references: No recent description. See Dahl (1971) for updated locality information.
 Common names: Brinconita (Colombia)

***Gephyrocharax valencia* Eigenmann, 1920**

Gephyrocharax valencia Eigenmann, 1920: 11. Type locality: Maracay, Lake Valencia, off dock of Paper Mill [Venezuela]. Holotype: CAS 44297.
 Maximum length: 4.1 cm SL
 Distribution: South America: Valencia Lake tributaries and Guari-co River basin.
 Countries: Venezuela
 Remarks and references: See Burns et al. (1995) for information on insemination.
 Common names: Brückensalmler (Germany), Sardina (Venezuela)

***Gephyrocharax venezuelae* Schultz, 1944**

Gephyrocharax venezuelae Schultz, 1944: 324, fig. 44. Type locality: Río San Juan at the bridge south of Mene Grande, Motatán system [Venezuela]. Holotype: USNM 121369.
 Maximum length: 4.14 cm SL
 Distribution: South America: Tributaries of Maracaibo Lake basin.
 Countries: Venezuela
 Remarks and references: See and Burns et al. (1995) for information on insemination.
 Common names: Venezuela-Drüsensalmler (Germany)

***Gephyrocharax whaleri* Hildebrand, 1938**

Gephyrocharax whaleri Hildebrand, 1938: 254, fig. 2. Type locality: Río Chame or a nearby stream, Pacific slope, Panama. Holotype: USNM 106513.
 Maximum length: 4.85 cm SL
 Distribution: Central America: Chame River basin.
 Countries: Panama

GLANDULOCAUDA

Glandulocauda Eigenmann, 1911: 168. Type species: *Glandulocauda melanogenys* Eigenmann, 1911. Type by original designation. Gender: feminine. See Weitzman and Menezes (1998) for relationships.

***Glandulocauda melanogenys* Eigenmann, 1911**

Glandulocauda melanogenys Eigenmann, 1911: 168, pl. 5 (fig. 6). Type locality: Alto da Serra, São Paulo [Brazil]. Holotype: FMNH 54891.

Maximum length: 4.26 cm SL
 Distribution: South America: Upper Tietê River basin.
 Countries: Brazil
 Remarks and references: See Weitzman et al. (1988) & Menezes & Weitzman (1990) for discussions of phylogeny and biogeography. See Burns et al. (1995) for information on insemination.

***Glandulocauda melanopleura* Eigenmann, 1911**

Glandulocauda melanopleura Eigenmann, 1911: 170, pl. 5 (fig. 7). Type locality: Serinha Paraná, Rio Iguassú [Brazil]. Holotype: FMNH 54895.
 Maximum length: 4.28 cm SL
 Distribution: South America: Iguaçú River basin.
 Countries: Brazil
 Remarks and references: According to Godoy (1987) this species occurs in the upper Paraná River.

HYSTERONOTUS

Hysteronotus Eigenmann, 1911: 171. Type species: *Hysteronotus megalostomus* Eigenmann, 1911. Type by original designation. Gender: masculine. See Weitzman and Menezes (1998) for relationships.

***Hysteronotus megalostomus* Eigenmann, 1922**

Hysteronotus megalostomus Eigenmann, 1911: 171, pl. 6 (fig. 1). Type locality: Rio das Velhas [Brazil]. Holotype: FMNH 54889.
 Maximum length: 4.15 cm SL
 Distribution: South America: Upper São Francisco River basin.
 Countries: Brazil

IOTABRYCON

Iotabrycon Roberts, 1973: 491. Type species: *Iotabrycon praecox* Roberts, 1973. Type by original designation. Gender: masculine. See Weitzman and Menezes (1998) for relationships.

***Iotabrycon praecox* Roberts, 1973**

Iotabrycon praecox Roberts, 1973: 492, fig. 1. Type locality:... an isolated dry season pool in Río Nuevo where it flows into left side of Río Vices, one kilometer upstream from town of Vices... [Ecuador]. Holotype: MCZ 48658.
 Maximum length: 2.18 cm SL
 Distribution: South America: Vices River basin.
 Countries: Ecuador
 Remarks and references: See Weitzman & Fink (1985) and Weitzman & Menezes (1998) for relationships. See Burns et al. (1995) for data about insemination.

LANDONIA

Landonia Eigenmann & Henn, in Eigenmann, Henn & Wilson, 1914: 1. Type species: *Landonia latidens* Eigenmann & Henn, 1914. Type by monotypy. Gender: feminine. See Weitzman and Menezes (1998) for relationships.

***Landonia latidens* Eigenmann & Henn, 1914**

Landonia latidens Eigenmann & Henn, in Eigenmann, Henn & Wilson, 1914: 2. Type locality: Vices, Ecuador. Holotype: CAS 55297.
 Maximum length: 4.21 cm SL
 Distribution: South America: Vices River basin.
 Countries: Ecuador
 Remarks and references: Osteology, Roberts (1973), relationships Weitzman & Fink (1985) & Weitzman & Menezes (1998).

MIMAGONIATES

Mimagoniates Regan, 1907: 402. Type species: *Mimagoniates barberi* Regan, 1907. Type by monotypy. Gender: masculine. See Weitzman and Menezes (1998) for relationships.

Check List of the Freshwater Fishes of South and Central America

Coelurichthys Miranda Ribeiro, 1908: unnumbered page. Type species: *Coelurichthys iporangae* Miranda Ribeiro, 1908. Type by monotypy. Gender: masculine. Note: *Coelurichthys* has line precedence over *Coalurichthys*.

***Mimagoniates barberi* Regan, 1907**

Mimagoniates barberi Regan, 1907: 402. Type locality: Arroyo Yacá, Estación Caballero, Paraguay. Syntypes: "Several specimens."

Maximum length: 3.45 cm SL

Distribution: South America: Paraguay, Estado Paraguay and San Pedro, usually in blackwater streams.

Countries: Paraguay

Remarks and references: See Weitzman et al. (1988) & Menezes & Weitzman (1990) for identification and relationships. See Burns et al. (1995) for evidence of insemination.

***Mimagoniates inequalis* (Eigenmann, 1911)**

Glandulocauda inequalis Eigenmann, 1911: 169, pl. 5 (fig. 5).

Type locality: Porto Alegre [Brazil]. Holotype: FMNH 54893.

Maximum length: 3.26 cm SL

Distribution: South America: Blackwater tributaries of lower Jacuí River and blackwater coastal streams and swamps, Rio Grande do Sul State.

Countries: Brazil

Remarks and references: See Weitzman et al. (1988) and Menezes & Weitzman (1990) for identification and relationships. See Burns et al. (1995) for evidence of insemination. See Nelson (1964 a, b, & c) for extensive description and discussion of courtship behavior.

Common names: Breitschwanzsalmler (Germany), Croaking tetra (USA), Lumbari (Brazil)

***Mimagoniates lateralis* (Nichols, 1913)**

Coelurichthys lateralis Nichols, 1913: 151. Type locality:... probably South American. Holotype: AMNH 4072.

Coelurichthys tenuis Nichols, 1913: 152. Type locality:... probably South American. Holotype: AMNH 4087.

Maximum length: 3.3 cm SL

Distribution: South America: Coastal blackwater streams, Paraná and São Paulo States.

Countries: Brazil

Remarks and references: See Weitzman et al. (1988) & Menezes & Weitzman (1990) for identification and relationships. See Burns et al. (1995) for evidence of insemination.

Common names: Blauersalmler (Germany), Croaking tetra (USA)

***Mimagoniates microlepis* (Steindachner, 1876)**

Paragoniates microlepis Steindachner, 1876: 591. Type locality: Bäche in der Nähe von Rio de Janeiro, Rio dos Macacos [Brazil]. Syntypes: (several) NMW 56534 (2).

Coelurichthys iporangae Miranda Ribeiro, 1908: [4], fig. 6. Type locality: Ribeirão das Pedras, Iporanga [São Paulo State, Brazil]. Holotype: USNM 92995.

Maximum length: 6.11 cm SL

Distribution: South America: Southern Bahia to northern Rio Grande do Sul States, usually in clearwater coastal streams.

Countries: Brazil

Remarks and references: See Weitzman et al. (1988) & Menezes & Weitzman (1990) for identification and relationships. See Burns et al. (1995) for evidence of insemination. See Nelson (1964a) for discussion of courtship behavior.

Common names: Blue tetra (USA), Kleinschuppiger Barberos-Tetra (Germany)

***Mimagoniates rheocharis* Menezes & Weitzman, 1990**

Mimagoniates rheocharis Menezes & Weitzman, 1990: 399, fig. 20. Type locality: Brazil, Santa Catarina, Município de Praia

Grande, rio Faxinalzinho at Mãe dos Homens, near Praia Grande, approximately, 29°20'S, 14°40'W. Holotype: MZUSO 40278.

Maximum length: 4.78 cm SL

Distribution: South America: Coastal streams in southeastern Santa Catarina to northeastern Rio Grande do Sul States.

Countries: Brazil

Remarks and references: See Burns et al. (1995) for evidence of insemination.

Common names: Lambari-azul (Brazil)

***Mimagoniates sylvicola* Menezes & Weitzman, 1990**

Mimagoniates sylvicola Menezes & Weitzman, 1990: 387, fig. 7.

Type locality: Brazil, Bahia, Município de Prado, forest stream tributary to Atlantic Ocean, near Fazenda Embaçuaba, approximately 8-9 km NW of Cumuruxatiba, 17°05'S, 39°13'W. Holotype: MZUSP 36612.

Maximum length: 3.02 cm SL

Distribution: South America: Coastal blackwater streams in southeastern Bahia State.

Countries: Brazil

Remarks and references: See Burns et al. (1995) for evidence of insemination.

PHENACOBRYCON

Phenacobrycon Eigenmann, 1922: 147. Type species: *Bryconamericus henni* Eigenmann, 1914. Type by original designation.

Gender: masculine. See Weitzman and Menezes (1998) for relationships.

***Phenacobrycon henni* (Eigenmann, 1914)**

Bryconamericus henni Eigenmann, in Eigenmann, Henn & Wilson, 1914: 6. Type locality: Vinces, Ecuador. Holotype: FMNH 56594.

Maximum length: 3.02 cm SL

Distribution: South America: Vinces River basin.

Countries: Ecuador

Remarks and references: Osteology, Roberts (1973); relationships Weitzman & Fink (1985) & Weitzman & Menezes (1998). See Burns et al. (1995) for evidence of possible insemination.

PLANALTINA

Planaltina Böhlke, 1954: 265. Type species: *Planaltina myersi* Böhlke, 1954. Type by original designation. Gender: feminine. See Weitzman and Menezes (1998) for relationships.

***Planaltina myersi* Böhlke, 1954**

Planaltina myersi Böhlke, 1954: 267, fig. 3. Type locality: Sarandi brook, Planaltina, Goyaz, Brazil. Holotype: SU 18636.

Maximum length: 4.6 cm SL

Distribution: South America: São Bartolomeu River in upper Paraguay River basin.

Countries: Brazil

Remarks and references: Relationships, see Weitzman & Fink (1985) & Weitzman & Menezes (1998). See Burns et al. (1995) for evidence of possible insemination.

PSEUDOCORYNOPOMA

Bergia Steindachner, 1891a: 173. Type species: *Bergia altipinnis* Steindachner, 1891. Type by monotypy. Gender: feminine. Preoccupied by *Bergia* Duchassaing & Michelotti, 1861, in Coleoptera and by *Bergia* Scott, 1881, in Hemiptera; apparently not replaced.

Pseudocorynopoma Perugia, 1891: 646. Type species: *Pseudocorynopoma doriae* Perugia, 1891. Type by monotypy. Gender: neuter. See Weitzman and Menezes (1998) for relationships.

Chalcinopeleucus Holmberg, 1891: 190. Type species: *Chalcinopeleucus argentinus* Holmberg, 1891. Type by monotypy. Gender: masculine.

***Pseudocorynopoma doriae* Perugia, 1891**

Pseudocorynopoma doriae Perugia, 1891: 646, fig. Type locality: Dintorni di la Plata [Argentina]. Holotype: MSNG 9224.

Bergia altipinnis Steindachner, 1891: 173. Type locality: Montevideo [Uruguay]. Syntypes: (12) NMW 62745 (4), 62748 (2), 67746 (4).

Chalcinopelecus argentinus Holmberg, 1891: 190. Type locality: Republica Argentina: Rio de la Plata (con su afluente el Rio Paraguay), desde Latitud 26° hasta 34 ½.

Maximum length: 6.22 cm SL

Distribution: South America: Southern Brazil to La Plata region, usually clear water streams.

Countries: Argentina, Brazil, Uruguay

Remarks and references: Steindachner (1891b) published a more complete description of *Bergia altipinnis* and of the genus *Bergia*. See Weitzman et al. (1988) for biogeography and distribution. For relationships, see Weitzman & Fink (1985) & Weitzman & Menezes (1998). See Burns et al. (1995) for evidence of insemination. See Nelson (1964a) for comments on courtship behavior.

Common names: Drachenflossersalmmler (Germany), Dragonfin tetra (USA), Lambari-bandeira (Brazil), Mojarra aletuda (Uruguay)

***Pseudocorynopoma heterandria* Eigenmann, 1914**

Pseudocorynopoma heterandria Eigenmann, 1914: 39. Type locality: Xiririca [Ribeira River, São Paulo, Brazil]. Holotype: FMNH 56407.

Maximum length: 5.62 cm SL

Distribution: South America: Coastal clearwater rivers in São Paulo and Paraná States.

Countries: Brazil

Remarks and references: See Weitzman et al. (1988) for biogeography and distribution. For relationships, see Weitzman & Fink (1985) & Weitzman & Menezes (1998). See Burns et al. (1995) for evidence of possible insemination.

PTEROBRYCON

Pterobrycon Eigenmann, 1913: 472. Type species: *Pterobrycon landoni* Eigenmann, 1913. Type by monotypy. Gender: masculine. See Weitzman and Menezes (1998) for relationships.

Microbrycon Eigenmann & Wilson, in Eigenmann, Henn & Wilson, 1914: 3. Type species: *Microbrycon minutus* Eigenmann & Wilson, 1914. Type by monotypy. Gender: masculine.

***Pterobrycon landoni* Eigenmann, 1913**

Pterobrycon landoni Eigenmann, 1913: 3. Type locality: Boca de Raspadura [Colombia]. Holotype: FMNH 56250.

Microbrycon minutus Eigenmann & Wilson, in Eigenmann, Henn & Wilson, 1914: 3. Type locality: Truando [Colombia]. Holotype: FMNH 56606 [ex CM 5422].

Maximum length: 2.51 cm SL

Distribution: South America: Middle and upper Atrato River basin.

Countries: Colombia

Remarks and references: Presence in the Atrato River confirmed recently by Bork (2000a), imported alive into Germany as bycatch with *Nematobrycon palmeri*. See Bork (2000b) for a brief account of breeding this fish. See Weitzman & Menezes (1998) for relationships.

Common names: Fadenschuppensalmmler (Germany)

***Pterobrycon myrnae* Bussing, 1974**

Pterobrycon myrnae Bussing, 1974: 138, fig. 1. Type locality: Costa Rica, Puntarenas Province, Osa Peninsula, in Quebrada Aguabeuna (elevation 30 m) Rio Rincón drainage, 2 km W. of Rincón. Holotype: LACM 33857-1.

Maximum length: 3.9 cm SL

Distribution: Central America: Pacific drainages of southern Costa

Rica, Jicote and Rincon Rivers and Esquinas River of Osa Peninsula.

Countries: Costa Rica

Remarks and references: See Bussing (1998) for distribution, ecology and other comments on this species. For illustrations of courtship behavior see Weitzman (1975). See Weitzman & Menezes (1998) for relationships. See Burns et al. (1995) for evidence of insemination.

Common names: Flügelschuppensalmmler (Germany), Sardinita (Costa Rica), Semaphore tetra (USA)

PTYCHOCHARAX

Ptychocharax Weitzman, Fink, Machado-Allison & Royero L., 1994: 49. Type species: *Ptychocharax rhyacophila* Weitzman, Fink, Machado-Allison & Royero L., 1994. Type by original designation. Gender: masculine. See Weitzman and Menezes (1998) for relationships.

***Ptychocharax rhyacophila* Weitzman, Fink, Machado-Allison & Royero L., 1994**

Ptychocharax rhyacophila Weitzman, Fink, Machado-Allison & Royero L., 1994: 55, fig. 2. Type locality: Venezuela, State of Amazonas, alto Río Siapa, tributary of the Río Casiquiare, approximately between 01°40' to 01°41'N, and 64°22' to 64°28'W, altitude 560 m. Holotype: MBUCV-V-20400.

Maximum length: 6.24 cm SL

Distribution: South America: Upper Siapa River in Casiquiare River drainage.

Countries: Venezuela

Remarks and references: Weitzman et al. (1994). See Weitzman & Menezes (1998) for relationships. See Burns et al. (1995) for evidence of insemination.

SCOPEOCHARAX

Scopeocharax Weitzman & Fink, 1985: 56. Type species: *Tytocharax rhinodus* Böhlke, 1958. Type by original designation. Gender: masculine. See Weitzman and Menezes (1998) for relationships.

***Scopeocharax atopodus* (Böhlke, 1958)**

Tytocharax atopodus Böhlke, 1958a: 323, fig. 1 (bottom). Type locality:... vicinity of Tingo Maria; Río Rondos (tributary of Río Monzón), just above new bridge site [Peru]. Holotype: ANSP 78714.

Maximum length: 2.2 cm SL

Distribution: South America: Middle and upper Huallaga River basin.

Countries: Peru

Remarks and references: See Weitzman & Fink (1985) and Weitzman & Menezes (1998) for relationships. See Burns et al. (1995) for insemination in *Scopeocharax*.

Common names: Mojarita (Peru)

***Scopeocharax rhinodus* (Böhlke, 1958)**

Tytocharax rhinodus Böhlke, 1958a: 320, fig. 1 (top & center). Type locality: Prov. Huanuco: vicinity of Tingo Maria; Cava de Pavos, Quebrada de Puente Perez, ca 1/4 mi. above Río Huallaga. Holotype: ANSP 78707.

Maximum length: 2.43 cm SL

Distribution: South America: Upper and middle Huallaga River basin.

Countries: Peru

Remarks and references: See Weitzman & Fink (1985) and Weitzman & Menezes (1998) for relationships.

Common names: Mojarita (Peru)

TYTTOCHARAX

Tytocharax Fowler, 1913: 563. Type species: *Tytocharax madeirae* Fowler, 1913. Type by original designation. Gender: masculine. See Weitzman and Menezes (1998) for relationships.

Microcaelurus Miranda Ribeiro, 1939: 362. Type species: *Microcaelurus odontocheilus* Miranda Ribeiro, 1939. Type by monotypy. Gender: masculine.

***Tytocharax cochui* (Ladiges, 1950)**

Microbrycon cochui Ladiges, 1950: 306, fig. 1. Type locality: Oberlauf des Amazonas mitgebracht worden. [Brazil or Peru]. Syntypes: (2) ZSM (1), MHNG 2187.75 (1).

Tytocharax boehlkei Géry, 1965: 195, pl. 18 (fig. 20). Type locality: Igarapé Prêto, collateral de l'Amazone supérieure près de Belém, à environ 60 km en aval de Leticia [Peru]. Holotype: SMF 7208.

Maximum length: 2.14 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Remarks and references: See Weitzman & Fink (1985) and Weitzman & Menezes (1998) for relationships. See Burns et al. (1995) for insemination in *Tytocharax*.

Common names: Mojarita (Peru)

***Tytocharax madeirae* Fowler, 1913**

Tytocharax madeirae Fowler, 1913: 564, fig. 20. Type locality: Tributary of the Rio Madeira, near Porto Velho, Brazil. Holotype: ANSP 39305.

Microcaelurus odontocheilus Miranda Ribeiro, 1939: 362. Type locality: Amazonas. Holotype: MNRJ 3752. Myers & Böhlke (1956: 7-8) presented evidence that the type locality is near Parintins, Amazonas State, Brazil; Miranda Ribeiro (1953) says Pará, Brazil.

Maximum length: 1.7 cm SL

Distribution: South America: Tributaries of lower and middle Amazon River basin.

Countries: Brazil

Remarks and references: See Weitzman & Fink (1985) and Weitzman & Menezes (1998) for relationships.

***Tytocharax tambopatensis* Weitzman & Ortega, 1995**

Tytocharax tambopatensis Weitzman & Ortega, 1995: 134, fig. 1. Type locality: Peru, Departamento de Madre de Dios, Provincia de Manu, Parque Nacional Manu, Pakitza Tachigalli trail 2, Quebrada Trompetero, approx. 11°55'48"S, 71°15'18"W. Holotype: MUSM 5083.

Maximum length: 1.55 cm SL

Distribution: South America: Manu and Tambopata River basins.

Countries: Peru

Remarks and references: See Weitzman & Menezes (1998) for relationships.

XENUROBRYCON

Xenurobrycon Myers & Miranda Ribeiro, 1945: 2. Type species: *Xenurobrycon macropus* Myers & Miranda Ribeiro, 1945. Type by original designation. Gender: masculine. See Weitzman and Menezes (1998) for relationships.

***Xenurobrycon heterodon* Weitzman & Fink, 1985**

Xenurobrycon heterodon Weitzman & Fink, 1985: 88, fig. 5. Type locality: Pastaza: Río Bobonaza at Sarayacu [Ecuador]. Holotype: KU 17925.

Maximum length: 1.72 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Ecuador, Peru

Remarks and references: See Weitzman & Fink (1985) and Weitzman & Menezes (1998) for relationships.

Common names: Mojarita (Peru)

***Xenurobrycon macropus* Myers & Miranda Ribeiro, 1945**

Xenurobrycon macropus Myers & Miranda Ribeiro, 1945: 5, fig. 1. Type locality: Rio Bodoquena, Matto Grosso [Brazil]. Holotype: MNRJ 4124.

Maximum length: 1.79 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil, Paraguay

Remarks and references: See Weitzman & Fink (1985) and Weitzman & Menezes (1998) for relationships.

***Xenurobrycon polyancistrus* Weitzman, 1987**

Xenurobrycon polyancistrus Weitzman, 1987: 113, fig. 1. Type locality: Bolivia, Estado Beni, Laguna Motacusal, Río Isiboro, about 15°40'S, 65°00'W. Holotype: MNHN 1986-452.

Maximum length: 1.38 cm SL

Distribution: South America: Mamore and Madre de Dios River basins.

Countries: Bolivia, Peru

Remarks and references: See Weitzman (1987) and Weitzman & Ortega (1995) records of distribution. See Weitzman (1987) and Weitzman & Menezes (1998) for relationships.

***Xenurobrycon pteropus* Weitzman & Fink, 1985**

Xenurobrycon pteropus Weitzman & Fink, 1985: 85, fig. 4. Type locality: Amazonas, an igarapé in Fonte Boa, approximately 2°30'S, 67°02'W [Brazil]. Holotype: MZUSP 12412.

Maximum length: 1.35 cm SL

Distribution: South America: Vicinity of Fonte Boa, Amazonas State.

Countries: Brazil

Remarks and references: See Weitzman (1987) and Weitzman & Ortega (1995) records of distribution. See Weitzman (1987) and Weitzman & Menezes (1998) for relationships.

Family Acestrorhynchidae (Acestrorhynchids)

Naercio A. Menezes

Fishes of this family are characterized by very elongate (pike-like) bodies covered with relatively small scales. All teeth are conical and strong canines are present on the premaxilla, anterior part of the maxilla and the dentary. Small conical teeth are present on the ectopterygoid and minute conical teeth have been detected on the mesopterygoid of some species. Other exclusive features of the group are: first infraorbital covering almost completely the maxilla when the mouth is closed; a branch of the laterosensory canal on the premaxilla; and rhinosphenoid bone in close contact with parasphenoid. The anal fin is falcate, never bearing hooks in sexually mature males and the origin of the dorsal fin is much nearer to caudal base than the tip of the snout. See Menezes (1969a), Menezes (1992), Menezes & Géry (1983), Toledo-Piza & Menezes (1996) and Lucena & Menezes (1998).

The single genus *Acestrorhynchus* is currently represented by 15 species ranging from about 35 to 400 mm in standard length. Acestrorhynchid species are entirely confined to South America and the greatest species diversity occurs in the Amazon and Orinoco basins. Three species occur further south in the São Francisco, Paraná, Paraguay and La Plata drainages. They are found in a variety of habitats, but primarily live in lakes, lagoons, areas near shore, and the smallest species are especially found in small streams (igarapés) of the Amazon basin (personal observation and see also Britski et al., 1986). The peculiar dentition makes acestrorhynchid species very specialized predators among characiforms, most species feeding primarily on fishes. See Menezes (1969a), Nico & Taphorn (1985) and Amaral (1990).

After the major revision of *Acestrorhynchus* and the description of some new species (Menezes & Gery, 1983; Toledo-Piza & Menezes, 1996) not many new species are expected to be found. Acestrorhynchids are not commercially important as food fishes and two of the smallest species (*A. nasutus* and *A. minimus*) might be eventually found in aquarium shops.

ACESTRORHYNCHUS

Xiphorhynchus Agassiz, in Spix & Agassiz, 1829: 76. Type species: *Salmo falcatus* Bloch, 1794. Type by subsequent designation. Gender: masculine. Proposed as a subgenus of *Hydrocyon*. Preoccupied by *Xiphorhynchus* Swainson, 1827, in Aves, replaced by *Xiphorhamphus* Müller & Troschel, 1845, and by *Acestrorhynchus* Eigenmann & Kennedy, 1903.

Xiphorhamphus Müller & Troschel, 1844: 92. Type species: *Salmo falcatus* Bloch, 1794. Type by being a replacement name. Gender: masculine. Replacement for *Xiphorhynchus* Agassiz, 1829, (but preoccupied by *Xiphorhamphus* Blyth, 1843, in Aves).

Acestrorhynchus Eigenmann & Kennedy, 1903: 527. Type species: *Salmo falcatus* Bloch, 1794. Type by being a replacement name. Gender: masculine. Replacement for *Xiphorhynchus* Agassiz, 1829.

Sphyraenocharax Fowler, 1907: 460. Type species: *Xiphorhamphus abbreviatus* Cope, 1876. Type by original designation. Gender: masculine.

Acestrorhynchus abbreviatus (Cope, 1878)

Xiphorhamphus abbreviatus Cope, 1878: 687. Type locality: Nauta, Peru. Lectotype: ANSP 21532.

Maximum length: 22 cm SL

Distribution: South America: Upper Amazon and Madeira River basins.

Countries: Brazil, Ecuador, Peru

Remarks and references: See Menezes (1992: 46) for diagnosis.

Common names: Cachorrinho (Brazil), Ueua (Brazil)

Acestrorhynchus altus Menezes, 1969

Acestrorhynchus altus Menezes, 1969: 52, 118, fig. 38. Type locality: Rio Arari in Cachoeira do Arari, Ilha de Marajó, Pará,

Brazil. Holotype: MCZ 45256.

Maximum length: 23.3 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

Remarks and references: See Menezes (1992: 47) for diagnosis.

Common names: Cachorrinho, Ueua (Brazil)

Acestrorhynchus apurensis Toledo-Piza & Menezes, 1996

Acestrorhynchus apurensis Toledo-Piza & Menezes, 1996: 18, fig. 10. Type locality: Módulo de la Unellez, Estado Apure, Venezuela. Holotype: MZUSP 48373.

Maximum length: 7.1 cm SL

Distribution: South America: Apure River basin.

Countries: Venezuela

Acestrorhynchus britskii Menezes, 1969

Acestrorhynchus britskii Menezes, 1969: 58, 118, fig. 42. Type locality: Reprêsa de Três Marias, Rio São Francisco basin in Minas Gerais, Brazil. Holotype: MZUSP 4406.

Maximum length: 16.5 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Common names: Peixe cachorro (Brazil)

Acestrorhynchus falcatus (Bloch, 1794)

Salmo pulverulentus Linnaeus, 1758: 312. Type locality: Unknown. Holotype: NRM 7249.

Salmo falcatus Bloch, 1794: 120, pl. 385. Type locality: Suriname. Syntypes: ZMB 3613 (2), ?6444 (1).

Xiphorhamphus ferox Günther, 1863: 443. Type locality: Essequibo [Guyana]. Holotype: ?

Acestrorhynchus falcatus varius Menezes, 1969: 40, fig. 25. Type

locality: Cachimbo, Pará, Rio Tapajós basin, Brazil. Holotype: MZUSP 4560.
 Maximum length: 27.2 cm SL
 Distribution: South America: Amazon and Orinoco River basins and rivers of Guyana, Surinam and French Guyana.
 Countries: Brazil, French Guiana, Guyana, Peru, Suriname, Venezuela
 Remarks and references: See Menezes (1969: 37) for detailed description. Photograph of the holotype of *Salmo pulverulentus* Linnaeus, 1758, examined. *Salmo pulverulentus* is treated as a junior synonym based on prevailing usage of *Acestrorhynchus falcatus* (ICNZ 23.9.1).
 Common names: Cachorrinho (Brazil), Grand dent-chien (French Guiana), Ueua (Brazil)

***Acestrorhynchus falcirostris* (Cuvier, 1819)**

Hydrocyon falcirostris Cuvier, 1819: 361, pl. 27 (fig. 2). Type locality: Brazil. Holotype: MNHN A.8604 (poor condition).
 Maximum length: 40 cm TL
 Distribution: South America: Amazon and Orinoco River basins and rivers of Guyana.
 Countries: Brazil, Ecuador, Guyana, Peru, Venezuela
 Remarks and references: See Menezes (1969: 59) for detailed description.
 Common names: Peixe cachorro (Brazil), Peje zorro (Peru), Pez cachorro (Peru), Ueua (Brazil)

***Acestrorhynchus grandoculis* Menezes & Géry, 1983**

Acestrorhynchus grandoculis Menezes & Géry, 1983: 582, fig. 8.
 Type locality: Mouth of Rio Urubaxi in Rio Negro, State of Amazonas, Brazil. Holotype: MZUSP 25863.
 Maximum length: 10.8 cm SL
 Distribution: South America: Negro and Orinoco River basins.
 Countries: Brazil, Venezuela
 Remarks and references: See Toledo-Piza & Menezes (1996: 17) for diagnosis and distribution.
 Common names: Peixe cachorro (Brazil), Ueua (Brazil)

***Acestrorhynchus heterolepis* (Cope, 1878)**

Xiphorhamphus heterolepis Cope, 1878: 687. Type locality: Peruvian Amazon. Lectotype: ANSP 21246.
 Maximum length: 32.1 cm SL
 Distribution: South America: Amazon and Orinoco River basins.
 Countries: Brazil, Venezuela
 Remarks and references: See Menezes (1969: 78) for detailed description.
 Common names: Peixe cachorro (Brazil), Ueua (Brazil)

***Acestrorhynchus isalineae* Menezes & Géry, 1983**

Acestrorhynchus isalineae Menezes & Géry, 1983: 577, figs. 5-6.
 Type locality: Tributary of Rio dos Marmelos (Rio Madeira basin), 110 km east of Humaitá along rodovia Transamazônica, State of Amazonas, Brazil. Holotype: MZUSP 25849.
 Maximum length: 10.1 cm SL
 Distribution: South America: Madeira River basin.
 Countries: Brazil

***Acestrorhynchus lacustris* (Lütken, 1875)**

Xiphorhamphus lacustris Lütken, 1875: 136. Type locality: Lagoa Santa, Brazil. Syntypes: ZMUC 185 (1), 187-188 (2), 194 (1), 196 (1); MNHN 9587 [ex ZMUC] (1); ZMB 9192 (1).
 Maximum length: 27 cm SL
 Distribution: South America: São Francisco and upper Paraná River basins.
 Countries: Brazil
 Remarks and references: See Menezes (1992: 47) for diagnosis.
 Common names: Peixe cachorro (Brazil), Ueua (Brazil)

***Acestrorhynchus maculipinna* Menezes & Géry,**

1983

Acestrorhynchus maculipinna Menezes & Géry, 1983: 579, fig. 7.
 Type locality: Rio Preto da Eva, between Manaus and Itacoatiara, Amazonas, Brazil. Holotype: MZUSP 25861.
 Maximum length: 7.9 cm SL
 Distribution: South America: Amazon River basin.
 Countries: Brazil
 Common names: Peixe cachorro (Brazil), Ueua (Brazil)

***Acestrorhynchus microlepis* (Schomburgk, 1841)**

Hydrocyon microlepis Schomburgk, 1841: 247. Type locality: Rio Negro; Rio Branco; and Essequibo River, South America. No types known.
Acestrorhynchus cachorro Fowler, 1940: 274, fig. 61. Type locality: Ucayali River basin, Boca Chica, Peru. Holotype: ANSP 68679.
Acestrorhynchus guianensis Menezes, 1969: 70, 120, fig. 54. Type locality: Botanic Garden [British] Guyana, (trenches in Georgetown with water from the Demerara River). Holotype: FMNH 74359.
 Maximum length: 26 cm SL
 Distribution: South America: Amazon and Orinoco River basins and rivers of Guyana, Suriname, and French Guyana.
 Countries: Brazil, French Guiana, Guyana, Peru, Suriname
 Remarks and references: See Toledo-Piza & Menezes (1996: 4) for detailed description.
 Common names: Cachorrinho (Brazil), Petit dent-chien (French Guiana), Pez cachorro (Peru)

***Acestrorhynchus minimus* Menezes, 1969**

Acestrorhynchus minimus Menezes, 1969: 78, 120, fig. 60. Type locality: Lago Jacaré, Rio Trombetas, Amazon River basin, Brazil. Holotype: MZUSP [ex DZSASP] 4608.
 Maximum length: 6.3 cm SL
 Distribution: South America: Amazon and Orinoco River basins.
 Countries: Brazil, Venezuela
 Common names: Cachorrinho (Brazil), Ueua (Brazil)

***Acestrorhynchus nasutus* Eigenmann, 1912**

Acestrorhynchus nasutus Eigenmann, 1912: 411, pl. 61 (fig. 4).
 Type locality: Rockstone. Holotype: FMNH 53475.
 Maximum length: 6.9 cm SL
 Distribution: South America: Amazon and Orinoco River basins and rivers of Guyana.
 Countries: Brazil, Guyana, Venezuela
 Remarks and references: See Menezes (1969: 78) for detailed description.
 Common names: Cachorrinho (Brazil), Ueua (Brazil)

***Acestrorhynchus pantaneiro* Menezes, 1992**

Acestrorhynchus pantaneiro Menezes, 1992: 42. Type locality: rio Cuiabá, Volta Grande, município de Santo Antônio do Leverger, Mato Grosso (aproximadamente 56°W - 16°S). Holotype: MZUSP 40256.
 Maximum length: 24 cm SL
 Distribution: South America: Paraguay, lower Paraná, Uruguay, La Plata, and Mamoré River basins.
 Countries: Bolivia, Brazil
 Common names: Peixe cachorro (Brazil)

Family Cynodontidae (Cynodontids)

Mônica Toledo-Piza

Fishes of the family Cynodontidae comprise a group of very distinctive Neotropical characiforms easily recognizable by their oblique mouth, well developed dentary canines, and relatively expanded pectoral fins. The group is not very diverse with 13 species currently recognized and grouped under two subfamilies: the Cynodontinae and the Roestinae (Lucena & Menezes, 1998). The Cynodontinae is represented by the largest members of the family with some of its species reaching up to 65 cm in length and possessing maximum development of dentary canines among cynodontids. The subfamily has been the subject of recent taxonomic and phylogenetic investigation by Toledo-Piza et al. (1999) and Toledo-Piza (2000) with three genera being recognized: *Cynodon* with three species, hypothesized as the sister group to the monotypic *Rhaphiodon*, and this clade being the sister group to *Hydrolycus* with four species. The Roestinae includes species that reach a maximum length of 20 cm and are represented by *Roestes* with three species and *Gilbertolus* with two (Menezes & Lucena, 1998).

The majority of cynodontid species occur in the Amazon and Orinoco River basins, and in the rivers of the Atlantic slopes of the Guianas. *Rhaphiodon vulpinus* is the only Cynodontidae that ranges southward to the Paraná-Paraguay and Uruguay basins, and *Gilbertolus* occurs in the trans-Andean drainages of the Atrato and Magdalena Rivers, and Lake Maracaibo basins of Colombia and Venezuela. Fossil cynodontids are represented by dentary canines originated in Miocene deposits from the La Venta fauna, located in the present Magdalena River valley of Western Colombia, in the Anta Formation at Quebrada de la Yesera, Salta, and near the city of Paraná, Entre Ríos the latter two localities in Argentina (Lundberg, 1997; Cione & Casciotta, 1995, 1997).

Most of what is known about the habits and biology of the Cynodontidae refers to members of the Cynodontinae. They live in mid- and surface waters of rivers, lakes, and flooded forests in all water types, are predatory fishes, mainly piscivorous, using their dentary canines to stab prey (Arendt 1997; Goulding, 1980). Although not much valued as food, some species may have some importance in subsistence commercial fisheries (Santos et al., 1984; and Taphorn, 1992). *Hydrolycus* is a sport species having been recently added to the International Game Fish Association in the fly and rod class (International Game Fish Association, 1995). The ecology of roestine species is poorly known. They are also much less common in museum collections when compared to cynodontines.

CYNODON

Cynodon Spix, in Spix & Agassiz, 1829: 76. Type species: *Cynodon gibbus* Spix & Agassiz, 1829. Gender: masculine. The nomenclature of *Cynodon* and *Rhaphiodon* has been the subject of debate by many authors including Campos (1945), Travassos (1946), Whitehead and Myers (1971), Kottelat (1988), Eschmeyer and Bailey (in Eschmeyer, 1990), and Eschmeyer (1998), as a consequence of problems arising from differences in the interpretation of the works of Spix & Agassiz (1829) and Cuvier (1829). In order to solve the conflicts generated by the different conclusions arrived at by these authors, a petition was submitted to the International Commission on Zoological Nomenclature proposing the conservation of the usage of these genus names and fixation of their respective type species and ruling of the case are still awaited (see Toledo-Piza & Lazara, 2000).

Camposichthys Travassos, 1946: 132. Type species: *Cynodon gibbus* Spix & Agassiz, 1829. Type by original designation. Gender: masculine.

Cynodon gibbus Spix & Agassiz, 1829

Cynodon gibbus Spix & Agassiz, 1829: 77, pl. 27. Type locality: Brasiliae fluviis. Neotype: MZUSP 6539, designated by Toledo-Piza (2000). Original types apparently destroyed (Terofal, 1983; Kottelat, 1988).

Maximum length: 28 cm SL

Distribution: South America: Amazon and Orinoco River basins and rivers of Guyana.

Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru, Venezuela

Common names: Dientón (Peru), Icanga (Brazil), Minguilista (Brazil), Payara chata (Venezuela), Payarín (Venezuela), Peixecachorro (Brazil), Perrito (Ecuador)

Cynodon meionactis Géry, Le Bail & Keith, 1999

Cynodon meionactis Géry, Le Bail & Keith, 1999: 70, fig. 1. Type locality: French Guiana, Antecume Pata, haut Maroni en amont de Maripanoula. Holotype: MNHN 1998-0397.

Maximum length: 30 cm TL

Distribution: South America: Coastal rivers in French Guiana and Suriname.

Countries: French Guiana, Suriname

Cynodon septenarius Toledo-Piza, 2000

Cynodon septenarius Toledo-Piza, 2000: 65, fig. 24. Type locality: Brazil, Amazonas: Rio Tefé, Supiã-Pucu (between 3°40' and 4°20'S; 65°50' and 65°10'W). Holotype: MZUSP 32590.

Maximum length: 31.2 cm SL

Distribution: South America: Amazon and upper Orinoco River basins and rivers of Guyana.

Countries: Brazil, Guyana, Venezuela

GILBERTOLUS

Gilbertella Eigenmann, 1903: 147. Type species: *Anacyrtus alatus* Steindachner, 1878. Type by original designation. Gender: feminine. Preoccupied by *Gilbertella* Waite, 1902, in fishes.

Gilbertolus Eigenmann & Ogle, 1907: 3. Type species: *Anacyrtus alatus* Steindachner, 1878. Type by being a replacement name. Gender: masculine. Replacement for *Gilbertella* Eigenmann, 1903, preoccupied by *Gilbertella* Waite, 1902, in fishes.

Xiphocharax Fowler, 1914: 251. Type species: *Xiphocharax ogilviei* Fowler, 1914. Type by original designation. Gender: masculine.

Gilbertolus alatus (Steindachner, 1878)

Anacyrtus (*Raestes*) *alatus* Steindachner, 1878: 91. Type locality: Cienega, welche der Magdalena Strom. Holotype: NMW 14998. Type locality provided by Steindachner (1879: 20).

Maximum length: 9.6 cm SL

Distribution: South America: Magdalena River and Lake Maracaibo basins.

Countries: Colombia, Venezuela

Remarks and references: See Lucena & Menezes (1998) for phylogenetic relationships and Menezes & Lucena (1998) for detailed description.

Common names: Boquiacha (Colombia), Chachás (Colombia)

Gilbertolus atratoensis Schultz, 1943

Gilbertolus alatus atratoensis Schultz, 1943: 275. Type locality: At Quibdo, Río Atrato, Colombia. Holotype: USNM 76976.

Maximum length: 11.88 cm SL

Distribution: South America: Atrato River basin.

Countries: Colombia

Remarks and references: See Lucena & Menezes (1998) for phylogenetic relationships and Menezes & Lucena (1998) for detailed description.

Gilbertolus maracaiboensis Schultz, 1943

Gilbertolus alatus maracaiboensis Schultz, 1943: 273. Type locality: In a caño half a mile west of Sinamaica, Maracaibo basin, Estado de Zulia, Venezuela. Holotype: USNM 121386.

Maximum length: 13.03 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

Remarks and references: See Lucena & Menezes (1998) for phylogenetic relationships and Menezes & Lucena (1998) for detailed description.

Common names: Jibao (Venezuela), Muelona (Venezuela), Mueluda (Venezuela)

HYDROLYCUS

Hydrolycus Müller & Troschel, 1844: 93. Type species: *Hydrocyon scomberoides* Cuvier, 1816. Type by monotypy. Gender: masculine. Type species confirmed and genus name placed on Official List (Opinion 1581 of ICZN, 1990: 76).

Hydrolycus armatus (Jardine & Schomburgk, 1841)

Hydrocyon armatus Jardine & Schomburgk in Schomburgk, 1841: 249, pl. 25. Type locality: Rivers of Guiana. Neotype: ANSP 175725, designated by Toledo-Piza et al. (1999).

Maximum length: 66 cm SL

Distribution: South America: Amazon and Orinoco River basins and rivers of Guyana.

Countries: Brazil, Colombia, Guyana, Venezuela

Common names: Cachorra (Brazil), Payara (Venezuela), Pirandirá (Brazil), Pirantera (Brazil)

Hydrolycus scomberoides (Cuvier, 1816)

Hydrocyon scomberoides Cuvier, 1816: 168. Type locality: Brazil.

Holotype: MNHN A.8659. Named in a footnote; indicated as a new species in Brazil. Under Opinion 1581 of the International Commission of Zoological Nomenclature (1990: 76) the name *scomberoides* Cuvier, 1819, was placed on the Official List of Specific Names in Zoology. As a consequence, 1819 constitutes the official date of the publication of the species. However, the species name first appeared in a footnote, associated with a brief description in the text, in Cuvier (1816: 168). *Hydrolycus scomberoides* should, therefore, be dated to Cuvier, 1816 (instead of 1819), a change that has to be evaluated by the ICZN.

Hydrocyon scomberoides Cuvier, 1819: 357, pl. 27 (fig. 2). Type locality: Brazil. Holotype: MNHN A.8659. More extensive description; specimen presumably the same as in Cuvier, 1816; see Remarks there.

Cynodon pectoralis Günther, 1866: 30. Type locality: Upper Amazon. Holotype: BMNH 1866.2.15.22.

Maximum length: 28.4 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Ecuador, Peru

Common names: Cachorra (Brazil), Dientón (Ecuador), Pirandirá (Brazil), Saranha do rabo amarelo (Brazil)

Hydrolycus tatauaia Toledo-Piza, Menezes & Santos, 1999

Hydrolycus tatauaia Toledo-Piza, Menezes & Santos, 1999: 263, fig. 7. Type locality: Brazil: Pará: Rio Xingu, Belo Monte, 3°10'S, 51°50'W. Holotype: MZUSP 48005.

Maximum length: 45.5 cm SL

Distribution: South America: Amazon and upper Orinoco River basins and rivers of Guyana.

Countries: Brazil, Colombia, Guyana, Venezuela

Common names: Cachorra (Brazil), Pirandirá (Brazil)

Hydrolycus wallacei Toledo-Piza, Menezes & Santos, 1999

Hydrolycus wallacei Toledo-Piza, Menezes & Santos, 1999: 259, fig. 3. Type locality: Brazil: Amazonas, Rio Negro, Mandiquié, 0°30'S, 64°30'W. Holotype: MZUSP 32645.

Maximum length: 33.5 cm SL

Distribution: South America: Negro and upper Orinoco River basins.

Countries: Brazil, Venezuela

RHAPHIODON

Rhaphiodon Agassiz, in Spix & Agassiz, 1829: 59, 76. Type species: *Rhaphiodon vulpinus* Spix & Agassiz, 1829. Type by subsequent designation. Gender: masculine. See comments under *Cynodon*.

Hydropardus Reinhardt, 1849: 46. Type species: *Hydropardus rapax* Reinhardt, 1849. Type by monotypy. Gender: masculine.

Rhaphiodontichthys Campos, 1945: 473. Type species: *Rhaphiodon vulpinus* Spix & Agassiz, 1829. Type by original designation. Gender: masculine.

Rhaphiodon vulpinus Spix & Agassiz, 1829

Rhaphiodon vulpinus Spix & Agassiz, 1829: 76, pl. 26 as *Cynodon vulpinus*. Type locality: Brasiliae fluviis. Holotype: MHNN 822.

Hydropardus rapax Reinhardt, 1849: 46. Type locality: Uruguay, Montevideo. Holotype: ZUMC 183.

?*Salmo tamuco* Kner, 1860: 55. Not available, mentioned in passing under *Cynodon vulpinus* Spix; from Brazil.

Maximum length: 62.3 cm SL

Distribution: South America: Amazon, Orinoco, and Paraná River basins (Paraná, Paraguay, and Uruguay rivers), and rivers of Guyana.

Countries: Argentina, Brazil, Ecuador, Guyana, Paraguay, Peru, Uruguay, Venezuela

Common names: Chafalote (Brazil), Chambira-challua (Peru),

Dentudo (Brazil), Payara-machete (Venezuela), Peixe-cachorro (Brazil), Peixe-cadela (Brazil), Pirayagua (Paraguay), Ripa (Brazil), Saranha (Brazil)

ROESTES

Lycodon Kner, 1860: 52. Type species: *Cynopotamus molossus* Kner, 1858. Type by monotypy. Gender: masculine. Preoccupied by *Lycodon* Fitzinger, 1826, in Reptilia.

Roestes Günther, 1864: 345. Type species: *Cynopotamus molossus* Kner, 1858. Type by monotypy. Gender: masculine.

Roestes itupiranga Menezes & Lucena, 1998

Roestes itupiranga Menezes & Lucena, 1998: 289, fig. 7. Type locality: Brazil, Pará, Lago Grande, Itupiranga, Rio Tocantins. Holotype: INPA 10267.

Maximum length: 14.2 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Remarks and references: See Lucena & Menezes (1998) for phylogenetic relationships and Menezes & Lucena (1998) for detailed description.

Roestes molossus (Kner, 1858)

Cynopotamus molossus Kner, 1858: 168. Type locality: No type-locality indicated in original description [Mato Grosso, Guaporé River und von Caicaral]. Syntypes: NMW 68754-55, 92856. Type locality indicated in Kner (1860: 53).

Maximum length: 19.5 cm SL

Distribution: South America: Upper Madeira River basin.

Countries: Brazil

Remarks and references: See Lucena & Menezes (1998) for phylogenetic relationships and Menezes & Lucena (1998) for detailed description.

Roestes ogilviei (Fowler, 1914)

Xiphocharax ogilviei Fowler, 1914: 252, fig. 9. Type locality: Rupununi River, British Guiana, 2°-3°N, 50°20'W. Holotype: ANSP 39337.

Maximum length: 18.7 cm SL

Distribution: South America: Upper and middle Amazon River basin and rivers Essequibo, Branco and Negro.

Countries: Brazil, Colombia (?), Guyana

Remarks and references: See Lucena & Menezes (1998) for phylogenetic relationships and Menezes & Lucena (1998) for detailed description.

Family Erythrinidae (Trahiras)

Oswaldo T. Oyakawa

Fishes of the family Erythrinidae are characterized by having a cylindrical body form, rounded caudal fin, dorsal fin with 8-15 rays, anterior to anal fin and usually above pelvic fins, anal fin short with 10-11 rays, no adipose fin, numerous teeth on the palate and lateral line with 34-47 scales. Besides that, the following exclusive characters might be useful to diagnose the representatives of this family: five branchiostegal rays, a lamellar suprapreopercle, anterior end of the first infraorbital bifurcate, and antorbital absent (Oyakawa, 1998).

Three genera are currently recognized in the family, *Erythrinus*, *Hoplerythrinus* and *Hoplias*. The first two include medium size species, reaching at least 40 cm standard length. On the other hand, *Hoplias* is a medium to large size genus, ranging from 30 to 100 cm of standard length in *Hoplias lacerdae* and *Hoplias macrophthalmus*. See Miranda Ribeiro (1908) and Planquette, Keith and Le Bail (1996).

The presence of sixth infraorbital transversely divided in two parts, and the upper region of the posterior end of the maxilla relatively smooth, with no projection, distinguished both *Erythrinus* and *Hoplerythrinus* from *Hoplias*, which has the sixth infraorbital as a single bony plate and a huge projection in the posterior end of maxilla. *Hoplerythrinus* is easily distinguished from the two other genera by having a distinctive black round spot in the postero-dorsal region of the opercle and usually a black stripe along the middle of the body.

Erythrinids species are entirely restricted to South America, mainly in the Amazon basin, where the greatest species diversity occurs. They are found in a variety of habitats such as lakes, lagoons, small and large rivers (Oyakawa, 1990). With the exception of *Hoplias malabaricus*, apparently widespread through almost all river basin of South America, all others species of *Hoplias* are restricted to some small areas; e. g. *Hoplias lacerdae* endemic to the Ribeira de Iguape River drainage, State of São Paulo and *Hoplias brasiliensis*, endemic to the Paraguaçu River, State of Bahia, and other small drainages of Eastern Brazil, or even *Hoplias microlepis* restricted to the west side of the Andes in Ecuador and Colombia.

A large number of undescribed species of this family was detected in museum collections and presented in Oyakawa (1990); but after that, no new species were detected and formally described. Erythrinids are relatively important as food fishes in many regions of South America.

ERYTHRINUS

Erythrinus Scopoli, 1777: 449. Type species: *Synodus erythrinus* Bloch & Schneider, 1801. Type by subsequent designation. Gender: masculine.

Erythrinus Gronovius, 1763: 114. Type species: *Erythrinus salmoneus* Gray, 1854. Gender: masculine. Not available, published in a rejected work on Official Index (Opinion 261).

Erythrichthys Bonaparte, 1831: 182. Type species: *Synodus erythrinus* Bloch & Schneider, 1801. Gender: masculine.

Hetererythrinus Günther, 1864: 283. Type species: *Erythrinus salmoneus* Gronow in Gray, 1854. Type by subsequent designation. Gender: masculine.

***Erythrinus erythrinus* (Bloch & Schneider, 1801)**

Synodus erythrinus Bloch & Schneider, 1801: 397. Type locality: Surinamum.

Erythrinus salmoneus Gronow, in Gray, 1854: 170. Type locality: Suriname. Holotype: BMNH 1853.11.12.59.

Erythrinus brevicauda Günther, 1864: 285. Type locality: No locality.

Erythrinus longipinnis Günther, 1864: 285. Type locality: Esse-quiibo River, Guyana. Holotype: BMNH 1864.1.21.18 [or 81].

Maximum length: 20 cm SL

Distribution: South America: Amazon and Orinoco River basins and coastal rivers of the Guianas.

Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela

Remarks and references: See Eigenmann & Eigenmann (1889: 105) for key of identification and Géry (1977: 103) for description in key.

Common names: Guabina (Venezuela), Jeju (Brazil), Koulan (French Guiana), Moroba (Brazil), Petit coulant (French Guiana), Ti-koulan (French Guiana)

***Erythrinus kessleri* Steindachner, 1876**

Erythrinus kessleri Steindachner, 1876: 596. Type locality: Salvador, Bahia, Brazil. Syntype: USNM 120407(1).

Maximum length: 19 cm SL

Distribution: South America: Bahia (?).

Countries: Brazil

HOPLERYTHRINUS

Hoplerythrinus Gill, 1896: 208. Type species: *Erythrinus unitaeniatus* Agassiz, 1829. Type by monotypy. Gender: masculine.

Ophiocephalops Fowler, 1906: 293. Type species: *Erythrinus unitaeniatus* Agassiz, 1829. Type by original designation. Gender: masculine.

Pseuderythrinus Hoedeman, 1950: 79. Type species: *Pseuderythrinus rosapinnis* Hoedeman, 1950. Type by original designation. Gender: masculine.

***Hoplerythrinus cinereus* (Gill, 1858)**

Erythrinus cinereus Gill, 1858: 413. Type locality: Western Portion of the Island of Trinidad, W.I. Holotype: USNM 5882. Maximum length: 20.2 cm SL
Distribution: South America: Island of Trinidad.
Countries: Trinidad and Tobago
Common names: Waubeen (Trinidad and Tobago)

***Hoplerythrinus gronovii* (Valenciennes, 1847)**

Erythrinus gronovii Valenciennes, in Cuvier & Valenciennes, 1847: 500. Type locality: Cayenne. Maximum length: 17.8 cm SL
Distribution: South America: French Guiana (?).
Countries: French Guiana

***Hoplerythrinus unitaeniatus* (Agassiz, 1829)**

Erythrinus salvus Agassiz, in Spix & Agassiz, 1829: 41. Type locality: Habitat cum *Erythrinus macrodonte* in flumine S. Francisci.
Erythrinus unitaeniatus Agassiz, in Spix & Agassiz, 1829: 42, pl. 19. Type locality: Habitat in flumine S. Francisci. No types known.
Erythrinus vittatus Valenciennes, in Cuvier & Valenciennes, 1847: 499, pl. 585. Type locality: Brésil; Cayenne; Surinam.
Erythrinus balteatus Günther, 1864: 284. Not available, name on specimen from Suriname mentioned under *Erythrinus unitaeniatus*.
Pseuderythrinus rosapinnis Hoedeman, 1950: 82, figs. 1a-e, 2, 3. Type locality: Paramaribo, Dutch Guiana. Holotype: ZMA 104279. Maximum length: 25 cm TL
Distribution: Central and South America: Amazon, Paraná, Orinoco, São Francisco, and Magdalena River basins, and coastal rivers in Guyana, Suriname, and French Guiana.
Countries: Argentina, Bolivia, Brazil, Ecuador, French Guiana, Guyana, Panama, Peru, Suriname, Trinidad and Tobago, Venezuela
Remarks and references: See Eigenmann & Eigenmann (1889: 105) for description and key of identification; Géry (1977: 103) for description in key.
Common names: Coulant barré (French Guiana), Guabina (Venezuela), Jejú (Brazil), Koulán baré (French Guiana), Traíra pixuna (Brazil), Yarrow (Trinidad and Tobago)

HOPLIAS

Macrodon Müller, 1842: 308. Type species: *Esox malabaricus* Bloch, 1794. Type by subsequent designation. Gender: masculine.

Hoplias Gill, 1903: 50. Type species: *Esox malabaricus* Bloch, 1794. Type by being a replacement name. Gender: masculine.

***Hoplias aimara* (Valenciennes, 1847)**

Macrodon aimara Valenciennes, in Cuvier & Valenciennes, 1847: 523, pl. 586. Type locality: Cayenne. Holotype: MNHN A.9968.
Erythrinus macrodon (non Agassiz, 1829) Schomburgk, 1841: 254, pl. XXVII. Type locality: Guyana. Maximum length: 100 cm SL
Distribution: South America: French Guiana and Venezuela (?).
Countries: French Guiana, Venezuela
Common names: Aimara (Venezuela), Aïmara (French Guiana)

***Hoplias brasiliensis* (Agassiz, 1829)**

Erythrinus brasiliensis Agassiz, in Spix & Agassiz, 1829: 45, pl. 20. Type locality: Peruaçu, Brazil. Maximum length: 20.3 cm SL
Distribution: South America: Paraguaçu River basin in Bahia State.
Countries: Brazil
Common names: Traíra (Brazil)

***Hoplias lacerdae* Miranda Ribeiro, 1908**

Hoplias lacerdae Miranda Ribeiro, 1908: [3]. Type locality: Iporanga. Holotype: MNRJ 211. Maximum length: 75 cm SL
Distribution: South America: Ribeira de Iguape River basin in São Paulo and Paraná States.
Countries: Brazil
Remarks and references: See Britski (1970: 81) for diagnosis and differentiation of *Hoplias malabaricus*.
Common names: Tariputanga (juvenles), Trairaçu, Trairão (Brazil)

***Hoplias macrophthalmus* (Pellegrin, 1907)**

Macrodon malabaricus var. *macrophthalma* Pellegrin, 1907: 26. Type locality: Cayenne, French Guiana. Holotype: MNHN A.9770.
Hoplias malabaricus microphthalmus Pellegrin, in Eigenmann, 1910: 448. Type locality: unknown
Maximum length: 100 cm TL
Distribution: South America: Amazon and Orinoco River basins, and coastal rivers in Guyana, Suriname, and French Guiana.
Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela
Remarks and references: See Géry (1977: 102) for description in key.
Common names: Aimara (Brazil, French Guiana, Venezuela), Trairão (Brazil)

***Hoplias malabaricus* (Bloch, 1794)**

Esox malabaricus Bloch, 1794: 149, pl. 392. Type locality: South America, probably Suriname (not "Tranquebar").
Synodus palustris Bloch & Schneider, 1801: 398. Type locality: Habitat in lacubus et paludibus non item in fluminibus Brasiliae. No types known.
Synodus tareira Bloch & Schneider, 1801: 398, pl. 79. Type locality: Habitat in fluviis Brasiliae.
Erythrinus macrodon Agassiz, in Spix & Agassiz, 1829: 43, pl. 18. Type locality: Habitat in lacu Almada, Prov. Bahiensis et in fluvio Sancti Francisci. Holotype: MHNN 773.
Erythrinus trahira Agassiz, in Spix & Agassiz, 1829: 44, pl. 18. Type locality: Habitat in lacu Almada, Prov. Bahiensis et in fluvio Sancti Francisci. Holotype: MHNN 773.
Macrodon tareira Valenciennes, in Cuvier & Valenciennes, 1847: 508. Type locality: Bahia, Rio-San-Francisco, Amazone, Cayenne, lagune de Maracaibo.
Macrodon ferox Gill, 1858: 411. Type locality: Western Portion of the Island of Trinidad; W. I.
Esox tararira Larrañaga, 1923: 378, 388. Type locality: Uruguay. Maximum length: 49 cm SL
Distribution: Central and South America: Known from Costa Rica to Argentina in most rivers basins.
Countries: Argentina, Bolivia, Brazil, Colombia, Costa Rica, Ecuador, French Guiana, Guyana, Paraguay, Peru, Suriname, Trinidad and Tobago, Uruguay, Venezuela
Common names: Bululu (Colombia), Calabrote (Colombia), Dentón (Colombia), Dientón (Colombia), Dorme-dorme (Brazil), Dormilón (Colombia), Guabina (Colombia, Venezuela), Guabine (Trinidad and Tobago), Lobó (Brazil), Mocho (Colombia), Moncholo (Colombia), Patagaie (French Guiana), Perraloca (Colombia), Perro (Colombia), Rivolo (Colombia), Taraira (Argentina), Tarango (Argentina), Tararira (Argentina, Uruguay), Tarucha (Argentina), Traíra (Brazil), Trairitinga (Brazil)

***Hoplias microcephalus* (Agassiz, 1829)**

Erythrinus microcephalus Agassiz, in Spix & Agassiz, 1829: 44. Type locality: Habitat in fluvio Sancti Francisci.
Macrodon intermedius Günther, 1864: 282. Type locality: Rio Cipo, Brazil. Syntypes: BMNH ?
Maximum length: 35.6 cm SL
Distribution: South America: São Francisco River basin.
Countries: Brazil

Common names: Traíra (Brazil)

***Hoplias microlepis* (Günther, 1864)**

Macrodon microlepis Günther, 1864: 282. Type locality: Western Ecuador; Guatemala. Syntypes: BMNH 1860.1.16.128 (3), BMNH 1860.6.16.154-5 (2), BMNH 1860.6.18.21-22 (3).

Maximum length: 36 cm SL

Distribution: Central and South America: Western slopes from Guayaquil (Ecuador) to Chagres River (Panama).

Countries: Colombia, Ecuador, Panama

Remarks and references: See Eigenmann & Eigenmann (1889: 102) for key of identification and description.

Common names: Juanchiche (Ecuador)

***Hoplias patana* (Valenciennes, 1847)**

Macrodon patana Valenciennes in Cuvier & Valenciennes, 1847: 522. Type locality: Cayenne. Holotype: whereabouts unknown.

Maximum length: 39.4 cm SL

Distribution: South America: French Guiana (?).

Countries: French Guiana

***Hoplias teres* (Valenciennes, 1847)**

Macrodon teres Valenciennes, in Cuvier & Valenciennes, 1847: 521. Type locality: lagune de Maracaibo.

Maximum length: 15.3 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

Common names: Guavina (Venezuela)

Species inquirenda

Macrodon auritus Valenciennes in Cuvier & Valenciennes 1847: 519. Type locality: Montevideo, Uruguay.

SPECIES INQUIRENDAE

Erythrinus cephalus Meuschen, 1778: 35. Type locality: Not indicated.

Erythrinus guavina Humboldt in Humboldt & Valenciennes, 1821: 179, pl. 48 (fig. 1). Type locality: Lake Valencia, Venezuela. No types known.

Erythrinus palustris Valenciennes in Cuvier & Valenciennes, 1847: 502. Type locality: ?

Family Lebiasinidae (Pencil fishes)

Marilyn Weitzman & Stanley H. Weitzman
(SHW contributed the *Nannostomus* section).

There is no recent review of this family. There are 61 described species in two subfamilies and seven genera, with several species yet to be described. In size they range from the miniature *Nannostomus anduzei*, 1.6 cm, to medium sizes in the Pyrrhulininae to 150 mm SL in the Lebiasininae. All species have a rather elongate, cylindrical body shape with fairly large scales, 17 to 33 in a longitudinal series. The laterosensory canal system on the body is reduced to seven scales, or absent. An adipose fin may be present or absent. The anal fin is short-based with up to 13 rays and the males of most species have well developed anal fins specialized for courtship and breeding. The frontal/parietal fontanel is always absent, the cheek is well covered by the orbital and opercular bones, there is no supraoccipital crest and the scales of the dorsal body begin over the parietal bones.

In his study of the phylogenetic relationships of the family Ctenoluciidae, Vari (1995: 35-36) included comments on the monophyly of the Lebiasinidae and listed three characters taken from Weitzman (1964) that he considered to be synapomorphies for the family: 1) absence of the supraorbital bone, 2) lack of a metapterygoid-quadrate fenestra, and 3) reduction of the laterosensory canal system on the body.

Members of this family are found in Central America in Costa Rica and Panama and in all countries of South America except Chile. Most species are found in quiet clear or black water streams from sea level to about 250 meters elevation, always in fresh water. Some species of the Lebiasininae occur in much higher elevations, to over 1000 meters.

Many of the species in the Pyrrhulininae, especially the pencilfishes, *Nannostomus*, are important aquarium fishes.

COPEINA

Copeina Fowler, 1906: 294. Type species: *Pyrrhulina argyrops* Cope, 1878. Type by original designation. Gender: feminine. One of the three genera included in the tribe Pyrrhulinini (Weitzman and Cobb, 1975: 1).

***Copeina guttata* (Steindachner, 1876)**

Pyrrhulina guttata Steindachner, 1876: 15, pl. 2 (fig. 6). Type locality: Amazon River at Obidos, Cudajas, and Tabatinga; Rio Negro, Brazil. Syntypes: NMW 56966; 56967, NMW 56969; MCZ 6833, 6429; USNM 120282, ZMB 10425; ZMUC 143 and ZMUC 143x.

Pyrrhulina argyrops Cope, 1878: 694. Type locality: near Pebas, Peru. Lectotype: ANSP 21441.

Maximum length: 7.6 cm SL

Distribution: South America: Middle Amazon River basin.

Countries: Brazil, Colombia, Ecuador, Peru

Remarks and references: No recent review of the genus, studies of types and consideration of type localities suggest that there is just the one species, *Copeina guttata*. Myers (1956: 12) noted that "Steindachner's figures are erroneously labeled and should be reversed", thus figs. 6 and 5a are correct for *Copeina guttata*, figs. 5 and 6a for *Copella nattereri*.

Common names: Forellensalmler (Germany), Urquisho (Peru)

***Copeina osgoodi* Eigenmann, 1922**

Copeina osgoodi Eigenmann, 1922: 232. Type locality: Nazareth, Peru. Holotype: FMNH 15352.

Maximum length: 5.1 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Common names: Urquisho (Peru)

COPELLA

Copella Myers, 1956: 12. Type species: *Copeina compta* Myers, 1927. Type by original designation. Gender: feminine. One of the three genera included in the tribe Pyrrhulinini (Weitzman and Cobb, 1975: 1).

***Copella arnoldi* (Regan, 1912)**

Copeina arnoldi Regan, 1912: 393. Type locality: Amazon. Syntypes: BMNH 1909.4.2.25-26.

Maximum length: 3.36 cm SL

Distribution: South America: Lower Amazon, coastal Guianas to mouth of the Orinoco River.

Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago (introduced)

Remarks and references: Regan (1912) described three *Copella* species from the Atlantic coastal region between the mouth of the Orinoco in Venezuela and the mouth of the Amazon in Pará, Brazil, *C. arnoldi*, *C. carsevensis*, and *C. eigenmanni*. No recent review has been produced to clarify their identities or relationships. The 'splash tetra' has been in the aquarium trade for a long time. This species lays its eggs on the underside of leaves just above the water line and the adults, mainly the male, splash water on the eggs until they hatch. The breeding behavior of the other two species has not been recorded. Other species of the genus lay their eggs on leaves near the surface but under water. See Planquette et al. (1996: 178) for notes on the fish in French Guiana.

Common names: Copeina (Trinidad and Tobago), Piratanta (Brazil), Splash tetra (USA), Ti-yaya (French Guiana)

***Copella carsevensis* (Regan, 1912)**

Copeina carsevensis Regan, 1912: 394. Type locality: Carsevenne, French Guiana [Calçoene, Amapa, Brazil]. Syntypes:

BMNH 1899.7.26.1-5.
 Maximum length: 3.6 cm SL
 Distribution: South America: Coastal rivers of the Guianas and Amapá State.
 Countries: Brazil, French Guiana, Suriname
 Remarks and references: See the notes above under *C. arnoldi*. This species appears more slender and it seems to inhabit more blackwater streams. Nothing has been noted about its breeding behavior. See Planquette et al. (1996: 178) for its occurrence in French Guyana.
 Common names: Milé montagn (French Guiana), Milipipi (French Guiana), Mulet montagne (French Guiana), Ti-yaya (French Guiana)

***Copella compta* (Myers, 1927)**

Copeina compta Myers, 1927: 110. Type locality: Creek above São Gabriel Rapids, Rio Negro, Brazil. Holotype: CAS 60496.
 Maximum length: 5.06 cm SL
 Distribution: South America: Upper Negro and upper Orinoco River basins.
 Countries: Brazil, Colombia, Venezuela
 Remarks and references: Myers did not originally illustrate this fish but Géry (1977: 147) published a drawing by Pablo Bravo prepared under Myers' direction, probably from the holotype. Until rather recently it was not known except for the preserved types. It occurs in acid clear and black water streams and is collected with the green neon, *Paracheirodon simulans*, and imported with it at times. It is a very slender fish, and the dorsal fin is placed far back on the body, almost over the anal fin. In life it grows to 6 cm or more. Its breeding behavior has not been noted.

***Copella eigenmanni* (Regan, 1912)**

Copeina eigenmanni Regan, 1912: 393. Type locality: Para; R. Aruka, Brit. Guiana; Lama, Brit. Guiana; Bogota, Colombia. Syntypes: BMNH 1894.5.18.40-41, BMNH 1911.10.31.140, BMNH 1911.10.31.146, BMNH 1869.7.25.6-7.
 Maximum length: 3.6 cm SL
 Distribution: South America: Atlantic coast between Pará State and mouth of the Orinoco River.
 Countries: Brazil, Guyana, Venezuela
 Remarks and references: See the notes above under *C. arnoldi*. As noted the type localities for this species are widespread and the syntypes are varied as to size and preservation. The syntypes labeled Bogotá were probably collected near Villavicencio on the Meta River, and are *Copella metae*. The other localities are between the mouth of the Orinoco in Venezuela to the north and Para, which might be in Brazil as has been presumed by authors or it might be in Surinam.
 Common names: Ti-yaya (French Guiana)

***Copella metae* (Eigenmann, 1914)**

Copeina metae Eigenmann, 1914: 229. Type locality: Barrigona, Río Meta, Colombia. Holotype: CAS 60494.
 Maximum length: 3.4 cm SL
 Distribution: South America: Upper Orinoco and upper Negro River basins.
 Countries: Brazil, Colombia, Venezuela
 Remarks and references: This species occurs in the llanos regions of Colombia and Venezuela. It has been mistakenly recorded from the Amazon of Brazil and Peru, but the species there is *C. nigrofasciata*.
 Common names: Voladorita (Venezuela)

***Copella nattereri* (Steindachner, 1876)**

Pyrrhulina nattereri Steindachner, 1876: 13, pl. 2 (fig. 5, 6a). Type locality: mouth of Río Negro; Obidos, Amazon R. Syntypes: NMW 56974, MCZ [mixed] 6259 + 6263 + 6300 + 6835 + 6836 + 6837 (78); MSNG 9239, NMW 56973-74, 57148.
Copeina callolepis Regan, 1912: 393. Type locality: Amazon R.

Syntypes: BMNH 1909.4.2.27-28
 Maximum length: 4.5 cm SL
 Distribution: South America: Lower Amazon, Negro and upper Orinoco River basins.
 Countries: Brazil, Colombia, Guyana, Venezuela
 Remarks and references: The dark spots occurring on most scales of the light colored body, usually appearing black or brown, easily identify this species. The type locality for *C. callolepis* is given as Amazon, the syntypes are aquarium specimens. The type localities for *C. nattereri* range from Óbidos on the lower Amazon to the mouth of the Negro River on the middle Amazon River, possibly overlapping localities. Examination of the types of both indicate *C. callolepis* to be a synonym of *C. nattereri*. It occurs in the lower to middle Amazon to the Negro River then up that river and into the upper Orinoco basin and from the headwater regions of the Branco River in Guyana.

***Copella nigrofasciata* (Meinken, 1952)**

Pyrrhulina nigrofasciata Meinken, 1952: 115, fig. 1. Type locality: peruanischen Amazonas Syntypes: BMNH 1952.7.31.3-5; ZMH H1211-1212.
 Maximum length: 4.5 cm SL
 Distribution: South America: Upper Amazon River basin, from Manaus and into the Ucayali River.
 Countries: Brazil, Peru
 Remarks and references: This species was described from aquarium specimens said to be from the Peruvian Amazon. It occurs from near the mouth of the Negro River west into the Marañón and Ucayali rivers of Peru. It is sometimes confused with *C. metae* but differs in its color pattern. Both have an almost black horizontal stripe across the body but *C. nigrofasciata* has a row of bright red spots just above the black stripe while *C. metae* has a pale stripe without any red spots.
 Common names: Urquisho (Peru)

***Copella vilmae* Géry, 1963**

Copella vilmae Géry, 1963: 25, fig. 1. Type locality: Igarapé Prêto, collatéral de l'Amazone supérieure près de Belem, à environ 60 km en aval de Leticia, Peru-Colombia border. Holotype: SMF 5931.
 Maximum length: 4.5 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Brazil, Colombia (?), Peru (?)
 Remarks and references: This species is known only from the types. It appears to be closely related to *C. compta*. Both have slender elongate bodies, similar scale counts, size, and color patterns. The dorsal fin is set back on the body almost over the anal fin.
 Common names: Rainbow copella (USA)

DERHAMIA

Derhamia Géry & Zarske, 2002: 36. Type species: *Derhamia hoffmannorum* Géry & Zarske, 2002. Type by original designation. Gender: feminine.

***Derhamia hoffmannorum* Géry & Zarske, 2002**

Derhamia hoffmannorum Géry & Zarske, 2002: 39, fig. 1. Type locality: sand bank at the confluent of the Kamarang River and the Mazuruni River, north-western part of Guyana north of the Roraima. Holotype: MTD F 26491.
 Maximum length: 6.14 cm SL
 Distribution: South America: Mazaruni River basin.
 Countries: Guyana

LEBIASINA

Lebiasina Valenciennes, in Cuvier & Valenciennes, 1847: 531. Type species: *Lebiasina bimaculata* Valenciennes, 1847. Type by monotypy. Gender: feminine. The genus *Lebiasina* is tradi-

tionally separated from *Piabucina*, the second genus of the subfamily Lebiasininae (Weitzman and Cobb, 1975), by its lack of an adipose fin and by the cellular composition of its swim bladder wall as described by Valenciennes. These characters may or may not be valid and have been discussed by many authors.

***Lebiasina bimaculata* Valenciennes, 1847**

Lebiasina bimaculata Valenciennes in Cuvier & Valenciennes, 1847: 531, pl. 587. Type locality: Rivière Remac, environs de Lima, Peru. Holotype: MNHN 141.

Maximum length: 16 cm SL

Distribution: South America: Ecuador and Peru west of Andes, also upper Marañón River basin.

Countries: Ecuador, Peru

Remarks and references: The body is stocky with a dark spot just behind the head and another at the base of the caudal fin. All lebiasinids are mainly insectivorous feeding generally near the surface of the water. *Lebiasina bimaculata* especially has been used in the control of mosquitoes. Thus it has been introduced into regions where it was not native. Its original distribution was in the coastal streams between the Lima area of central Peru north to northern Ecuador. It also occurs inland at higher elevations in the Cajamarca region of central Peru. Pearson (1937: 89) remarks that this fish can live for a long time in a minimum quantity of water and that pre Inca people could easily have carried this fish from the coast up into the Cajamarca valley where it has adapted and spread into the upper Marañón River.

Common names: Chalquoque (Peru), Choro-coque (Peru), Guabina (Ecuador), Guavina (Peru), Huaija (Peru), Las Penitas (Peru)

***Lebiasina chucuriensis* Ardila Rodríguez, 2001**

Lebiasina chucuriensis Ardila Rodríguez, 2001: [3], color figure.

Type locality: Quebrada La Carbonera, afluente del río La Llana. Municipio de San Vicente de Chucurí, Dept. Santander, Colombia. Holotype: Author coll. 8-VII-2000.

Maximum length: 14.8 cm TL.

Distribution: South America: Northern Colombia, between Magdalena River and the Andes.

Countries: Colombia

***Lebiasina floridablancaensis* Ardila Rodríguez, 1994**

Lebiasina floridablancaensis Ardila Rodríguez, 1994: [2], fig. 1.

Type locality: quebrada El Gaque, Trib. del Río Aranzoque, Dept. Santander, Colombia. Holotype: Author coll. 15-04-01.

Maximum length: 13 cm TL

Distribution: South America: Northeastern Colombia, between Magdalena River and the Andes.

Countries: Colombia

Remarks and references: This species has an adipose fin and thus is a *Piabucina* species; however, see above in the description of the genus *Lebiasina*. The complete distribution of this species is unknown; it seems to be limited to some eastern tributaries of the lower Magdalena River. It has been confused with *Piabucina pleurotaenia* Regan by earlier authors.

***Lebiasina intermedia* Meinken, 1936**

Lebiasina intermedia Meinken, 1936: 49, fig. (unnumbered). Type locality: mittlere Amazonas bei Santarem, Pará. Brazil. Holotype: ?KHMM 2156.

Maximum length: 10.7 cm TL

Distribution: South America: unknown.

Countries: Brazil

Remarks and references: Known only from the type. The type locality given for this aquarium specimen is probably incorrect, this genus is not known to occur in the lower Amazon basin.

***Lebiasina multimaculata* Boulenger, 1911**

Lebiasina multimaculata Boulenger, 1911: 212. Type locality: Condoto River at Condoto, Choco Dept., SW. Colombia, elev. 150 ft. Syntypes: BMNH 1910.7.11.167-169.

Maximum length: 15 cm SL

Distribution: South America: Southwestern Colombia.

Countries: Colombia

Remarks and references: This is a slender species with a series of about 10 dark rounded spots across the body as well as red dots on the three middle rows of scales on the body. It appears to be limited to the Condoto River basin and nearby streams. Dahl (1971: 119) claims that *Piabucina panamensis* is a synonym of *Lebiasina multimaculata*, that the latter sometimes has an adipose fin. However examination of over 65 specimens of *L. multimaculata* and an equal number of *P. panamensis* has shown that the possession of or lack of an adipose fin remains constant in a species (pers. obs).

Common names: Candela (Colombia), Guabina (Colombia), Saltona (Colombia)

***Lebiasina provenzanoi* Ardila Rodríguez, 1999**

Lebiasina provenzanoi Ardila Rodríguez, 1999: [3], color photo.

Type locality: Río Aponwao (Qda. Tarotá), Gran Sabana, Estado Bolívar, Venezuela. Holotype: MBUCV-V-22285.

Maximum length: 12.3 cm TL

Distribution: South America: Upper Aponwao River basin, Gran Sabana.

Countries: Venezuela

***Lebiasina uruyensis* Fernández-Yépez, 1967**

Lebiasina uruyensis Fernández-Yépez, 1967: 173, pl. 5. Type locality: río Uruyén medio, Auyan-Tepui, Guyana highlands, Venezuela. Holotype: MHNLS 789.

Maximum length: 14.6 cm SL

Distribution: South America: Upper Caroni River basin, in western Gran Sabana.

Countries: Venezuela

Remarks and references: *Lebiasina uruyensis* occurs in the Auyan-Tepui region in the western portion of the Gran Sabana of Venezuela. It is distinct from its nearby relative, *Piabucina unitaeniata*, in having a deeper body, its lack of an adipose fin and in its color pattern.

Common names: Carpa criolla (Venezuela)

***Lebiasina yuruaniensis* Ardila Rodríguez, 2000**

Lebiasina yuruaniensis Ardila Rodríguez, 2000: [3], color photo.

Type locality: río Yuruaní, Gran Sabana, Estado Bolívar, Venezuela. Holotype: MHNLS 7469.

Maximum length: 10 cm TL

Distribution: South America: Yuruaní River basin, in Gran Sabana.

Countries: Venezuela

NANNOSTOMUS

Nannostomus Günther, 1872: 146. Type species: *Nannostomus beckfordi* Günther, 1872. Type by monotypy. Gender: masculine.

Archicheir Eigenmann, 1909: 46. Type species: *Archicheir minutus* Eigenmann, 1909. Type by monotypy. Gender: feminine.

Poecilobrycon Eigenmann, 1909: 43. Type species: *Poecilobrycon harrisoni* Eigenmann, 1909. Type by original designation. Gender: masculine.

