Hypostomus gymnorhynchus occidentalis Boeseman, 1968: 47, pl. 6 (figs. 1-4). Type locality: Surinam River near Brokopondo, Surinam. Holotype: RMNH 25520.

Maximum length: 14.6 cm SL

Distribution: South America: Suriname River basin.

Countries: Suriname

Remarks and references: Raised to specific level by Isbrücker (1980: 29). Lives in pools near rapids or cataracts in the main river.

***Hypostomus oculus* (Fowler, 1943)**

Panaque oculus Fowler, 1943: 256, fig. 51. Type locality: Florencia, Rio Ortegusa, Colombia. Holotype: ANSP 70518.

Maximum length: 20 cm TL

Distribution: South America: Upper Japurá River basin.

Countries: Colombia

Remarks and references: New combination in Weber and Montoya-Burgos (2002: 366).

***Hypostomus pantherinus* Kner, 1854**

Hypostomus pantherinus Kner, 1854: 267. Type locality: Rio Guaporé, ohne nähere Angaben [Brazil]. Holotype: NMW 44206. Originally proposed as *Hyp. pantherinus*.

Maximum length: 4.8 cm SL

Distribution: South America: Madeira River basin.

Countries: Brazil

Remarks and references: Known only from holotype (juvenile).

***Hypostomus papariae* (Fowler, 1941)**

Plecostomus plecostomus papariae Fowler, 1941: 145, fig. 42. Type locality: Lago Papary, Rio Grande do Norte [Brazil]. Holotype: ANSP 69398.

Maximum length: 11.4 cm TL

Distribution: South America: Grande do Norte River basin.

Countries: Brazil

Remarks and references: Raised to specific level by Isbrücker (1980: 29).

***Hypostomus paucimaculatus* Boeseman, 1968**

Hypostomus paucimaculatus Boeseman, 1968: 52, pl. 8 (fig. 1). Type locality: Surinam River, near Brokopondo, Surinam. Holotype: RMNH 25468.

Maximum length: 12 cm SL

Distribution: South America: Upper and middle Suriname River basin.

Countries: Suriname

Remarks and references: Juveniles found in or near rapids.

***Hypostomus paulinus* (Ihering, 1905)**

Plecostomus paulinus Ihering, 1905: 560. Type locality: Rio Piracicaba, São Paulo, Brazil. Holotype: BMNH 1905.6.9.4.

Maximum length: 13.1 cm SL

Distribution: South America: Tietê River basin.

Countries: Brazil, Paraguay.

Remarks and references: Specimens collected in Paraguay (middle Paraguayan Paraná basin) identified as *Hypostomus paulinus* based on morphology (Weber et al., 1992: 13).

***Hypostomus piratatu* Weber, 1986**

Hypostomus piratatu Weber, 1986: 987, fig. 3 (middle). Type locality: Bras intermittent du Río Tebicuary, bassin du rio Paraguay, système du Río Paraná; Sapucáí, dép. Paraguari, Paraguay. Holotype: MHNG 2265.03.

Maximum length: 27.5 cm SL

Distribution: South America: Eastern Paraguay River tributaries.

Countries: Paraguay

Remarks and references: Description of teeth in Muller and Weber (1992: 750, fig. 2d).

Common names: cascarudo (Paraguay); pirá tatu, guaimingué (Paraguay, Guarani).

***Hypostomus plecostomoides* (Eigenmann, 1922)**

Cochliodon plecostomoides Eigenmann, 1922: 225, pl. 11 (fig. 1). Type locality: Quebrada Cramalote, Villavicencio [Colombia, in label: brook at Villavicencio]. Holotype: CAS 82501 [ex IU 15043] [lost in 1959 (Eschmeyer, 1998)].

Maximum length: 25.6 cm TL

Distribution: South America: Meta River basin.

Countries: Colombia

Remarks and references: Redescription in Lilyestrom (1984: 45). New combination in Weber and Montoya-Burgos (2002: 366). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig. 2; EMBL/GenBank AJ318349).

Common names: Panaque (Venezuela)

***Hypostomus plecostomus* (Linnaeus, 1758)**

Acipenser plecostomus Linnaeus, 1758: 238. Type locality: India [=Suriname] or Surinam River outlet. Syntype: NRM 32 (smallest) and possible syntypes: NRM 32 (larger two) or neotype RMNH 18240 (see remarks).

Hypostomus guacari La Cepède, 1803: 144, 145, pl. 4 (fig. 2). Type locality: India [=Suriname]. Unneeded substitute name for *Hypostomus plecostomus* (Linnaeus, 1758).

Loricaria flava Shaw, 1804: 38, pl. 101. Type locality: Indian Seas [South America]. No types known.

Plecostomus bicirrosus Gronow in Gray, 1854: 158. Type locality: Tropical America. No types known.

Plecostomus brasiliensis Bleeker, 1864: 7. Type locality: Suriname; Mexico; Cuba; Chile [restricted to Suriname by designation of a lectotype by Boeseman (1968: 38)]. Lectotype: RMNH 3102. Pre-Linnaean name adopted by Bleeker.

Maximum length: 50 cm SL

Distribution: South America: Guianan coastal drainages.

Countries: Guyana, Suriname

Remarks and references: Neotype designation of *Acipenser plecostomus* and type locality restriction in Boeseman (1968: 11) may

be invalid if the smallest specimen in NRM LP 32 is part of the type series; for more details on synonymy of *Hypostomus plecostomus* see Boeseman (1968: 32) and Isbrücker (1980: 30). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig. 2; EMBL/GenBank AJ318351).

Common names: Acari (Brazil); goré-jonn, goré-kron-kron (French Guiana, Creole); koko, wala wala, wara wara, wawa (Guyana, Suriname, French Guiana, Amerindian).

***Hypostomus pseudohemiurus* Boeseman, 1968**

Hypostomus pseudohemiurus Boeseman, 1968: 54, pl. 9 (fig. 1). Type locality: Kabalebo River, Corantijn River basin, Surinam. Holotype: RMNH 25516 (largest).

Maximum length: 6.2 cm SL

Distribution: South America: Corantijn River basin.

Countries: Suriname

Remarks and references: Collected in pools in or near rapids or cataracts.

***Hypostomus punctatus* Valenciennes, 1840**

Hypostomus punctatus Valenciennes in Cuvier & Valenciennes, 1840: 493 [364 in Strasbourg deluxe ed.]. Type locality: Rio Janéiro [Brazil]. Holotype: not found.

Maximum length: 30 cm TL

Distribution: South America: Southeastern Brazilian coastal drainages.

Countries: Brazil

Remarks and references: 12S and 16S mitochondrial rRNA gene sequences used in a molecular phylogeny of Loricariidae by Montoya-Burgos et al. (1997: fig. 4; EMBL/GenBank Y08289, Y08337). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig. 2; EMBL/GenBank AJ318357).

Common names: Cascudo (Brazil).

***Hypostomus pusarum* (Starks, 1913)**

Plecostomus pusarum Starks, 1913: 36, pl. 6. Type locality: at Ceará Mirim [Brazil]. Holotype: SU 22225.

Maximum length: 20.3 cm TL

Distribution: South America: Northern Brazilian coastal drainages.

Countries: Brazil

Remarks and references: Found in little disconnected ponds and in a muddy stream.

***Hypostomus pyrineusi* (Miranda Ribeiro, 1920)**

Cochliodon pyrineusi Miranda Ribeiro, 1920: 9 [3rd unnumbered pl]. Type locality: provaveimente Jamary [Brazil]. Holotype: MNRJ 863.

Maximum length: 26 cm TL

Distribution: South America: Madeira River basin (?).

Countries: Brazil

Remarks and references: New combination in Weber and Montoya-Burgos (2002: 366).

***Hypostomus regani* (Ihering, 1905)**

Plecostomus regani Ihering, 1905: 558. Type locality: Rio Piracicaba, São Paulo, Brazil. Lectotype: BMNH 1905.6.7.2, designated by Reis et al. (1990: 745).

Maximum length: 30 cm TL

Distribution: South America: Paraná, Paraguay and Uruguay River basins.

Countries: Brazil, Paraguay, Uruguay

Remarks and references: Redescription by Reis et al. (1990: 745). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig. 2; EMBL/GenBank AJ318371).

Common names: Cascudo-chita, cascudo-chitão, chitão (Brazil); cascarudo (Paraguay); guaimingué, pirá tatu (Paraguay, Guarani).