Nannobrycon Hoedeman, 1950: 15, 22. Type species: *Nannostomus eques* Steindachner, 1876. Type by original designation. Gender: masculine.

***Nannostomus anduzei* Fernandez & Weitzman, 1987**

Nannostomus anduzei Fernandez & Weitzman, 1987: 165, fig. 1.

Type locality: Laguna Provincial, ca. 20 km north of Puerto Ayacucho, ca. 5°50'N, 67°30'W, Depto. de Ature, Amazonas, Venezuela. Holotype: MBUCV V-15.141.

Maximum length: 1.6 cm SL

Distribution: South America: Upper Orinoco and Ereré River, a tributary of the Negro River.

Countries: Brazil, Venezuela

Remarks and references: This species is so far recorded from two localities, that of the type specimens given above and the Eréré River, Amazonas, Brazil. See Weitzman & Fernandez (1989) for a discussion of these localities. This species has been exported, as an aquarium fish, into the USA and Germany as bycatch with *Paracheirodon simulans*. See Bork (1998) and Bork and Mayland (1998) for accounts of this species as an aquarium fish.

Common names: Anduzes Ziersalmler (Germany), Anduzes Zwergziersalmler (Germany), Anduzi's *Nannostomus* (USA), Miniature *Nannostomus* (USA)

***Nannostomus beckfordi* Günther, 1872**

Nannostomus beckfordi Günther, 1872: 146. Type locality: Goedverwagting, a plantation on the coast of Demerara [Guyana]. Holotype: BMNH 1871.12.28.10.

Nannostomus anomalus Steindachner, 1876: 129. Type locality: Amazonenstrome bei Obidos [Brazil]. Syntypes: (several) not found at NMW.

Nannostomus simplex Eigenmann, 1909: 42. Type locality: Lama Stop-off [Guyana]. Holotype: FMNH 52773 [ex CM 1167].

Nannostomus aripirangensis Meinken, 1931: 1, fig. Type locality: Unterwasservegetation auf der Insel Aripiranga im unteren Amazonas gefangen. [Northeast of Belém, Pará, Brazil]. Syntypes: destroyed during WWII.

Nannostomus beckfordi surinami Hoedeman, 1954: 84. Type locality: Suriname River, Berg en Dal, Suriname. Holotype: ZMA 100514a.

Maximum length: 6.5 cm SL

Distribution: South America: Natively present in the rivers of Guyana south to the Amazon basin and up the Amazon River to the Negro River.

Countries: Brazil, French Guiana, Guyana, Suriname

Remarks and references: The most recent distributional records were published by Weitzman & Weitzman (1982: fig. 229). Most recent systematic description by Weitzman (1966). Commonly exported as an aquarium fish since 1910, Stansch (1914). The courtship and other behavior was studied in detail by Caplan & Dunham (1978) and Kuenzer (1982). Probably introduced into Jaquaraípe River, east of Salvador, Bahia Brazil, Géry (1977) and definitely introduced into baía de Guanabara, Rio de Janeiro, Bizerril & Lima (2001). This species is commonly exported as an aquarium fish from Peru and Guyana. There is considerable geographic variation in populations of this species.

Common names: Anomalous pencilfish (USA), Aripiranga pencilfish (USA), Brown pencilfish (USA), Golden pencilfish (USA), Längsband-Ziersalmler (Germany), Poisson-crayon (French Guiana), Roter Ziersalmler (Germany), Ti-yaya (French Guiana)

***Nannostomus bifasciatus* Hoedeman, 1954**

Nannostomus bifasciatus Hoedeman, 1954: 85, fig. Type locality: Berg en Dal at Suriname River, Suriname. Holotype: ZMA 100513 (apparently lost).

Maximum length: 3.4 cm SL

Distribution: South America: Coastal rivers of Suriname and French Guiana.

Countries: Brazil, French Guiana, Suriname

Remarks and references: The most recent distributional records were published by Weitzman & Weitzman (1982: fig. 229). Most recent systematic description by Weitzman (1966). Occasionally exported as an aquarium fish, Weitzman et al. (2001).

Common names: Double striped pencilfish (USA), Poisson-crayon (French Guiana), Ti-yaya (French Guiana), Whiteside pencilfish (USA), Zweistreifen-Ziersalmler (Germany)

***Nannostomus britskii* Weitzman, 1978**

Nannostomus britskii Weitzman, 1978: 5, fig. 3. Type locality: Brazil, State of Amazonas, an igarapé of Lago José-Açu, Parintins, Amazon River. Holotype: MZUSP 7795.

Maximum length: 2.4 cm SL

Distribution: South America: Known from two localities in Brazil, the type locality and Aripuana River, Castanhal Island, Amazonas State.

Countries: Brazil

Remarks and references: This species has never been exported as an aquarium fish.

Common names: Spotstripe pencilfish (USA)

***Nannostomus digrammus* (Fowler, 1913)**

Poecilobrycon digrammus Fowler, 1913: 525, fig. 5. Type locality: Rio Madeira ca. 200 mi. east of 62°20'W, Brazil. Holotype: ANSP 39189.

Maximum length: 2.76 cm SL

Distribution: South America: Madeira River, lower and middle Amazon River, and Guyana.

Countries: Brazil, Guyana

Remarks and references: The latest systematic description is by Weitzman (1966). Occasionally exported as an aquarium fish, usually as bycatch, Weitzman et al. (2001), Bork & Mayland (1998).

Common names: Two striped *Nannostomus* (USA), Zweibinden Ziersalmler (Germany), Zweistreifen-Ziersalmler (Germany)

***Nannostomus eques* Steindachner, 1876**

Nannostomus eques Steindachner, 1876: 126, pl. 9 (fig. 3). Type locality: No exact designation, given as: Das Wiener Museum erhielt diese schöne Art in mehreren Exemplaren aus dem Amazoneustrome auf peruanischem Gebiete oberhalb Tabatinga [Brazil]. Syntypes: NMW 56513 (5).

Poecilobrycon auratus Eigenmann, 1909: 43. Type locality: Konawaruk [Guyana]. Holotype: FMNH 52768 [ex CM 1161].

Maximum length: 5 cm TL

Distribution: South America: Central and upper Amazon River basin.

Countries: Brazil, Peru

Remarks and references: The most recent reference to distribution is by Weitzman & Weitzman (1982), but due to a printer's error fig. 22.12 provides the correct distribution for *Nannostomus eques*, not fig. 22.13. The most recent systematic description by Weitzman (1966). This species is commonly exported as an aquarium fish from Brazil, Peru and Guyana. Most recent systematic description is by Weitzman (1966). Commonly exported as an aquarium fish since 1910, Stansch (1914).

Common names: Brown pencilfish (USA), Diptail pencilfish (USA), Spitzmaul-Ziersalmler (Germany), Tubemouth pencilfish (USA)

***Nannostomus espei* (Meinken, 1956)**

Poecilobrycon espei Meinken, 1956: 31, fig. Type locality: None provided. Lectotype: SU 51593, designated by Weitzman (1966).

Maximum length: 2.8 cm SL

Distribution: South America: Mazaruni River basin in Guyana.

Countries: Guyana

Remarks and references: The most recent distributional records were published by Weitzman & Weitzman (1982: fig. 229). Most recent systematic description by Weitzman (1966). Locality records including the locality of the original collections are discussed by Weitzman & Cobb (1975). Occasionally exported as an aquarium fish, Weitzman et al. (2001) and Bork & Mayland (1998).

Common names: Barred pencilfish (USA), Barren-Ziersalmler (Germany), Espei's pencilfish (USA), Espes Ziersalmler (Germany), Gebänderter Ziersalmler (Germany)

***Nannostomus harrisoni* (Eigenmann, 1909)**

Archicheir minutus Eigenmann, 1909: 46. Type locality: Canal at Christianburg [Guyana]. Holotype: FMNH 52786 [ex CM 1186].

Poecilobrycon harrisoni Eigenmann, 1909: 43. Type locality:

Canal at Christianburg [Guyana]. Holotype: FMNH 52767 [ex CM 1160].

Maximum length: 4.5 cm SL

Distribution: South America: Demerara River basin.

Countries: Guyana

Remarks and references: The most recent distributional records were published by Weitzman & Weitzman (1982: fig. 229). Most recent systematic descriptions are by Weitzman (1966) and Weitzman & Cobb (1975). Weitzman & Cobb (1975) published photographs of growth stages of juveniles demonstrating that *Archicheir minutus* is a juvenile of *Nannostomus harrisoni*. Occasionally exported as an aquarium fish, Weitzman et al. (2001).

Common names: Blackstripe pencilfish (USA), Goldbinden-Ziersalmler (Germany), Harrison's pencilfish (USA)

***Nannostomus limatus* Weitzman, 1978**

Nannostomus limatus Weitzman, 1978: 9, fig. 6. Type locality: Brazil, State of Pará in Igarapé tributary to Lago Marapar, near Santarém, Amazon River. Holotype: MZUSP 8486.

Maximum length: 3.6 cm SL

Distribution: South America: Amazon River basin near Santarém.

Countries: Brazil

Remarks and references: See Remarks and references under *Nannostomus nitidus* below.

Common names: Elegant pencilfish (USA)

***Nannostomus marginatus* Eigenmann, 1909**

Nannostomus marginatus Eigenmann, 1909: 41. Type locality: Maduni Creek [Guyana]. Holotype: FMNH 53550 [ex CM 1171].

Nannostomus marginatus picturatus Hoedeman, 1954: 87. Type locality: A ditch near Zanderij II, Suriname. Holotype: ZMA 100324a.

Maximum length: 3.5 cm TL

Distribution: South America: Lower to middle Amazon River, Colombia east of the Andes, Guyana, Peru east of the Andes, Suriname and Venezuela east of the Andes.

Countries: Brazil, Colombia, Guyana, Peru, Suriname

Remarks and references: The most recent reference to distribution is by Weitzman & Weitzman (1982), but due to a printer's error fig. 22.10 provides the correct distribution for *Nannostomus trifasciatus*, not fig. 22.11. The most recent systematic description by Weitzman (1966). Weitzman et al. (2001) most recently discussed the geographical color forms of this species.

Common names: Dwarf pencilfish (USA), Zwerdziersalmler (Germany)

***Nannostomus marilynae* Weitzman & Cobb, 1975**

Nannostomus marilynae Weitzman & Cobb, 1975: 29, fig. 28. Type locality: Brazil, Rio Negro, rock pools below rapids, São Gabriel. Holotype: CAS-SU 50238.

Maximum length: 5 cm TL

Distribution: South America: Negro and Vichada River basins.

Countries: Brazil, Colombia

Remarks and references: Occasionally exported as an aquarium fish, mostly as bycatch with *Paracheirodon axelrodi*.

Common names: Greenstripe pencilfish (USA), Marilyn's pencilfish (USA), Marylins Ziersalmler (Germany)

***Nannostomus minimus* Eigenmann, 1909**

Nannostomus minimus Eigenmann, 1909: 42. Type locality: Erukin [Guyana]. Holotype: FMNH 52771 [ex CM 1165].

Maximum length: 2.3 cm SL

Distribution: South America. Potaro and Mazaruni River basins.

Countries: Guyana

Remarks and references: The most recent distributional records were published by Weitzman & Weitzman (1982: fig. 229). The most recent systematic description is by Weitzman & Cobb (1975). Occasionally exported as an aquarium fish with various

small tetragonopterines and *Nannostomus espeii* from Guyana. This species is now the second smallest species of *Nannostomus*, the smallest being *Nannostomus anduzei*. See Weitzman et al. (2001) and Bork & Mayland (1998).

Common names: Least pencilfish (USA)

***Nannostomus mortenthaleri* Paepke & Arendt, 2001**

Nannostomus marginatus mortenthaleri Paepke & Arendt, 2001: 114. Type locality: Peru, departamento of Loreto, province of Maynas (previously the province of Iquitos), administrative district of Santa Maria, small tributary of Rio Nanay at village of Alvarenga (before Puerto Alianza), about 130 km (air distance) west of Iquitos, 74°25'40"W, 3°31'10"S. Holotype MUSM: 17719.

Maximum length: 2.9 cm SL

Distribution: South America: Nany River near Albarenga and apparently Tigre River near Santa Elena, in Loreto Department.

Countries: Peru

Remarks and references: In the original description Paepke & Arendt (2001) described this fish as a subspecies, *Nannostomus marginatus mortenthaleri*. However, they provide several characters that can be used to clearly distinguish this species from the various geographical color "forms" of *Nannostomus marginatus* that so far are not recognized as species. We have a paper in preparation discussing and illustrating these characters in detail, but some of these features were illustrated and discussed by Paepke & Arendt (2001) and are as follows: several aspects of both live and preserved color patterns and the number of cups on the teeth of the jaws as well as the number of teeth on the various jaw bones. One prominent character not mentioned by Paepke & Arendt (2001) was mentioned and illustrated by Weitzman & Weitzman (2002) and that is the relatively thickened anal-fin rays of sexually mature males of *Nannostomus mortenthaleri* compared to those of the female of that species. Whereas the anal fin rays of the various color "forms" of *Nannostomus marginatus*, whereas the various color "forms" of *Nannostomus marginatus* have the anal-fin rays of sexually mature specimens of both sexes about equal in thickness. Furthermore, in sexually mature males of *Nannostomus mortenthaleri* the supporting structures of the anal fin are highly sexually dimorphic. Thus the ossified proximal ends of each of five of the posterior anal-fin rays are fused to and continuous with elongate ossified tendons that extend between and are attached to the large erector anales muscles. These muscles in turn originate on enlarged saggittally expanded bony plates of the supporting pterygiophores. In sexually active male *Nannostomus marginatus* and males of most other species of *Nannostomus* only a very short bony extension attaches to a strong ligament extending between and to the erector anales muscles of the posterior anal-fin rays. Compare figs. 9 and 10 in Weitzman & Weitzman (2002).

Common names: Coral red pencilfish (USA), Purpurrziersalmler (Germany), Red penciffish (England).

***Nannostomus nitidus* Weitzman, 1978**

Nannostomus nitidus Weitzman, 1978: 3, fig. 1. Type locality: Brazil, State of Pará, Igarapé Candiru-Mirim, near Badajós, Rio Capim. Holotype: MZUSP 12920.

Maximum length: 3.5 cm SL

Distribution: South America: Capim River basin in Pará State.

Countries: Brazil

Remarks and references: The most recent distributional records were published by Weitzman & Weitzman (1982: fig. 229). Zarske (1993) noted that eleven aquarium bred specimens best identified as *Nannostomus nitidus* had an adipose fin and some did not, although their wild caught parents had this fin. All specimens described by Weitzman (1978) had this fin. Because of the similarity in many other characters between *Nannostomus nitidus* and *Nannostomus limatus* Weitzman (1978), a species without an adipose fin, Zarske (1993) opened the question of the

differences between these two species. There remain some differences between these species as designated by Weitzman (1978), for example *Nannostomus nitidus* lacks a tertiary stripe and has 2-3 inner dentary teeth while *Nannostomus limatus* has the opposite of these features. Solution of this problem must await statistical analyses of several characters using extensive collections from their native habitat of these tentatively distinct species. Occasionally exported as an aquarium fish, Weitzman et al. (2001).

Common names: Schmuckziersalmmler (Germany), Shining pencilfish (USA)

***Nannostomus trifasciatus* Steindachner, 1876**

Nannostomus trifasciatus Steindachner, 1876: 123, pl. 9 (fig. 2). Type locality: Amazonenstrome bei Tabatinga [Brazil]. Syntypes: NMW 56522-23 (3, 5).

Poecilobrycon erythrurus Eigenmann, 1909: 44. Type locality: Rockstone sandbank [Guyana]. Holotype: FMNH 52774 [ex CM 1168].

Poecilobrycon vittatus Ahl, 1934: 124. Type locality: Pará [Brazil]. Syntypes: ZMB 20791 (5).

Maximum length: 3.3 cm SL

Distribution: South America: Peruvian, Bolivian, and Brazilian Amazon River basin, Negro River basin, and Guyana.

Countries: Bolivia, Brazil, Guyana, Peru

Remarks and references: The most recent reference to distribution is by Weitzman & Weitzman (1982), but due to a printer's error fig. 22.13 provides the correct distribution for *Nannostomus trifasciatus*, not fig. 22.10. The most recent systematic description by Weitzman (1966). This species is commonly exported as an aquarium fish from Peru and Guyana.

Common names: Dreibinden-Ziersalmmler (Germany), Threestripe pencilfish (USA)

***Nannostomus unifasciatus* Steindachner, 1876**

Nannostomus unifasciatus Steindachner, 1876: 127, pl. 9 (fig. 1). Type locality: ...zunächst der Mündung des Rio negro in kleinen Ausständenund Nebenarmen.. [Amazonas, Brazil]. Syntypes: NMW 56514 (4), 58741 (3).

Poecilobrycon ocellatus Eigenmann, 1909: 45. Type locality: Wismar [Guyana]. Holotype: FMNH 52975 [ex CM 1179].

Maximum length: 3.8 cm SL

Distribution: South America: Parts of the Amazon River basin of Bolivia, Brazil, and probably Colombia; upper Orinoco basin of Venezuela, and Guyana.

Countries: Bolivia, Brazil, Guyana, Trinidad and Tobago (introduced), Venezuela

Remarks and references: The most recent reference to distribution is by Weitzman & Cobb (1975) and Weitzman & Weitzman (1982), but due to a printer's error fig. 22.13 provides the correct distribution for *Nannostomus unifasciatus*, not fig. 22.12. This species is frequently exported as an aquarium fish from at least Peru and Guyana.

Common names: Einbandsalmmler (Germany), Einbinden-Ziersalmmler (Germany), Oneline pencilfish (USA)

PIABUCINA

Piabucina Valenciennes, in Cuvier & Valenciennes, 1849: 161. Type species: *Piabucina erythrinoides* Valenciennes, 1849. Type by monotypy. Gender: feminine. *Piabucina* is the second genus in the subfamily Lebiasininae and as noted above under *Lebiasina*, it was distinguished from that genus by Valenciennes by possession of an adipose fin and in the noncellular composition of the swim bladder.

***Piabucina astrigata* Regan, 1903**

Piabucina astrigata Regan, 1903: 622. Type locality: St. Javier, Paramba and Río Sapayo, nw. Ecuador. Syntypes: BMNH 1898.4.28.164-166, BMNH 1901.3.29.71, BMNH 1902.7.29.59.

Maximum length: 16 cm SL

Distribution: South America: Northern Ecuador, southern Colombia west of Andes.

Countries: Colombia, Ecuador

Remarks and references: Found in small shallow waterways in forested areas. In young specimens this species has a series of dark spots across the body similar to those of *L. multimaculata*, suggesting a possible relationship, but the spots become less distinct in the adult, those anterior fading and some posterior joining to form bars on *P. astrigata*. In addition *multimaculata* has rows of red spots on the scales whereas on *astrigata* the spots are orange. All specimens of this species examined have an adipose fin.

***Piabucina aureoguttata* Fowler, 1911**

Piabucina aureoguttata Fowler, 1911: 513, fig. 6. Type locality: Affluent of the Chimbo River near Bucay, Guayas Prov., w. Ecuador. Holotype: ANSP 39103.

Maximum length: 12.8 cm SL

Distribution: South America: Ecuador west of Andes.

Countries: Ecuador

Remarks and references: This species may be a synonym of *P. astrigata*. Its color pattern and other characters overlap with that species and this may just be a southern extension.

***Piabucina boruca* Bussing, 1967**

Piabucina boruca Bussing, 1967: 218, fig. 3. Type locality: Stream 7.5 km south of Interamerican Highway on road to Golfito, Puntarenas, se. Costa Rica, elev. 20 m. Holotype: LACM 9239-1.

Maximum length: 11.8 cm SL

Distribution: Central America: Southwestern Costa Rica, Grande de Térraba and Coto River basins.

Countries: Costa Rica

Remarks and references: *Piabucina boruca* seems to have a limited distribution in southwestern Costa Rica, it has not been recorded from nearby areas of Costa Rica or Panama. Bussing cited southeastern Costa Rica in error.

***Piabucina elongata* Boulenger, 1887**

Piabucina elongata Boulenger, 1887: 280, pl. 23 (fig. 2). Type locality: Canelos and Sarayacu, e. Ecuador. Syntypes: BMNH 1880.12.8.123-124, BMNH 1880.12.5.255-257.

Maximum length: 14.3 cm SL

Distribution: South America: Amazon side of the Andes above 250 m elevation in Ecuador and Peru.

Countries: Ecuador, Peru

Remarks and references: It is a slender species with a narrow black stripe across the body just above the middle and a reddish color in life (color photo, Ramiro Barriga). It appears to be limited to streams above 250 m elevation in northern tributaries of the Amazon River in Ecuador and Peru. It is not recorded from streams nearby in Colombia.

Common names: Urquisho (Peru)

***Piabucina erythrinoides* Valenciennes, 1850**

Piabucina erythrinoides Valenciennes, in Cuvier & Valenciennes, 1850: 161, pl. 640. Type locality: les rivières de Maracaibo, du côté du Parija, Venezuela. Holotype: MNHN 4014

Maximum length: 16.4 cm SL

Distribution: South America: Northwestern Venezuela in the Lake Maracaibo basin and along coast north of Andes, northwestern Colombia; Venezuelan llanos.

Countries: Colombia, Venezuela

Remarks and references: Reviewed by Taphorn (1992: 468). This is a slender species with a black horizontal stripe across the mid-body ending on the caudal peduncle, a black caudal spot on the base of the caudal fin. There is a pale stripe just above the mid-body stripe and another dark stripe above extending to near the

dorsal fin. In life there are rows of yellow and orange spots, the fins are orange with white edges. It occurs in small clear water shady streams.

Common names: Carpa Criolla (Venezuela), Volador (Venezuela)

***Piabucina festae* Boulenger, 1899**

Piabucina festae Boulenger, 1899: 1. Type locality: Laguna della Pita, Darien, Panama. Holotype: ZMUT 1591.

Maximum length: 13.5 cm SL

Distribution: Central and South America: Pacific drainages of Panama and Colombia.

Countries: Colombia, Panama

Remarks and references: There are two species of *Piabucina* in the region, *P. festae* and *P. panamensis*. Graham, Kramer and Pineda (1978) used the two species in their study of the comparative respiration of an air-breathing characoid fish (*P. festae*) and a non-air-breathing one (*P. panamensis*). They report that the first species has its gas bladder modified with a specialized region in the posterior chamber while the second has no respiratory specializations. These authors report that the first is found in lowland streams and swamps, while the latter occurs in small, rocky forest streams. *P. festae* has a stocky body shape with the dark mid-body stripe common to most species limited to a narrow dark wedge across the caudal peduncle.

Common names: Candela (Colombia), Saltona (Colombia)

***Piabucina panamensis* Gill, 1877**

Piabucina panamensis Gill, 1877: 336. Type locality: Río Frijoli and a stream emptying into the Atlantic, Panama. Syntypes: USNM 16676 (1), USNM 16677 (now 1), USNM 116372 [ex 16677] (1).

Maximum length: 14.3 cm SL

Distribution: Central and South America: Panama, Atlantic and limited Pacific drainage, in northwestern Colombia.

Countries: Colombia, Panama

Remarks and references: See note above under *P. festae*. *P. panamensis* is a slender fish with a dusky band across the body that is more or less solid anterior and broken into spots posterior.

Common names: Candela (Colombia), Domini Candela (Panama), Saltona (Colombia)

***Piabucina pleurotaenia* Regan, 1903**

Piabucina pleurotaenia Regan, 1903: 623. Type locality: Merida, Venezuela, elev. 1600 m. Syntypes: BMNH 1902.7.29.91-92; BMNH 1903.4.28.39-40; BMNH 1904.6.30.19-20.

Maximum length: 16 cm TL

Distribution: South America: Mérida and Catatumbo River basins.

Countries: Colombia, Venezuela

Remarks and references: Synonym of *Piabucina erythrinoides*, Taphorn and Lilyestrom (1980: 335) and retained as *P. pleurotaenia*, a separate species (Galvis, Mojica and Camargo, 1997: 32).

***Piabucina unitaeniata* Günther, 1864**

Piabucina unitaeniata Günther, 1864: 311. Type locality: British Guiana. Holotype: BMNH 1988.2.16.1.

Maximum length: 14.6 cm SL

Distribution: South America: Western Guyana vicinity of Roraima and Gran Sabana of Venezuela.

Countries: Guyana, Venezuela

Remarks and references: It is the common *Piabucina* in the Gran Sabana highlands of southeastern Venezuela and western Guyana. Ardila Rodríguez (1999) described a new species, *Lebiasina provenzanoi* from a quebrada tributary to Tarotá River, Apongao River. It is probably a synonym of *Piabucina unitaeniata*.

Common names: Carpa criolla (Venezuela)

PYRRHULINA

Pyrrhulina Valenciennes, in Cuvier & Valenciennes, 1847: 535.

Type species: *Pyrrhulina filamentosa* Valenciennes, 1847. Type by monotypy. Gender: feminine. *Pyrrhulina* is the third genus in the tribe Pyrrhulinini (Weitzman & Cobb, 1975). The species are small, to 80 mm SL. On all species the teeth are conical, two rows on the premaxillary and dentary bones, a single row on the maxillary. The dorsal fin is placed posterior to the midbody.

Holotaxis Cope, 1870: 563. Type species: *Holotaxis melanostomus* Cope, 1870. Type by monotypy. Gender: feminine.

***Pyrrhulina australis* Eigenmann & Kennedy, 1903**

Pyrrhulina australe Eigenmann & Kennedy, 1903: 508. Type locality: Arroyo Trementina, Paraguay. Holotype: CAS 60490.

Maximum length: 5 cm SL

Distribution: South America: La Plata and Paraguay River basins north into the Guaporé River basin.

Countries: Bolivia, Brazil, Paraguay, Peru

Remarks and references: The southernmost species of *Pyrrhulina*, it occurs also in southeastern Brazil north into São Paulo State. It certainly occurs north into the Guaporé River and probably the upper Madeira, but its occurrence in Peru may be in error. Name emended to *australis* by Eigenmann (1910).

Common names: Urquisho (Peru)

***Pyrrhulina beni* Pearson, 1924**

Pyrrhulina beni Pearson, 1924: 32. Type locality: Ivon. Lower Beni. Altitude about 500 feet, Bolivia. Syntypes: CAS 60493, UMMZ 66489.

Maximum length: 5 cm SL

Distribution: South America: Southwestern Amazon River basin.

Countries: Bolivia, Brazil, Peru

Common names: Urquisho (Peru)

***Pyrrhulina brevis* Steindachner, 1876**

Pyrrhulina brevis Steindachner, 1876: 11, pl. 1 (fig. 3-4). Type locality: mouth of Rio Negro; Cudajas, Tabatinga, and Manaos, rio Negro. Syntypes: NMW 76177 (2), NMW 56963 (6), MCZ 6338 (2).

Maximum length: 7 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Remarks and references: The identification of *P. brevis* is difficult, the type series seems to include more than one species and the identification of the female cited by Myers (1927) has not yet been made. The male illustrated in Steindachner (1876) may be *Pyrrhulina zigzag* Zarske & Géry.

Common names: Urquisho (Peru)

***Pyrrhulina eleanorae* Fowler, 1940**

Pyrrhulina eleanorae Fowler, 1940: 262, fig. 59. Type locality: Contamana, Río Ucayali basin, Peru. Holotype: ANSP 68676.

Maximum length: 7.5 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Remarks and references: Known until recently only from the holotype, this species was collected in 1994 by D. Schleser in the lower Napo River and subsequently in the Iquitos region.

Common names: Urquisho (Peru)

***Pyrrhulina elongata* Zarske and Géry, 2001**

Pyrrhulina elongata Zarske and Géry, 2001: 16, fig. 1. Type locality: Brasilien, Para, Bach und kleiner Teich etwa 25 km südwestlich von Itaituba an der Strasse Itaituba – Vila Nova, Einzugsgebiet des rio Tapajós. Holotype: MZUSP 52731.

Maximum length: 3.7 mm SL.

Distribution: South America: Tapajós River basin.

Countries: Brazil

Remarks and references: Known from the 4 types in the original description.

***Pyrrhulina filamentosa* Valenciennes, 1847**

Check List of the Freshwater Fishes of South and Central America

Pyrrhulina filamentosa Valenciennes, in Cuvier & Valenciennes, 1847: 535, pl. 589. Type locality: Surinam. Holotype: MNHN 4408.

Maximum length: 8.5 cm SL

Distribution: South America: Atlantic coastal rivers between mouth of Amazon and the Orinoco rivers.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Remarks and references: As can be seen by the numerous common names shared by this and the *Copella* species, they are commonly collected together in small streams and backwaters throughout the countries listed above. *P. filamentosa* reaches a greater size than the *Copella* species.

Common names: Matoeli (Suriname), Milé-montagn (French Guiana), Milipipi (French Guiana), Mulet montagne (French Guiana), Pirá-tan-tan (Brazil), Ti-yaya (French Guiana)

***Pyrrhulina laeta* (Cope, 1872)**

Holotaxis laetus Cope, 1872: 257. Type locality: Small streams tributary to the Ambyiacu R. and the river near Pebas, eastern Ecuador [now Peru]. Holotype: ANSP 8029.

Maximum length: 7.6 cm SL

Distribution: South America: Presumed to be central and upper Amazon River basin.

Countries: Brazil (?), Peru, Trinidad and Tobago (introduced)

Remarks and references: Illustrated by Fowler (1906) already without its head, the unique holotype has no head, fins, or scales, thus certain identity is difficult. However, it is confused with other species in the literature and its identity needs to be clarified.

Common names: Urquisho (Peru)

***Pyrrhulina lugubris* Eigenmann, 1922**

Pyrrhulina lugubris Eigenmann, 1922: 231, pl. 21 (fig. 1). Type locality: Barrigón, Colombia. Holotype: CAS 78888.

Maximum length: 5 cm SL

Distribution: South America: Meta River basin and Venezuelan llanos.

Countries: Colombia, Venezuela

Remarks and references: A deep bodied species probably related to *P. brevis*.

Common names: Voladorita (Venezuela)

***Pyrrhulina macrolepis* Ahl & Schindler, 1937**

Pyrrhulina macrolepis Ahl & Schindler, 1937: 140. Type locality: San Jose, Río Pilcomayo, Formosa, Argentina. Holotype: ZMB (not found).

Maximum length: 3.52 cm SL

Distribution: South America: Pilcomayo River and perhaps into the Paraguay River basin.

Countries: Argentina

Remarks and references: Identity uncertain unless the type can be found. From the description it appears to be a small species with a low horizontal scale count, it may be a synonym of *P. australis*.

***Pyrrhulina maxima* Eigenmann & Eigenmann, 1889**

Pyrrhulina maxima Eigenmann & Eigenmann, 1889: 111, pl. 1 (fig. 4). Type locality: Tabatinga, upper Amazon. Holotype: MCZ 6343.

Maximum length: 8 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil

Remarks and references: In the original description: "Type No. 6343, one specimen .08 m. to base of caudal". That lot number now has 11 specimens plus 3 under a USNM number. None of these come close to the measurement given in the description.

***Pyrrhulina obermuelleri* Myers, 1926**

Pyrrhulina obermuelleri Myers, 1926: 150. Type locality: Iquitos, Peru. Syntypes: CAS 60498.

Maximum length: 6 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Colombia, Ecuador, Peru

Remarks and references: *P. obermuelleri* is a handsome relative of *P. brevis* with much red on the fins and body and a dark horizontal band across the body. Treated as a synonym of *Pyrrhulina brevis lugubris* (Géry, 1977: 138; Lüling, 1979: 296).

Common names: Urquisho (Peru)

***Pyrrhulina rachoviana* Myers, 1926**

Pyrrhulina rachoviana Myers, 1926: 441. Type locality: Aquarium specimens from "Rosario, Argentina." Syntypes: USNM 92970 (2).

Maximum length: 3.9 cm SL

Distribution: South America: Northern Argentina if locality is correct.

Countries: Argentina, Brazil

Remarks and references: In the aquarium literature there is a fish being given the name *rachoviana*. It seems to have been imported from the lower Amazon region of Brazil rather than from Argentina.

***Pyrrhulina semifasciata* Steindachner, 1876**

Pyrrhulina semifasciata Steindachner, 1876a: 7, pl. 1 (fig. 1-2a).

Type locality: mouth Rio Negro (Johan Natterer); Cudajas, Gurupa, Tabatinga (Thayer expedition). Syntypes: NMW 56975, MCZ 6317, NMW 56978, MCZ 6345, MCZ 6367, MCZ 6858, ZMUC 42, NMW 56976-77, NMW 56980, NMW 56986.

Maximum length: 7 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Ecuador, Guyana, Peru, Venezuela

Remarks and references: There is confusion in the literature regarding the identity of this species; Steindachner (1876) noted that it might be *P. laeta* (Cope, 1872). However *P. semifasciata* has a distinctive narrow black stripe extending across the head and onto the body almost to the dorsal fin, whereas on what remains of the type of *P. laeta* the black stripe ends just behind the head.

Common names: Urquisho (Peru)

***Pyrrhulina spilota* Weitzman, 1960**

Pyrrhulina spilota Weitzman, 1960: 109, fig. 1. Type locality: aquarium specimens said to be from Iquitos, Peru. Holotype: SU 52352.

Maximum length: 7 cm SL

Distribution: South America: Upper Amazon River basin in Peru.

Countries: Peru

Remarks and references: *P. spilota* has been collected recently in the Iquitos region. It is another easily recognized by the four dark blotches on the body, its long fins with black borders, and black markings on the anal fin as well as the dorsal fin.

Common names: Urquisho (Peru)

***Pyrrhulina stoli* Boeseman, 1953**

Pyrrhulina stoli Boeseman, 1953: 14, fig. 1d. Type locality: Marowini basin, Surinam. Holotype: RMNH 20469.

Maximum length: 6 cm SL

Distribution: South America: Suriname (?).

Countries: Suriname

Remarks and references: This species may be related to *P. semifasciata* but it does not have the extended black stripe of that species. It occurs with *P. filamentosa* and *Copella* species in small streams and backwaters in the Guianas.

***Pyrrhulina vittata* Regan, 1912**

Pyrrhulina vittata Regan, 1912: 391. Type locality: Aquarium collection, Obidos. Holotype: BMNH 1912.8.31.2.

Maximum length: 3.5 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Bolivia, Brazil, Peru

Remarks and references: *P. vittata* is a very small species. The

type is an aquarium specimen said to be from Óbidos on the lower Amazon River and not far away C. Ternetz collected a specimen near Santarém in 1925. However more recent collections have been limited to far western localities in Bolivia, Brazil and Peru. Like *P. spilota* it has black spots across the body. However there only three and these are larger and almost black.

Common names: Urquisho (Peru)

Pyrrhulina zigzag Zarske & Géry, 1997

Pyrrhulina zigzag Zarske & Géry, 1997: 12, fig. 1. Type locality: Creek on road from Campo-Verde to Nueva Requena, ca. 74°35'W, 8°30'S, near Pucallpa, Loreto Dept., Peru. Holotype: MTD F 17 705.

Maximum length: 3.5 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil, Peru

Remarks and references: This has been a popular aquarium fish for over 50 years but was just given a name in 1997. *P. zigzag* is a relatively small species with a broad, almost black zigzag band across the body. Small specimens can be confused with *Copella nigrofasciata* but in *C. nigrofasciata* the black band is straight and there is a row of red spots along its dorsal border.

Family Ctenoluciidae (Pike-characids)

Richard P. Vari

The attenuate body, elongate jaws bearing numerous relatively small teeth with posteriorly recurved teeth arranged in a single row in each jaw, and the posteriorly positioned dorsal and anal fins are features which in combination serve to unequivocally separate the Ctenoluciidae from other members of the Characiformes. The Ctenoluciidae is also distinguished within the Characiformes by a series of derived features discussed by Vari (1995). Members of the family range from moderate sized species (e.g., *Ctenolucius hujeta*; largest examined specimen 22.8 cm SL) to among the largest of New World characiforms (*Boulengerella cuvieri*; largest examined specimen 67.5 cm SL). The taxonomy, morphology, phylogenetics, and biogeography of the family were discussed by Vari (1995).

Ctenoluciids are distributed though the lowlands and lower elevation uplands to both sides of the Andean Cordilleras. *Ctenolucius* ranges from the Pacific Ocean slope rivers of western Panama, though the river systems of northwestern and northern Colombia, to the eastern tributaries of the Lago Maracaibo basin in northwestern Venezuela. *Boulengerella* is widely distributed in the Orinoco, Amazon, and Tocantins River basins and the shorter coastal rivers of Guyana, French Guiana (Guyane), and the Brazilian states of Amapá and Pará.

According to Breder (1925: 144), Miles (1941: 65) and Dahl (1971: 106) *Ctenolucius* species are predators in calm waters with immature specimens gathering together in schools and adults being solitary hunters. *Boulengerella* species are all predators, apparently feeding exclusively on fishes as adults (Goulding et al., 1988: 135, 139, 140, 144, 173). Breeding behavior of *B. cuvieri* was discussed by Santos et al. (1984: 24) and Vazzoler and Menezes (1992: 632) discussed sexual maturation and breeding season of that species.

The recent study of the family by Vari (1995) revealed only one species new to science and it is not expected that many more species await discovery.

Members of the Ctenoluciidae are important as high-level predators (Smith, 1981: 22) and are exploited in both subsistence and commercial food fishes (Santos et al., 1984) and for export in the aquarium fish trade (Castro, 1986: 3).

BOULENGERELLA

Xiphostoma Agassiz, in Spix & Agassiz, 1829: 60. Type species: *Xiphostoma cuvieri* Agassiz, 1829. Type by monotypy. Gender: neuter. Preoccupied by *Xiphostoma* Kirby & Spence, 1818, in Hemiptera, replaced by *Spixostoma* Whitley, 1951.

Boulengerella Eigenmann, 1903: 147. Type species: *Xiphostoma lateristriga* Boulenger, 1895. Type by original designation. Gender: feminine.

Spixostoma Whitley, 1951: 407. Type species: *Xiphostoma cuvieri* Agassiz, 1829. Type by being a replacement name. Gender: neuter. Replacement for *Xiphostoma* Agassiz, 1829.

***Boulengerella cuvieri* (Agassiz, 1829)**

Xiphostoma cuvieri Agassiz, in Spix & Agassiz, 1829: 79, pl. 42. Type locality: Brasiliae fluviis. Holotype: MHNN 823.

Xiphostoma ocellatum Jardine & Schomburgk, in Schomburgk, 1841: 245, pl. 23. Type locality: Essequibo R., Guyana. Lectotype: MNHN A.9853, designated by Vari (1995: 79).

Xiphostoma oseryi Castelnau, 1855: 76, pl. 40 (fig. 1). Type locality: Tocantins [=Brazil, Tocantins River]. Holotype: MNHN 4233 (head and skin).

Xiphostoma longipinne Steindachner, 1876: 132. Type locality: Mündung des Rio Negro [=mouth of Negro River]. Holotype: NMW (not found).

Maximum length: 67.5 cm SL

Distribution: South America: Amazon, Tocantins, Orinoco, Essequibo, Oyapock River basins and rivers of Amapá and Pará States.

Countries: Brazil, Colombia, French Guiana, Peru, Venezuela

Remarks and references: Redescribed with synonymy in Vari (1995: 74).

Common names: Piakoko (French Guiana), Piapoukou (French Guiana), Pirapoucou (Brazil)

***Boulengerella lateristriga* (Boulenger, 1895)**

Xiphostoma lateristriga Boulenger, 1895: 449. Type locality: Manaos [=Brazil, Manaus]. Holotype: BMNH 1893.4.24.28.

Maximum length: 25.8 cm SL

Distribution: South America: Negro River basin and southern portions of the upper Orinoco River basin.

Countries: Brazil, Venezuela

Remarks and references: Redescribed with synonymy in Vari (1995: 59).

Common names: Agujeta (Venezuela)

***Boulengerella lucius* (Cuvier, 1816)**

Hydrocynus lucius Cuvier, 1816: 168. Type locality: Brazil. Holotype: MNHN A.8601 (dry).

Hydrocynus lucius with genus originally spelled as *Hydrocyon*.

Maximum length: 42 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Brazil, Venezuela

Remarks and references: Redescribed with synonymy in Vari (1995: 69).

***Boulengerella maculata* (Valenciennes, 1850)**

Xiphostoma maculatum Valenciennes, in Cuvier & Valenciennes,

1850: 357. Type locality: Amazon. Holotype: MNHN 4232.
Xiphostoma taedo Cope, 1872: 267, pl. 13 (fig. 2). Type locality: Ambyiacu [=Ambyiacu River, Peru]. Lectotype: ANSP 7958, designated by Fowler (1907: 463).
 Maximum length: 31.9 cm SL
 Distribution: South America: Amazon, Tocantins, and Orinoco River basins.
 Countries: Brazil, Colombia, Ecuador, Peru, Venezuela
 Remarks and references: Redescribed with synonymy in Vari (1995: 63).
 Common names: Agujeta (Venezuela), Bicuda (Brazil), Gazzachallua (Peru), Picudo (Ecuador, Peru), Uena (Brazil)

***Boulengerella xyrekes* Vari, 1995**

Boulengerella xyrekes Vari, 1995: 82, figs. 46-49. Type locality: Cachoeira de Bicho-Açu, ca. 0°20'S, 65°20'W, Rio Marauíá, Rio Negro basin, Amazonas, Brazil. Holotype: MZUSP 32163.
 Maximum length: 38.2 cm SL
 Distribution: South America: Amazon and Orinoco River basins.
 Countries: Brazil, Venezuela

CTENOLUCIUS

Ctenolucius Gill, 1861: 8. Type species: *Xiphostoma hujeta* Valenciennes, 1850. Type by subsequent monotypy. Gender: masculine.
Luciocharax Steindachner, 1878: 91. Type species: *Luciocharax insculptus* Steindachner, 1878. Type by monotypy. Gender: masculine.
Belonocharax Fowler, 1907: 464. Type species: *Belonocharax beani* Fowler, 1907. Type by original designation. Gender: masculine.

***Ctenolucius beani* (Fowler, 1907)**

Belonocharax beani Fowler, 1907: 464, fig. 51. Type locality: Truando, Río Atrato basin, Isthmus of Darien, Colombia. Holotype: ANSP 16642.
Luciocharax striatus Boulenger, 1911: 212. Type locality: Boca de Calima, Chocó, southwestern Colombia, elev. 150-200 ft. Holotype: BMNH 1910.7.11.210.
 Maximum length: 28.6 cm SL
 Distribution: Central and South America: Atrato and San Juan River basins of northwestern Colombia and Pacific versant rivers of Panama as far west as the Santa Maria River basin in Veraguas Province.
 Countries: Colombia, Panama
 Remarks and references: Redescribed with synonymy in Vari (1995: 52).

***Ctenolucius hujeta* (Valenciennes, 1850)**

Xiphostoma hujeta Valenciennes, in Cuvier & Valenciennes, 1850: 358. Type locality: Rivières de Maracaibo basin, Venezuela. Lectotype: MNHN 4231, designated by Vari (1995: 52).
Luciocharax insculptus Steindachner, 1878: 91. Type locality: Río Magdalena. Lectotype: NMW 68252, designated by Vari (1995: 52).
 Maximum length: 22.8 cm SL
 Distribution: South America: Magdalena and Sinú River basins and rivers draining into Lake Maracaibo.
 Countries: Colombia, Venezuela
 Remarks and references: Redescribed with synonymy in Vari (1995: 43).
 Common names: Aguja (Colombia), Agujeta (Colombia, Venezuela), Agujeto (Colombia)

Genus and Species Incertae Sedis in Siluriformes

Carl J. Ferraris, Jr.

The family-level classification of Siluriformes presented here differs in several respects from that found in some current literature (e.g. Nelson, 1994; Eschmeyer, 1998) inasmuch as it reflects the family boundaries more widely accepted by Neotropical ichthyologists. Herein, species formerly placed in the family Ageneiosidae are now included within the Auchenipteridae; and species of the Helogenidae are now included within the Cetopsidae. The monotypic genus *Nematogenys* Girard, which had been included within the Trichomycteridae is recognized herein as the sole representative of the Nematogenyidae. The Pimelodidae includes species formerly placed in the Hypophthalmidae, but it is a much smaller family, because a large number of species formerly included in the Pimelodidae are now placed into the Heptapteridae and still others placed into the Pseudopimelodidae. A summary of the character support for these changes can be found in de Pinna (1998). One problematic species, *Conorhynchos conirostris* (Valenciennes), which was formerly included in the Pimelodidae, does not appear to belong there, or in any of the other Neotropical siluriform families (J.G. Lundberg, M.C.C. de Pinna, and F. Bockmann, pers. comm.). It is listed below as Incertae sedis at the level of the Siluriformes while its placement is under investigation.

CONORHYNCHOS

Conostome Duméril 1856: 484. Type species: *Pimelodus conirostris* Valenciennes, 1840. Type by original designation. Gender: feminine. Remarks: Possibly preoccupied by *Conostoma* Hodgson, 1842, in birds and not treated as valid in recent times. Considered a nomen oblitum.

Conorhynchus Bleeker 1858: 191, 205, 209. Type species: *Pimelodus conirostris* Valenciennes, in Cuvier & Valenciennes, 1840. Type by monotypy. Gender: neuter. New name for *Conostome* Dumeril, which is apparently preoccupied by *Conostoma* Hodgson, 1842, in birds. Name often misspelled *Conorhynchus* following the spelling in Bleeker (1863).

Conorhynchus Bleeker, 1863: 12. Type species: *Pimelodus conirostris* Valenciennes, in Cuvier & Valenciennes, 1840. Type by original designation. New spelling for *Conorhynchus*. Preoccupied by *Conorhynchus* Motschousky, 1860, in Coleoptera.

Conorhynchichthys Regan 1908: 192. Type species: *Pimelodus conirostris* Valenciennes, in Cuvier & Valenciennes, 1840. Type by being a replacement name. Gender: masculine. Replacement for *Conorhynchus* Bleeker, 1863 [= *Conorhynchus* Bleeker, 1858], preoccupied by *Conorhynchus* Motschousky, 1860.

Conorhynchos conirostris (Valenciennes, 1840)

Pimelodus conirostris Valenciennes, in Cuvier & Valenciennes, 1840: 204 [156 in Strasbourg deluxe ed.], pl. 436. Type locality: rivière de Saint-François [Brazil]. Holotype: MNHN A. 9413.

Conorhynchus glaber Steindachner 1877:637, pl. 8. Type locality: einem flusse bei Porto Seguro [Brazil]. Holotype: (?)NMW not found.

Maximum length: 53.5 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Remarks and references: Formerly placed in the Pimelodidae, but not currently thought to belong in that family.

Common names: Pirá (Brazil), Pirá-tamanduá (Brazil)

Family Diplomystidae (Velvet catfishes)

Carl J. Ferraris, Jr.

The catfish family Diplomystidae is a relatively poorly known group composed of six species of similar looking fishes. Species of this family are, however, quite famous among catfish systematists because of their position as the sister-group of all remaining catfishes. Diplomystids branched off quite early from the lineage that led to the incredible radiation of catfishes that we know today, as well as all known fossil catfishes. This early evolutionary divergence means that diplomystid catfishes lack many of the unique characteristics that are otherwise shared by catfishes and, instead, have primitive characters that were transformed in the remaining lineage. Arratia (1987) provides a thorough review of the characters of diplomystids in relation to other catfishes.

Superficially, diplomystids can be distinguished from other catfishes by the following combination of characters: body without bony plates; skin entirely covered with papillae; head with a single barbel (the maxillary barbel) at the corner of the mouth; upper jaw with teeth on both the premaxilla and maxilla; dorsal and pectoral fins with a stout spine at anterior margin; adipose dorsal fin base relatively long, its length greater than its height; and caudal fin with 18 principal fin rays.

Diplomystids are known only from the foothill-rivers of the eastern and western slopes of the Andes of Argentina and Chile, respectively. Three species are known from each side of the mountains (Arratia, 1987; Azpelicueta, 1994b), and the species on each side of the mountains appear to form monophyletic groups (Arratia, 1987). The classification presented here differs from that of the two most recent studies on the family by recognizing three species from the eastern Andes, following Azpelicueta (1994b), but placing them in their own genus, *Olivaichthys*, following the phylogenetic work of Arratia (1987).

Little is known of the biology of most species. Diplomystids were sold as food fishes in the Santiago, Chile, market at the beginning of the 20th century, but are now sufficiently rare that they are rarely captured at least one species is either endangered or extinct (Arratia, 1987). Because of their phylogenetic and their unusual morphology, diplomystids are important to systematic ichthyologists, but are of little interest to most other people.

DIPLOMYSTES

- Diplomyste* Duméril, 1856: 487. Type species: *Arius papillosus* Valenciennes, 1840. Type by monotypy. Gender: masculine. Predates *Diplomystes* Bleeker, 1858, but the latter in wide use.
- Diplomystes* Bleeker, 1858: 63. Type species: *Arius papillosus* Valenciennes, 1840. Type by monotypy. Gender: masculine.
- Diplomystax* Günther, 1864: 180. Type species: *Arius papillosus* Valenciennes, 1840. Type by original designation. Gender: masculine. Unneeded replacement for *Diplomyste* Duméril and *Diplomystes* Bleeker.

Diplomystes camposensis Arratia, 1987

- Diplomystes camposensis* Arratia, 1987: 44, fig. 19. Type locality: Lago Riñihue, Chile. Holotype: IZUA 3302. Maximum length: 25 cm TL. Distribution: South America: Valdivia region, southern Chile. Countries: Chile. Common names: Bagre (Chile), Tollo (Chile).

Diplomystes chilensis (Molina, 1782)

- Silurus chilensis* Molina, 1782: 225. Type locality: Chile. Type(s): whereabouts unknown.
- Arius papillosus* Valenciennes in Cuvier & Valenciennes, 1840: 118 [88 in the Strasbourg deluxe ed.], pl. 431. Type locality: Rivières de Valparaíso et de San Jago du Chili. Syntypes: MNHN B.584 (1), B.585 (4), MNHN uncat. (skeleton, missing).
- Arius cacharioides* Leybold, 1859: 1083, pls. 1-2. Type locality: Ad thermos Colina, dictas in flumine, Río Seco (Chile). Syntypes

(100): whereabouts unknown.

- ?*Arius micropterus* Philippi, 1866: 713. Type locality: (Chile). Type(s): whereabouts unknown.
- Arius squalus* Philippi, 1866: 713. Type locality: Peine, Santiago, Chile. Type(s): whereabouts unknown.
- ?*Arius synodon* Philippi, 1866: 714. Type locality: (Chile). Type(s): whereabouts unknown.
- ?*Arius villosus* Philippi, 1866: 712. Type locality: (Chile). Type(s): whereabouts unknown.
- Maximum length: 23 cm TL. Distribution: South America: Rivers near Valparaíso and Santiago, central Chile. Countries: Chile. Remarks and references: Redescribed in Arratia (1987); either extinct or endangered. Common names: Bagre (Chile), Tollo (Chile), Tollo de agua dulce (Chile).

Diplomystes nahuelbutaensis Arratia, 1987

- Diplomystes nahuelbutaensis* Arratia, 1987: 33, fig. 11. Type locality: Río Cautín, Lautaro, Chile. Holotype: CAS 55423. Maximum length: 26 cm TL. Distribution: South America: Bío-Bío River basin and Loncomilla River. Countries: Chile. Common names: Bagre (Chile), Tollo (Chile). Remarks and references: Biological notes in Ruiz & Berra (1994).

OLIVAICHTHYS

Olivaichthys Arratia, 1987: 66. Type species: *Diplomystes viedmensis* MacDonagh, 1931. Type by original designation. Gender: masculine. Key to species (as Argentine species of *Diplomystes*) in Azpelicueta (1994a), redescription of species in Azpelicueta (1994b).

***Olivaichthys cuyanus* (Ringuet, 1965)**

Diplomystes viedmensis cuyanus Ringuet, 1965: 91. Type locality: Arroyo Yaucha (Vilucó, Mendoza) [Argentina]. Holotype: MLP 286 [ex MLP 13-v-32-3].

Maximum length: 21.8 cm SL

Distribution: South America: Colorado River and tributaries; Desaguadero-Salado River basin, including the rivers San Juan, Mendoza, Tunuyán and temporary environments connected to those rivers.

Countries: Argentina

Remarks and references: First regarded as a valid species in Azpelicueta (1994a), redescribed in Azpelicueta (1994b).

***Olivaichthys mesembrinus* (Ringuet, 1982)**

Diplomystes viedmensis mesembrinus Ringuet, 1982: 349, figured on p. 350. Type locality: Desembocadura del Río Senguer en el lado Musters (45°60'S, 49°10'W) [Chubut, Argentina]. Holotype: ILPLA 8452.

Maximum length: 16.8 cm SL

Distribution: South America: Chubut and Senguer River basins.

Countries: Argentina

Remarks and references: First regarded as a valid species in Azpelicueta (1994a), redescribed in Azpelicueta (1994b).

***Olivaichthys viedmensis* (MacDonagh, 1931)**

Diplomystes viedmensis MacDonagh, 1931: 65. Type locality: río Negro, Argentina, frente a Viedma. Holotype: MLP 214 [ex MLP 19-III-31-3].

Maximum length: 32.4 cm SL

Distribution: South America: Negro River and tributaries in Argentina.

Countries: Argentina

Remarks and references: Redescribed in Azpelicueta (1994b).

Common names: Atún (Argentina), Bagre aterciopelado (Argentina), Gatuno (Argentina), Otuno (Argentina)

Family Cetopsidae (Whale catfishes)

Richard P. Vari and Carl J. Ferraris, Jr.

The family Cetopsidae consists of small to moderate sized fishes which share an anal fin with a long base, a lack of spines in the pectoral and dorsal fins other than in a few species of the subfamily Cetopsinae, and the lack of a nasal barbel, a free orbital margin and bony plates on the body. The two subfamilies of the Cetopsidae, the Cetopsinae and Helogeninae have been traditionally recognized at the family level, but were shown to be each other's sister group by de Pinna and Vari (1995) and brought together in an expanded Cetopsidae.

The members of the subfamily Cetopsinae have smooth bodies lacking body plates or an adipose fin and reduced or absent dorsal and pelvic-fin species and eyes. In trans-Andean South America cetopsines are found along the Pacific slope from the Jurubidá River of Colombia south to the Tumbes River of northern Peru. Along the Caribbean trans-Andean versant species of cetopsines occur from the Sinú River of northwestern Colombia east to the Lago Maracaibo basin of northwestern Venezuela. East of the Andean Cordilleras, the Cetopsinae occurs in the Aroa and Yaracuy River basins along the Caribbean versant of northern Venezuela, through the Orinoco River system and the coastal rivers of the Guianas, south through the Amazon basin to the southern portions of the La Plata River basin. Cetopsines also occur in the Juquia River basin of the state of São Paulo and the São Francisco River basin of eastern Brazil.

The species of the Helogeninae have the body naked and lacking body plates with the adipose fin usually present, but reduced or absent in some populations of one species, the dorsal and pectoral fins lack spines and an elongate base on the anal fin. The species of the single contained genus, *Helogenes*, occur through much of the Amazon basin, the southern portions of the Orinoco River basin, the coastal rivers of the Guianas, and at least the lower portions of the Tocantins River.

Helogenes species feed on allochthonous terrestrial insects, a food habit also shared with most species in the Cetopsinae. The larger cetopsine species of the genera *Cetopsis* and *Hemicetopsis* are notorious for their feeding habits; attacking not only carrion, but also live fishes in gill-nets (Barthem and Goulding, 1997:44) and on occasion humans (Goulding, 1989:185). Some members of the family have been erroneously thought to be parasitic.

The species-level taxonomy of the Helogeninae was treated by Vari and Ortega (1986). Several of the species recognized in that study have limited known distributions and it is possible that additional geographically restricted *Helogenes* species remain to be discovered. Ongoing revisionary and phylogenetic studies of the Cetopsinae indicate that a number of cetopsine species remain undescribed and that present generic limits will need to be modified.

BATHYCETOPSIS

Bathycetopsis Lundberg & Rapp Py-Daniel, 1994: 382. Type species: *Bathycetopsis oliveirai* Lundberg & Rapp Py-Daniel, 1994. Type by original designation Gender: feminine.

Bathycetopsis oliveirai Lundberg & Rapp Py-Daniel, 1994

Bathycetopsis oliveirai Lundberg & Rapp Py-Daniel, 1994: 383, figs. 1, 3-4. Type locality: Brazil, Amazonas State, Rio Solimões north of Ilha da Marchantaria, approximately 15 km upstream of the mouth of Rio Negro at Manaus, approximately 15 m depth, 3°15'S, 60°00'W. Holotype: INPA 4439.

Maximum length: 3.6 cm SL

Distribution: South America: Middle and upper Amazon River basin.

Countries: Brazil, Peru

CETOPSIS

Cetopsis Spix & Agassiz, 1829: 11. Type species: *Silurus coecutiens* Lichtenstein, 1819. Type by subsequent designation by Bleeker (1862b: 16). Gender: feminine.

Cetopsis coecutiens (Lichtenstein, 1819)

Silurus coecutiens Lichtenstein, 1819: 61. Type locality: Brazil. Holotype: whereabouts unknown.

Silurus caecutiens Günther, 1864: 199. Type locality: Brazil. Holotype: whereabouts unknown. Unjustified emendation of *Silurus coecutiens* Lichtenstein, 1819.

Maximum length: 26.5 cm SL

Distribution: South America: Amazon, Tocantins, and Orinoco River basins.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru, Venezuela

Common names: Bagre ciego (Colombia, Venezuela), Candiru (Brazil), Candiru-açú (Brazil), Ciego (Ecuador), Piracatinga (Brazil)

Cetopsis parma Oliviera, Vari, & Ferraris, 2001

Cetopsis parma Oliviera, Vari & Ferraris, 2001: 575, fig. 1. Type locality: Peru. Departamento de Ucayali, Provincia Coronel Portillo. Río Tambo, Río Ucayali basin, Pucallpa, Atalaya (8°23'S, 74°32'W). Holotype: MUSM 2266.

Maximum length: 17 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Ecuador, Peru

DENTICETOPSIS

Denticetopsis Ferraris, 1996: 162. Type species: *Denticetopsis sauli* Ferraris, 1996. Type by original designation. Gender: feminine.

***Denticetopsis royeri* Ferraris, 1996**

Denticetopsis royeri Ferraris, 1996: 167, figs. 4, 12. Type locality: Venezuela: Estado Amazonas, Caño Chola at crossing of San Carlos de Río Negro to Solano Road, 1°58'N, 67°00'W. Holotype: MBUCV-V-26785 [ex USNM 268643].

Maximum length: 1.8 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Venezuela

***Denticetopsis sauli* Ferraris, 1996**

Denticetopsis sauli Ferraris, 1996: 164, figs. 3, 11. Type locality: Venezuela, Estado Amazonas, Outflow stream from series of morichales, ca. 5.0 km from mouth of Río Pamoni, 2°48'N, 65°53'W. Holotype: MBUCV-V-20300.

Maximum length: 2.1 cm SL

Distribution: South America: Around mouth of Pamoni River.

Countries: Venezuela

HELOGENES

Helogenes Günther, 1863: 443. Type species: *Helogenes marmoratus* Günther, 1863. Type by monotypy. Gender: masculine.

Leyvaichthys Dahl, 1960: 302. Type species: *Leyvaichthys castaneus* Dahl, 1960. Type by original designation. Gender: masculine. Spelled *Leyvaichthys* in one place, priority established by first reviser action of Eschmeyer & Bailey (in Eschmeyer, 1990: 221).

***Helogenes castaneus* (Dahl, 1960)**

Leyvaichthys castaneus Dahl, 1960: 303. Type locality: Small pond in a brook tributary to the Guayabero River, approx. one kilometer from the mouth of the brook, and 1500 meters from the expedition Camp N° I, situated on the left bank of the Guayabero about 4 kilometers from Camp Thompson, Colombia. Holotype: missing.

Maximum length: 4.7 cm SL

Distribution: South America: Upper Orinoco, Guaviare and Meta River basins.

Countries: Colombia

***Helogenes gouldingi* Vari & Ortega, 1986**

Helogenes gouldingi Vari & Ortega, 1986: 7, fig. 3. Type locality: Brazil. Amazonas: Igarapé, 15 km from Humaitá along Rio Madeira (7°31'S, 63°02'W). Holotype: MZUSP 28854.

Maximum length: 4.7 cm SL

Distribution: South America: Madeira River basin.

Countries: Brazil

***Helogenes marmoratus* Günther, 1863**

Helogenes marmoratus Günther, 1863: 443. Type locality: Essequibo River, Guiana [=Guyana]. Lectotype: BMNH 1864.1.21: 83, designated by Vari & Ortega (1986: 16).

Helogenes amazonae Delsman, 1941: 80. Type locality: Manaus [=Manaus, Amazonas, Brazil]. Holotype: IRSNB 545.

Helogenes unidorsalis Glodek & Carter, 1978: 77, fig. 1. Type locality: Eastern Ecuador, Rio Bobonaza between Sarayacu and Montalvo. Holotype: FMNH 80463.

Maximum length: 7.3 cm SL

Distribution: South America: Atlantic drainages of Guianas, upper Orinoco and Negro systems and upper Amazon River basin.

Countries: Brazil, Ecuador, French Guiana, Guyana, Peru, Suriname, Venezuela

***Helogenes uruyensis* Fernández-Yépez, 1967**

Helogenes marmoratus uruyensis Fernández-Yépez, 1967: 166,

pls. 2, 3 (fig. 2). Type locality: Río Uruyén, Venezuela. Holotype: AFY 56613 (apparently lost, Vari & Ortega 1986: 13).

Maximum length: 4.3 cm SL

Distribution: South America: Uruyén River basin.

Countries: Venezuela

HEMICETOPSIS

Hemicetopsis Bleeker, 1862a: 403. Type species: "*Cetopsis candira* Agassiz" [= *Cetopsis candiru*, Spix & Agassiz, 1829]. Type by monotypy. Gender: feminine.

***Hemicetopsis candiru* (Spix & Agassiz, 1829)**

Cetopsis candiru Spix & Agassiz, 1829: 13, pl. 10 (fig. 1). Type locality: Brasiliae aequatorialis fluviis [=Equatorial rivers of Brazil]. Syntypes: MHNG 210.05 (1), MHNN 735-7 (3) Name first appeared in Cuvier (1829) as nomen nudum.

Cetopsis spixii Swainson, 1839: 308. Type locality: Brasiliae aequatorialis fluviis. Unneeded replacement for *Cetopsis candiru* Spix & Agassiz, 1829.

Maximum length: 26.3 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Ecuador, Peru

Common names: Canero (Peru), Ciego (Ecuador)

PARACETOPSIS

Paracetopsis Bleeker, 1862b: 16. Type species: *Paracetopsis bleekeri* Bleeker, 1862. Type by original designation. Gender: feminine.

Paracetopsis Eigenmann & Bean, 1907: 615. Type species: *Cetopsis occidentalis* Steindachner, 1880. Type by original designation. Gender: feminine. Preoccupied by *Paracetopsis* Bleeker 1862: 16.

Cetopsogiton Eigenmann & Bean in Eigenmann, 1910: 398. Type species: *Cetopsis occidentalis* Steindachner, 1880. Type by original designation. Gender: masculine.

***Paracetopsis bleekeri* Bleeker, 1862**

Paracetopsis bleekeri Bleeker, 1862b: 16. Type locality: Not stated. Type(s): MNHN (Not found).

Cetopsis ventralis Gill, 1870: 95. Type locality: Maranon or upper Amazon, and Napo Rivers [in error, actually rivers of southwestern Ecuador]. Holotype: USNM 8307.

Cetopsis occidentalis Steindachner, 1880: 99, pl. 8 (figs. 2, 2a). Type locality: Guayaquil [Ecuador]. Holotype: NMW.

Maximum length: 24.2 cm SL

Distribution: South America: Pacific versant, Guayas River basin.

Countries: Ecuador

Common names: Bagre ciego (Ecuador), Ciego (Ecuador)

PSEUDOCETOPSIS

Pseudocetopsis Bleeker, 1862a: 403. Type species: *Cetopsis gobioides* Kner, 1858. Type by monotypy. Gender: feminine.

***Pseudocetopsis amphiloxa* (Eigenmann, 1914)**

Hemicetopsis amphiloxus Eigenmann in Eigenmann, Henn & Wilson, 1914: 14. Type locality: Creek near San Lorenzo [Río] Patía basin, Colombia. Holotype: FMNH 56519 [ex CM 5332].

Maximum length: 18.8 cm SL

Distribution: South America: Pacific versant, Patía, upper San Juan and Atrato River basins of western Colombia, and rivers of northwestern Ecuador.

Countries: Colombia

***Pseudocetopsis baudoensis* Dahl, 1960**

Pseudocetopsis baudoensis Dahl, 1960: 452, figured on p. 453. Type locality: Quitasol, Baudó, western Colombia. Holotype: ICNMHN 118.

Maximum length: 18.7 cm SL

Distribution: South America: Pacific versant, Baudó River basin.
Countries: Colombia

***Pseudocetopsis gobioides* (Kner, 1858)**

Silurus pygmaeus Natterer in Kner, 1858: 408. Type locality: Not available, name mentioned in the synonymy of *Cetopsis gobioides*.

Cetopsis gobioides Kner, 1858: 407, pl. 6 (fig. 16). Type locality: Irisanga, Brazil. Syntypes: possibly NMW 47378 (2)

Cetopsis chalmersi Norman, 1926: 116. Type locality: Rio das Velhas about 32 miles north of Bello (=Belo) Horizonte, Brazil. Syntypes: BMNH 1925.10.1.4 (1), 1925.1.12.2-3 (2)

Maximum length: 10.9 cm SL

Distribution: South America: Upper São Francisco, Paraná and Uruguay River basins.

Countries: Argentina, Brazil, Paraguay, Uruguay

Common names: Candiru-açu (Brazil)

***Pseudocetopsis jurubidae* Fowler, 1944**

Pseudocetopsis jurubidae Fowler, 1944: 235, figs. 7-9. Type locality: Clear waters of Rio Jurubidá, Nuquí, Colombia. Holotype: ANSP 71430.

Maximum length: 9 cm SL

Distribution: South America: Jurubidá River basin.

Countries: Colombia

***Pseudocetopsis macilentus* (Eigenmann, 1912)**

Hemicetopsis macilentus Eigenmann, 1912b: 211, pl. 23 (fig. 1). Type locality: Creek below Potaro Landing, British Guiana [=Guyana]. Holotype: FMNH 53260 [ex CM 1726].

Maximum length: 6.7 cm SL

Distribution: South America: Essequibo River basin.

Countries: Guyana

***Pseudocetopsis minuta* (Eigenmann, 1912)**

Hemicetopsis minutus Eigenmann, 1912b: 211, pl. 23 (fig. 2). Type locality: Amatuk Cataract, British Guiana [= Guyana]. Holotype: FMNH 53262 [ex CM 1728].

Maximum length: 4.9 cm SL

Distribution: South America: Coastal rivers of northern South America between Amazon and Orinoco Rivers.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

***Pseudocetopsis morenoi* (Fernández-Yépez, 1972)**

Hemicetopsis morenoi Fernández-Yépez, 1972: 19. Type locality: Río Aguaro, 1 km. abajo del paso Garcerito al Oeste franco de Santa Rita, Estado Guárico, Venezuela. Holotype: apparently lost.

Maximum length: 4.3 cm SL

Distribution: South America: Western tributaries of Orinoco River basin.

Countries: Colombia, Venezuela

***Pseudocetopsis motatanensis* Schultz, 1944**

Pseudocetopsis plumbeus motatanensis Schultz, 1944: 255, pl. 5 (fig. B). Type locality: Río Motatán, 4 km. above Motatán, Venezuela. Holotype: USNM 121265.

Maximum length: 15.5 cm SL

Distribution: South America: Lago Maracaibo basin.

Countries: Colombia, Venezuela

Common names: Ciego (Colombia)

***Pseudocetopsis orinoco* Schultz, 1944**

Pseudocetopsis plumbeus orinoco Schultz, 1944: 253, pl. 5 (fig. A). Type locality: Río Torbes, 1 km. above Táriba [Río] Orinoco system, Venezuela. Holotype: USNM 121263.

Maximum length: 9.4 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Common names: Bagre ciego (Venezuela)

***Pseudocetopsis othonops* (Eigenmann, 1912)**

Hemicetopsis othonops Eigenmann, 1912a: 17. Type locality: Girardot, Colombia. Holotype: FMNH 56040 [CM 4830].

Maximum length: 11 cm SL

Distribution: South America: Magdalena and Sinu River basins.

Countries: Colombia

Common names: Babosa (Colombia), Bobo (Colombia), Ciego (Colombia)

***Pseudocetopsis plumbea* (Steindachner, 1882)**

Cetopsis plumbeus Steindachner, 1882a: 178. Type locality: Canelos [Ecuador]. Syntypes: NMW 47381 (3). Species illustrated and described in more detail in Steindachner (1882b: 31, Pl. 6, fig. 3).

Cetopsis macroteronema Boulenger, 1898: 8. Type locality: Rio Zamora, Equateur oriental [= eastern Ecuador]. Syntypes: BMNH 1898.11.4.11 (1), ZMUT 1548 (1)

Maximum length: 11.8 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Ecuador, Peru

Common names: Canero (Peru), Ciego (Ecuador)

***Pseudocetopsis praecox* Ferraris & Brown, 1991**

Pseudocetopsis praecox Ferraris & Brown, 1991: 162, fig. 1. Type locality: Neblina base camp, Río Mawarinuma of the Río Baria drainage, Territorio Federal Amazonas, southern Venezuela, 0°55'N, 66°10'W, elevation 120 m. Holotype: AMNH 74446.

Maximum length: 5.29 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Venezuela

Family Aspredinidae (Banjo catfishes)

John P. Friel

The Aspredinidae are commonly known as banjo catfishes because of their distinctive body shape (a broad depressed head and body followed by a slender caudal peduncle), which is thought to resemble a banjo. Aspredinids can be readily distinguished from other Neotropical catfishes by several external features including: overall body shape, roughened skin covered by keratinized tubercles often arranged in parallel rows along the body, opercular openings restricted to small slits, lack of a rigid dorsal spine in most species, lack of an adipose fin, and 10 or fewer caudal-fin rays. In general, most species are cryptically pigmented, benthic and sluggish unless disturbed. Many species bury themselves shallowly in loose substrates. When handled, some species produce stridulatory sounds while abducting and adducting their pectoral spines just like doradid catfishes.

Banjo catfishes are endemic to South America and are widely distributed throughout most tropical river systems in this area (e.g., Magdalena, Orinoco, Amazon, São Francisco and Paraguay-Paraná), several smaller rivers west of the Andes (Atrato, San Juan, and Patia) as well as brackish and marine waters between the Orinoco and Amazon River deltas. They may be found in habitats ranging from shallow backwaters to deep river channels to tidal estuaries.

Approximately 60 extant species of banjo catfishes have been described. Many of these species are now considered subjective junior synonyms. As currently recognized this family contains approximately 35 nominal species placed in 13 genera (Friel, 1994). Given the cryptic nature and small size of some aspredinids it is likely many species await future discovery particular from habitats such as river channels. This author is aware of several undescribed species in the genus *Bunocephalus* and tribe Hoplomyzontini.

Despite the relatively small number of species in this family as compared to other catfish families, aspredinids are quite morphologically diverse. They range from miniature armored species such as *Micromyzon akamai*, less than 1.6 cm SL, to large elongate species such as *Aspredo aspredo*, reaching up to 38 cm SL. Since most species are under 15 cm in length, aspredinids are of little or no commercial interest for food, however several species appear in the ornamental fish trade on a regular basis.

Very little is known about the general ecology of aspredinids. Based on this author's observations, most aspredinids appear to be generalized omnivores and stomachs examined often contain aquatic invertebrates, terrestrial insects and organic debris. One notable exception is the genus *Amaralia*. This genus apparently feeds exclusively on the egg clutches of lorica-riid catfishes and despite relatively small mouths can swallow a large mass of eggs (Friel, 1994).

Parental care occurs in some aspredinids as evidenced by specimens collected with developing embryos. Females of *Pterobunocephalus*, *Platystacus*, *Aspredo*, and *Aspredinichthys* carry their developing embryos attached to the ventral surface of their bodies. In *Pterobunocephalus*, the eggs are directly attached to the body whereas in *Platystacus*, *Aspredo*, and *Aspredinichthys* eggs are attached to fleshy stalks, called cotylephores (Friel, 1994). These cotylephores develop seasonally and are believed to function in the exchange of materials between the mother and embryos (Wetzel, Wourms & Friel, 1997).

ACANTHOBUNOCEPHALUS

Acanthobunocephalus Friel, 1995: 90. Type species: *Acanthobunocephalus nicoi* Friel, 1995. Type by original designation. Gender: masculine.

Acanthobunocephalus nicoi Friel, 1995

Acanthobunocephalus nicoi Friel, 1995: 90, fig. 1. Type locality: Río Sipapo, 200 m from Salto Remo, 4°34'N, 67°18'W, Venezuela. Holotype: MCNG 29000. Maximum length: 1.97 cm SL. Distribution: South America: Upper Orinoco River basin, including Sipapo, Ramoni and Casiquiare rivers. Countries: Venezuela

AMARALIA

Amaralia Fowler, 1954: 40. Type species: *Bunocephalus hypsiurus*

Kner, 1855. Type by original designation Gender: feminine.

Amaralia hypsiura (Kner, 1855)

Bunocephalus hypsiurus Kner, 1855: 98, pl. 1 (fig. 1). Type locality: Rio Branco [Brazil]. Syntypes: NMW 47626 (2). Maximum length: 13.3 cm SL. Distribution: South America: Amazon River basin. Countries: Bolivia, Brazil, Colombia, Ecuador, Peru. Remarks and references: See Ferraris (1991: 224) for details on generic placement of this species. In addition to the single nominal species there is an undescribed species of *Amaralia* in the Paraguay-Paraná River basin.

ASPREDINICHTHYS

Aspredinichthys Bleeker, 1858: 328, 329. Type species: *Aspredo tibicen* Valenciennes, 1840. Type by monotypy. Gender: mascu-

line. See Mees (1987) for latest revision.

Chamaigenes Eigenmann, 1910: 380. Type species: *Aspredo filamentosus* Valenciennes, 1840. Type by original designation. Gender: masculine.

***Aspredinichthys filamentosus* (Valenciennes, 1840)**

Aspredo filamentosus Valenciennes in Cuvier & Valenciennes, 1840: 437 [324 of Strasbourg deluxe ed.], pl. 450. Type locality: Cayenne [French Guiana]. Syntypes: MNHN 4401 and B-0594 (9).

Maximum length: 21.8 cm SL

Distribution: South America: Lower portions of coastal rivers and in coastal waters in Venezuela northern Brazil.

Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela

Remarks and references: See Mees (1987: 190) for detailed description.

Common names: Poson-kronkron (French Guiana)

***Aspredinichthys tibicen* (Valenciennes, 1840)**

Aspredo tibicen Valenciennes in Cuvier & Valenciennes, 1840: 438 [325 of Strasbourg deluxe ed.]. Type locality: Surinam. Holotype: RMNH 3111.

Maximum length: 21 cm SL

Distribution: South America: Lower portions of coastal rivers and in coastal waters in Venezuela to northern Brazil.

Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela

Common names: Poson-kronkron (French Guiana)

ASPREDO

Aspredo Scopoli, 1777: 453. Type species: *Silurus aspredo* Linnaeus, 1758. Gender: masculine. See Friel (1994: 86) for latest revision.

***Aspredo aspredo* (Linnaeus, 1758)**

Silurus aspredo Linnaeus, 1758: 304. Type locality: in Americae fluviis [= South America]. Syntypes: ZMUU Linn. Coll. 48 (1).

Platystacus laevis Bloch, 1794: 58. Type locality: No locality. Syntypes: ZMB 3153 (3).

Aspredo sicuephorus Valenciennes in Cuvier & Valenciennes, 1840: 439 [326 of Strasbourg deluxe ed.]. Type locality: La Mana [= Mana, French Guiana]. Holotype: MNHN 6362.

Aspredo batrachus Gronow in Gray, 1854: 137. Type locality: Tropical American rivers. No types known.

Aspredo sicyephorus Günther, 1864: 269. Type locality: Mana [= Mana, French Guiana]. Unjustified emendation of *Aspredo sicuephorus* Valenciennes, 1840.

Aspredo batrachus Bleeker, 1864: 93. Type locality: No locality.

Maximum length: 38.3 cm SL

Distribution: Western Atlantic: Lower portions of coastal rivers in Venezuela to northern Brazil.

Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela

Remarks and references: See Mees (1987: 184) for detailed description.

Common names: Poisson-kronkron (French Guiana)

BUNOCEPHALUS

Aspredo Swainson, 1838: 332. Type species: *Aspredo gronovii* Swainson, 1838. Type by monotypy. Gender: masculine. Preoccupied by *Aspredo* Scopoli, 1777.

Bunocephalus Kner, 1855: 95. Type species: *Platystacus verrucosus* Bloch, 1794. Type by subsequent designation by Bleeker (1862: 19). Gender: masculine. See Ferraris (1991: 224) for details on type species of this genus.

Bunocephalichthys Bleeker, 1858: 329. Type species: *Bunocephalichthys verrucosus* Bloch, 1794. Type by subsequent designation

by Jordan (1919: 279). Gender: masculine.

Dysichthys Cope, 1874: 133. Type species: *Dysichthys coracoideus* Cope, 1874. Type by monotypy. Gender: masculine.

Agmus Eigenmann, 1910: 379. Type species: *Bunocephalus scabriceps* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: masculine.

***Bunocephalus aleuropsis* Cope, 1870**

Bunocephalus aleuropsis Cope, 1870: 568. Type locality: Pebas, Eastern Ecuador [now Peru]. Syntypes: ANSP 8286-8288.

Bunocephalus melas Cope, 1874: 132. Type locality: Nauta [Peru]. Holotype: ANSP 21235 (in pieces).

Maximum length: 9.1 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru, Venezuela

Remarks and references: See Mees (1989: 204) for detailed description.

***Bunocephalus amaurus* Eigenmann, 1912**

Bunocephalus amaurus Eigenmann, 1912b: 126, fig. 24; pl. 2 (fig. 2). Type locality: Konawaruk [Guyana]. Holotype: FMNH 53121 [ex CM 1555].

Bunocephalus amaurus aloikae Hoedeman, 1961: 130. Type locality: Litany R., Aloiké village, French Guiana. Holotype: ZMA 102229.

Bunocephalus amaurus sipaliwini Hoedeman, 1961: 130, fig. 1. Type locality: Sipaliwini, Suriname, 20 km from frontier with Brazil. Holotype: ZMA 102228.

Maximum length: 12 cm SL

Distribution: South America: Coastal rivers between Orinoco and Amazon mouths.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Remarks and references: See Mees (1989: 216) for detailed description. Friel (1994: 81) does not consider this species as a subspecies of *B. coracoideus*. *Bunocephalus amarus* first published in Eigenmann (1910: 380) as nomen nudum.

***Bunocephalus amazonicus* (Mees, 1989)**

Dysichthys amazonicus Mees, 1989: 241, fig. 21. Type locality: creek near Todos Santos, upper course of R. Mamoré, Cochabamba [Bolivia]. Holotype: ZMA 109.264 (37 mm SL specimen).

Maximum length: 4.5 cm SL

Distribution: South America: Upper and middle Amazon River basin.