***Hypostomus robinii* Valenciennes, 1840**

Hypostomus robinii Valenciennes, in Cuvier and Valenciennes 1840: 501 [370 in Strasbourg deluxe ed.]. Type locality: de la Trinité [...] des affluens da la Plata [restricted to La Trinité (Trinidad Island)]. Lectotype: MNHN A.9569, designated by Boeseman (1968: 36).

Maximum length: 16 cm SL

Distribution: South America: Trinidad Island.

Countries: Trinidad and Tobago

Remarks and references: Type locality restricted to Trinidad by designation of the lectotype.

Common names: Anne-marie, tata, teta. Found in running or still waters

***Hypostomus rondoni* (Miranda Ribeiro, 1912)**

Plecostomus rondoni Miranda Ribeiro, 1912: 6. Type locality: S. Manoel - Rio Tapajós [Brazil]. Holotype: MNRJ 741. Specific name spelled *rondini* in heading of account, but corrected in attached printed errata.

Maximum length: 8 cm TL

Distribution: South America: Tapajós River basin.

Countries: Brazil

***Hypostomus roseopunctatus* Reis, Weber & Malabarba, 1990**

Hypostomus roseopunctatus Reis, Weber & Malabarba, 1990: 756, figs. 2, 26. Type locality: Rio Pelotas at road from Esmeralda to Anita Garibaldi, Rio Grande do Sul, Brazil. Holotype: MCP 12239.

Maximum length: 23.3 cm SL

Distribution: South America: Uruguay River basin.

Countries: Argentina, Brazil.

***Hypostomus saramaccensis* Boeseman, 1968**

Hypostomus saramaccensis Boeseman, 1968: 58, pl. 2 (fig. 1). Type locality: Feddiprati (rapids), middle Saramacca River, Surinam. Holotype: RMNH 25488 (largest).

Maximum length: 11.5 cm SL

Distribution: South America: Guianan coastal drainages.

Countries: Suriname

Remarks and references: Found in a large shallow pool below extensive fall.

***Hypostomus scabriceps* (Eigenmann & Eigenmann, 1888)**

Plecostomus commersonii scabriceps Eigenmann & Eigenmann, 1888: 168. Type locality: Sao Matheos [Brazil]. Syntypes: MCZ 7894 (2), BMNH 1904.1.28.2 [ex MCZ] (1).

Maximum length: 35 cm TL

Distribution: South America: São Mateus River basin.

Countries: Brazil

Remarks and references: Available from description in key. Raised to specific level by Isbrücker (1980: 33).

***Hypostomus scaphyceps* (Nichols, 1919)**

Plecostomus scaphyceps Nichols, 1919: 425 [in English portion of original description]. Type locality: Cerqueira Cezar, Estado de São Paulo [Brazil]. Holotype: AMNH 7152.

Plecostomus scapyiceps Nichols, 1919: 416 [in Portuguese portion of original description]. Incorrect original spelling.

Maximum length: 3.5 cm SL

Distribution: South America: Paranapanema River basin.

Countries: Brazil

Remarks and references: Holotype juvenile. Earliest first reviser located is Fowler (1954: 194) who selected *scaphyceps* (Eschmeyer 1998: 1514).