Countries: Bolivia, Brazil, Colombia, Peru

***Bunocephalus bifidus* Eigenmann, 1942**

Bunocephalus bifidus Eigenmann in Eigenmann & Allen, 1942: 86, pl. 2 (fig. 2). Type locality: creek, Yurimaguas [Huallaga River, Peru]. Holotype: CAS 35105 [ex IU 15412].

Maximum length: 4.3 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Ecuador, Peru

Remarks and references: See Mees (1989: 240) for detailed description. Name appeared several times (Pearson, 1924: 9; 1937: 111; Fowler, 1940: 94) as nomen nudum prior to being made available in Eigenmann and Allen (1942).

***Bunocephalus chamaizelus* Eigenmann, 1912**

Bunocephalus chamaizelus Eigenmann, 1912b: 127, fig. 24; pl. 2 (fig. 1). Type locality: Erukin [Guyana]. Holotype: FMNH 53122 [ex CM 1556].

Maximum length: 3.7 cm SL

Distribution: South America: Essequibo River basin.

Countries: Guyana

Remarks and references: See Mees (1989: 236) for detailed description.

***Bunocephalus colombianus* Eigenmann, 1912**

- Bunocephalus colombianus* Eigenmann, 1912a: 10. Type locality: Raspadura [Colombia]. Holotype: FMNH 56038 [ex CM 4828]. Maximum length: 11.5 cm SL
Distribution: South America: Atrato and Magdalena River basins.
Countries: Colombia
Remarks and references: See Mees (1989: 237) for detailed description.
- Bunocephalus coracoideus* (Cope, 1874)**
Dysichthys coracoideus Cope, 1874: 133. Type locality: Nauta [Peru]. Syntypes: ANSP 21212-21215.
Bunocephalus bicolor Steindachner, 1882a: 176. Type locality: Aus dem Huallaga [Peru]. Holotype: MTD F345. Species later illustrated and described in more detail in Steindachner (1882b: 8, pl. 2 (figs. 1-1b)).
Bunocephalus haggini Eigenmann & Allen, 1942: 86, pl. 2 (fig. 1). Type locality: Amazon at Iquitos [Peru]. Holotype: CAS 35107 [IU 15408].
Maximum length: 11 cm SL
Distribution: South America: Amazon River basin.
Countries: Bolivia, Brazil, Peru
Remarks and references: See Mees (1989: 208) for detailed description.
Common names: Guitarrero (Brazil), Sapo cunshi (Peru)
- Bunocephalus doriae* Boulenger, 1902**
Bunocephalus doriae Boulenger, 1902: 286. Type locality: Villa Rica, Paraguay; and Posadas, Río Parana [Argentina]. Syntypes: BMNH 1902.10.22.23; MSNG 14274-14275.
Bunocephalus retropinnis Eigenmann & Allen, 1942: 85, pl. 2 (fig. 3). Type locality: Cacequi, Brazil. Holotype: CAS 35246 [ex IU 15332, not 14332].
Maximum length: 8.1 cm SL
Distribution: South America: Paraguay-Paraná and Uruguay River basins.
Countries: Argentina, Brazil, Paraguay, Uruguay
Remarks and references: See Mees (1989: 226) for detailed description.
- Bunocephalus iheringii* Boulenger, 1891**
Bunocephalus iheringii Boulenger, 1891: 235, pl. 26 (fig. 2). Type locality: No locality cited [apparently from Rio Grande do Sul, Brazil]. Syntypes: BMNH 1891.3.16.77-78 (2).
Bunocephalus salatheii Myers, 1927: 125. Type locality: Brazil: Morro Ajudo, about 100 km from Rio de Janeiro. Holotype: MCZ 31583.
Bunocephalus minutus Güntert, 1942: 28, figs. 1-2. Type locality: Paraguay, Dept. Villetta. Syntypes: NMBA 5296-98, 5299-5300.
Bunocephalus carvalhoi Miranda Ribeiro, 1944: 1. Type locality: Magé, Estado do Rio de Janeiro, Brazil. Holotype: MNRJ 1060.
Maximum length: 5.9 cm SL
Distribution: South America: Atlantic, Paraguay and Uruguay River basins.
Countries: Brazil, Paraguay
Remarks and references: See Mees (1989: 222) for detailed description.
- Bunocephalus knerii* Steindachner, 1882**
Bunocephalus knerii Steindachner, 1882a: 176. Type locality: Canelos, e. Ecuador. Syntypes: NMW 47628 [?] formerly NMW 10976-77]. Species later illustrated and described in more detail in Steindachner (1882b: 9, pl. 2, figs. 2-2b).
Maximum length: 13 cm SL
Distribution: South America: Western Amazon River basin.
Countries: Colombia, Ecuador, Peru
Remarks and references: See Mees (1989: 220) for detailed description.
- Bunocephalus larai* Ihering, 1930**
Bunocephalus larai Ihering, 1930: 101, pl. 13 (figs. 3-3A) [not 4]. Type locality: Rio Piracicaba, junto ao Salto; ao 20 km abaixo (ilha das Flechas) [São Paulo, Brazil]. Syntypes are apparently lost.
Maximum length: 5 cm SL
Distribution: South America: Paraná River basin.
Countries: Brazil
Remarks and references: See Mees (1989: 238) for detailed description. Note that the specimen examined by Mees (1989) from the São Francisco River basin is an undescribed species.
- Bunocephalus quadriradiatus* (Mees, 1989)**
Dysichthys quadriradiatus Mees, 1989: 244, fig. 23. Type locality: Samiria, Chinguito [= Cocha Shinguita or Shirguita], Peru. Holotype: MHNG 2157.21.
Maximum length: 3.2 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Peru
- Bunocephalus rugosus* Eigenmann & Kennedy, 1903**
Bunocephalus rugosus Eigenmann & Kennedy, 1903: 498. Type locality: Laguna near Arroyo Chagalalina [Paraguay]. Holotype: CAS [ex IU 9819] (apparently lost).
Dysichthys australe Eigenmann & Ward in Eigenmann, McAtee & Ward, 1907: 113, pl. 31. Type locality: Corumba [Paraguay]. Holotype: CAS 35240 [ex IU 10123].
Maximum length: 3 cm SL
Distribution: South America: Paraguay-Paraná River basin.
Countries: Brazil, Paraguay
Remarks and references: See Mees (1989: 247) for detailed description.
- Bunocephalus verrucosus* (Walbaum, 1792)**
Silurus verrucosus Walbaum, 1792: 574. Type locality: No locality. No types known. Based on Gronovius (1754, pl. 5 (fig. 3)).
Platystacus verrucosus Bloch, 1794: 63, pl. 373 (fig. 3). Type locality: Wahrscheinlich gerhört er in Surinam zu Hause [= Suriname]. No types known.
Aspredo gronovii Swainson, 1838: 332, fig. 80. Type locality: No locality. No types known.
Aspredo verrucosa Gronow in Gray, 1854: 137. Type locality: America Meridionali [= South America]. No types known.
Bunocephalichthys gronovii Bleeker, 1858: 329. Type locality: Am. Merid. [= South America]. No types known.
Bunocephalus scabriceps Eigenmann & Eigenmann, 1889: 49. Type locality: Jutahy [Brazil]. Syntypes: MCZ 7967.
Agmus lyriformis Eigenmann, 1912b: 128, fig. 25; pl. 3. Type locality: Gluck Island [Rupununi R., Guyana]. Holotype: FMNH 53120 [ex CM 1554].
Maximum length: 9.5 cm SL
Distribution: South America: Rivers of Guyana and the Amazon River basin.
Countries: Brazil, Ecuador, Guyana, Peru, Suriname
Remarks and references: See Mees (1988: 93) for detailed description. Note: Mees (1988) does not cite *Silurus verrucosus* Walbaum, 1792, which has priority over *Platystacus verrucosus* Bloch, 1794.
- DUPOUYICHTHYS**
Dupouyichthys Schultz, 1944: 244. Type species: *Dupouyichthys sapito* Schultz, 1944. Type by original designation. Gender: masculine.
- Dupouyichthys sapito* Schultz, 1944**
Dupouyichthys sapito Schultz, 1944: 245, pl. 4 (fig. d); fig. 4b. Type locality: Río Motatán, at the bridge 22 km north of Motatán, Venezuela. Holotype: USNM 121072.
Maximum length: 3 cm SL
Distribution: South America: Magdalena River and Lake Maracaibo basins.

Check List of the Freshwater Fishes of South and Central America

Countries: Colombia, Venezuela

Remarks and references: See Stewart (1985: 10) for detailed description.

ERNSTICHTHYS

Ernstichthys Fernández-Yépez, 1953: 3, 4. Type species: *Ernstichthys anduzei* Fernández-Yépez, 1953. Type by original designation. Gender: masculine.

***Ernstichthys anduzei* Fernández-Yépez, 1953**

Ernstichthys anduzei Fernández-Yépez, 1953: 5, fig. 1. Type locality: Río Salinas, northeast of El Baúl, Estado Cojedes, Venezuela. Holotype: MHNLS 28 [not MHNLS 7779].

Maximum length: 3.5 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: See Stewart (1985: 12) for detailed description.

***Ernstichthys intonsus* Stewart, 1985**

Ernstichthys intonsus Stewart, 1985: 16, figs. 1f, 3, 9. Type locality: Río Napo at Añangu, Napo Prov, 0°30.8'S, 76°24.0'W, Ecuador. Holotype: FMNH 94603.

Maximum length: 4.9 cm SL

Distribution: South America: Napo River basin.

Countries: Ecuador

***Ernstichthys megistus* (Orcés, 1961)**

Hoplomyzon megistus Orcés, 1961: 3, figs. 1-2. Type locality: Small river off of the Río Chicherota, Río Bobonaza system, Prov. Pastaza, e. Ecuador. Holotype: Author's coll. 4305.

Maximum length: 6.7 cm SL

Distribution: South America: Bobonaza and Marañón River basins.

Countries: Ecuador, Peru

Remarks and references: See Stewart (1985: 15) for detailed description.

HOPLOMYZON

Hoplomyzon Myers, 1942: 94. Type species: *Hoplomyzon atrizona* Myers, 1942. Type by original designation. Gender: masculine.

***Hoplomyzon atrizona* Myers, 1942**

Hoplomyzon atrizona Myers, 1942: 95, fig. 3. Type locality: Brook trib. to Río Zulia, at Estacion Tachira, 60 km north of San Cristobal, Venezuela, elev. ca. 150 m. Holotype: SU 36494.

Hoplomyzon atrizona petroleus Schultz, 1944: 248, pl. 4 (fig. C); fig. 4a. Type locality: Río Motatán, 4 km above Motatán, Maracaibo basin, Venezuela. Holotype: USNM 121070.

Maximum length: 2.7 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

Remarks and references: See Stewart (1985: 7) for detailed description.

***Hoplomyzon papillatus* Stewart, 1985**

Hoplomyzon papillatus Stewart, 1985: 8, figs. 1b, 2b, 4b, 5. Type locality: Río Aguatico, 1 km upstream from confluence with Río Shushufindi, Napo Prov., 0°17'S, 76°24.5'W, Ecuador. Holotype: FMNH 94908.

Maximum length: 1.7 cm SL

Distribution: South America: Napo and Portuguesa River basins.

Countries: Ecuador, Venezuela

***Hoplomyzon sexpapilostoma* Taphorn & Marrero, 1990**

Hoplomyzon sexpapilostoma Taphorn & Marrero, 1990: 4, figs. 1-4. Type locality: Río Masparro at site of Masparro Dam, Barinas, Venezuela, 8°50'40"N, 70°06'00"W. Holotype: MCNG 18669.

Maximum length: 3.2 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

MICROMYZON

Micromyzon Friel & Lundberg, 1996: 642. Type species: *Micromyzon akamai* Friel & Lundberg, 1996. Type by original designation. Gender: masculine.

***Micromyzon akamai* Friel & Lundberg, 1996**

Micromyzon akamai Friel & Lundberg, 1996: 643, fig. 1. Type locality: Rio Tocantins, above confluence with Rio Pará, 2°02'S, 49°17'W, Pará, Brazil, 10-14 m. Holotype: MZUSP 48550.

Maximum length: 1.58 cm SL

Distribution: South America: Lower Amazon River basin.

Countries: Brazil

PLATYSTACUS

Platystacus Bloch, 1794: 52. Type species: *Platystacus cotylephorus* Bloch, 1794. Type by subsequent designation by Bleeker (1862: 19). Gender: masculine. Revised by Friel (1994: 86), with species diagnosis, geographical distribution and phylogenetic analysis.

Platysomatos Bloch, 1797: 115. Type species: *Platystacus cotylephorus* Bloch, 1794. Type by being a replacement name. Gender: masculine.

Cotylephorus Swainson, 1838: 354. Type species: *Cotylephorus blochii* Swainson, 1838. Type by monotypy. Gender: masculine.

***Platystacus cotylephorus* Bloch, 1794**

Platystacus cotylephorus Bloch, 1794: 54, pl. 372. Type locality: Ostindischen Gewässer [East Indian type locality is clearly in error; certainly from South America]. Syntypes: ZMB 3157.

Silurus hexadactylus La Cépède, 1803: 58, 82. Type locality: no locality. No types known.

Cotylephorus blochii Swainson, 1838: 354, fig. 90. Type locality: Ostindischen Gewässer [East Indian type locality is clearly in error; certainly from South America]. Syntypes: ZMB 3157. Also in Swainson 1839: 308. Unneeded new name for *Platystacus cotylephorus* Bloch to avoid Stricklandian tautonymy.

Aspredo sexcirrhis Valenciennes in Cuvier & Valenciennes, 1840: 441 [326 of Strasbourg deluxe ed.]. Type locality: Surinam [= Suriname]. Syntypes: MNHN A.9313.

Aspredo spectrum Gronow in Gray, 1854: 137. Type locality: in fluminibus Americas Meridionalis [= South America]. No types known.

Platystacus nematophorus Bleeker, 1862: 371. Type locality: Surinama [= Suriname]. Holotype: RMNH 3105.

Maximum length: 31.8 cm SL

Distribution: Western Central Atlantic: Venezuela to northern Brazil; including the lower portions of coastal rivers.

Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela

Remarks and references: See Mees (1987: 186) for detailed description. Friel (1994: 86) removed this species from *Aspredo* to preserve monophyly of that genus.

Common names: Grongron (French Guiana), Poson-kronkron (French Guiana)

PTEROBUNOCEPHALUS

Pterobunocephalus Fowler, 1943: 1. Type species: *Bunocephalus albifasciatus* Fowler, 1943. Type by original designation. Gender: masculine. Fowler (1954: 45) elevated *Pterobunocephalus* from a subgenus to genus.

Petacara Böhlke, 1959: 2. Type species: *Bunocephalus dolichurus* Delsman, 1941. Type by original designation. Gender: neuter.

***Pterobunocephalus depressus* (Haseman, 1911)**

Bunocephalus depressus Haseman, 1911: 319, pls. 48 (fig. 1), 49. Type locality: Río Machupo near San Joaquín, Bolivia. Holotype: FMNH 54338 [ex CM 2984].

Bunocephalus albifasciatus Fowler, 1943: 2, fig. 1. Type locality: Todos Santos, Bolivia. Holotype: ANSP 69193.

Maximum length: 8.9 cm SL

Distribution: South America: Amazon, Orinoco and Paraguay River basins.

Countries: Bolivia, Brazil, Ecuador, Paraguay, Venezuela

Remarks and references: See Mees (1989: 233) for detailed description. Note there may be one or more undescribed species within this single nominal species.

***Pterobunocephalus dolichurus* (Delsman, 1941)**

Bunocephalus dolichurus Delsman, 1941: 77, fig. 12. Type locality: Trombetas-river, near Obidos. Holotype: IRSNB 359.

Maximum length: 6.7 cm SL

Distribution: South America: Amazon River basin

Countries: Brazil, Peru

Remarks and references: See Böhlke (1959: 3) for detailed description.

XYLIPHIIUS

Xyliphius Eigenmann, 1912a: 10. Type species: *Xyliphius magdalenae* Eigenmann, 1912a. Type by monotypy. Gender: masculine. Spelled two ways in original description: *Xyliphius* and *Xiliphius*.

***Xyliphius barbatus* Alonso de Arámburu & Arámburu, 1962**

Xyliphius barbatus Alonso de Arámburu & Arámburu, 1962: 219, figs. 1-2. Type locality: Río Paraná en Rosario, Provincia de Santa Fe, Argentina. Holotype: MLP 12-VII-60-26. Holotype and paratype are apparently lost.

Xyliphius labrosus Risso & Risso, 1964: 11. Type locality: Introduced as a nomen nudum, but clearly in reference to the nominal *Xyliphius* species described by Arámburu & Arámburu.

Maximum length: 9.2 cm SL

Distribution: South America: Paraguay-Paraná River basin.

Countries: Argentina

***Xyliphius kryptos* Taphorn & Lilystrom, 1983**

Xiliphius kryptos Taphorn & Lilystrom, 1983: 43, fig. 1. Type locality: Cerca del Puente de la carretera 6 sobre el Río Aricausá, Estado Zulia, Venezuela. Holotype: MCNG 1224.

Maximum length: 11 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

Remarks and references: See Taphorn & Lilystrom (1983: 43) for detailed description.

***Xyliphius lepturus* Orcés, 1962**

Xyliphius lepturus Orcés, 1962: 50, figs. 1-2. Type locality: Cerca de Desembocadura del río Pucayacu en el Bobonaza [Ecuador]. Holotype: Author's coll. 1307.

Maximum length: 13.2 cm SL

Distribution: South America: Upper Amazon and Orinoco River basins.

Countries: Colombia, Ecuador, Venezuela

***Xyliphius lombarderoi* Risso & Risso, 1964**

Xyliphius lombarderoi Risso & Risso, 1964: 12, pl. 1 (figs. 1-2). Type locality: el Riacho Barranqueras [Paraná, Argentina]. Holotype: personal collection of authors.

Maximum length: 9.9 cm SL

Distribution: South America: Paraná River basin.

Countries: Argentina

***Xyliphius magdalenae* Eigenmann, 1912**

Xyliphius magdalenae Eigenmann, 1912a: 10. Type locality: Gi-

rardot [Colombia]. Holotype: FMNH 56039 [ex CM 4829].

Maximum length: 8 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

***Xyliphius melanopterus* Orcés, 1962**

Xyliphius melanopterus Orcés, 1962: 52, figs. 3-4. Type locality: el bajo Pucayacu no lejos de su desembocadura en el Bobonaza [Ecuador]. Holotype: Author's coll. 2021.

Maximum length: 14.7 cm SL

Distribution: South America: Upper Amazon and Orinoco River basins.

Countries: Ecuador, Peru, Venezuela

Family Nematogenyidae (Mountain catfishes)

Mário C. C. de Pinna

This family includes a single species from the Pacific drainages of central Chile, *Nematogenys inermis*, with other names available being obvious synonyms based on intraspecific color variations. Nevertheless, the presence of populations in basins that open directly to the ocean along the Chilean versant implies that they must be isolated. Whether there has been differentiation deserving of specific recognition remains to be determined. An updated study on populational variation in *Nematogenys* is in order. *Nematogenys inermis* has always been allied with the Trichomycteridae, reflected in its original description in the genus *Trichomycterus*. Indeed, the species greatly resembles a generalized trichomycterid in the posterior position of the dorsal fin, the absence of dorsal-fin spines and presence of a small nasal barbel on the anterior nostril. On the other hand, it differs from trichomycterids in the presence of pectoral-fin spines, lack of rictal barbels, and lack of opercular and interopercular odontode patches (and associated lack of anatomical specializations in the structure of the respective bones). *Nematogenys inermis* was included in the Trichomycteridae for most of its taxonomic history, though widely recognized as the most “primitive” or “generalized” member of the family. A separate Nematogenyidae was proposed by Eigenmann (1927). That proposal was rejected by most subsequent authors, who continued to include *Nematogenys* in Trichomycteridae, as subfamily Nematogenyinae. The situation changed with Baskin (1973), who hypothesized *Nematogenys* as the sister group to all other loricarioids. That hypothesis required recognition of Nematogenyidae in order to avoid a paraphyletic Trichomycteridae. Since then, Nematogenyidae has been normally recognized. The idea of the two taxa as closest relatives was resurrected by de Pinna (1992). The change of hypotheses was due in part to the inclusion of basal trichomycterids *Trichogenes* and copionodontines in the analysis of relationships. Those taxa considerably bridge the morphological gap between *Nematogenys* and more distal trichomycterids, resulting in character conflict and changes in the interpretation of character-state evidence. In the new hypothesis, inclusion of *Nematogenys* in Trichomycteridae is again possible, but de Pinna (1992) suggested maintaining a separate Nematogenyidae, in order not to change its widespread use in the literature by then.

Nematogenys inermis is a relict species. It retains many character states which are representative of the plesiomorphic condition in the common ancestor of Loricarioidea, but modified in all other Recent lineages of the group. *Nematogenys inermis* is the single most important species in understanding relationships of loricarioids to other siluriforms. Surprisingly, relatively little is known about the anatomy of *Nematogenys*. Although fragmentary information is available in a number of publications (e.g., Peyer, 1922; Eigenmann, 1927; Baskin, 1973; Arratia & Chang, 1975; Arratia, 1992; Arratia & Huaquin, 1995; de Pinna 1992, 1998), a complete description of its osteology is still unavailable. A fossil species of *Nematogenys*, *N. cuivi*, was described from the Cura-Mallín Formation Miocene deposits of central Chile (Azpelicueta & Rubilar, 1998), a locality within the present distribution of *N. inermis*. The fossil is remarkably similar to *N. inermis*, but only its head is preserved.

Nematogenys inermis seems to be a highly threatened species, although no detailed studies are available to adequately assess its conservation status. Anecdotal information indicates that it has been extirpated from most of its original range, as a result of habitat degradation and introduction of alien species (trout in particular). The species was reported to be common in Santiago fish markets, and a common dish in restaurants in the region during the early part of the 20th century (Eigenmann, 1927). The situation has changed drastically, and even specimens for scientific study are hard to come by today. Apparently, the destruction of adjacent terrestrial vegetation has also had a negative impact on the species' survival, since *N. inermis* is associated with submerged roots of trees (especially *Salix chilensis*) growing along river banks. Ecological information on the species is provided in Arratia (1983).

NEMATOGENYS

Nematogenys Girard, 1855: 198. Type species: *Trichomycterus inermis* Guichenot, 1848. Type by monotypy. Gender: feminine.

***Nematogenys inermis* (Guichenot, 1848)**

Trichomycterus inermis Guichenot, 1848: 312, pl. 9 (fig. 2). Type locality: Chile. No types known.

Nematogenys nigricans Philippi, 1866: 716. Type locality: Chile. No types known.

Nematogenys pallidus Philippi, 1866: 716. Type locality: Chile. No types known.

Maximum length: largest specimen examined by the author was 240 mm SL, but Eigenmann (1927) reports a specimen of 407 mm (not specified if SL or TL). There is evidence that the species can grow even larger, although specimens over 200 mm SL are unusual at present.

Distribution: South America: Originally throughout most of Central Chile, in the latitudes approximately between present cities of Valparaíso in the North to Osorno in the South. Currently

Check List of the Freshwater Fishes of South and Central America

restricted to few spots mainly in regions of Concepción, Rancagua and Angol.
Countries: Chile

Family Trichomycteridae (Pencil or parasitic catfishes)

Mário C. C. de Pinna and Wolmar Wosiacki

The fishes united into the family Trichomycteridae form a well-corroborated and cohesive monophyletic group. The most conspicuous external characteristic of the group is the presence of a patch of odontodes on the interopercle, visible in ventral or ventrolateral aspect of the head. The interopercular odontodes have been lost in a few lineages, such as the genera *Pygidianops*, *Typhlobelus* and *Glanapteryx*, of the subfamily Glanapteryginae. Even in those taxa, however, the interopercle has a modified shape typical of other trichomycterids. Also, juvenile specimens of *Glanapteryx anguilla* have a few interopercular odontodes (de Pinna, 1989), further supporting the view that their absence is secondary in those taxa. In one species, *Megalocentor echthrus*, of the subfamily Stegophilinae, there is a single hypertrophied interopercular odontode. A second patch of odontodes, in the opercle, is also present in most trichomycterids, but is absent in all members of Copionodontinae, in the stegophilines *Megalocentor* and *Apomatoceros*, and in the glanapterygines *Pygidianops*, *Typhlobelus* and *Glanapteryx*. Other characteristics of trichomycterids are the presence of a pair of barbels at the angle of the mouth (the maxillary barbel dorsally and the rictal barbel ventrally, the latter very reduced in some stegophilines and vandelliines), the lack of pectoral- and dorsal-fin spines; the presence of anterior procurent rays of the dorsal fin; the total lack of a dorsal-fin spine-locking mechanism; the dorsal fin located on the middle or posterior half of SL, the presence of nasal barbels on the anterior nostrils (absent or very reduced in stegophilines, vandelliines and many tridentines); the presence of i+4 pelvic-fin rays (except in copionodontines and trichogenines, with i+6) and the lack of adipose fin (except in copionodontines).

The distribution of the Trichomycteridae covers practically all of South America. Species of the genus *Hatcheria* have long been recognized as the southernmost record of any primary freshwater fish worldwide (Darlington, 1957), extending into Patagonia as far as 45°30'S (Arratia, 1981). To the north, species of *Trichomycterus* have been recorded from Panama and Costa Rica. Only the Trichomycterinae are present throughout the whole range of distribution of the family, and are the only ones occurring west of the Andes. The small Southeastern Brazilian drainages have a single parasitic form, the stegophiline *Homodiaetus passarellii*, plus one sarcoglanidine (*Microcambeva barbata*) and glanapterygines of the genus *Listrua*. The Paraná-Paraguay system is inhabited by a single vandelliine (*Paravandellia oxyptera*, with various junior synonyms), a few stegophilines (*Ochmacanthus batrachostoma*, *Parastegophilus maculatus*, *P. paulensis*) and two tridentines (*Tridentopsis cahuali* and *T. pearsoni*). The São Francisco drainage has a single parasitic form (*Stegophilus insidiosus*). Also a single parasitic species, the vandelliine *Paravandellia phaneronema*, is present in the Magdalena system. The largest diversity of Trichomycteridae is found in the Amazon basin, where all subfamilies have their richest representation, except for the Trichomycterinae, which are surprisingly few there, and the Copionodontinae and Trichogeninae, which are relicts endemic to other basins. The Orinoco has the same subfamilial representation as the Amazon, with the exception of the Sarcoglanidinae, and even that is probably a sampling artifact. The total number of species in the Orinoco is smaller, however. In the rivers draining the Guianas, only the Trichomycterinae, Stegophilinae and Vandelliinae have been recorded so far.

The major gap in the distribution of Trichomycteridae is the Parnaíba River basin, in Northeastern Brazil. The fish fauna of the Parnaíba is evidently allied to that of the Amazon basin. Included are many of the large pimelodid species which are often associated with the parasitic vandelliines and stegophilines. Nevertheless, none of the parasitic forms has been found as yet. The fish fauna of the middle and lower portions of the Parnaíba has been relatively sampled. Although no extensive ichthyological survey has been undertaken, it seems unlikely that any lowland trichomycterids therein would not yet have been secured so far. The upper portions and headwaters, however, remain virtually unexplored. It is possible that yet unknown trichomycterids inhabit those reaches.

The ecology of trichomycterids is among the most fascinating of any fish, mostly due to the presence of parasitic specializations in the clade including vandelliines and stegophilines. The hematophagous habits of vandelliines are widely known, though detailed information is still unavailable. Examination of stomach contents of museum specimens show that all vandelliines feed exclusively on blood, which they take by inserting their heads into the branchial chamber of the host and lacerating a major vessel with their specialized teeth. At least the larger species of *Vandellia* seem to aim consistently for a branchial artery or vein, not damaging the gill filaments. There have been reports of vandelliines (e.g., *Plectrochilus diabolicus*) caught with their heads inserted in the abdominal cavity of the host, which indicates that there may be pronounced variation in the feeding habits in the subfamily. Most species of vandelliines associate with the host only during feeding, leaving the larger fish immediately or shortly after filling their stomach. Species of the genus *Paracanthopoma*, on the other hand, seem to attach to the outer surface of the body of large fish even when not feeding. Apparently they attach and

cruise along with the host for reasons additional to feeding. The Stegophilinae are all scale- and mucus-eaters, and their feeding habits have been studied on few occasions (Winemiller & Yan, 1989). Apparently, some stegophilines also rasp skin and superficial flesh, and have been reported to be attracted to chunks of flesh. (Luling, 1984). *Pareiodon microps* is specialized on eating chunks of flesh, especially from wounded or dead fish, in a manner similar to that reported for large cetopsids (such as *Cetopsis coecutiens*) and the pimelodid *Callophrys macropterus*.

The Trichomycteridae is currently divided into nine subfamilies: Copionodontinae, Trichogeninae, Trichomycterinae, Sarcoglanidinae, Glanapteryginae, Tridentinae, Stegophilinae, Vandelliinae and Pareiodontinae. The latter is included in Stegophilinae by some authors (e.g., Baskin, 1973), an opinion followed here. All of those subfamilies are demonstrably monophyletic, except for the Trichomycterinae.

The Stegophilinae is composed of species which specialize in eating mucus and scales of other fish. In many cases, they also rasp the superficial integumentary tissues of the host. The list below includes a few changes in the taxonomy of the group. The genus *Parastegophilus* is maintained, but the synonymy between *Stegophilus maculatus* and *S. paulensis*, proposed by Miranda Ribeiro (1946) is rejected. Examination of specimens leave no doubt that the two species are distinct. They are also allopatric in distribution. *Parastegophilus maculatus* is restricted to the lower portions of the Paraná and Prata, while *P. paulensis* occurs in the upper Paraná. The Paraguay basin is inhabited by yet another species, still undescribed.

Acanthopoma bondi was included by Myers (1942) in that genus because of its branchial membranes free from the isthmus, similar to the condition in the type of *Acanthopoma*, *A. annectens*. Examination of anatomical material of the two species revealed that they are not closest relatives. Rather, *A. bondi* seems to be the closest relative of *Schultzichthys*, a poorly-known genus from Colombia. No material of the only species in the genus, *S. gracilis*, is available, all types having been lost and no new material having been collected since. However, information in the original description indicate that *S. gracilis* is very similar to *A. bondi*. Evidence comes mainly from the shared presence of a deep suborbital groove (clearly illustrated in the original description of *S. gracilis*) that dorsally separates the lateral portion of the upper lip from the rest of the head. This characteristic is not present in any other stegophiline known. Similarities in internal anatomy further indicate that the relationships of *S. bondi* (and supposedly *S. gracilis* as well) are closer with the type species of *Homodiaetus*, *H. anisitsi*, rather than with *A. annectens*, type of *Acanthopoma*. So, there is no reason to maintain *S. bondi* in *Acanthopoma*. The same argument applies to the species described as *Homodiaetus haemomyzon* Myers. Anatomical comparisons show that its phylogenetic relationships lie closer with *Pseudostegophilus nemurus* than with *Homodiaetus anisitsi*, respective type-species of their genera. The species is therefore referred to as *Pseudostegophilus haemomyzon*.

The enigmatic genus *Pleurophysus*, with its single species *P. hydrostaticus*, was previously thought to be a stegophiline (Myers, 1944; Baskin, 1973). Examination of the types reveals that it is actually a vandelliine, and a junior synonym of *Paravandellia*.

The Sarcoglanidinae is perhaps the least known of trichomycterid subfamilies. Most of its species are highly specialized inhabitants of sandy environments, and are rarely sampled. Their psamic adaptations are reflected in their reduced dark pigmentation and translucent body tissues. In one case (*Stauroglanis*), the live fish is highly transparent and nearly invisible in its habitat. The possible exception to this pattern is *Stenolicmus*, which has intense integumentary dark pigment. Unfortunately, its microhabitat is unknown. The taxonomy of Sarcoglanidinae is presently quite simple, and no modifications are proposed herein. All five genera in the subfamily are currently monotypic, but this situation is expected to change soon in view of the numerous sarcoglanidine species that still await description.

The Glanapteryginae is another peculiar and poorly known trichomycterid subgroup. The phylogenetic progression of adaptation to interstitial environments seen in various glanapterygine taxa is remarkable. At the base of the cladogram there are generalized forms included in *Listrura*, so far restricted to coastal regions of Southeastern Brazil. They are darkly-pigmented and eyed inhabitants of shallow leaf-litter pools. At the other extreme there are the genera *Pygidianops* and *Typhlobelus*, which are white, blind (or nearly blind) and mostly finless fishes which occur in sandy bottoms or sand banks of rivers in the Amazon and Orinoco systems. In between these extremes there is *Glanapteryx*, with its two eel-like species, whose habitat is unknown in detail but involves leaf litter deposits. As with the Sarcoglanidinae, knowledge about glanapterygine biodiversity is considered to be grossly incomplete. Their taxonomy is quite satisfactory insofar as their known diversity goes and the account herein does not include any changes.

The Copionodontinae is a relatively recent discovery. The subfamily, its two genera and three species were described as new in a single publication (de Pinna, 1992). Since then, a fourth species has been described (Campanario & de Pinna, 2000). All copionodontines come from the Mucujê River basin, part of the Paraguaçu River drainage, which opens directly into the Atlantic Ocean. This subfamily is of special interest in a number of aspects. It is hypothesized as the sister group to all other trichomycterids, a position reflected in the relatively anterior position of their dorsal fin. In contrast to most other trichomycterids, copionodontines (or at least *Copionodon pecten*, which has been observed in nature and in aquaria) lack cryptic behavior, and swim continuously over the substrate. Even during evasive action, they do not attempt to hide under rocks. *Copionodon orthiocarinatus* was described on the basis of three small specimens only. Despite that, its diagnostic characters were so unambiguous that its specific distinctiveness was obvious. Since then, additional material including

adult specimens has been collected. These new specimens should form the basis of a redescription of the species. Copionodontines are the only trichomycterids with rasping teeth.

The Trichogeninae includes a single genus and species, *Trichogenes longipinnis*, described relatively recently (Britski & Ortega, 1983). It occurs in small isolated basins along a restricted region between the states of Rio de Janeiro and São Paulo, Southeastern Brazil. As with the Copionodontinae, *Trichogenes* is an active midwater or bottom swimmer which does not display cryptic behavior. In fact, there is some preliminary evidence that Copionodontinae and Trichogeninae may be sister groups (de Pinna, 1998), contrary to an earlier hypothesis (de Pinna, 1992) which placed them as successive sister groups to the remainder of the family.

The Trichomycterinae is the largest and most complex of trichomycterid subfamilies. A clear pattern is evident in the taxonomic history of trichomycterids which explains the situation with this group. All other subfamilies in the family have been traditionally diagnosed by one or more distinctive characters which can be interpreted as apomorphic. Indeed, all those subfamilies have been confirmed as monophyletic groups. The forms that lacked those characters were treated as leftovers, and united into a group of their own, diagnosed basically by the lack of specializations of the other subfamilies. This group is the subfamily Trichomycterinae. Though small in the beginning, gradually the number of forms in the Trichomycterinae accumulated to comprise approximately half of the species in the family. The non-monophyletic nature of the group was noticed first by Baskin (1973), and then by de Pinna (1989) and Costa & Bockmann (1993).

Despite its vastness in terms of number of species, relatively few genera are recognized in the Trichomycterinae. Additionally, most of them are monotypic. The majority of species are comprised in the genus *Trichomycterus*, again a non-monophyletic waste basket for species lacking the characters diagnostic of the other genera. A relatively large subset of *Trichomycterus* was shown to form a monophyletic group by Costa & Bockmann (1993), and split to a separate genus *Ituglanis*. Costa & Bockmann (1993) hypothesized *Ituglanis* as the sister group to a large clade composed of Glanapteryginae, Sarcoglanidinae, Tridentinae, Stegophilinae and Vandelliinae (called the TSVSG clade). Other than for *Ituglanis*, all other trichomycterine genera are of questionable phylogenetic significance. *Scleronema* is a small monophyletic clade composed of three species plus a few undescribed ones from Southern trans-Andean South America. *Eremophilus* includes its type-species from the plains of Bogota, *E. mutisii* - the earliest trichomycterid described - and *E. candidus*, from Southeastern Brazil. *Eremophilus* has been distinguished from *Trichomycterus* solely by the absence of pelvic fins in the former. *Eremophilus candidus* was included in that genus for that reason alone. Ongoing studies indicate that relationships of *E. candidus* lie with some species currently in *Trichomycterus*, rather than with *E. mutisii*. Therefore, the species is here transferred to *Trichomycterus*. The lack of pelvic fins is a character known to be highly homoplastic in the family. Remaining genera of the Trichomycterinae, *Rhizosomichthys*, *Hatcheria*, *Bullockia* and *Silvinichthys* are monotypic and based on autapomorphies only. Their phylogenetic position is unknown and they likely only make *Trichomycterus* more rampantly non-monophyletic. Despite that, all those genera are maintained in the present account, for want of a better alternative.

The only attempt so far at resolving relationships among “Trichomycterinae” in detail is Wosiacki (2002). As expected, the members of the subfamily are arranged in a highly asymmetrical (ladder-like) topology, forming a succession of sister groups to the TSVGS clade, above the Trichogeninae/Copionodontinae level. Transforming this hypothesis into a classification is a complicated procedure, since the distal portion of the cladogram is split into several subfamilies. A classification reflective of the real complexity of “Trichomycterinae” will require recognition of a number of new subfamilies and genera. For this contribution, we maintained the Trichomycterinae as currently composed, simply correcting some obvious cases of synonymy and other small-scale errors in the literature.

ACANTHOPOMA

Acanthopoma Lütken, 1892: 57. Type species: *Acanthopoma annectens* Lütken, 1892. Type by monotypy. Gender: neuter.

Acanthopoma annectens Lütken, 1892

Acanthopoma annectens Lütken, 1892: 53, figs. on p. 56. Type locality: Huallaga. Holotype: MTD F5245.

Maximum length: 12 cm

Distribution: South America: Upper and middle Amazon River basin.

Countries: Brazil, Peru

AMMOGLANIS

Ammoglanis Costa, 1994: 208. Type species: *Ammoglanis diaphanus* Costa, 1994. Type by original designation. Gender: masculine.

Ammoglanis diaphanus Costa, 1994

Ammoglanis diaphanus Costa, 1994: 208, fig. 1. Type locality: Stream trib. to Rio Javaés, Rio Araguaia basin, ca. 40 km north

of Araguaçu, 12°24'S, 49°58'W, Tocantin state, Brazil. Holotype: MNRJ 12442.

Maximum length: 1.87 cm SL

Distribution: South America: Stream tributary to Javaés River, Araguaia River basin.

Countries: Brazil

Ammoglanis pulex de Pinna & Winemiller, 2000

Ammoglanis pulex de Pinna & Winemiller, 2000: 257, fig. 1. Type locality: Venezuela: Estado Amazonas: Río Paria Grande at bridge on road between Pto. Ayacucho and Samariapo (5°23'N 67°37'W). Holotype: MBUCV-V-29040.

Maximum length: 1.49 cm SL

Distribution: South America: Paria Grande River, Pamoni River and Caño Garrapata.

Countries: Venezuela

APOMATOCEROS

Apomatoceros Eigenmann, 1922a: 113. Type species: *Apomatoceros alleni* Eigenmann, 1922. Type by monotypy. Gender: masculine.

***Apomatoceros alleni* Eigenmann, 1922**

Apomatoceros alleni Eigenmann, 1922a: 113, pls. 3 (figs. 1-4), 4 (fig. 9). Type locality: Río Morona, upper Amazon system, Peru. Holotype: CAS 56174 [ex IU 15500].
Maximum length: 14.6 cm SL
Distribution: South America: Amazon River basin.
Countries: Peru

BULLOCKIA

Bullockia Arratia, Chang, Menu-Marque & Rojas, 1978: 162, 187. Type species: *Hatcheria maldonadoi* Eigenmann, 1920. Type by monotypy. Gender: feminine.

***Bullockia maldonadoi* (Eigenmann, 1920)**

Hatcheria maldonadoi Eigenmann, 1920: 53. Type locality: ...lower course of the Río Nonguen where it passes through the ground of the Agricultural School, at the outskirts of Concepción [36°50' S 73° 03'W], Chile. Holotype: CAS 63842 [ex IU 15058]. Also described as new in Eigenmann (1927: 39, pl 8, figs. 2-2b). Lectotype established in pl. 8.

Hatcheria bullocki Fowler, 1940a: 180, figs. 14-15. Type locality: Angol [37°48'S 72°43'W], Chile. Holotype: ANSP 69145. Böhlke (1984: 163) commented that locality in publication is Angol, but catalog and label say "El Vergal".

Maximum length: 7 cm
Distribution: South America: Chile.
Countries: Chile

COPIONODON

Copionodon de Pinna, 1992b: 181. Type species: *Copionodon pecten* de Pinna, 1992. Type by original designation. Gender: masculine.

***Copionodon lianae* Campanario & de Pinna, 2000**

Copionodon lianae Campanario & de Pinna, 2000: 370, figs. 1-2. Type locality: Brazil: Bahia: Rio Grisante (Rio Mucujê basin), approx. 13°08'S 41°17'W. Holotype: MZUSP 81034 (holotype recatalogued after publication as MZUSP 42469).

Maximum length: 4.59 cm SL
Distribution: South America: Grisante River, tributary to Mucujê River (Paraguaçu River basin).
Countries: Brazil

***Copionodon orthiocarinatus* de Pinna, 1992**

Copionodon orthiocarinatus de Pinna, 1992b: 188, figs. 3-4. Type locality: Rio Mucujê, trib. of Rio Paraguaçu, Bahia, Brazil, ca. 13°00'S, 41°23'W, elev. 1200 m. Holotype: MZUSP 42463.

Maximum length: 7.5 cm SL
Distribution: South America: Mucujê River, tributary of Paraguaçu River.
Countries: Brazil

***Copionodon pecten* de Pinna, 1992**

Copionodon pecten de Pinna, 1992b: 182, figs. 1-2. Type locality: Rio Mucujê, trib. of R. Paraguaçu, Bahia, Brazil, ca. 13°00'S, 41°23'W, elev. 1200 m. Holotype: MZUSP 42461.

Maximum length: 6.22 cm SL
Distribution: South America: Mucujê River, tributary of Paraguaçu River.
Countries: Brazil

EREMOPHILUS

Eremophilus Humboldt, 1805: 17. Type species: *Eremophilus mutisii* Humboldt, 1805. Type by monotypy. Gender: masculine.

Thrichomycterus Humboldt, 1805: 18. Type species: *Eremophilus mutisii* Humboldt, 1805. Type by monotypy. Gender: masculine. Given as alternative name, but never used subsequently, for *Eremophilus* Humboldt.

Trachypoma Giebel, 1871: 97. Type species: *Trachypoma marmoratum* Giebel, 1871. Type by original designation. Gender: neuter. Preoccupied by *Trachypoma* Günther, 1859, in fishes; not replaced.

***Eremophilus mutisii* Humboldt, 1805**

Eremophilus mutisii Humboldt, 1805: 18, pl. 6. Type locality: petite rivière de Bogota, qui forme la fameuse catarate de Tequendama [Bogotá = 4°36'N 74°05'W; Tequendama = 4°36'N 74°10'W], Colombia. No types known.

Trachypoma marmoratum Giebel, 1871: 97. Type locality: obern Amazonenstrom.

Maximum length: 30 cm
Distribution: South America: Bogotá River basin. Probably introduced to Ubaté, Chinquinquirá and Tundama valleys, Colombia.
Countries: Colombia

GLANAPTERYX

Glanapteryx Myers, 1927: 128. Type species: *Glanapteryx anguilla* Myers, 1927. Type by original designation. Gender: feminine.

***Glanapteryx anguilla* Myers, 1927**

Glanapteryx anguilla Myers, 1927: 129. Type locality: Rapids of São Gabriel, Rio Negro system, Brazil. Holotype: CAS 56048 [ex IU 17700].

Maximum length: 6.14 cm TL
Distribution: South America: Negro and Orinoco River basins.
Countries: Brazil, Venezuela

***Glanapteryx niobium* de Pinna, 1998**

Glanapteryx niobium de Pinna, 1998: 36, fig. 1. Type locality: Brazil, State of Amazonas, Pico da Neblina National Park, Morro dos Seis Lagos (approx. 0°17'N 66°41'W), Lago Esperança. Holotype: INPA 12421.

Maximum length: 5.53 cm
Distribution: South America: Negro River basin: Morro dos Seis Lagos.
Countries: Brazil

GLAPHYROPOMA

Glaphyropoma de Pinna, 1992: 194. Type species: *Glaphyropoma rodriguesi* de Pinna, 1992. Type by original designation. Gender: feminine.

***Glaphyropoma rodriguesi* de Pinna, 1992**

Glaphyropoma rodriguesi, 1992: 196, figs. 7-8. Type locality: Rio Mucujê, trib. of Rio Paraguaçu, Bahia, Brazil, ca. 13°00'S, 41°23'W, elev. 1200 m. Holotype: MZUSP 42465.

Maximum length: 5.07 cm SL
Distribution: South America: Mucujê River, tributary of Paraguaçu River.
Countries: Brazil

HAEMOMASTER

Haemomaster Myers, 1927: 131. Type species: *Haemomaster venezuelae* Myers, 1927. Type by original designation. Gender: masculine.

***Haemomaster venezuelae* Myers, 1927**

Haemomaster venezuelae Myers, 1927: 131. Type locality: Venezuela, Playa Matepalma, Orinoco. Holotype: CAS 55882 [ex IU 17705].

Maximum length: 6.6 cm SL
Distribution: South America: Amazon and Orinoco River basins.
Countries: Brazil, Venezuela

HATCHERIA

Hatcheria Eigenmann, 1909b: 250. Type species: *Hatcheria patagoniensis* Eigenmann, 1909. Type by original designation. Gender: feminine.

Hatcheria macraei (Girard, 1855)

Thrichomycterus macraei Girard, 1855: 245. Type locality: Near Uspullata, east side of the Cordilleras, Argentina, elev. 7000 ft. [Uspallata = 32°33'S 69°20'W]. Syntypes: MCZ 8298 (1), USNM 1546 (orig. 3, now 1).

Pygidium burmeisteri Berg, 1895: 128, pl. 2 (fig. 1). Type locality: Río Mendoza, Mendoza Prov., Argentina. Holotype: MACN.

Hatcheria patagoniensis Eigenmann, 1909b: 250, pl. 33 (fig. 2), pl. 34 (fig. 1). Type locality: Río Blanco at base of Andes, Patagonia, Argentina, 47°30'S, 72°W. Holotype: whereabouts unknown.

Hatcheria titcombi Eigenmann, 1917: 692. Type locality: Río Comajo; tributary of Lake Traftul, tributary to Río Limay, Argentina. Holotype: CAS 28557 [ex IU 11110].

Hatcheria pique MacDonagh, 1938: 171, figs. 23-24. Type locality: Río Colorado cerca de su desembocadura, vecino a la estación Pedro Luro del F. C. S., Argentina. Holotype: MLP 15.X.36.

Maximum length: 20.8 cm

Distribution: South America: Cis-Andean rivers between 29° and 45°30'S.

Countries: Argentina

HENONEMUS

Henonemus Eigenmann & Ward, in Eigenmann, McAtee & Ward, 1907: 118. Type species: *Stegophilus intermedius* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: masculine.

Cobitiglanis Fowler, 1914: 268. Type species: *Ochmacanthus taxistigma* Fowler, 1914. Type by original designation. Gender: masculine.

Henonemus intermedius (Eigenmann & Eigenmann, 1889)

Stegophilus intermedius Eigenmann & Eigenmann, 1889: 54. Type locality: Goyaz. Holotype: MCZ 9842.

Maximum length: 8 cm

Distribution: South America: Araguaia River basin.

Countries: Brazil

Henonemus macrops (Steindachner, 1882)

Stegophilus macrops Steindachner, 1882a: 178. Type locality: Manacapuru Lake, Amazon River basin. Holotype: NMW. Species later illustrated and described in more detail in Steindachner (1882b: 28, Pl. 6, figs. 2-2a).

Maximum length: 6 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

Henonemus punctatus (Boulenger, 1887)

Stegophilus punctatus Boulenger, 1887a: 279, pl. 21 (fig. 4). Type locality: Canelos. Holotype: BMNH 1880.12.8.89.

Maximum length: 9 cm

Distribution: South America: Amazon River basin.

Countries: Brazil, Ecuador, Peru

Henonemus taxistigma (Fowler, 1914)

Ochmacanthus taxistigma Fowler, 1914: 268, fig. 16. Type locality: Rupununi River, Guyana, 2°-3°N, 50°20'W. Holotype: ANSP 39344.

Maximum length: 9.3 cm

Distribution: South America: Rupununi River basin.

Countries: Guyana

HOMODIAETUS

Homodiaetus Eigenmann & Ward, in Eigenmann, McAtee & Ward, 1907: 117. Type species: *Homodiaetus anisitsi* Eigenmann & Ward, 1907. Type by original designation. Gender: masculine.

Homodiaetus anisitsi Eigenmann & Ward, 1907

Homodiaetus anisitsi Eigenmann & Ward, in Eigenmann, McAtee & Ward, 1907: 119, pl. 34 (figs. 2-3). Type locality: small creek at Villa Rica, Paraguay. Holotype: CAS 37276 [ex IU 10155].

Homodiaetus vazferreirai Devincenzi, in Devincenzi & Vaz-Ferreira, 1939: 168, fig. Type locality: río Uruguay, en las inmediaciones de la ciudad de Paysandú, Uruguay. Holotype: MHNM CI 345. Holotype not specified in original description.

Maximum length: 4.2 cm SL

Distribution: South America: Paraná-Paraguay River basin.

Countries: Paraguay, Uruguay and Brazil

Homodiaetus banguela Koch, 2002

Homodiaetus banguela Koch, 2002: 42, fig. 4. Type locality: Brasil, Rio de Janeiro: Silva Jardim (rio São João, no cruzamento com a BR-101). Holotype: MCP 19619.

Maximum length: 3.8 cm SL

Distribution: South America: São João River (coastal basin of southeastern Brazil in State of Rio de Janeiro).

Countries: Brazil

Homodiaetus graciosa Koch, 2002

Homodiaetus graciosa Koch, 2002: 44, fig. 5. Type locality: Brasil, Paraná, Morretes (rio Sagrado, posto florestal). Holotype: MCP 19618.

Maximum length: 3.5 cm SL

Distribution: South America: Coastal basins of southeastern Brazil in States of Paraná and São Paulo.

Countries: Brazil

Homodiaetus passarellii (Miranda Ribeiro, 1944)

Stegophilus passarellii Miranda Ribeiro, 1944a: 1, fig. Type locality: Córrego do Barro Branco, Baía de Guanabara, Estado do Rio de Janeiro, Brazil. Holotype: MNRJ 3783.

Maximum length: 3.8 cm SL

Distribution: South America: Coastal basins of southeastern Brazil in State of Rio de Janeiro.

Countries: Brazil

ITUGLANIS

Ituglanis Costa & Bockmann, 1993: 44. Type species: *Pygidium proops parahybae* Eigenmann, 1918. Type by original designation. Gender: masculine.

Ituglanis amazonicus (Steindachner, 1882)

Trichomycterus amazonicus Steindachner, 1882a: 178. Type locality: Cudajas, S. America [Códajas = 03°55'S 62°00'W], Brazil. Holotype: NMW 43306. Species later illustrated and described in more detail in Steindachner (1882b: 29, pl. 6, figs. 4-4a).

Maximum length: 7.5 cm

Distribution: South America: Amazon River basin.

Countries: Brazil, French Guiana

Ituglanis eichorniarum (Miranda Ribeiro, 1912)

Trichomycterus eichorniarum Miranda Ribeiro, 1912: 27. Type locality: Cáceres, nas margens do Paraguay (M. Grosso), Mato Grosso [16°05'S 57°50'W], Brazil. Lectotype: MNRJ 780A, designated by Miranda Ribeiro (1953: 405).

Maximum length: 5 cm

Distribution: South America: Upper Paraguay River basin.

Countries: Brazil

Ituglanis gracilior (Eigenmann, 1912)

Pygidium gracilior Eigenmann, 1912b: 213. Type locality: Erukin.
 Holotype: FMNH 53264 [ex CM 1730].
 Maximum length: 7.9 cm
 Distribution: South America: Guyana.
 Countries: Guyana

***Ituglanis guayaberensis* (Dahl, 1960)**

Pygidium metae guayaberensis Dahl, 1960: 307, fig. 2. Type locality: Small pond in a brook trib. to Río Guayabero, ca. 1 km from mouth of the brook In a brook approx. 1500 m. from Camp I, same locality as the holotype of *Leyvaichthys castaneus*, Orinoco System [Guayabero = 0°08'N 70°57'W], Colombia. Holotype: whereabouts unknown.
 Maximum length: 5.7 cm
 Distribution: South America: Guayabero River basin, Orinoco drainage.
 Countries: Colombia

***Ituglanis herberti* (Miranda Ribeiro, 1940)**

Trichomycterus herberti Miranda Ribeiro, 1940: 60, fig. Type locality: Rio Bodoquena, Pantanal, Mato Grosso [Bodoquena = 20°40'S 56°50'W], Brazil. Syntypes: (7) MNRJ 1428 (2).
 Maximum length: 8.1 cm TL
 Distribution: South America: Bodoquena River in Paraguay River basin.
 Countries: Brazil

***Ituglanis laticeps* (Kner, 1863)**

Trichomycterus laticeps Kner, 1863: 228, fig. 17. Type locality: ["Fundort, wie die vorige Art," in reference to *Trichomycterus taenia*, from Westabhang der Andes im Staate Ecuador].
 Maximum length: 8.9 cm
 Distribution: South America: Ecuador.
 Countries: Ecuador

***Ituglanis metae* (Eigenmann, 1917)**

Pygidium metae Eigenmann, 1917: 694. Type locality: Barrigona [7°42'N 75°35'W], Colombia. Holotype: CAS 58138 [ex IU 13770].
 Maximum length: 7.8 cm
 Distribution: South America: Colombia.
 Countries: Colombia

***Ituglanis parahybae* (Eigenmann, 1918)**

Pygidium proops parahybae Eigenmann, 1918: 332. Type locality: Rio Parahyba [river mouth of the Paraíba do Sul River = 21°40'S 41°00'W], Brazil. Holotype: FMNH 58576 [ex CM 7598].
 Maximum length: 5.1 cm
 Distribution: South America: Paraíba do Sul and São João River basins.
 Countries: Brazil

***Ituglanis parkoi* (Miranda Ribeiro, 1944)**

Pygidium parkoi Miranda Ribeiro, 1944b: 1, fig. Type locality: rio Iticoaí (entre os rios das Pedras e Ituí) que deságua no Javari, afluente do Amazonas - Benjamin Constant, Amazonas [4°30'S 70°05'W], Brazil. Holotype: MNRJ 3849.
 Maximum length: 17 cm
 Distribution: South America: Amazon River basin.
 Countries: Brazil

***Ituglanis passensis* Fernández & Bichuette, 2002**

Ituglanis passensis Fernández & Bichuette, 2002: 274, fig. 1. Type locality: Brazil: Goiás: São Domingos: Passa Três cave: subterranean stream in the Tocantins drainage, 13°36'S 46°23'W. Holotype: MCP 27382.
 Maximum length: 7 cm SL
 Distribution: South America: Passa Três cave system in São Domingos, Goiás.
 Countries: Brazil

***Ituglanis proops* (Miranda Ribeiro, 1908)**

Trichomycterus proops Miranda Ribeiro, 1908: [3], fig. 4. Type locality: Rio Ribeira, Iguape [river mouth of the Ribeira de Iguape River = 24°50'S 47°10'W], Brazil. Lectotype: MNRJ 781A.
 Maximum length: 8.7 cm
 Distribution: South America: Ribeira de Iguape River basin.
 Countries: Brazil

LISTRURA

Listrura de Pinna, 1988: 114. Type species: *Listrura nematopteryx* de Pinna, 1988. Type by original designation. Gender: feminine.

***Listrura boticario* de Pinna & Wosiacki, 2002**

Listrura boticario de Pinna & Wosiacki, 2002: 721, fig. 1. Type locality: Brazil, State of Paraná, Município de Guaraqueçaba, pool adjacent to Rio da Figueira (tributary of Rio Morato, itself tributary to Rio Guaraqueçaba, an isolated coastal basin that drains directly into the Baía das Laranjeiras), inside the nature preserve "Reserva Particular do Patrimônio Natural Salto Morato" (25°16'S, 48°12'W, UTM: 7.212.500-7.215.400). Holotype: MZUSP 69573.
 Maximum length: 3.7 cm SL
 Distribution: South America: Da Figueira and Guaraqueçaba River basins, Paraná State.
 Countries: Brazil

***Listrura camposi* (Miranda Ribeiro, 1957)**

Eremophilus camposi Miranda Ribeiro, 1957: 72, fig. Type locality: Rio Poço Grande, trib. of the Rio Juquiá, Fazenda Poço Grande, Juquiá, ca. 24°15'S, 47°37'W, Sao Paulo State, Brazil. Holotype: MZUSP 3426.
 Maximum length: 3.94 cm SL
 Distribution: South America: Poço Grande River, tributary of the Juquiá River, São Paulo State, and Ribeirão da Ilha, Florianópolis, Santa Catarina State.
 Countries: Brazil

***Listrura nematopteryx* de Pinna, 1988**

Listrura nematopteryx de Pinna, 1988: 115, figs. 1-2. Type locality: Small marsh which is source of creek later joining Ribeirão Imbariê, trib. of Rio Estrela, near 58 km mark of old road leading to Petrópolis ("Antiga Rio-Petrópolis, also called "Estrada Automóvel Club"), Município de Magé, Localidade de Piabetá, Rio de Janeiro, Brazil (22°36'36"S 43°11'26"W). Holotype: MZUSP 36974.
 Maximum length: 3.66 cm SL
 Distribution: South America: Marsh that is the source of a creek later joining Imbariê Creek, tributary of the Estrela River, Piabetá, Rio de Janeiro State, and similar habitats in Picinguaba, São Paulo State.
 Countries: Brazil

***Listrura tetradactyla* Landim and Costa, 2002**

Listrura tetradactyla Landim and Costa, 2002: 152, fig. 1. Type locality: Brazil: Estado do Rio de Janeiro: Município de Saquarema, rio da Represa, a tributary of rio Bom Sucesso, rio Ibicufba basin of the Lagoa de Araruama system, Palmital, approximately 5 km north from Bacaxá, about 22°50'S, 42°28'W. Holotype: MZUSP 52572.
 Maximum length: 4.3 cm SL
 Distribution: South America: Ibicufba River, Araruama Lagoon system.
 Countries: Brazil

MALACOGLANIS

Malacoglanis Myers & Weitzman, 1966: 281. Type species: *Malacoglanis gelatinosus* Myers & Weitzman, 1966. Type by original designation. Gender: masculine.

***Malacoglanis gelatinosus* Myers & Weitzman, 1966**

Malacoglanis gelatinosus Myers & Weitzman, 1966: 282, figs. 3-4. Type locality: Small (caño (side channel) of the Río Orteguaza, a short distance above its junction with the Río Caquetá, Caquetá Province, Colombia. The caño was a forest-brook, a mile or more long from its detachment from the main river to its mouth on the main river. The mouth was across the Río Orteguaza directly opposite the small settlement and military aviation post of Tres Esquinas, which is situated at approximately 0°45'N, 75°15'W. Holotype: SU 50754.

Maximum length: 1.99 cm SL

Distribution: South America: Caquetá River basin.

Countries: Colombia

MEGALOCENTOR

Megalocentor de Pinna & Britski, 1991: 115. Type species: *Megalocentor echthrus* de Pinna & Britski, 1991. Type by original designation. Gender: masculine.

***Megalocentor echthrus* de Pinna & Britski, 1991**

Megalocentor echthrus de Pinna & Britski, 1991: 116, figs. 3, 4 (a-b). Type locality: Rio Madeira, Calama, Praia do Caraparu, Estado do Amazonas, Brazil. Holotype: MZUSP 41879.

Maximum length: 8.79 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Bolivia, Brazil, Peru, Venezuela

MICROCAMBEVA

Microcambeva Costa & Bockmann, 1994b: 718. Type species: *Microcambeva barbata* Costa & Bockmann, 1994. Type by original designation. Gender: feminine.

***Microcambeva barbata* Costa & Bockman, 1994**

Microcambeva barbata Costa & Bockmann, 1994b: 718, figs. 2-3. Type locality: Brazil: Estado do Rio de Janeiro: rio São João, near Gaviões, Município de Silva Jardim. Holotype: MZUSP 43678.

Maximum length: 2.6 cm SL

Distribution: South America: Coastal drainages in States of Rio de Janeiro and Espírito Santo, Brazil.

Countries: Brazil

MIUROGLANIS

Miuroglanis Eigenmann & Eigenmann, 1889: 55. Type species: *Miuroglanis platycephalus* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: masculine.

***Miuroglanis platycephalus* Eigenmann & Eigenmann, 1889**

Miuroglanis platycephalus Eigenmann & Eigenmann, 1889: 56. Type locality: Jutahy. Holotype: MCZ 8172.

Maximum length: 1.23 cm

Distribution: South America: Solimões River basin.

Countries: Brazil

OCHMACANTHUS

Gyrinurus Miranda Ribeiro, 1912: 27. Type species: *Gyrinurus batrachostoma* Miranda Ribeiro, 1912. Type by monotypy. Gender: masculine.

Ochmacanthus Eigenmann, 1912b: 213. Type species: *Ochmacanthus flabelliferus* Eigenmann, 1912. Type by original designation. Gender: masculine.

***Ochmacanthus alternus* Myers, 1927**

Ochmacanthus alternus Myers, 1927: 129. Type locality: Venezuela: Caño de Quiribana, near Caicara. Lectotype: CAS 13522 [ex IU 17697].

Maximum length: 4 cm SL

Distribution: South America: Negro and Orinoco River basins.

Countries: Brazil, Venezuela

***Ochmacanthus batrachostoma* (Miranda Ribeiro, 1912)**

Gyrinurus batrachostoma Miranda Ribeiro, 1912: 28, pl. Type locality: Rio Paraguay at São Luiz de Cáceres, Corumba, Mato Grosso, Brazil. Holotype: MNRJ 786.

Maximum length: 3.2 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil

***Ochmacanthus flabelliferus* Eigenmann, 1912**

Ochmacanthus flabelliferus Eigenmann, 1912b: 213. Type locality: Konawaruk, Guyana. Holotype: FMNH 53263 [ex CM 1729].

Maximum length: 3.5 cm TL

Distribution: South America: River drainages in Guyana and Venezuela.

Countries: Guyana, Venezuela

***Ochmacanthus orinoco* Myers, 1927**

Ochmacanthus orinoco Myers, 1927: 130. Type locality: Venezuela: Playa Matepalma, Orinoco. Holotype: CAS 76355 [ex IU 17698].

Maximum length: 4.6 cm SL

Distribution: South America: Negro and Orinoco River basins.

Countries: Brazil, Venezuela

***Ochmacanthus reinhardtii* (Steindachner, 1882)**

Stegophilus reinhardtii Steindachner, 1882a: 178. Type locality: Rio Iça, Montalegre; See Manacapuru (Thayer-Expedition). Syntypes: (several) NMW 44735 (2), 50603 (3). Species later illustrated and described in more detail in Steindachner (1882b: 28, Pl. 6, fig. 1).

Maximum length: 5 cm TL

Distribution: South America: Amazon River basin and drainages in French Guyana.

Countries: Brazil, French Guiana

PARACANTHOPOMA

Paracanthopoma Giltay, 1935: 1. Type species: *Paracanthopoma parva* Giltay, 1935. Type by original designation. Gender: neuter.

***Paracanthopoma parva* Giltay, 1935**

Paracanthopoma parva Giltay, 1935: 1, figs. 1-3. Type locality: Rio Catrymany supérieur, Brazil. Holotype: IRSNB 43.

Maximum length: 2.7 cm SL

Distribution: South America: Amazon and Essequibo River basins.

Countries: Brazil

PARASTEGOPHILUS

Parastegophilus Miranda Ribeiro, 1946: 12. Type species: *Stegophilus maculatus* Steindachner, 1879. Type by original designation. Gender: masculine.

***Parastegophilus maculatus* (Steindachner, 1879)**

Stegophilus maculatus Steindachner, 1879a: 32. Type locality: La Plata, Prov. of Buenos Aires, Argentina. Holotype: NMW 57222. Species later illustrated and described in more detail in Steindachner (1879b: 25, pl. 4, fig. 2).

Maximum length: 6 cm SL

Distribution: South America: Lower Paraná and Uruguay River basins.
Countries: Argentina

***Parastegophilus paulensis* (Miranda Ribeiro, 1918)**

Pseudostegophilus paulensis Miranda Ribeiro, 1918a: 727. Type locality: Avanhanda, Rio Tieté, Estado de São Paulo, Brazil.
Pseudostegophilus scarificator Ihering, 1930: 100, pl. 13 (fig. 2). Type locality: São Paulo, Brazil.
Maximum length: 5.4 cm SL
Distribution: South America: Upper Paraná River basin
Countries: Brazil

PARAVANDELLIA

Paravandellia Miranda Ribeiro, 1912: 28. Type species: *Paravandellia oxyptera* Miranda Ribeiro, 1912. Type by monotypy. Gender: feminine.
Branchioica Eigenmann, 1917: 702. Type species: *Branchioica bertonii* Eigenmann, 1917. Type by original designation. Gender: feminine.
Pleurophysus Miranda Ribeiro, 1918b: 636. Type species: *Pleurophysus hydrostaticus* Miranda Ribeiro, 1918. Type by monotypy. Gender: masculine.
Parabranchioica Devincenzi & Vaz-Ferreira, 1939: 5. Type species: *Parabranchioica teaguei* Devincenzi & Vaz-Ferreira, 1939. Type by monotypy. Gender: feminine.

***Paravandellia oxyptera* Miranda Ribeiro, 1912**

Paravandellia oxyptera Miranda Ribeiro, 1912: 29. Type locality: Cáceres, margens do Rio Paraguay. Holotype: MNRJ 790.
Branchioica bertonii Eigenmann, 1917: 703. Type locality: Asuncion, Paraguay. Holotype: CAS 63840 [ex IU 13950].
Pleurophysus hydrostaticus Miranda Ribeiro, 1918b: 636. Type locality: Rio Claro. Lectotype: MZUSP 2214, designated by Britski (1969: 206).
Vandellia hematophaga Guimaraes, 1935: 300, figs. 1-4. Type locality: Río Tietê, Salto, São Paulo, Brazil. Lectotype: SU 16766, designated by Böhlke (1953: 45).
Parabranchioica teaguei Devincenzi & Vaz-Ferreira, 1939: 5, fig. Type locality: río Uruguay, en las inmediaciones de la ciudad de Paysandú. Types unknown.
Maximum length: 2.8 cm
Distribution: South America: Paraná, Paraguay and Uruguay River basins.
Countries: Brazil, Paraguay

***Paravandellia phaneronema* (Miles, 1943)**

Branchioica phaneronema Miles, 1943: 367, fig. 1. Type locality: various points in the Upper Cauca valley. Holotype: lost (Román-Valencia, 1998), a paratype is preserved as USNM 120141.
Branchioica magdalanae Miles, 1943: 368. Type locality: Río Magdalena, Colombia. Holotype: lost (Román-Valencia, 1998), a paratype is preserved as USNM 120142.
Maximum length: 2.81 cm SL
Distribution: South America: Magdalena and Cauca River basins.
Countries: Colombia

PAREIODON

Pareiodon Kner, 1855: 160. Type species: *Pareiodon microps* Kner, 1855. Type by monotypy. Gender: masculine.
Centrophorus Kner, 1859: 167 (footnote). Type species: *Pareiodon microps* Kner, 1855. Type by being a replacement name. Gender: masculine. Unneeded replacement for *Pareiodon* Kner, 1855, then considered preoccupied by *Parodon*. Preoccupied by *Centrophorus* Müller & Henle, 1837.

Astemomycterus Guichenot, 1860: 525. Type species: *Trichomycterus pusillus* Castelnau, 1855. Type by original designation. Gender: masculine.

***Pareiodon microps* Kner, 1855**

Pareiodon microps Kner, 1855: 160, fig. 2. Type locality: Borba, Rio Madeira, about 4 days from Amazon mouth. Syntypes: NMW 45486 (2).
Trichomycterus pusillus Castelnau, 1855: 50, pl. 24 (fig. 4). Type locality: l'Araguay et [...] l'Amazone. Syntypes: MNHN 1210 (4).
Maximum length: 13 cm
Distribution: South America: Amazon River basin.
Countries: Brazil

PLECTROCHILUS

Plectrochilus Miranda Ribeiro, 1917: 50. Type species: *Plectrochilus machadoi* Miranda Ribeiro, 1917. Type by monotypy. Gender: masculine.
***Plectrochilus diabolicus* (Myers, 1927)**
Urinophilus diabolicus Myers, 1927: 132. Type locality: Iquitos, Peru. Holotype: CAS 59940 [ex IU 17701].
Maximum length: 6.3 cm SL
Distribution: South America: Amazon River basin.
Countries: Brazil, Peru
Remarks and references: Revalidated here, not a synonym of *Plectrochilus machadoi* Miranda Ribeiro as proposed in Myers (1944).

***Plectrochilus machadoi* Miranda Ribeiro, 1917**

Plectrochilus machadoi Miranda Ribeiro, 1917: 50, three unnumbered figs. Type locality: Rio Solimões, Upper Amazon, Brazil. Holotype: MNRJ 978.
Vandellia hasemani Eigenmann, 1918: 363, figs. 33-35, pl. 53 (fig. 3). Type locality: Río Mamoré, Alto Amazonas, Bolivia. Holotype: FMNH 58523 [ex CM 7542].
Maximum length: 9.3 cm
Distribution: South America: Amazon River basin.
Countries: Brazil, Peru

***Plectrochilus wieneri* (Pellegrin, 1909)**

Vandellia wieneri Pellegrin, 1909: 199, unnumbered fig. Type locality: Río Napo, near mouth of Río Misahually, Ecuador. Holotype: MNHN A.9934.
Maximum length: 7.9 cm
Distribution: South America: Napo River basin.
Countries: Ecuador

PSEUDOSTEGOPHILUS

Pseudostegophilus Eigenmann & Eigenmann, 1889: 54. Type species: *Stegophilus nemurus* Günther, 1869. Type by original designation. Gender: masculine.
***Pseudostegophilus haemomyzon* (Myers, 1942)**
Homodiaetus haemomyzon Myers, 1942: 98, fig. 4. Type locality: Río Guarico at Calabozo, Venezuela. Holotype: SU 36500.
Maximum length: 5.7 cm SL
Distribution: South America: Orinoco River basin.
Countries: Venezuela
***Pseudostegophilus nemurus* (Günther, 1869)**
Stegophilus nemurus Günther, 1869: 429. Type locality: Upper Amazon River, Peru. Holotype: BMNH 1869.5.21.9.
Maximum length: 11 cm
Distribution: South America: Amazon River basin.
Countries: Brazil, Peru

PYGIDIANOPS

Pygidianops Myers, 1944: 592. Type species: *Pygidianops eigenmanni* Myers, 1944. Type by original designation. Gender: masculine.

***Pygidianops eigenmanni* Myers, 1944**

Pygidianops eigenmanni Myers, 1944: 592, pls. 52 (fig. 1)- 53 (figs. 3-5). Type locality: Rock pools below São Gabriel Rapids, Rio Negro, Brazil. Holotype: CAS 11120.

Maximum length: 2.3 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

RHIZOSOMICHTHYS

Bathophilus Miles, 1942: 57. Type species: *Pygidium totae* Miles, 1942. Type by monotypy. Gender: masculine. Preoccupied by *Bathophilus* Giglioli, 1882, in fishes.

Rhizosomichthys Miles, 1943: 369. Type species: *Pygidium totae* Miles, 1942. Type by original designation. Gender: masculine. Replacement for *Bathophilus* Miles, 1942, preoccupied by *Bathophilus* Giglioli, 1882.

Bathypygidium Whitley, 1947: 150. Type species: *Pygidium totae* Miles, 1942. Type by being a replacement name. Gender: neuter. Replacement for *Bathophilus* Miles, 1942, preoccupied by *Bathophilus* Giglioli, 1882.

***Rhizosomichthys totae* (Miles, 1942)**

Pygidium totae Miles, 1942: 55, unnumbered fig. Type locality: Lago de Tota, Boyacá, Cordillera Oriental [5°27' N 73°23' W], Colombia, 3060 metros. Holotype: ICNMMNH 20 [? now ICNMMNH 353].

Maximum length: 13.8 cm

Distribution: South America: Lake Tota basin.

Countries: Colombia

SARCOGLANIS

Sarcoglanis Myers & Weitzman, 1966: 279. Type species: *Sarcoglanis simplex* Myers & Weitzman, 1966. Type by original designation. Gender: masculine.

***Sarcoglanis simplex* Myers & Weitzman, 1966**

Sarcoglanis simplex Myers & Weitzman, 1966: 279, figs. 1-2. Type locality: Rock pools below São Gabriel Rapids, of the Rio Negro (below the town of Uaupés, formerly São Gabriel), Estado de Amazonas, Brazil. Holotype: SU 50189.

Maximum length: 2.1 cm

Distribution: South America: Upper Negro River basin.

Countries: Brazil

SCHULTZICHTHYS

Schultzichthys Dahl, 1960: 312. Type species: *Schultzichthys gracilis* Dahl, 1960. Type by monotypy. Gender: masculine.

***Schultzichthys bondi* (Myers, 1942)**

Acanthopoma bondi Myers, 1942: 97, fig. 5. Type locality: Río Apuré at San Fernando de Apuré, Venezuela. Holotype: SU 36498.

Maximum length: 3.65 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Brazil, Peru, Venezuela

***Schultzichthys gracilis* Dahl, 1960**

Schultzichthys gracilis Dahl, 1960: 312, figs. 4-5. Type locality: foot of a rapid in Caño Lozada, about 15 km above its junction with the Guayabero River [Río Orinoco system, Colombia]. Holotype: lost (P. Cala, pers. comm.).

Maximum length: 2.6 cm SL

Distribution: South America: Guayabero River (Orinoco River basin).

Countries: Colombia

SCLERONEMA

Scleronema Eigenmann, 1917: 691. Type species: *Scleronema operculatum* Eigenmann, 1917. Type by original designation. Gender: neuter.

***Scleronema angustirostris* (Devincenzi, 1942)**

Pygidium angustirostris Devincenzi in Devincenzi & Teague, 1942: 30, pl. 4 (fig. 3). Type locality: La Cañeda de las Piedras, Uruguay. Holotype: MHNM CI (not found).

Maximum length: 4.8 cm

Distribution: South America: Uruguay.

Countries: Uruguay

***Scleronema minutum* (Boulenger, 1891)**

Trichomycterus minutus Boulenger, 1891: 235, pl. 26 (fig. 3). Type locality: San Lorenzo district [São Lourenço das Missões = 28°30'S 54°40'W], Brazil. Syntypes: BMNH 1891.3.16.84-86 (3).

Maximum length: 4 cm SL

Distribution: South America: Rio Grande do Sul State, Brazil.

Countries: Brazil

***Scleronema operculatum* Eigenmann, 1917**

Scleronema operculatum Eigenmann, 1917: 691. Type locality: Cacequy [29°50'S 54°55'W], Brazil. Holotype: FMNH 58080 [ex CM 7077].

Maximum length: 8 cm

Distribution: South America: Rio Grande do Sul State, Brazil.

Countries: Brazil

SILVINICHTHYS

Silvinichthys Arratia, 1998: 356. Type species: *Silvinichthys mendozensis* Arratia, Chang, Menu-Marque & Rojas, 1978. Type by monotypy. Gender: masculine.

***Silvinichthys mendozensis* (Arratia, Chang, Menu-Marque & Rojas, 1978)**

Trichomycterus mendozensis Arratia, Chang, Menu-Marque & Rojas, 1978: 170, figs. 8-10. Type locality: freshwater of the preandean range of Mendoza, Argentina ..., where it occupies a restricted environment between 1,500 to 1,700 m above sea level. Holotype: FFSUC IC 118-27.

Maximum length: 7.3 cm

Distribution: South America: Mendoza River basin.

Countries: Argentina

STAUROGLANIS

Stauroglanis de Pinna, 1989: 6. Type species: *Stauroglanis gouldingi* de Pinna, 1989. Type by original designation. Gender: masculine.

***Stauroglanis gouldingi* de Pinna, 1989**

Stauroglanis gouldingi de Pinna, 1989: 7, figs. 1-3. Type locality: Cachoeira do Aracu, R. Daraá (R. Negro drainage system), Estado do Amazonas, Brazil. Holotype: MZUSP 31088.

Maximum length: 2.7 cm SL

Distribution: South America: Daraá River, Negro River basin.

Countries: Brazil

STEGOPHILUS

Stegophilus Reinhardt, 1859: 5. Type species: *Stegophilus insidiosus* Reinhardt, 1859. Type by monotypy. Gender: masculine.

***Stegophilus insidiosus* Reinhardt, 1859**

Stegophilus insidiosus Reinhardt, 1859: 5, pl. 2. Type locality: Rio das Velhas, Rio São Francisco system, Brazil. BMNH 1875.5.22.1.

Distribution: South America: São Francisco River basin.
Countries: Brazil

***Stegophilus panzeri* (Ahl, 1931)**

Henonemus panzeri Ahl, 1931: 210, fig. 3. Type locality: Rio Capim. Holotype: ZMB orig. no. 656.

Maximum length: 4.1 cm SL
Distribution: South America: Lower Amazon River basin.
Countries: Brazil

***Stegophilus septentrionalis* Myers, 1927**

Stegophilus septentrionalis Myers, 1927: 130. Type locality: Venezuela: Santa Barbara, Orinoco. Holotype: CAS 64597 [ex IU 17699].

Maximum length: 4.4 cm SL
Distribution: South America: Orinoco River basin.
Countries: Venezuela

STENOLICMUS

Stenolicmus de Pinna & Starnes, 1990: 77. Type species: *Stenolicmus sarmientoi* de Pinna & Starnes, 1990. Type by original designation. Gender: masculine.

***Stenolicmus sarmientoi* de Pinna & Starnes, 1990**

Stenolicmus sarmientoi de Pinna & Starnes, 1990: 77, fig. 1-2. Type locality: Río Matos, trib. of Río Apere, 48 km east of San Borja, Ballivia Prov., Depto. Beni, Bolivia, 14°55'S, 66°17'W. Holotype: USNM 301664.

Maximum length: 29.5 cm
Distribution: South America: Upper Apere River basin.
Countries: Bolivia

TRICHOGENES

Trichogenes Britski & Ortega, 1983: 211. Type species: *Trichogenes longipinnis* Britski & Ortega, 1983. Type by original designation. Gender: masculine.

***Trichogenes longipinnis* Britski & Ortega, 1983**

Trichogenes longipinnis Britski & Ortega, 1983: 212, figs. 1-2. Type locality: Cachoeira do Amor, km 3 da estrada Parati-Ubatuba, Sao Paulo, Brazil. Holotype: MZUSP 16099.

Maximum length: 12 cm TL
Distribution: South America: Coastal drainages in northern São Paulo State, close to the border with Rio de Janeiro State.
Countries: Brazil

TRICHOMYCTERUS

Trichomycterus Valenciennes in Humboldt, 1832: 348. Type species: *Trichomycterus nigricans* Valenciennes, 1832. Type by monotypy. Gender: masculine.

***Trichomycterus albinotatus* Costa, 1992**

Trichomycterus albinotatus Costa, 1992: 102, figs. 1-2. Type locality: Estado do Rio de Janeiro: Visconde de Maua, 1 km O de la Ville de Maromba, rio Preto, bassin du rio Paraíba [22°30'S 44°15'], Brazil. Holotype: MZUSP 42312.

Maximum length: 4.63 cm
Distribution: South America: Preto River, tributary of Paraíba do Sul River.
Countries: Brazil

***Trichomycterus alternatus* (Eigenmann, 1917)**

Pygidium alternatum Eigenmann, 1917: 700. Type locality: Rio Doce [river mouth of the Doce River = 19°30'S 39°40'], Brazil. Holotype: FMNH 58082 [ex CM 7079].

Pygidium florense Miranda Ribeiro, 1943: 1, fig. Type locality: rio das Flores, próximo a Ipiabas (estação de Pandiá Calógeras) Estado do Rio de Janeiro [Ipiabas = 22°25'S 43°50'W], Brazil. Holotype: MNRJ 3751.

Pygidium travassosi Miranda Ribeiro, 1949a: 145, fig. 2. Type locality: Rio das Pedras, Fazenda Penedo, Agulhas Negras, Estado do Rio de Janeiro [22°30'S 44°30'W], Brazil. Holotype: MNRJ 5424.

Maximum length: 8.1 cm
Distribution: South America: Coastal river basins in Rio de Janeiro and Espírito Santo States.
Countries: Brazil

***Trichomycterus alterus* (Marini, Nichols & La Monte, 1933)**

Pygidium alterum Marini, Nichols & La Monte, 1933: 2, fig. 2. Type locality: Rio de los Sauces, La Rioja [29° 26'S 66°51'W], Argentina. Holotype: AMNH 12241.

Maximum length: 9.25 cm
Distribution: South America: Humahuaca (Jujuy), Los Sauces River and Valle Guanchin (La Rioja).
Countries: Argentina

***Trichomycterus areolatus* Valenciennes, 1846**

Trichomycterus areolatus Valenciennes, in Cuvier & Valenciennes, 1846: 492. Type locality: la rivièrre de San Jago, Santiago [33°27'S 70°40'W], Chile. Syntypes: MNHN 3167 (3), A.6310 (2).

Trichomycterus maculatus Valenciennes in Cuvier & Valenciennes, 1846: 493. Type locality: Santiago du Chili [33°27'S 70°40'W], Chile. Syntypes: MNHN 3166 (1), 4236 (10).

Trichomycterus marmoratus Philippi, 1866: 714. Type locality: Chile.

Trichomycterus tigrinus Philippi, 1866: 714. Type locality: Chile.

Trichomycterus palleus Philippi, 1866: 715. Type locality: Chile.

Maximum length: 11.6 cm.
Distribution: South America: Western vertents in Central Chile.
Countries: Chile

***Trichomycterus arleoi* (Fernández-Yépez, 1972)**

Pygidium arleoi Fernández-Yépez, 1972: 21, pl. 34. Type locality: Estación - 140 - de la Cuenca del Rio Yaracuy [Yaracuy River = 10°35'N 68°14'], Venezuela. Holotype: whereabouts unknown.

Maximum length: 5.19 cm SL
Distribution: South America: Yaracuy River basin.
Countries: Venezuela

***Trichomycterus auroguttatus* Costa, 1992**

Trichomycterus auroguttatus Costa, 1992: 105, fig. 6. Type locality: Rio de Janeiro Estado do Rio de Janeiro: 1 km à l'ouest de la ville de Visconde de Mauá, rio Marimbondo, affluent du rio Preto, bassin du rio Paraíba [22°30'S 44°15'W], Brazil. Holotype: MZUSP 43341.

Maximum length: 6.06 cm
Distribution: South America: Marimbondo River, tributary of Preto River, Paraíba do Sul River basin.
Countries: Brazil

***Trichomycterus bahianus* Costa, 1992**

Trichomycterus bahianus Costa, 1992: 105, fig. 5. Type locality: Estado da Bahia: Una, 6,5 km au sud-est de la ville de Sao José, dans um ruisseau affluent du ribeirão Caveira, bassin du rio Una, Bahia [Una = 15°35'S 39°20'W], Brazil. Holotype: MZUSP 43340.

Maximum length: 8.86 cm

Check List of the Freshwater Fishes of South and Central America

- Distribution: South America: Tributary stream of Ribeirão Caveira, Una River basin in State of Bahia.
Countries: Brazil
- Trichomycterus barbouri*** (Eigenmann, 1911)
Pygidium barbouri Eigenmann, 1911: 214, pl. 32. Type locality: Río Beni, e. Bolivia [10°23'S 65°24'W]. Holotype: MCZ 29313.
Maximum length: 3.7 cm
Distribution: South America: Beni River basin.
Countries: Bolivia
- Trichomycterus belensis*** Fernández and Vari, 2002
Trichomycterus belensis Fernández and Vari, 2002:739, fig. 1. Type locality: Argentinian, Provincia de Catamarca, Departamento Belén, stream tributary to Laguna Blanca, 11 km northeast from Belén on provincial road 43 along route from Belén to Antogagasta de la Sierra, near Los Nacimientos de San Antonio (approximately 26°30'S, 67°03'W). Holotype: FML 2530.
Maximum length: 6.3 cm
Distribution: South America: Laguna Blanca basin.
Countries: Argentina
- Trichomycterus bogotense*** (Eigenmann, 1912)
Pygidium bogotense Eigenmann, 1912a: 18. Type locality: On the plains of Bogota, at an elevation of nearly nine thousand feet, ... Chapinero [4°41' N 75° 56'W], Colombia. Holotype: FMNH 56030 [ex CM 4820].
Pygidium banneau Eigenmann, 1912a: 19. Type locality: Bernal Creek near Honda, Colombia. Holotype: FMNH 56025 [ex CM 4815].
Maximum length: 9.4 cm
Distribution: South America: River drainages in Colombia and Venezuela.
Countries: Colombia, Venezuela
- Trichomycterus bomboizanum*** (Tortonese, 1942)
Pygidium bomboizanum Tortonese, 1942: 113, pl. 1. Type locality: Río Bomboiza (Ecuador merid.) [3°25'S 78°29'W] Ecuador. Holotype: MZUT 3553.
Maximum length: 11.2 cm
Distribution: South America: Bomboiza River basin.
Countries: Ecuador
- Trichomycterus borellii*** Boulenger, 1897
Trichomycterus borellii Boulenger, 1897: 3. Type locality: Mission d'Aguairenda, Tala, and Lesser [Tala = 27°53'S 67°23'W], Argentina. Syntypes: BMNH 1897.1.27.26 (1): ZMUT 1396-98 (6, 2, 1).
Pygidium schmidti Berg, 1897: 266. Type locality: Río de Belén (Provincia de Catamarca)[27°00'S 67°00'W], Argentina. Syntypes: BMNH 1898.9.23.3 (1); MACN 2361 (1), 4595 (1), 5164 (2), 5176 (1).
Maximum length: 11 cm
Distribution: South America: Salta, Catamarca and Mendoza in Argentina; and Aguairenda in Bolivia
Countries: Argentina, Bolivia
- Trichomycterus boylei*** Nichols, 1956
Pygidium boylei Nichols, 1956: 1, fig. 1. Type locality: dry country at Tilcara, Argentina, elevation 8000 feet. [Tilcara = 23°30'S 65°20'W], Argentina. Holotype: AMNH 20299.
Maximum length: 13 cm TL
Distribution: South America: Grande River basin.
Countries: Argentina
- Trichomycterus brasiliensis*** Lütken, 1874
Trichomycterus brasiliensis Lütken, 1874: 29. Type locality: Rio das Velhas, Minas Gerais [river mouth of the das Velhas River on São Francisco basin = 17°10'S 44°51'W], Brazil. Syntypes: NMW 85270 (3); ZMB 9121 (2); ZMUC 103 (1), 108-109 (2), 114 (1), 116 (1), 119-121 (3), 123-127 (5).
Trichomycterus brasiliensis tristis Lütken, 1875: 137. Type locality: Rio das Velhas, Minas Gerais, Brazil. Holotype: ZMUC 122.
Maximum length: 13.3 cm
Distribution: South America: Upper São Francisco River in State of Minas Gerais and in smaller adjoining basins in Southeastern Brazil.
Countries: Brazil
- Trichomycterus caliense*** (Eigenmann, 1912)
Pygidium caliense Eigenmann, 1912a: 18. Type locality: Cali [3°27'N 76°31'W], Colombia. Holotype: FMNH 56029.
Maximum length: 5.3 cm
Distribution: South America: Calima River basin.
Countries: Colombia
- Trichomycterus candidus*** (Miranda Ribeiro, 1949)
Eremophilus candidus Miranda Ribeiro, 1949b: 2, pls. Type locality: pequeno córrego que cai no ribeirão Espírito Santo, afluente do Rio Claro e este do Sapucaí, que deságua no Rio Grande - Município de Conceição Aparecida, Estado de Minas Gerais [21°00'S 46°15'W], Brazil. Holotype: MNRJ 5209.
Maximum length: 7.5 cm
Distribution: South America: Grande River basin, Minas Gerais State.
Countries: Brazil
- Trichomycterus castroi*** de Pinna, 1992
Trichomycterus castroi de Pinna, 1992a: 90, figs. 1-3. Type locality: Branch of the Rio Iguaçu, near the point crossed by Curitiba-Paranaguá Road., State of Paraná, Brazil, ca. 25°26'S, 49°06'W Holotype: MZUSP 36964.
Maximum length: 14.8 cm
Distribution: South America: Iguaçu River basin.
Countries: Brazil
- Trichomycterus catamarcensis*** Fernández & Vari, 2000
Trichomycterus catamarcensis Fernández & Vari, 2000: 990. Type locality: Provincia de Catamarca, Departamento Belén, stream tributary to Laguna Blanca, 11 km northeast from Belén on provincial road 43 along route from Belén to Antofagasta de la Sierra, near Los Nacimientos de San Antonio (approximately 26° 30'S, 67°03'W), elevation 3500m, Argentina. Holotype: FML 2507.
Maximum length: 4.2 cm
Distribution: South America: Laguna Blanca basin in Catamarca Province.
Countries: Argentina
- Trichomycterus chaberti*** Durand, 1968
Trichomycterus chaberti Durand, 1968: 344, fig. 3. Type locality: Umayalanta (Grotte de) [Torotoro = 18°07'S 65°46'W], Bolivia. Holotype: MNHN 1968-217.
Maximum length: 11.4 cm
Distribution: South America: Umayalanta Cave system.
Countries: Bolivia
- Trichomycterus chapmani*** (Eigenmann, 1912)
Pygidium chapmani Eigenmann, 1912a: 18. Type locality: Boquia [4°41'S 75°29'W], Colombia. Holotype: FMNH 56027 [ex CM 4817].
Maximum length: 11.8 cm
Distribution: South America: Boquia River basin.
Countries: Colombia
- Trichomycterus chiltoni*** (Eigenmann, 1920)

- Pygidium chiltoni* Eigenmann, 1920: 54. Type locality: Rio Nongen Concepcion [36°30'S 72° 30'W], Chile. Holotype: CAS 57596 [ex IU 15059]. Also described as new in Eigenmann (1927: 40, pl. 8, figs. 1, 1a, and pl. 13, figs. 5-6).
Maximum length: 17 cm
Distribution: South America: Western drainages in central Chile.
Countries: Chile
- Trichomycterus chungaraensis* Arratia, 1983**
Trichomycterus chungaraensis Arratia, 1983: 67, fig. 2. Type locality: Streams of Vertiente de Mal Paso, Chungará Lake, 4500 m above sea level, North Chile, South America [18°15'S 69°10'W], Chile. Holotype: FFSUC IC 290878A.
Maximum length: 12 cm
Distribution: South America: Streams of Chungará Lake.
Countries: Chile
- Trichomycterus concolor* Costa, 1992**
Trichomycterus concolor Costa, 1992: 107, fig. 9. Type locality: ruisseau 20 km au sud de la ville de Garapuava, bassin du rio São Francisco, Minas Gerais [16°05'S 46°35'W], Brazil. Holotype: MZUSP 43347.
Maximum length: 6.43 cm
Distribution: South America: Upper São Francisco River basin.
Countries: Brazil
- Trichomycterus conradi* (Eigenmann, 1912)**
Pygidium conradi Eigenmann, 1912b: 212. Type locality: Amatuk [5°18'N 59°18'W]. Holotype: FMNH 53721 [ex CM 2212].
Maximum length: 8 cm
Distribution: South America: River drainages in Guyana and Venezuela.
Countries: Guyana, Venezuela
- Trichomycterus corduensis* Weyenbergh, 1877**
Trichomycterus corduensis Weyenbergh, 1877: 11, pl. 3 (figs. 1-2). Type locality: Rio Primero, y en las acequias de Córdoba [Primeiro River = 31°20'S 63°37'], Argentina. Syntypes: (several) MSNG 9020 (1).
Maximum length: 13.6 cm
Distribution: South America: Primeiro River basin.
Countries: Argentina
- Trichomycterus davisii* (Haseman, 1911)**
Pygidium davisii Haseman, 1911: 380, pl. 77; Fig. 1. Type locality: Serrinha Paraná, Rio Iguacu system [Engenheiro Bley = 25°35'S 49°30'W], Brazil. Holotype: FMNH 60309 [ex CM 2862].
Maximum length: 6 cm
Distribution: South America: Iguacu and Ribeira de Iguape River basins.
Countries: Brazil
- Trichomycterus dispar* (Tschudi, 1846)**
Pygidium dispar Tschudi, 1846: 22, pl. 3. Type locality: ... meisten Flüssen der Cordillera; ich habe ein Exemplar ahf einer Höhe von mehr als 14000 Fussü. M. gefangen; aber immer nur auf dem Hochlande zwischen den beiden Gebirgsketten und am Ostabhange der Anden wie an dem der Cordillera, Peru. Syntypes: (several) MHNN 767 (1).
Maximum length: 26 cm
Distribution: South America: Peruvian Andes.
Countries: Peru
- Trichomycterus dorsostriatus* (Eigenmann, 1917)**
Pygidium dorsostriatum Eigenmann, 1917: 695. Type locality: Villavicencio [4°09'N 73°37'W], Colombia. Holotype: FMNH 58096 [ex CM 7093]. Appeared initially as *dorsotriatum* but as *dorsostriatum* in other Eigenmann publications; *dorsotriatum* regarded as a typographical error.
Maximum length: 7.7 cm
Distribution: South America: River drainages in Villavicencio.
Countries: Colombia
- Trichomycterus duellmani* Arratia & Menu-Marque, 1984**
Trichomycterus duellmani Arratia & Menu-Marque, 1984: 510, figs. 14-15. Type locality: Río Tupiza, 12.5 km SE Tupiza, Bolivia, ... 22°33'S, 65°45'W. Holotype: KU 20191.
Maximum length: 4.8 cm TL
Distribution: South America: Tupiza River basin.
Countries: Bolivia
- Trichomycterus emanueli* (Schultz, 1944)**
Pygidium emanueli emanueli Schultz, 1944: 259, pl. 5 (fig. C). Type locality: Río Chama at Estanques, Estado de Mérida [Chama River = 9°03' N 71°37'W; Estanques = 8°28'N 71°33'W], Venezuela. Holotype: USNM 121223.
Maximum length: 17.4 cm
Distribution: South America: Chama River basin.
Countries: Venezuela
- Trichomycterus fassli* (Steindachner, 1915)**
Pygidium fassli Steindachner, 1915a: 200. Type locality: Rio Songo im Distrikt Nord-Yungas [16°00'S 67°30'W], Bolivia. Syntypes: (4) NMW 44470 (1). Spelling changed to *fasslii* when later illustrated and described in more detail in Steindachner (1915b: 97, pl. 13 figs. 1-2).
Maximum length: 14.9 cm
Distribution: South America: Songo Rievr basin.
Countries: Bolivia
- Trichomycterus gabrieli* (Myers, 1926)**
Pygidium gabrieli Myers, 1926: 151. Type locality: São Gabriel rapids, Rio Negro, in rock-pools, Amazon system [0°05' S 67°00'W], Brazil. Syntypes: CAS 64583 (4), SU 36556 (1).
Maximum length: 5 cm
Distribution: South America: Upper Negro River in Brazil.
Countries: Brazil
- Trichomycterus goeldii* Boulenger, 1896**
Trichomycterus goeldii Boulenger, 1896: 154. Type locality: Colonia Alpina, Organ Mts in the Province Rio Janeiro, at an altitude of nearly 2600 feet, Brazil. Syntypes: BMNH 1896.4.4.7-8 (2).
Maximum length: 9.9 cm TL
Distribution: South America: Mountain ranges of coastal basins of Rio de Janeiro State.
Countries: Brazil
- Trichomycterus guianensis* (Eigenmann, 1909)**
Pygidium guianensis Eigenmann, 1909: 11. Type locality: Aruataima Falls, Upper Potaro [Upper Potaro = 05°00'N 59°30'W], Guyana. Holotype: FMNH 52676 [ex CM 1003].
Maximum length: 7.7 cm
Distribution: South America: River drainages in Guianas and Venezuela.
Countries: French Guiana, Guyana, Venezuela
- Trichomycterus hasemani* (Eigenmann, 1914)**
Pygidium hasemani Eigenmann, 1914: 48. Type locality: Santarem, Pará [2°30'S 54°50'W], Brazil. Holotype: FMNH 56424 [ex CM 5238]. Species illustrated in Eigenmann (1918: 326, pl. 50, fig. 4).
Maximum length: 1.8 cm
Distribution: South America: Amazon River basin.
Countries: Bolivia, Brazil, Peru
- Trichomycterus heterodontus* (Eigenmann, 1917)**
Pygidium heterodontum Eigenmann, 1917: 692. Type locality: Rio Mendoza, Palmira, Argentina, 900 m [33°03'S 68°34'W],

Argentina. Holotype: CAS 58139 [ex IU 13832]. Type illustrated in Eigenmann (1918: 296, pl. 44, fig. 4).
Maximum length: 8.3 cm
Distribution: South America: Mendoza River basin.
Countries: Argentina

***Trichomycterus iheringi* (Eigenmann, 1917)**

Pygidium iheringi Eigenmann, 1917: 697. Type locality: São Paulo in coastal streams and Parana basin, Brazil [on Table: 7071 C, Sapina, São Paulo; 10785 I, Santos, São Paulo - Santos = 24°00'S 43°25'W, Ribeira River system = 25°00'S 49°00'W], Brazil. Holotype: CAS 64585 [ex IU 10785] not FMNH 58074 [CM 7071].

Maximum length: 16.1 cm
Distribution: South America: Ribeira do Iguape River basin.
Countries: Brazil

***Trichomycterus immaculatus* (Eigenmann & Eigenmann, 1889)**

Pygidium immaculatum Eigenmann & Eigenmann, 1889: 52. Type locality: Juiz de Fora, Rio Parahybuna [Juiz de Fora = 21°40'S 43°25'W], Brazil. Syntypes: MCZ 8266 (1), 8300 (10), 8302 (1), 8305 (1), 8307 (1). Type illustrated in Eigenmann (1918: 334 pl. 52, fig.1).

Maximum length: 9.3 cm
Distribution: South America: Paraíbuna River, Paraíba do Sul River basin.
Countries: Brazil

***Trichomycterus itacarambiensis* Trajano & de Pinna, 1996**

Trichomycterus itacarambiensis Trajano & de Pinna, 1996: 86, figs. 1-2. Type locality: Creek inside Olhos d'Água cave, Município de Itacarambi, Minas Gerais, Brazil, 15°06'06"S, 44°09'30"W. Holotype: MZUSP 42469.

Maximum length: 5.97 cm
Distribution: South America: Olhos d'Água Cave in State of Minas Gerais, Brazil.
Countries: Brazil

***Trichomycterus itatiaiae* Miranda Ribeiro, 1906**

Trichomycterus brasiliensis itatiaiae Miranda Ribeiro, 1906: p. [15], pl. 1 (figs. a-c). Type locality: ... do Itatiaia, ... em afluente do Parahyba, Rio de Janeiro State [22°27'S, 44°50'W], Brazil. The type locality was restricted by Caramaschi & Caramaschi (1991: 223) to: Ribeirão da Tapera (tributary of the Ribeirão Bonito, Rio Paraíba do Sul drainage), Mont-Serrat, Itatiaia (ca. 22°27'S, 44°50'W, ca. 800 m a.s.l.), Rio de Janeiro State, Brazil. Lectotype: MNRJ 792, designated by Caramaschi & Caramaschi (1991: 223).

Maximum length: 6.7 cm
Distribution: South America: Rivers in Itatiaia mountains (part of the upper reaches of Paraíba do Sul River basin).
Countries: Brazil

***Trichomycterus johnsoni* (Fowler, 1932)**

Pygidium johnsoni Fowler, 1932: 367, fig. p. 364. Type locality: Descalvados, Matto Grosso [16°40'S 57°40'W], Brazil. Holotype: ANSP 53873.

Maximum length: 1.6 cm
Distribution: South America: Paraná River basin in State of Mato Grosso, Brazil, and Corrientes, Argentina.
Countries: Argentina, Brazil

***Trichomycterus knerii* Steindachner, 1882**

Trichomycterus knerii Steindachner, 1882a: 142. Type locality: Canelos [1°35'S 77°45'W], Ecuador. Syntypes: (several) NMW 43328 (1). Species later illustrated and described in more detail in Steindachner (1882b: 81).

Maximum length: 15.5 cm
Distribution: South America: Canelos, Ecuador.
Countries: Ecuador

***Trichomycterus latidens* (Eigenmann, 1917)**

Pygidium latidens Eigenmann, 1917: 693. Type locality: Small creek near mouth of Rio Calima [4°08'N 77°04'W], Colombia. Holotype: IU 13801.

Maximum length: 5.3 cm
Distribution: South America: Calima River basin.
Countries: Colombia

***Trichomycterus latistriatus* (Eigenmann, 1917)**

Pygidium latistriatum Eigenmann, 1917: 696. Type locality: Quebrada de Pinchote, Santander [Quebrada de Pinchote = 6°32'N 73°12'W], Colombia. Holotype: FMNH 58449 [ex CM 7450].

Maximum length: 4.6 cm
Distribution: South America: Santander, Colombia.
Countries: Colombia

***Trichomycterus laucaensis* Arratia, 1983**

Trichomycterus laucaensis Arratia, 1983: 74, fig. 8. Type locality: System of Lauca River, Parinacota, 4,390 m above sea level, Northern Chile, South America [18°13'S 69°18'W], Chile. Holotype: FFSUC IC 160878A.

Maximum length: 14.1 cm
Distribution: South America: Lauca River basin.
Countries: Chile

***Trichomycterus longibarbatus* Costa, 1992**

Trichomycterus longibarbatus Costa, 1992: 104, fig. 4. Type locality: près de la ville de Santa Tereza, Espirito Santo [19°50'S 40°25'W], Brazil. Holotype: MZUSP 43339.

Maximum length: 5.84 cm
Distribution: South America: Near Santa Tereza, Espirito Santo State.
Countries: Brazil

***Trichomycterus maracaiboensis* (Schultz, 1944)**

Pygidium banneaui maracaiboensis Schultz, 1944: 262, pl. 6 (fig. B). Type locality: Río San Juan near bridge, south of Mene Grande, tributary to Río Motatán, Maracaibo basin [Mene Grande = 9°49'N 70°56'W], Venezuela. Holotype: USNM 121227.

Maximum length: 4.37 cm
Distribution: South America: San Juan River, tributary to Motatán River, Lake Maracaibo basin.
Countries: Venezuela

***Trichomycterus meridae* Regan, 1903**

Trichomycterus meridae Regan, 1903: 624. Type locality: Merida, Venezuela, and from the Río Albireggas above Merida, altitude 3500 metres [Merida = 8°36'N 71°08'W], Venezuela. Syntypes: BMNH 1903.4.28.35-38 (4), USNM 133136 [ex BMNH 1903.6.30.77-80 (4), in part] (1).

Maximum length: 9.9 cm
Distribution: South America: Albirregas River basin.
Countries: Venezuela

***Trichomycterus migrans* (Dahl, 1960)**

Pygidium migrans Dahl, 1960: 309, fig. 3. Type locality: in front of Camp I, in the Guayabero River [Orinoco System, Colombia]. Holotype: ICNMHN 399.

Maximum length: 4.2 cm
Distribution: South America: Guayabero River, Orinoco River basin.
Countries: Colombia

***Trichomycterus mimonha* Costa, 1992**

- Trichomycterus mimonha* Costa, 1992: 106, fig. 7. Type locality: 2 km au nord de la ville de Piquete, rio Benfica, bassin du rio Paraíba, Sao Paulo [22°50'S 45°10'W], Brazil. Holotype: MZUSP 43343.
Maximum length: 7.8 cm
Distribution: South America: Benfica River, Paraíba do Sul River basin.
Countries: Brazil
- Trichomycterus mirissumba* Costa, 1992**
Trichomycterus mirissumba Costa, 1992: 107, fig. 8. Type locality: Visconde de Mauá, 1 km à l'est de la ville de Maromba, rio Preto, près du confluent avec le ruisseau Santa Clara, bassin du rio Paraíba, Rio de Janeiro [22°30'S 44°15'W], Brazil. Holotype: MZUSP 43345.
Maximum length: 5.96 cm
Distribution: South America: Preto River, Paraíba do Sul River basin.
Countries: Brazil
- Trichomycterus mondolfi* (Schultz, 1945)**
Pygidium mondolfi Schultz, 1945: 29, fig. 1. Type locality: Quebrado Chacaito near Caracas but in Estado de Miranda, Río Tuy system [Tuy River = 10°24'N 65°59'W], Venezuela. Holotype: USNM 120377.
Maximum length: 6.05 cm
Distribution: South America: Tuy River basin.
Countries: Venezuela
- Trichomycterus motatanensis* (Schultz, 1944)**
Pygidium emanueli motatanensis Schultz, 1944: 260, pl. 6 (fig. a). Type locality: Río San Juan at the bridge south of Mene Grande, Motatán system, Maracaibo basin [Mene Grande = 9°49'N 70°56'W], Venezuela. Holotype: USNM 121232.
Maximum length: 7.1 cm
Distribution: South America: San Juan River, Motatán drainage, Lake Maracaibo basin.
Countries: Venezuela
- Trichomycterus nigricans* Valenciennes, 1832**
Trichomycterus nigricans Valenciennes, 1832: 348. Type locality: ruisseaux de Sainte-Catherine du Brésil, Santa Catarina [Itapocu River = 26°10'S 48°35'W], Brazil. Holotype: On the basis of circumstantial evidence, MNHN B.251 was interpreted by Arratia (1998) as a type specimen.
Maximum length: 8.9 cm
Distribution: South America: Coastal drainages in Santa Catarina State, Brazil.
Countries: Brazil
- Trichomycterus nigromaculatus* Boulenger, 1887**
Trichomycterus nigromaculatus Boulenger, 1887b: 349. Type locality: Andes of Columbia. Syntypes: BMNH 1880.2.26.16-17 (2), BMNH 1903.4.28.35-38 (4), USNM 133136 [ex BMNH 1903.6.30.77-80 (4), in part] (1).
Maximum length: 16.5 cm
Distribution: South America: Colombian Andes.
Countries: Colombia
- Trichomycterus paolence* (Eigenmann, 1917)**
Pygidium paolence Eigenmann, 1917: 698. Type locality: São Paulo in the Parana basin and (?) in coastal streams. ... Alto da Serra, Rio Tieté, São Paulo. ... Mogy das Cruces, Rio Tieté, São Paulo [Mogy das Cruces = 23°30'S 46°10'W], Brazil. Holotype: FMNH 58085 [ex CM 7081].
Maximum length: 6.8 cm
Distribution: South America: Paraná River basin in São Paulo State.
Countries: Brazil
- Trichomycterus paquequerense* (Miranda Ribeiro, 1943)**
Pygidium paquequerense Miranda Ribeiro, 1943: 2, fig. Type locality: Rio Paquequer Grande, Estado do Rio de Janeiro [22°30' S 43°00'W], Brazil. Holotype: MNRJ 1159.
Maximum length: 4.4 cm
Distribution: South America: Paquequer River, Paraiba do Sul River basin.
Countries: Brazil
- Trichomycterus piurae* (Eigenmann, 1922)**
Pygidium punctulatum piurae Eigenmann, 1922b: 63. Type locality: Piura [Piura River = 5°32'S 80°53'W], Peru. Holotype: CAS 58119 [ex IU 15224].
Maximum length: 10.1 cm SL
Distribution: South America: Piura River basin.
Countries: Peru
- Trichomycterus punctatissimus* Castelnau, 1855**
Trichomycterus punctatissimus Castelnau, 1855: 49, pl. 24 (fig. 3). Type locality: De l'Araguay. Holotype: MNHN B.610.
Maximum length: 28 cm TL
Distribution: South America: Araguaia River basin.
Countries: Brazil
- Trichomycterus punctulatus* Valenciennes, 1846**
Trichomycterus punctulatus Valenciennes, in Cuvier & Valenciennes, 1846: 488, pl. 552. Type locality: la rivière de Lima [12°00'S 76°50'W], Peru. Syntypes: MNHN 3168 (5).
Maximum length: 14.5 cm
Distribution: South America: Western Peru.
Countries: Peru
- Trichomycterus ramosus* Fernández, 2000**
Trichomycterus ramosus Fernández, 2000: 350, fig. 1. Type locality: Catamarca: Departamento Belém: Laguna Blanca, 3680 m elevation, approximately 26°30'S, 67°03'W, Argentina. Holotype: FML 2070.
Maximum length: 3.58 cm
Distribution: South America: Laguna Blanca basin, Catamarca Province.
Countries: Argentina
- Trichomycterus regani* (Eigenmann, 1917)**
Pygidium regani Eigenmann, 1917: 696. Type locality: Tado, Rio San Juan [Tado = 5°22'N 76°25'W], Colombia. Holotype: CAS 64591 [ex IU 13772]. Eigenmann 1918: Plate XLVIII, fig. 5.
Maximum length: 5.5 cm
Distribution: South America: San Juan River basin.
Countries: Colombia
- Trichomycterus reinhardti* (Eigenmann, 1917)**
Pygidium reinhardti Eigenmann, 1917: 699. Type locality: Burmier on the Rio Itabira, a tributary of the Rio das Velhas [20°00'S 47°00'W], Brazil. Holotype: FMNH 58081 [ex CM 7078].
Maximum length: 6.5 cm
Distribution: South America: Upper São Francisco River basin.
Countries: Brazil
- Trichomycterus retropinnis* Regan, 1903**
Trichomycterus retropinnis Regan, 1903: 624. Type locality: St. Augustin, Andes of Colombia, elev. 5000 feet. Syntypes: (2) BMNH, ?RMNH 24727 (4).
Maximum length: 8 cm TL
Distribution: South America: Colombian Andes.
Countries: Colombia
- Trichomycterus riojanus* (Berg, 1897)**

- Pygidium riojanum* Berg, 1897: 269. Type locality: un arroyo de la Cordillera de La Rioja [Provincia de la Rioja = 3000' S 67°30'W], Argentina. Holotype: MACN 5175. Maximum length: 8.5 cm. Distribution: South America: La Rioja Range. Countries: Argentina
- Trichomycterus rivulatus* Valenciennes, 1846**
Trichomycterus rivulatus Valenciennes, in Cuvier & Valenciennes, 1846: 495. Type locality: ruisseaux qui se jettent dans le lac de Titicaca, vaste mer alpine, peuplée par les Orestias sans ventrales, ou dans les affluents de l'Apurimac, l'une des sources de l'Amazonie ... du Guasacóna [15°48'S 69°24'W], Peru. Syntypes: MNHN B.586 (1).
- Trichomycterus barbatula* Valenciennes, in Cuvier & Valenciennes, 1846: 498. Type locality: Guasacóna et du Rio de Pontezualo près coroico, par une hauteur de terize à quatorze milles pieds et à una latitude de seize à dix - sept degrés nord. Syntypes: MNHN 4077 (1), 4078 (5) and B.587 (3).
- Trichomycterus gracilis* Valenciennes, in Cuvier & Valenciennes, 1846: 497. Type locality: Rio de Azangaro près de Guasacóna, dans le Rio de Pontezualo près de Coroico, et enfin dans le lac de la Compucila dans les Andes, à l'ouest de Cuzco, par la hautes de quatorze mille pieds, Peru. Syntypes: MNHN 3129 (2), 4063 (2), A.9766 (6), B.588 (2).
- Trichomycterus incae* Valenciennes, in Cuvier & Valenciennes, 1846: 496. Type locality: Rio Guatanai à Cuzco, Peru. Syntypes: MNHN A.8986 (1).
- Trichomycterus pentlandi* Castelnau, 1855: 49, pl. 24 (fig. 1). Type locality: lac situé près de la mission de Sarayacu, qui communiqué avec la rivière d'Ucayale, Peru. Holotype: MNHN B.608.
- Trichomycterus pictus* Castelnau, 1855: 50, pl. 24 (fig. 2). Type locality: grand lac de Titicaca. Syntypes: MNHN B.609 (3).
- Trichomycterus pardus* Cope, 1874: 132. Type locality: Upper Amazon. Syntypes: ANSP 21180-202 (23).
- Trichomycterus poeyanus* Cope, 1877: 47. Type locality: Arequipa, Peru. Syntypes: ANSP 21382-83 (2).
- Pygidium oroyae* Eigenmann & Eigenmann, 1889: 51. Type locality: Rio Oroya, Pochachara, Brazil. Syntypes: MCZ 3955 (8).
- Trichomycterus eigenmanni* Boulenger, 1898: 8. Type locality: Cumbaca [unknown], Brazil. Holotype: MCZ 8301.
- Pygidium quechuorum* Steindachner, 1900: 207. Type locality: Arequipa, Río Chile, Südperu. Syntypes: (5) whereabouts unknown.
- Pygidium tiraquae* Fowler, 1940b: 92, fig. 52. Type locality: Tiraque, Cochabamba, Bolivia. Holotype: ANSP 69126 (with paratypes).
- Pygidium atochae* Allen, in Eigenmann & Allen, 1942: 156, pl. 13 (figs. 3-5). Type locality: Rio de Atocha, Atocha, Bolivia. Holotype: CAS 64576 [ex IU 17819]. Maximum length: 37.4 cm TL. Distribution: South America: High-altitude lakes and streams in the central Andean range (including Lakes Titicaca and Poopó), from Lake Junin in the north to Chilean region of Tarapacá in the south, spanning Western Bolivia, Peru and Northern Chile. Countries: Bolivia, Chile, Peru
- Trichomycterus roigi* Arratia & Menu-Marque, 1984**
Trichomycterus roigi Arratia & Menu-Marque, 1984: 494, figs. 1-10. Type locality: Río Pastos Chicos. Jujuy, north of Argentina; 23°24'S - 66°35'W. Holotype: MLP 29-8-83-1. Maximum length: 11 cm TL. Distribution: South America: Pastos Chicos River basin. Countries: Argentina
- Trichomycterus romeroi* (Fowler, 1941)**
Pygidium romeroi Fowler, 1941: 4, figs. 6-8. Type locality: Honda, Colombia. Holotype: ANSP 69331. Maximum length: 6.6 cm. Distribution: South America: Honda River basin. Countries: Colombia
- Trichomycterus santaeritae* (Eigenmann, 1918)**
Pygidium santae-ritae Eigenmann, 1918: 341, pl. 52 (fig. 5). Type locality: Santa Rita, Rio Preto, Brazil. Holotype: FMNH 58577 [ex CM 7599]. Maximum length: 6.6 cm. Distribution: South America: Preto River, Paraíba do Sul River basin. Countries: Brazil
- Trichomycterus spegazzinii* (Berg, 1897)**
Pygidium spegazzinii Berg, 1897: 267. Type locality: Río de Cachi (Provincia de Salta), ... , á una altura de 2500 á 2800 metros sobre el nivel del mar [24°47'S 65°25'W], Argentina. Syntypes: BMNH 1898.9.23.1-2 (2); MACN 4925 (originally 29, now 19), 5173 (2); SMF 831 (1). Maximum length: 10.8 cm. Distribution: South America: Provinces of Salta and Catamarca in Argentina. Countries: Argentina
- Trichomycterus spelaeus* DoNascimento, Villarreal & Provenzano, 2001**
Trichomycterus spelaeus DoNascimento, Villarreal & Provenzano, 2001: 21, fig. 1. Type locality: Cueva Punto Fijo, en el caserío Punto Fijo a 7,5 km al N del Cerro Yolanda, 590 m.s.n.m., cuenca del río Guasare, Edo. Zulia, Venezuela (10°57'10"N; 72°28'06"O). Holotype: MBUCV-V-29602. Maximum length: 5.41 cm SL. Distribution: South America: Punto Fijo Cave, upper Guasare River basin. Countries: Venezuela
- Trichomycterus spilosoma* (Regan, 1913)**
Pygidium spilosoma Regan, 1913: 468. Type locality: Rio Sipi and Rio Tamana [Sipi River = 4°45'N 76°50'W; Tamana River = 5°00'N 76°44'W], Colombia. Syntypes: (3) BMNH 1910.7.11.106-108 (3), 1910.7.11.15 (1). Maximum length: 25 cm. Distribution: South America: Sipi and Tamana River basins. Countries: Colombia
- Trichomycterus stawiarski* (Miranda Ribeiro, 1968)**
Pygidium stawiarski Miranda Ribeiro, 1968: 1. Type locality: Pequeno córrego pertencente á bacia do Rio Paraná - localidade de Bituruna - Est. do Paraná, Paraná [26°10'S 51°30'W], Brazil. [Iguaçu system]. Holotype: MNRJ 9739. Maximum length: 8.5 cm. Distribution: South America: Iguaçu River basin. Countries: Brazil
- Trichomycterus stellatus* (Eigenmann, 1918)**
Pygidium stellatum Eigenmann, 1918: 308, pl. 47 (fig. 1). Type locality: Quebrada Sarjento, Colombia. Holotype: FMNH 58101 [ex CM 7097]. Maximum length: 7.8 cm. Distribution: South America: Colombia. Countries: Colombia
- Trichomycterus straminus* (Eigenmann, 1917)**
Pygidium straminium Eigenmann, 1917: 694. Type locality: Quebrada del Mango, Santander, Colombia. Holotype: FMNH 58105 [ex CM 7101]. Maximum length: 6.7 cm. Distribution: South America: Santander, Colombia.

Countries: Colombia

***Trichomycterus striatus* (Meek & Hilbebrand, 1913)**

Pygidium striatum Meek & Hildebrand, 1913: 78. Type locality: Río Cana at Cana [8°51'N 81°42'W], Panama. Holotype: FMNH 7579.

Pygidium septentrionale Behre, 1928: 309, pl. 18. Type locality: ... small streams tributary to Río Chiriqui del Tiro above Caldera, Pacific slope of Panama, altitude about 4,000 feet ... Quebrada Salão, Panama, ca. elev. 4000 ft [Caldera = 8°39'N 82°23'W]. Holotype: FMNH 59522 [ex CM 8515].

Maximum length: 8.4 cm

Distribution: Central America: Southern Central America.

Countries: Panama, Costa Rica

***Trichomycterus taczanowskii* Steindachner, 1882**

Trichomycterus taczanowskii Steindachner, 1882a: 177. Type locality: Huambo und Río Tortora bei Chirimoto [6°31'S 77°24'W], Peru. Syntypes: (several) NMW 43387 (1). Species later illustrated and described in more detail in Steindachner (1882b: 22, pl. 4, figs. 1-1b).

Maximum length: 11.3 cm

Distribution: South America: Peru.

Countries: Peru

***Trichomycterus taenia* Kner, 1863**

Trichomycterus taenia Kner, 1863: 228, fig. 16. Type locality: Vom Westabhang der Andes im State Ecuador, Ecuador. Holotype: whereabouts unknown. Also appeared as new in Kner & Steindachner (1864: 52, pl. 6, fig. 1).

Maximum length: 11.1 cm

Distribution: South America: Ecuadorian Andes.

Countries: Ecuador

***Trichomycterus taeniops* Fowler, 1954**

Pygidium tenue Fowler, 1945: 6, figs. 7-9. Type locality: Acobamba, near Tarma at 2000 meters elevation, Rio Ucayali basin, Peru. Holotype: ANSP 71638. Preoccupied in *Trichomycterus* by *Trichomycterus tenuis* Weyenbergh, 1877; replaced by *Trichomycterus taeniops* Fowler, 1954.

Trichomycterus taeniops Fowler, 1954: 36, fig. 635. Type locality: Acobamba, near Tarma, at 2000 meters elevation, Rio Ucayali basin, Peru, elev. 2000 m [Ucayali River = 430°S 73° 27'W; Tarma = 3°22'S 71°45'W], Peru. Replacement name for *Pygidium tenue* Fowler, 1945, preoccupied in *Trichomycterus* by *Trichomycterus tenuis* Weyenburgh, 1877

Maximum length: 9.2 cm

Distribution: South America: Ucayali River basin (elevation 2000 m).

Countries: Peru

***Trichomycterus tenuis* Weyenbergh, 1877**

Trichomycterus tenuis Weyenbergh, 1877: 12, pl. 3 (figs. a-c). Type locality: una pequeña laguna, en la Sierra de Córdoba, cerca de la Villa Cruz-del-eje [Santa Fé, Provincia de Santa Fé = 31°00'S 61°00'W; Cordoba = 31°24'S 64°11'W], Argentina. Syntypes: (several) MSNG 8852 (2).

Maximum length: 11.7 cm

Distribution: South America: Córdoba Sierra.

Countries: Argentina

***Trichomycterus transandianum* (Steindachner, 1915)**

Pygidium taenia transandianum Steindachner, 1915b: 100, pl. 12 (fig. 6). Type locality: Gebirgsbach im Cañon del Gallo, einem rechten Seitental des Rio Combeima in der Zentral-Cordillere, Columbien, in einer Höhe von 1800 m [4°19'N 75°09'W], Colombia. Syntypes: (2) NMW 44475 (?).

Maximum length: 6.1 cm

Distribution: South America: Combeima River basin, Central Andes.

Countries: Colombia

***Trichomycterus triguttatus* (Eigenmann, 1918)**

Pygidium triguttatum Eigenmann, 1918: 339, pl. 52 (fig. 4). Type locality: Jacarehy, São Paulo [22°30'S 45°50'W], Brazil. Holotype: FMNH 58670 [ex CM 7600a].

Maximum length: 3.6 cm

Distribution: South America: São Paulo State, Brazil.

Countries: Brazil

***Trichomycterus unicolor* (Regan, 1913)**

Pygidium unicolor Regan, 1913: 468. Type locality: Condoto [6°26'N 76°12'W], Colombia. Syntypes: BMNH 1913.10.1.42-43 (2).

Maximum length: 8.5 cm

Distribution: South America: San Juan River basin.

Countries: Colombia

***Trichomycterus variegatus* Costa, 1992**

Trichomycterus variegatus Costa, 1992: 103, fig. 3. Type locality: Estado de Minas Gerais: ville de São Roque de Minas, rio do Peixe, affluent du haut rio Sao Francisco [20°20'S 46°36'W], Brazil. Holotype: MZUSP 42316.

Maximum length: 4 cm

Distribution: South America: Upper São Francisco River basin.

Countries: Brazil

***Trichomycterus venulosus* (Steindachner, 1915)**

Pygidium venulosum Steindachner, 1915c: 199. Type locality: Paramo de Cruz verde, östliche Cordillere, Columbien, in 3000 m Colombia. Syntypes: NMW 44476 (2). Species illustrated and described in more detail in Steindachner (1915b: 99).

Maximum length: 12.5 cm

Distribution: South America: Western Andean Cordillera in Colombia.

Countries: Colombia

***Trichomycterus vermiculatus* (Eigenmann, 1917)**

Pygidium vermiculatum Eigenmann, 1917: 699. Type locality: Juiz de Fora. Habitat, Rio Parahyba [21°40'S 43°25'W], Brazil. Holotype: FMNH 58077 [ex CM 7074].

Maximum length: 13.1 cm

Distribution: South America: Paraíba do Sul River in State of Minas Gerais, Brazil.

Countries: Brazil

***Trichomycterus vittatus* Regan, 1903**

Trichomycterus vittatus Regan, 1903: 623. Type locality: Marcapata Valley, E. Peru [13°13' S 70°24'W], Peru. Holotype: BMNH 1902.5.29.210.

Maximum length: 7.8 cm

Distribution: South America: Eastern Peru.

Countries: Peru

***Trichomycterus weyrauchi* (Fowler, 1945)**

Pygidium weyrauchi Fowler, 1945: 7, figs. 10-12. Type locality: Acobamba, near Tarma, at 2200 meters elevation, Rio Ucayali drainage [Ucayali River = 4°30'S 73°27'W], Peru. Holotype: ANSP 71639 (with paratypes).

Maximum length: 4.9 cm

Distribution: South America: Ucayali River basin (elev. 2900 m).

Countries: Peru

***Trichomycterus zonatus* (Eigenmann, 1918)**

Pygidium zonatum Eigenmann, 1918: 330, pl. 51 (fig. 1). Type locality: Agua Quente [Cubatão, seven miles west of Santos (Eigenmann, 1918) = 23°40'S 46°25'W], São Paulo, Brazil. Holotype: FMNH 58573 [ex CM 7596].

Trichomycterus cubataonis Bizerril, 1994: 618, figs. 1-3. Type locality: Rio Cubatão, Joinville, Estado de Santa Catarina [Joinville = 26°18' 48°50'], Brazil. Holotype: MNRJ 12490.

Maximum length: 6.2 cm

Distribution: South America: Coastal rivers between Santa Catarina and São Paulo States.

Countries: Brazil

TRIDENS

Tridens Eigenmann & Eigenmann, 1889: 53. Type species: *Tridens melanops* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: masculine.

Tridens melanops Eigenmann & Eigenmann, 1889

Tridens melanops Eigenmann & Eigenmann, 1889: 53. Type locality: Iça, Brazil. Syntypes: (27) CAS 64598 [IU 4275] (1); BMNH 1889.11.14.42 [ex MCZ] (1); MCZ 8137 (orig. 27, now 15, 2 c&s); USNM 41522 [ex MCZ 8137] (1), 120296 (orig. 4, now 3).

Maximum length: 2.7 mm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

TRIDENSIMILIS

Tridensimilis Schultz, 1944: 266. Type species: *Tridensimilis venezuelae* Schultz, 1944. Type by original designation. Gender: masculine.

Tridensimilis brevis (Eigenmann & Eigenmann, 1889)

Tridens brevis Eigenmann & Eigenmann, 1889: 54. Type locality: Tabatinga. Holotype: MCZ 8160.

Maximum length: 3 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

Tridensimilis venezuelae Schultz, 1944

Tridensimilis venezuelae Schultz, 1944: 267, pl. 6 (fig. C). Type locality: Río Negro, below the mouth of the Río Yasa, Maracaibo basin, Venezuela. Holotype: USNM 121290.

Maximum length: 2.5 cm TL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

TRIDENTOPSIS

Tridentopsis Myers, 1925: 84. Type species: *Tridentopsis pearsoni* Myers, 1925. Type by original designation. Gender: feminine.

Tridentopsis cahuali Azpelicueta, 1990

Tridentopsis cahuali Azpelicueta, 1990: 982, figs. 1-4. Type locality: Estancia El Bagual, Formosa Province, Argentina, 26°10'53"S, 58°56'39"W. Holotype: MLP 5-IX-89-1.

Maximum length: 2.22 cm SL

Distribution: South America: Paraguay River basin.

Countries: Argentina

Tridentopsis pearsoni Myers, 1925

Tridentopsis pearsoni Myers, 1925: 84. Type locality: Lagoons at Lake Rogoagua, Bolivia. Holotype: CAS 28258 [ex IU 17664].

Maximum length: 2.3 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Bolivia

Tridentopsis tocantinsi La Monte, 1939

Tridentopsis tocantinsi La Monte, 1939: 1. Type locality: Rio Tocantins, northeastern Brazil. Holotype: AMNH 13967.

Maximum length: 2.3 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

TYPHLOBELUS

Typhlobelus Myers, 1944: 593. Type species: *Typhlobelus ternetzi* Myers, 1944. Type by original designation. Gender: masculine.

Typhlobelus macromycterus Costa & Bockmann, 1994

Typhlobelus macromycterus Costa & Bockmann, 1994a: 68, figs. 1-3. Type locality: Brazil: Estado do Pará, Rio Tocantins near Tucuruí. Holotype: MNRJ 12129.

Maximum length: 2.19 cm SL

Distribution: South America: Tocantins River near Tucuruí, Pará State.

Countries: Brazil

Typhlobelus ternetzi Myers, 1944

Typhlobelus ternetzi Myers, 1944: 593, pls. 52 (fig. 2) - 53 (figs. 6-8). Type locality: Rock pools below São Gabriel Rapids, Rio Negro, Brazil. Holotype: CAS 11118.

Maximum length: 3.35 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Brazil

VANDELLIA

Vandellia Valenciennes, in Cuvier & Valenciennes, 1846: 386.

Type species: *Vandellia cirrhosa* Valenciennes, 1846. Type by monotypy. Gender: feminine.

Urinophilus Eigenmann, 1918: 358. Type species: *Vandellia sanguinea* Eigenmann, 1917. Type by subsequent designation by Eigenmann (1920: 441). Gender: masculine.

Vandellia beccarii Di Caporiacco, 1935

Vandellia beccarii Di Caporiacco, 1935: 59. Type locality: Rockstone, in flumine Essequibo dicto, in Guiana Britannica. Holotype: MZUF 5506.

Maximum length: 5.9 cm

Distribution: South America: Orinoco River basin and rivers of Guyana.

Countries: Colombia, Guyana, Venezuela

Vandellia cirrhosa Valenciennes, 1846

Vandellia cirrhosa Valenciennes, in Cuvier & Valenciennes, 1846: 386, pl. 547. Type locality: Probably from America [= South America]. Syntypes (2): MNHN A.6308.

Vandellia gigantea Cornalia, 1849: 15, figs. 4-5. Type locality: [not specified, but mention of Fl. Amazonum et Napo, in the context of text, indicates that the specimen studied came from that region]. Type material lost in the Milan Museum fire of 1943 (Cagnolaro & Violani 1988). Considered nomen oblitum by Cagnolaro & Violani (1988), but now an available name.

Vandellia plazai Castelnau, 1855: 51, pl. 28 (fig. 1). Type locality: rio Ucayale (Pérou). Holotype: MNHN A.6309.

Vandellia balzanii Perugia, 1897: 23. Type locality: Rio Beni, Mission Mosetenes, Bolivia. Holotype: MSNG 8848.

Urinophilus erythrurus Eigenmann, 1922a: 114, pls. 3 (figs. 5-7), 4 (10-16). Type locality: Río Morona, Peru. Holotype: CAS 64599 [ex IU 15884].

Maximum length: 17 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru.

Vandellia sanguinea Eigenmann, 1917

Vandellia sanguinea Eigenmann, 1917: 701. Type locality: San Antonio de Rio Madeira. Holotype: FMNH 58086 [ex CM 7082].

Maximum length: 8.4 cm SL

Distribution: South America: Amazon, Orinoco and Essequibo River basins.

Countries: Brazil, Venezuela, Guyana.

GENUS INQUIRENDUM

Pygidium Meyen, 1835: 475. Type species: *Pygidium fuscum* Meyen, 1835. Type by monotypy. Gender: neuter. Familial assignment of this genus is uncertain (cf. Tchernavin 1944).

SPECIES INQUIRENDA

Pygidium fuscum Meyen, 1835: 369. Type locality: Peru. Holotype: lost. Familial assignment of this species is uncertain (cf. Tchernavin, 1944).

Family Callichthyidae (Armored catfishes)

Roberto E. Reis

Members of the armored catfish family Callichthyidae can be readily distinguished from other fishes by their characteristic encasement in a double series of dermal plates. A few other external synapomorphies of the family include a reduced lateral line, the absence of the lachrymal-antorbital bone, the infraorbital series reduced to only two bones, the absence of premaxillary teeth in adults, the aperture of the gas-bladder capsule partially covered by a hollow expansion of the pterotic-supracleithrum, and the posterior processes of cleithrum and coracoid bones sutured to each other behind the pectoral-fin insertion (Reis, 1998a). The phylogenetic relationships of the family have recently been studied by Reis (1998a), who demonstrated its monophyly based on 28 derived features and corroborated its division in two subfamilies. The Callichthyinae, including *Callichthys*, *Lepthoplosternum*, *Megalechis*, *Dianema*, and *Hoplosternum*; and the Corydoradinae, which includes *Aspidoras*, *Corydoras*, and *Brochis*. Taxonomy of the Callichthyinae is mostly solved, and the species of *Hoplosternum*, *Megalechis*, and *Lepthoplosternum* have been revised by Reis (1997). The taxonomic situation among the Corydoradinae is far more complicated as *Corydoras* is not monophyletic and accounts for about 80% of the family diversity (143 of the 177 valid species), being the most speciose genus of the Siluriformes. A phylogeny of the species of *Lepthoplosternum*, as well a review of the available data on biogeography and the fossil record of the callichthyids were presented by Reis (1998b).

Body size and shape among callichthyids are not dramatically variable as in other large Neotropical catfish families (e.g. Loricariidae, Pimelodidae), but they range from small midwater swimmers like *Corydoras hastatus* and *C. pygmaeus* (about 20 mm in standard length) to large, heavy bodied bottom dwellers like the species of *Hoplosternum* and *Callichthys* (up to about 160 mm). The callichthyids are distributed in all the major river drainages of cis-Andean South America, from the Province of Buenos Aires in Argentina north to the Orinoco River basin, including most Atlantic coastal drainages, and in trans-Andean Colombia and Panama. The highest species diversity is found in the upper reaches of the Amazon drainage and in the Guianas Shield, where representatives occur in a variety of habitats ranging from wide open areas like big rivers and lakes or even marshes and muddy ponds where oxygen might be depleted, to swift, oxygen-rich streams.

All callichthyids are obligatory air-breathers. Air is collected at the water surface and swallowed, passed to the intestine, their accessory respiratory organ, and eventually expelled through the anus. Contrary to loricariids and trichomycterids that also show air-breathing capabilities in case of hypoxia, callichthyids breathe air under all water conditions. In this family, however, swallowed air plays a more important role in the maintenance of the hydrostatic balance than in respiration itself, contributing about 75% of the necessary air to attain neutral buoyancy (Gee, 1976; Gee & Graham, 1978). There are two basic reproductive strategies among the callichthyids. Representatives of the callichthyines exhibit the interesting behavior of building a floating nest composed of foam and vegetal debris for spawning (Reis, 1998a and references therein). Members of the corydoradines, on the other hand, are substrate brooders and attach adhesive eggs to the substrate after a very elaborated spawning behavior. It has been suggested by Kohda et al. (1995) that while in the "T-position" during the spawning, when male grasps the female barbels with his pectoral fin, the female actively drinks his sperm, which then pass through her intestines and is discharged together with eggs into the pouch formed by her pelvic fins, ensuring an effective fertilization.

The present status of knowledge of species diversity and taxonomy is quite distinct for both subfamilies. Except for the genus *Callichthys*, the callichthyines have been well studied and future studies are not likely to find many additional species (Reis, 1997). *Callichthys* is now under study and some degree of previously undetected diversity starts to be found. Among the corydoradines, a considerable number of undescribed species of both *Corydoras* and *Aspidoras* can be found in museum collections and many others are likely to be captured in undersampled regions of South America. As can be seen below, an average of two new species of *Corydoras* have been described every year during the last decade.

The larger species of *Hoplosternum* are used as food in many places of the flood-plains of Brazil, Peru, and other countries, being so common in certain areas that they are fished commercially as food fishes. The great commercial importance of this family, however, is due to the extraordinarily high aquaristic interest on most of its members, especially on the genus *Corydoras*.

ASPIDORAS

Aspidoras Ihering, 1907: 30. Type species: *Aspidoras rochai*

Ihering, 1907. Type by original designation. Gender: masculine.

***Aspidoras albater* Nijssen & Isbrücker, 1976**

Aspidoras albater Nijssen & Isbrücker, 1976a: 115, fig. 6. Type locality: Brazil, Est. Goiás, Rio Tocantinzinha near São João da Aliança, 14°46'S, 47°30'W, Rio Tocantins system. Holotype: MZUSP 12991.

Maximum length: 3.56 cm SL

Distribution: South America: Upper Tocantins River basin.

Countries: Brazil

Common names: False macropterus (USA)

***Aspidoras belenos* Britto, 1998**

Aspidoras belenos Britto, 1998: 361, fig. 1. Type locality: Brazil: Estado do Mato Grosso, creek at Primavera do Leste - Paranatinga road, 82 km N from Primavera do Leste, rio das Mortes basin, 15°03'S, 52°03'W. Holotype: MNRJ 12433.

Maximum length: 2.79 cm SL

Distribution: South America: Das Mortes River basin, Araguaia River drainage.

Countries: Brazil

***Aspidoras brunneus* Nijssen & Isbrücker, 1976**

Aspidoras brunneus Nijssen & Isbrücker, 1976a: 116, fig. 7. Type locality: Brazil, Est. Mato Grosso, Serra do Roncador, km 125 of the road Chavantina-Casimba. Holotype: ZMA 113588.

Maximum length: 2.13 cm SL

Distribution: South America: Upper Araguaia River basin.

Countries: Brazil

***Aspidoras carvalhoi* Nijssen & Isbrücker, 1976**

Aspidoras carvalhoi Nijssen & Isbrücker, 1976a: 117, fig. 8. Type locality: Brazil, Est. Ceará, Açude Canabrava, Guaramiranga. Holotype: MNRJ 5230.

Maximum length: 2.54 cm SL

Distribution: South America: Ceará State, Brazil.

Countries: Brazil

***Aspidoras depinnai* Britto, 2000**

Aspidoras depinnai Britto, 2000: 1049, fig. 1. Type locality: Brazil: Pernambuco State, creek at Amaraji-Primavera road, rio Ipojuca basin, 08°21'S, 35°26'W. Holotype: MZUSP 56214.

Maximum length: 3.25 cm SL

Distribution: South America: Ipojuca River basin.

Countries: Brazil

***Aspidoras eurycephalus* Nijssen & Isbrücker, 1976**

Aspidoras eurycephalus Nijssen & Isbrücker, 1976a: 118, fig. 9. Type locality: Brazil, Est. Goiás, Rio Tocantins system, Corrego Vermelho into Rio das Almas, tributary of Rio Maranhão, about 15°S, 49°30'W. Holotype: CAS 16010.

Maximum length: 3 cm SL

Distribution: South America: Upper Tocantins River basin.

Countries: Brazil

***Aspidoras fuscoguttatus* Nijssen & Isbrücker, 1976**

Aspidoras fuscoguttatus Nijssen & Isbrücker, 1976a: 118, fig. 10. Type locality: Brazil, Est. Mato Grosso, Rio Paraná system, Córrego Corguinho, estrada da Três Lagoas (20°46'S, 51°43'W) - Conceição do Taboado. Holotype: MZUSP 8573.

Maximum length: 3.8 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

***Aspidoras lakoi* Miranda Ribeiro, 1949**

Aspidoras lakoi Miranda Ribeiro, 1949: 143, fig. 1. Type locality: Pequeno, córrego na floresta do Grotão, Fazenda da Cachoeira, Município de Passos, Estado de Minas Gerais [Brazil]. Holotype: MNRJ 5292.

Maximum length: 4 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

***Aspidoras maculosus* Nijssen & Isbrücker, 1976**

Aspidoras maculosus Nijssen & Isbrücker, 1976a: 119, fig. 11. Type locality: Brazil, Est. Bahia, Rio Paiaia, into headwaters of Rio Itapicurú, small, rocky, rapid stream from Serra Jacobina between Bom Fim and Jacobina, about 11°S, 40°30'W. Holotype: FMNH 54810.

Maximum length: 3.37 cm SL

Distribution: South America: Itapicurú River basin.

Countries: Brazil

***Aspidoras menezesi* Nijssen & Isbrücker, 1976**

Aspidoras menezesi Nijssen & Isbrücker, 1976a: 120, fig. 12. Type locality: Brazil, Est. Ceará, Rio Granjeiro at Crato, 7°10'S, 39°25'W, tributary on left bank of Rio Salgado. Holotype: UMMZ 147336.

Maximum length: 4.18 cm SL

Distribution: South America: Coastal rivers in Ceará State.

Countries: Brazil

***Aspidoras microgalaeus* Britto, 1998**

Aspidoras microgalaeus Britto, 1998: 364, fig. 8. Type locality: Brazil: Estado do Mato Grosso, small tributary of rio Culuene, km 86 of Paranatinga-Canarana road, rio Xingú basin, 14°00'S, 54°38'W. Holotype: MZUSP 51209.

Maximum length: 3.32 cm SL

Distribution: South America: Xingu River basin.

Countries: Brazil

***Aspidoras pauciradiatus* (Weitzman & Nijssen, 1970)**

Corydoras pauciradiatus Weitzman & Nijssen, 1970: 129, fig. 5. Type locality: Brazil, Rio Araguaia, near Aruanã, Est. Goiás (14°58'S, 51°04'W). Holotype: USNM 191625.

Maximum length: 2.9 cm SL

Distribution: South America: Upper Araguaia River basin.

Countries: Brazil

Common names: False corydoras (USA)

***Aspidoras poecilus* Nijssen & Isbrücker, 1976**

Aspidoras poecilus Nijssen & Isbrücker, 1976a: 121, fig. 13. Type locality: Brazil, Est. Mato Grosso, creek upstream of village Porrori, left bank of Rio Xingu, upper Rio Xingu. Holotype: IRSNB 560.

Maximum length: 3.53 cm SL

Distribution: South America: Upper Xingu, Araguaia, and Tocantins River basins.

Countries: Brazil

***Aspidoras raimundi* (Steindachner, 1907)**

Corydoras raimundi Steindachner, 1907b: 84. Type locality: in dem Bächchen, welches bei Victoria in den Rio Parnahyba mündet. Lectotype: NMW 61110, designated by Nijssen & Isbrücker (1976a: 111).

Maximum length: 3.26 cm SL

Distribution: South America: Parnaíba River basin.

Countries: Brazil

***Aspidoras rochai* Ihering, 1907**

Aspidoras rochai Ihering, 1907: 30. Type locality: Fortaleza, capital of the state of Ceará [Brazil]. Lectotype: MZUSP 2195, designated by Britski (1969: 206).

Maximum length: 4 cm SL

Distribution: South America: Coastal rivers in Ceará State.

Countries: Brazil

***Aspidoras spilotus* Nijssen & Isbrücker, 1976**

Aspidoras spilotus Nijssen & Isbrücker, 1976a: 123, fig. 14. Type locality: Brazil, Est. Ceará, Riacho dos Macacos, tributary of Rio Acará. Holotype: ZMA 113590.

Maximum length: 3.4 cm SL

Distribution: South America: Coastal rivers in Ceará State.

Countries: Brazil

***Aspidoras velites* Britto, Lima & Moreira, 2002**

Aspidoras velites Britto, Lima & Moreira, 2002: 728, fig. 1. Type locality: Brazil. Estado do Mato Grosso. Município de Alto Araguaia, córrego Boiadeiro, km 487.08 of Ferronorte railroad, 17°20'01"S, 53°14'53"W. Holotype: MZUSP 74447.

Maximum length: 2.79 cm SL

Distribution: South America: Small tributaries of upper Araguaia River in Mato Grosso State.

Countries: Brazil

***Aspidoras virgulatus* Nijssen & Isbrücker, 1980**

Aspidoras virgulatus Nijssen & Isbrücker, 1980a: 133, fig. 1. Type locality: Brazil: Est. Espírito Santo. Holotype: MNRJ 5371.

Distribution: South America: Coastal rivers in Espírito Santo State.

Countries: Brazil

BROCHIS

Brochis Cope, 1871: 112. Type species: *Brochis coeruleus* Cope, 1872. Type by subsequent designation. Gender: feminine. Appeared first without species, more fully described in Cope (1872) where two species were added; type designated by Cope (in describing second species he refers to first as type).

Chaenothorax Cope, 1878: 679. Type species: *Chaenothorax bicarinatus* Cope, 1878. Type by original designation. Gender: masculine.

***Brochis britskii* Nijssen & Isbrücker, 1983**

Brochis britskii Nijssen & Isbrücker, 1983a: 179, fig. 1. Type locality: Brazil, Est. Mato Grosso, Lagoas Marginais, rodovia Transpantaneira, Poconé (16°15'S, 56°37'W). Holotype: MZUSP 26811.

Maximum length: 8.8 cm SL

Distribution: South America: Upper Paraguay River basin.

Countries: Brazil

Common names: Britski's catfish (USA)

***Brochis multiradiatus* (Orcés V., 1960)**

Chaenothorax multiradiatus Orcés V., 1960: 3, fig. 1. Type locality: afluyente occidental del río Lagartococha, cerca del poblado de Garza-Cocha, sistema del alto Napo [Prov. Napo, Ecuador]. Holotype: USNM 200739.

Maximum length: 6.7 cm SL

Distribution: South America: Western Amazon River basin.

Countries: Ecuador, Peru

Common names: Hog-nosed brochis (USA)

***Brochis splendens* (Castelnau, 1855)**

Callichthys taiosh Castelnau, 1855: 39, pl. 19 (fig. 1). Type locality: Chiquitos [Bolivia]. No types known.

Callichthys splendens Castelnau, 1855: 39, pl. 18 (fig. 3). Type locality: Rio Tocantins [Brazil]. Holotype: MNHN 4291.

Brochis dipterus Cope, 1872: 278. Type locality: Ambyiacu River [Peru]. Holotype: ANSP 117172.

Brochis coeruleus Cope, 1872: 277, pl. 9 (fig. 3). Type locality: Tributaries of the Ambyiacu [Peru]. Lectotype: ANSP 8231, designated by Nijssen & Isbrücker (1970: 157-158).

Corydoras semiscutatus Cope, 1872: 280, pl. 6 (fig. 1). Type locality: Ambyiacu River [Peru]. Holotype: ANSP 8289.

Chaenothorax bicarinatus Cope, 1878: 679. Type locality: Peruvian Amazon. Holotype: ANSP 21447.

Chaenothorax eigenmanni Ellis, 1913: 393, pl. 26 (fig. 2). Type locality: Cáceres [Mato Grosso, Brazil]. Holotype: FMNH 54880.

Maximum length: 6 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Ecuador, Peru

Common names: Emerald catfish (USA)

CALLICHTHYS

Callichthys Gronow, 1763: 127. Type species: not indicated. Gender: masculine. Not available, published in a rejected work on Official Index (Opinion 261).

Callichthys Scopoli, 1777: 451. Type species: *Silurus callichthys* Linnaeus, 1758. Gender: masculine. Original spelling not used subsequently and spelling in prevailing usage, *Callichthys*, is adopted here following Art. 33.3.1 of the Code.

Callichthys Meuschen, 1778: 39. Type species: *Silurus callichthys* Linnaeus, 1758. Gender: masculine.

Callichthys Linck, 1790: 32. Type species: *Silurus callichthys* Linnaeus, 1758. Gender: masculine.

Cataphractus Bloch, 1794: 80. Type species: *Silurus callichthys* Linnaeus, 1758. Type by subsequent designation. Gender: masculine.

***Callichthys callichthys* (Linnaeus, 1758)**

Silurus callichthys Linnaeus, 1758: 307. Type locality: in Americae rivulis. Syntypes: lost.

Callichthys asper Quoy & Gaimard, 1824: 232. Type locality: ruisseau qui coule devant la ferme de Santa-Anna, sur le chemin qui conduit de Rio de Janeiro à la colonie suisse [Brazil]. Syntypes: MNHN 1951 (2).

Cataphractus depressus Swainson, 1839: 304. Type locality: ? Based on Bloch 1794: pl. 377.

Callichthys asper Valenciennes in Cuvier & Valenciennes, 1840: 302 [225 in the Strasbourg deluxe edition]. Type locality: Cayenne [French Guiana]; Rio-Janéiro [Brazil].

Callichthys laeviceps Valenciennes in Cuvier & Valenciennes, 1840: 309 [229 in the Strasbourg deluxe edition]. Type locality: La Mana [French Guiana]. Syntypes: MNHN 1947 (1) La Mana R., MNHN 4259 (1) Rio de Janeiro, MNHN 4261 (1) La Mana R.

Callichthys caelatus Valenciennes in Cuvier & Valenciennes, 1840: 308 [229 in the Strasbourg deluxe edition]. Type locality: Bahia [Brazil]. Syntypes: MNHN 4258 (2), MNHN 4259 (2) Bahia.

Callichthys loricatus Gronow in Gray, 1854: 157. Type locality: Tropical America. Holotype: BMNH 1853.11.12.194.

Callichthys kneri Gill, 1858: 394. Type locality: Trinidad I., West Indies.

Callichthys tamoata Bleeker, 1864: 22. Type locality: Suriname.

Callichthys affinis Günther, 1864: 226. Type locality: Rio Grande [Brazil]. Syntypes: BMNH 1861.5.7.1-4 (4).

Callichthys hemiphractus Hensel, 1868: 374. Type locality: Costa da Serra [Rio Grande do Sul, Brazil]. Holotype: ZMB 7434.

Callichthys arcifer Hensel, 1868: 373. Type locality: Rio de Janeiro [Brazil]. Holotype: ZMB 7433.

Callichthys callichthys bolteni Hoedeman, 1952b: 9. Type locality: Surinam. Holotype: ZMA 100303a.

Callichthys callichthys demararae Hoedeman, 1952b: 10. Type locality: Demarara, British Guiana. Holotype: ZMA 100304.

Maximum length: 16.5 cm SL

Distribution: South America: Most Cis-Andean South American river drainages north of Buenos Aires.

Countries: Argentina, Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Paraguay, Peru, Suriname, Trinidad and Tobago, Uruguay, Venezuela

Remarks and references: See Reis (1997) for phylogeny.

Common names: Tamboatá (Brazil), Tamuatá (Brazil)

***Callichthys fabricioi* Román-Valencia, Lehmann-A & Muñoz, 1999**

Callichthys fabricioi Román-Valencia, Lehmann-A & Muñoz, 1999: 54, fig. 1. Type locality: Colombia, Departamento del Cauca, Municipio de Buenos Aires, Zanjón Bagazal afluyente del Río Cauca 980 meters (03°03'59"N y 76°33'55"W). Holotype: IUQ 295.

Maximum length: 12.5 cm SL
 Distribution: South America: Cauca River basin.
 Countries: Colombia
 Common names: Roño (Colombia)

CORYDORAS

Corydoras La Cepède, 1803: 147. Type species: *Corydoras geofroy* La Cepède, 1803. Type by monotypy. Gender: masculine.
Cataphractus punctatus Bloch, 1794 sometimes cited as type but not cited by La Cepède in this subgenus (see Nijssen & Isbrücker 1980b: 192).

Cordinus Rafinesque, 1815: 89. Type species: *Corydoras geofroy* La Cepède, 1803. Type by being a replacement name. Gender: masculine.

Hoplisoma Swainson, 1838: 336. Type species: *Cataphractus punctatus* Bloch, 1794. Type by original designation. Gender: neuter.

Scleromystax Günther, 1864: 225. Type species: *Callichthys barbatus* Quoy & Gaimard, 1824. Type by monotypy. Gender: masculine. Described as a subgenus in key (p. 225) with species on p. 229.

Gastrodermus Cope, 1878: 681. Type species: *Corydoras elegans* Steindachner, 1877. Type by subsequent designation. Gender: masculine. Type apparently first designated by Gosline (1940: 10).

Osteogaster Cope, 1894: 102. Type species: *Corydoras eques* Steindachner, 1877. Type by original designation. Gender: feminine.

Microcorydoras Myers, 1953: 270. Type species: *Corydoras hastatus* Eigenmann & Eigenmann, 1888. Type by original designation. Gender: masculine.

***Corydoras acrensis* Nijssen, 1972**

Corydoras acrensis Nijssen, 1972: 416, fig. 1. Type locality: Brazil, Est. Acre, Furo do Lago São Francisco, tributary at left bank of Rio Juruá, upstream of confluence with Mao at Cruzeiro do Sul. Holotype: IRSNB 505.

Maximum length: 3 cm SL
 Distribution: South America: Juruá River basin.
 Countries: Brazil

***Corydoras acutus* Cope, 1872**

Corydoras acutus Cope, 1872: 281. Type locality: Ambyiacu River [Shansho Caño, Loreto, Peru]. Neotype: SU 33307, designated by Nijssen & Isbrücker (1980: 215); original syntypes ANSP 8292-8293 lost.

Maximum length: 4.4 cm SL
 Distribution: South America: Amazon River basin in northern Peru and Ecuador.
 Countries: Ecuador, Peru
 Common names: Black top catfish (USA)

***Corydoras adolfoi* Burgess, 1982**

Corydoras adolfoi Burgess, 1982: 15, fig. 1. Type locality: Small tributary of the upper Rio Negro on the equator near São Gabriel da Cachoeira, Brazil. Holotype: MZUSP 26641.

Maximum length: 5.7 cm SL
 Distribution: South America: Negro River basin.
 Countries: Brazil
 Common names: Adolf's catfish (USA)

***Corydoras aeneus* (Gill, 1858)**

Hoplosoma aeneum Gill, 1858: 403. Type locality: Island of Trinidad, West Indies. Lectotype: USNM 1116, designated by Nijssen & Isbrücker (1980b: 208).

Corydoras microps Eigenmann & Kennedy, 1903: 506. Type locality: From a small lagoon, half dry, near the Rio Branco (Mato Grosso, Brazil). Holotype: CAS 20662.

Corydoras venezuelanus Ihering, 1911: 383. Type locality: Río

Cabriales, Valencia, Est. Carabobo, Venezuela. Lectotype: MZUSP 146, designated by Britski (1969: 208).

Corydoras macrosteus Regan, 1912: 219. Type locality: Rio Piracicaba, San Paulo, Brazil. Lectotype: BMNH 1905.6.9.12, designated by Nijssen & Isbrücker (1980: 208).

Corydoras schultzei Holly, 1940: 111. Type locality: Aquarium specimen (said to be from very small water-courses of the Amazon).

Maximum length: 7.5 cm SL
 Distribution: South America: Colombia and Trinidad to La Plata River basin east of the Andes.

Countries: Argentina, Bolivia, Brazil, Colombia, French Guiana, Guyana, Paraguay, Peru, Suriname, Trinidad and Tobago, Venezuela

Common names: Aeneus (France), Bronze catfish (USA)

***Corydoras agassizii* Steindachner, 1877**

Corydoras agassizii Steindachner, 1877: 138, pl. 12 (fig. 2). Type locality: Amazonenstrom bei Tabatinga [Brazil]. Lectotype: NMW 61112, designated by Nijssen & Isbrücker (1980: 195).

Maximum length: 5.2 cm SL
 Distribution: South America: Amazon River basin near border of Peru and Brazil.

Countries: Brazil, Peru

***Corydoras amandajanea* Sands, 1995**

Corydoras amandajanea Sands, 1995: 10, fig. 1. Type locality: Rio Miua system of streams, possibly the Uarinabe stream (Miua system) 10-12 kilometers away from its confluence of the upper Negro River, Brazil. Holotype: LIVCM 1994.4.21.

Maximum length: 5.88 cm SL
 Distribution: South America: Upper Negro River basin.
 Countries: Brazil

***Corydoras amapaensis* Nijssen, 1972**

Corydoras amapaensis Nijssen, 1972: 417, fig. 2, 3. Type locality: Brazil, Est. Amapa, Cachoera Creek at right bank of Río Amapari, 4 km downstream of Casa do 7. Holotype: IRSNB 476.

Maximum length: 7 cm SL
 Distribution: South America: Oyapockand Amapari rivers in Amapá State in Brazil and French Guiana.
 Countries: Brazil, French Guiana

***Corydoras ambiacus* Cope, 1872**

Corydoras ambiacus Cope, 1872: 280. Type locality: Ambyiacu River [Peru]. Holotype: ANSP 8291.

Corydoras grafi Holly, 1940: 108. Type locality: Aquarium specimen (said to be from very small water-courses of the Amazon). Holotype: Münchner Tierpark AG 92/139 (reportedly lost, but possibly = NMW 84287).

Corydoras melanistius longirostris Hoedeman, 1952b: 17, fig. 13. Type locality: Amazon area. Holotype: Münchner Tierpark A.G. 92/139 (lost).

Maximum length: 4.9 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Brazil, Colombia, Peru
 Common names: Spotted catfish (USA)

***Corydoras amphibelus* Cope, 1872**

Corydoras amphibelus Cope, 1872: 282. Type locality: Ambyiacu River [near Pebas, Peru, ca. 3°10'S, 71°50'W]. Holotype: ANSP 8290.

Distribution: South America: Upper Amazon River basin.
 Countries: Peru

***Corydoras approuaguensis* Nijssen & Isbrücker, 1983**

Corydoras approuaguensis Nijssen & Isbrücker, 1983c: 73, fig. 1. Type locality: fleuve Approuague [French Guiana]. Holotype: ZMA 119098.