***Hypostomus seminudus* (Eigenmann & Eigenmann, 1888)**

- Plecostomus seminudus* Eigenmann & Eigenmann, 1888: 169.
Type locality: Brazil? Holotype: MCZ 28981.
Distribution: South America: Brazil (?).
Countries: Brazil
Remarks and references: Available from description in key. Only known from holotype.
- Hypostomus sipaliwini* Boeseman, 1968**
Hypostomus sipaliwini Boeseman, 1968: 60, pl. 12 (fig. 1). Type locality: Sipaliwini River, upper Corantijn River basin, Surinam. Holotype: RMNH 25481 (larger).
Maximum length: 12.6 cm SL
Distribution: South America: Upper Corantijn River basin.
Countries: Suriname.
Remarks and references: Collected in pools in or near rapids or cataracts.
- Hypostomus strigaticeps* (Regan, 1908)**
Plecostomus strigaticeps Regan, 1908b: 796, pl. 48 (fig. 1). Type locality: Rio Piracicaba, San Paulo, Brazil. Syntypes: BMNH 1907.7.6.10-11.
Maximum length: 15 cm SL
Distribution: South America: Tietê River basin.
Countries: Brazil
- Hypostomus subcarinatus* Castelnau, 1855**
Hypostomus subcarinatus Castelnau, 1855: 42, p. 21 (fig. 1). Type locality: des rivières de la province des Mines [Brazil]. Holotype: MNHN A.9575.
Maximum length: 31 cm TL
Distribution: South America: Eastern Brazilian coastal drainage, including São Francisco River basin (?).
Countries: Brazil
- Hypostomus surinamensis* Boeseman, 1968**
Hypostomus surinamensis Boeseman, 1968: 61, pl. 13 (fig. 1). Type locality: Surinam River near Brokopondo, Surinam. Holotype: RMNH 25497 (larger).
Maximum length: 16.5 cm SL
Distribution: South America: Suriname River basin.
Countries: Suriname
Remarks and references: Collected in or near rapids, falls or cataracts and in pools.
- Hypostomus tapanahoniensis* Boeseman, 1969**
Hypostomus gymnorhynchus tapanahoniensis Boeseman, 1969: 129, figs. 5 (b, d). Type locality: Upper Tapanahoni River, Surinam. Holotype: RMNH 25476. Originally proposed *H. gymnorhynchus tapanahoniensis*.
Maximum length: 17 cm SL
Distribution: South America: Maroni River basin.
Countries: Suriname
Remarks and references: Raised to specific level by Isbrücker (1980: 35).
- Hypostomus taphorni* (Lilyestrom, 1984)**
Cochliodon taphorni Lilyestrom, 1984: 43, fig. 8. Type locality: Río Botanamo, cerca del puente en la vía a Bochinche, Edo. Bolívar, Venezuela. Holotype: MCNG 8084.
Maximum length: 18.5 cm SL
Distribution: South America: Essequibo River basin.
Countries: Venezuela
Remarks and references: New combination in Weber and Montoya-Burgos (2002: 366).
- Hypostomus ternetzi* (Boulenger, 1895)**
Plecostomus ternetzi Boulenger, 1895: 525. Type locality: Paraguay. Holotype illustrated in Boulenger (1896 pl. 5, bottom). Holotype: BMNH 1895.5.17.64.
Maximum length: 17.5 cm SL
Distribution: South America: Middle Paraná, Paraguay, and Uruguay River basins.
Countries: Argentina, Brazil, Paraguay, Uruguay
Common names: Cascarudo (Paraguay); guaimingué, pirá tatu (Paraguay, Guaraní).
- Hypostomus tietensis* (Ihering, 1905)**
Plecostomus tietensis Ihering, 1905: 559. Type locality: Rio Tietê, São Paulo, Brazil. Holotype: BMNH 1905.6.9.1.
Maximum length: 12.5 cm SL
Distribution: South America: Tietê River basin.
Countries: Brazil
- Hypostomus topavae* (Godoy, 1969)**
Plecostomus topavae Godoy, 1969: 176, fig. 1. Type locality: na região da topava [...] Cachoeira de Emas, Rio Mogi Guassu, Estado de São Paulo, Brasil. Holotype: EEBP 315a.
Maximum length: 70 cm SL
Distribution: South America: Grande River basin.
Countries: Brazil
Remarks and references: Only known from the holotype.
- Hypostomus unae* (Steindachner, 1878)**
Plecostomus unae Steindachner, 1878a: 383. Type locality: Rio Una [(südlich von Bahia) [Brazil]], in Steindachner (1877a: 676)].
Syntypes: NMW 44259 (4).
Maximum length: 17.1 cm SL
Distribution: South America: Una River basin in Bahia State.
Countries: Brazil
- Hypostomus uruguayensis* Reis, Weber & Malabarba, 1990**
Hypostomus uruguayensis Reis, Weber & Malabarba, 1990: 760, fig. 30. Type locality: Rio Uruguay at “Rancho da Amizade”, São Borja, Rio Grande do Sul, Brazil. Holotype: MCP 11874.
Maximum length: 26 cm SL
Distribution: South America: Uruguay River basin.
Countries: Argentina, Brazil, Uruguay (?)
Remarks and references: Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318377).
- Hypostomus vaillanti* (Steindachner, 1877)**
Plecostomus vaillanti Steindachner, 1877b: 225. Type locality: Rio Preto [at Villa de Santa Rita, Bahia, Brazil (Thayer expedition)].
Syntypes: MCZ 7842 (2); NMW 44273 (1), 44276 (3), 44277 (1).
Maximum length: 16.1 cm SL
Distribution: South America: Preto River basin of São Francisco River drainage.
Countries: Brazil
Remarks and references: Distribution restricted in Mazzoni et al. (1994: 12).
- Hypostomus variipictus* (Ihering, 1911)**
Plecostomus variipictus Ihering, 1911: 390. Type locality: Rio Pardo, perto de Barretos, Estado de São Paulo, quasi em sua foz no Rio Grande, tributario do lado esquerdo do Rio Paraná, Brazil. Holotype: MZUSP 2114.
Maximum length: 37 cm TL
Distribution: South America: Grande River basin.
Countries: Brazil
- Hypostomus varimaculosus* (Fowler, 1945)**
Plecostomus varimaculosus Fowler, 1945a: 113, fig. 15. Type locality: Morelia, Río Caquetá drainage, Colombia. Holotype: ANSP 71707.
Maximum length: 6 cm SL
Distribution: South America: Upper Japurá River basin.
Countries: Brazil, Colombia