Maximum length: 5.65 cm SL

Distribution: South America: Approuague River basin.
Countries: French Guiana

***Corydoras araguaiaensis* Sands, 1990**

Corydoras araguaiaensis Sands, 1990: no page, unnumbered fig.
Type locality: Rio Araguaia, Brazil. Holotype: RMNH ?.
Maximum length: 3.5 cm SL
Distribution: South America: Araguaia River basin.
Countries: Brazil

***Corydoras arcuatus* Elwin, 1939**

Corydoras arcuatus Elwin, 1939: 126, pl. 3. Type locality: Amazon River (aquarium specimen). Holotype: BMNH 1939.3.3.1.
Maximum length: 4 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Brazil, Colombia, Ecuador, Peru
Common names: Skunk catfish (USA)

***Corydoras areio* Knaack, 2000**

Corydoras areio Knaack, 2000: 47, unnumbered fig. Type locality: Brasilien, Mato Grosso (östlich von Cuiaba), in Fließgewässern des Cór. Areio-Systems, in der Umgebung von Vila Nova, an der Straße 373, ca. 8.5 kilometers (Foto Seite 45) und ca.13.5 km (Foto Seite 47) von der Ortschaft aus entfernt in Richtung Poxoreo. Holotype: ZMB 33113.
Maximum length: 5 cm SL
Distribution: South America: Upper Paraguay River basin.
Countries: Brazil

***Corydoras armatus* (Günther, 1868)**

Callichthys armatus Günther, 1868: 476. Type locality: Xeberus and Huallaga [Peru]. Lectotype: BMNH 1867.6.13.51, designated by Nijssen & Isbrücker (1980: 194).
Maximum length: 5 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Peru

***Corydoras atropersonatus* Weitzman & Nijssen, 1970**

Corydoras atropersonatus Weitzman & Nijssen, 1970: 123, fig. 2. Type locality: Ecuador, Río Conambo at mouth of Río Shione (about 2°00'S, 76°30'W), Río Tigre system, Est. Pastaza. Holotype: USNM 204359.
Maximum length: 4.5 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Ecuador, Peru

***Corydoras aurofrenatus* Eigenmann & Kennedy, 1903**

Corydoras aurofrenatus Eigenmann & Kennedy, 1903: 507. Type locality: Aguada, near Arroyo Trementina [Paraguay]. Holotype: CAS 20661.
Distribution: South America: Paraguay River basin.
Countries: Paraguay

***Corydoras axelrodi* Rössel, 1962**

Corydoras axelrodi Rössel, 1962a: 335, fig. 2. Type locality: Columbien, Río Meta. Holotype: SMF 5700.
Maximum length: 4.2 cm SL
Distribution: South America: Meta River basin.
Countries: Colombia

***Corydoras baderi* Geisler, 1969**

Corydoras baderi Geisler, 1969: 354, fig. 1. Type locality: Brasilien, Staat Para, Rio Paru de Oeste und Bäche bei der Missionsstation Tirió (2°12'N, 55°59'W) [Brasil]. Holotype: SMF 9651.
Corydoras oelemariensis Nijssen, 1970: 29, fig. 14. Type locality: Creek at left bank of Oelemari River, near airstrip, Marowijne, Suriname. Holotype: IRSNB 472.
Maximum length: 4.7 cm SL
Distribution: South America: Pará State in Brazil and Maroni

River in Suriname.
Countries: Brazil, Suriname

***Corydoras barbatus* (Quoy & Gaimard, 1824)**

Callichthys barbatus Quoy & Gaimard, 1824: 234. Type locality: ...petit ruisseaux qui aurosent, près de Rio de Janeiro, la ferme de Mandioca. [Neotype locality: Fazenda da Japuhya near Angra dos Reis, Rio de Janeiro, Brazil, 22°59'S, 44°17'W]. Neotype: CAS 16006, designated by Nijssen & Isbrücker (1980b: 202).
Corydoras kronei Miranda Ribeiro, 1907: 189, fig. unnumbered. Type locality: Iguape, Estado de São Paulo, Brasil. Lectotype: MNRJ 918A, designated by Nijssen & Isbrücker 1980: 202.
Corydoras eigenmanni Ihering, 1907: 34. Type locality: Riverlets by Cubatão and Raiz da Serra, State of São Paulo [Brazil]. Lectotype: MZUSP 153, designated by Britski (1969: 206).
Maximum length: 9.8 cm SL
Distribution: South America: Coastal drainages from Rio de Janeiro to Santa Catarina States.
Countries: Brazil
Common names: Bearded catfish (USA), Sarrinho (Brazil), Sarro (Brazil)

***Corydoras bicolor* Nijssen & Isbrücker, 1967**

Corydoras bicolor Nijssen & Isbrücker, 1967: 36, pl. 3 (fig. 3). Type locality: Sipaliwini River [near border with Brazil, Corantijn R. system, Paru Savanna, Nickerie, Suriname]. Holotype: ZMA 104627.
Maximum length: 3.02 cm SL
Distribution: South America: Coastal rivers of Suriname.
Countries: Suriname

***Corydoras bifasciatus* Nijssen, 1972**

Corydoras bifasciatus Nijssen, 1972: 420, fig. 4. Type locality: Brazil, Est. Para, creek at left bank of Río Cururu, tributary of upper Río Tapajós near Maloca do Conzalo (about 7°45'S, 58°00'W). Holotype: IRSNB 485.
Maximum length: 5.15 cm SL
Distribution: South America: Lower Amazon River basin.
Countries: Brazil

***Corydoras bilineatus* Knaack, 2002**

Corydoras bilineatus Knaack, 2002a: 52, unnumbered fig. Type locality: Santa Cruz, Santiesteban, Chané, Restgewässer eines großen Überflutungs-Nährungsgebietes zwischen den Flüssen Rio Piray and Rio Yapacarie und dem Rio Grande o Guapay mit abfluss (Regenzeit) in den Arroyo Chanè. Holotype: MTD F 25925.
Maximum length: 5.03 cm SL
Distribution: South America: Madeira River basin in Santa Cruz and Beni Departments of Bolivia.
Countries: Bolivia

***Corydoras blochi* Nijssen, 1971**

Corydoras blochi Nijssen, 1971: 92, fig. 2. Type locality: Guyana, district Essequibo, Moco Creek near Lehtem, tributary of Rio Tacutú, Rio Branco system. Holotype: FMNH 75951.
Maximum length: 4.9 cm SL
Distribution: South America: Venezuela, Guyana, and northern Brazil.
Countries: Brazil, Guyana, Venezuela

***Corydoras boehlkei* Nijssen & Isbrücker, 1982**

Corydoras boehlkei Nijssen & Isbrücker, 1982: 139, fig. 1. Type locality: Venezuela, Edo Bolivar, Río Cuchime (Cusimo), about 20 miles upstream from junction of Río Caura - Río Erebató (Entre Rios) at 5°45'N, 64°24'W. Holotype: ANSP 148097.
Maximum length: 2.57 cm SL
Distribution: South America: Caura River basin in the Orinoco River drainage.

Countries: Venezuela

***Corydoras boesemani* Nijssen & Isbrücker, 1967**

Corydoras boesemani Nijssen & Isbrücker, 1967: 37, pl. 4 (fig. 1).
Type locality: Little tributaries of Gran-Rio between Ligolio and Awaradam Falls [Brokopondo, Suriname]. Holotype: RMNH 25316.

Distribution: South America: Coastal rivers in Suriname.
Countries: Suriname

***Corydoras bondi* Gosline, 1940**

Corydoras bondi Gosline, 1940: 20. Type locality: Rio Yuruari, 3 km east of El Callao, Venezuela [7°18'N, 61°50'W]. Holotype: SU 35065.

Maximum length: 4.7 cm SL

Distribution: South America: Rio Yuruari in Venezuela, Corantijn and Rupununi River basins.

Countries: Guyana, Suriname, Venezuela

Common names: Bond's catfish (USA)

***Corydoras brei* Isbrücker & Nijssen, 1992**

Corydoras brei Isbrücker & Nijssen, 1992: 10, fig. 1. Type locality: Surinam, Corantijn river system, Kabalebo River, Avanavero Falls. Holotype: RMNH 31912.

Maximum length: 3.9 cm SL

Distribution: South America: Corantijn River basin.

Countries: Suriname

***Corydoras brevirostris* Fraser-Brunner, 1947**

Corydoras melanistius brevirostris Fraser-Brunner, 1947: 244.
Type locality: Orinoco [Venezuela (aquarium specimen)]. Holotype: BMNH 1946.10.10.1.

Maximum length: 5 cm SL

Distribution: South America: Orinoco River basin and coastal drainages in Suriname.

Countries: Suriname, Venezuela

***Corydoras burgessi* Axelrod, 1987**

Corydoras burgessi Axelrod, 1987: 22, unnumbered fig. Type locality: Rio Unini, tributary of the Rio Negro, Amazonas, Brazil. Holotype: MZUSP 37692.

Maximum length: 4.8 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Brazil

***Corydoras carlae* Nijssen & Isbrücker, 1983**

Corydoras carlae Nijssen & Isbrücker, 1983c: 76, fig. 5. Type locality: Petit Arroyo, affluent rive gauche du Rio Iguazu, route no. 101 entre Porto Iguazu et Bernardino de Irigoyen, 50 km de Puerto Iguazu, bassin du Paraná [Misiones Prov., Argentina]. Holotype: IRSNB 688.

Maximum length: 4.2 cm SL

Distribution: South America: Lower Iguazu River basin.

Countries: Argentina

***Corydoras caudimaculatus* Rössel, 1961**

Corydoras caudimaculatus Rössel, 1961: 49, pl. 5 (fig. 1). Type locality: Brasilien, oberer Rio Guaporé (=Itenez) [Rondônia, Brazil]. Holotype: SMF 5291.

Maximum length: 4.15 cm SL

Distribution: South America: Guaporé River basin.

Countries: Brazil

***Corydoras cervinus* Rössel, 1962**

Corydoras cervinus Rössel, 1962b: 31, fig. 1. Type locality: Brasilien, oberer Rio Guaporé (=Itenez) [Rondônia, Brazil]. Holotype: SMF 5460.

Maximum length: 4.9 cm SL

Distribution: South America: Guaporé River basin.

Countries: Brazil

***Corydoras cochui* Myers & Weitzman, 1954**

Corydoras cochui Myers & Weitzman, 1954: 93. Type locality: Santa Maria Nova, Rio Araguaya, State of Goyaz, Brazil. Holotype: SU 47656.

Maximum length: 2.5 cm SL

Distribution: South America: Upper Araguaia River basin.

Countries: Brazil

***Corydoras concolor* Weitzman, 1961**

Corydoras concolor Weitzman, 1961: 105, fig. 1. Type locality: Las Mangas, in a tributary to the Río Parguaza, western part of the State of Bolivar, Venezuela, 6°20'N, 67°10'W. Holotype: SU 54131.

Maximum length: 5.4 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Corydoras condiscipulus* Nijssen & Isbrücker, 1980**

Corydoras condiscipulus Nijssen & Isbrücker, 1980b: 494, fig. 1. Type locality: French Guiana, Cumuri Creek at left bank of Oya-pock River, upstream of first rapids of Grande Roche, southwest of village Oiapoque. Holotype: IRSNB 617.

Maximum length: 5.1 cm SL

Distribution: South America: Oyapock River basin.

Countries: Brazil, French Guiana

***Corydoras copei* Nijssen & Isbrücker, 1986**

Corydoras copei Nijssen & Isbrücker, 1986: 70, fig. 11. Type locality: Loreto, cours inférieur du Río Huytoyacu, près du village Nuevo Progreso, affluent de la rive droite du Río Pastaza, environ 40 km N. du Lago Rimachi (4°13'S, 76°38'W) [Peru]. Holotype: ZMA 119305.

Maximum length: 3.9 cm SL

Distribution: South America: Pastaza River basin in Loreto.

Countries: Peru

***Corydoras copenamensis* Nijssen, 1970**

Corydoras bondi copenamensis Nijssen, 1970: 19, fig. 8. Type locality: Creek at left bank of Coppename River (3°52'N, 56°55'W) [Saramacca, Suriname]. Holotype: ZMA 105877.

Maximum length: 3.1 cm SL

Distribution: South America: Coppename River basin.

Countries: Suriname

***Corydoras coriatae* Burgess, 1997**

Corydoras coriatae Burgess, 1997: 140, unnumbered fig. Type locality: Río Aguaytia, a branch of the Río Ucayali, in jungles of Peru west of the city of Pucallpa. Holotype: MUSM [= MHNJP] 10701.

Maximum length: 6.48 cm SL

Distribution: South America: Ucayali River basin.

Countries: Peru

***Corydoras crimmeni* Grant, 1997**

Corydoras crimmeni Grant, 1997: 44, fig. 3. Type locality: Aquarium specimen, said to be from Brazil, Roraima State, near the city of Boa Vista, possibly from the Rio Branco. Holotype: MZUSP 52490.

Maximum length: 4 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

***Corydoras cruziensis* Knaack, 2002**

Corydoras cruziensis Knaack, 2002b: 63, fig. Unnumbered fig. Type locality: kleinerer Fließgewässer in Santa Cruz, Guarayos, A. Puente [Bolivia]. Holotype: MTD F 25930.

Maximum length: 4.26 cm SL

Distribution: South America: Madeira River basin in Santa Cruz and Beni Departments of Bolivia.

Countries: Bolivia

***Corydoras crypticus* Sands, 1995**

Corydoras crypticus Sands, 1995: 11, fig. 4. Type locality: Rio Miua system of streams, possibly the Uarinabe stream, 10-12 kilometers away from its confluence of the upper Negro River, Brazil. Holotype: LIVCM 1994.4.29.

Maximum length: 4.5 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Brazil

***Corydoras davidsandsi* Black, 1987**

Corydoras davidsandsi Black, 1987: 74, unnumbered fig. Type locality: Rio Unini, Brazil. Holotype: MZUSP 38632.

Maximum length: 4.4 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

***Corydoras delphax* Nijssen & Isbrücker, 1983**

Corydoras delphax Nijssen & Isbrücker, 1983b: 55, fig. 3. Type locality: Guainía, Río Inírida system, Caño Bacón, Pueblo Bretania (3°43'N, 67°59'W) [Colombia]. Holotype: NRM 26073.

Maximum length: 4.9 cm SL

Distribution: South America: Inírida River and upper Orinoco River basin.

Countries: Colombia

Common names: False blochi catfish (USA)

***Corydoras difluviatilis* Britto & Castro, 2002**

Corydoras difluviatilis Britto & Castro, 2002: 1007, fig 1. Type locality: Brazil: São Paulo, Município de Santra Rita do Passa Quatro, Parque Estadual de Vassununga, Glepa Pé-do-Gigante, córrego Paulicéia, tributary of rio Pardo, rio Paraná system, 21°38'S, 47°38'W. Holotype: MZUSP 75268.

Maximum length: 4.7 cm SL

Distribution: South America: Upper Paraná and Grande River basins, Paraná River drainage, and Jequitaiá, Preto, and upper Da Prata rivers, São Francisco drainage.

Countries: Brazil

***Corydoras duplicareus* Sands, 1995**

Corydoras duplicareus Sands, 1995: 12, fig. 6. Type locality: Rio Poranga, 8 kilometers north of the Nobua oba, prior to where it joins a small tributary of the upper Negro River, Brazil. Holotype: LIVCM 1994.4.36.

Maximum length: 4 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Brazil

***Corydoras ehrhardti* Steindachner, 1910**

Corydoras ehrhardti Steindachner, 1910: 60. Type locality: Flußgebiet des Jaraguá [Santa Catarina, Brazil]. Lectotype: NMW 61104, designated by Nijssen & Isbrücker (1980: 205).

Corydoras meridionalis Ihering, 1911: 380. Type locality: Colonia Hansa, Est. Santa Catharina [Brazil].

Maximum length: 4.1 cm SL

Distribution: South America: Coastal rivers in Santa Catarina and Paraná States and Iguaçú River basin.

Countries: Brazil

***Corydoras elegans* Steindachner, 1877**

Corydoras elegans Steindachner, 1877: 141. Type locality: Teffé [Amazonas, Brazil]. Lectotype: NMW 46729, designated by Nijssen & Isbrücker (1980: 213).

Corydoras pestai Holly, 1940: 107. Type locality: Aquarium specimen (said to be from very small water-courses of the Amazon). Holotype: Münchner Tierpark A.G. 81/1938 (destroyed in WWII).

Maximum length: 5.1 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil, Colombia, Peru

Common names: Elegant catfish (USA)

***Corydoras ellisae* Gosline, 1940**

Corydoras ellisae Gosline, 1940: 17. Type locality: Arroyo Poná, Sapucay, Paraguay. Holotype: FMNH 57361.

Maximum length: 4.8 cm SL

Distribution: South America: Paraguay River basin.

Countries: Paraguay

***Corydoras ephippifer* Nijssen, 1972**

Corydoras ephippifer Nijssen, 1972: 422, fig. 5. Type locality: Brazil, Est. Amapa, Cachoera Creek at right bank of Río Amapari, 4 kilometers downstream of Casa do 7. Holotype: IRSNM 507.

Maximum length: 4.95 cm SL

Distribution: South America: Amapá State.

Countries: Brazil

***Corydoras eques* Steindachner, 1877**

Corydoras eques Steindachner, 1877: 140, pl. 12 (fig. 3). Type locality: Amazonenstrom bei Cudajas [Brazil]. Lectotype: NMW 61111, designated by Nijssen & Isbrücker (1980: 208).

Maximum length: 4.8 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Corydoras esperanzae* Castro, 1987**

Corydoras esperanzae Castro, 1987: 34, fig. 2. Type locality: Caño Orocué at Orocué, Río Meta, Intendencia de Casanare (4°49'N, 71°20'W) [Colombia]. Holotype: UBJTL MM275.

Maximum length: 5.08 cm SL

Distribution: South America: Meta River basin.

Countries: Colombia

***Corydoras evelynae* Rössel, 1963**

Corydoras evelynae Rössel, 1963: 360, fig. 4. Type locality: Brazilian, oberer Rio Solimões. Holotype: SMF 6107.

Maximum length: 4 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Corydoras filamentosus* Nijssen & Isbrücker, 1983**

Corydoras filamentosus Nijssen & Isbrücker, 1983c: 77, fig. 6. Type locality: Bassin de la rivière Corantijn, affluent du Sisa Creek, versant nord, environ 700 m en aval du croisement de Amatopo avec Camp Geologie Road, 03°42'N, 57°42'O [Suriname]. Holotype: USNM 225536.

Maximum length: 3.15 cm SL

Distribution: South America: Corantijn River basin.

Countries: Suriname

***Corydoras flaveolus* Ihering, 1911**

Corydoras flaveolus Ihering, 1911: 386. Type locality: Pequenos riachos afluentes do rio Piracicaba, acima do Salto, Est. S. Paulo [Brazil]. Lectotype: MZUSP 424, designation in Britski (1969: 207).

Maximum length: 3.36 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

Common names: Rouquinho (Brazil)

***Corydoras fowleri* Böhlke, 1950**

Corydoras fowleri Böhlke, 1950: 26. Type locality: Chanco Caño, near Pebas (3°10'S, 71°46'W), Peruvian Amazon, Peru. Holotype: SU 16115.

Maximum length: 6 cm SL

Distribution: South America: Western Amazon River basin.

Countries: Colombia, Peru

***Corydoras garbei* Ihering, 1911**

Corydoras garbei Ihering, 1911: 382. Type locality: Rio São Francisco, Est. da Bahia [Brazil]. Lectotype: MZUSP 711, designated by Britski (1969: 207) for *C. garbei* Ihering, not *C. garbei* of Miranda Ribeiro (1937); lectotype designated by Miranda Ribeiro (1953: 394) for *Corydoras garbei* of Miranda Ribeiro (1937).

Corydoras garbei Miranda Ribeiro, 1937: 54. Type locality: Rio S. Francisco, Estado da Bahia [Brazil]. Lectotype: MNRJ 1101A. Appeared as "*Corydoras garbei* sp. nov.," but the description was copied from Ihering (1911) (and not from Miranda Ribeiro 1911). Regarded by Britski (1969: 207) as a homonym and synonym of *Corydoras garbei* Ihering 1911, but the authorship "Mir. Rib." at the beginning of the account (p. 54) we regard as in error. Britski (1969: 207) designated MZUSP 711 as lectotype for *garbei* Ihering 1911.

Distribution: South America: São Francisco River basin.

Countries: Brazil

***Corydoras geoffroy* La Cepède, 1803**

Corydoras geoffroy La Cepède, 1803: 147. Type locality: Suriname. Neotype: ZMA 106017 (Holotype of *Corydoras octocirrus*), designated by Isbrücker (2000: 17).

Corydoras octocirrus Nijssen, 1970: 26, fig. 12. Type locality: Marchall Creek, East of the road Paranam-Afobaka, 1.5 km North of Marchall village, Suriname River system, Suriname. Holotype: ZMA 106017.

Maximum length: 7 cm SL

Distribution: South America: Coastal rivers of Suriname and French Guiana.

Countries: French Guiana, Suriname

***Corydoras geryi* Nijssen & Isbrücker, 1983**

Corydoras bolivianus Nijssen & Isbrücker, 1983c: 75, fig. 3. Type locality: Plaine inondée, à quelques kilomètres de Trinidad (14°46'S, 65°50'W) Bassin du Rio Mamoré [Beni Prov., Bolivia]. Holotype: MNHN 1983-528.

Corydoras geryi Nijssen & Isbrücker, 1983c: 78, fig. 7. Type locality: Plaine inondée, à quelques kilomètres de Trinidad (14°46'S, 65°50'O), bassin du Rio Mamoré [Beni Prov., Bolivia]. Holotype: MNHN 1983-529.

Maximum length: 5.8 cm SL

Distribution: South America: Mamoré River basin.

Countries: Bolivia

***Corydoras gomezi* Castro, 1986**

Corydoras gomezi Castro, 1986: 34, fig. 1. Type locality: Lakes of the Isla de Mocagua, Rio Amazonas/Solimões near Leticia, Comisaría del Amazonas (3°54'S, 70°14'W) [Colombia]. Holotype: UBJTL MM536.

Maximum length: 3.74 cm SL

Distribution: South America: Amazon River basin near the border of Colombia and Brazil.

Countries: Colombia

***Corydoras gossei* Nijssen, 1972**

Corydoras gossei Nijssen, 1972: 424, fig. 6. Type locality: Brazil, Est. Rondonia, creek near Guajará Mirim (10°50'S, 65°21'W), Río Mamoré system. Holotype: IRSNB 487.

Maximum length: 5.5 cm SL

Distribution: South America: Mamoré River basin.

Countries: Brazil

***Corydoras gracilis* Nijssen & Isbrücker, 1976**

Corydoras gracilis Nijssen & Isbrücker, 1976c: 91, fig. 1 (unnumbered). Type locality: Brazil, Est. Pará, tributary of Rio Tapajós, 66.5 kilometers west of Itaituba, 4°15'S, 55°56'W. Holotype: ZMA 114687. Type locality corrected in Nijssen & Isbrücker (1980: 214) to Rio Jauna (= R. Juma) at Trans-Amazonica high-

way, about 6°09'S, 59°55'W, tributary of Rio Aripuaña, Amazonas, Brazil.

Maximum length: 2.32 cm SL

Distribution: South America: Middle and lower Amazon River basin.

Countries: Brazil

***Corydoras griseus* Holly, 1940**

Corydoras griseus Holly, 1940: 110. Type locality: Aquarium specimen (said to be from very small water-courses of the Amazon). Holotype: Münchner Tierpark A.G. 72/1938 (lost in WWII).

Corydoras griseus deweyeri Meinken, 1957: 5, fig. 1 (unnumbered). Type locality: British-Guiana. Lectotype: ZMH H1186, designated by Nijssen & Isbrücker (1967: 35).

Maximum length: 4.2 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Guyana

***Corydoras guapore* Knaack, 1961**

Corydoras guapore Knaack, 1961: 135, fig. 32. Type locality: Main stream of upper Rio Guaporé, Rondônia, Brazil. Holotype: ZMB 21406.

Maximum length: 4.1 cm SL

Distribution: South America: Guaporé River basin.

Countries: Brazil

***Corydoras guianensis* Nijssen, 1970**

Corydoras guianensis Nijssen, 1970: 21, fig. 9. Type locality: Creek at right of Nickerie River, 12 kilometers W.S.W of Stondansie Fall [Nickerie, Suriname]. Holotype: ZMA 105933.

Maximum length: 4.2 cm SL

Distribution: South America: Coastal rivers of Suriname and French Guiana.

Countries: French Guiana, Suriname

***Corydoras habrosus* Weitzman, 1960**

Corydoras habrosus Weitzman, 1960b: 141, fig. 1. Type locality: Río Salinas, a branch of Río Pao Viejo, El Baúl, State of Cojedes, Venezuela [8°59'N, 68°16'W]. Holotype: SU 52351.

Maximum length: 2 cm SL

Distribution: South America: Upper Orinoco River basin.

Countries: Colombia, Venezuela

Common names: Salt and Pepper catfish (USA)

***Corydoras haraldschultzi* Knaack, 1962**

Corydoras haraldschultzi Knaack, 1962: 129, fig. 1. Type locality: Brasilien. Holotype: SMF 5475.

Maximum length: 5.9 cm SL

Distribution: South America: Brazil and Bolivia.

Countries: Bolivia, Brazil

***Corydoras hastatus* Eigenmann & Eigenmann, 1888**

Corydoras hastatus Eigenmann & Eigenmann, 1888: 166. Type locality: Villa Bella [= Parintins, 2°38'S, 56°45'W, Amazonas, Brazil]. Lectotype: MCZ 7747, designated by Nijssen & Isbrücker (1980: 213).

Corydoras australe Eigenmann & Ward in Eigenmann, McAtee & Ward, 1907: 123. Type locality: Corumba [19°00'S, 57°25'W, Rio Paraguay system, Mato Grosso, Brazil]. Holotype: CAS 77305.

Maximum length: 2.4 cm SL

Distribution: South America: Amazon and Paraguay River basins.

Countries: Argentina, Bolivia, Brazil

Common names: Tail spot pigmy catfish (USA)

***Corydoras heteromorphus* Nijssen, 1970**

Corydoras heteromorphus Nijssen, 1970: 22, fig. 10. Type locality: Creek at right bank of Coppename River (3°52'30"N, 56°53'W), Saramacca, Suriname. Holotype: ZMA 105880.

Maximum length: 5.3 cm SL

Distribution: South America: Coppename and Nickerie River basins.

Countries: Suriname

***Corydoras imitator* Nijssen & Isbrücker, 1983**

Corydoras imitator Nijssen & Isbrücker, 1983c: 79, fig. 8. Type locality: haut Rio Negro, localite exact inconnue [Brazil]. Holotype: MZUSP 27894.

Maximum length: 5.56 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Brazil

***Corydoras incolicana* Burgess 1993**

Corydoras incolicana Burgess, 1993: 157, unnumbered fig. Type locality: Rio Içana, upper Rio Negro, Brazil. Holotype: MZUSP 45717.

Maximum length: 5.21 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Brazil

***Corydoras julii* Steindachner, 1906**

Corydoras julii Steindachner, 1906: 480. Type locality: im Parahim, dem Ausflusse der Sess von Parnagua und an der Ausmündung des Baches bei Victoria [Creek into Rio Parnaíba near Alto Parnaíba (= Victoria, 9°08'S, 45°56'W), Maranhão, Brazil]. Lectotype: NMW 61105, designated by Nijssen & Isbrücker (1980b: 195).

Maximum length: 5.2 cm SL

Distribution: South America: Lower Amazon River and coastal rivers in northeastern Brazil.

Countries: Brazil

Common names: Julii catfish (USA)

***Corydoras kanei* Grant, 1997**

Corydoras kanei Grant, 1997: 41, fig. 1. Type locality: Aquarium specimens said to be from Brazil, Roraima State near Boa Vista, possibly from the Rio Branco. Holotype: MZUSP 52489.

Maximum length: 3.8 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

***Corydoras lacerdai* Hieronimus, 1995**

Corydoras lacerdai Hieronimus, 1995: 110, fig. 5. Type locality: Brasilien, Rio Ribeira da Terra Firme, zwischen den Städten Canavieiras und Ilheus, im Südosten des Bundesstaates Brasilien [Bahia]. Holotype: MZUSP 47682.

Maximum length: 3.36 cm SL

Distribution: South America: Ribeira da Terra Firme River, Bahia State.

Countries: Brazil

***Corydoras lamberti* Nijssen & Isbrücker, 1986**

Corydoras lamberti Nijssen & Isbrücker, 1986: 71, fig. 16. Type locality: Loreto, cours inférieur du Rio Huytoyacu, près du village Nuevo Progreso, affluent de la rive droite du Rio Pastaza, 40 kilometers environ au N. du Lago Rimachi (4°13'S, 76°38'W), Peru. Holotype: ZMA 119335.

Maximum length: 3.8 cm SL

Distribution: South America: Pastaza River basin.

Countries: Peru

***Corydoras latus* Pearson, 1924**

Corydoras latus Pearson, 1924: 19, pl. 3 (fig. 1). Type locality: Lagoons, Lake Rogoagua [Beni River basin, upper Amazon drainage, Beni, Bolivia]. Holotype: CAS 36452.

Maximum length: 5.2 cm SL

Distribution: South America: Beni River basin.

Countries: Bolivia

***Corydoras leopardus* Myers, 1933**

Corydoras leopardus Myers, 1933: 188. Type locality: Brazil [probably from a Brazilian coastal river south of the Amazon]. Lectotype: USNM 93305, designated by Nijssen & Isbrücker 1980: 197.

Corydoras funnelli Fraser-Brunner, 1947: 241, fig. 1. Type locality: Amazon ? (imported aquarium specimen). Holotype: USNM 102222.

Maximum length: 6.1 cm SL

Distribution: South America: Western Amazon River basin.

Countries: Brazil, Ecuador, Peru

Common names: Leopard catfish (USA)

***Corydoras leucomelas* Eigenmann & Allen, 1942**

Corydoras leucomelas Eigenmann & Allen, 1942: 178, pl. 12 (fig. 4). Type locality: Yarinacocha [cutoff lake at right bank of Río Pacaya, upper Amazon, Peru, about 5°15'S, 74°15'W]. Holotype: CAS 36561.

Corydoras caquetae Fowler, 1943: 248, fig. 26. Type locality: Florencia, Río Ortegusa, Colombia [Caquetá]. Holotype: ANSP 70509.

Maximum length: 4.5 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Colombia, Ecuador, Peru

Common names: False spotted catfish (USA)

***Corydoras loretoensis* Nijssen & Isbrücker, 1986**

Corydoras loretoensis Nijssen & Isbrücker, 1986: 68, fig. 4. Type locality: Loreto, Prov. Maynas, Río Nanay, plage sableuse, rive droite, environ 15 minutes en amont de Santa Clara, Peru. Holotype: NRM 26079.

Maximum length: 3.57 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

***Corydoras loxozonus* Nijssen & Isbrücker, 1983**

Corydoras loxozonus Nijssen & Isbrücker, 1983b: 67, fig. 12. Type locality: Meta, Lomalinda near Río Ariari, tributary to Río Guaviare, S.E. of Villavicencio [Colombia]. Holotype: ANSP 150170.

Maximum length: 4.9 cm SL

Distribution: South America: Meta River basin.

Countries: Colombia

***Corydoras macropterus* Regan, 1913**

Corydoras macropterus Regan, 1913: 232. Type locality: Parana-guá, Brazil [Paraná, 25°32'S, 48°36'W]. Lectotype: BMNH 1913.1.1.11, designated by Nijssen & Isbrücker (1980b: 206).

Corydoras bertonii Eigenmann in Eigenmann & Allen, 1942: 179. Type locality: Puerto Bertoni, Alto Paraná, Paraguay. Holotype: CAS [ex IU 15441] (missing in 1997).

Maximum length: 8.7 cm SL

Distribution: South America: Coastal rivers from São Paulo to Santa Catarina States and some upper Paraná River tributaries.

Countries: Brazil, Paraguay

***Corydoras maculifer* Nijssen & Isbrücker, 1971**

Corydoras maculifer Nijssen & Isbrücker, 1971: 183, fig. 1. Type locality: Brazil, Est. Mato Grosso, Sangadina stream, 2 kilometers W of Chavantina (14°45'S, 52°20'W), tributary of the Rio das Mortes. Holotype: BMNH 1970.10.30.3.

Maximum length: 5.9 cm SL

Distribution: South America: Upper Araguaia River basin.

Countries: Brazil

***Corydoras melanistius* Regan, 1912**

Corydoras melanistius Regan, 1912: 216. Type locality: Essequibo [Guyana]. Lectotype: BMNH 1864.1.21.86, designated by Nijssen & Isbrücker (1967: 32).

Check List of the Freshwater Fishes of South and Central America

- Corydoras wotroi* Nijssen & Isbrücker, 1967: 44, pl. 5 (fig. 3). Type locality: Outlet of Kleine Saramacca along and between sand bank [Saramacca River system, Brokopondo, Suriname]. Holotype: RMNH 25331. Maximum length: 5.1 cm SL. Distribution: South America: Coastal rivers of the Guianas. Countries: French Guiana, Guyana, Suriname. Common names: Spotted catfish (USA)
- Corydoras melanotaenia* Regan, 1912**
Corydoras melanotaenia Regan, 1912: 217. Type locality: Honda [Río Meta system of Río Orinoco, Tolima, Colombia, 12°21'N, 71°47'W]. Lectotype: BMNH 1909.7.23.41, designated by Nijssen & Isbrücker (1980b: 207). Maximum length: 5.8 cm SL. Distribution: South America: Meta River basin. Countries: Colombia. Common names: Green gold catfish (USA)
- Corydoras melini* Lönnberg & Rendahl, 1930**
Corydoras melini Lönnberg & Rendahl, 1930: 1, fig. 1. Type locality: Jauareté an dem Ausfluss des Rio Papuri in den Rio Uaupés [Iuareté (0°35'N, 69°13'W) at confluence of Rio Papuri and Rio Uaupés, Rio Negro system, Amazonas, Brazil]. Lectotype: NRM 11091, designated by Nijssen & Isbrücker (1980b: 209). Maximum length: 5 cm SL. Distribution: South America: Upper Negro and Meta River basins. Countries: Brazil, Colombia. Common names: False bandit catfish (USA)
- Corydoras metae* Eigenmann, 1914**
Corydoras metae Eigenmann, 1914: 230. Type locality: Barrigona, Rio Meta, Colombia. Holotype: CAS 36447. Holotype is figured in Eigenmann (1916: pl. 14). Maximum length: 4.8 cm SL. Distribution: South America: Meta River basin. Countries: Colombia. Common names: Bandit catfish (USA), Meta River catfish (USA)
- Corydoras micracanthus* Regan, 1912**
Corydoras micracanthus Regan, 1912: 211. Type locality: Salta, Argentina [24°46'S, 65°28'W]. Lectotype: BMNH 1897.1.27.8, designated by Nijssen & Isbrücker (1980: 206). Maximum length: 4 cm SL. Distribution: South America: Western tributaries of Paraná River in Salta Province. Countries: Argentina
- Corydoras multimaculatus* Steindachner, 1907**
Corydoras multimaculatus Steindachner, 1907a: 291. Type locality: Nebenarme des Rio Preto bei Sa. Rita im Staate Bahia [Brazil, about 11°00'S, 44°30'W]. Lectotype: NMW 46783, designated by Nijssen & Isbrücker (1980b: 196). Maximum length: 5.1 cm SL. Distribution: South America: Preto River basin in Bahia State. Countries: Brazil
- Corydoras nanus* Nijssen & Isbrücker, 1967**
Corydoras nanus Nijssen & Isbrücker, 1967: 41, pl. 5 (fig. 1). Type locality: Little tributaries of Gran-Rio between Ligolio and Awaradam Falls [Brokopondo, Suriname]. Holotype: RMNH 25333. Maximum length: 4.5 cm SL. Distribution: South America: Suriname and Maroni River basins in Suriname and Iracoubo River basin in French Guiana. Countries: French Guiana, Suriname. Common names: *Corydoras nain* (France)
- Corydoras napoensis* Nijssen & Isbrücker, 1986**
Corydoras napoensis Nijssen & Isbrücker, 1986: 73, fig. 25. Type locality: Napo, Lagartococha, affluent septentrional du Rio Aguatico, entre l'embouchure de la rivière (0°39'S, 75°16'W) et le village de Garzacochoa (0°28'S, 75°21'W), bassin du Rio Napo [Ecuador]. Holotype: ZMA 119226. Maximum length: 4.2 cm SL. Distribution: South America: Western Amazon River basin in eastern Ecuador and Loreto in Peru. Countries: Ecuador, Peru
- Corydoras narcissus* Nijssen & Isbrücker, 1980**
Corydoras narcissus Nijssen & Isbrücker, 1980b: 497, fig. 2. Type locality: Brazil, Est. Amazonas, Rio Purus system, creek into Rio Ipixuna, 7°31'S, 63°16'W, 30 km west of Humaitá. Holotype: ZMA 115178. Maximum length: 6.5 cm SL. Distribution: South America: Purus River basin in middle Amazon River basin. Countries: Brazil
- Corydoras nattereri* Steindachner, 1877**
Corydoras nattereri Steindachner, 1877: 143, pl. 11 (fig. 1). Type locality: Affluent of Rio Parahyba, 3 mi. up, Rio de Janeiro, Brazil. Neotype: MCZ 8229, designated by Nijssen & Isbrücker (1980: 3). *Corydoras juquiaae* Ihering, 1907: 36. Type locality: Juquiá River, Poço Grande, State of São Paulo [Brazil]. Lectotype: CAS 16016, designated by Ellis (1913: 403). *Corydoras nattereri triseriatus* Ihering, 1911: 386. Type locality: Rio Doce, Est. Espírito Santo [Brazil]. Lectotype: MZUSP 342, designated by Britski (1969: 207). Maximum length: 5.4 cm SL. Distribution: South America: Coastal rivers in southeastern Brazil from Espírito Santo to Paraná. Countries: Brazil. Common names: *Coridoras* (Brazil), Natterer's catfish (USA)
- Corydoras nijsseni* Sands, 1989**
Corydoras elegans nijsseni Sands, 1989: 45. Type locality: Tributary of the Rio Negro, Brazil. Holotype: RMNH ?. Maximum length: 3 cm SL. Distribution: South America: Negro River basin. Countries: Brazil
- Corydoras oiapoquensis* Nijssen, 1972**
Corydoras oiapoquensis Nijssen, 1972: 425, fig. 7. Type locality: French Guiana, Cumuri Creek at left bank of Rio Oiapoque (= Oyapock River), upstream of first rapids of Grande Roche, southwest of village Oiapoque (Brazil, 03°54'N, 51°46'W). Holotype: IRSNB 489. Maximum length: 4.5 cm SL. Distribution: South America: Oyapock River basin. Countries: Brazil, French Guiana
- Corydoras ornatus* Nijssen & Isbrücker, 1976**
Corydoras ornatus Nijssen & Isbrücker, 1976b: 126, fig. 1. Type locality: Brazil, Est. Pará, Rio Tapajós, 80 km E of Jacareacanga, 06°09'S, 58°15'W. Holotype: ZMA 114690. Maximum length: 4.9 cm SL. Distribution: South America: Lower Tapajós River basin. Countries: Brazil
- Corydoras orphnopterus* Weitzman & Nijssen, 1970**
Corydoras orphnopterus Weitzman & Nijssen, 1970: 125, fig. 3. Type locality: Ecuador, Lower Río Bobonaza between Montalvo (2°06'S, 76°59'W) and Chicherota, Rio Pastaza system, Est. Pastaza. Holotype: USNM 204361. Maximum length: 5.77 cm SL. Distribution: South America: Pastaza River basin. Countries: Ecuador

***Corydoras osteocarus* Böhlke, 1951**

Corydoras osteocarus Böhlke, 1951: 824. Type locality: San Fernando de Atabapo, where Rio Atabapo empties into the Orinoco, Venezuela (at approximately 04°03' North Latitude, 67°45' West Longitude). Holotype: SU 16333.

Maximum length: 4 cm SL

Distribution: South America: Orinoco River basin and coastal rivers in Suriname.

Countries: Suriname, Venezuela

***Corydoras ourastigma* Nijssen, 1972**

Corydoras ourastigma Nijssen, 1972: 428, fig. 8. Type locality: Brazil, Est. Acre, Rio Iquiri (= Rio Ituxi) at road Rio Branco vil-lage - Abuna, 47 kilometers from Rio Branco village (about 10°00'S, 67°30'W), Purus River system. Holotype: IRSNB 498.

Maximum length: 6 cm SL

Distribution: South America: Purus River basin.

Countries: Brazil

***Corydoras oxyrhynchus* Nijssen & Isbrücker, 1967**

Corydoras oxyrhynchus Nijssen & Isbrücker, 1967: 42, pl. 4 (fig. 3). Type locality: Gojo Creek above Posoegroenoe, tributary of Saramacca River [Brokopondo, Suriname]. Holotype: RMNH 25329.

Maximum length: 5 cm SL

Distribution: South America: Saramacca River basin.

Countries: Suriname

***Corydoras paleatus* (Jenyns, 1842)**

Callichthys paleatus Jenyns, 1842: 113. Type locality: South America [exact locality uncertain]. Lectotype: BMNH 1917.7.14.18, designated by Nijssen & Isbrücker (1980b: 204).

Corydoras maculatus Steindachner, 1879b: 32. Type locality: La Plata [Argentina]. No types known.

Corydoras punctatus argentina Steindachner, 1879a: 26. Type locality: Buenos Ayres [Argentina]. Not available, name only in synonymy of *Corydoras marmoratus*.

Corydoras marmoratus Steindachner, 1879a: 26, pl. 5 (fig. 1). Type locality: Montevideo [Uruguay] und ... La Plata innerhalb der Provinz Buenos-Ayres [Argentina]. Lectotype: NMW 5538, designated by Nijssen & Isbrücker (1980b: 204).

Corydoras microcephalus Regan, 1912: 211. Type locality: La Plata [Buenos Aires, Argentina]. Lectotype: BMNH 1890.3.12.4, designated by Nijssen & Isbrücker (1980b: 204).

Silurus quadricostatus Larrañaga, 1923: 376. Type locality: Uruguay. No type indicated.

Silurus 7-radiatus Larrañaga, 1923: 385. Type locality: Uruguay. No type indicated.

Maximum length: 5.9 cm SL

Distribution: South America: Lower Paraná River basin and coastal rivers in Uruguay and Brazil.

Countries: Argentina, Brazil, Paraguay, Uruguay

Common names: Peppered catfish (USA)

***Corydoras panda* Nijssen & Isbrücker, 1971**

Corydoras panda Nijssen & Isbrücker, 1971: 186, fig. 2. Type locality: Peru, Est. Huanuco, Aguas Amarillas, tributary of Río Pachitea, Ucayali river system. Holotype: BMNH 1969.7.15.8.

Maximum length: 3.8 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Common names: Panda catfish (USA)

***Corydoras pantanalensis* Knaack, 2001**

Corydoras pantanalensis Knaack, 2001: 59, unnumbered fig. Type locality: Bolivien, Prov. Santa Cruz, Restgewässer im nördlichen Pantanal, Überschwemmungsgebiet im Raum San Lorenzo, Flusssystem Rio Cussis und Rio Las Petas. Koordinaten des Fundortes: 16°06' 525"S, 59°55'620"W. Holotype: MTD

24774.

Maximum length: 6.9 cm SL

Distribution: South America: Cussis and Las Petas River basins.

Countries: Bolivia

***Corydoras parallelus* Burgess 1993**

Corydoras parallelus Burgess, 1993: 154, unnumbered fig. Type locality: Rio Içana, upper Rio Negro, Brazil. Holotype: MZUSP 45716.

Maximum length: 5.15 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Brazil

***Corydoras pastazensis* Weitzman, 1963**

Corydoras pastazensis Weitzman, 1963: 59, fig. 1. Type locality: Chicherata, near the mouth of the Río Bobonaza, a tributary of the Río Pastaza, itself a tributary of the Río Marañon, Pastaza Province, Ecuador, about 02°33'S latitude and 76°40'W longitude. Holotype: USNM 177216.

Corydoras pastazensis orcesi Weitzman & Nijssen, 1970: 120, fig. 1. Type locality: Ecuador, Río Conambo near village of Conambo (1°55'S, 76°51'W), Río Tigre system, Est. Pastaza. Holotype: USNM 204358.

Maximum length: 6.07 cm SL

Distribution: South America: Pastaza River basin.

Countries: Ecuador

***Corydoras pinheiroi* Dinkelmeyer, 1995**

Corydoras pinheiroi Dinkelmeyer, 1995: 60, unnumbered fig. Type locality: Brasilien, Est. Rondonia, in einem Nebenfluss des Rio Ribeiro bei der Ortschaft Guajará-Mirim. Holotype: MZUSP 48099.

Maximum length: 5.7 cm SL

Distribution: South America: Western Amazon River basin in Rondônia State.

Countries: Brazil

***Corydoras polystictus* Regan, 1912**

Corydoras virescens Miranda Ribeiro, 1912: 16. Type locality: Rio Paraguay, perto de Cáceres [Mato Grosso, Brazil 16°05'S, 57°40'W]. Holotype: MNRJ 3806.

Corydoras polystictus Regan, 1912: 216. Type locality: Descalvados, Matto Grosso [Brazil] [16°45'S, 57°40'W]. Lectotype: BMNH 1895.5.17.62, designated by Nijssen & Isbrücker (1980b: 197).

Maximum length: 3.2 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil

***Corydoras potaroensis* Myers, 1927**

Corydoras potaroensis Myers, 1927: 126. Type locality: Br. Guiana: Creek below Potaro Landing [5°20'N, 59°05'W, Potaro River, Essequibo, Guyana]. Lectotype: CAS 24754, designated by Nijssen & Isbrücker (1980b: 208).

Maximum length: 4.12 cm SL

Distribution: South America: Potaro River basin.

Countries: Guyana

***Corydoras prionotos* Nijssen & Isbrücker, 1980**

Corydoras prionotos Nijssen & Isbrücker, 1980c: 5, figs. 6-7. Type locality: Linhares, 19°22'S, 40°04'W, Lagoa Juparanã, Rio Doce system [Espírito Santo, Brazil]. Holotype: MNRJ 10537.

Maximum length: 5.3 cm SL

Distribution: South America: Coastal rivers in southeastern Brazil from Espírito Santo to São Paulo.

Countries: Brazil

***Corydoras pulcher* Isbrücker & Nijssen, 1973**

Corydoras pulcher Isbrücker & Nijssen, 1973: 2, fig. 1. Type locality: Brazil, Est. Amazonas, Rio Purus, north of Lábrea

(7°20'S, 64°46'W), Rio Amazonas system. Holotype: SMF 9231.

Maximum length: 5 cm SL

Distribution: South America: Purus River basin.

Countries: Brazil

***Corydoras punctatus* (Bloch, 1794)**

Cataphractus punctatus Bloch, 1794: 90, pl. 377 (fig. 2). Type locality: Suriname [species occurs in Brokopondo, Suriname River system, Compagnie Creek]. Lectotype: ZMB 3149, designated by Nijssen & Isbrücker (1975: 63). Earlier neotype designation (RMNH 25301) invalidated by rediscovery of syntype series.

Maximum length: 6.6 cm SL

Distribution: South America: Suriname River basin in Suriname and Iracoubo River basin in French Guiana.

Countries: French Guiana, Suriname

***Corydoras pygmaeus* Knaack, 1966**

Corydoras pygmaeus Knaack, 1966: 168, fig. 1 (unnumbered). Type locality: einem Nebenfluß des Rio Madeira (Brasilien) [Near Calama, 8°05'S, 62°52'W, along Rio Madeira near mouth of Rio Jipirana (= R. Machado), Rondônia, Brazil]. Holotype: ZMB 21620.

Maximum length: 2.1 cm SL

Distribution: South America: Madeira River basin.

Countries: Brazil

Common names: Pygmy catfish (USA)

***Corydoras rabauti* La Monte, 1941**

Corydoras rabauti La Monte, 1941: 5. Type locality: A tributary of the Amazon River [Brazil]. Holotype: AMNH 15644.

Corydoras myersi Miranda Ribeiro, 1942: 427, fig. 1. Type locality: Rio Javari, Município de Benjamin Constant, Estado do Amazonas, Brasil. Holotype: MNRJ 3626.

Maximum length: 5 cm SL

Distribution: South America: Upper Amazon, Solimões, and Negro River basins.

Countries: Brazil, Colombia

Common names: Rabaut's catfish (USA)

***Corydoras reticulatus* Fraser-Brunner, 1938**

Corydoras reticulatus Fraser-Brunner, 1938: 208, fig. 2 (unnumbered). Type locality: No type locality published in 1938. As in 1947 Monte Alegre River, Amazon [Pará, Brazil] (2°00'S, 54°04'W). Neotype: BMNH 1926.10.27[or 24].333. Original two syntypes were lost, Fraser-Brunner (1947: 245) redescribed species with a "holotype" which Weitzman (1960a) designated as neotype (see Nijssen & Isbrücker 1980b: 197).

Maximum length: 6.1 cm SL

Distribution: South America: Lower Amazon River basin.

Countries: Brazil

Common names: Network catfish (USA)

***Corydoras reynoldsi* Myers & Weitzman, 1960**

Corydoras reynoldsi Myers & Weitzman, 1960: 105, fig. 2. Type locality: Tributary to the Río Ortegua, opposite the town and air base known as Tres Esquinas, Caquetá Province, Colombia. Holotype: SU 52349 (Fig. 2 lists SU 50702 as holotype).

Maximum length: 3.15 cm SL

Distribution: South America: Upper Caquetá River basin.

Countries: Colombia

***Corydoras robineae* Burgess, 1983**

Corydoras robineae Burgess, 1983: 42, unnumbered fig. Type locality: Rio Aiuana, a southern tributary of the middle Rio Negro, Amazonas, Brazil. Holotype: MZUSP 27175.

Maximum length: 4.39 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Brazil

Common names: Bannertail catfish (USA), Flagtail catfish (USA)

***Corydoras robustus* Nijssen & Isbrücker, 1980**

Corydoras robustus Nijssen & Isbrücker, 1980b: 499, fig. 3. Type locality: Brazil, Est. Amazonas, Rio Purus system, creek into Rio Ipixuna, 07°31'S, 63°16'W, 30 km west of Humaitá. Holotype: ZMA 115179.

Maximum length: 7.12 cm SL

Distribution: South America: Purus River basin in middle Amazon.

Countries: Brazil

***Corydoras sanchesi* Nijssen & Isbrücker, 1967**

Corydoras sanchesi Nijssen & Isbrücker, 1967: 43, pl. 5 (fig. 2). Type locality: Gojo Creek above Posoegroenoe, tributary of Saramacca River [Brokopondo, Suriname]. Holotype: RMNH 25319.

Maximum length: 4.1 cm SL

Distribution: South America: Saramacca River basin.

Countries: Suriname

***Corydoras saramaccensis* Nijssen, 1970**

Corydoras saramaccensis Nijssen, 1970: 38, fig. 21. Type locality: Creek at right bank of Kleine Saramacca River, 11 km E.S.E. from junction with Saramacca River, Brokopondo, Suriname. Holotype: ZMA 106018.

Maximum length: 5.1 cm SL

Distribution: South America: Saramacca River basin.

Countries: Suriname

***Corydoras sararensis* Dinkelmeyer, 1995**

Corydoras saraarensis Dinkelmeyer, 1995: 61, unnumbered fig. Type locality: Brasilien, Est. Mato Grosso, Rio Sararé, rechter Nebenfluß des Rio Guaporé. Holotype: MZUSP 48100.

Maximum length: 4.4 cm SL

Distribution: South America: Guaporé River basin.

Countries: Brazil

***Corydoras schwartzi* Rössel, 1963**

Corydoras schwartzi Rössel, 1963: 359, fig. 1. Type locality: Brasilien, Mündungsgebiet des Rio Purus [Amazonas]. Holotype: SMF 6425.

Maximum length: 3.9 cm SL

Distribution: South America: Purus River basin.

Countries: Brazil

Common names: Schwartz's catfish (USA)

***Corydoras semiaquilus* Weitzman, 1964**

Corydoras semiaquilus Weitzman, 1964: 121, fig. 5. Type locality: Igarapé Preto, a small jungle rivulet at the headwaters of the black water creeks, which empty in the upper Solimões, State of Amazonas, Brazil. Holotype: SU 55939.

Maximum length: 6 cm SL

Distribution: South America: Western Amazon River basin.

Countries: Brazil, Peru

***Corydoras septentrionalis* Gosline, 1940**

Corydoras septentrionalis Gosline, 1940: 16. Type locality: Río Piña, north of Maturín, Venezuela [09°45'N, 63°10'W, Guara-piché River system, Monagas]. Holotype: SU 35055.

Corydoras cortesi Castro, 1987: 31, fig. 1. Type locality: Río Arauca near to Arauca, Intendencia de Arauca (7°03'N, 70°46'W) [Colombia]. Holotype: UBJTL MM671.

Maximum length: 4.9 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

***Corydoras serratus* Sands, 1995**

Corydoras serratus Sands, 1995: 14, fig. 7. Type locality: Rio Poranga, 8 kilometers north of the Nobua oba, where the two

streams join a small tributary of the upper Negro river, Brazil.
 Holotype: LIVCM 1994.4.38.
 Maximum length: 4.88 cm SL
 Distribution: South America: Upper Negro River basin.
 Countries: Brazil

***Corydoras seussi* Dinkelmeyer, 1996**

Corydoras seussi Dinkelmeyer, 1996: 25. Type locality: Brasilien, Est. Rondonia, kleiner Nebenfluß des Rio Pacaás Novos, eines rechtsseitigen Zuflusses des Rio Mamoré nahe bei Guajara-Mirim. Holotype: MZUSP 49322.
 Maximum length: 6 cm SL
 Distribution: South America: Mamoré River basin.
 Countries: Brazil

***Corydoras similis* Hieronimus, 1991**

Corydoras similis Hieronimus, 1991: 39, fig. 1. Type locality: Brasilien, in der Nähe der Stadt Ariquemes in einem Zufluß zum Rio Madeira, Bundesstaat Rondonia. Holotype: ZFMK 16400.
 Maximum length: 3.8 cm SL
 Distribution: South America: Madeira River basin.
 Countries: Brazil

***Corydoras simulatus* Weitzman & Nijssen, 1970**

Corydoras simulatus Weitzman & Nijssen, 1970: 126, fig. 4. Type locality: Colombia, Río Ocoá near Puerto López (04°06'N, 72°57'W), Río Meta system, Est. Meta. Holotype: USNM 197615.
 Maximum length: 4.9 cm SL
 Distribution: South America: Upper Meta River in Colombia.
 Countries: Colombia

***Corydoras sipaliwini* Hoedeman, 1965**

Corydoras punctatus sipaliwini Hoedeman, 1965: 87 fig. 46. Type locality: Sipalawini River [Re-established by Isbrücker (2000)]. Lectotype: ZMA 104.278, designated by Isbrücker (2000).
 Maximum length: 4.6 cm SL
 Distribution: South America: Coastal river basins of Guyana and Suriname.
 Countries: Guyana, Suriname

***Corydoras sodalis* Nijssen & Isbrücker, 1986**

Corydoras sodalis Nijssen & Isbrücker, 1986: 68, fig. 6. Type locality: Loreto, Rio Yavari, Cano de Guavariba dans le Lago Matamata (04°12'S, 70°17'W), Peru. Holotype: NRM 13713.
 Maximum length: 4.86 cm SL
 Distribution: South America: Amazon River in Loreto (Peru) and Amazonas State (Brazil).
 Countries: Brazil, Peru
 Common names: False network catfish (USA)

***Corydoras solox* Nijssen & Isbrücker, 1983**

Corydoras solox Nijssen & Isbrücker, 1983c: 80, fig. 9. Type locality: bassin du Rio Oiapoque, 60 km S du village Martinique (03°51'N, 51°53'O), Terr. Amapa, Brazil. Holotype: MNHN 1983-531.
 Maximum length: 6.25 cm SL
 Distribution: South America: Oyapock River basin and smaller coastal drainages in French Guiana.
 Countries: Brazil, French Guiana

***Corydoras spectabilis* Knaack, 1999**

Corydoras spectabilis Knaack, 1999: 74, unnumbered fig. Type locality: Brasilien, Mato Grosso, Oberlauf Rio Guaporé im Raum Vila Bela [15°00.397S, 59°57.348W]. Holotype: ZMB 33150.
 Maximum length: 4.9 cm SL
 Distribution: South America: Guaporé River basin.
 Countries: Brazil

***Corydoras spilurus* Norman, 1926**

Corydoras spilurus Norman, 1926: 95. Type locality: Iponcin Creek, into Approuague River, French Guiana. Lectotype: BMNH 1926.3.2.738, designated by Nijssen & Isbrücker (1967: 33).
 Maximum length: 5.8 cm SL
 Distribution: South America: Approuague River basin in French Guiana, and Suriname River basin in Suriname.
 Countries: French Guiana, Suriname

***Corydoras steindachneri* Isbrücker & Nijssen, 1973**

Corydoras steindachneri Isbrücker & Nijssen, 1973: 4, fig. 3. Type locality: Brazil, Est. Paraná, Paranaguá (25°32'S, 48°36'W). Holotype: NMW 1504.
 Maximum length: 5 cm SL
 Distribution: South America: Coastal rivers in Paraná State.
 Countries: Brazil

***Corydoras stenocephalus* Eigenmann & Allen, 1942**

Corydoras stenocephalus Eigenmann & Allen, 1942: 177, pl. 12 (fig. 2). Type locality: Yarinococha [08°15'S, 74°45'W, Río Ucayali system, Loreto, Peru]. Holotype: CAS 36386.
 Maximum length: 6.35 cm SL
 Distribution: South America: Eastern Ecuador and Ucayali River basin in Peru.
 Countries: Ecuador, Peru

***Corydoras sterbai* Knaack, 1962**

Corydoras sterbai Knaack, 1962: 131, pl. 12 (fig. 2). Type locality: Brasilien. Holotype: SMF 5476.
 Maximum length: 6.8 cm SL
 Distribution: South America: Central Brazil and Bolivia.
 Countries: Bolivia, Brazil

***Corydoras surinamensis* Nijssen, 1970**

Corydoras schwartzi surinamensis Nijssen, 1970: 39, fig. 22. Type locality: Creek at right bank of Coppename River (03°52'30"N, 56°53'00"W), Saramacca, Suriname. Holotype: ZMA 105876.
 Maximum length: 5.1 cm SL
 Distribution: South America: Coppename River basin.
 Countries: Suriname

***Corydoras sychri* Weitzman, 1960**

Corydoras sychri Weitzman, 1960b: 151, fig. 7. Type locality: Tropical South America [aquarium specimen]. Holotype: SU 51295.
 Maximum length: 4.3 cm SL
 Distribution: South America: Nanay River basin, Loreto.
 Countries: Peru
 Common names: Sychr's catfish (USA)

***Corydoras treitlii* Steindachner, 1906**

Corydoras treitlii Steindachner, 1906: 478. Type locality: Mündungstelle eines kleinen Baches gefangen, der bei dem Städtchen Victoria in der Parnahyba fällt [Creek into Parnaíba River near alto Parnaíba (= Victoria, 9°08'S, 45°56'W), Maranhão, Brazil]. Lectotype: NMW 61103, designated by Weitzman (1964: 116).
 Maximum length: 5.9 cm SL
 Distribution: South America: Coastal drainages in northeastern Brazil.
 Countries: Brazil
 Common names: Hognosed corydoras (USA)

***Corydoras trilineatus* Cope, 1872**

Corydoras trilineatus Cope, 1872: 281, pl. 6 (fig. 2). Type locality: Ambyiacu River [Peru]. Lectotype: ANSP 8294, designated by Nijssen & Isbrücker 1980: 194.
Corydoras episcopi Eigenmann & Allen, 1942: 177, pl. 12 (fig. 3). Type locality: Rio Morona. Holotype: CAS 36448.
Corydoras dubius Nijssen & Isbrücker, 1967: 38, pl. 4 (fig. 2).

Type locality: Suriname, surroundings of Paramaribo. Holotype: ZMA 104623.

Maximum length: 6.1 cm SL

Distribution: South America: Central Amazon River basin; Peruvian Amazon and coastal drainages of Suriname.

Countries: Brazil, Colombia, Peru, Suriname

Common names: Three line catfish (USA)

***Corydoras undulatus* Regan, 1912**

Corydoras undulatus Regan, 1912: 217. Type locality: La Plata [Buenos Aires, Argentina]. Holotype: BMNH 1912.4.10.5.

Maximum length: 4.4 cm SL

Distribution: South America: Lower Paraná River basin and coastal rivers in southern Brazil.

Countries: Argentina, Brazil

***Corydoras virginiae* Burgess, 1993**

Corydoras virginiae Burgess, 1993: 152, fig. unnumbered. Type locality: Rio Ucayali, Peru. Holotype: MZUSP 45715.

Maximum length: 5.1 cm SL

Distribution: South America: Ucayali River basin.

Countries: Peru

***Corydoras vittatus* Nijssen, 1971**

Corydoras blochi vittatus Nijssen, 1971: 97, fig. 7. Type locality: Brazil, Est. Maranhão, tributary of Rio Itapicurú at Caxias (4°53'S, 43°20'W). Holotype: ZMA 109990.

Maximum length: 3.6 cm SL

Distribution: South America: Itapicurú River basin in northeastern Brazil.

Countries: Brazil

***Corydoras weitzmani* Nijssen, 1971**

Corydoras weitzmani Nijssen, 1971: 91, fig. 1. Type locality: Peru, Est. Cuzco, at Cuzco (13°32'S, 71°57'W), Vilcanota river system. Holotype: FMNH 69934.

Distribution: South America: Western Amazon River basin.

Countries: Peru

***Corydoras xinguensis* Nijssen, 1972**

Corydoras xinguensis Nijssen, 1972: 429, fig. 9. Type locality: Brazil, Est. Mato Grosso, Suia Missú Creek, tributary of upper Río Xingu near Posto Diauarum (about 11°15'S, 53°00'W). Holotype: IRSNB 500.

Maximum length: 3.7 cm SL

Distribution: South America: Upper Xingu River basin.

Countries: Brazil

***Corydoras zygatus* Eigenmann & Allen, 1942**

Corydoras zygatus Eigenmann & Allen, 1942: 175, pl. 12 (fig. 1). Type locality: Creek, Yurimaguas [05°54'S, 76°04'W, Río Hualagua system, Loreto, Peru]. Holotype: CAS 24756.

Maximum length: 5.6 cm SL

Distribution: South America: Western Amazon River basin.

Countries: Ecuador, Peru

Common names: Black band catfish (USA)

DIANEMA

Dianema Cope, 1871: 112. Type species: *Dianema longibarbis* Cope, 1872. Type by subsequent monotypy by Cope (1872: 276). Gender: neuter. Appeared first as above, with brief description and no species; species added by Cope (1872: 276).

Decapogon Eigenmann & Eigenmann, 1888: 165. Type species: *Callichthys adpersus* Steindachner, 1877. Type by monotypy. Gender: masculine.

***Dianema longibarbis* Cope, 1872**

Dianema longibarbis Cope, 1872: 276, pl. 7 (fig. 1). Type locality: Ambyiacu River, Peru. Syntypes: ANSP 8285 (1), ANSP 21540

(1).

Callichthys adpersus Steindachner, 1877: 135, pl. 11 (fig. 2). Type locality: Stromgebiete des Amazonenflusses von Santarem bis Tabatinga ... im Xingu bei Porto do Moz, im Amazonenstrom bei Cudajas und bei Tabatinga. Syntypes: (several) MCZ 8223 (8), 8245 + 8265 (8), 18266 (1); NMW 47667-69 (2, 2, 2), 47672-73 (2, 2); USNM 41518 [ex MCZ 8245 or 8265] (2, now 1, 1 missing) Bourget, Tabatinga, Brazil.

Decapogon verissimi Miranda Ribeiro, 1911: 154, pl. 36 (fig. 1). Type locality: Pará [Brazil]. Lectotype: MNRJ 774A, designated by Miranda Ribeiro (1953: 395).

Maximum length: 8.2 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Remarks and references: See Reis (1997) for phylogeny.

Common names: Porthole catfish (USA)

***Dianema urostriatum* (Miranda Ribeiro, 1912)**

Decapogon urostriatum Miranda Ribeiro, 1912: 15. Type locality: Manáos [Amazonas, Brazil]. Lectotype: MNRJ 1067A, designated by Miranda Ribeiro (1953: 395). Name originally spelled *urostriatum* in heading of account, but corrected in attached printed errata.

Maximum length: 8.4 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

Remarks and references: See Reis (1997) for phylogeny.

Common names: Flagtail catfish (USA)

HOPLOSTERNUM

Hoplosternum Gill, 1858: 395. Type species: *Callichthys laevigatus* Valenciennes, 1836. Type by original designation. Gender: neuter.

Cascadura Ellis, 1913: 387. Type species: *Cascadura maculocephala* Ellis, 1913. Type by monotypy. Gender: feminine.

Cataphractops Fowler, 1915: 231. Type species: *Callichthys melampterus* Cope, 1872. Type by original designation. Gender: masculine.

Ellisichthys Miranda Ribeiro, 1920: 11. Type species: *Cascadura maculocephala* Ellis, 1913. Type by being a replacement name. Gender: masculine. Unneeded replacement for *Cascadura* Ellis, 1913, apparently not preoccupied.

***Hoplosternum littorale* (Hancock, 1828)**

Callichthys littoralis Hancock, 1828: 244, pl. 32 (fig. 1). Type locality: Demerara [Guyana]. BMNH 1996.7.11: 1.

Callichthys laevigatus Valenciennes, 1836: pl. 5 (fig. 2). Type locality: Buénos-Ayres [Argentina]. Syntypes: MNHN 4274 (1); 4272 (2); and 4271 (2). Name available from plate, description in Valenciennes (1847: 7).

Callichthys subulatus Valenciennes in Cuvier & Valenciennes, 1840: 311 [231 in the Strasbourg deluxe edition]. Type locality: Cayenne [French Guiana]; Buénos-Ayres [Argentina]. Syntypes: MNHN 4268 (1); 4269 (2); and 4270 (1).

Callichthys albidus Valenciennes in Cuvier & Valenciennes, 1840: 316 [235 in the Strasbourg deluxe edition]. Type locality: Cayenne [French Guiana]. Syntypes: MNHN 4276-77 (1, 1).

Callichthys chiquitos Castelnau, 1855: 38, pl. 18 (fig. 2). Type locality: la province de Chiquitos [Bolivia]. Holotype: MNHN 4285.

Hoplosternum stevardii Gill, 1858: 401. Type locality: Island of Trinidad, West Indies. Syntypes: (2) USNM 5944 (1).

Callichthys melampterus Cope, 1872: 275, pl. 14 (fig. 4). Type locality: Trinidad, W.I. [correct type locality: rio Ambyiacu, Peru]. Lectotype: ANSP 8318, designated by Reis (1997: 303).

Hoplosternum schreineri Miranda Ribeiro, 1911: 150, pl. 35 (fig. 3). Type locality: Amazonas, Brazil. Lectotype: MNRJ 1051A, designated by Miranda Ribeiro (1953: 396).

Cascadura maculocephala Ellis, 1913: 387, pl. 25 (fig. 3). Type locality: Uruguayana [Rio Grande do Sul, Brazil]. Holotype: FMNH 54878.

Hoplosternum shirui Fowler, 1940: 232, fig. 20. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68648.

Hoplosternum littorale daillyi Hoedeman, 1952b: 7. Type locality: Suriname (near Paramaribo). Holotype: ZMA 100277a.

Hoplosternum thoracatum cayennae Hoedeman, 1961: 130. Type locality: French Guiana: Ile de Cayenne. Holotype: ZMA 102238a.

Maximum length: 15.8 cm SL

Distribution: South America: Most Cis-Andean South American river drainages north of Buenos Aires.

Countries: Argentina, Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Paraguay, Peru, Suriname, Trinidad and Tobago, Uruguay, Venezuela

Remarks and references: See Reis (1997) for detailed description and Reis (1998) for phylogeny.

Common names: Tamboatá (Brazil), Tamoatá (Brazil)

***Hoplosternum magdalenae* Eigenmann, 1913**

Hoplosternum magdalenae Eigenmann in Ellis, 1913: 412. Type locality: Soplaviento, U.S. of Colombia. Holotype: FMNH 56281. Appeared above on 5 May; also appeared in Eigenmann (June) 1913: 30.

Maximum length: 9.6 cm SL

Distribution: South America: Magdalena and Sinu River basins.

Countries: Colombia, Venezuela

Remarks and references: See Reis (1997) for detailed description and Reis (1998) for phylogeny.

***Hoplosternum punctatum* Meek & Hildebrand, 1916**

Hoplosternum punctatum Meek & Hildebrand, 1916: 264, pl. 14. Type locality: Rio Marte Arnade, 6 miles east of Panama City [Panama]. Holotype: FMNH 8943.

Maximum length: 7.7 cm SL

Distribution: Central and South America: Pacific coastal drainages of Panama and in the Atrato River basin.

Countries: Colombia, Panama

Remarks and references: See Reis (1997) for detailed description and Reis (1998) for phylogeny.

LEPTHOPOSTERNUM

Lepthoplosternum Reis, 1997: 315. Type species: *Callichthys pectoralis* Boulenger, 1895. Type by original designation. Gender: neuter.

***Lepthoplosternum altamazonicum* Reis, 1997**

Lepthoplosternum altamazonicum Reis, 1997: 318, fig. 14. Type locality: Peru: Pucallpa: Río Ucayali. Holotype: MHNG 2551.01.

Maximum length: 5 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Remarks and references: See Reis (1998) for phylogeny.

***Lepthoplosternum beni* Reis, 1997**

Lepthoplosternum beni Reis, 1997: 319, fig. 15. Type locality: Peru: Madre de Dios: Tambopata Reserve (12°15'S, 69°17'W). Holotype: USNM 329424.

Maximum length: 5 cm SL

Distribution: South America: Madeira River basin in the Beni region of Bolivia and Peru.

Countries: Bolivia, Peru

Remarks and references: See Reis (1998) for phylogeny.

***Lepthoplosternum pectorale* (Boulenger, 1895)**

Callichthys pectoralis Boulenger, 1895: 525. Type locality: Monte Sociedad, Paraguayan Chaco. Syntypes: BMNH 1895.5.17.57-61.

Maximum length: 6.03 cm SL

Distribution: South America: Paraguay River basin.

Countries: Argentina, Brazil, Paraguay

Remarks and references: See Reis (1998) for phylogeny.

Common names: Tamboatá (Brazil), Tamoatá (Brazil)

***Lepthoplosternum tordilho* Reis, 1997**

Lepthoplosternum tordilho Reis, 1997: 321, fig. 16. Type locality: Brazil: Rio Grande do Sul: Marginal lagoon near sanga do Junco, on dust road between hwy BR-116 and Barra do Ribeiro. Holotype: MCP 16310.

Maximum length: 4.58 cm SL

Distribution: South America: Northern tributaries of Laguna dos Patos in southern Brazil.

Countries: Brazil

Remarks and references: See Reis (1998) for phylogeny.

Common names: Cascudo (Brazil)

MEGALECHIS

Megalechis Reis, 1997: 310. Type species: *Callichthys thoracatus* Valenciennes, 1840. Type by original designation. Gender: feminine.

***Megalechis personata* (Ranzani, 1841)**

Callichthys personatus Ranzani, 1841: 113. Type locality: Unknown [Brazil]. Holotype: MZUB 934. Redescribed and illustrated in Ranzani (1842: 322, pl. 24, fig.1).

Callichthys exaratus Müller & Troschel, 1848: 630. Type locality: Britisch-Guiana.

Hoplosternum thoracatum surinamensis Hoedeman, 1952b: 5. Type locality: Surinam. Holotype: ZMA 100292.

Maximum length: 12.4 cm SL

Distribution: South America: Amazon, Orinoco and upper Paraguay River basins, as well as coastal rivers of the Guianas and northern Brazil.

Countries: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Peru, Suriname, Venezuela

Remarks and references: See Reis (1997) for detailed description and Reis (1998) for phylogeny.

Common names: Tamboatá (Brazil), Tamoatá (Brazil)

***Megalechis thoracata* (Valenciennes, 1840)**

Callichthys thoracatus Valenciennes in Cuvier & Valenciennes, 1840: 309 [230 in the Strasbourg deluxe edition], pl. 443. Type locality: Mana [French Guiana]. Holotype: MNHN 4266.

Callichthys longifilis Valenciennes in Cuvier & Valenciennes, 1840: 317 [235 in the Strasbourg deluxe edition]. Type locality: Cayenne [French Guiana]. Holotype: MNHN 4284.

Callichthys pictus Müller & Troschel, 1848: 630. Type locality: Britisch-Guiana. Syntypes: ZMB 3151 (1).

Callichthys sulcatus Kner, 1855: 110. Type locality: Riobranco und Marabitanas [Brazil]. Lectotype: NMW 4775, designated by (Reis, 1997: 311).

Hoplosternum oronocoi Fowler, 1915: 229, fig. 8. Type locality: La Pedrita, Venezuela. Holotype: ANSP 37895.

Maximum length: 15.5 cm SL

Distribution: South America: Amazon and Orinoco River basins, as well as coastal rivers of the Guianas and northern Brazil.

Countries: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Peru, Suriname, Trinidad and Tobago, Venezuela

Remarks and references: See Reis (1997) for detailed description and Reis (1998) for phylogeny.

Common names: Tamboatá (Brazil), Tamoatá (Brazil)

Family Scoloplacidae (Spiny dwarf catfishes)

Scott A. Schaefer

The Scoloplacidae is a group of four species of minute catfishes, known from the Amazon, Tocantins, and Paraná/Paraguay rivers systems of South America. Scoloplacids are miniature catfishes, not known to exceed about 20 mm standard length. The smallest individuals of *Scoloplax dolicholophia* at 12 mm appear to be adults. They are immediately recognized by the presence of a movable rostral plate located on the head between the nares and bearing numerous large, recurved odontodes or dermal teeth. In addition, scoloplacids are unique among catfishes in the presence of two bilateral series of bony plates on the body, one located at the dorsal midline between the dorsal and caudal fins, the second along the ventral midline between the anal and caudal fins. The head is broad and depressed, the eyes project dorsally on the head, the trunk is straight and relatively slender, the mouth small, slightly subterminal; maxillary, mental, and mandibular barbels are present. The dorsal fin has a stout spine and 3-5 branched rays; the anal fin is short, first ray unbranched and slightly thickened, 4-5 branched rays, the pectoral fin has a large spine and 4-6 branched rays; the pelvic fin has a thickened unbranched first ray and 3-4 branched rays; the caudal fin has 10-12 principal rays. Odontodes occur on the head, body plates, fin spines, and pectoral girdle, but are absent from the branched fin rays. Males are smaller than females and sexually dimorphic with a fleshy opercular flap; females have a large, fleshy, sac-like genital papilla.

The Scoloplacidae is the most recent family of catfishes to be discovered. The first scoloplacid, *Scoloplax dicra*, was described by Bailey and Baskin (1976) from specimens collected in the Bolivian Amazon in 1964. In fact, a single specimen was collected in Brazil by Louis Agassiz as early as 1866, but was not recognized as distinctive and instead misidentified as a banjo catfish (Schaefer et al., 1989). Indeed, ichthyologists first suspected that the Bolivian specimens were representatives of *Bunocephalus* (Aspredinidae; Lundberg and Baskin, 1969) because of their general similarities in shape. Bailey and Baskin (1976) placed *Scoloplax dicra* in a new subfamily of the Loricariidae, the Scoloplacinae, based on the presence of bony dermal armor and overall morphological similarity to other loricariids. Isbrücker (1980) elevated the subfamily to family status and Howes (1983) confirmed that action via a cladistic analysis of higher loricarioid relationships, wherein scoloplacids were proposed as the sister-group to the astrolepids plus loricariids. Schaefer et al. (1989) described three additional species from the Amazon, Tocantins, and Paraná/Paraguay River systems. *Scoloplax dicra* is widely distributed in the Amazon basin, *S. empousa* is known from the Amazon and Paraná/Paraguay basins, *S. distolothrix* is known from the Xingu, Tocantins, and upper Paraguay basins, while *S. dolicholophia* is known only from the Río Negro of Brazil. Schaefer (1990) described their anatomy, offered a hypothesis of phylogenetic relationships among the species, and provided additional character support to the hypothesis of Howes (1983).

The general biology of scoloplacids is poorly known. Aspects of the natural history of *S. empousa* were studied by Sazima et al. (2000), who discovered that the fishes hide during the day in bottom debris and among roots of aquatic vegetation in shallow waters with sand and soft mud bottoms, and emerge at twilight to forage on chironomid insect larvae and oligochaete worms at night. Such cryptic behavior, coupled with their small size, may explain why scoloplacids are rarely observed even when abundant. The toothed rostral plate may aid in maintaining position among bottom debris. Sazima et al. (2000) reported the presence of sexually dimorphic males between 14 and 15 mm and females between 13 and 16 mm with up to 300 immature oocytes per ovary in a collection made at the end of the rainy season between May and August. They found fewer juveniles and a different size-frequency distribution of individuals in the August sample, suggesting that scoloplacids are annual fishes. Armbruster (1998) described specializations of the digestive tract presumably used for breathing air. Given that scoloplacids are small, not highly mobile, and prefer shallow reaches of oxbow lagoons and small streams, air breathing would be particularly advantageous for life in small, isolated patches of water that occur over extended periods during the dry season in these habitats.

Since the studies of Bailey and Baskin (1976) and Schaefer et al. (1989), much additional scoloplacid material has been discovered, but no new taxa have been proposed, suggesting that future studies are unlikely to uncover much additional diversity of scoloplacids. However, due to their small size, cryptic habits, and nocturnal activity, scoloplacids are not routinely collected in general ichthyological surveys and their study requires considerable effort. It is entirely possible that additional scoloplacid diversity awaits discovery in hitherto neglected, or overlooked habitats of several otherwise well-studied regions of lowland South America, such as the Orinoco and upper Paraná River basins.

SCOLOPLAX

Scoloplax Bailey & Baskin, 1976: 5. Type species: *Scoloplax dicra* Bailey & Baskin, 1976. Type by original designation. Gender: feminine. Review, with key to species, in Schaefer et al. (1989); anatomical and phylogenetic study in Schaefer (1990).

***Scoloplax dicra* Bailey & Baskin, 1976**

Scoloplax dicra Bailey & Baskin, 1976: 7, figs. 1-3. Type locality: Isolated Ox-Bow lagoon off the Río Iténez, ca. 400 m southwest of the river at a point opposite Costa Marques (Brazil), Dept. of Beni, Bolivia, 12°28.38'S, 64°16.59'W. Holotype: AMNH 32482.

Maximum length: 1.38 cm SL

Distribution: South America: Amazon and Paraguay River basins.

Countries: Bolivia, Brazil, Peru

Remarks and references: Redescribed in Schaefer et al. (1989: 185).

***Scoloplax distolothrix* Schaefer, Weitzman & Britski, 1989**

Scoloplax distolothrix Schaefer, Weitzman & Britski, 1989: 191, figs. 5, 6. Type locality: Small tributary of Rio Batovi, upper Rio Xingu, Mato Grosso, Brazil, approx. 12°58'S, 53°37'W. Holotype: MZUSP 39065.

Maximum length: 1.79 cm SL

Distribution: South America: Tocantins/Araguaia, Xingu, and Paraguay River basins.

Countries: Brazil, Paraguay

***Scoloplax dolicholopia* Schaefer, Weitzman & Britski, 1989**

Scoloplax dolicholopia Schaefer, Weitzman & Britski, 1989: 196, figs. 9, 10. Type locality: In Igarapé, trib. of Rio Tarumãzinho, approximately 45 km north of Manaus, Amazonas, Brazil, 2°42'S, 60°03'W. Holotype: MZUSP 6788.

Maximum length: 1.2 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

***Scoloplax empousa* Schaefer, Weitzman & Britski,**

1989

Scoloplax empousa Schaefer, Weitzman & Britski, 1989: 194, figs. 7, 8. Type locality: Rio Ivinheima 70 km upstream from its confluence with Rio Paraná and Rio dos Bandeirantes, Mato Grosso, Brazil, approx. 22°35'S, 53°30'W. Holotype: MZUSP 39075.

Maximum length: 1.99 cm SL

Distribution: South America: Amazon and Paraguay/Paraná River basins.

Countries: Bolivia, Brazil

Remarks and references: Natural history observations in Sazima et al. (2000).

Family Astroblepidae (Naked sucker-mouth catfishes)

Scott A. Schaefer

The family Astroblepidae is a group of distinctive Neotropical catfishes that live at moderate to high (to 3500 m) elevations. Most are of moderate to small size, typically less than 10 cm in length, but a few species can reach 30 cm or more as adults. Astroblepids can be recognized by the presence of a fleshy, suctorial mouth with expanded lips, naked body, and presence of a dorsal opening to the gill chamber between the dorsal opercle margin and ventral edge of the pterotic. Astroblepids have been classified either as a distinct family (Argiidae-- first recognized as distinct by Gill, 1872) or considered a degenerate (i.e., naked) subfamily of the Loricariidae (e.g., Regan, 1904; Gosline, 1947). One of the first classifications of catfishes (Swainson, 1838) placed the two astroblepid species known at that time in the subfamilies Pimelodinae and Aspredinae. Despite the fact that astroblepids share a number of specializations with the armored loricarioid catfishes (Callichthyidae, Scoloplacidae, Loricariidae), they are entirely devoid of bony dermal plates. The head is broad and depressed, the body is somewhat compressed and deep. The first unbranched ray of the dorsal, anal, pectoral and pelvic fins are thickened and robust, bearing enlarged odontodes, or dermal teeth; the first pelvic fin ray is greatly thickened; an adipose fin is present or absent, when present, an adipose spine is present or absent, often embedded within the fin. The dorsal fin is short, with 6 or 7 branched rays, the pectoral fin is broad, with 9-12 rays, the pelvic fin has 3 or 4 rays, the anal fin has 4-6 rays, and the caudal fin has 11 branched rays. The upper jaw is movably articulated with the skull, broad and flat, bearing several rows of teeth. Teeth vary in size and shape within an individual and include large, unicuspid teeth, both large and small symmetrically bifid teeth, and asymmetrically bifid teeth.