***Hypostomus variostictus* (Miranda Ribeiro, 1912)**

Plecostomus variostictus Miranda Ribeiro, 1912: 6. Type locality: Coxim, M [ato] Grosso [Brazil]. Holotype: MNRJ 1072. Maximum length: 5.7 cm TL. Distribution: South America: Upper Paraguay River basin. Countries: Brazil. Remarks and references: Only known from holotype, a juvenile specimen almost decayed.

***Hypostomus ventromaculatus* Boeseman, 1968**

Hypostomus ventromaculatus Boeseman, 1968: 65, pl. 15 (fig. 1). Type locality: Surinam River between Afobaka and Brokopondo, Surinam. Holotype: RMNH 25507. Maximum length: 25 cm SL. Distribution: South America: Guianan coastal drainages from Oyapock River to Suriname river. Countries: French Guiana, Suriname. Remarks and references: Redescription in Le Bail et al. (2000: 256). Lives in lower part of the rivers, downstream the last falls but not in the estuarine brackish waters. Common names: Acari (Brazil); goré-jonn, goré-kron-kron (French Guiana, Creole) koko, wala wala, wara wara, wawa (Guyana, Suriname, French Guiana, Amerindian).

***Hypostomus vermicularis* (Eigenmann & Eigenmann, 1888)**

Plecostomus vermicularis Eigenmann & Eigenmann, 1888: 171. Type locality: Rio Parahyba; Rio Janeiro; Mendez; Macacos, Goiás [Brazil]. Syntypes: (35) MCZ 7814 (1), 7848 (12), 7849 (1), 7850 (4), 7851 (1), 7857 (1), 91352 (12); NMW 44279 (1); USNM 123010 [ex MCZ 7850] (3). Maximum length: 19 cm SL. Distribution: South America: Eastern Brazilian coastal drainages. Countries: Brazil. Remarks and references: Available from description in key. Synonyms from Paraíba do Sul River belong to *Hypostomus luetkeni* (Mazzoni et al. 1994: 8), this species needs a revision.

***Hypostomus watwata* Hancock, 1828**

Hypostomus watwata Hancock, 1828: 246. Type locality: Demerara [...] on the sea-shores [restricted to Berbice River, Guyana] by designation of a neotype. Neotype: BMNH 1932.11.10.31, designated by Boeseman (1868: 71, pl. 16, fig. 1). *Hypostomus verres* Valenciennes in Cuvier & Valenciennes, 1840: 494 [365 in Strasbourg deluxe ed.]. Type locality: envoyés de Cayenne [French Guiana]. Lectotype: MNHN A.9450, designated by Boeseman (1968: 70). Synonymized here. Maximum length: 45 cm SL. Distribution: South America: Guianan coastal drainages from Oyapock River to Demerara River. Countries: French Guiana, Guyana, Suriname, Venezuela.