Astroblepids are unique among siluroids in a number of features. Most notable is the presence of a derived pelvic-fin musculature wherein the protractor ischii is completely separated from the hypaxialis muscle and developed as a pair of thin cords between the pectoral and pelvic-fin skeletons. Alternating contraction of the protractor and retractor ischii muscles, coupled with attachment via the suctorial mouth, gives astroblepids the capability of climbing vertical surfaces (Shelden, 1937). Astroblepids inhabit high elevation streams of the Andes from Panama, Colombia and Venezuela in the north to Bolivia in the south. Their distribution includes streams on both sides of the Andes draining into the Pacific Ocean, Caribbean Sea, and Amazon/Orinoco watersheds of the Atlantic Ocean. Two species, *Astroblepus pholeter* and *A. ribeirae*, inhabit caves and lack pigment; the former with minute eyes, and eyes completely absent in the latter species. There have been few reports of general biology and behavior. Males are sexually dimorphic, with an enlarged genital papilla and modified anal fin rays (Buitrago-Suárez and Galvis, 1997). Schaefer and Buitrago-Suárez (2002) discovered specialized skin surface features and a new type of odontode, or dermal tooth type, in three species.

Knowledge of the taxonomy, morphology, and ecology of astroblepids is rudimentary. Currently, one valid genus and 54 species are recognized. Most species are known only from their original description. Of these 54 nominal species, all but 4 were described before 1950 and 11 were described in the nineteenth century. As is typical of the taxonomic literature prior to the mid-twentieth century, these older descriptions are brief and often lack descriptive detail. At that time, most species were known only from a few specimens and, consequently, new species were often recognized without direct comparison to other species and on the basis of differences in proportional lengths of fins, head and body shape, and coloration. Many of these differences involve morphologies which are now known to be highly variable and considered of low systematic utility. There has been no attempt at review, reanalysis, and synthesis of astroblepid taxonomy since Regan (1904). Nevertheless, it seems reasonable to infer that astroblepid species-level taxonomy is over-split, and that once subjected to comprehensive revision, the number of valid astroblepid species will be considerably less than that recognized herein.

Astroblepids are not commercially important, not included among the ornamental fishes of the aquarium trade; however, some are consumed by locals.

ASTROBLEPUS

Astroblepus Humboldt, 1805a: 19. Type species: *Astroblepus grixalvii* Humboldt, 1805. Type by monotypy. Gender: masculine.

Cyclopium Swainson, 1838: 355. Type species: *Cyclopium humboldtii* Swainson, 1839. Type by monotypy. Gender: neuter. Genus dates to 1838, without species; species designated by Swainson (1839: 305).

Arges Valenciennes in Cuvier & Valenciennes, 1840: 333 [247 in Strasbourg deluxe ed.]. Type species: *Arges sabalo* Valenciennes, 1840. Type by monotypy. Gender: masculine.

Brontes Valenciennes in Cuvier & Valenciennes, 1840: 341 [254 in Strasbourg deluxe ed.]. Type species: *Brontes prenadilla* Valenciennes, 1840. Type by monotypy. Gender: masculine.

Strephon Gistel, 1848: VIII. Type species: *Brontes prenadilla* Valenciennes, 1840. Type by being a replacement name. Gender:

masculine. Replacement for *Brontes Valenciennes*, 1840, preoccupied by *Brontes Fabricius*, 1801 in Coleoptera, de Montfort, 1810 in Mollusca, and Goldfuss, 1839 in Trilobites.

Stygogenes Günther, 1864: 223. Type species: *Cyclopium humboldtii* Swainson, 1839. Type by subsequent designation of Jordan (1919: 332). Gender: masculine.

***Astroblepus boulengeri* (Regan, 1904)**

Arges boulengeri Regan, 1904: 310. Type locality: Canelos, Ecuador. Syntypes: BMNH 1890.6.13.12-13.

Maximum length: 7 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Ecuador

***Astroblepus brachycephalus* (Günther, 1859)**

Arges brachycephalus Günther, 1859: 92. Type locality: Andes of w. Ecuador. Syntypes: BMNH 1858.7.25.37-40.

Maximum length: 20 cm SL

Distribution: South America: Coastal Pacific drainages of Ecuador.

Countries: Ecuador

***Astroblepus caquetae* Fowler, 1943**

Astroblepus caquetae Fowler, 1943: 246, fig. 23-25. Type locality: Florencia, Río Ortegusa, Colombia. Holotype: ANSP 70506.

Maximum length: 7 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Colombia

***Astroblepus chapmani* (Eigenmann, 1912)**

Cyclopium chapmani Eigenmann, 1912: 13. Type locality: Boquia, Colombia. Holotype: FMNH 56071.

Maximum length: 8 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

***Astroblepus chimborazoi* (Fowler, 1915)**

Cyclopium chimborazoi Fowler, 1915: 241, fig. 11. Type locality: Junction of Chanchan and Chiguancay rivers. Province of Chimborazo, Ecuador. Holotype: ANSP 43523.

Maximum length: 2.5 cm SL

Distribution: South America: Pacific coastal drainages of Ecuador.

Countries: Ecuador

Remarks and references: Considered a junior synonym of *Astroblepus cyclopus* (Humboldt) by Gosline 1945: 114.

***Astroblepus chotae* (Regan, 1904)**

Arges chotae Regan, 1904: 313, pl. 21 (fig. 5). Type locality: Chota Valley, northern Ecuador. Holotype: BMNH 1898.11.4.22.

Maximum length: 10 cm TL

Distribution: South America: Pacific coastal drainages, Magdalena and Orinoco River basins.

Countries: Colombia, Ecuador, Peru, Venezuela

Common names: Baboso (Colombia)

***Astroblepus cirratus* (Regan, 1912)**

Arges cirratus Regan, 1912: 670. Type locality: Río Condoto, Río San Juan, S.W. Colombia. Holotype: BMNH 1912.3.2.7.

Maximum length: 3 cm SL

Distribution: South America: Pacific coastal drainage, San Juan River basin.

Countries: Colombia

***Astroblepus cyclopus* (Humboldt, 1805)**

Pimelodus cyclopus Humboldt, 1805b: 24, pl. 6. Type locality: Subterranean waters in Andes of Quito (basin of Río Esmeraldas), Ecuador.

Cyclopium humboldtii Swainson, 1839: 305. Type locality: ? No types known.

Stygogenes humboldtii Günther, 1864: 223. Type locality: No

locality. Syntypes: (4, missing) BMNH.

Maximum length: 3 cm SL

Distribution: South America: Esmeraldas River and Pacific coastal drainages of Ecuador.

Countries: Ecuador

Common names: Preñadilla (Ecuador)

***Astroblepus eigenmanni* (Regan, 1904)**

Arges eigenmanni Regan, 1904: 312, pl. 21 (fig. 3). Type locality: Cayambe and Machachi, Ecuador. Syntypes: BMNH 1892.5.14.1-8.

Maximum length: 10 cm SL

Distribution: South America: Pacific coastal drainages of Ecuador.

Countries: Ecuador

***Astroblepus festae* (Boulenger, 1898)**

Arges festae Boulenger, 1898: 9. Type locality: Vallée de Gualaquiza Equateur Oriental. Syntypes: BMNH 1898.11.4.23-29; MZUT 1486, 1497.

Maximum length: 10 cm SL

Distribution: South America: Upper Marañón River in southern Ecuador.

Countries: Ecuador

***Astroblepus fissidens* (Regan, 1904)**

Arges fissidens Regan, 1904: 316. Type locality: Andes of Ecuador. Syntypes: BMNH 1887.1.7.2, 1889.2.1.4397.

Maximum length: 9 cm SL

Distribution: South America: Andes of Ecuador.

Countries: Ecuador

***Astroblepus formosus* Fowler, 1945**

Astroblepus formosus Fowler, 1945: 10, fig. 1-2. Type locality: Acobamba, near Tarma, at 2900 meters elevation, Río Ucayali basin, Peru, Holotype: ANSP 71647.

Maximum length: 5 cm SL

Distribution: South America: Upper Ucayali River basin.

Countries: Peru

Common names: Bagre (Peru)

***Astroblepus frenatus* Eigenmann, 1918**

Astroblepus frenatus Eigenmann, 1918: 676. Type locality: Quebrada de San Joaquín, Santander, Colombia. Holotype: FMNH 58384.

Maximum length: 6 cm TL

Distribution: South America: Magdalena River basin.

Countries: Colombia

Common names: Baboso (Colombia)

***Astroblepus grixalvii* Humboldt, 1805**

Astroblepus grixalvii Humboldt, 1805a: 19, pl. 7. Type locality: Río Palacé, near Popayan, Colombia.

Maximum length: 30 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

Common names: El Capitan (Colombia), La Guapucha (Colombia), Pez negro (Colombia)

***Astroblepus guentheri* (Boulenger, 1887)**

Stygogenes guentheri Boulenger, 1887: 348. Type locality: Colombia. Syntypes: BMNH 1880.2.26.18-25.

Maximum length: 9 cm SL

Distribution: South America: Colombia.

Countries: Colombia

***Astroblepus heterodon* (Regan, 1908)**

Arges heterodon Regan, 1908: 799, pl. 49 (fig. 2, 2a&b). Type locality: Jimenez, western Colombia. Holotype: BMNH 1908.5.29.30.

Maximum length: 11 cm SL

Check List of the Freshwater Fishes of South and Central America

Distribution: Central America: Cana River basin.
Countries: Panama
- Astroblepus praeliorum* Allen, 1942**
Astroblepus praeliorum Allen in Eigenmann & Allen, 1942: 169, pl. 13 (fig. 6-7). Type locality: Huancachupa Creek, Húanuco, Peru. Syntypes: CAS 7509, CAS 16114, CAS 16115, CAS 47068, CAS 47069.

Maximum length: 8 cm SL

Distribution: South America: Upper Marañón River basin.

Countries: Peru

***Astroblepus prenadillus* (Valenciennes, 1840)**

Brontes prenadilla Valenciennes, in Cuvier & Valenciennes, 1840: 343 [255 of the Strasbourg deluxe ed.], pl. 444-445. Type locality: Rivulets descending from Cotopaxi, Ecuador, elev. 5000 m. Syntypes: MNHN A.4227, 5164.

Maximum length: 20 cm SL

Distribution: South America: Andes of Ecuador.

Countries: Ecuador

***Astroblepus regani* (Pellegrin, 1909)**

Arges regani Pellegrin, 1909: 518. Type locality: Río Cariyacu, Ecuador, elev. 3100 m. Syntypes: MNHN 1903-108 to 110.

Maximum length: 16 cm SL

Distribution: South America: Mira River basin and Pacific coastal drainage of Ecuador.

Countries: Ecuador

***Astroblepus rengifoi* Dahl, 1960**

Astroblepus rengifoi Dahl, 1960: 459, fig. Type locality: small brook, tributary to the Atrato River on the left side, approx. 6 ks. [sic] above the town El Carmen de Atrato, Colombia. Holotype: unknown.

Maximum length: 5 cm SL

Distribution: South America: Atrato River basin.

Countries: Colombia

Common names: Capitán (Colombia)

***Astroblepus retopinnus* (Regan, 1908)**

Arges retopinna Regan, 1908: 800, pl. 48 (fig. 2). Type locality: Jimenez, western Colombia. Syntypes: BMNH 1908.5.29.81-82.

Maximum length: 7 cm SL

Distribution: South America: Dagua River basin and Pacific coastal drainage of Colombia.

Countries: Colombia

***Astroblepus riberae* Cardona & Guerao, 1994**

Astroblepus riberae Cardona & Guerao, 1994: 21, fig. Type locality: Cueva de Ninabamba, Peru, 06.33°S, 78.51°W. Holotype: UAB unnumbered.

Maximum length: 9 cm SL

Distribution: South America: Reque River basin and Pacific coastal drainage.

Countries: Peru

***Astroblepus rosei* Eigenmann, 1922**

Astroblepus rosei Eigenmann, 1922: 55. Type locality: Río Jequetepeque, Lllallán, Peru. Syntypes: CAS 64649, FMNH 58640.

Maximum length: 10 cm SL

Distribution: South America: Pacific coastal drainages of Cajamarca.

Countries: Peru

***Astroblepus sabalo* (Valenciennes, 1840)**

Arges sabalo Valenciennes, in Cuvier & Valenciennes, 1840: 335 [249 in Strasbourg deluxe ed.], pl. 444-445. Type locality: Río Apurimac, north of Cusco, Peru. Holotype: MNHN A.4226.

Distribution: South America: Upper Ucayali River basin.

Countries: Peru

***Astroblepus santanderensis* Eigenmann, 1918**

Astroblepus cyclopus santanderensis Eigenmann, 1918: 675. Type locality: Quebrada de Guapota, Colombia. Lectotype: FMNH 58433, designated by Henn (1928: 82).

Maximum length: 8 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

***Astroblepus simonsii* (Regan, 1904)**

Arges simonsii Regan, 1904: 317, pl. 21 (fig. 9). Type locality: Huaras, Peru, elev. 10700 ft. Syntypes: BMNH 1900.6.20.51-55.

Maximum length: 8 cm SL

Distribution: South America: Santa River basin and Pacific coastal drainages of Peru.

Countries: Peru

***Astroblepus stuebeli* (Wandolleck, 1916)**

Arges stuebeli Wandolleck, 1916: 158, fig. 1-4. Type locality: Lake Titicaca. Syntypes: MTD F977, MTD F4639-87.

Maximum length: 8 cm SL

Distribution: South America: Lake Titicaca basin.

Countries: Bolivia, Peru

***Astroblepus supramollis* Pearson, 1937**

Astroblepus supramollis Pearson, 1937: 94, pl. 13 (fig. 3). Type locality: Balsas, Peru. Syntypes: CAS 47012, 47015, 47022.

Maximum length: 8 cm SL

Distribution: South America: Marañón River basin.

Countries: Peru

***Astroblepus taczanowskii* (Boulenger, 1890)**

Arges taczanowskii Boulenger, 1890: 451, pl. 41 (fig. 1). Type locality: Amable Maria, Peruvian Andes. Holotype: BMNH 1875.10.14.19.

Maximum length: 8 cm SL

Distribution: South America: Upper Ucayali River basin.

Countries: Peru

***Astroblepus theresiae* (Steindachner, 1907)**

Arges theresiae Steindachner, 1907: 228. Type locality: Hohen Anden von Cayendelet. Syntypes: NMW 48091-92.

Maximum length: 8 cm SL

Distribution: South America: Pacific coastal drainage of Ecuador.

Countries: Ecuador

***Astroblepus trifasciatus* (Eigenmann, 1912)**

Cyclopium trifasciatum Eigenmann, 1912: 14. Type locality: Caldas, Colombia. Holotype: FMNH 56076.

Maximum length: 9 cm SL

Distribution: South America: Dagua River basin and Pacific coastal drainages of Colombia.

Countries: Colombia

***Astroblepus ubidiai* (Pellegrin, 1931)**

Cyclopium ubidiai Pellegrin, 1931: 114. Type locality: Lac St. Paul, near Otavalo, Imbabura Prov., Ecuador, elev. 2600 m. Syntypes: MNHN 1930-172 and 173.

Maximum length: 11 cm SL

Distribution: South America: Mira River basin and Pacific coastal drainages of Ecuador.

Countries: Ecuador

***Astroblepus unifasciatus* (Eigenmann, 1912)**

Cyclopium unifasciatum Eigenmann, 1912: 15. Type locality: Caldas, Colombia. Holotype: FMNH 56079.

Maximum length: 7 cm SL

Distribution: South America: Dagua River basin and Pacific coastal drainages of Colombia.

Countries: Colombia

***Astroblepus vaillanti* (Regan, 1904)**

Arges vaillanti Regan, 1904: 312. Type locality: Huamani Peak, Ecuador, elev. 10700 ft. Syntypes: BMNH 1897.2.16.2-4.

Maximum length: 10 cm SL

Distribution: South America: Pacific coastal drainages of Ecuador.

Countries: Ecuador

***Astroblepus vanceae* (Eigenmann, 1913)**

Check List of the Freshwater Fishes of South and Central America

Cyclopium vanceae Eigenmann, 1913: 421, pl. 32 (fig. 2). Type locality: Small stream in highlands, southeast of Tarma, Peru. Holotype: FMNH 56066.

Maximum length: 8 cm SL

Distribution: South America: Upper Ucayali River basin.

Countries: Peru

***Astroblepus ventralis* (Eigenmann, 1912)**

Cyclopium ventrale Eigenmann, 1912: 15. Type locality: Caldas, Colombia. Holotype: FMNH 56074.

Maximum length: 8 cm SL

Distribution: South America: Dagua River basin and Pacific coastal drainage of Colombia.

Countries: Colombia

***Astroblepus whymeri* (Boulenger, 1890)**

Arges whymeri Boulenger, 1890: 451, pl. 41 (fig. 2). Type locality: Milligalli, Andes of Ecuador. Holotype: BMNH 1887.1.7.1.

Maximum length: 9 cm SL

Distribution: South America: Esmeraldas River basin and Pacific coastal drainages of Ecuador.

Countries: Ecuador

Family Loricariidae (Armored catfishes)

The armored catfish family Loricariidae is the largest family of catfishes in the Neotropics and, indeed, in the world. At present, 683 species are recognized as valid and more are described every year. Loricariids are distributed throughout most of the Neotropics, extending from Costa Rica in the north to Argentina in the south. The vast majority of species are found on the eastern side of the Andes, but several species are restricted to the western slopes of that mountain range.

Six subfamilies of the Loricariidae are recognized here: Ancistrinae (217 species), Hypoptopomatinae (79 species), Hypostominae (169 species), Lithogeneinae (1 species), Loricariinae (209 species), and Neoplecostominae (7 species). The subfamily-level classification presented here closely follows that of Isbrücker (1980), with a few modifications. The monophyly of some of the currently recognized subfamilies is under study at present and limits of one or more of the subfamilies presented here are likely to be changed in the future.

The loricariid subfamilies and summary accounts for each are presented below with separate authorship (except for the monotypic Lithogeneinae, which is presented here along with one species that cannot currently be assigned to any of the subfamilies).

SPECIES INCERTAE SEDIS IN LORICARIIDAE

Ancistrus salgadae Fowler, 1941

Ancistrus salgadae Fowler 1941: 154. Fig. 57. Type locality: Rio Salgado, Icó, Ceará; eastern Brazil [6°25'S, 38°50'W]. Holotype: ANSP 69440

Maximum length: 2 cm SL

Distribution: South America: Jaguaribe River basin.

Countries: Brazil

Remarks and references: Juvenile, identification uncertain (examined by S. Fisch-Muller). Details of type locality in Isbrücker (1980:56).

Subfamily Lithogeneinae

Lithogenes villosus Eigenmann, 1909

Lithogenes villosus Eigenmann 1909: 6. Type locality: Aruataima Falls, Upper Potaro. [British Guiana]. Holotype: FMNH 52960 [ex CM 1002].

Maximum length: 4.4 cm SL

Distribution: South America: Essequibo River basin, Potaro River.

Countries: Guyana

Subfamily Neoplecostominae (Armored catfishes)

Carl J. Ferraris, Jr.

The Neoplecostominae was originally proposed by Regan (1904) for what was then considered to be a single species of armored catfish that did not fit into any of the existing subfamilies and, according to Regan, was a loricariid that was most closely related to the Astroblepidae. Currently, seven species are recognized within one genus in this subfamily.

Neoplecostomines are apparently restricted to the rivers of Southeastern Brazil. One species, *Neoplecostomus granosus*, was reported in its original description to have come from French Guiana, but Langeani (1990) questioned the validity of that claim, and no specimens of that species have been captured subsequently (Le Bail et al., 2000).

Species of *Neoplecostomus* are poorly known and little has been written on the species beyond their descriptions. Because nearly all of the known species were discovered within the past 15 years, it is likely that there are additional species that have yet to be collected or studied.

NEOPLECOSTOMUS

Neoplecostomus Eigenmann & Eigenmann, 1888: 171. Type species: *Plecostomus microps* Steindachner, 1877. Type by original designation. Gender: masculine.

Neoplecostomus espiritosantensis Langeani, 1990

Neoplecostomus espiritosantensis Langeani, 1990: 16, fig. 3. Type locality: rio Jacu (braço sul), Vitor Hugo, Mun. de Domingos Martins, ES [Brazil]. Holotype: MZUSP 38573.

Maximum length: 10.3 cm SL

Distribution: South America: Jacu and São Lourenço River basins, eastern slope of Serra do Mar.

Countries: Brazil

Neoplecostomus franciscoensis Langeani, 1990

Neoplecostomus franciscoensis Langeani, 1990: 22, fig. 5. Type locality: riacho afluente do córrego da Mutuca, à direita da estrada Belo Horizonte-Nova Lima, Km 20, MG, 20°06'S, 43°55'W [Brazil]. Holotype: MZUSP 38577.

Maximum length: 7.5 cm SL

Distribution: South America: Headwaters of Das Velhas and Paraopeba River basins, São Francisco River drainage.

Countries: Brazil

Neoplecostomus granosus (Valenciennes, 1840)

Hypostomus granosus Valenciennes in Cuvier & Valenciennes, 1840: 502 [371 in Strasbourg deluxe ed.]. Type locality: Cayenne [French Guiana]; Brésil, Rio de Janeiro [both localities apparently in error (Langeani, 1990)]. Syntypes: MNHN B.597 (6), MNHN B.598 (5), MNHN 9566 (3).

Maximum length: 8.6 cm SL

Distribution: South America: Southeastern Brazil (?).

Countries: Brazil (?)

Neoplecostomus microps (Steindachner, 1877)

Plecostomus microps Steindachner, 1877: 688, pl. 13. Type locality: der Umgebung von Rio Janeiro [Brazil]. Lectotype: NMW 45337.1, designated by Langeani (1990: 8).

Maximum length: 10.2 cm SL

Distribution: South America: Paraíba do Sul River basin.

Countries: Brazil

Neoplecostomus paranensis Langeani, 1990

Neoplecostomus paranensis Langeani, 1990: 12, figs. 2, 6. Type locality: Rio Cubatão, Faz. Santa Carlota, Cajuru, SP [Brazil]. Holotype: MZUSP 38572.

Maximum length: 9.3 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

Neoplecostomus ribeirensis Langeani, 1990

Neoplecostomus ribeirensis Langeani, 1990: 19, fig. 4. Type locality: riacho afluente do rio Bananal, km 7 da rodovia Biguá-Iguape (SP-222), SP [Brazil]. Holotype: MZUSP 38576.

Maximum length: 9 cm SL

Distribution: South America: Ribeira de Iguape River basin.

Countries: Brazil

Neoplecostomus variipictus Bizerril, 1995

Neoplecostomus variipictus Bizerril, 1995: 695, figs. 1-2. Type locality: rio Santo Antônio, tributário do rio Bengala, bacia do rio Paraíba do Sul, Firburgo, RJ [Brazil]. Holotype: MNRJ 12806.

Maximum length: 9 cm SL

Distribution: South America: Paraíba do Sul River basin.

Countries: Brazil

Subfamily Hypoptopomatinae (Armored catfishes)

Scott A. Schaefer

The Hypoptopomatinae is a monophyletic subfamily of the family Loricariidae comprised of 16 genera and 79 species. Among loricariids, they are perhaps the most recognizable and distinctive assemblage of species. They are distributed widely throughout lowland cis-Andean South America from Venezuela to northern Argentina and occur in small to moderate-sized streams and rivers. Most species are relatively small as adults, ranging in size from 20-35 mm SL. Like other members of the family, hypoptopomatines are encased in dermal plates. These plates, and the dermal bones of the head and fin rays, bear numerous odontodes, or dermal teeth. The mouth is surrounded by expanded fleshy lips forming a suction mouth. Hypoptopomatines are distinguished from all other loricariids by the morphology of the pectoral fin skeleton, wherein the bones bear laminar extensions on their ventral surface that largely or entirely cover the fossae for the arrector muscles. The ventral surface of the pectoral fin skeleton is covered by thin skin and usually bears numerous odontodes, such that the bone appears to be exposed on the ventral surface. In contrast, the pectoral fin skeleton is covered ventrally by thick skin and/or dermal plates in all other Loricariidae, the bones of the pectoral fin skeleton lack the ventral laminar extensions and, consequently, the arrector fossae are not covered or occluded. Body shape of hypoptopomatines is quite variable among genera. The body is short and head deep in species of *Otocinclus* and *Hisonotus*, for example, whereas the body is elongate and the head is depressed in species of *Hypoptopoma* and *Oxyropsis*. The trunk is depressed and extremely narrow in species of *Oxyropsis* and *Niobichthys*, yielding the “whip-tail” morphology that is apparently independently derived and ubiquitous among members of the subfamily Loricariinae. The first unbranched ray of the dorsal, anal, pectoral and pelvic fins are thickened and robust, bearing enlarged odontodes. An adipose fin may be present or absent. The dorsal fin has 7 branched rays and sometimes a small spinelet and corresponding mechanism for locking the dorsal spine in an erect position, the pectoral fin has 6 rays, the pelvic fin has 4 rays, the anal fin has 4-5 rays, and the caudal fin has 12 or 14 branched rays. Jaw teeth occur in a single emergent (functional) row and several pre-emergent (non functional) rows below the skin within the cup-shaped jaw element. Teeth are asymmetrically bifid, the larger cusp is spatulate, never spoon-shaped or greatly enlarged. A few species also have accessory conical teeth (Reis & Schaefer, 1992).

Hypoptopomatines are mostly herbivorous and are typically diurnal in habits. Most hypoptopomatines are usually found at or near the water surface, typically in close association with marginal vegetation or subsurface structure. The fishes can often be observed clinging to the vegetation by clasping stems and leaf blades between the pelvic fins. The first unbranched ray of the pelvic fin is thickened and, along with the plates of the rostrum margin, bear numerous enlarged odontodes. Males of *Otocinclus* have a patch of odontodes near the caudal fin base which may function in adhesion during spawning and courtship (Aquino, 1994). The abundant odontode covering on the ventral body surfaces of hypoptopomatines may offer increased frictional surfaces relevant to ventral adhesion and attachment behaviors in high water velocities (Alexander, 1965; Macdonnell & Blake, 1990). Males are typically smaller than females and possess several sexual dimorphisms (Isbrucker & Nijssen, 1992; Aquino, 1994).

Among the subfamilies of the Loricariidae, the status of the taxonomy of the Hypoptopomatinae is the most current and comprehensive. The first major revisionary study of a hypoptopomatine was of *Parotocinclus* by Garavello (1977). Of the 16 genera currently recognized in the subfamily, four (*Acestridium*, *Otocinclus*, *Otothyris*, *Oxyropsis*) have been the subject of a thorough taxonomic revision within the last ten years, while during that same interval, 5 new genera (*Corumbataia*, *Epacionotus*, *Eurycheilichthys*, *Nannoptopoma*, *Niobichthys*) and 21 new species have been described. Revisions of *Hypoptopoma*, *Hisonotus*, and *Microlepidogaster* are in progress; once completed, all of the more speciose generic-level taxa within the Hypoptopomatinae will have been recently revised.

ACESTRIDIUM

Acestridium Haseman, 1911: 319. Type species: *Acestridium discus* Haseman, 1911. Type by monotypy. Gender: neuter.

Acestridium dichromum Retzer, Nico & Provenzano, 1999

Acestridium dichromum Retzer, Nico & Provenzano, 1999: 316, fig. 3(a-c). Type locality: Pozo Lucas, tributary of Río Orinoco, 7 km south of San Fernando de Atabapo, 4°02'N, 67°42'W, Amazonas State, Venezuela. Holotype: MBUCV-V-26780.

Maximum length: 6.3 cm SL

Distribution: South America: Upper Orinoco and Negro River basins.

Countries: Venezuela

Acestridium discus Haseman, 1911

Acestridium discus Haseman, 1911: 319, pls. 50 (fig. 1), 51. Type locality: Igarapé de Cachoeira Grande, near Manaus, Brazil. Holotype: FMNH 54339 [ex CM 2985].

Maximum length: 6.7 cm SL

Check List of the Freshwater Fishes of South and Central America

Distribution: South America: Lower Negro River basin.

Countries: Brazil

Acestridium martini Retzer, Nico & Provenzano, 1999

Acestridium martini Retzer, Nico & Provenzano, 1999: 318, fig. 3(d-f). Type locality: Caño Pozo Azul, tributary of Río Orinoco, near Balneario Pozo Azul, 5°45'49"N, 67°29'21"W, Amazonas State, Venezuela, elev. 75 m. Holotype: MCNG 36484.

Maximum length: 6.7 cm SL

Distribution: South America: Upper Orinoco and Negro River basins.

Countries: Venezuela

CORUMBATAIA

Corumbataia Britski, 1997:231. Type species: *Corumbataia cuestae* Britski, 1997. Type by original designation. Gender: feminine.

Corumbataia cuestae Britski, 1997

Corumbataia cuestae Britski, 1997: 234, fig. 3. Type locality: Cachoeira de Analândia, rio Corumbataí, Analândia, SP, Brazil. Holotype: MZUSP 51222.

Maximum length: 3.3 cm SL

Distribution: South America: Tietê River basin.

Countries: Brazil

Corumbataia tocantinensis Britski, 1997

Corumbataia tocantinensis Britski, 1997: 237, fig. 4. Type locality: rio Vermelho, Goiás, GO, Brazil. Holotype: MZUSP 51223.

Maximum length: 3.8 cm SL

Distribution: South America: Araguaia and Tocantins River basins.

Countries: Brazil

EPACTIONOTUS

Epactionotus Reis & Schaefer, 1998: 4. Type species: *Epactionotus bilineatus* Reis & Schaefer, 1998. Type by original designation. Gender: masculine.

Epactionotus bilineatus Reis & Schaefer, 1998

Epactionotus bilineatus Reis & Schaefer, 1998: 5, fig. 3. Type locality: Mouth of arroio do Ouro, which flows into rio Maquiné, between Barra do Ouro and Maquiné, 29°35'S, 50°17'W, Rio Grande do Sul State, Brazil. Holotype: MCP 20279.

Maximum length: 4 cm SL

Distribution: South America: Maquiné and Três Forquilhas River basins.

Countries: Brazil

Epactionotus gracilis Reis & Schaefer, 1998

Epactionotus gracilis Reis & Schaefer, 1998: 12, fig. 6. Type locality: Rio Jordão at Jordão Alto, 28°36'S, 49°29'W, Nova Veneza, Santa Catarina State, Brazil. Holotype: MCP 20282.

Maximum length: 3.9 cm SL

Distribution: South America: Araranguá River basin.

Countries: Brazil

Epactionotus itaimbezinho Reis & Schaefer, 1998

Epactionotus itaimbezinho Reis & Schaefer, 1998: 9, fig. 5. Type locality: Rio Canoas, tributary of rio Mampituba, ca. 8 km from Praia Grande in the direction of Mãe dos Homens, 29°14'S, 50°01'W, Rio Grande do Sul, Brazil. Holotype: MCP 20281.

Maximum length: 3.8 cm SL

Distribution: South America: Mampituba River basin.

Countries: Brazil

EURYPHEILICHTHYS

Eurycheilus Reis & Schaefer, 1992: 216. Type species: *Eurycheilus pantherinus* Reis & Schaefer, 1992. Type by monotypy. Gender:

masculine. Preoccupied by *Eurycheilus* Septfontaine, 1970, in fossil cephalopods, replaced by *Eurycheilichthys* Reis & Schaefer, 1993.

Eurycheilichthys Reis & Schaefer, 1993: 894. Type species: *Eurycheilus pantherinus* Reis & Schaefer, 1992. Type by being a replacement name. Gender: masculine. Replacement for *Eurycheilus* Reis & Schaefer, 1992, preoccupied by *Eurycheilus* Septfontaine, 1970, in fossil cephalopods.

Eurycheilichthys limulus Reis & Schaefer, 1998

Eurycheilichthys limulus Reis & Schaefer, 1998: 15, fig. 7. Type locality: Rio Jacuí on road RS-010, between Marau and Passo Fundo, 28°18'S, 52°18'W, Rio Grande do Sul State, Brazil. Holotype: MCP 20283.

Maximum length: 4.8 cm SL

Distribution: South America: Upper Jacuí River basin.

Countries: Brazil

Eurycheilichthys pantherinus (Reis & Schaefer, 1992)

Eurycheilus pantherinus Reis & Schaefer, 1992: 217, figs. 1-5. Type locality: Brazil: Rio Grande do Sul, creek tributary of rio dos Touros, at road from Silveira to Rondinha, Bom Jesus, approx. 28°42'S, 50°10'W. Holotype: MCP 13077.

Maximum length: 4.2 cm SL

Distribution: South America: Upper and middle Uruguay River basin.

Countries: Brazil

HISONOTUS

Hisonotus Eigenmann & Eigenmann, 1889b: 40. Type species: *Hisonotus notatus* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: masculine.

Hisonotus depressicauda (Miranda Ribeiro, 1918)

Otocinclus depressicauda Miranda Ribeiro, 1918: 635. Type locality: Sorocaba [Paraná River, Estado de São Paulo, Brazil]. Lectotype: MZUSP 1004, designated by Britski (1969: 208).

Maximum length: 5 cm SL

Distribution: South America: Tietê River basin.

Countries: Brazil

Hisonotus depressinotus (Miranda Ribeiro, 1918)

Microlepidogaster depressinotus Miranda Ribeiro, 1918: 633. Type locality: Piracicaba [Estado de São Paulo, Brazil]. Holotype: MZUSP 2156.

Maximum length: 3 cm SL

Distribution: South America: Tietê River basin.

Countries: Brazil

Hisonotus francirochai (Ihering, 1928)

Otocinclus francirochai Ihering, 1928: 2, fig. 1. Type locality: Creeks by Pirangy, headwaters of the rio Turvo, Brazil. Lectotype: MZUSP 3258, designated by Britski (1969: 209).

Maximum length: 3.6 cm SL

Distribution: South America: Grande River basin.

Countries: Brazil

Hisonotus laevior Cope, 1894

Hisonotus laevior Cope, 1894: 95, pl. 8 [7] (figs. 12, 12a-b). Type locality: Rio Jacuhy, Rio Grande do Sul, Brazil. Holotype: ANSP 21563.

Maximum length: 5 cm SL

Distribution: South America: Jacuí River basin.

Countries: Brazil

Hisonotus leptochilus Cope, 1894

Hisonotus leptochilus Cope, 1894: 96, pl. 8 [7] (figs. 11 a-b). Type locality: Rio Grande do Sul, Brazil. Holotype: ANSP 21564.

Maximum length: 4 cm SL

Distribution: South America: Jacuí River basin.

Countries: Brazil

Hisonotus leucofrenatus (Miranda Ribeiro, 1908)

Otocinclus leucofrenatus Miranda Ribeiro, 1908: [2]. Type locality: Rio das Pedras [Ribeira de Iguape River basin, Brazil]. No types known.

Maximum length: 6 cm SL

Distribution: South America: Ribeira de Iguape River basin.

Countries: Brazil

Hisonotus maculipinnis (Regan, 1912)

Otocinclus maculipinnis Regan, 1912: 668, pl. 77 (fig. 3). Type locality: Rio de la Plata, South America. Syntypes: BMNH 1909.4.2.19-22.

Maximum length: 4 cm SL

Distribution: South America: Paraná/Paraguay and La Plata River basins.

Countries: Argentina

Hisonotus nigricauda (Boulenger, 1891)

Otocinclus nigricauda Boulenger, 1891: 234, pl. 25 (fig. 3). Type locality: Rio Grande do Sul, Brazil. Syntypes: BMNH 1891.3.16.53-62.

Maximum length: 5 cm SL

Distribution: South America: Paraná/Paraguay River basin.

Countries: Brazil

Hisonotus notatus Eigenmann & Eigenmann, 1889

Hisonotus notatus Eigenmann & Eigenmann, 1889b: 41. Type locality: Brazil [Stated "Santa Cruz and Juiz de Fora"]. Syntypes: MCZ 7764, 8177; ANSP 166924.

Hisonotus minutus Eigenmann & Eigenmann, 1890: 391. Type locality: Apparently a lapsus under *Hisonotus notatus* for *notatus* (Isbrücker 1980: 84, Schaefer 1996: 1034).

Maximum length: 4 cm TL

Distribution: South America: Southeastern Brazil.

Countries: Brazil

Hisonotus paulinus (Regan, 1908)

Otocinclus paulinus Regan, 1908: 799, fig. 208. Type locality: Rio Piracicaba, San Paulo, Brazil. Holotype: BMNH 1907.7.6.9.

Maximum length: 4 cm SL

Distribution: South America: Tietê River basin.

Countries: Brazil

Hisonotus ringueleti Aquino, Schaefer & Miquelarena, 2001

Hisonotus ringueleti Aquino, Schaefer & Miquelarena, 2001: 3, fig. 1. Type locality: Uruguay, Rivera State, upper Uruguay River drainage, Quaraf River drainage, creek at Km 18 of route joining Santa do Livramento, Brazil, and Rivera, Uruguay; close to border (ca. 31°00'S, 55°30'W). Holotype: ILPLA 886.

Maximum length: 3.9 cm SL

Distribution: South America: Upper Uruguay River basin.

Countries: Uruguay

Hisonotus taimensis (Buckup, 1981)

Microlepidogaster taimensis Buckup, 1981: 22, figs. 1-7. Type locality: Novo canal do Arroio Taim, Estação Ecológica do Taim, Rio Grande do Sul, Brazil. Holotype: MZUSP 14133.

Maximum length: 6.6 cm SL

Distribution: South America: Mirim Lagoon drainage.

Countries: Brazil

HYPOPTOPOMA

Hypoptopoma Günther, 1868a: 477. Type species: *Hypoptopoma thoracatum* Günther, 1868. Type by monotypy. Gender: neuter.

Aristommata Holmberg, 1893: 96. Type species: *Aristommata inexpectata* Holmberg, 1893. Type by monotypy. Gender: feminine.

Diapeltoplites Fowler, 1915: 237. Type species: *Hypoptopoma gulare* Cope, 1878. Type by original designation. Gender: masculine.

Hypoptopoma bilobatum Cope, 1870

Hypoptopoma bilobatum Cope, 1870: 566. Type locality: Pebas, Ecuador [=Peru]. Syntypes: ANSP 8280-81.

Maximum length: 6 cm SL

Distribution: South America: Amazon River basin.

Countries: Peru

Hypoptopoma guianense Boeseman, 1974

Hypoptopoma guianense Boeseman, 1974: 259, fig. 1; pl. 1. Type locality: Left tributary of the Nickerie River, a few km upstream from the Stondansi Falls, Surinam. Holotype: RMNH 26919.

Maximum length: 6.2 cm SL

Distribution: South America: Nickerie River basin.

Countries: Suriname

Hypoptopoma gulare Cope, 1878

Hypoptopoma gulare Cope, 1878: 679. Type locality: Peruvian Amazon. Holotype: ANSP 21477.

Maximum length: 10.5 cm SL

Distribution: South America: Amazon River basin.

Countries: Peru, Venezuela

Hypoptopoma inexpectatum (Holmberg, 1893)

Aristommata inexpectata Holmberg, 1893: 90, 354. Type locality: Río Paraguay, Formosa Prov., Argentina. Holotype: MACN 5164.

Hypoptopoma guentheri Boulenger, 1895: 526. Type locality: Descalvados, Mato Grosso [Brazil]. Syntypes: BMNH 1895.5.17.77-82.

Maximum length: 7.1 cm SL

Distribution: South America: Paraná/Paraguay River basin.

Countries: Argentina, Brazil, Paraguay

Hypoptopoma joberti (Vaillant, 1880)

Otocinclus joberti Vaillant, 1880: 147. Type locality: Calderon, Brésil. Holotype: MNHN A.1966.

Maximum length: 8 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

Hypoptopoma psilogaster Fowler, 1915

Hypoptopoma psilogaster Fowler, 1915: 235, fig. 9. Type locality: Peruvian Amazon. Holotype: ANSP 21922.

Maximum length: 7 cm SL

Distribution: South America: Amazon River basin.

Countries: Colombia, Peru

Hypoptopoma steindachneri Boulenger, 1895

Hypoptopoma steindachneri Boulenger, 1895: 526. Type locality: Amazonenstromen zunächst der mündung des Rio Negro. Holotype: NMW 46272.

Maximum length: 10 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Peru

Hypoptopoma thoracatum Günther, 1868

Hypoptopoma thoracatum Günther, 1868a: 477. Type locality: Xeberos [upper Amazon River, Peru]. Holotype: BMNH 1867.6.13.38. Redescribed and illustrated in Günther (1868b: 234, fig. 2).

Maximum length: 8 cm TL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Colombia, Peru

MICROLEPIDOGASTER

Microlepidogaster Eigenmann & Eigenmann, 1889a: 8. Type species: *Microlepidogaster perforatus* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: feminine.

***Microlepidogaster perforatus* Eigenmann & Eigenmann, 1889**

Microlepidogaster perforatus Eigenmann & Eigenmann, 1889a: 9. Type locality: Rio Carandahy, Brazil. Holotype: MCZ 8181 [incorrectly published as 8182].

Maximum length: 5 cm SL

Distribution: South America: Carandaí River in upper Paraná River basin.

Countries: Brazil

NANNOPTOPOMA

Nannoptopoma Schaefer, 1996a: 915. Type species: *Nannoptopoma spectabilis* Eigenmann, 1914. Type by original designation. Gender: neuter.

***Nannoptopoma spectabile* (Eigenmann, 1914)**

Otocinclus spectabilis Eigenmann, 1914: 229. Type locality: Quebrada Cramalote, 4°07'N, 73°36'W, Dpto. Meta, Villavicencio, Colombia. Holotype: CAS 33806 [ex IU 13253a].

Maximum length: 2.9 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Colombia

***Nannoptopoma sternoptychum* Schaefer, 1996**

Nannoptopoma sternoptychum Schaefer, 1996a: 920, fig. 4. Type locality: Quebrada Mariposa at Cosco-Amazonico Lodge, 12°36'S, 69°11'W, Puerto Maldonado, Tambopata, Madre de Dios, Peru. Holotype: MUSM 4097.

Maximum length: 3.3 cm SL

Distribution: South America: Lower Amazon River basin and tributaries below 200 m elevation.

Countries: Bolivia, Brazil, Ecuador, Peru

NIOBICHTHYS

Niobichthys Schaefer & Provenzano, 1998: 222. Type species: *Niobichthys ferrarisi* Schaefer & Provenzano, 1998. Type by original designation. Gender: masculine.

***Niobichthys ferrarisi* Schaefer & Provenzano, 1998**

Niobichthys ferrarisi Schaefer & Provenzano, 1998: 226, fig. 4. Type locality: Municipio Autónomo Río Negro, Río Baria, approximately 200 m above Neblina base camp, 0°55'N, 66°10'W, Amazonas State, Venezuela. Holotype: MBUCV V-20225.

Maximum length: 6.98 cm SL

Distribution: South America: Upper Baria River, Negro River basin.

Countries: Venezuela

OTOCINCLUS

Otocinclus Cope, 1871: 112. Type species: *Otocinclus vestitus* Cope, 1872. Type by subsequent monotypy. Gender: masculine.

Lampiella Isbrücker, in Isbrücker et al., 2001: 19. Type species: *Otocinclus gibbosus* Miranda Ribeiro, 1908. Type by original designation. Gender: feminine.

Macrotocinclus Isbrücker & Seidel, in Isbrücker et al., 2001: 20. Type species: *Otocinclus affinis* Steindachner, 1877. Type by original designation. Gender: masculine.

***Otocinclus affinis* Steindachner, 1877**

Otocinclus affinis Steindachner, 1877: 221. pl. 1 (figs. 1-1b). Type locality: Flüssen bei S. Crux in der umgebung von Rio de Janeiro, Brazil. Lectotype: NMW 45368: 1, designated by Schaefer (1997:

49).

Maximum length: 5 cm SL

Distribution: South America: vicinity of Rio de Janeiro.

Countries: Brazil

***Otocinclus bororo* Schaefer, 1997**

Otocinclus bororo Schaefer, 1997: 69, fig. 43. Type locality: Barra do Bugres, stream crossing road between Barra do Bugres and Cáceres, 51 km S of Barra Do Bugres, ca. 15°20'S, 57°12'W, Mato Grosso, Brazil. Holotype: MCP 19285.

Maximum length: 3.1 cm SL

Distribution: South America: Upper Paraguay River basin.

Countries: Brazil

***Otocinclus caxarari* Schaefer, 1997**

Otocinclus caxarari Schaefer, 1997: 71, fig. 44. Type locality: Region between Guajara-Mirim and Mato Grosso, ca. 10°48'S, 65°23'W, Rio Solimoes/Madeira/Guaporé drainage, Brazil/Bolivia border. Holotype: MZUSP 51102.

Maximum length: 2.6 cm SL

Distribution: South America: Upper Madeira River basin.

Countries: Brazil

***Otocinclus flexilis* Cope, 1894**

Otocinclus flexilis Cope, 1894: 97, pl. 8 (figs. 13, 13a-b). Type locality: Rio Jacuhy [Jacu], Rio Grande do Sul, Brazil. Lectotype: ANSP 21756.

Otocinclus fimbriatus Cope, 1894: 98, pl. 9 (figs. 16, 16a-b). Type locality: Rio Jacuhy [Jacu], Rio Grande do Sul, Brazil. Syntypes: ANSP 21752 (4), 21585-97 (14).

Otocinclus arnoldi Regan, 1909: 234. Type locality: Rio de la Plata, South America. Holotype: BMNH 1908.12.5.13.

Maximum length: 5.5 cm TL

Distribution: South America: Middle and lower Paraná/Paraguay, Uruguay and La Plata basins and Atlantic coastal streams of Southeastern Brazil.

Countries: Argentina, Brazil, Uruguay

***Otocinclus gibbosus* Miranda Ribeiro, 1908**

Otocinclus gibbosus Miranda Ribeiro, 1908: [2], Figs. 2-2a. Type locality: Rio Bethary [Bethari], São Paulo, Brazil. Holotype: MNRJ 1048.

Maximum length: 5 cm TL

Distribution: South America: Ribeira de Iguape River basin.

Countries: Brazil

***Otocinclus hasemani* Steindachner, 1915**

Otocinclus hasemani Steindachner, 1915: 348. Type locality: Engenhão de Agua, im flußgebiete des Paranahyba [ca. 4°52'S, 43°10'W, Maranhão State, Brazil]. Lectotype: NMW 45369: 1 (largest), designated by Schaefer (1997: 62).

Maximum length: 2.7 cm SL

Distribution: South America: Tocantins and Parnaíba River basins.

Countries: Brazil

***Otocinclus hoppei* Miranda Ribeiro, 1939**

Otocinclus hoppei Miranda Ribeiro, A., 1939: 359. Type locality: Belém, Pará, Brasil-Norte. Lectotype: MNRJ 1030, designated by Miranda Ribeiro (1953: 401).

Maximum length: 3.3 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Otocinclus huaorani* Schaefer, 1997**

Otocinclus huaorani Schaefer, 1997: 74, fig. 46. Type locality: Trib. to Río San Miguel (km 50, 4.5 km S of Tipischca), ca. 0°10'N, 76°13'W, Río Amazonas/Napo drainage, Napo, Ecuador. Holotype: FMNH 101555.

Maximum length: 3.2 cm SL

Distribution: South America: Western upper Amazon and Orinoco

River basins.
Countries: Colombia, Ecuador, Peru

Otocinclus macrospilus Eigenmann & Allen, 1942
Otocinclus macrospilus Eigenmann & Allen, 1942: 201, pl. 13 (fig. 1). Type locality: Río Morona [Upper Amazon, Dpto Loreto, Peru]. Holotype: CAS 77335 [ex IU 15606].
Maximum length: 3.5 cm SL
Distribution: South America: Amazon River basin.
Countries: Peru

Otocinclus mariae Fowler, 1940
Otocinclus mariae Fowler, 1940: 83, figs. 41-43. Type locality: Boca Chapare, Río Chimore [tributary to Ichilo River] [Cochabamba, ca. 15°58'S, 64°42'W, Río Mamoré system] Bolivia. Holotype: ANSP 69068.
Maximum length: 3.3 cm SL
Distribution: South America: Upper Madeira and lower Amazon River basins.
Countries: Bolivia

Otocinclus mura Schaefer, 1997
Otocinclus mura Schaefer, 1997: 77, fig. 47. Type locality: Rio Sanabani, município de Silves (Lago Canaçari drainage into Rio Solimões mainstem), ca. 2°51'40"S, 58°15'40"W, rio Solimões/Sanabani/Lago Canaçari drainage, Brazil. Holotype: MZUSP 51101.
Maximum length: 3.6 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Brazil

Otocinclus tapirape Britto & Moreira, 2002
Otocinclus tapirape Britto & Moreira, 2002:1064, fig. 1. Type locality: Brazil: Goiás, córrego Água Parada, tributary of Rio Pintado, 11 km west from Novo Planalto, rio Araguaia system, 13°7'S, 49°62'W. Holotype: MZUSP 73975.
Maximum length: 2.4 cm SL
Distribution: South America: Upper and middle Araguaia River basin.
Countries: Brazil.

Otocinclus vestitus Cope, 1872
Otocinclus vestitus Cope, 1872: 283, pl. 4 (figs. 2a-c). Type locality: Tributaries of the Ambyiacu [Ampiyacu near Pebas, ca. 3°40'S, 71°45'W, Depto. Loreto, Peru]. Lectotype: ANSP 8283, designated by Schaefer (1997: 46).
Maximum length: 3.2 cm SL
Distribution: South America: Amazon and lower Paraná River basins.
Countries: Bolivia, Paraguay, Peru

Otocinclus vittatus Regan, 1904
Otocinclus vittatus Regan, 1904: 267, pl. 15 (fig. 3). Type locality: Descalvados, Mato Grosso, Brazil. Lectotype: BMNH 1895.5.17.83, designated by Schaefer (1997: 57).
Rhinolepis paraguensis Borodin, 1927: 7. Type locality: Paraguay. Holotype: AMNH 8641.
Maximum length: 3.3 cm TL
Distribution: South America: Amazon, Orinoco, Paraná/Paraguay, Xingu and Tocantins River basins.
Countries: Argentina, Bolivia, Brazil, Colombia, Paraguay, Peru, Venezuela

Otocinclus xakriaba Schaefer, 1997
Otocinclus xakriaba Schaefer, 1997: 79, fig. 48. Type locality: Rio Pau de Colher, on road between Guanambi and Mutas, 14°12'48"S, 42°49'29"W, rio São Francisco drainage, Bahia, Brazil. Holotype: MZUSP 51103.
Maximum length: 3.1 cm SL
Distribution: South America: São Francisco River basin.

Countries: Brazil

OTOTHYRIS

Otothyris Myers, 1927: 128. Type species: *Otothyris canaliferus* Myers, 1927. Type by original designation. Gender: feminine.

Otothyris juquiae Garavello, Britski & Schaefer, 1998
Otothyris juquiae Garavello, Britski & Schaefer, 1998: 8, fig. 4. Type locality: Juquiá creek at Cantagalo farm, São Paulo State, Brazil. Holotype: MZUSP 10309.
Maximum length: 3.15 cm SL
Distribution: South America: Ribeira de Iguape River basin.
Countries: Brazil

Otothyris lophophanes (Eigenmann & Eigenmann, 1889)

Rhinelepis lophophanes Eigenmann & Eigenmann, 1889a: 9. Type locality: Santa Cruz, Brazil. Holotype: MCZ 8164.
Otocinclus cephalacanthus Miranda Ribeiro, 1911: 93. Type locality: Brazil. Holotype: MNRJ 1050.
Otothyris canaliferus Myers, 1927: 128. Type locality: Hills in the vicinity of Rio de Janeiro, Brazil. Lectotype: MCZ 31577, designated in Garavello et al. (1998: 7).

Maximum length: 2.82 cm SL
Distribution: South America: Atlantic coastal streams of Rio de Janeiro State.
Countries: Brazil

Otothyris rostrata Garavello, Britski & Schaefer, 1998
Otothyris rostrata Garavello, Britski & Schaefer, 1998: 10, fig. 5. Type locality: Osório, Canal between lagoons Emboaba and Emboabinha, on the highway between Osório and Tramandai, Rio Grande do Sul State, Brazil. Holotype: MCP 14812.

Maximum length: 3.1 cm SL
Distribution: South America: Atlantic coast of Santa Catarina and Rio Grande do Sul States.
Countries: Brazil

Otothyris travassosi Garavello, Britski & Schaefer, 1998

Otothyris travassosi Garavello, Britski & Schaefer, 1998: 12, fig. 6. Type locality: Barra Sêca River at Linhares to São Mateus Road, Espírito Santo State, Brazil. Holotype: MNRJ 10177.
Maximum length: 3.2 cm SL
Distribution: South America: Atlantic coast of southeastern Brazil.
Countries: Brazil

OXYROPSIS

Oxyropsis Eigenmann & Eigenmann, 1889b: 39. Type species: *Oxyropsis wrightiana* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: feminine. Revised by Aquino and Schaefer (2002).

Oxyropsis acutirostra Miranda Ribeiro, 1951

Oxyropsis acutirostris Miranda Ribeiro, 1951: 1, pls. 1-3 (figs. 2, 2). Type locality: Paricachoeira, Rio Taquié, afl. do vaupes que é afl. do Negro, Amazonas, Brazil. Holotype: MNRJ 5745.
Maximum length: 4.4 cm SL
Distribution: South America: Orinoco and Negro River basins.
Countries: Brazil, Colombia, Venezuela

Oxyropsis carinata (Steindachner, 1879)

Hypoptopoma carinatum Steindachner, 1879: 48, pl. 4 (fig. 3). Type locality: Einem nebenflusse des Amazonenstromes an der Peruanische Grenze. Holotype: NMW 46267.
Maximum length: 7.6 cm SL
Distribution: South America: Middle and upper Amazon River basin.

Check List of the Freshwater Fishes of South and Central America

Countries: Brazil, Colombia, Peru

Oxyropsis wrightiana Eigenmann & Eigenmann, 1889
Oxyropsis wrightiana Eigenmann & Eigenmann, 1889b: 39. Type locality: Lago Hyanuary [Amazonas, Brazil]. Holotype: MCZ 8055.

Oxyropsis wrightii Eigenmann & Eigenmann, 1891:40. Unjustified emendation of *Oxyropsis wrightiana*.

Maximum length: 5.6 cm SL

Distribution: South America: Middle and upper Amazon River basins.

Countries: Brazil, Colombia, Peru

PAROTOCINCLUS

Parotocinclus Eigenmann & Eigenmann, 1889b: 41. Type species: *Otocinclus maculicauda* Steindachner, 1877. Type by monotypy. Gender: masculine.

Parotocinclus amazonensis Garavello, 1977

Parotocinclus amazonensis Garavello, 1977: 7, figs. 21-22. Type locality: Ilha Sorubim, Rio Solimões, Amazonas, Brazil. Holotype: MZUSP 10145.

Maximum length: 2.45 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

Parotocinclus aripuanensis Garavello, 1988

Parotocinclus aripuanensis Garavello, 1988: 122, fig. 3. Type locality: Ingazeiro, 20 km upstream of Boca do Rio Canumã, Aripuanã, MT, Brazil. Holotype: MZUSP 36899.

Maximum length: 2.09 cm SL

Distribution: South America: Aripuanã River basin.

Countries: Brazil

Parotocinclus bahiensis (Miranda Ribeiro, 1918)

Microlepidogaster bahiensis Miranda Ribeiro, 1918: 635. Type locality: Villa Nova, Estado da Bahia, Brazil. Syntypes: MZUSP 1071

Distribution: South America: Bahia State.

Countries: Brazil

Remarks and references: Maximum length unknown, types lost (Britski, 1969).

Parotocinclus britskii Boeseman, 1974

Parotocinclus britskii Boeseman, 1974: 267, fig. 2; pl. 2. Type locality: Left tributary of Coppename River, Surinam, 3°51'N, 56°55'W. Holotype: ZMA 106593.

Maximum length: 6 cm TL

Distribution: South America: Orinoco River basin and Atlantic coastal drainages of the Guianas.

Countries: Guyana, Suriname, Venezuela

Parotocinclus cearensis Garavello, 1977

Parotocinclus cearensis Garavello, 1977: 14, figs. 19-20. Type locality: Cachoeira do Gusmão, Ipu, Ceará, Brazil. Holotype: MNRJ 10176.

Maximum length: 5 cm SL

Distribution: South America: Ceará State.

Countries: Brazil

Parotocinclus cesarpintoi Miranda Ribeiro, 1939

Parotocinclus cesarpintoi Miranda Ribeiro, P., 1939: 364, fig. Type locality: Quebrângulo, Alagôas, Brazil. Syntypes: (2) Seção de Zoologia do Museu Nacional, Brasil [? now MNRJ].

Maximum length: 4 cm TL

Distribution: South America: Paraíba do Sul River basin.

Countries: Brazil

Parotocinclus collinsae Schmidt & Ferraris, 1985

Parotocinclus collinsae Schmidt & Ferraris, 1985: 341, figs. 1-3.

Type locality: Tributary to Takutu River, ca. 2 mi. from Mazarhally Takutu Lumber Camp in Takutu mountains, 6°15'N, 59°5'W, Essequibo, Guyana. Holotype: AMNH 55433.

Maximum length: 5 cm SL

Distribution: South America: Essequibo River basin.

Countries: Guyana

Parotocinclus cristatus Garavello, 1977

Parotocinclus cristatus Garavello, 1977: 6, figs. 9-10. Type locality: Fazenda Almada, Ilhéus, Bahia, Brazil. Holotype: MNRJ 10132.

Maximum length: 4 cm TL

Distribution: South America: Coastal rivers near Ilhéus, Bahia State.

Countries: Brazil

Parotocinclus doceanus (Miranda Ribeiro, 1918)

Microlepidogaster doceanus Miranda Ribeiro, 1918: 634. Type locality: Rio Doce, Espírito Santo, Brazil. Holotype: MZUSP 1016.

Maximum length: 4 cm SL

Distribution: South America: Doce River basin.

Countries: Brazil

Parotocinclus eppleyi Schaefer & Provenzano, 1993

Parotocinclus eppleyi Schaefer & Provenzano, 1993: 46, figs. 5-6.

Type locality: Caño Curicurito, ca. 1 km above its mouth into the Río Autana, Amazonas, Venezuela, 4°47'N, 67°25'W. Holotype: MBUCV V-22530.

Maximum length: 2.98 cm SL

Distribution: South America: Upper and middle Orinoco River basin.

Countries: Venezuela

Parotocinclus haroldoi Garavello, 1988

Parotocinclus haroldoi Garavello, 1988: 118, fig. 1. Type locality: Córrego do Otaviano, Poço do Sanharó, Riacho Sanharó, Piauí, Brazil. Holotype: MNRJ 10531.

Maximum length: 3 cm SL

Distribution: South America: Piauí State.

Countries: Brazil

Parotocinclus jimi Garavello, 1977

Parotocinclus jimi Garavello, 1977: 9, figs. 25-26. Type locality: Rio do Peixe, small tributary of Rio de Contas, Fazenda Pedra Branca, Itagibá, Bahia, Brazil. Holotype: MZUSP 12133.

Maximum length: 4 cm TL

Distribution: South America: Bahia State.

Countries: Brazil

Parotocinclus jumbo Britski & Garavello, 2002

Parotocinclus jumbo Britski & Garavello, 2002: 280, fig. 1. Type locality: Brazil: Paraíba: rio Paraíba do Norte, at bridge on road PB 408, NW of Umbuzeiro (7°38'27"S 35°42'30"W). Holotype: MZUSP 69513.

Maximum length: 5.7 cm SL

Distribution: South America: Coastal rivers in Ceará, Paraíba, Pernambuco and Alagoas States.

Countries: Brazil

Parotocinclus longirostris Garavello, 1988

Parotocinclus longirostris Garavello, 1988: 120, fig. 2. Type locality: Rio Preto da Eva, Manaus-Itacoatiara highway, km 80, Manaus, Amazonas, Brazil. Holotype: MZUSP 36891.

Maximum length: 2.65 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

Parotocinclus maculicauda (Steindachner, 1877)

Otocinclus maculicauda Steindachner, 1877: 222, pl. 1 (Figs. 2-

2b). Type locality: Santa Cruz, Rio Quenda in vicinity of Rio de Janeiro, Brazil. Lectotype: NMW 45381: 1, designated by Schaefer (1996b: 1034). Name spelled *caudimacula* once.

Parotocinclus steindachneri Di Caporiacco, 1948: 201, fig. 2. Type locality: Rio Novo, Santa Catarina, Brazil. Syntypes: MZUF 5565 [ex MZUF 994] (1).

Maximum length: 6 cm TL

Distribution: South America: Coastal rivers between Santa Catarina and Rio de Janeiro States.

Countries: Brazil

***Parotocinclus minutus* Garavello, 1977**

Parotocinclus minutus Garavello, 1977: 15, figs. 13-14. Type locality: Rio Vasa-Barris, Canudos, Bahia, Brazil. Holotype: MNRJ 10135.

Maximum length: 3 cm SL

Distribution: South America: Vasa-Barris River basin.

Countries: Brazil

***Parotocinclus polyochrus* Schaefer, 1988**

Parotocinclus polyochrus Schaefer, 1988: 184, figs. 1-2. Type locality: Río Mawarinuma tributary at Neblina base camp, Terr. Federal Amazonas, Venezuela, 0°55'N, 66°10'W, elev. 120 m. Holotype: AMNH 74482.

Maximum length: 3 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Venezuela

***Parotocinclus prata* Ribeiro, Melo & Pereira, 2002**

Parotocinclus prata Ribeiro, Melo & Pereira, 2002: 218, fig. 1. Type locality: Brazil: Minas Gerais: rio São Francisco basin, município de Presidente Olegário, headwaters of rio da Prata, stream tributary of ribeirão Quiricó, fazenda São Zeferino, near Galena; approximately 18°22'S 46°14.3'W. Holotype: MZUSP 68359.

Maximum length: 4.2 cm SL

Distribution: South America: Upper São Francisco River basin.

Countries: Brazil

***Parotocinclus spilosoma* (Fowler, 1941)**

Plecostomus spilosoma Fowler, 1941: 152, figs. 53-55. Type locality: Campina Grande, Parahyba, Brazil. Holotype: ANSP 69410.

Maximum length: 6 cm TL

Distribution: South America: Paraíba State.

Countries: Brazil

***Parotocinclus spilurus* (Fowler, 1941)**

Plecostomus spilurus Fowler, 1941: 148, figs. 47-49. Type locality: Rio Salgade [Salgado], Icó, Ceará, Brazil. Holotype: ANSP 69403.

Maximum length: 4 cm SL

Distribution: South America: Ceará State.

Countries: Brazil

PSEUDOTOCINCLUS

Pseudotocinclus Nichols, 1919: 534. Type species: *Pseudotocinclus intermedius* Nichols, 1919. Type by monotypy. Gender: masculine.

***Pseudotocinclus tietensis* (Ihering, 1907)**

Otocinclus (Microlepidogaster) tietensis Ihering, 1907: 26. Type locality: Rio Tieté, São Paulo, Brazil. Holotype: DZSASP [now MZUSP] (not found).

Pseudotocinclus intermedius Nichols, 1919: 534. Type locality: Campo Grande, Mato Grosso, Brazil. Holotype: AMNH 7177.

Maximum length: 6 cm SL

Distribution: South America: Upper Tietê River at Paranapiacaba.

Countries: Brazil

PSEUDOTOTHYRIS

Pseudotothyris Britski & Garavello, 1984: 232. Type species: *Otocinclus obtusus* Miranda Ribeiro, 1911. Type by original designation. Gender: feminine.

***Pseudotothyris janeirensis* Britski & Garavello, 1984**

Pseudotothyris janeirensis Britski & Garavello, 1984: 234, figs. 9-10. Type locality: Rio dos Macacos, Represa Engenho da Serra, Paulo de Frontin, Rio de Janeiro, Brazil. Holotype: MNRJ 10278.

Maximum length: 5 cm SL

Distribution: South America: Rio de Janeiro State.

Countries: Brazil

***Pseudotothyris obtusa* (Miranda Ribeiro, 1911)**

Otocinclus obtusus Miranda Ribeiro, 1911: 95, pl. 29 (fig. 3). Type locality: Brazil. Lectotype: MNRJ 1026A, designated by Miranda Ribeiro (1953: 401). Spelled *obtusos* at heading of account and index (p. 498), and *obtusus* in etymology, index (p. 497), figure caption, and two additional places in text.

Maximum length: 4 cm SL

Distribution: South America: Southeastern Brazil.

Countries: Brazil

SCHIZOLECIS

Schizolecis Britski & Garavello, 1984: 228. Type species: *Microlepidogaster guntheri* Miranda Ribeiro, 1918. Type by original designation. Gender: feminine.

***Schizolecis guntheri* (Miranda Ribeiro, 1918)**

Microlepidogaster guntheri Miranda Ribeiro, 1918: 634. Type locality: Praia do Piraíque, Ilha de São Sebastião, Estado de São Paulo, Brazil. Lectotype: MZUSP 1015, designated by Britski (1969: 208). Spelled *guentheri* on p. 717.

Pseudotocinclus ribeiroi Gomes, 1955: 222, pl. 1. Type locality: Rio Branco, Bacia do rio Itanhaem, São Paulo, Brazil. Holotype: Est. Exp. Biol. Pisc. 110.

Maximum length: 4 cm SL

Distribution: South America: Southeastern Brazil.

Countries: Brazil

SPECIES INQUIRENDA

Microlepidogaster bourguyi Miranda Ribeiro, 1911: 90. Type locality: Brasil. Syntypes: MNRJ (12) Types apparently lost.

Subfamily Loricariinae (Armored catfishes)

Carl J. Ferraris, Jr.

The subfamily Loricariinae is composed of 31 genera and 209 species. The subfamily is diagnosed by a number of anatomical features (see Schaefer, 1987, for details), most of which can only be observed in skeletal preparations. In general, loricariines can generally be distinguished from other loricariids by having a depressed caudal peduncle with no adipose fin and, often, a depressed snout.

Most species of loricariines are small to medium sized fishes. The largest species, *Spatuloricaria euacanthagenys*, reaches to more than one-half meter in length, while the smallest, *Hartiella crassicauda*, only grows to about one-tenth of that size.

Loricariines exhibit a wide array of sexually dimorphic features, many of which are used to diagnose the species. Dimorphic features include the size and placement of odontodes on the head, body, and pectoral fin and the form of the lower lip. Males of species with enlarged lower lips, in the genera *Loricariichthys*, *Hemiodontichthys* and *Pseudoloricaria*, carry fertilized eggs attached to their lip until the larvae hatch.

Loricariines are distributed widely through the South American rivers, from the La Plata drainage in the south to the Caribbean coastal rivers in the North. A few species occur on the Pacific coastal rivers of Colombia, Ecuador, and Panama; one is known from the Caribbean drainages of Costa Rica.

The taxonomy of the Loricariinae is still young and likely to undergo substantial change. Various studies by Isaïc Isbrücker (sometimes with co-authors, especially Han Nijssen), resulted in the discovery and description of a large number of species and genera. Nonetheless, it is likely that there are still many species yet to be described. Revisionary studies of the larger genera (e. g., *Rineloricaria*, *Loricariichthys*, and *Harttia*) are needed as the only recent major revision was that of *Farlowella* (Retzer and Page, 1997).

Loricariines are generally not of much economic interest. Few species are large enough to be important for food and only a small number of species are readily available in the aquarium trade.

APISTOLORICARIA

Apistoloricaria Isbrücker & Nijssen, 1986a: 103. Type species: *Apistoloricaria condei* Isbrücker & Nijssen, 1986. Type by original designation. Gender: feminine. Review and key to species in Nijssen & Isbrücker (1988).

***Apistoloricaria condei* Isbrücker & Nijssen, 1986**

Apistoloricaria condei Isbrücker & Nijssen, 1986a: 104, fig. 1. Type locality: L'Equateur, Prov. Napo, bassin du Napo (haut Amazone) embouchure du Rio Tiputini dans le Rio Napo au confluent de l'affluent principal, en eau profonde (00°48.9'S, 75°32.5'O). Holotype: FMNH 94683.

Maximum length: 14.1 cm SL

Distribution: South America: Upper Amazon drainage, Napo River basin.

Countries: Ecuador

Common names: Carachama (Ecuador)

***Apistoloricaria laani* Nijssen & Isbrücker, 1988**

Apistoloricaria laani Nijssen & Isbrücker, 1988: 34, figs. 2-4. Type locality: Colombie, Dept. Meta, Río Metica, à El Aviso, environ 3°59'N, 72°59'O. Holotype: ANSP 131483.

Maximum length: 13 cm SL

Distribution: South America: Orinoco River drainage, Meta River basin.

Countries: Colombia

***Apistoloricaria listrorhinos* Nijssen & Isbrücker, 1988**

Apistoloricaria listrorhinos Nijssen & Isbrücker, 1988: 36, figs. 5-

7. Type locality: Colombie, Dept. Meta, Río Metica, à environ 1.5 km E. de Rajote, 3°56'N, 73°03'O. Holotype: ANSP 131482.

Maximum length: 13.6 cm SL

Distribution: South America: Orinoco River drainage, Metica River basin.

Countries: Colombia

***Apistoloricaria ommation* Nijssen & Isbrücker, 1988**

Apistoloricaria ommation Nijssen & Isbrücker, 1988: 37, figs. 8-10. Type locality: Pérou, Dept. Loreto, environs d'Iquitos, Rio Amazonas (Maranon) entre l'île Iquitos et l'île Lapuna, près du rivage d l'île Lapuna. Holotype: ANSP 138932.

Maximum length: 9.8 cm SL

Distribution: South America: Upper Amazon River drainage, Lower Marañón River.

Countries: Peru

APOSTURISOMA

Aposturisoma Isbrücker, Britski, Nijssen & Ortega, 1983: 34. Type species: *Aposturisoma myriodon* Isbrücker, Britski, Nijssen & Ortega, 1983. Type by original designation. Gender: neuter.

***Aposturisoma myriodon* Isbrücker, Britski, Nijssen & Ortega, 1983**

Aposturisoma myriodon Isbrücker, Britski, Nijssen & Ortega, 1983: 35, figs. 3-6. Type locality: Pérou, Dept. Ucayali, Prov. Coronel Portillo, bassin du Aguaytia, Rio Huacamayó (environ 09°00'S, 75°29.0'O) près de la roule de Pucallpa à Tingo Mario,

environ 8 km N.E. du village d' Aguaytia. Holotype: MZUSP 15328.
 Maximum length: 20 cm SL
 Distribution: South America: Upper Amazon River drainage, Aguaytia River basin.
 Countries: Peru
 Common names: Shitari (Peru)

BROCHILORICARIA

Brochiloricaria Isbrücker & Nijssen in Isbrücker, 1979: 90. Type species: *Brochiloricaria chauliodon* Isbrücker, 1979. Type by original designation. Gender: feminine.

***Brochiloricaria chauliodon* Isbrücker, 1979**

Brochiloricaria chauliodon Isbrücker, 1979: 102, fig. 15. Type locality: Argentine, Prov. Entre Rios, Isla El Dorado, Paraná Guaza (localité non précisée). Holotype: ZSM 23342.
 Maximum length: 28.2 cm
 Distribution: South America: La Plata River basin.
 Countries: Argentina

***Brochiloricaria macrodon* (Kner, 1853)**

Loricaria macrodon Kner, 1853: 12, 15, pl. 2. Type locality: Aus dem Cujabaflusse [Brazil]. Holotype: NMW 45087. Originally as *Lor. macrodon*.
 Maximum length: 26.8 cm SL
 Distribution: South America: Paraguay River basin.
 Countries: Brazil

CROSSOLORICARIA

Crossoloricaria Isbrücker, 1979: 90. Type species: *Loricaria variegata* Steindachner, 1879. Type by original designation. Gender: feminine.

***Crossoloricaria bahuaja* Chang & Castro, 1999**

Crossoloricaria bahuaja Chang & Castro, 1999: 83, fig. 1. Type locality: Peru, Departamento Madre de Dios, Provincia Tambopata, Río Tambopata, 12°47'05"S, 69°18'55"W. Holotype: MUSM 9916.
 Maximum length: 16.4 cm SL
 Distribution: South America: Madre de Dios River basin in Peru, Grande River in Bolivia and Manuripe River in Pando.
 Countries: Bolivia, Peru

***Crossoloricaria cephalaspis* Isbrücker, 1979**

Crossoloricaria cephalaspis Isbrücker, 1979: 102, fig. 18. Type locality: Colombie, Río Magdalena. Holotype: BMNH 1947.7.1.228.
 Maximum length: 10.9 cm SL
 Distribution: South America: Magdalena River basin.
 Countries: Colombia

***Crossoloricaria rhami* Isbrücker & Nijssen, 1983**

Crossoloricaria rhami Isbrücker & Nijssen, 1983: 9, fig. 1. Type locality: Pérou, Dept. Ucayali, Prov. Coronel Portillo, Bassin du Río Aguaytia, Río Huacamayo (ca. 9°S, 75°29'O) près de la route de Pucallpa à Tingo Maria (Carretera Federico Badadre), à environ 8 km au N. E. du village Aguaytia. Holotype: ZMA 116391.
 Maximum length: 12.7 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Ecuador, Peru
 Common names: Carachama (Ecuador, Peru)

***Crossoloricaria variegata* (Steindachner, 1879)**

Loricaria variegata Steindachner, 1879a: 151. Type locality: Mamoni (Mamoni-Flusses bei Chaop in Isthmus von Panama). Holotype: NMW 45138. Species later illustrated and described in more detail in Steindachner (1879b:165, pl. 3).
 Maximum length: 26.5 cm SL

Distribution: Central and South America: Mamoni, Tuirá, Yape River basins in Panama; San Juan and Sinu River basins in Colombia.

Countries: Colombia, Panama

Common names: Alcalde (Colombia), Baracalde (Colombia), Cuchilla (Colombia), Raspacaonia (Colombia), Varacalde (Colombia)

***Crossoloricaria venezuelae* (Schultz, 1944)**

Loricaria variegata venezuelae Schultz, 1944b: 329, pl. 12 (fig. C).
 Type locality: Río Palmar at the bridge about 70 km southwest of Maracaibo [Venezuela]. Holotype: USNM 121108.
 Maximum length: 18.3 cm SL
 Distribution: South America: Lake Maracaibo drainage.
 Countries: Colombia, Venezuela
 Common names: Paleta (Venezuela), Tabla (Venezuela)

CTENILORICARIA

Cteniloricaria Isbrücker & Nijssen in Isbrücker, 1979: 91. Type species: *Loricaria platystoma* Günther, 1868. Type by original designation. Gender: feminine.

***Cteniloricaria fowleri* (Pellegrin, 1908)**

Oxyloricaria Fowleri Pellegrin, 1908: 126. Type locality: Rivière Camopi (Guyane française). Holotype: MNHN 1901-372.
 Maximum length: 21 cm SL
 Distribution: South America: Oyapock River basin.
 Countries: Brazil, French Guiana
 Remarks and references: Species redescribed in le Bail et al. (2000).
 Common names: Acari (Brazil), Achiwa (French Guiana), Cachimbo (Brazil), Chichiwa (French Guiana), Goré (French Guiana), Lapipi (French Guiana), Santiwipi (French Guiana), Sisiwa (French Guiana)

***Cteniloricaria maculata* (Boeseman, 1971)**

Parasturisoma maculata Boeseman, 1971: 33, pl. 5. Type locality: Sipaliwini, near airstrip, upper Corantijn River basin, Surinam. Holotype: RMNH 26381 (170 mm).
 Maximum length: 17 cm SL
 Distribution: South America: Maroni and Corantijn River basins.
 Countries: French Guiana, Suriname
 Remarks and references: Species redescribed in le Bail et al. (2000).
 Common names: Acari (Brazil), Achiwa (French Guiana), Cachimbo (Brazil), Chichiwa (French Guiana), Lapipi (French Guiana), Santiwipi (French Guiana), Sisiwa (French Guiana)

***Cteniloricaria platystoma* (Günther, 1868)**

Loricaria platystoma Günther, 1868: 478. Type locality: Surinam. Lectotype: BMNH 1866.8.14.124, designated by Isbrücker (1979: 113).
 Maximum length: 20 cm
 Distribution: South America: Suriname.
 Countries: Suriname

DASYLORICARIA

Dasylicaria Isbrücker & Nijssen in Isbrücker, 1979: 90. Type species: *Loricaria filamentosa* Steindachner, 1878. Type by original designation. Gender: feminine.

***Dasylicaria capetensis* (Meek & Hildebrand, 1913)**

Loricaria capetensis Meek & Hildebrand, 1913: 80. Type locality: Río Capetí, Río Tuyra basin, Panama. Holotype: FMNH 7582.
 Maximum length: 16.4 cm SL
 Distribution: Central America: Tuirá River basin.
 Countries: Panama

***Dasylicaria filamentosa* (Steindachner, 1878)**

Check List of the Freshwater Fishes of South and Central America

- Loricaria filamentosa* Steindachner, 1878: 90. Type locality: Magdalena-Stromes [Colombia]. Lectotype: NMW 44874, designated by Isbrücker (1979: 113).
Maximum length: 26 cm SL
Distribution: South America: Magdalena River basin and, possibly, Catatumbo River.
Countries: Colombia
Common names: Alcalde, Cuchara, Cucho pitero, Raspacanoa, Zapatero (Colombia)
- Dasylicaria latiura* (Eigenmann & Vance, 1912)**
Loricaria filamentosa latiura Eigenmann & Vance in Eigenmann, 1912a: 13. Type locality: Boca de Certegai, Colombia. Syntypes: 122 specimens: originally CM 3806 and IU 12695, now FMNH 55115, USNM 79219, and 4 unaccounted for.
Maximum length: 35.5 cm SL
Distribution: Central and South America: Tuira and Atrato River basins.
Countries: Colombia, Panama
- Dasylicaria seminuda* (Eigenmann & Vance, 1912)**
Loricaria filamentosa seminuda Eigenmann & Vance in Eigenmann, 1912a: 13. Type locality: Colombia, Girardot. Holotype: FMNH 55117 [ex CM 1307].
Maximum length: 18.2 cm SL
Distribution: South America: Magdalena River basin.
Countries: Colombia
Common names: Cucho pitero (Colombia), Zapatero (Colombia)
- Dasylicaria tuyrensis* (Meek & Hildebrand, 1913)**
Loricaria tuyrensis Meek & Hildebrand, 1913: 81. Type locality: Río Tuyra, Boca de Cupe, Panama. Holotype: FMNH 7583.
Maximum length: 35.5 cm SL
Distribution: Central America: Tuira River basin.
Countries: Panama
- DENTECTUS**
Dentectus Martín Salazar, Isbrücker & Nijssen, 1982: 127. Type species: *Dentectus barbarmatus* Martín Salazar, Isbrücker & Nijssen, 1982. Type by original designation. Gender: masculine.
- Dentectus barbarmatus* Martín Salazar, Isbrücker & Nijssen, 1982**
Dentectus barbarmatus Martín Salazar, Isbrücker & Nijssen, 1982: 130, fig. 3. Type locality: Venezuela, Estado Cojedes, Río Salinas, a tributary of the Río Pao Viejo, N.E. of El Baul (9°13'N, 68°07'W). Holotype: MBUCV V-12780.
Maximum length: 13.7 cm SL
Distribution: South America: Western Orinoco River basin.
Countries: Venezuela
- FARLOWELLA**
Acestra Kner, 1853: 29. Type species: *Acestra acus* Kner, 1853. Type by subsequent designation by Bleeker (1862b: 4). Gender: feminine. Preoccupied by *Acestra* Bonaparte, 1846 in fishes and by Dallas, 1852 in Hemiptera; replaced by *Farlowella* Eigenmann & Eigenmann, 1889.
Farlowella Eigenmann & Eigenmann, 1889: 32. Type species: *Acestra acus* Kner, 1853. Type by being a replacement name. Gender: feminine. Replacement for *Acestra* Kner, 1853. Genus revised by Retzer & Page (1997).
- Farlowella acus* (Kner, 1853)**
Acestra acus Kner, 1853: 13, 29, pl. 8 (fig. 1). Type locality: Caracas [Venezuela]. Holotype: NMW 47795.
Loricaria scolopacina De Filippi, 1853: 166. Type locality: in rivis prov. Venezuelae, Caracas. Holotype: MZUT 22.
Maximum length: 16 cm SL
Distribution: South America: Lake Valencia and Torito River basins.
Countries: Venezuela
Remarks and references: Species redescribed by Retzer & Page (1997).
Common names: Aguja (Venezuela), Agujeta (Venezuela)
- Farlowella amazona* (Günther, 1864)**
Acestra amazonum Günther, 1864: 261. Type locality: Santarém [Brazil]. Holotype: BMNH 1856.3.25.22.
Acestra gladiolus Günther, 1864: 261. Type locality: Rio Cupai [Brazil]. Lectotype: BMNH 1853.3.19.66, designated by Isbrücker (1979: 114).
Farlowella carinata Garman in Eigenmann & Eigenmann, 1889: 32. Type locality: Santarem, Teffé, Gurupa, Obidos, Juthay, Tabatinga [restricted to Gurupá, Brazil]. Lectotype: MCZ 9830, designated by Isbrücker (1979: 114).
Farlowella pseudogradiolus Steindachner, 1910c: 405, figured on p. 405. Type locality: Amazonenstromes ohne nähere Angabe des Fundortes, wahrscheinlich aus dem Rio negro. Holotype: NMW 46498.
Farlowella paranaense Meinken, 1937: 78. Type locality: mittleren Paraná-gebiete [Argentina]. Holotype: lost in WW II (Eschmeyer 1998).
Farlowella pleurotaenia Miranda Ribeiro, A., 1939: 360. Type locality: Pará [Brazil]. Holotype: MNRJ 758.
Farlowella oliveirae Miranda Ribeiro, A., 1939: 359. Type locality: Pará [Brazil]. Holotype: MNRJ 757.
Maximum length: 22.5 cm SL
Distribution: South America: Amazon, Tocantins, and La Plata River basins.
Countries: Argentina, Brazil
Remarks and references: Species redescribed by Retzer & Page (1997).
- Farlowella colombiensis* Retzer & Page, 1997**
Farlowella colombiensis Retzer & Page, 1997: 62, fig. 33. Type locality: Colombia, Meta Department, area of Guaicaramo, Río Upia drainage. Holotype: SU 23733.
Maximum length: 16 cm SL
Distribution: South America: Orinoco River drainage, Meta River basin.
Countries: Colombia
- Farlowella curtirostra* Myers, 1942**
Farlowella curtirostra Myers, 1942: 102, fig. 11. Type locality: Quebrada Tabor, tributary of the Río Motatan system, 30 km north of Trujillo, Maracaibo basin, Venezuela. Holotype: SU 36508.
Maximum length: 15 cm SL
Distribution: South America: Lake Maracaibo drainage.
Countries: Venezuela
Remarks and references: Species redescribed by Retzer & Page (1997).
Common names: Aguja (Venezuela), Agujeta (Venezuela)
- Farlowella gracilis* Regan, 1904**
Farlowella gracilis Regan, 1904: 303, pl. 20 (fig. 3). Type locality: Río Caqueta, Cauca Valley, s. Colombia. Holotype: BMNH 1902.5.29.180.
Farlowella boliviana Steindachner, 1910c: 404. Type locality: Kolombien. Holotype: NMW (apparently lost, Isbrücker (1979: 114)).
Maximum length: 17.8 cm SL
Distribution: South America: Caqueta River basin, Upper Amazon River basin.
Countries: Colombia
Remarks and references: Species redescribed by Retzer & Page (1997).

***Farlowella hahni* Meinken, 1937**

Farlowella hahni Meinken, 1937: 77, fig. 2. Type locality: Río Paraná, ca. 2 km east of Ayolas, 27°24'S, 56°46'W, Misiones Dept., Paraguay. Neotype: UMMZ 228132, designated by Retzer & Page (1997: 76).

Maximum length: 20.1 cm SL

Distribution: South America: Middle Paraná River basin.

Countries: Argentina, Paraguay

Remarks and references: Species redescribed by Retzer & Page (1997).

***Farlowella hasemani* Eigenmann & Vance, 1917**

Farlowella hasemani Eigenmann & Vance, 1917: 301, pl. 30 (figs. 1-2). Type locality: Para [Brazil]. Holotype: FMNH 55089 [ex CM 3781a].

Maximum length: 17 cm SL

Distribution: South America: Pará State.

Countries: Brazil

Remarks and references: Species redescribed by Retzer & Page (1997).

***Farlowella henriquei* Miranda Ribeiro, 1918**

Farlowella henriquei Miranda Ribeiro, 1918: 636. Type locality: Rio Vermelho, aff do Araguaia (Sta. Rita das Antas) [Brazil]. Holotype: MZUSP 2159.

Maximum length: 16.5 cm SL

Distribution: South America: Araguaia River basin.

Countries: Brazil

Remarks and references: Species redescribed by Retzer & Page (1997).

***Farlowella isbruckeri* Retzer & Page, 1997**

Farlowella isbruckeri Retzer & Page, 1997: 55, fig. 24. Type locality: Brazil, Mato Grosso State, small river on highway from Cuibá to Porto Velho, approximately 32 km from Lacerda. Holotype: MZUSP 37641.

Maximum length: 13.4 cm SL

Distribution: South America: Upper Paraguay River basin.

Countries: Brazil

***Farlowella jauruensis* Eigenmann & Vance, 1917**

Farlowella jauruensis Eigenmann & Vance, 1917: 300, pl. 30 (fig. 3). Type locality: Jaura [Brazil]. Holotype: FMNH 55088 [ex CM 3780].

Maximum length: 13 cm SL

Distribution: South America: Upper Paraguay River basin.

Countries: Brazil

Remarks and references: Species redescribed by Retzer & Page (1997).

***Farlowella knerii* (Steindachner, 1882)**

Acestra knerii Steindachner, 1882a: 177. Type locality: Canelos [Ecuador]. Lectotype: NMW 47796, designated by Isbrücker (1979: 114).

Maximum length: 16.2 cm SL

Distribution: South America: Upper Amazon River drainage, Napo and Pastaza River basins.

Countries: Ecuador

Remarks and references: Species redescribed by Retzer & Page (1997).

Common names: Palito (Ecuador)

***Farlowella mariaelenae* Martín Salazar, 1964**

Farlowella mariaelenae Martín Salazar, 1964: 246, fig. 1. Type locality: río Salinas, brazo del río Pao Viejo, al noreste de El Baúl, brazo del río Portuguesa, Edo. Cojedes [Venezuela]. Holotype: MBUCV-V-11938 [ex AFY 50.060].

Maximum length: 17 cm SL

Distribution: South America: Western Orinoco River basin and,

possibly, Caribbean coastal rivers.

Countries: Venezuela

Remarks and references: Species redescribed by Retzer & Page (1997).

Common names: Aguja (Venezuela), Agujeta (Venezuela)

***Farlowella martini* Fernández-Yépez, 1972**

Farlowella martini Fernández-Yépez, 1972: 22, pl. 15. Type locality: la Estación 114 del Complejo Hidrográfico (04) "Río Yacucuy" [Coastal Caribbean drainage, Venezuela]. Syntypes: 2 (male and female "holotypes", whereabouts unknown).

Maximum length: 17 cm SL

Distribution: South America: Caribbean coastal rivers in Venezuela.

Countries: Venezuela

Remarks and references: Species redescribed by Retzer & Page (1997).

***Farlowella nattereri* Steindachner, 1910**

Farlowella nattereri Steindachner, 1910: 403c, figured on p. 404. Type locality: Aus dem mittleren Amazonas-Gebiete ohne nähere Angabe des Fundortes, wahrscheinlich aus dem Rio negro. Holotype: NMW 46497.

Farlowella hargreavesi Eigenmann, 1912b: 252, pl. 32 (fig. 3). Type locality: British Guiana. Holotype: Museum of Georgetown (apparently lost).

Farlowella azygia Eigenmann & Vance, 1917: 299, pl. 29 (figs. 1-2). Type locality: Santarem. Holotype: FMNH 55091 [ex CM 3782].

Farlowella acestrichthys Pearson, 1924: 25, pl. 8 (fig. 2). Type locality: Rurrenabaque, Bolivia. Syntypes: CAS 77322 (2), UMMZ 66480 (1).

Maximum length: 26.5 cm SL

Distribution: South America: Upper Amazon and Essequibo River basins.

Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru

Remarks and references: Species redescribed by Retzer & Page (1997).

***Farlowella odontotumulus* Retzer & Page, 1997**

Farlowella odontotumulus Retzer & Page, 1997: 57, fig. 28. Type locality: Ecuador, Sucumbios Province, Río Aguarico, 4.7 km north of Lago Agrio at bridge on road to El Conejo, 0°07'42"S, 76°52'42"W. Holotype: FMNH 99135.

Maximum length: 17.5 cm SL

Distribution: South America: Aguarico River basin in Ecuador and Mavaca River basin in Venezuela.

Countries: Ecuador, Venezuela

***Farlowella oxyrryncha* (Kner, 1853)**

Acestra oxyrryncha Kner, 1853: 13, 31, pl. 8 (fig. 2). Type locality: Rio Mamoré -- Cachoeira da Bananeira [Brazil]. Holotype: NMW 47797. Name spelled *oxyrrhyncha* in figure captions, *oxyrryncha* in text; first reviser apparently Isbrücker (1980).

Acestra gladius Boulenger, 1898: 425, pl. 41 (fig. 2). Type locality: Rio Jurua [Brazil]. Lectotype: BMNH 1897.12.1.80, designated by Isbrücker (1979: 114).

Maximum length: 23 cm SL

Distribution: South America: Amazon and Orinoco River basins; coastal rivers of NE Brazil.

Countries: Bolivia, Brazil, Ecuador, Peru, Venezuela

Remarks and references: Species redescribed by Retzer & Page (1997).

Common names: Palito (Ecuador), Shitari (Peru)

***Farlowella paraguayensis* Retzer & Page, 1997**

Farlowella paraguayensis Retzer & Page, 1997: 78, fig. 54. Type locality: Paraguay, Canendiyu Department, Arroyo Carimbatay, 15.6 km WSW Curuguaty, 24°31'06"S, 56°43'30"W. Holotype: UMMZ 228129.

Maximum length: 17.5 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil, Paraguay

***Farlowella platyrhyncha* Retzer & Page, 1997**

Farlowella platyrhynchus Retzer & Page, 1997: 71, fig. 44. Type locality: Peru, Ucayali Department, Pucallpa, Yarinachocha, Río Ucayali drainage, 8°23'S, 74°32'W. Holotype: MHNG 2389.57.

Maximum length: 19.4 cm SL

Distribution: South America: Upper and lower Amazon River basin.

Countries: Brazil, Peru

***Farlowella reticulata* Boeseman, 1971**

Farlowella reticulata Boeseman, 1971: 37, pl. 7 (right). Type locality: Maka Creek, left tributary of the Lawa River 10 km S of Stoelmanseiland, Marowijne River basin, Surinam. Lectotype: ZMA 106174, designated by Isbrücker (1979: 114).

Maximum length: 15.3 cm SL

Distribution: South America: Essequibo, Marowijne, and Oyapock River basins.

Countries: French Guiana, Guyana, Suriname

Remarks and references: Species redescribed by Retzer & Page (1997) and le Bail et al. (2000).

Common names: Goré-zégwi (French Guiana), Santiwipi (French Guiana), Teyoupétin (French Guiana)

***Farlowella rugosa* Boeseman, 1971**

Farlowella rugosa Boeseman, 1971: 40, pl. 7 (middle). Type locality: Kamaloea (or Saloea) Creek, right tributary of the Marowijne River, 9 km SE of the outlet of Gran Creek, French Guyane. Lectotype: ZMA 106208, designated by Isbrücker (1979: 114).

Farlowella parvicarinata Boeseman, 1971: 42, pl. 7 (left). Type locality: Right tributary of the Nickerie River, 12 km WSW of Stondansie Falls, Surinam. Lectotype: ZMA 105823, designated by Isbrücker (1979: 114).

Maximum length: 21.4 cm SL

Distribution: South America: Essequibo, Marowijne, and Corantijn River basins.

Countries: French Guiana, Guyana, Suriname

Remarks and references: Species redescribed by Retzer & Page (1997).

Common names: Goré-zégwi (French Guiana), Santiwipi (French Guiana), Teyoupétin (French Guiana)

***Farlowella schreitmülleri* Ahl, 1937**

Farlowella schreitmülleri Ahl, 1937: 446. Type locality: Santarem [Brazil]; Lectotype ZMB 20956, designated by Isbrücker (1979: 114).

Farlowella latisoma Miranda Ribeiro, A., 1939: 361. Type locality: Oriximiná Amazonas [Brazil]. Holotype: MNRJ 761.

Maximum length: 18.1 cm SL

Distribution: South America: Lower Amazon River basin.

Countries: Brazil

Remarks and references: Species redescribed by Retzer & Page (1997).

***Farlowella smithi* Fowler, 1913**

Farlowella smithi Fowler, 1913: 574, fig. 24. Type locality: Rio Madeira, about 200 miles east of W. Long. 62°20', Brazil. Holotype: ANSP 39313.

Maximum length: 10 cm SL

Distribution: South America: Middle Madeira River basin.

Countries: Brazil

Remarks and references: Species redescribed by Retzer & Page (1997).

***Farlowella taphorni* Retzer & Page, 1997**

Farlowella taphorni Retzer & Page, 1997: 51, fig. 19. Type local-

ity: Venezuela, Merida State, Río Muyapas (Río Torondoy-Lago Maracaibo drainage), 4.5 km S of Nueva Bolívai on highway 1. Holotype: INHS 60352.

Maximum length: 13.5 cm SL

Distribution: South America: Torondoy River basin, Maracaibo Lake drainage.

Countries: Venezuela

***Farlowella venezuelensis* Martín Salazar, 1964**

Farlowella acus venezuelensis Martín Salazar, 1964: 250. Type locality: río Colorado, de la Hoya del río Guarapiche, en San Antonio de Maturín, Monagas [Venezuela]. Lectotype: MBUCV-V-26150, designated by Retzer & Page (1997: 64).

Maximum length: 19.8 cm SL

Distribution: South America: Guarapiche River basin, lower Orinoco River basin.

Countries: Venezuela

Remarks and references: Species redescribed by Retzer & Page (1997).

Common names: Aguja (Venezuela), Agujeta (Venezuela)

***Farlowella vittata* Myers, 1942**

Farlowella vittata Myers, 1942: 103, fig. 12. Type locality: tributaries of the Río Uribanto, from San Cristobal to Ilanos, Venezuela. Holotype: SU 36512.

Farlowella angosturae Martín Salazar, 1964: 251, fig. 3. Type locality: Caño Largo al oeste de Ciudad Bolívar, Edo. Bolívar [Venezuela]. Holotype: MBUCV-V-11939.

Farlowella agustini Martín Salazar, 1964: 254, fig. 5. Type locality: Una quebrada límite entre los Estados Cojedes y Carabobo, carretera Campo Carabobo Taguanes, afluente del río Chirigua que a su vez lo es del río Pao [Venezuela]. Holotype: MBUCV-V-11940.

Farlowella guaricensis Martín Salazar, 1964: 253, fig. 4. Type locality: Río Guárico, en el puente de Uverito, carretera San Juan de Los Morros a Ortiz, Guárico [Venezuela]. Holotype: MBUCV-V-11941.

Farlowella roncallii Martín Salazar, 1964: 258, fig. 6. Type locality: la quebrada El Ahorcado Aguirre, afluente del Río Tirgua Carabobo [Venezuela]. Holotype: MBUCV-V-11949.

Maximum length: 22.5 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

Remarks and references: Species redescribed by Retzer & Page (1997).

Common names: Aguja (Venezuela), Agujeta (Venezuela)

FURCODONTICHTHYS

Furcodontichthys Rapp Py-Daniel, 1981: 2. Type species: *Furcodontichthys novaesi* Rapp Py-Daniel, 1981. Type by original designation. Gender: masculine.

***Furcodontichthys novaesi* Rapp Py-Daniel, 1981**

Furcodontichthys novaesi Rapp Py-Daniel, 1981: 4, figs. 1-6. Type locality: rio Solimões, lago Tefé, Caititu, Amazonas, Brasil. Holotype: INPA T.79-014.

Maximum length: 10.2 cm SL

Distribution: South America: Solimões River basin.

Countries: Brazil

HARTTIA

Harttia Steindachner, 1877: 668. Type species: *Harttia loricariiformis* Steindachner, 1877. Type by monotypy. Gender: feminine.

Quiritixys Isbrücker, in Isbrücker et al., 2001: 21. Type species: *Harttia leiopleura* Oyakawa, 1993. Type by original designation. Gender: feminine.

***Harttia carvalhoi* Miranda Ribeiro, 1939**

Harttia carvalhoi Miranda Ribeiro, P., 1939: 11, pl. 2 (upper).
Type locality: Rio Paquequer, Estado do Rio de Janeiro [Brazil].
Syntypes: MNRJ (?).
Maximum length: 7.1 cm SL
Distribution: South America: Paquequer River basin in Paraíba do Sul River drainage.
Countries: Brazil

***Harttia depressa* Rapp Py-Daniel & Oliveira, 2001**

Harttia depressa Rapp Py-Daniel & Oliveira, 2001: 87, fig. 5.
Type locality: Brazil: Amazonas, rio Pitinga, rio Uatumã basin, below the Paranapanema Enterprise dam, Cachoeira 40 Ilhas (59°34'24"W, 0°53'20"S). Holotype: INPA 3901.
Maximum length: 12.6 cm SL
Distribution: South America: Uatumã River basin.
Countries: Brazil

***Harttia dissidens* Rapp Py-Daniel & Oliveira, 2001**

Harttia dissidens Rapp Py-Daniel & Oliveira, 2001: 91, fig. 8.
Type locality: Brazil: Pará: rio Tapajós, Pimental (56°15'16"W, 4°35'22"S). Holotype: INPA 7739.
Maximum length: 15.2 cm SL
Distribution: South America: Tapajós River basin.
Countries: Brazil

***Harttia duriventris* Rapp Py-Daniel & Oliveira, 2001**

Harttia duriventris Rapp Py-Daniel & Oliveira, 2001: 84, fig. 3.
Type locality: Brazil: Pará: rio Tocantins, Igarapé Bacuri (49°30'32"W, 4°29'44"S). Holotype: INPA 2833.
Maximum length: 12.8 cm SL
Distribution: South America: Tocantins River basin, above Tucuruí dam.
Countries: Brazil

***Harttia garavelloi* Oyakawa, 1993**

Harttia garavelloi Oyakawa, 1993: 13, fig. 4. Type locality: Rio Fanado, ponte de cidade de Minas Novas, 17°15'S, 42°35'W, MG [Brazil]. Holotype: MZUSP 43266.
Maximum length: 8.6 cm SL
Distribution: South America: Fanado and Araçuaí River basins.
Countries: Brazil

***Harttia gracilis* Oyakawa, 1993**

Harttia gracilis Oyakawa, 1993: 16, fig. 5. Type locality: Riacho afluente dos rio São João município de Fortaleza de Minas, próximo à estrada de ferro Minas-Perobas, 20°58'S, 46°47'W, MG [Brazil]. Holotype: MZUSP 43267.
Maximum length: 10.1 cm SL
Distribution: South America: São João and upper Paraná River basin, Brazil.
Countries: Brazil

***Harttia guianensis* Rapp Py-Daniel & Oliveira, 2001**

Harttia guianensis Rapp Py-Daniel & Oliveira, 2001: 88, fig. 6.
Type locality: French Guiana: Approuague River, Saut Athanase (52°1'W, 4°11'N). Holotype: MNHN 1998-0395.
Maximum length: 17.5 cm SL
Distribution: South America: Sinnamary and Approuague River basins.
Countries: Brazil

***Harttia kronei* Miranda Ribeiro, 1908**

Harttia kronei Miranda Ribeiro, 1908: [2], figs. 3-3a. Type locality: Rio Bethary [Brazil]. Lectotype: MNRJ 713A, designated by Miranda Ribeiro (1953: 400).
Maximum length: 12 cm SL
Distribution: South America: Ribeira de Iguape River basin.
Countries: Brazil

***Harttia leiopleura* Oyakawa, 1993**

Harttia leiopleura Oyakawa, 1993: 5, fig. 1. Type locality: Riacho afluente do Córrego Mutuca, à direita da estrada Belo Horizonte Nova Lima, km 20, 20°60'S, 43°55'W, bacia do rio das Velhas MG [Brazil]. Holotype: MZUSP 43264.
Maximum length: 5.7 cm SL
Distribution: South America: Das Velhas River basin.
Countries: Brazil

***Harttia longipinna* Langeani, Oyakawa & Montoya-Burgos, 2001**

Harttia longipinna Langeani, Oyakawa & Montoya-Burgos, 2001: 137, fig. 1. Type locality: Brazil: Minas Gerais State: rio Pará, bridge on road BR 262 between Nova Serrana and Pará de Minas, approximately 19°53'S, 44°52'W. Holotype: MZUSP 54579.
Maximum length: 10.7 cm SL
Distribution: South America: Upper São Francisco River basin.
Countries: Brazil

***Harttia loricariformis* Steindachner, 1877**

Harttia loricariformis Steindachner, 1877: 669, pl. 6 (figs. 2, 2a-b). Type locality: Oberer Lafu des Rio Parahyba und dessen Nebenflüsse. Lectotype: NMW 46346, designated by Isbrücker (1979: 113).
Maximum length: 13 cm SL
Distribution: South America: Paraíba do Sul River basin.
Countries: Brazil

***Harttia novalimensis* Oyakawa, 1993**

Harttia novalimensis Oyakawa, 1993: 8, fig. 2. Type locality: Riacho afluente do Córrego Mutuca, à direita da estrada Belo Horizonte Nova Lima, km 20, 20°60'S, 43°55'W, bacia do rio das Velhas, MG [Brazil]. Holotype: MZUSP 43262.
Maximum length: 5.8 cm SL
Distribution: South America: Das Velhas River basin.
Countries: Brazil

***Harttia punctata* Rapp Py-Daniel & Oliveira, 2001**

Harttia punctata Rapp Py-Daniel & Oliveira, 2001: 82, fig. 2.
Type locality: Brazil: Pará: rio Tocantins, on rocks just below the Tucuruí dam (49°38'10"W, 3°49'43"S). Holotype: INPA 4714.
Maximum length: 13.3 cm SL
Distribution: South America: Upper and middle Tocantins River basin.
Countries: Brazil

***Harttia rhombocephala* Miranda Ribeiro, 1939**

Harttia rhombocephala Miranda Ribeiro, P., 1939: 11, pl. 2 (lower). Type locality: Rio Farias [Brazil]. Holotype: MNRJ (?).
Distribution: South America: Farias River basin.
Countries: Brazil

***Harttia surinamensis* Boeseman, 1971**

Harttia surinamensis Boeseman, 1971: 28, pl. 3. Type locality: Grandam, Gran Rio, upper Suriname River, Surinam. Holotype: RMNH 26388 (188 mm specimen). Holotype apparently not separated from paratypes.
Maximum length: 18.8 cm SL
Distribution: South America: Coastal rivers from Suriname River east to Approuague River.
Countries: French Guiana, Suriname
Remarks and references: Species redescribed by le Bail et al. (2000).
Common names: Acari (Brazil), Achiwa (French Guiana), Cachimbo (Brazil), Chichiwa (French Guiana), Goré (French Guiana), Lapipi (French Guiana), Santiwipi (French Guiana), Sisiwa (French Guiana)

***Harttia torrenticola* Oyakawa, 1993**

Harttia torrenticola Oyakawa, 1993: 10, fig. 3. Type locality: Riacho afluente do rio Paraopebá, Água Limpa, município de Noeda, 3 km da BR 040, acima das cachoeiras, 44°02'W, 20°20'S, bacia do rio São Francisco, MG [Brazil]. Holotype: MZUSP 43283.

Maximum length: 7.7 cm SL

Distribution: South America: Upper São Francisco River basin.

Countries: Brazil

***Harttia trombetensis* Rapp Py-Daniel & Oliveira, 2001**

Harttia trombetensis Rapp Py-Daniel & Oliveira, 2001: 89, fig. 7. Type locality: Brazil: Pará: rio Trombetas, Cachoeira Viramundo (57°03'38''W, 1°02'04''S). Holotype: INPA 4715.

Maximum length: 17.6 cm SL

Distribution: South America: Trombetas River basin, above Cachoeira Porteira falls.

Countries: Brazil

***Harttia uatumensis* Rapp Py-Daniel & Oliveira, 2001**

Harttia uatumensis Rapp Py-Daniel & Oliveira, 2001: 85, fig. 4. Type locality: Brazil: Amazonas: rio Uatumã, at Santa Luzia (59°28'36''W, 1°50'13''S). Holotype: INPA 2974.

Maximum length: 11.9 cm SL

Distribution: South America: Uatumã River basin.

Countries: Brazil

HARTTIELLA

Harttiella Boeseman, 1971: 25. Type species: *Harttia crassicauda* Boeseman, 1953. Type by original designation. Gender: feminine.

***Harttiella crassicauda* (Boeseman, 1953)**

Harttia crassicauda Boeseman, 1953: 10, fig. 2. Type locality: Nassau Mountains, in creek [Suriname]. Holotype: RMNH 19418 (largest of 15 specimens). Holotype apparently not separated from paratypes.

Maximum length: 4.9 cm SL

Distribution: South America: Marowijne River basin.

Countries: Suriname

Remarks and references: Species redescribed by le Bail et al. (2000).

HEMIODONTICHTHYS

Hemiodontichthys Bleeker, 1862b: 4. Type species: *Hemiodon acipenserinus* Kner, 1853. Type by original designation. Gender: masculine.

***Hemiodontichthys acipenserinus* (Kner, 1853)**

Hemiodon acipenserinus Kner, 1853: 12, 28, pl. 7 (fig. 2a-c). Type locality: Rio Guaporé, Matogrosso (Juquia) [Brazil]. Lectotype: NMW 46139, designated by Isbrücker & Nijssen (1974b: 204). Originally as *Hem. acipenserinus*.

Maximum length: 13.4 cm SL

Distribution: South America: Amazon, Essequibo, Oyapock, and Paraguay River basins.

Countries: Bolivia, Brazil, French Guiana, Guyana, Peru

Remarks and references: Species redescribed by le Bail et al. (2000).

Common names: Shitari (Peru)

IXINANDRIA

Ixinandria Isbrücker & Nijssen in Isbrücker, 1979: 91. Type species: *Loricaria steinbachi* Regan, 1906. Type by original designation. Gender: feminine.

***Ixinandria montebelloi* (Fowler, 1940)**

Canthopomus montebelloi Fowler, 1940b: 55, fig. 10. Type locality: Monte Bello, Tarija, Bolivia. Holotype: ANSP 68832.

Maximum length: 8.5 cm SL

Distribution: South America: Southern Bolivia.

Countries: Bolivia

***Ixinandria steinbachi* (Regan, 1906)**

Loricaria Steinbachi Regan, 1906: 97. Type locality: Salta, Argentina. Lectotype: BMNH 1906.5.31.37, designated by Isbrücker (1979: 113).

Maximum length: 10 cm SL

Distribution: South America: Salado River basin.

Countries: Argentina

Remarks and references: Species reviewed by Ringulet et al. (1967).

Common names: Vieja, Vieja de agua (Argentina)

LAMONTICHTHYS

Lamontichthys Miranda Ribeiro, P., 1939: 12. Type species: *Harttia filamentosa* La Monte, 1935. Type by original designation. Gender: masculine.

***Lamontichthys filamentosus* (La Monte, 1935)**

Harttia filamentosa La Monte, 1935: 5, fig. 4. Type locality: Brazilian Amazonas, Rio Jurua, in the vicinity of the mouth of the Rio Embira, a tributary of Rio Tarauaca, which, in turn, is a tributary of Rio Jurua, 70°15'W, 7°30'S. Holotype: AMNH 12616. *Harttia filamentissima* Eigenmann & Allen, 1942: 211, pl. 8 (figs. 1-2). Type locality: Rio Huallaga [Peru]. Holotype: CAS 28541 [ex IU 15378].

Maximum length: 16.7 cm SL

Distribution: South America: Western Amazon River basin.

Countries: Bolivia, Brazil, Peru

Common names: Raspabalsa (Ecuador), Shitari (Peru)

***Lamontichthys llanero* Taphorn & Lilyestrom, 1984**

Lamontichthys llanero Taphorn & Lilyestrom, 1984: 96, fig. 2. Type locality: Venezuela, Estado Portuguesa, Río Guanare Viejo cerca de Hoyada. Holotype: MCNG 10000.

Maximum length: 20.2 cm SL

Distribution: South America: Guanare Viejo River basin, Orinoco River drainage.

Countries: Venezuela

***Lamontichthys maracaibero* Taphorn & Lilyestrom, 1984**

Lamontichthys maracaibero Taphorn & Lilyestrom, 1984: 94, fig. 1. Type locality: Venezuela, Estado Zulia, Distrito Miranda, Río Motatán, en el puente en Agua Viva. Holotype: MCNG 3592.

Maximum length: 18.5 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

***Lamontichthys stibaros* Isbrücker & Nijssen, 1978**

Lamontichthys stibaros Isbrücker & Nijssen, 1978a: 66, fig. 8. Type locality: Ecuador, Prov. Pastaza, Río Amazonas system, Río Bobonaza at Chicherota, 2°25'S, 76°38'W, altitude approximately 260-280 m., upper Río Pastaza. Holotype: USNM 167914.

Maximum length: 24.2 cm SL

Distribution: South America: Bobonaza River basin.

Countries: Ecuador

Common names: Raspabalsa (Ecuador)

LIMATULICHTHYS

Limatulichthys Isbrücker & Nijssen in Isbrücker, 1979: 91. Type species: *Loricaria punctata* Regan, 1904. Type by original designation. Gender: masculine.

***Limatulichthys griseus* (Eigenmann, 1909)**

Loricaria punctata Regan, 1904: 285, pl. 17 (fig. 1). Type locality: Manaos, Rio Negro, middle Amazon, and Porto do Moz, lower Amazon. Syntypes: BMNH 1893.4.24.18, and MCZ (?). Preoccupied by *Loricaria punctata* Kner, 1854 [now *Glyptoperichthys punctatus*], apparently not replaced.

Loricaria griseus Eigenmann, 1909: 8. Type locality: Conawaruk [=Konawaruk, Guyana]. Holotype: FMNH 53077 [ex CM 1504].

Rhineloricaria petleyi Fowler, 1940a: 243, figs. 36-38. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68661.

Loricariichthys parnahybae Fowler, 1941: 161, fig. 70. Type locality: Rio Parnahyba, Therizina, Piauhy [Brazil]. Holotype: ANSP 69451.

Maximum length: 18 cm SL

Distribution: South America: Amazon, Tocantins, Essequibo, western Orinoco, and Parnafba River basins.

Countries: Brazil, Colombia, Ecuador, Guyana, Peru

Remarks and references: Synonymy follows Isbrücker (1980).

Common names: Carachama (Ecuador)

LORICARIA

Loricaria Linnaeus, 1758: 307. Type species: *Loricaria cataphracta* Linnaeus, 1758. Type by monotypy. Gender: feminine.

Fusiloricaria Fowler, 1940a: 247. Type species: *Loricaria (Fusiloricaria) clavipinna* Fowler, 1940. Type by original designation. Gender: feminine. Originally proposed as a subgenus of *Loricaria*.

Prolicoricaria Isbrücker, in Isbrücker et al., 2001: 21. Type species: *Loricaria prolixa* Isbrücker & Nijssen, 1978. Type by original designation. Gender: feminine.

***Loricaria apeltogaster* Boulenger, 1895**

Loricaria apeltogaster Boulenger, 1895: 528. Type locality: Paraguay. Lectotype: BMNH 1895.5.17.105, designated by Isbrücker (1979: 110).

Maximum length: 26 cm SL

Distribution: South America: Uruguay, Paraná and Paraguay River basins.

Countries: Argentina, Brazil, Paraguay

***Loricaria cataphracta* Linnaeus, 1758**

Loricaria cataphracta Linnaeus, 1758: 307. Type locality: In America meridionali. Lectotype: NRM 33, designated by Isbrücker (1979: 110). Earlier neotype designation by Isbrücker (1972: 173) invalidated by rediscovery of syntype series.

Loricaria cirrhosa Bloch & Schneider, 1801: 125, pl. 34. Type locality: America meridionali. Lectotype: ZMB 3160, designated by Isbrücker (1972: 170).

Loricaria setifera La Cépède, 1803: 140, 141. Type locality: In America meridionali. Holotype: NRM 33. Unneeded new name for *Loricaria cataphracta* Linnaeus.

Loricaria Dentata Shaw, 1804: 37. Type locality: Indian Seas, in error [South America]. Types: On Gronovius (1763: 127, pl. 2, figs. 1-2), Bloch (1794 pl. 375, figs. 3-4), and *Loricaria cataphracta* Linnaeus.

Plecostomus flagellaris Gronow in Gray, 1854: 158. Type locality: Surinam. Holotype: BMNH 1863.11.12.195 (dorsal surface of body) and 196 (ventral surface).

Loricaria carinata Castelnau, 1855: 46, pl. 23 (fig. 3). Type locality: De la rivières Amazones. Holotype: MNHN A.9562.

Loricaria dura Bleeker, 1862b: 3. Type locality: Surinam. Holotype: NRM 33. Unneeded new name for *Loricaria cataphracta* Linnaeus.

Maximum length: 29.5 cm SL

Distribution: South America: Amazon River basin, and coastal rivers of the Guianas.

Countries: Brazil, French Guiana, Guyana, Suriname

Remarks and references: Species redescribed by le Bail et al. (2000).

Common names: Acari (Brazil), Achiwa (French Guiana), Atomba (French Guiana), Cachimbo (Brazil), Chichiwa (French Guiana), Goré-fwèt (French Guiana), Krakakoe (French Guiana), Lapipi (French Guiana), Santipiwi (French Guiana), Sinwa (French Guiana), Sisiou (French Guiana), Tatoulouway (French Guiana)

***Loricaria clavipinna* Fowler, 1940**

Loricaria clavipinna Fowler, 1940a: 247, fig. 46. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68665.

Maximum length: 18 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Common names: Shitari (Peru)

***Loricaria lata* Eigenmann & Eigenmann, 1889**

Loricaria lata Eigenmann & Eigenmann, 1889: 36. Type locality: Goyaz [Brazil]. Lectotype: MCZ 46721, designated by Isbrücker (1972: 179).

Maximum length: 27 cm SL

Distribution: South America: Araguaia River basin.

Countries: Brazil

***Loricaria lentiginosa* Isbrücker, 1979**

Loricaria prolixa lentiginosa Isbrücker, 1979: 97, fig. 9. Type locality: Brésil, Est. Sao Paulo, haut bassin du Rio Parana, Represa de Volta Grande, Rio Grande [Brazil]. Holotype: MZUSP 13188.

Maximum length: 29 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

***Loricaria nickeriensis* Isbrücker, 1979**

Loricaria nickeriensis Isbrücker, 1979: 97, figs. 11-13. Type locality: Surinam, district Nickerie, rapide dans la rivièr Fallawatra, 5 km SSW des chutes Stondansie. Holotype: ZMA 107561.

Maximum length: 12 cm SL

Distribution: South America: Nickerie and Marowijne River basins.

Countries: French Guiana, Suriname

***Loricaria parnahybae* Steindachner, 1907**

Loricaria parnahybae Steindachner, 1907a: 153. Type locality: dem Rio Parnahyba an der Mündung eines Baches bei Victoria [Brazil]. Lectotype: NMW 44854, designated by Isbrücker (1979: 110).

Loricaria piauhybae Fowler, 1941: 163, fig. 73. Type locality: Rio Parnahyba, Therezina, Piauhy [Brazil]. Holotype: ANSP 69452.

Maximum length: 16 cm SL

Distribution: South America: Coastal rivers of NE Brazil and French Guiana.

Countries: Brazil, French Guiana

Common names: Achiwa (French Guiana), Goret fouet (French Guiana)

***Loricaria piracicabae* Ihering, 1907**

Loricaria piracicabae Ihering, 1907: 28. Type locality: Piracicaba, Piracicaba River, State of S. Paulo [Brazil]. Holotype: MZUSP 2182.

Maximum length: 17 cm SL

Distribution: South America: Piracicaba River basin.

Countries: Brazil

***Loricaria prolixa* Isbrücker & Nijssen, 1978**

Loricaria prolixa Isbrücker & Nijssen, 1978b: 188, fig. 5. Type locality: Brazil, Est. São Paulo, Rio Piracicaba through River Tietê, Rio Paraná system [Piracicaba 22°45'S, 47°40'W]. Holotype: NMW 45091.

Maximum length: 35 cm SL

Distribution: South America: Upper Paraná River drainage, La Plata basin.
Countries: Brazil

***Loricaria simillima* Regan, 1904**

Loricaria simillima Regan, 1904: 292, pl. 17 (fig. 2). Type locality: Canelos, e. Ecuador. Lectotype: BMNH 1880.12.8.77, designated by Isbrücker (1979: 110).

Maximum length: 18 cm SL

Distribution: South America: Amazon, Orinoco and La Plata River basins.

Countries: Argentina, Brazil, Ecuador, Paraguay, Peru, Venezuela
Common names: Carachama (Ecuador), Paleta (Venezuela), Shitari (Peru), Tabla (Venezuela)

***Loricaria tucumanensis* Isbrücker, 1979**

Loricaria tucumanensis Isbrücker, 1979: 98, fig. 14. Type locality: Argentine, Prov. Tucuman, San Miguel de Tucuman, 26°47'S, 65°15'W (Rio Sali ?). Holotype: USNM 88669.

Maximum length: 12 cm SL

Distribution: South America: Dulce River basin.

Countries: Argentina

LORICARIICHTHYS

Plecostomus Swainson, 1839: 304. Type species: *Loricaria maculata* Bloch, 1794. Type by monotypy. Gender: masculine. Pre-dates *Loricariichthys* Bleeker, but not treated as valid since before 1899 and, therefore, permanently suppressed.

Loricariichthys Bleeker, 1862b: 3. Type species: *Loricaria maculata* Bloch, 1794. Type by original designation. Gender: masculine.

Parahemiodon Bleeker, 1862a: 373. Type species: *Parahemiodon typus* Bleeker, 1862. Type by original designation. Gender: masculine.

***Loricariichthys acutus* (Valenciennes, 1840)**

Loricaria acuta Valenciennes in Cuvier & Valenciennes, 1840: 472 (349 of Strasbourg deluxe ed.), pl. 452. Type locality: On peut croire qu'il venait du Brésil. Holotype: MNHN (apparently lost).

Maximum length: 20 cm

Distribution: South America: Brazil (?).

Countries: Brazil

***Loricariichthys anus* (Valenciennes, 1836)**

Loricaria anus Valenciennes, 1836: pl. 6 (fig. 1). Type locality: Not stated. Holotype: MNHN A.9456 or A.9455. Name made available from illustration of single specimen, which must be considered the holotype. Redescribed in Cuvier & Valenciennes (1840: 470 [p. 347 in Strasbourg deluxe ed.] from two specimens, with locality stated as: sur les bords de la rivière de La Plata près de Buénos-Ayres). Lectotype designation by Isbrücker (1979: 113) not valid.

Maximum length: 46 cm

Distribution: South America: Coastal rivers of southern Brazil, Uruguay and lower Paraná River basins.

Countries: Argentina, Brazil, Uruguay

***Loricariichthys cashibo* (Eigenmann & Allen, 1942)**

Loricaria cashibo Eigenmann & Allen, 1942: 205. Type locality: Lago Cashiboya [Peru]. Holotype: IU 15416 (not found, Isbrücker & Nijssen, 1976: 110).

Maximum length: 13 cm

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Common names: Shitari (Peru)

***Loricariichthys castaneus* (Castelnau, 1855)**

Loricaria castanea Castelnau, 1855: 46, pl. 23 (fig. 4). Type local-

ity: donné a Rio de Janeiro, comme venant des rivières du voisinage [Brazil]. Holotype: MNHN A.9561.

Loricaria Spixii Steindachner, 1881a: 97. Type locality: Rio Quenda (originally: Rio Parahyba, Santa Cruz, Rio Quenda, Rio Muriahe, Sao Matheos, Sambaia, Rio Grande do Sul). Lectotype: NMW 45113, designated by Isbrücker (1979: 113). Illustrated and described in more detail in Steindachner (1881b:4, pl. 2 (figs. 1-1b)).

Maximum length: 25 cm

Distribution: South America: Coastal streams of SE Brazil between southern São Paulo and northern Espírito Santo, including the Paraíba do Sul River basin.

Countries: Brazil

***Loricariichthys chanjoo* (Fowler, 1940)**

Parahemiodon chanjoo Fowler, 1940a: 240, fig. 32. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68656.

Maximum length: 23 cm

Distribution: South America: Ucayali River basin.

Countries: Peru

Common names: Shitari (Peru)

***Loricariichthys derbyi* Fowler, 1915**

Loricariichthys derbyi Fowler, 1915a: 267, fig. 4. Type locality: Rio Jaguaribe at Barro Alto, Brazil. Holotype: ANSP 39932.

Maximum length: 18 cm

Distribution: South America: Jaguaribe River basin.

Countries: Brazil

***Loricariichthys edentatus* Reis & Pereira, 2000**

Loricariichthys edentatus Reis & Pereira, 2000: 1041, fig. 8. Type locality: rio Uruguay at brazo Itape, south of Isla Canario, Concepción del Uruguay, Argentina (32°29'S, 58°14'W). Holotype: MACN 4041.

Maximum length: 11.5 cm SL

Distribution: South America: Lower Uruguay River basin.

Countries: Argentina

***Loricariichthys hauxwelli* Fowler, 1915**

Loricariichthys hauxwelli Fowler, 1915b: 238, fig. 10. Type locality: Ambyiacu River, Ecuador. Holotype: ANSP 8301.

Maximum length: 18 cm

Distribution: South America: Ampyiacu River basin.

Countries: Peru

Common names: Shitari (Peru)

***Loricariichthys labialis* (Boulenger, 1895)**

Loricaria labialis Boulenger, 1895: 527. Type locality: Paraguay. Lectotype: BMNH 1895.5.17.98, designated by Isbrücker (1979: 113).

Maximum length: 22 cm SL

Distribution: South America: Paraguay and middle Paraná River basin.

Countries: Argentina, Brazil, Paraguay

Remarks and references: Reviewed in Ringulet et al. (1967), diagnosed in Britski et al. (1999).

Common names: Acari (Brazil), Cari (Brazil), Maimingué (Argentina), Rapa-canoa (Brazil), Vieja (Argentina), Vieja de agua (Argentina)

***Loricariichthys maculatus* (Bloch, 1794)**

Loricaria maculata Bloch, 1794: 73, pl. 375 (figs. 1-2). Type locality: No locality stated. Lectotype: ZMB 3163, designated by Isbrücker (1971: 12).

Loricaria accipenser Shaw, 1804: 36. Type locality: Indian seas, in error [South America]. Types: On Bloch (1794: pl. 375, fig. 1), Gronovius (1763: 127, no. 391), and *Loricaria cataphracta* Linnaeus.

Plecostomus cataphracta Gronow in Gray, 1854: 158. Type locality: No locality stated. Neotype: ZMB 3163, designated by

Isbrücker (1971b: 15).
Loricaria amazonica Castelnau, 1855: 46, pl. 23 (fig. 2). Type locality: Not stated. Holotype: MNHN A.9560.
 ?*Parahemiodon typus* Bleeker, 1862a: 373. Type locality: Surinam. Holotype: RMNH 3121.
 ?*Loricaria parahemiodon* Günther, 1864: 258. Type locality: Surinam. Holotype: RMNH 3121. Unneeded new name for *Parahemiodon typus* Bleeker.
 Distribution: South America: Rivers of Suriname.
 Countries: Suriname

***Loricariichthys melanocheilus* Reis & Pereira, 2000**
Loricariichthys melanocheilus Reis & Pereira, 2000: 1042, fig. 9. Type locality: mouth of rio Ijuí-Mirim, tributary of rio Ijuí, Pirapó, Rio Grande do Sul, Brazil (rio Uruguay drainage, 28°03'S, 55°11'W). Holotype: MCP 16961.
 Maximum length: 20.9 cm SL
 Distribution: South America: Lower Paraná and Uruguay River basins.
 Countries: Brazil

***Loricariichthys microdon* (Eigenmann, 1909)**
Loricaria microdon Eigenmann, 1909: 7. Type locality: Rupununi [Guyana]. Holotype: FMNH 53555 [ex CM 1507].
 Maximum length: 11 cm
 Distribution: South America: Rupununi River basin.
 Countries: Guyana

***Loricariichthys nudirostris* (Kner, 1853)**
Loricaria nudirostris Kner, 1853: 12, 22, pl. 4. Type locality: Barra do Rio negro [Manaus, Brazil]. Lectotype: NMW 45092: 1, designated by Isbrücker (1979: 113). Originally as *Lor. nudirostris*.
 Maximum length: 20 cm
 Distribution: South America: Amazon River basin.
 Countries: Brazil

***Loricariichthys platymetopon* Isbrücker & Nijssen, 1979**
Loricariichthys platymetopon Isbrücker & Nijssen, 1979: 203, fig. 7. Type locality: Paraguay, Lago Ypacarai, San Bernardino, 25°16'S, 57°16'W, Río Paraguay system. Holotype: USNM 181580.
 Maximum length: 30 cm SL
 Distribution: South America: La Plata River basin.
 Countries: Argentina, Brazil, Paraguay
 Common names: Acari (Brazil), Cari (Brazil), Rapa-canoa (Brazil)

***Loricariichthys rostratus* Reis & Pereira, 2000**
Loricariichthys rostratus Reis & Pereira, 2000: 1044, fig. 10. Type locality: rio São Francisco Falso, limit between Diamante do Oeste and Santa Helena, Paraná, Brazil (upper rio Paraná drainage, 24°54'S, 54°12'W). Holotype: MCP 16962.
 Maximum length: 27.5 cm SL
 Distribution: South America: Paraná River basin, above Paraguay River mouth.
 Countries: Brazil, Paraguay

***Loricariichthys stuebelii* (Steindachner, 1882)**
Loricaria Stuebelii Steindachner, 1882a: 175. Type locality: Aus dem Huallaga [Peru]. Lectotype: NMW 45110, designated by Isbrücker (1979: 113).
 Maximum length: 19 cm SL
 Distribution: South America: Upper Amazon drainage, Huallaga River basin.
 Countries: Peru
 Common names: Shitari (Peru)

***Loricariichthys ucayalensis* Regan, 1913**
Loricariichthys ucayalensis Regan, 1913: 282. Type locality:

River Ucayali, Peru. Lectotype: BMNH 1913.7.30.36, designated by Isbrücker & Nijssen (1979: 208).
 Maximum length: 22 cm TL
 Distribution: South America: Upper Amazon drainage, Ucayali River basin.
 Countries: Peru
 Common names: Shitari (Peru)

Species inquirenda
Loricaria brunnea Hancock, 1828: 247. Type locality: Venezuela, the branches and lakes of the Orinoko [sic]. Type or types not found (Isbrücker 1979: 113).

METALORICARIA
Metaloricaria Isbrücker, 1975a: 2. Type species: *Metaloricaria paucidens* Isbrücker, 1975. Type by original designation. Gender: feminine. Genus reviewed in Isbrücker & Nijssen (1982).

***Metaloricaria nijsseni* (Boeseman, 1976)**
Hartia nijsseni Boeseman, 1976: 170, pl. 8. Type locality: Sipaliwini River, southwestern Surinam. Holotype: RMNH 27498.
 Maximum length: 29.5 cm SL
 Distribution: South America: Suriname, Saramacca, Nickerie, and Corantijn River basins.
 Countries: Suriname
 Remarks and references: Species reviewed and reassigned to *Metaloricaria* in Isbrücker & Nijssen (1982).

***Metaloricaria paucidens* Isbrücker, 1975**
Metaloricaria paucidens Isbrücker, 1975a: 2, fig. 1. Type locality: Creek at right bank of Ouauqui River, upstream of Sant Bali, French Guiana. Holotype: IRSNB 549.
 Maximum length: 27 cm SL
 Distribution: South America: Oyapock, Sinnamary, and Marowijne River basins.
 Countries: French Guiana, Suriname
 Remarks and references: Species reviewed in Isbrücker & Nijssen (1982). Species redescribed by le Bail et al. (2000).
 Common names: Achiwa (French Guiana), Goré (French Guiana), Wapakani (French Guiana)

PARALORICARIA
Paraloricaria Isbrücker, 1979: 87, 90. Type species: *Loricaria vetula* Valenciennes, 1836. Type by original designation. Gender: feminine.

***Paraloricaria agastor* Isbrücker, 1979**
Paraloricaria agastor Isbrücker, 1979: 103, figs. 20 (right) -21 (right). Type locality: Paraguay (rio?) Paraguay. Holotype: BMNH 1895.5.17.108.
 Maximum length: 10.8 cm SL
 Distribution: South America: Paraguay River basin.
 Countries: Paraguay

***Paraloricaria commersonoides* (Devincenzi, 1943)**
Loricaria commersonoides Devincenzi, 1943: 3, fig. 2. Type locality: río Uruguay, frente a la ciudad de Paysandú [Uruguay]. Holotype: MHNM (apparently lost, Olazarri et al. 1970).
 Maximum length: 37 cm
 Distribution: South America: Uruguay River basin.
 Countries: Argentina, Brazil (?), Uruguay
 Remarks and references: Redescribed in Ringulet et al. (1967).
 Common names: Vieja (Argentina)

***Paraloricaria vetula* (Valenciennes, 1836)**
Loricaria vetula Valenciennes, 1836: pl. 6 (fig. 2). Type locality: Not stated. Holotype: MNHN A.8996. Described in Cuvier & Valenciennes (1840: 466 [344 in Strasbourg deluxe ed.]) with

locality stated as: des environs de Buéno-Ayres.
 Maximum length: 48 cm
 Distribution: South America: La Plata River basin.
 Countries: Argentina, Brazil
 Remarks and references: Reviewed in Ringulet et al. (1967).
 Common names: Vieja (Argentina), Vieja con barba (Argentina),
 Vieja de agua (Argentina), Vieja de cola (Argentina), Vieja de
 látigo (Argentina), Viola (Brazil)

PLANILORICARIA

Planiloricaria Isbrücker, 1971a: 276. Type species: *Pseudohemiodon (Planiloricaria) cryptodon* Isbrücker, 1971. Type by original designation. Gender: feminine. Originally proposed as a subgenus of *Pseudohemiodon*. Diagnosed and distinguished in key from related genera in Isbrücker (1986b).

***Planiloricaria cryptodon* (Isbrücker, 1971)**

Pseudohemiodon (Planiloricaria) cryptodon Isbrücker, 1971a: 278, fig. 3. Type locality: Peru: Río Ucayali near Pucallpa. Holotype: ZFMK 1865.
 Maximum length: 21.5 cm SL
 Distribution: South America: Upper Amazon drainage, Ucayali, Purus, and Mamoré River basins.
 Countries: Bolivia, Brazil, Peru
 Remarks and references: Redescribed in Isbrücker (1986b).
 Common names: Shitari (Peru)

PSEUDOHEMIODON

Pseudohemiodon Bleeker, 1862b: 3. Type species: *Hemiodon platycephalus* Kner, 1853. Type by original designation. Gender: masculine.

***Pseudohemiodon amazonus* (Delsman, 1941)**

Loricaria apeltogaster amazonum Delsman, 1941: 80. Type locality: Trombetas-river, near Obidos [Brazil]. Holotype: IRSNB 546. Originally as *Loricaria apeltogaster* var. *amazonum*.
 Maximum length: 9.2 cm SL
 Distribution: South America: Lower Amazon River basin.
 Countries: Brazil

***Pseudohemiodon apithanos* Isbrücker & Nijssen, 1978**

Pseudohemiodon apithanos Isbrücker & Nijssen, 1978b: 195, fig. 6. Type locality: Ecuador, Prov. Napo, Río Conejo, a tributary of Río San Miguel, vicinity of Santa Cecilia, 0°06'N, 76°51'W, upper Río Amazonas system. Holotype: ANSP 134370.
 Maximum length: 14.5 cm SL
 Distribution: South America: San Miguel River basin, Western Amazon River drainage.
 Countries: Ecuador
 Common names: Caracha (Ecuador)

***Pseudohemiodon devincenzii* (Soriano-Señorans, 1950)**

Loricaria devincenzii Soriano-Señorans, 1950: 265. Type locality: sobre fondo de arena fangosa con red de playa, a 200 metros aqua abajo d la desembocadura del arroyo Espinillar, en el Río Uruguay, Rep. Oriental del Uruguay, departamento de Salto. Holotype: MHNM (apparently lost, Olazarri et al. 1970).
 Maximum length: 14.3 cm SL
 Distribution: South America: Uruguay River basin.
 Countries: Uruguay

***Pseudohemiodon laminus* (Günther, 1868)**

Loricaria lamina Günther, 1868: 478. Type locality: Xeberos (Upper Amazon). Lectotype: BMNH 1867.6.13.33, designated by Isbrücker (1973: 186).
 Maximum length: 15.9 cm SL

Distribution: South America: Upper Amazon River basin.
 Countries: Peru
 Common names: Shitari (Peru)

***Pseudohemiodon laticeps* (Regan, 1904)**

Loricaria laticeps Regan, 1904: 295, pl. 20 (fig. 1). Type locality: Paraguay. Lectotype: BMNH 1895.5.17.113, designated by Isbrücker (1973: 187).
 Maximum length: 29.8 cm SL
 Distribution: South America: Uruguay, Paraná and Paraguay River basins.
 Countries: Argentina, Brazil, Paraguay
 Remarks and references:
 Common names: Vieja, Vieja de cola (Argentina)

***Pseudohemiodon platycephalus* (Kner, 1853)**

Hemiodon platycephalus Kner, 1853: 12, 25, pl. 1 (fig. 6), pl. 6 (fig. 2a-b). Type locality: Rio Cuiaba [Brazil]. Holotype: lost (Isbrücker 1980: 122). Originally as *Hem. ? platycephalus*.
 Maximum length: 18 cm SL
 Distribution: South America: Paraguay River basin.
 Countries: Brazil

***Pseudohemiodon thorectes* Isbrücker, 1975**

Pseudohemiodon thorectes Isbrücker, 1975b: 87, fig. 1. Type locality: Bolivia, Est. Santa Cruz, Buena Vista, 17°28'S, 63°37'W, west of Río Palacios, tributary of Río Mamoré, which is a tributary of Río Madeira, Río Amazonas system. Holotype: BMNH 1927.10.4.43.
 Maximum length: 11.7 cm SL
 Distribution: South America: Mamoré River basin.
 Countries: Bolivia

PSEUDOLORICARIA

Pseudoloricaria Bleeker, 1862b: 3. Type species: *Loricaria laeviscula* Valenciennes, 1840. Type by original designation. Gender: feminine.

***Pseudoloricaria laeviscula* (Valenciennes, 1840)**

Loricaria laeviscula Valenciennes in Cuvier & Valenciennes, 1840: 476 (p. 352 of Strasbourg deluxe ed.). Type locality: Not stated. Holotype: MNHN B.365.
 Maximum length: 30.5 cm SL
 Distribution: South America: Lower and middle Amazon basin, including Negro and Branco rivers.
 Countries: Brazil

PTEROSTURISOMA

Pterosturisoma Isbrücker & Nijssen, 1978a: 69. Type species: *Harttia microps* Eigenmann & Allen, 1942. Type by original designation. Gender: neuter.

***Pterosturisoma microps* (Eigenmann & Allen, 1942)**

Harttia microps Eigenmann & Allen, 1942: 211, pl. 9 (fig. 1). Type locality: Iquitos [Peru]. Lectotype: CAS 28543, designated by Isbrücker & Nijssen (1978a: 71).
 Maximum length: 16.1 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Peru
 Common names: Shitari (Peru)

PYXILORICARIA

Pyxiloricaria Isbrücker & Nijssen, 1984a: 163. Type species: *Pyxiloricaria menezesi* Isbrücker & Nijssen, 1984. Type by original designation. Gender: feminine.

***Pyxiloricaria menezesi* Isbrücker & Nijssen, 1984**

Pyxiloricaria menezesi Isbrücker & Nijssen, 1984a: 164, fig. 1.

Type locality: Brazil, Mato Grosso do Sul, Lagoas marginais da rodovia Transpantaneira, município de Miranda (20°10'S, 56°19'W).

Maximum length: 14 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil

REGANELLA

Hemiodon Kner, 1853: 24. Type species: *Hemiodon depressus* Kner, 1853. Type by subsequent designation by Bleeker (1862b: 4). Gender: masculine. Preoccupied by *Hemiodon* Swainson, 1840 in Mollusca; replaced by *Reganella* Eigenmann, 1905.

Reganella Eigenmann, 1905: 793. Type species: *Hemiodon depressus* Kner, 1853. Type by being a replacement name. Gender: feminine. Replacement for *Hemiodon* Kner, 1853.

***Reganella depressa* (Kner, 1853)**

Hemiodon depressus Kner, 1853: 12, 27, pl. 7 (fig. 1a-c). Type locality: Marabitanos [=Marabitanas, 0°57'N, 66°55'W] (originally, Rio negro und Marabitanos). Lectotype: NMW 9438, designated by Isbrücker & Nijssen (1974b: 219). Originally as *Hem. depressus*.

Maximum length: 11.3 cm SL

Distribution: South America: Negro, Branco, and Tapajós River basins.

Countries: Brazil

RHADINOLORICARIA

Rhadinoloricaria Isbrücker & Nijssen, 1974a: 73. Type species: *Loricaria macromystax* Günther, 1869. Type by original designation. Gender: feminine.

***Rhadinoloricaria macromystax* (Günther, 1869)**

Loricaria macromystax Günther, 1869: 426, figs. 5-6. Type locality: Peruvian Amazonas. Holotype: BMNH 1869.5.21.8.

Maximum length: 14.2 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Ecuador, Peru

Common names: Carachama (Ecuador), Shitari (Peru)

RICOLA

Ricola Isbrücker & Nijssen, 1978b: 182. Type species: *Loricaria macrops* Regan, 1904. Type by original designation. Gender: feminine.

***Ricola macrops* (Regan, 1904)**

Loricaria macrops Regan, 1904: 290, pl. 17 (fig. 3). Type locality: the R. de la Plata. Lectotype: BMNH 1868.9.16.1, designated by Isbrücker & Nijssen (1978: 184).

Maximum length: 21 cm SL

Distribution: South America: Lower Paraná River basin.

Countries: Argentina, Uruguay

Remarks and references: Reviewed in Ringulet et al. (1967).

Common names: Vieja, Vieja de cola (Argentina)

RINELORICARIA

Hemiloricaria Bleeker, 1862b: 3. Type species: *Hemiloricaria caracasensis* Bleeker, 1862. Type by original designation. Gender: feminine.

Rineloricaria Bleeker, 1862b: 3. Type species: *Loricaria lima* Kner, 1853. Type by original designation. Gender: feminine.

Fonchiiichthys Isbrücker & Michels, in Isbrücker et al., 2001: 18. Type species: *Loricaria uracantha* Kner & Steindachner, 1863. Type by original designation. Gender: masculine.

Leliella Isbrücker, in Isbrücker et al., 2001: 20. Type species: *Loricaria heteroptera* Isbrücker & Nijssen, 1975. Type by original designation. Gender: feminine.

***Rineloricaria aequalicuspis* Reis & Cardoso, 2001**

Rineloricaria aequalicuspis Reis & Cardoso, 2001: 324, fig. 3.

Type locality: Brazil: Rio Grande do Sul: rio Três Forquilhas, opposite to church of Vila Itati (29°30'43"S 50°05'31"W). Holotype: MCP 25852.

Maximum length: 16.1 cm SL

Distribution: South America: Três Forquilhas and Maquiné River basins.

Countries: Brazil

***Rineloricaria altipinnis* (Breder, 1925)**

Loricaria altipinnis Breder, 1925: 1, fig. 1. Type locality: Río Chico, Darien, Panama. Holotype: AMNH 8404.

Maximum length: 15.4 cm SL

Distribution: Central America: Chico River basin.

Countries: Panama

***Rineloricaria beni* (Pearson, 1924)**

Loricaria beni Pearson, 1924: 25, pl. 5 (fig. 4). Type locality: Lagoons, Lake Rogoagua [Beni River basin, Bolivia]. Holotype: CAS 28772 [ex IU 17016].

Maximum length: 7.8 cm SL

Distribution: South America: Beni River basin.

Countries: Bolivia

***Rineloricaria cacerensis* (Miranda Ribeiro, 1912)**

Loricaria cacerensis Miranda Ribeiro, 1912: 11. Type locality: Caceres, M. Grosso (Agua do Paraguay) [Brazil]. Lectotype: MNRJ 645A, designated by Miranda Ribeiro (1953: 400).

Distribution: South America: Paraguay River basin.

Countries: Brazil

***Rineloricaria cadeae* (Hensel, 1868)**

Loricaria cadeae Hensel, 1868: 369. Type locality: Rio Cadéa [Rio Grande do Sul, Brazil]. Lectotype: ZMB 7430, designated by Isbrücker (1979: 112).

Maximum length: 11.2 cm SL

Distribution: South America: Laguna dos Patos basin.

Countries: Brazil

***Rineloricaria caracasensis* (Bleeker, 1862)**

Loricaria rostrata van der Hoeven, 1849: 90. Type locality: Caracas [Venezuela]. Holotype: RMNH 3120. Preoccupied by *Loricaria rostrata* Spix & Agassiz, 1829, replaced by *Hemiloricaria caracasensis* Bleeker, 1862.

Hemiloricaria caracasensis Bleeker, 1862b: 3. Type locality: Caracas [Venezuela]. Holotype: RMNH 3120. Replacement for *Loricaria rostrata* van der Hoeven, 1849.

Distribution: South America: Caribbean coastal drainages.

Countries: Venezuela

Common names: Paleta (Venezuela), Tabla (Venezuela)

***Rineloricaria castroi* Isbrücker & Nijssen, 1984**

Rineloricaria castroi Isbrücker & Nijssen, 1984b: 93, fig. 1. Type locality: Brazil, Est. Pará, Trápiche da Reserva Biológica de Trombetas, Rio Trombetas. Holotype: MZUSP 15731.

Maximum length: 16 cm SL

Distribution: South America: Trombetas River basin.

Countries: Brazil

***Rineloricaria catamarcensis* (Berg, 1895)**

Loricaria catamarcensis Berg, 1895: 137. Type locality: Provincia Catamarca [Argentina]. Holotype: not found (Isbrücker 1979: 113).

Maximum length: 11 cm

Distribution: South America: Tala and Salí River basins in Catamarca Province.

Countries: Argentina

Remarks and references: Reviewed in Ringulet et al. (1967).

Common names: Vieja (Argentina)

Rineloricaria cubataonis (Steindachner, 1907)

Loricaria cubataonis Steindachner, 1907b: 489. Type locality: aus dem Flusse Cubatão, im Staate Santa Catharina bei Theoresopolis (Brasilien). Holotype: NMW (not found, Isbrücker 1979: 113).

Maximum length: 5.4 cm SL

Distribution: South America: Coastal Atlantic rivers of southeastern Brazil.

Countries: Brazil

Rineloricaria eigenmanni (Pellegrin, 1908)

Loricaria Eigenmanni Pellegrin, 1908: 125. Type locality: Sarare (Venezuela). Lectotype: MNHN 1899-118, designated by Isbrücker (1979: 113).

Maximum length: 10.2 cm SL

Distribution: South America: Venezuela (?).

Countries: Venezuela

Common names: Paleta (Venezuela), Tabla (Venezuela)

Rineloricaria fallax (Steindachner, 1915)

Loricaria (Loricariichthys) fallax Steindachner, 1915b: 87, pl. 13 (figs. 1-4). Type locality: Brazil, Est. Roraima, Igarapé de Caraná (=Sa. Grande, 02°51'N, 60°43'W) near Bôa Vista (02°51'N, 60°3'W), altitude 200m above sea level, Rio Branco drainage, Rio Amazonas drainage (originally: Rio Rupununi, dem Rio Parimé dei Serra do Banco, aus einem Igarapé bei Capivari, dem Rio Branco bei Bem Querer und Conceição, einem Flusse bei Maguary an der Braganzabahn bei Pará). Lectotype: NMW 44864, designated by Isbrücker & Nijssen (1979: 198).

Maximum length: 15.7 cm SL

Distribution: South America: Upper Rupununi and Branco River basins.

Countries: Brazil, Guyana

Rineloricaria felipponei (Fowler, 1943)

Loricaria felipponei Fowler, 1943b: 319, fig. 9. Type locality: Uruguay. Holotype: ANSP 70324.

Maximum length: 11.3 cm

Distribution: South America: Lower La Plata River basin.

Countries: Uruguay

Rineloricaria formosa Isbrücker & Nijssen, 1979

Rineloricaria formosa Isbrücker & Nijssen, 1979: 192, fig. 1. Type locality: Colombia, Lagoon about 1 km upriver from Puerto Inírida, Río Orinoco basin. Holotype: FMNH 83713.

Maximum length: 15.2 cm SL

Distribution: South America: Western Orinoco and upper Amazon River basins.

Countries: Brazil, Colombia, Venezuela

Common names: Paleta (Venezuela), Tabla (Venezuela)

Rineloricaria hasemani Isbrücker & Nijssen, 1979

Rineloricaria hasemani Isbrücker & Nijssen, 1979: 200, fig. 4. Type locality: Brazil, Est. Pará, Maguary near Belém, along the Bragança railroad (Bragança, 1°02'S, 46°46'W), in forest streams. Holotype: NMW 44865.

Maximum length: 13.7 cm SL

Distribution: South America: Lower Amazon or Tocantins River basin.

Countries: Brazil

Rineloricaria henselii (Steindachner, 1907)

Loricaria henselii Steindachner, 1907b: 488. Type locality: Aus dem Flusse Cubatão im Staate Santa Catherina bei Theresopolis (Brasilien). Holotype: NMW (not found, Isbrücker 1979: 113).

Maximum length: 7.5 cm SL

Distribution: South America: Cubatão River in southern Santa Catarina State.

Countries: Brazil

Rineloricaria heteroptera Isbrücker & Nijssen, 1976

Rineloricaria heteroptera Isbrücker & Nijssen, 1976: 112, fig. 1.

Type locality: Brazil, Est. Amazonas. Creek in reserve Duce, near Manaus (03°06'S, 60°00'W). Holotype: IRSNB 555.

Maximum length: 13.3 cm SL

Distribution: South America: Amazon River basin, near Manaus.

Countries: Brazil

Rineloricaria hoehnei (Miranda Ribeiro, 1912)

Loricaria hoehnei Miranda Ribeiro, 1912: 11. Type locality: Coxim, no Rio Paraguay [Brazil]. Holotype: MNRJ 650.

Maximum length: 5.8 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil

Rineloricaria jaraguensis (Steindachner, 1909)

Loricaria jaraguensis Steindachner, 1909: 196. Type locality: dem Jaraguá und dessen Nebenflüssen in brasilianischen Staate Sa. Catharina. Lectotype: NMW 44886, designated by Isbrücker (1979: 113).

Maximum length: 18.5 cm

Distribution: South America: Jaraguá River basin in Santa Catarina State.

Countries: Brazil

Rineloricaria jubata (Boulenger, 1902)

Loricaria jubata Boulenger, 1902: 70. Type locality: Northwestern Ecuador, St. Javier (60 feet), and the Rio Durango elev. (350 feet) [restricted to the Durango River]. Lectotype: BMNH 1902.5.27.45, designated by Isbrücker (1979: 112).

Maximum length: 21 cm SL

Distribution: South America: Mira and Esmeraldas River basins, Pacific drainage.

Countries: Ecuador

Common names: Carachama (Ecuador), Guitarra (Ecuador), Palo seco (Ecuador)

Rineloricaria konopickyi (Steindachner, 1879)

Loricaria konopickyi Steindachner, 1879d: 34. Type locality: dem mittleren Laufe des Amazonenstromes. Holotype: NMW 44934.

Maximum length: 9.6 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

Rineloricaria kronei (Miranda Ribeiro, 1911)

Loricaria kronei Miranda Ribeiro, 1911: 132, pl. 34 (fig. 2). Type locality: Rio Iporanga, S. Paulo [Brazil]. Holotype: MNRJ (?), not found.

Distribution: South America: Ribeira de Iguape River basin.

Countries: Brazil

Rineloricaria lanceolata (Günther, 1868)

Loricaria lanceolata Günther, 1868: 477. Type locality: Xeberos.

Holotype: BMNH 1867.6.13.79.

Maximum length: 9.5 cm

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Common names: Shitari (Peru)

Rineloricaria latirostris (Boulenger, 1900)

Loricaria paulina Boulenger, 1900: 166. Type locality: Southern Brazil, Province São Paulo, Mogy-guassu River. Lectotype: BMNH 1899.12.18.8, designated by Isbrücker (1979: 112).

Loricaria latirostris Boulenger, 1900: 165. Type locality: Southern Brazil, Province São Paulo, Mogy-guassu River about 250 miles inland of Santos. Lectotype: BMNH 1899.12.18.6, designated by Isbrücker (1979: 112).

Maximum length: 36 cm TL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

***Rineloricaria lima* (Kner, 1953)**

Loricaria lima Kner, 1853: 12, 25, pl. 6 (fig. 1a-b). Type locality: aus Brasilien durch Natterer, ober ohne nähere Angabe des Fundortes. Holotype: NMW (probably lost, Isbrücker 1980: 107). Originally as *Lor.?* *lima*.
Distribution: South America: distribution unknown.
Countries: Brazil

***Rineloricaria longicauda* Reis, 1983**

Rineloricaria longicauda Reis, 1983: 64, figs. 5-7. Type locality: Banhado do Taim, município de Rio Grande, RS [Brazil]. Holotype: MZUSP 16078.
Maximum length: 10.9 cm SL
Distribution: South America: Coastal drainages of Rio Grande do Sul State, between Chuí and Tramandaí.
Countries: Brazil

***Rineloricaria magdalenae* (Steindachner, 1879)**

Loricaria magdalenae Steindachner, 1879e: 74. Type locality: Magdalena-Stromes [Colombia]. Lectotype: NMW 45080, designated by Isbrücker (1979: 112).
Maximum length: 20 cm
Distribution: South America: Sinú, Magdalena and, possibly, Catatumbo River basins.
Countries: Colombia, Venezuela
Common names: Alcalde (Colombia), Paleta (Venezuela), Raspacanoa (Colombia), Tabla (Venezuela)

***Rineloricaria maquinensis* Reis & Cardoso, 2001**

Rineloricaria maquinensis Reis & Cardoso, 2001: 321, fig. 1. Type locality: Brazil: Rio Grande do Sul: arroio Água Parada, tributary to rio Maquiné (approximately 29°40'S 50°12'W), Maquiné. Holotype: MCP 25817.
Maximum length: 8.5 cm SL
Distribution: South America: Maquiné and Araranguá River basins in southern Brazil.
Countries: Brazil

***Rineloricaria melini* (Schindler, 1959)**

Loricariichthys melini Schindler, 1959: 387, fig. 1. Type locality: Rio Solimoes beim Ort Manacapuru, nahe der Mündung des Rio Negro [Brazil]. Holotype: NRM 10830.
Maximum length: 13 cm SL
Distribution: South America: Amazon River basin.
Countries: Brazil

***Rineloricaria microlepidogaster* (Regan, 1904)**

Loricaria microlepidogaster Regan, 1904: 283, pl. 15 (fig. 4). Type locality: Rio Grande do Sul [Brazil]. Holotype: BMNH 1884.2.5.41.
Maximum length: 18.5 cm SL
Distribution: South America: Laguna dos Patos basin.
Countries: Brazil

***Rineloricaria microlepidota* (Steindachner, 1907)**

Loricaria lima microlepidota Steindachner, 1907a: 154. Type locality: dem Juruá [Brazil]. Syntypes: NMW (?), not found (Isbrücker 1979: 113). Originally as *Loricaria lima* var. *microlepidota*.
Maximum length: 14.5 cm
Distribution: South America: Juruá River basin.
Countries: Brazil

***Rineloricaria morrowi* Fowler, 1940**

Rineloricaria morrowi Fowler, 1940a: 244, fig. 41. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68663.
Maximum length: 16.5 cm
Distribution: South America: Ucayali River basin.
Countries: Peru
Common names: Shitari (Peru)

***Rineloricaria nigricauda* (Regan, 1904)**

Loricaria nigricauda Regan, 1904: 275, pl. 16 (fig. 2). Type locality: Porto Real, Province Rio Janeiro [Brazil]. Lectotype: BMNH 1891.6.16.32, designated by Isbrücker (1979: 113).
Maximum length: 6.5 cm
Distribution: South America: Coastal streams in Rio de Janeiro State.
Countries: Brazil

***Rineloricaria pareiacantha* (Fowler, 1943)**

Loricaria pareiacantha Fowler, 1943b: 321, fig. 12. Type locality: Rio Santa Lucia, Canelones [Uruguay]. Holotype: ANSP 67815.
Maximum length: 10 cm
Distribution: South America: Santa Lucia River basin.
Countries: Uruguay

***Rineloricaria parva* (Boulenger, 1895)**

Loricaria parva Boulenger, 1895: 527. Type locality: Descalvados, Matto Grosso [Brazil]. Lectotype: BMNH 1895.5.17.91, designated by Isbrücker (1979: 112).
Maximum length: 11 cm SL
Distribution: South America: Paraguay River basin.
Countries: Argentina, Brazil
Remarks and references: Reviewed in Ringulet et al. (1967).
Common names: Vieja (Argentina), Vieja de agua (Argentina)

***Rineloricaria pentamaculata* Langeani & Araujo, 1994**

Rineloricaria pentamaculata Langeani & Araujo, 1994: 153, fig. 1. Type locality: rio Turvo, Ourinhos, São Paulo, Brasil. Holotype: MZUSP 43051.
Distribution: South America: Turvo River basin in São Paulo State.
Countries: Brazil

***Rineloricaria phoxocephala* (Eigenmann & Eigenmann, 1889)**

Loricaria phoxocephala Eigenmann & Eigenmann, 1889: 37. Type locality: Coary [Brazil]. Lectotype: MCZ 8030, designated by Isbrücker (1979: 112).
Maximum length: 15 cm SL
Distribution: South America: Amazon River basin.
Countries: Brazil

***Rineloricaria platyura* (Müller & Troschel, 1848)**

Loricaria platyura Müller & Troschel, 1848: 631. Type locality: dem Rupununi [Guyana]. Holotype: ZMB 3166.
Loricaria submarginatus Eigenmann, 1909: 10. Type locality: Creek below Potaro Landing [Guyana]. Holotype: FMNH 53080 [ex CM 1510].
Maximum length: 14 cm SL
Distribution: South America: Various coastal rivers from near Amazon mouth to Essequibo River.
Countries: Brazil, French Guiana, Guyana
Remarks and references: Species redescribed by le Bail et al. (2000).
Common names: Achiwa (French Guiana), Chichiwa (French Guiana), Goré-fwèt (French Guiana), Lapipi (French Guiana), Sisiou (French Guiana), Tatoulouway (French Guiana)

***Rineloricaria quadrensis* Reis, 1983**

Rineloricaria quadrensis Reis, 1983: 66, figs. 15-17. Type locality: Lagoa dos Quadros, município de Osório, RS [Brazil]. Holotype: MZUSP 14363.
Maximum length: 14.7 cm SL
Distribution: South America: Coastal streams and lagoons in Rio Grande do Sul, between Tramandaí and Torres.
Countries: Brazil

***Rineloricaria rupestris* (Schultz, 1944)**

Loricaria uracantha rupestre Schultz, 1944b: 325, pl. 12 (figs. A-B). Type locality: Río San Pedro at bridge south of Mene Grande, Río Motatán system, Maracaibo basin [Venezuela]. Holotype: USNM 121102.

Maximum length: 9 cm SL

Distribution: South America: Rivers of the Lake Maracaibo basin, in lower and middle reaches of rivers.

Countries: Venezuela

Common names: Paleta (Venezuela), Tabla (Venezuela)

***Rineloricaria sneiderni* (Fowler, 1944)**

Loricaria sneiderni Fowler, 1944: 240, fig. 18. Type locality: Río Jurubidá, Nuquí, in brook [Colombia].

Holotype: ANSP 71433.

Maximum length: 18 cm

Distribution: South America: Pacific versant: Jurubidá River basin.

Countries: Colombia

***Rineloricaria steindachneri* (Regan, 1904)**

Loricaria steindachneri Regan, 1904: 281. Type locality: Eastern Brazil, from the R. Preto to the R. Parahyba. Lectotype: NMW 45016: 1, designated by Isbrücker (1979: 113).

Maximum length: 19 cm TL

Distribution: South America: Coastal rivers of northeastern Brazil.

Countries: Brazil

***Rineloricaria stewarti* (Eigenmann, 1909)**

Loricaria stewarti Eigenmann, 1909: 9. Type locality: Chipoo Creek, a tributary of the Ireng [Guyana]. Holotype: FMNH 53330 [ex CM 1508].

Maximum length: 10 cm SL

Distribution: South America: Coastal rivers of the Guianas.

Countries: French Guiana, Guyana, Suriname

Remarks and references: Species redescribed by le Bail et al. (2000).

Common names: Achiwa (French Guiana), Atomba (French Guiana), Chichiwa (French Guiana), Goré fwèt (French Guiana), Krakakoe (French Guiana), Lapipi (French Guiana), Santipiwí (French Guiana)

***Rineloricaria strigilata* (Hensel, 1868)**

Loricaria strigilata Hensel, 1868: 368. Type locality: Südbrasilien, in eimen steinigem Bache bei Santa Cruz. Holotype: ZMB 7429.

Maximum length: 11 cm SL

Distribution: South America: Laguna dos Patos basin.

Countries: Brazil

***Rineloricaria teffeana* (Steindachner, 1879)**

Loricaria teffeana Steindachner, 1879d: 34. Type locality: Teffé, Amazonenstrom [Brazil]. Lectotype: NMW 45134: 1, designated by Isbrücker (1979: 112).

Loricaria Valenciennesii Vaillant, 1880: 157. Type locality: Calderon [Brazil]. Holotype: MNHN A.1985.

Maximum length: 14 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Rineloricaria thrissoceps* (Fowler, 1943)**

Loricaria thrissoceps Fowler, 1943b: 322, fig. 15. Type locality: Río Santa Lucia, Canelones [Uruguay]. Holotype: ANSP 67796.

Maximum length: 10.6 cm

Distribution: South America: Santa Lucia River basin.

Countries: Uruguay

***Rineloricaria uracantha* (Kner, 1863)**

Loricaria uracantha Kner, 1863: 228, fig. 18. Type locality: Aus dem Río Chagres, Nordseite von Panama. Syntypes: NMW, probably lost (Isbrücker 1979: 112). Originally as *Lor. uracantha*. Also appeared as new in Kner & Steindachner (1864:56, Pl.

6 (fig. 3)).