Remarks and references: Last redescription and biology in Le Bail et al. (2000: 260). Regarded as *Squaliforma* by Isbrücker et al. (2001:22), but not confirmed by Montoya-Burgos et al. (2002, fig 2, Mitochondrial D-loop sequences; EMBL/GenBank AJ318362 to AJ318364). Biology: Seems to be the unique species of *Hypostomus* living in brackish waters. Occurs the lower part and the mouth of the rivers, found even along the nearby seashore. Common names: Acari do mar, caraboï (Brazil); atipa-lanmè, goré-kron-kron, goré-nwè (French Guiana, Creole); hu, koko, wala wala, wara wara, wawa (Guyana, Suriname, French Guiana, Amerindian).

***Hypostomus winzi* (Fowler, 1945)**

Plecostomus winzi Fowler, 1945b: 9, fig. 7. Type locality: Honda, Colombia. Holotype: ANSP 71623. Maximum length: 4.2 cm SL. Distribution: South America: Magdalena River basin.

Countries: Colombia

Remarks and references: Only known from holotype, a juvenile specimen.

***Hypostomus wuchereri* (Günther, 1864)**

Plecostomus wuchereri Günther, 1864: 235. Type locality: Brazil [...] Bahia. Syntypes: (4) BMNH 1863.3.27.15 (1). Maximum length: 20 cm SL. Distribution: South America: Paraguaçu River basin (?). Countries: Brazil

ISBRUECKERICHTHYS

Isbrueckerichthys Derijst, 1996: 64. Type species: *Hemipsilichthys duseni* Miranda Ribeiro, 1907. Type by original designation. Gender: masculine. New name for *Pareiorhaphis* sensu Gosline (1947: 102).

Diagnosis, nomenclatural revision and key to species in Pereira and Reis (2002: 141).

***Isbrueckerichthys alipionis* (Gosline, 1947)**

Pareiorhaphis alipionis Gosline, 1947: 104. Type locality: Rio Bethary, São Paulo [Brazil]. Holotype: MNRJ 4241. Maximum length: 8.2 cm SL. Distribution: South America: Betari River basin in Ribeira de Iguape River drainage. Countries: Brazil. Remarks and references: Locality restricted to Ribeirão do Mojo-linho, in the Iporanga basin, São Paulo, by Isbrücker (1980: 13). New combination by Derijst (1996: 64). Redescription and distribution in Pereira and Reis (2002: 143)

***Isbrueckerichthys duseni* (Miranda Ribeiro, 1907)**

Hemipsilichthys duseni Miranda Ribeiro, 1907: 187, unnumbered pl. (same page). Type locality: Paraná and Ribeirão do Monjolinho, á 300 metros sobre o mar [Iporanga River, São Paulo, Brazil]. Lectotype: MNRJ 772, designated by Gosline (1947: 102). Maximum length: 10 cm SL. Distribution: South America: Upper Ribeira de Iguape River in Paraná State. Countries: Brazil. Remarks and references: Type locality restricted to "Paraná" by lectotype designation. New combination in Derijst (1996: 64). Redescription and distribution in Pereira and Reis (2002: 141). Biology: found in torrents with rocks. Common names: Cascudinho (Brazil)

ISORINELORICARIA

Isorineloricaria Isbrücker, 1980: 15. Type species: *Plecostomus spinosissimus* Steindachner, 1880. Type by original designation. Gender: feminine.

***Isorineloricaria spinosissima* (Steindachner, 1880)**

Plecostomus spinosissimus Steindachner, 1880: 98, pl. 5 (figs. 1-1a). Type locality: Guayaquil [Ecuador] [from title, p. 94]. Holotype: NMW 55027. *Plecostomus festae* Boulenger, 1898: 11. Type locality: Río Vices and Río Peripa, Ecuador. Syntypes: BMNH 1898.11.4.32 (1), ZMUT 1518 (1). Synonymized by Eigenmann (1922: 68). Maximum length: 56.5 cm TL. Distribution: South America: Pacific versant rivers in Ecuador. Countries: Ecuador. Remarks and references: New combination by Isbrücker (1980: 17). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318365). Common names: Raspabalsa (Ecuador); Longtail-pleco (English); L 131 (Aqualog).