Loricaria bransfordi Gill, 1877: 338. Type locality: Isthmus of Panama, Empire Station. Holotype: USNM 16673.

Maximum length: 16.5 cm SL

Distribution: Central America: Atlantic and Pacific versant rivers.

Countries: Costa Rica, Panama

Remarks and references: Diagnosis and ecological notes in Bussing (1998).

Common names: Alcalde (Costa Rica), Cuchara (Costa Rica), Zapatero (Costa Rica)

***Rineloricaria wolfei* Fowler, 1940**

Rhineloricaria wolfei Fowler, 1940a: 241, fig. 35. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68660.

Maximum length: 14.9 cm

Distribution: South America: Ucayali River basin.

Countries: Peru

Common names: Shitari (Peru)

SPATULORICARIA

Spatuloricaria Schultz, 1944b: 287, 334. Type species: *Spatuloricaria phelpsi* Schultz, 1944. Type by original designation. Gender: feminine.

Euacanthagenys Fowler, 1945: 123. Type species: *Euacanthagenys caquetae* Fowler, 1945. Type by original designation. Gender: feminine.

***Spatuloricaria atratoensis* Schultz, 1944**

Spatuloricaria atratoensis Schultz, 1944a: 155. Type locality: Río Truando, tributary of Río Atrato, Colombia. Holotype: USNM 93810.

Maximum length: 33.8 cm SL

Distribution: South America: Atrato River basin.

Countries: Colombia

***Spatuloricaria caquetae* (Fowler, 1943)**

Loricaria caquetae Fowler, 1943a: 261, fig. 61. Type locality: Florencia, Río Ortegusa, Colombia. Holotype: ANSP 70526.

Maximum length: 37 cm

Distribution: South America: Ortegusa River basin.

Countries: Colombia

***Spatuloricaria curvispina* (Dahl, 1942)**

Loricaria curvispina Dahl, 1942: 85, figs. 5-7. Type locality: Río Batatal, tributary to Río San Jorge, which is next to Río Cauca the largest tributary to Río Magdalena. Department of Bolivar, Republic of Colombia. Holotype: ZMUL (?).

Maximum length: 40 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

Common names: Bigutudo (Colombia)

***Spatuloricaria euacanthagenys* Isbrücker, 1979**

Euacanthagenys caquetae Fowler, 1945: 125, figs. 37-39. Type locality: Morelia, Río Caquetá drainage, Colombia. Holotype: ANSP 71718. Preoccupied in *Spatuloricaria* by *Loricaria caquetae* Fowler, 1943, replaced by *Spatuloricaria euacanthagenys* Isbrücker, 1979.

Spatuloricaria euacanthagenys Isbrücker, 1979: 113, figs. 24-26. Type locality: Morelia, Río Caquetá drainage, Colombia. Holotype: ANSP 71718. Replacement name for *Euacanthagenys caquetae* Fowler, 1945.

Maximum length: 52 cm

Distribution: South America: Caquetá River basin.

Countries: Colombia

***Spatuloricaria evansii* (Boulenger, 1892)**

Loricaria Evansii Boulenger, 1892: 10, pl. 1. Type locality: Janganda [Matto Grosso, Brazil]. Holotype: BMNH 1892.4.20.29.

Check List of the Freshwater Fishes of South and Central America

Loricaria cirrhosa Perugia, 1897: 22. Type locality: Río Beni, Mission Mosetenes, Bolivia. Syntypes: MSNG 8850, 43118, and one specimen not found. Preoccupied by *Loricaria cirrhosa* Bloch & Schneider, 1801, apparently not replaced.

Maximum length: 20 cm SL

Distribution: South America: Paraguay and Beni River basins.

Countries: Argentina, Bolivia, Brazil

***Spatuloricaria fimbriata* (Eigenmann & Vance, 1912)**

Loricaria fimbriata Eigenmann & Vance in Eigenmann, 1912a: 12. Type locality: Boca de Certegai [Colombia]. Holotype: FMNH 55117 [ex CM 3808].

Maximum length: 8 cm SL

Distribution: Central and South America: Tuira River, Magdalena River and Boca de Certegai.

Countries: Colombia, Panama

Common names: Cucho pitero (Colombia), Zapatero (Colombia)

***Spatuloricaria gymnogaster* (Eigenmann & Vance, 1912)**

Loricaria gymnogaster Eigenmann & Vance in Eigenmann, 1912a: 12. Type locality: Apulo [Colombia]. Holotype: CAS 28773 [ex IU 12691].

Maximum length: 25 cm SL

Distribution: South America: Upper Magdalena River basin.

Countries: Colombia

Common names: Alcalde (Colombia), Cucho pitero (Colombia), Zapatero (Colombia)

***Spatuloricaria lagoichthys* (Schultz, 1944)**

Loricaria gymnogaster lagoichthys Schultz, 1944b: 331, pl. 13. Type locality: Río Palmar near Totuma, about 100 km southwest of Maracaibo [Venezuela]. Holotype: USNM 121092.

Maximum length: 30.5 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

Common names: Paleta (Venezuela), Tabla (Venezuela)

***Spatuloricaria nudiventris* (Valenciennes, 1840)**

Loricaria nudiventris Valenciennes in Cuvier & Valenciennes, 1840: 469 (346 of Strasbourg deluxe ed.). Type locality: la rivière de Saint-François au Brésil. Holotype: MNHN A.9558.

Distribution: South America: São Francisco River basin.

Countries: Brazil

***Spatuloricaria phelpsi* Schultz, 1944**

Spatuloricaria phelpsi Schultz, 1944b: 335, pl. 14. Type locality: Río Socuy, 3 km above its mouth, Maracaibo basin, Venezuela. Holotype: USNM 121121.

Maximum length: 33.8 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

***Spatuloricaria pujanensis* (Pearson, 1937)**

Loricaria pujanensis Pearson, 1937: 96. Type locality: Pusoc, Río Marañón, Peru. Lectotype: CAS 28776 [ex IU 17656], designated by Isbrücker (1979: 113).

Maximum length: 22 cm

Distribution: South America: Marañón River basin.

Countries: Peru

Common names: Shitari (Peru)

STURISOMA

Sturisoma Swainson, 1838: 333. Type species: *Loricaria rostrata* Spix & Agassiz, 1829. Type by monotypy. Gender: neuter.

Oxyloricaria Bleeker, 1862b: 3. Type species: *Loricaria barbata* Kner, 1853. Type by original designation. Gender: feminine.

Parasturisoma Miranda Ribeiro, 1911: 109. Type species: *Loricaria (Rineloricaria) brevirostris* Eigenmann & Eigenmann, 1889.

Type by monotypy. Gender: neuter.

***Sturisoma aureum* (Steindachner, 1900)**

Loricaria aurea Steindachner, 1900: 206. Type locality: Bodega central, Río Magdalena [Colombia]. Holotype: NMW (?).

Maximum length: 20 cm SL

Distribution: South America: Magdalena, San Jorge and Cesar River basins.

Countries: Colombia

Common names: Palito (Colombia)

***Sturisoma barbatum* (Kner, 1853)**

Loricaria barbata Kner, 1853: 12, 23, pl. 5. Type locality: Rio Cuibá, Cujaba-Fluss [Brazil]. Holotype: NMW 46155. Originally *Lor. barbata*.

Maximum length: 28 cm SL

Distribution: South America: Paraguay River basin.

Countries: Brazil

***Sturisoma brevirostre* (Eigenmann & Eigenmann, 1889)**

Loricaria brevirostris Eigenmann & Eigenmann, 1889: 35. Type locality: Iça [Brazil]. Holotype: MCZ 8095.

Maximum length: 20.7 cm SL

Distribution: South America: Içá River basin.

Countries: Brazil

***Sturisoma dariense* (Meek & Hildebrand, 1913)**

Oxyloricaria dariensis Meek & Hildebrand, 1913: 81. Type locality: Río Tuyra, Boca de Cupe, Panama. Holotype: FMNH 7584.

Maximum length: 25.4 cm

Distribution: Central America: Tuira River basin.

Countries: Panama

***Sturisoma festivum* Myers, 1942**

Sturisoma festivum Myers, 1942: 100, fig. 8. Type locality: Río Monay, 35 km north of Trujillo, Motatan system, Maracaibo basin, Venezuela. Holotype: SU 36505.

Maximum length: 16.9 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

***Sturisoma frenatum* (Boulenger, 1902)**

Loricaria frenata Boulenger, 1902: 69. Type locality: Salidero, Ecuador (Originally: Northwestern Ecuador, St. Javier (60 feet), Saildero (350 feet), and Río Durango (350 feet)). Lectotype: BMNH 1901.8.3.29, designated by Isbrücker (1979: 113).

Maximum length: 24 cm SL

Distribution: South America: Pacific versant rivers.

Countries: Ecuador

Common names: Raspabalsa (Ecuador)

***Sturisoma guentheri* (Regan, 1904)**

Oxyloricaria guentheri Regan, 1904: 299, pl. 18 (fig. 1). Type locality: Xeberos, Upper Amazon [Peru]. Holotype: BMNH 1867.6.13.36.

Maximum length: 23 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Common names: Shitari (Peru)

***Sturisoma lyra* (Regan, 1904)**

Oxyloricaria lyra Regan, 1904: 300, pl. 19 (fig. 2). Type locality: Río Jurua. Lectotype: BMNH 1897.12.1.64, designated by Isbrücker (1979: 113).

Maximum length: 25 cm TL

Distribution: South America: Juruá River basin.

Countries: Brazil, Peru

Common names: Shitari (Peru)

***Sturisoma monopelte* Fowler, 1914**

Sturisoma monopelte Fowler, 1914: 274, fig. 18. Type locality: Rupununi River, British Guiana. Holotype: ANSP 39346. Maximum length: 26.5 cm
Distribution: South America: Rupununi River basin.
Countries: Guyana

***Sturisoma nigrirostrum* Fowler, 1940**

Sturisoma nigrirostrum Fowler, 1940a: 249, fig. 50. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68666. Maximum length: 22 cm
Distribution: South America: Ucayali River basin.
Countries: Peru
Common names: Shitari (Peru)

***Sturisoma panamense* (Eigenmann & Eigenmann, 1889)**

Loricaria panamensis Eigenmann & Eigenmann, 1889: 34. Type locality: Panama. Holotype: MCZ 8126. Maximum length: 26 cm SL
Distribution: Central and South America: Pacific slope rivers of Panama, Colombia, and Ecuador; Caribbean slope rivers of Colombia.
Countries: Colombia, Ecuador, Panama
Common names: Alcalde (Colombia), Chuzo (Colombia), Guitarera (Ecuador), Palito (Colombia), Pitero (Colombia)

***Sturisoma robustum* (Regan, 1904)**

Oxyloricaria robusta Regan, 1904: 300, pl. 19 (fig. 1). Type locality: Rio Paraguay. Lectotype: BMNH 1895.5.17.89, designated by Isbrücker (1979: 113). Maximum length: 25 cm SL
Distribution: South America: La Plata River basin.
Countries: Argentina, Brazil, Paraguay
Remarks and references: Reviewed in Ringulet et al. (1967).
Common names: Acari (Brazil), Cari (Brazil), Rapa-canoa (Brazil)

***Sturisoma rostratum* (Spix & Agassiz, 1829)**

Loricaria rostrata Spix & Agassiz, 1829: 5, pl. 3. Type locality: Brasiliae fluvii. Holotype: lost (Isbrücker 1979: 113). Maximum length: 19 cm
Distribution: South America: Brazil (?)
Countries: Brazil

***Sturisoma tenuirostre* (Steindachner, 1910)**

Oxyloricaria tenuirostris Steindachner, 1910b: 410. Type locality: dem Rio Meta in Venezuela. Holotype: NMW 45453. Maximum length: 12.6 cm SL
Distribution: South America: Meta River basin.
Countries: Venezuela

STURISOMATICHTHYS

Sturisomatichtchys Isbrücker & Nijssen in Isbrücker, 1979: 91. Type species: *Oxyloricaria leightoni* Regan, 1912. Type by original designation. Gender: masculine.

***Sturisomatichtchys caquetae* (Fowler, 1945)**

Harttia caquetae Fowler, 1945: 126, fig. 43. Type locality: Morelia, Rio Caquetá drainage, Colombia. Holotype: ANSP 71719. Maximum length: 19.3 cm
Distribution: South America: Caquetá River basin.
Countries: Colombia

***Sturisomatichtchys citurensis* (Meek & Hildebrand, 1913)**

Oxyloricaria citurensis Meek & Hildebrand, 1913: 82. Type locality: Río Cupe at Cituro, Panama, Tuyra River basin. Holotype: FMNH 7585.

Maximum length: 25 cm SL

Distribution: Central America: Tuirá and Bayano River basins.
Countries: Panama

***Sturisomatichtchys leightoni* (Regan, 1912)**

Oxyloricaria leightoni Regan, 1912: 669, pl. 77 (fig. 2). Type locality: Honda, Colombia, 300-400 ft. Lectotype: BMNH 1909.7.23.45, designated by Isbrücker (1979: 113). Maximum length: 18 cm SL
Distribution: South America: Upper Magdalena and Cauca River basins.
Countries: Colombia
Common names: Baracalde (Colombia), Cucho pitero (Colombia)

***Sturisomatichtchys tamanae* (Regan, 1912)**

Oxyloricaria tamanae Regan, 1912: 669, pl. 77 (figs. 1, 1a & b). Type locality: the Rio Tamana, Río San Juan, Choco, S.W. Colombia. Lectotype: BMNH 1910.7.11.133, designated by Isbrücker (1979: 113). Maximum length: 22.5 cm TL
Distribution: South America: San Juan River basin.
Countries: Colombia

Subfamily Hypostominae (Armored catfishes)

Claude Weber

The genera of the subfamily Hypostominae differ from Ancistrinae by the absence of evertible bristle-like odontodes in the interopercular area, from Hypoptopomatinae, in having the pectoral girdle not exposed and from Loricariinae, in having a compressed or cylindrical caudal peduncle.

This subfamily has numerous nominal species with unclear status, especially in the genus *Hypostomus*. The particularly high intraspecific variability in morphology and color pattern prompted authors to describe new taxa that were misunderstood in terms of this variability. Recent molecular analyses are shedding new light on Hypostominae systematics and numerous modifications of the nomenclature have to be expected. Based on molecular investigations, it seems that one third of the recent species is undescribed.

In general, Hypostominae seem to be restricted to freshwaters, except for *Hypostomus watwata* which lives in estuarine brackish waters of the rivers of Guianas. Most of the species live in the bottom and the banks of sandy and rocky rivers. During the day they stay under rocks or boughs of dead trees. Most of them start to activate after sunset. No cave-dwelling species is known.

Sexual dimorphism is poorly developed. Only in some genera, such as *Aphanotorulus*, mature males show more spiny body and fins and some modifications of the teeth.

Most species are medium sized. The large sized ones belong to *Glyptoperichthys*, *Hypostomus*, *Liposarcus*, *Pterygoplichthys* and *Squaliforma*. *Isorineloricaria spinosissima* is the longest hypostomine, which can reach 50 centimeters in total length.

The most important generic diversity is found in the Eastern and Southeastern Brazilian Coastal Drainages, with ten genera, mostly endemic. The most speciose genus is *Hypostomus*, with more than hundred species.

SPECIES INCERTAE SEDIS IN HYPOSTOMINAE

***Hypostomus itacua* Valenciennes, 1836**

Hypostomus itacua Valenciennes, 1836 [1847]: pl. 7 (fig. 1). Type locality: not explicitly given, restricted to tributaries of La Plata. Holotype not found in MNHN.

Maximum length: 11 cm TL

Distribution: South America: Middle Paraná River basin.

Countries: Argentina, Brazil?, Paraguay?

Common name: Yaru itacua (in Valenciennes, 1836) = Jaryi Itakua (Guarani).

Remarks and references: No description, only a figure in Valenciennes, 1836 [1847]. Type locality restricted by Valenciennes, in Cuvier and Valenciennes (1840: 506). New combination *Chaetostoma (Hemiancistrus) itacua* (Ancistrinae) in Günther (1864: 243), based on complementary description of Valenciennes, in Cuvier and Valenciennes (1840: 505), which does not fit with the specimen figured in Valenciennes (1836). *Hemiancistrus itacua* in Isbrücker (1980: 50) and in Eschmeyer (1998: 795). As the original plate 7 is reminiscent of *Hypostomus* without clear diagnostic characters, *Hypostomus itacua* is placed here in Incertae Sedis of Hypostominae.

***Plecostomus obtusirostris* (Steindachner, 1907)**

Plecostomus obtusirostris Steindachner, 1907b: 490. Type locality: Rio Cubatao, Santa Catherina by Theresopolis, Brazil. Holotype not found in NMW.

Maximum length: 5.9 cm TL

Distribution: South America: Southeastern Brazilian coastal drainage.

Countries: Brazil

Remarks and references: *Hypostomus obtusirostris* in Isbrücker (1980: 29), but the description of the holotype does not fit with the genus *Hypostomus*, by mention of presence of hypertrophied odontodes on each side of the head.

APHANOTORULUS

Aphanotorulus Isbrücker & Nijssen, 1983: 105. Type species: *Aphanotorulus franki* Isbrücker & Nijssen, 1983. Type by original designation. Gender: masculine. Recent revisions in Armbruster and Page (1996) and Armbruster (1998a).

***Aphanotorulus ammophilus* Armbruster & Page, 1996**

Aphanotorulus ammophilus Armbruster & Page, 1996: 385, fig. 2 (middle). Type locality: Venezuela, Estado Cojedes, Rfo San Carlos, R. Portuguesa drainage at Caño Hondo, 2 km west of Las Vegas on the road from Las Vegas to Campo Alegre - 9°31'51"N, 68°39'39"W. Holotype: INHS 32035.

Maximum length: 16.1 cm SL

Distribution: South America: Portuguesa River basin.

Countries: Venezuela

Remarks and references: Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318346).

***Aphanotorulus unicolor* (Steindachner, 1908)**

Plecostomus unicolor Steindachner, 1908b: 164. Type locality: Rio Purús [Restricted to Purus River, between Cachoeira (7°42'S, 65°59'W) and Porto Alegre (8°57'S, 67°52'W)]. Lectotype: NMW 44271: 2, designated by Armbruster (1998a: 254).

Plecostomus madeiræ Fowler, 1913: 571, fig. 23. Type locality: Madeira river, about 200 miles east of W. long. 63°54'W, Brazil. Holotype: ANSP 39312. Synonymized by Armbruster (1998a: 254).

Plecostomus popoi Pearson, 1924: 20, pl. 3 (fig. 2). Type locality: Popoi River, Upper Río Beni, Bolivia. Holotype: CAS 77346 [ex IU 17010]. Synonymized by Armbruster (1998a: 254).

Plecostomus micropunctatus La Monte, 1935: 1, fig. 1. Type locality: Rio Purus: [...] in the vicinity of the mouth of Rio Macuhan, a tributary of Rio Iaco which, in turn, is a tributary of Rio Purus (70°15'W, 7°30'S.). Holotype: AMNH 12598. Synonymized by Armbruster (1998a: 254).

Plecostomus chaparæ Fowler, 1940b: 81, fig. 39. Type locality: Boca Chapare, Río Chimore, Cochabamba, Bolivia. In introduction (p.73): at the mouth of the Rio Chapare at its junction with the Rio Chimore, in the Department of Cochabamba. Holotype: ANSP 69067. Synonymized by Armbruster (1998a: 254).

Aphanotorulus franki Isbrücker & Nijssen, 1983: 108, figs. 1-2. Type locality: [...] du Pérou, Dept. Ucayali, Prov. Coronel Portillo, système du Rio Aguaytia. Rio Neshua (environ 08°36'S, 74°50'W), 60 km S.O. de Pucallpa, le long de la route de Tingo Maria. Holotype: ZMA 116.640. Synonymized by Armbruster (1998a: 254).

Maximum length: 13.9 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Bolivia, Brazil, Ecuador, Peru

Remarks and references: Type locality restricted here, based on Snethlage (1909: 449) and a map in Snethlage (1908: 43).

CORYMBOPHANES

Corymbophanes Eigenmann, 1909: 5. Type species: *Corymbophanes andersoni* Eigenmann, 1909. Type by monotypy. Gender: masculine. Revision in Armbruster & al. (2000: 998).

Corymbophanes andersoni Eigenmann, 1909

Corymbophanes andersoni Eigenmann, 1909: 5, pl. 27 (fig.1) in Eigenmann, 1912. Type locality: Aruataima Falls, Upper Potaro R., British Guiana [in title]. Holotype: FMNH 52675 [ex CM 1001].

Maximum length: 8.6 cm SL

Distribution: South America: Essequibo River drainage, upper Potaro River, upstream Kaieteur Falls.

Countries: Guyana

Remarks and references: Redescription in Armbruster & al. (2000: 1001). Biology: found in shallow riffles, in the main channel; substratum: bedrock with numerous crevices and small patches of gravel and cobble.

Corymbophanes kaiei Armbruster & Sabaj, 2000

Corymbophanes kaiei Armbruster & Sabaj, in Armbruster et al., 2000: 1002, fig. 3 (middle). Type locality: Guyana, Potaro-Siparuni Region, Oung Creek (Chenapou River-Potaro River Drainage) about one hour hike southwest of coordinates 04°58'26"N, 59°34'41"W (mouth of Chenapou River). Holotype: UG/CSBD F644.

Maximum length: 6.6 cm SL

Distribution: South America: Essequibo river drainage, upper Potaro River basin.

Countries: Guyana

Remarks and references: Biology: found among cobble and submerged logs in sun-lit areas of swift riffles.

DELTURUS

Delturus Eigenmann & Eigenmann, 1889: 45. Type species: *Del-*

turus parahybae Eigenmann & Eigenmann, 1889. Type by original designation. Gender: masculine.

Carinotus La Monte, 1933: 1. Type species: *Plecostomus (Carinotus) carinotus* La Monte, 1933. Type by original designation. Gender: masculine. Synonymized by Gosline (1947: 106).

Delturus angulicauda (Steindachner, 1877)

Plecostomus angulicauda Steindachner, 1877a: 672, pl. 12. Type locality: Rio Mucuri bei Santa Clara; Rio Parahyba. Syntypes: NMW 44069-70 (only 2 found, one from Mucuri, the other from Paraíba do Sul).

Maximum length: 27 cm SL

Distribution: South America: Mucuri River basin.

Countries: Brazil

Remarks and references: New combination in Eigenmann and Eigenmann (1889: 45).

Delturus carinotus (La Monte, 1933)

Plecostomus (Carinotus) carinotus La Monte, 1933: 2, fig. 1(a). Type locality: Rio Doce, Estado do Espírito Santo, eastern Brazil. Holotype: AMNH 11911.

Maximum length: 23.5 cm SL

Distribution: South America: Doce River basin.

Countries: Brazil

Remarks and references: New combination in Gosline (1947: 106).

Delturus parahybae Eigenmann & Eigenmann, 1889

Delturus parahybae Eigenmann & Eigenmann, 1889: 45. Type locality: Parahyba [Brazil]. Syntypes: MCZ 7726 (2).

Maximum length: 24 cm SL

Distribution: South America: Paraíba do Sul River basin.

Countries: Brazil

GLYPTOPERICHTHYS

Glyptoperichthys Weber, 1991: 639. Type species: *Ancistrus lituratus* Kner, 1854. Type by original designation. Gender: masculine. Complementary description in Weber (1992: 14).

Glyptoperichthys gibbiceps (Kner, 1854)

Ancistrus gibbiceps Kner, 1854: 284, pl. 5 (fig. 2). Type locality: aus dem Rio Negro bei Marabitanos [Brazil]. Holotype: whereabouts unknown (Eschmeyer 1998: 641). Originally proposed as *Anc. gibbiceps*.

Liposarcus altipinnis Günther, 1864: 239. Type locality: Rio Cupari [restricted to Cupari River, Tapajós River basin, Amazon drainage, Amazonas State, Brazil, by Weber, 1992: 29]. Holotype: BMNH 1853.3.19.34. Synonymized by Weber (1992: 29).

Maximum length: 50 cm TL

Distribution: South America: Middle and upper Amazon and Orinoco basins.

Countries: Bolivia, Brazil, Ecuador, Peru, Venezuela

Remarks and references: New combination in Weber (1991: 639), redescription in Weber (1992: 17).

Common names: Carachama (Ecuador).

Glyptoperichthys joselimaianus Weber, 1991

Glyptoperichthys joselimaianus Weber, 1991: 640, pl. 15 (b) in Weber, 1992: 20. Type locality: Rio Araguaya, affl. du Tocantins, système de l'Amazone, Aruanã, Goiás, Brésil. Holotype: MZUSP 4873.

Maximum length: 30.5 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Remarks and references: 12S and 16S mitochondrial rRNA gene sequences used in a molecular phylogeny of Loricariidae by Montoya-Burgos et al. (1997: fig. 4; EMBL/GenBank Y08286, Y08334).

Common names: Acari bodó (Brazil); White-spot Glyptoperichthys (English); L 001 (Aqualog).

***Glyptoperichthys lituratus* (Kner, 1854)**

Ancistrus lituratus Kner, 1854: 285, pl. 5 (fig. 3). Type locality: aus dem Rio Guaporé bei cidade do Matogrosso [Amazon system, Brazil]. Lectotype: NMW 16416. Originally as *Anc. [istrus] lituratus*.

Maximum length: 37 cm SL

Distribution: South America: Madeira River basin.

Countries: Bolivia, Brazil

Remarks and references: New combination in Weber (1991: 639); Lectotype designation and redescription in Weber (1992: 28).

Common names: Guapore-salifin (English); L 196 (Aqualog).

***Glyptoperichthys parnaibae* Weber, 1991**

Glyptoperichthys parnaibae Weber, 1991: 641 [pl. 16 (b) in Weber (1992: 21)]. Type locality: Lac de Parnaguá, Rio Paraim, bassin de Parnaíba, sys. côtier brésilien; Maranhão, Brésil. Holotype: NMW 48034.

Maximum length: 29 cm SL

Distribution: South America: Parnaíba River basin.

Countries: Brazil

***Glyptoperichthys punctatus* (Kner, 1854)**

Loricaria punctata Kner, 1854: 281. Type locality: S. Vincente [...] aus einer Lache [Restricted to Guaporé River, Amazon basin, San Vincente = Arraial de São Vincente, bourgade disparue au N. de Mato Grosso, Brésil]. Holotype: NMW 76587.

Maximum length: 28.5 cm SL

Distribution: South America: Madeira, Purus, Jurua and Marañón River basins.

Countries: Bolivia, Brazil, Ecuador, Peru

Remarks and references: New combination in Weber (1991: 635); type locality restricted and redescription by Weber (1992: 31 and 22).

Common names: Carachama (Ecuador).

***Glyptoperichthys scrophus* (Cope, 1874)**

Liposarcus scrophus Cope, 1874: 136. Type locality: Nauta [Peru]. Syntypes: The two syntypes cannot be located.

Maximum length: 27.5 cm SL

Distribution: South America: Marañón and Ucayali River basins.

Countries: Peru

Remarks and references: Complementary description and new combination in Page et al. (1996: 186). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2, EMBL/GenBank AJ318362).

Common names: White-tail (English); L 198 (Aqualog).

***Glyptoperichthys xinguensis* Weber, 1991**

Glyptoperichthys xinguensis Weber, 1991: 640 [illustrated on pl. 14, fig b, in Weber (1992)]. Type locality: Rio Fresco, affl. du Rio Xingu, système de l'Amazone; Aldeio Gorotire, municípe de São Felix do Xingu, Pará, Brésil. Holotype: MZUSP 35961.

Maximum length: 27 cm SL

Distribution: South America: Xingu River basin.

Countries: Brazil

HEMIPSILICHTHYS

Xenomystus Lütken, 1874a: 217. Type species: *Xenomystus gobio* Lütken, 1874. Type by original designation. Gender: masculine. Preoccupied by *Xenomystus* Günther, 1868.

Hemipsilichthys Eigenmann & Eigenmann, 1889: 46. Type species: *Xenomystus gobio* Lütken, 1874. Type by being a replacement name. Gender: masculine. Replacement name for *Xenomystus* Lütken, 1874.

Psilichthys Steindachner, 1907a: 82. Type species: *Psilichthys cameroni* Steindachner, 1907. Type by monotypy. Gender: masculine. Preoccupied by *Psilichthys* Hall, 1899 (in fossil fishes).

Pareiorhaphis Miranda Ribeiro, 1918c: 106. Type species: *Hemip-*

silichthys calmoni [= *Psilichthys cameroni* Steindachner, 1907]. Type by subsequent designation by Regan (1920: 14). Gender: feminine. Type designation made with the unjustified emended name of *Hemipsilichthys calmoni*, and, erroneously, with Miranda Ribeiro as author. Subsequent designation by Gosline (1947: 102) of *Hemipsilichthys duseni* as type is invalid (see Derijst, 1996: 63).

Upsilonodus Miranda Ribeiro, 1924: 365. Type species: *Upsilonodus victori* Miranda Ribeiro, 1924. Type by monotypy. Gender: masculine. Synonymized by Pereira and Reis (2002: 99).

Diagnosis, nomenclatural revision and key to species in Pereira and Reis (2002).

***Hemipsilichthys azygolechis* Pereira and Reis, 2002**

Hemipsilichthys azygolechis Pereira and Reis, 2002: 129, fig. 20 (middle). Type locality: Brazil: Paraná: Guaratuba; rio Araraquara ca. 8 km N of Guaruva (25°57'58"S 48°49'43"W). Holotype: MCP 19670.

Maximum length: 11.6 cm SL

Distribution: South America: São João River basin.

Countries: Brazil

Remarks and references: Biologie: Sympatric and syntopic with *H. splendens*.

***Hemipsilichthys bahianus* (Gosline, 1947)**

Corymbophanes bahianus Gosline, 1947: 107, pl. 3 (fig. 6). Type locality: Fazenda Almada, Ilheus, Bahia [Brazil]. Holotype: MNRJ 4243.

Maximum length: 7.4 cm SL

Distribution: South America: Small drainages near Ilhéus, between Pado and Contas River basins.

Countries: Brazil

Remarks and references: New combination in Armbruster et al. (2000: 997), redescription and distribution in Pereira and Reis (2002: 113).

***Hemipsilichthys calmoni* (Steindachner, 1907)**

Psilichthys cameroni Steindachner, 1907a: 82. Type locality: aus dem Fluss Cubataõ im Staate Santa Catharina, Brazilien [restricted to: im Flusse Cubataõ, welcher das Gebeit der Exkolonie Theresopolis im Staate Santa Catharina durchfließt, in einer Höhe von 800 bis 100 Fuß über dem Meere (= ao rio Cubatão situado no municípe de Aguas Mornas)]. Lectotype: NMW 46414. Originally proposed as *Ps. cameroni*. Name rejected by Pereira and Reis (2002: 106, see "Comments") as incorrect spelling published in an abstract (Steindachner, 1907a: 82) of the full description (Steindachner 1907b: 475), where the mistake was clear (481).

Hemipsilichthys calmoni Steindachner, 1908a: 31. (Correction of name only).

Maximum length: 10.4 cm SL

Distribution: South America: Cubatão (southern), Tubarão and Araranguá River basins.

Countries: Brazil

Remarks and references: New combination in Steindachner (1907b: 475). Type locality restricted by Steindachner (1907b: 481) and relocated by Lucena and Lucena (1990: 100) Redescription, distribution and designation of the lectotype in Pereira and Reis (2002: 104).

***Hemipsilichthys cerosus* Miranda Ribeiro, 1951**

Hemipsilichthys cerosus Miranda Ribeiro, 1951: 39. Type locality: Not explicitly given. Syntypes: MNRJ 648 (2).

Maximum length: 11 cm SL

Distribution: South America: Eastern Brazilian coastal basin (?).

Countries: Brazil

Remarks and references: Not explicit then invalid designation of a lectotype in Miranda Ribeiro (1953: 400). Redescription and designation of a lectotype in Pereira and Reis (2002: 115) Only

known from two type specimens.

***Hemipsilichthys eurycephalus* Pereira & Reis, 2002**

Hemipsilichthys eurycephalus Pereira & Reis, 2002: 0131, fig 21 (middle). Type locality: Brazil: Santa Catarina: Urubici: creek tributary of Rio Canoas East of vila São José, on road to serra do Corvo Branco (28°03'33"S 49°25'42"W). Holotype: MCP 19778.

Maximum length: 6.3 cm SL

Distribution: South America: Upper Canoas River basin.

Countries: Brazil

***Hemipsilichthys garbei* Ihering, 1911**

Hemipsilichthys garbei Ihering, 1911: 399. Type locality: no curso superior, montanha acima, do Rio Macahé, no Est. do Rio de Janeiro [...] im Staat Rio de Janiero, im Gebirgeflusse Macahé (ca. 10-15m. Breite, flach und Steinig) im Oberlaufe, d.h. am Gebirgsrande [Brazil]. Lectotype: MZUSP 1163, designated by Oliveira (1997:117).

Maximum length: 11.2 cm SL

Distribution: South America: Macaé River basin.

Countries: Brazil

Remarks and references: Redescription and distribution in Pereira and Reis (2002: 107)

***Hemipsilichthys gobio* (Lütken, 1874)**

Xenomystus gobio Lütken, 1874a: 217, pl. 4 (fig. 1). Type locality: not explicitly given [restricted to Paraíba do Sul River basin]. Holotype: ZMUC 76.

Upsilodus victori Miranda Ribeiro, 1924: 366. Type locality: Paquequer ad Theresopolis, Rio de Janeiro [Brazil]. Lectotype: MNRJ 639, designated by Gosline (1947: 100). Synonymized by Pereira and Reis (2002: 100).

Maximum length: 15.6 cm SL

Distribution: South America: Paraíba do Sul River basin.

Countries: Brazil

Remarks and references: Type locality restricted by Pereira & al. (2000: 382). Lives in a small shallow stream, with clear water and moderate to strong current. Bottom formed by rocks, loose stones and gravel. Redescription and distribution in Pereira and Reis (2002: 100)

***Hemipsilichthys hypselurus* Pereira & Reis, 2002**

Hemipsilichthys hypselurus Pereira & Reis, 2002: 136, fig 23 (middle). Type locality: Brazil: Rio Grande do Sul: Maquiné; rio Forqueta tributary to rio Maquiné, 29° 32'42"S 50°14'21"W. Holotype MCP 19665.

Maximum length: 7 cm SL

Distribution: South America: Maquiné, Três Forquillas, Mampituba and Araranguá River basins.

Countries: Brazil

***Hemipsilichthys hystrix* Pereira & Reis, 2002**

Hemipsilichthys hystrix Pereira & Reis, 2002: 134, fig 22 (middle). Type locality: Brazil: Rio Grande do Sul: Bom Jesus; creek tributary of rio dos Touros, on road from Silveira to Rondinha, 28° 39'18"S 50°18'25"W. Holotype MCP 19779

Maximum length: 11.5 cm SL

Distribution: South America: Headwaters of Pelotas, Ijuí and Piratinim River basins; upper Taquari River basin.

Countries: Brazil

***Hemipsilichthys mutuca* Oliveira & Oyakawa, 1999**

Hemipsilichthys mutuca Oliveira & Oyakawa, 1999: 75, fig. 1 (top). Type locality: Brazil: Minas Gerais: Rio das Velhas drainage, County of Nova Lima, Córrego Mutuca, at right side of the road from Belo Horizonte to Nova Lima, km 20 (approx. 20°60'S, 43°55'W). Holotype: MZUSP 37148.

Maximum length: 9.6 cm SL

Distribution: South America: Headwaters of Das Velhas River

basin.

Countries: Brazil

Remarks and references: Redescription in Pereira and Reis (2002: 124)

***Hemipsilichthys nudulus* Reis & Pereira, 1999**

Hemipsilichthys nudulus Reis & Pereira, 1999: 46, fig. 2 (top). Type locality: Rio Jordão, at Jordão Alto (approx. 28°35'S, 49°27'W), Nova Veneza, Santa Catarina, Brazil. Holotype: MCP 20278.

Maximum length: 4.2 cm SL

Distribution: South America: Araranguá, Mapituba, Três Forquillas, and Maquiné River basins.

Countries: Brazil

Remarks and references: Redescription and distribution in Pereira and Reis (2002: 122)

***Hemipsilichthys papillatus* Pereira, Oliveira & Oyakawa, 2000**

Hemipsilichthys papillatus Pereira, Oliveira & Oyakawa, 2000: 378, fig. 1. Type locality: Brazil: Minas Gerais: rio Paraíba do Sul drainage, County of Rio Preto, ribeirão Santana, tributary of rio Preto (approx. 22°02'S 43°47'W). Holotype: MZUSP 53085.

Maximum length: 9.2 cm SL

Distribution: South America: Preto River basin of Paraíba do Sul River drainage.

Countries: Brazil

***Hemipsilichthys regani* Giltay, 1936**

Hemipsilichthys regani Giltay, 1936: 6, fig. 2. Type locality: Rio Curi Curiay, au S. du Rio Negro (Amazoné, Brésil). Holotype: IRSNB 47.

Maximum length: 11.5 cm TL

Distribution: South America: Curicuriari and possibly Jaú River basins in the Negro River drainage.

Countries: Brazil

Remarks and references: Diagnosis and distribution in Pereira and Reis (2002: 112)

***Hemipsilichthys splendens* Bizerril, 1995**

Hemipsilichthys splendens Bizerril, 1995: 118, fig. 2. Type locality: Brazil: State of Santa Catarina, river Cubatão: near to the city of Joinville. Holotype: MNRJ 13325.

Maximum length: 6.5 cm SL

Distribution: South America: Cubatão (northern), Itajaí-Açu, Cubatão (southern), Nhundiaquara and São João River basins .

Countries: Brazil

Remarks and references: Redescription and distribution in Pereira and Reis (2002: 120) Biology: caught in small crevices formed by loose stones; clear and fast flowing water with a gravel and rock bottom composition.

***Hemipsilichthys stephanus* Oliveira & Oyakawa, 1999**

Hemipsilichthys stephanus Oliveira & Oyakawa, 1999: 77, fig. 4 (top). Type locality: Brazil: Minas Gerais: Rio Jequitinhonha drainage, County of Diamantina, ribeirão das Pedras, ca. 1300 masl, 3 km north of Diamantina (approx. 18°10'S, 43°37'W). Holotype: MZUSP 36971.

Maximum length: 9.7 cm SL

Distribution: South America: Jequitinhonha River basin.

Countries: Brazil

Remarks and references: Redescription in Pereira and Reis (2002: 126)

***Hemipsilichthys steindachneri* Miranda Ribeiro, 1918**

Hemipsilichthys steindachneri Miranda Ribeiro, 1918a: 107. Type locality: Flum. Rio Itapucú (Santa Catharina) [= rio Itapocu on brazilian map, Brazil]. Lectotype: NMW 92790, designated by

Pereira & Reis (2002: 109). Originally proposed as *H. steindachneri*. Described as belonging to the new genus *Pareiorhaphis*.

Pseudancistrus luderwaldti Miranda Ribeiro 1918c: 632. Type locality: Hansa, Santa Catharina, Brasil [margens do rio Itajaí, perto de Blumenau, Estado de Santa Catarina]. Holotype: MZUSP 2109. Details on type locality and data on holotype from Britski (1969: 210).

Maximum length: 14.3 cm SL

Distribution: South America: Cubatão (northern), Itapocu, Itajaí-Açu, and Cubatão (southern) River basins.

Countries: Brazil

Remarks and references: Redescription, distribution and designation of lectotype in Pereira and Reis (2002: 109). The priority of *steindachneri* upon *luderwaldti* is not clearly established. Nevertheless, *luderwaldti* was mentioned only in few checklists as belonging to *Pseudancistrus*, without any published nomenclatural act. For this reason, and for the stability of the nomenclature, in case of priority of this last name, it should be rejected as *nomen oblitum* (Reis, pers. comm.).

***Hemipsilichthys stomias* Pereira & Reis, 2002**

Hemipsilichthys stomias Pereira & Reis, 2002: 139, fig 24 (middle). Type locality: Brazil: Santa Catarina: Treviso: rio Mãe Luzia at Forquilha, 28°27'66"S 49°30'06"W. Holotype MCP 19666

Maximum length: 5.2 cm SL

Distribution: South America: Ararangua and Tubarão River basins.

Countries: Brazil

***Hemipsilichthys vestigipinnis* Pereira & Reis, 1992**

Hemipsilichthys vestigipinnis Pereira & Reis, 1992: 113, fig. 2(b).

Type locality: Creek tributary of the Rio Caveiras at Painel, on the road from São Joaquim to Lares (approximately 27°55'S, 50°05'W) Lajes, Santa Catarina, Brazil. Holotype: MCP 14344.

Maximum length: 9.8 cm SL

Distribution: South America: Headwaters of Canoas River basin.

Countries: Brazil

Remarks and references: Redescription and distribution in Pereira and Reis (2002: 118).

HYPOSTOMUS

Plecostomus Gronow in Walbaum, 1792: 663. Type species: *Acipenser plecostomus* Linnaeus, 1758. Type by subsequent designation. Gender: masculine. Non-binominal and therefore invalid (Boeseman, 1968:32).

Hypostomus La Cepède, 1803: 145. Type species: *Hypostomus guacari* La Cepède, 1803. Type by monotypy. Gender: masculine. *Hypostomus guacari* La Cepède is an unneeded substitute for *Acipenser plecostomus* Linnaeus, 1758.

Cochliodon Heckel in Kner, 1854: 265. Type species: *Hypostomus cochliodon* Kner, 1854. Type by monotypy. Gender: masculine. Synonymized after results based on morphological data by Weber and Montoya-Burgos (2002: 365), and molecular data by Montoya-Burgos & al. (2002: 377).

Cheiridodus Eigenmann, 1922: 70. Type species: *Plecostomus hondae* Regan, 1912. Type by original designation. Gender: masculine. Synonymized by Dahl (1971: 87) with *Cochliodon*.

Watawata Isbrücker & Michels, in Isbrücker et al., 2001: 21. Type species: *Hypostomus microstomus* Weber 1987. Type by original designation. Gender: feminine. Synonymized here. *Watawata* is only based on a unique teeth character not sufficient as diagnostic generic criterion (see also Weber & Montoya-Burgos, 2002: 365).

Revisions in Boeseman (1968, Suriname), Weber (1986, Paraguay), Reis et al. (1990, Rio Grande do Sul), López & Miquelarena (1991, Argentina) and Le Bail et al. (2000, French Guiana). Molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002).

***Hypostomus affinis* (Steindachner, 1877)**

Plecostomus affinis Steindachner, 1877a: 685. Type locality: aus dem Rio Mucury bei Santa Clara [...] im Rio Parahyba und dessen Nebenflusse Muriahé, im Rio Mucury und S. Antonio bei S. Antonio de Ferros [Brazil - Restricted to Campos, in the rio Paraíba do Sul basin]. Lectotype: NMW 44041: 1 designated by Mazzoni et al. (1994:5 and 7).

Maximum length: 39.7 cm SL

Distribution: South America: Paraíba do Sul River basin.

Countries: Brazil

Remarks and references: Lectotype designation, and type locality restriction in Mazzoni et al. (1994: 5 and 7). 12S and 16S mitochondrial rRNA gene sequences used in a molecular phylogeny of Loricariidae by Montoya-Burgos et al. (1997: fig. 4; EMBL/GenBank Y08288, Y08336); mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318358). Biology: found in large and small waters, in lentic or rapid sections of the river, on rocky or sandy-rocky bottom. Young specimens inhabit the riparian vegetation along those habitats.

***Hypostomus agna* (Miranda Ribeiro, 1907)**

Plecostomus agna Miranda Ribeiro, 1907: 188. Type locality: Rio da Ribeira. In title: da Iporanga - S. Paulo [Brazil]. Holotype: whereabouts unknown.

Maximum length: 22 cm TL

Distribution: South America: Ribeira de Iguapé River basin.

Countries: Brazil

Common names: Anhá (Brazil).

***Hypostomus alatus* Castelnau, 1855**

Hypostomus alatus Castelnau, 1855: 41, pl. 20 (fig. 1). Type locality: du rio Sabara, dans la province de Minas Geraës (Brésil).

Holotype: MNHN A.9441.

Maximum length: 27 cm SL

Distribution: South America: Upper São Francisco River basin.

Countries: Brazil

Common names: Acari (Brazil); anhá, Cascudo (Brazil).

***Hypostomus albopunctatus* (Regan, 1908)**

Plecostomus albopunctatus Regan, 1908b: 797, pl. 49 (fig. 1).

Type locality: Rio Piracicaba, Sao Paulo, Brazil. Lectotype: BMNH 1907.7.6.15 designated by Weber (1987: 279).

Maximum length: 27 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil, Paraguay (?)

Remarks and references: Specimens collected in Paraguay (middle Paraguayan Paraná basin) identified as *Hypostomus albopunctatus* based on morphology (Weber et al. 1992: 13). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318379).

Common names: Cascudo ferro (Brazil).

***Hypostomus ancistroides* (Ihering, 1911)**

Plecostomus ancistroides Ihering, 1911: 396. Type locality: Rio Tatuhy, affluente do lado esquerdo do Rio Sorocaba, Rio Piracicaba, Est. de S. Paulo [Brazil]. Syntypes: cannot be located in MZUSP (Britski, 1969: 200).

Maximum length: 21 cm TL

Distribution: South America: Tietê River basin.

Countries: Brazil

Remarks and references: Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318369). Biology: strictly herbivorous; found mainly in riffle stretches of small forest streams (Castro and Casatti, 1997, Casatti et al., 2001).

***Hypostomus angipinnatus* (Leege, 1922)**

Plecostomus angipinnatus Leege, 1922: 152, pl. 9 (fig. 1). Type locality: Mato Grosso (?) [Brazil]. Holotype not found in Phyletisch Museum, Jena.

Maximum length: 15 cm (axial length)

Distribution: South America: La Plata drainage: Paraguay basin?

Countries: Brazil

***Hypostomus argus* (Fowler, 1943)**

Plecostomus argus Fowler, 1943: 249, fig. 31. Type locality: Villavicencio, Río Meta basin, Colombia. Holotype: ANSP 70510.

Maximum length: 11.6 cm SL

Distribution: South America: Upper Meta River basin.

Countries: Colombia

***Hypostomus asperatus* Castelnau, 1855**

Hypostomus asperatus Castelnau, 1855: 41, pl. 20 (fig. 2). Type locality: de l'Araguay [Brazil]. Holotype: MNHN A.9442.

Maximum length: 22.9 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Remarks and references: Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318370).

***Hypostomus aspilogaster* (Cope, 1894)**

Plecostomus aspilogaster Cope, 1894: 100, pl. 7 [pl. 7 reversed 8] (fig. 14). Type locality: from the Jacuhy, Rio Grande do Sul. Lectotype: ANSP 21781.

Maximum length: 26.5 cm SL

Distribution: South America: Uruguay River basin and Laguna dos Patos drainage.

Countries: Brazil

Remarks and references: Redescription and lectotype designated by Reis et al. (1990: 733). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318375).

***Hypostomus atropinnis* (Eigenmann & Eigenmann, 1890)**

Plecostomus lima atropinnis Eigenmann & Eigenmann, 1890: 410 (Description in key p. 399). Type locality: Goiás, Brazil, defined as: Brazil, Est. Goiás, rio Araguaia drainage, upper course of rio Vermelho at Goiás (15°57' S, 50°07' W). Holotype: MCZ 27265 [ex MCZ 7871a].

Maximum length: 21 cm TL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Remarks and references: Available from description in key (p. 399); raised to species level by Eigenmann (1910: 406). Type locality located by Isbrücker (1973: 174, in footnote).

***Hypostomus auroguttatus* Kner, 1854**

Hypostomus auroguttatus Kner, 1854: 269, pl. 2 (fig. 3). Type locality: Not explicitly given, restricted to Rio Parahyba [Brazil]. Syntypes not found in NMW. Originally proposed as *Hyp. auroguttatus*.

Plecostomus luetkeni Steindachner, 1877b: 217. Type locality: Im Rio Parahyba, R. Mucuri, R. San Antonio, R. Quenda, R. de Pedra [restricted to rio Parafba do Sul and tributaries, State of Rio de Janeiro, Brazil by Mazzoni et al. (1994: 10)]. Lectotype: NMW 44196: 1.

Maximum length: 28.6 cm TL

Distribution: South America: Parafba do Sul River basin.

Countries: Brazil

Remarks and references: Type locality, based on Natterer's notes, restricted by Steindachner (1881b: 6); *H. auroguttatus* auctorum is referred below to *Hypostomus meleagris* (Marini, Nichols & La Monte, 1933). Biology: found in big and rapid waters with

rocky bottom.

***Hypostomus bolivianus* (Pearson, 1924)**

Plecostomus bolivianus Pearson, 1924: 21, pl. 4 (fig. 1). Type locality: Popoi River, Upper Beni, Bolivia. Holotype: CAS 77347 [ex IU 17011] (largest specimen).

Maximum length: 15 cm TL

Distribution: South America: Beni River basin.

Countries: Bolivia

***Hypostomus borellii* (Boulenger, 1897)**

Plecostomus borellii Boulenger, 1897: 2. Type locality: Mission de San Francisco [Pilcomayo River, Bolivia]. Syntypes: BMNH 1897.1.27.19 (1); MZUT 1393 (1).

Maximum length: 16.1 cm SL

Distribution: South America: Upper and middle Pilcomayo River basin.

Countries: Argentina, Bolivia

Remarks and references: Reported from Argentina by Arratia et al. (1983).

Common names: Vieja, Vieja de agua (Bolivia, Argentina).

***Hypostomus boulengeri* (Eigenmann & Kennedy, 1903)**

Plecostomus boulengeri Eigenmann & Kennedy, 1903: 502. Type locality: Matto Grosso or Asuncion [Brazil or Paraguay]. Holotype: CAS 58554 [ex IU 9868].

Maximum length: 24.5 cm SL

Distribution: South America: Paraguay River basin.

Countries: Argentina, Brazil, Paraguay

Remarks and references: Redescription in Weber (1986: 982).

Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002 fig 2; EMBL/GenBank AJ318344).

Common names: Cascarudo (Paraguay); guaimingué, pirá tatu (Paraguay, Guarani); cascudo (Brazil).

***Hypostomus brevicauda* (Günther, 1864)**

Plecostomus brevicauda Günther, 1864: 235. Type locality: Bahia [Brazil]. Syntypes: BMNH 1864.1.19.16-17 (2).

Maximum length: 19.3 cm SL

Distribution: South America: Eastern Brazilian coastal drainage.

Countries: Brazil

***Hypostomus brevis* (Nichols, 1919)**

Plecostomus brevis Nichols, 1919: 413, 423. Type locality: no Estado de S. Paulo [...] in the state of São Paulo [Brazil]. Holotype: AMNH 7150.

Maximum length: 7.4 cm SL

Distribution: South America: Paraná River basin; or eastern Brazilian coastal drainage?

Countries: Brazil

Remarks and references: Only known from holotype.

***Hypostomus carinatus* (Steindachner, 1881)**

Plecostomus carinatus Steindachner, 1881a: 108, pl. 4 (fig. 2).

Type locality: aus dem Amazonen - Strome, ohne nähere Angabe des Fundortes; [...], von Jatuarana [=probably in the Parintins, near Barreirinha], Ueranduba [=lago Iranduba], und aus dem See Saraca [=lago de Sarac]. Syntypes: (several) ?MCZ 27266 (1); NMW 44094 (1), 44096 (1).

Maximum length: 24.8 cm SL

Distribution: South America: Middle Amazon River basin.

Countries: Brazil

Remarks and references: Some diagnostic characters in Rapp Py-Daniel (1988: 17 and tab. 3).

***Hypostomus carvalhoi* (Miranda Ribeiro, 1937)**

Plecostomus carvalhoi Miranda Ribeiro, 1937: 54. Type locality: Rio Granjeiro - Crato - Ceará. Syntypes: MNRJ 924 (2 of 4

found).
 Maximum length: 14.2 cm SL
 Distribution: South America: Jaguaribe River basin.
 Countries: Brazil
 Remarks and references: Not explicit then invalid designation of a lectotype in Miranda Ribeiro (1953: 401).

***Hypostomus cochliodon* Kner, 1854**

Hypostomus cochliodon Kner, 1854: 265, pl. 2 (fig. 1). Type locality: Rio Cuyaba. Syntypes: NMW 44101 (1), 46277 (1), 59395 (1); RMNH D1897 (1).

Loricaria melanoptera Kner, 1854: 265. Name not available, published as a synonym of *Hypostomus cochliodon* Kner, 1854, as in Natterer notes.

Cochliodon hypostomus Kner, 1854: 265. Name not available, published as a synonym of *Hypostomus cochliodon* Kner, 1854, as in Heckel ms.

Maximum length: 23 cm SL

Distribution: South America: Paraguay and middle Paraná River basins.

Countries: Argentina, Brazil, Paraguay

Remarks and references: First record in Argentina and complementary description in Lopez & Miquelarena (1991a: 4); combination revalidated in Weber and Montoya-Burgos (2002: 366).

***Hypostomus commersoni* Valenciennes, 1836**

Hypostomus commersoni Valenciennes, 1836 [1847]: pl. 7 (fig. 2). Type locality: not stated [restricted to La Plata River, Parana River basin, Montevideo, Uruguay]. Holotype: MNHN A.9444.

Plecostomus spiniger Hensel, 1870: 73. Type locality: Rio Cadea [=Cadeia River, Rio Grande do Sul, Brazil]. Holotype: ZMB 7444. Synonymized by Malabarba (1989: 152).

Plecostomus limosus Eigenmann & Eigenmann, 1888: 167. Type locality: Rio Grande do Sul [Brazil]. Lectotype: MCZ 7869, designated by Reis et al. (1990: 737). Synonymized by Malabarba (1989: 152).

Maximum length: 42.5 cm SL

Distribution: South America: Middle and lower Paraná and Uruguay River basins; Laguna dos Patos basin.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: No description, only a figure in Valenciennes, 1836 [1847]. In Weber (1986: 994), restriction of the type locality and unjustified designation of a lectotype but implicitly recognition of the holotype based on plate (MNHN 939.24.5.7 given as lectotype, corresponds as classification's number to A.9444). Populations of the Rio Grande do Sul in Reis et al. (1990: 736). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318356).

Common names: Cascudo panaque, coroncho (Brazil); vieja negra (Argentina, Uruguay).

***Hypostomus coppenamensis* Boeseman, 1969**

Hypostomus coppenamensis Boeseman, 1969: 120, fig. 3. Type locality: tributary of Left Coppename River, 3°54'N, 56°46'W, Surinam. Holotype: ZMA 105856.

Maximum length: 12.5 cm SL

Distribution: South America: Upper Coppename River basin.

Countries: Suriname

Remarks and references: Found in a river having a width of 4 meters, a depth of 30-150cm. and a bottom of sand and loam with rocks.

***Hypostomus corantijni* Boeseman, 1968**

Hypostomus corantijni Boeseman, 1968: 40, pl. 4 (fig. 1). Type locality: Sipaliwini River, Surinam. Holotype: RMNH 25471 (largest of 3).

Maximum length: 18.8 cm SL

Distribution: South America: Corantijn River basin, upstream first

cataracts.

Countries: Suriname

Remarks and references: Lives in cataracts, rapids and falls, or in pools or creeks nearby, usually in rapidly flowing water.

***Hypostomus cordovae* (Günther, 1880)**

Hypostomus paranensis Weyenbergh, 1877: 9. No types known. Nomen oblitum.

Plecostomus cordovae Günther, 1880: 11. Type locality: Cordova [Argentina]. Holotype: BMNH 1878.4.4.1. Nomen protectum.

Maximum length: 18.1 cm SL

Distribution: South America: Bermejo, Dulce, Uno, Secundo, and middle Paraná River basins.

Countries: Argentina, Paraguay (?)

Remarks and references: Diagnosed in Weber (1985: 966, tab. 2). Found among aquatic plants of ponds.

Common names: Vieja de agua (Argentina).

***Hypostomus crassicauda* Boeseman, 1968**

Hypostomus crassicauda Boeseman, 1968: 42, pl. 17 (fig. 1). Type locality: Sipaliwini River, Surinam. Holotype: RMNH 25489.

Maximum length: 14.3 cm SL

Distribution: South America: Upper Sipaliwini River basin.

Countries: Suriname

Remarks and references: Lives in cataracts, rapids and falls, or in pools or creeks nearby, usually in rapidly flowing water.

***Hypostomus derbyi* (Haseman, 1911)**

Plecostomus derbyi Haseman, 1911: 384, pl. 79. Type locality: Porto União da Victoria [Iguaçu River basin, Brazil]. Holotype: FMNH 54246 [ex CM 2865].

Maximum length: 30.5 cm SL

Distribution: South America: Iguaçu River and Uruga-í Creek basins, Paraguayan tributaries of Paraná River.

Countries: Argentina, Brazil, Paraguay

Remarks and references: First record in Argentina and complementary description in Gomez et al. (1990:145); specimens collected in Paraguay (middle Paraguayan Paraná basin) identified as *Hypostomus derbyi* based on morphology (Weber et al. 1992: 13) and description of teeth in Muller and Weber (1992: 750, fig. 2 f).

Common names: Cascudo (Brazil); vieja de agua (Argentina).

***Hypostomus dlouhyi* Weber, 1985**

Hypostomus dlouhyi Weber, 1985: 956, fig. 1 (middle). Type locality: système du Rio Paraná, sur un bras du lac de retenue du Rio Yguazú (non Iguaçu, Brésil) à la hauteur de la localité Juan E. O'Leary, 55°20' Ouest, 25°25'30' Sud, Paraguay, dép. Alto Parana. Holotype: MHNG 2229.43.

Maximum length: 24.5 cm SL

Distribution: South America: Yguazú River basin in middle Paraná River drainage.

Countries: Paraguay

Remarks and references: Collected in a temporary arm of a reservoir of a small dam, muddy bottom.

Common names: Cascarudo (Paraguay); guaimingué pirá tatu (Paraguay, Guarani).

***Hypostomus eptingi* Fowler, 1941**

Chaetostomus eptingi Fowler, 1941: 158, fig. 67. Type locality: Forteleza [=Fortaleza], Ceará, Brazil. Holotype: ANSP 69447.

Maximum length: 12.2 cm SL

Distribution: South America: Northern Brazilian coastal drainage.

Countries: Brazil

Remarks and references: New combination in Isbrücker (2001:28)

***Hypostomus fluviatilis* (Schubart, 1964)**

Plecostomus fluviatilis Schubart, 1964: 7, figs. 1-4. Type locality: Corrego da Lazica, perto de Ouro Fino (MG); Cachoeira do Es-

praiado, no alto Mogi Guaçu, acima do Soledade, Ouro Fino (MG); Alto Mogi Guaçu, 5 km jusante de Inconfidentes (mun. Ouro Fino, MG). Syntypes not found after extensive search in 1993.

Maximum length: 16.5 cm SL

Distribution: South America: Grande River basin.

Countries: Brazil

Common names: Cascudo (Brazil).

***Hypostomus fonchii* Weber & Montoya-Burgos, 2002**

Hypostomus fonchii Weber & Montoya-Burgos, 2002: 357, fig. 3 (b). Type locality: Peru: Ucayali: Quebrada John, lower part, near mouth in the Rio Pauya, in shallow water with emerging rocks, 06° 36' 7.0"S/75°56'26.3"W (GPS), alt. 360 m., Rio Cushabatay drainage, Rio Ucayali basin (Station 1). Holotype: MHNG 2613.66.

Maximum length: 14.1 cm SL

Distribution: South America: Cushabatay River basin.

Countries: Peru

Remarks and references: Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig. 2; EMBL/GenBank AJ318350). Biology: collected in transparent water, substrate composed by large rocks on fine sand, clay or shingle. No aquatic vegetation but leaves and dead woods. Water characteristics: depth of water: < 200 mm, temperature 25-26°.

***Hypostomus francisci* (Lütken, 1874)**

Plecostomus francisci Lütken, 1874b: 30. Type locality: in flumine Sti. Francisci [=São Francisco River, Brazil]. Holotype: ZMUC 60. Originally proposed as *Pl. francisci*.

Maximum length: 36 cm SL

Distribution: South America: Upper São Francisco River basin.

Countries: Brazil

***Hypostomus garmani* (Regan, 1904)**

Plecostomus garmani Regan, 1904: 214, pl. 10 (fig. 1). Type locality: Rio das Velhas, Eastern Brazil. Holotype: BMNH 1904.1.28.3.

Distribution: South America: São Francisco River basin.

Countries: Brazil

Remarks and references: Biology: Nocturnal benthic algae grazer (Casatti & Castro, 1998)

***Hypostomus goyazensis* (Regan, 1908)**

Plecostomus goyazensis Regan, 1908b: 798, fig. 207(a). Type locality: Goyaz [Brazil] defined as: Brazil, Est. Goiás, rio Araguaia drainage, upper course of rio Vermelho at Goiás (15°57' S, 50°07' W). Holotype: BMNH 1889.11.14.49.

Maximum length: 26 cm TL

Distribution: South America: Upper Araguaia River basin.

Countries: Brazil

Remarks and references: Type locality located by Isbrücker (1973: 174, in footnote).

***Hypostomus gymnorhynchus* (Norman, 1926)**

Plecostomus gymnorhynchus Norman, 1926: 95. Type locality: Iponcin Creek, into Approuague River, French Guiana. Holotype: BMNH 1926.3.2.74-5 [sic].

Maximum length: 17 cm SL

Distribution: South America: Guianan coastal drainages, from Oyapock westward to Maroni basin.

Countries: French Guiana, Suriname

Remarks and references: Usually lives in cataracts, rapids and falls, or in pools or creeks nearby. Redescription in Le Bail et al. (2000: 254).

Common names: Acari (Brazil); goré-riviè (French Guiana, Creole); kabitanka, kokoudu, wala wala, wara wara (Guyana, Suriname, French Guiana, Amerindian).

***Hypostomus hemiurus* (Eigenmann, 1912)**

Plecostomus hemiurus Eigenmann, 1912: 224, fig. 34, pl. 25 (fig. 1). Type locality: Amatuk [Potaro River, Guyana]. Holotype: FMNH 53110 [ex CM 1544].

Maximum length: 20.1 cm SL

Distribution: South America: Guianan coastal drainages.

Countries: Guyana

Remarks and references: Appeared first as name only in Eigenmann (1910: 407). Some diagnostic characters given in Boeseman (1968: 55 and tab. 17).

***Hypostomus hermanni* (Ihering, 1905)**

Plecostomus Hermanni Ihering, 1905: 560. Type locality: Rio Piracicaba, São Paulo, Brazil. Holotype: BMNH 1905.6.9.5.

Maximum length: 24 cm TL

Distribution: South America: Tietê River basin.

Countries: Brazil

***Hypostomus hondae* (Regan, 1912)**

Plecostomus hondae Regan, 1912: 666, pl. 76 (fig. 3). Type locality: Honda, Colombia (300-400 ft.). Syntypes: BMNH 1909.7.23.43-44 (2).

Cochliodon pospisili Schultz, 1944: 312, pl. 11 (figs. C-D). Type locality: Rio Palmar near Totuma, about 100 km. southwest of Maracaibo [Venezuela]. Holotype: USNM 121003. Synonymized by Lilyestrom (1984: 43).

Maximum length: 35 cm SL

Distribution: South America: Magdalena River and Lake Maracaibo basins.

Countries: Colombia, Venezuela

Remarks and references: Redescription in Lilyestrom (1984: 43).

New combination in Weber and Montoya-Burgos (2002: 366). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318348).

Common names: Coroncoro, cucho (Colombia).

***Hypostomus hoplonites* Rapp Py-Daniel, 1988**

Hypostomus hoplonites Rapp Py-Daniel, 1988: 14, fig. 2(6). Type locality: Brasil: Amazon (Rio Solimões, complexo de lagos do Janauacá). Holotype: INPA 109.2.

Maximum length: 32.5 cm SL

Distribution: South America: Middle Amazon basin.

Countries: Brazil

Remarks and references: Collected in a complex of lakes, connected to the main stream during 9 to 10 months.

Common names: Acari-bodó (Brazil).

***Hypostomus iheringii* (Regan, 1908)**

Plecostomus iheringii Regan, 1908b: 795, pl. 47 (fig. 1). Type locality: Rio Piracicaba, San Paulo, Brazil. Holotype: BMNH 1907.7.6.13.

Maximum length: 11.6 cm SL

Distribution: South America: Tietê River basin.

Countries: Brazil

***Hypostomus interruptus* (Miranda Ribeiro, 1918)**

Plecostomus interruptus Miranda Ribeiro, 1918c: 632. Type locality: Rio Juquiá [restricted by Britski (1969: 209) to rio Juquiá, Poço Grande, Estado de São Paulo, Brazil]. Holotype: MZUSP 2110.

Maximum length: 12 cm SL

Distribution: South America: Ribeira de Iguape River basin.

Countries: Brazil

***Hypostomus isbrueckeri* Reis, Weber & Malabarba, 1990**

Hypostomus isbrueckeri Reis, Weber & Malabarba, 1990: 752, fig. 22. Type locality: Rio Conceição, Ijuí, Rio Grande do Sul, Bra-

zil. Holotype: MCP 10488.
 Maximum length: 24.6 cm SL
 Distribution: South America: Middle and upper Uruguay River basin.
 Countries: Brazil
 Remarks and references: Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig. 2; EMBL/GenBank AJ318376).

***Hypostomus jaguribensis* (Fowler, 1915)**

Plecostomus jaguribensis Fowler, 1915b: 264, fig. 3. Type locality: Rio Jaguaribé at Barro Alto, Brazil. Holotype: ANSP 39930.
 Maximum length: 12 cm TL
 Distribution: South America: Jaguaribe River basin.
 Countries: Brazil

***Hypostomus johnii* (Steindachner, 1877)**

Plecostomus johnii Steindachner, 1877a: 691. Type locality: Rio Puty und Rio Preto [Brazil]. Syntypes: (several) MCZ 7831 (1), 7863-64 (4, 2); NMW 44191-93 (2, 2, 2).
 Maximum length: 11.3 cm SL
 Distribution: South America: Parnaíba and São Francisco River basins.
 Countries: Brazil

***Hypostomus laplatae* (Eigenmann, 1907)**

Plecostomus laplatae Eigenmann, 1907: 450, pl. 21 (fig. 1). Type locality: Buenos Aires [Argentina]. Holotype: Princeton Univ.
Plecostomus taeniatus Regan, 1908a: 358. Type locality: Río La Plata, Argentina. Syntypes: BMNH 1908.8.29.17 (1), ZMB 16817 (1). Synonymized by Gosline (1947: 129).
Plecostomus rachovii Regan, 1913: 555. Type locality: Near Rio Janeiro. Probably wrong, only known from the holotype presented by A. Rachow. Holotype: BMNH 1913.10.30.15. Synonymized here after comparison of holotypes of *H. rachovii* and *H. taeniatus*.
Plecostomus commersonoides Marini, Nichols & La Monte, 1933: 3. Type locality: Dársena Norte, Buenos Aires, Argentina. Holotype: AMNH 12243. Synonymized by Gosline (1947: 130).
 Maximum length: 69 cm TL
 Distribution: South America: La Plata River basin.
 Countries: Argentina, Uruguay.
 Remarks and references: Redescription in Lopez & Miquelarena (1991b: 28).

***Hypostomus latifrons* Weber, 1986**

Hypostomus latifrons Weber, 1986: 991, fig. 6 (middle). Type locality: Río Aguaray-guazú, bassin du río Paraguay système du río Paraná, Transchaco 117 km 58°00'00" Ouest, 24°22'50" Sud, dép. Presidente Hayes, Paraguay. Holotype: MHNG 2256.67.
 Maximum length: 28.7 cm SL
 Distribution: South America: Paraguay River basin.
 Countries: Paraguay
 Remarks and references: Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig. 2; EMBL/GenBank AJ318378).
 Common names: Cascarudo (Paraguay); guaimingué, pirá tatu (Paraguay, Guaraní).

***Hypostomus latirostris* (Regan, 1904)**

Plecostomus latirostris Regan, 1904: 213, pl. 11 (fig. 1). Type locality: Rio Jungada, Matto Grosso [Brazil]. Syntypes: BMNH 1892.4.20.26-27 (2).
 Maximum length: 26 cm TL
 Distribution: South America: Paraguay River basin.
 Countries: Brazil, Paraguay
 Remarks and references: Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig. 2; EMBL/GenBank

AJ318373).
 Common names: Cascarudo (Paraguay); guaimingué, pirá tatu (Paraguay, Guaraní).

***Hypostomus levis* (Pearson, 1924)**

Rhinelepis levis Pearson, 1924: 22, pl. 5 (fig. 1). Type locality: Huachi, Bolivia [in introduction:] Huachi, altitude 2,235 feet. Huachi overlooks the junction of the Bopi and Cochabamba rivers which here form the Beni. Holotype: CAS 77349 [ex IU 17014].
 Maximum length: 15.5 cm SL
 Distribution: South America: Madeira River basin.
 Countries: Bolivia
 Remarks and references: New combination in Weber and Montoya-Burgos (2002: 366).

***Hypostomus lexi* (Ihering, 1911)**

Plecostomus lexi Ihering, 1911: 387. Type locality: Rio Pardo, perto de Barretos (Est. S. Paulo) quasi na foz do rio que é afluente do Rio Grande, por sua vez tributario do lado esquerdo do Rio Paraná [Brazil]. Holotype: MZUSP 2126.
 Maximum length: 46 cm SL
 Distribution: South America: Grande River basin.
 Countries: Brazil

***Hypostomus lima* (Lütken, 1874)**

Plecostomus lima Lütken, 1874b: 29. Type locality: in rivulus flumini Rio da Velhas affluentibus [restricted to "Ribeirão do Mato" og andre smaa Bifloder til Rio d. Velhas]. Syntypes: BMNH 1876.1.10.1-2 [ex ZMUC]; NMW 44194 (1), 44195 (1); ZMUC 51 (1), 56 (1), 57 (1), 58 (1), 59 (1), 611 (1).
 Maximum length: 9.4 cm SL
 Distribution: South America: São Francisco River basin.
 Countries: Brazil
 Remarks and references: Type locality restricted by Lütken (1875: 140, in labels: Lagoa Santa or Ribeirão do Mato). MNHN 9573 [ex ZMUC], given as "paratype" in Bertin & Estève (1950: 71), is not a species of *Hypostomus*.

***Hypostomus longiradiatus* (Holly, 1929)**

Plecostomus longiradiatus Holly, 1929: 118. Type locality: aus dem Rio Guaná, vermutlich einem Nebenflusse des Madeira, der selbst ein Nebenfluß des Amazonenstromes ist [...] (Brasilien). Holotype: Not found.
 Maximum length: 39.5 cm TL
 Distribution: South America: Guamá River basin.
 Countries: Brazil
 Remarks and references: Type locality: Madeira basin is doubtful: Rio Guaná should be Guamá River, a river with the "Ilha das Onças" (given as locality of the paratype) at mouth, near Belém (Pará).

***Hypostomus luteomaculatus* (Devincenzi 1942)**

Plecostomus luteomaculatus Devincenzi in Devincenzi and Teague, 1942: 20, pl. 3 (fig. 3). Type locality: Río Uruguay [at Paysandú, Uruguay]. Holotype: MHNM CI 359.
 Maximum length: 28 cm SL
 Distribution: South America: Uruguay River basin.
 Countries: Argentina, Brazil, Uruguay
 Remarks and references: Species revalidated in Isbrücker (2001: 31) and Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig. 2; EMBL/GenBank AJ318372).
 Common names: Cascudo amarelo, cascudo chita, chitão (Brazil); vieja (Uruguay); vieja de agua (Argentina).

***Hypostomus luteus* (Godoy, 1980)**

Plecostomus luteus Godoy, 1980: 29, fig. 15. Type locality: Rio Pelotas, Volta Grande 2, Marcelino Ramos, RS [Brazil]. Holotype: in the personal coll. of M. Godoy.

Maximum length: 31 cm SL
 Distribution: South America: Upper Uruguay River basin.
 Countries: Brazil
 Remarks and references: Redescription by Reis & al. (1990: 741). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002 fig. 2; EMBL/GenBank AJ318350).
 Common names: Cascudo-amarelo (Brazil); Gold-yellow-Hypostomus (USA); L 200 (Aqualog).

***Hypostomus macrophthalmus* Boeseman, 1968**
Hypostomus pseudohemius macrophthalmus Boeseman, 1968: 56, pl. 10 (fig. 1). Type locality: Sipaliwini River, near air strip, Surinam. Holotype: RMNH 25514.
 Maximum length: 7.9 cm SL
 Distribution: South America: Sipaliwini River basin.
 Countries: Suriname
 Remarks and references: Raised to species level by Isbrücker (1980: 27). Collected in or near rapids.

***Hypostomus macrops* (Eigenmann & Eigenmann, 1888)**
Plecostomus macrops Eigenmann & Eigenmann, 1888: 170. Type locality: Rio das Velhas [Brazil]. Holotype: MCZ 7888.
 Maximum length: 28 cm SL
 Distribution: South America: Das Velhas River basin.
 Countries: Brazil
 Remarks and references: Available from description in key.

***Hypostomus margaritifer* (Regan, 1908)**
Plecostomus margaritifer Regan, 1908b: 796, pl. 47 (fig. 2). Type locality: Rio Piracicaba, San Paulo, Brazil. Holotype: BMNH 1907.7.6.14.
Plecostomus margaritifer butantanis Ihering, 1911: 394. Type locality: no Rio Pinheiros, perto de São Paulo (Capital) [Brazil]. Holotype: not found in MZUSP. Considered here as a synonym of *Hypostomus margaritifer*, based on observations of the pattern variability of this species.
 Maximum length: 33 cm TL
 Distribution: South America: Upper and middle Paraná River basin.
 Countries: Brazil, Paraguay (?).

***Hypostomus meleagris* (Marini, Nichols & La Monte, 1933)**
Plecostomus meleagris Marini, Nichols & La Monte, 1933: 4. Type locality: Southeastern Brazil [restricted herein to upper and middle Paraná drainage]. Holotype: AMNH 12246.
 Maximum length: 30 cm SL
 Distribution: South America: Upper and Middle Paraná River basin.
 Countries: Argentina, Brazil, Paraguay.
 Remarks and references: Morphological characters of *Hypostomus auroguttatus* auctorum (see Steindachner, 1881b: 6, Gosline, 1947: 117, Fowler, 1954: 176, Mazzoni et al., 1994:11), fit with *H. meleagris*, the true *H. auroguttatus* Kner, 1854, being now senior synonym of *H. luetcheni* (Steindachner, 1877).

***Hypostomus micromaculatus* Boeseman, 1968**
Hypostomus micromaculatus Boeseman, 1968: 49, 77 [addendum], pl. 7 (figs. 1-4). Type locality: Mamadam (falls), Surinam River, Surinam. Holotype: RMNH 25487 (largest).
 Maximum length: 18.5 cm SL
 Distribution: South America: Upper and middle Suriname River basin.
 Countries: Suriname
 Remarks and references: Found in or near rapids and cataracts and falls.

***Hypostomus microstomus* Weber, 1987**
Hypostomus microstomus Weber, 1987: 275, fig. 2 (middle). Type locality: système du río Paraná, río Alto-Paraná, Paraguay, dpt Itapua, 15 km SE Encarnacion, Campichuelo, 55°45' Ouest, 27°26' Sud. Holotype: MHNG 2367.90.
 Maximum length: 24 cm SL
 Distribution: South America: Middle Paraná River basin.
 Countries: Argentina, Paraguay
 Common names: Cascarudo (Paraguay); guaimingué, pirá tatu (Paraguay, Guarani); vieja de agua (Argentina).

***Hypostomus mutuae* Knaack, 1999**
Hypostomus mutuae Knaack, 1999: 102, fig. p. 102, Type locality: Brazil, Mato Grosso, rio Mutuca. Holotype: MCP 28669
 Maximum length: 10 cm TL
 Distribution: South America: Cuiabá River basin.
 Countries: Brazil

***Hypostomus myersi* (Gosline, 1947)**
Plecostomus myersi Gosline, 1947: 116, pl. 5 (fig. 9). Type locality: Rio Iguazu at Porto União, State of Paraná [Brazil]. Holotype: MNRJ 4251.
 Maximum length: 20.7 cm SL
 Distribution: South America: Iguazu River and Uruga-í Creek basins.
 Countries: Argentina, Brazil
 Remarks and references: Various ecological studies in Agostinho and Gomes (1997); first record in Argentina and complementary description in Gomez et al. (1990: 142).
 Common names: Cascudo (Brazil); vieja de agua (Argentina).

***Hypostomus nematopterus* Isbrücker & Nijssen, 1984**
Hypostomus nematopterus Isbrücker & Nijssen, 1984: 9, fig. 1 (middle). Type locality: French Guyana, Alikene Creek, left bank tributary to Camopi River, Oyapock river system. Holotype: IRSNB 689.
 Maximum length: 10.7 cm SL
 Distribution: South America: Oyapock River basin.
 Countries: French Guiana
 Remarks and references: Only known from the two type specimens.

***Hypostomus niceforoi* (Fowler, 1943)**
Hemiancistrus niceforoi Fowler, 1943: 250, fig. 35. Type locality: Florencia, Río Ortegusa, Colombia. Holotype: ANSP 70511.
 Maximum length: 13.5 cm SL
 Distribution: South America: Upper Japurá River basin.
 Countries: Colombia
 Remarks and references: New combination in Isbrücker (1980: 28).

***Hypostomus nickeriensis* Boeseman, 1969**
Hypostomus nickeriensis Boeseman, 1969: 125, fig. 4(a). Type locality: Stondansie Falls, Nickerie River, Surinam. Holotype: ZMA 105.765.
 Maximum length: 17 cm SL
 Distribution: South America: Upper Nickerie River basin.
 Countries: Suriname
 Remarks and references: Found in rapids or in pools below the falls, the bottom covered with rocks, sand and rotten wood.

***Hypostomus niger* (Marini, Nichols & La Monte, 1933)**
Plecostomus niger Marini, Nichols & La Monte, 1933: 4. Type locality: Southeastern Brazil. Holotype: AMNH 12245.
 Maximum length: 24.5 cm SL
 Distribution: South America: Rivers of southeastern Brazil.
 Countries: Brazil
 Remarks and references: Only known from the holotype.

***Hypostomus nigromaculatus* (Schubart, 1964)**

Plecostomus nigromaculatus Schubart, 1964: 2, fig. 2. Type locality: Rio Mogi Guaçu, Cachoeira de Emas, na região da corredeira (topava) (Mun. Pirassununga, Est. São Paulo) [Brazil]. Holotype: EEBP 304 (123 mm) not found after extensive search in 1993.

Maximum length: 10.2 cm SL

Distribution: South America: Middle and upper Paraná River basin.

Countries: Brazil

Remarks and references: Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig. 2; EMBL/GenBank AJ318355). Biology: benthic algae grazer (Casatti et al., 2001).

***Hypostomus nudiventris* (Fowler, 1941)**

Plecostomus nudiventris Fowler, 1941: 147, figs. 44-46. Type locality: Rio Choró, Ceará, near Fortaleza [Brazil]. Holotype: ANSP 69402.

Maximum length: 5.7 cm SL

Distribution: South America: Northern Brazilian coastal drainages.

Countries: Brazil

***Hypostomus obtusirostris* (Steindachner, 1907)**

Plecostomus obtusirostris Steindachner, 1907b: 490. Type locality: Rio Cubatao, Santa Catherina by Theresopolis, Brazil. Holotype: Not found in NMW.

Maximum length: 5.9 cm TL

Distribution: South America: Southeastern Brazilian coastal drainages.

Countries: Brazil

***Hypostomus occidentalis* Boeseman, 1968**