KRONICHTHYS

Kronichthys Miranda Ribeiro, 1908: [27th unnumbered page]. Type species: *Kronichthys subteres* Miranda Ribeiro, 1908. Type by monotypy. Gender: masculine. Redescription in Gosline (1947: 105).

***Kronichthys heylandi* (Boulenger, 1900)**

Plecostomus heylandi Boulenger, 1900: 165. Type locality: Mountain stream in the Province São Paulo [...] 400 feet above sea-level near Santos [Brazil]. Holotype: BMNH 1899.12.18.1.

Maximum length: 12.8 cm SL

Distribution: South America: Eastern Brazilian coastal streams between Santos and Rio de Janeiro.

Countries: Brazil

Remarks and references: New combination in Miranda Ribeiro (1918b: 716) and redescription in Gosline (1947: 106).

***Kronichthys lacerta* (Nichols, 1919)**

Plecostomus lacerta Nichols, 1919: 414. Type locality: Poço Grande (Estado de São Paulo) Rio Juquia, Brazil. Holotype: AMNH 7151 or 7152 (published).

Maximum length: 10.7 cm SL

Distribution: South America: Baía de Paranaguá basin and Ribeira de Iguape River basin.

Countries: Brazil

Remarks and references: Partial redescription and new combination in Armbruster & Page (1997: 228).

***Kronichthys subteres* Miranda Ribeiro, 1908**

Kronichthys subteres Miranda Ribeiro, 1908: [28th unnumbered page], fig. 1. Type locality: Rios Betharí, Pardo e Iporanga [Brazil]. Syntypes: MNRJ 655 (4).

Maximum length: 12.7 cm TL

Distribution: South America: Ribeira de Iguape River basin.

Countries: Brazil

Common names: Mãe-do-anhá (Brazil)

LIPOSARCUS

Liposarcus Günther, 1864: 238. Type species: *Hypostomus multiradiatus* Hancock, 1828. Type by subsequent designation by Jordan (1919: 332). Gender: masculine. Revalidation in Weber (1991: 638) and redescription in Weber (1992: 8).

***Liposarcus anisitsi* (Eigenmann & Kennedy, 1903)**

Liposarcus ambrosettii Holmberg, 1893: 354. Type locality: Río Paraguay, in front of Formosa. No types known. Nomen oblitum in Weber (1992: 28).

Pterygoplichthys anisitsi Eigenmann & Kennedy, 1903: 503. Type locality: Laguna of the Rio Paraguay at Asuncion. Holotype: IU 9873. Nomen protectum.

Pterygoplichthys juvenis Eigenmann & Kennedy, 1903: 504. Type locality: Asuncion, Río Paraguay, Paraguay. Holotype: CAS 59784 [ex IU 9876]. Synonymized by López & Miquelarena (1991b: 39).

Ancistrus multiradiatus alternans Regan, 1904: 229. Type locality: Paraguay and Southern Bolivia [restricted by Weber (1992: 28) to: Paraguayan Chaco [...] región Vila Concepción (=Concepción) - Caraya Vuelta -2/3 Piste Pozo Colorado, probablemente Waikth-latingmayalwa (=Mission Inglesia)]. Lectotype: BMNH 1898.7.4.5, designated by Weber (1992: 28). Originally proposed as *A. multiradiatus* var. *alternans*. Synonymized by Weber (1992: 28).

Maximum length: 42 cm TL

Distribution: South America: Paraguay, middle Paraná, Bermejo, and Uruguay River basins.

Countries: Argentina, Brazil, Paraguay

Remarks and references: Complementary description and new combination in Weber (1992: 13, 28).

Common names: Guaimingué (Paraguay, Guaraní); vieja de agua (Argentina); Snow king pleco (English); L021a (Aqualog).

***Liposarcus disjunctivus* Weber, 1991**

Liposarcus disjunctivus Weber, 1991: 638 [pl. 9 in Weber 1992].

Type locality: Rio Madeira, système de l'Amazonas, Restauração, Amazonas, Brésil. Holotype: MZUSP 28360.

Distribution: South America: Madeira River basin.

Countries: Bolivia, Brazil

Remarks and references: Complementary description in Weber (1992: 12).

***Liposarcus multiradiatus* (Hancock, 1828)**

Hypostomus multiradiatus Hancock, 1828: 246. Type locality: Demerara [in title] [...] Lakes [...] on the slime [restricted to env. de Santa Catalina, Terr. Féd du delta Amacuro, sys. De l'Orénoque: Vénézuéla (localité probable), Guyana]. Holotype: BMNH 1857.6.13.162.

Maximum length: 50 cm TL

Distribution: South America: Orinoco River basin.

Countries: Guyana (?), Venezuela

Remarks and references: New combination in Günther (1864: 238). Redescription and type locality restriction in Weber (1992: 9, 27). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318361).

***Liposarcus pardalis* (Castelnau, 1855)**

Hypostomus pardalis Castelnau, 1855: 42, pl. 20 (fig. 3). Type locality: l'Amazone [Brazil]. Holotype: MNHN A.9574.

Liposarcus varius Cope, 1872: 284. Type locality: Ambyiacu River [=Ampyiacu, Loreto, Peru]. Lectotype: ANSP 21931, designated by Fowler (1915a: 233).

Liposarcus jeansianus Cope, 1874: 135. Type locality: Nauta, Peru (= Marañón River, Amazon basin). Lectotype: ANSP 8241, designated by Weber (1992: 27).

Maximum length: 40 cm TL

Distribution: South America: Lower, middle and upper Amazon River basin.

Countries: Brazil, Peru

Remarks and references: New combination in Günther (1864: 239). Ecology and economic value in Serpa (1967); redescription with new synonyms in Weber (1992: 10).

Common names: Cascudo (Brazil); carachama (Ecuador); cachga, cachpas, cajas, carachama, vieja (Peru).

PAREIORHINA

Pareiorhina Gosline, 1947: 104. Type species: *Rhinelepis rudolphi* Miranda Ribeiro, 1911. Type by original designation. Gender: feminine.

***Pareiorhina rudolphi* (Miranda Ribeiro, 1911)**

Plecostomus (Rhinelepis) microps Ihering, 1907: 24. Type locality: Piquete (Lorena), Estado de São Paulo [Brazil]. Holotype: MZUSP 2154. Preoccupied by *Plecostomus microps* Steindachner, 1876.

Rhinelepis rudolphi Miranda Ribeiro, 1911: 84. Type locality: Replacement name for *Plecostomus microps* Ihering, 1907.

Maximum length: 5 cm SL

Distribution: South America: Streams tributary to Paraíba do Sul River near Lorena in São Paulo State.

Countries: Brazil

Remarks and references: New combination in Gosline (1947: 104).

POGONOPOMA

Pogonopoma Regan, 1904: 205. Type species: *Plecostomus wertheimeri* Steindachner, 1867. Type by subsequent designation by Eigenmann (1910: 407). Gender: neuter. Originally proposed as

subgenus of *Plecostomus* Gronow. Revision of the genus by Quevedo and Reis (2002: 402).

Pogonopomoides Gosline, 1947: 109. Type species: *Rhinelepis parahybae* Steindachner, 1877. Type by original designation. Gender: masculine. Synonymized by Quevedo and Reis (2002: 404).

***Pogonopoma obscurum* Quevedo & Reis, 2002**

Pogonopoma obscurum Quevedo & Reis, 2002: 405, fig. 3 (middle). Type locality: Rio Canoas at road from Anita Garibaldi to Abdon Batista (approximately 27°39'S, 51°05'W) Santa Catarina, Brazil. Holotype MCP 25036.

Maximum length: 24.5 cm SL.

Distribution: South America: Upper Uruguay River basin.

Countries: Brazil

Remarks and references: Inhabits stretches of the main river and its tributaries, with relatively rapid water currents over bottom usually formed by rocks and boulders.

***Pogonopoma parahybae* (Steindachner, 1877)**

Rhinelepis parahybae Steindachner, 1877b: 218, pl. 2 (top). Type locality: aus dem Parahyba [Brazil]. Syntypes: MCZ 7756 (4); NMW 44556 (1), 44557 (1), 44558 (1) (Eschmeyer, 1998: 1285).

Maximum length: 26.3 cm SL

Distribution: South America: Paraíba do Sul River basin.

Countries: Brazil

Remarks and references: Redescription (as unique species of *Pogonopomoides*) in Armbruster (1998b: 629) and new combination in Quevedo and Reis (2002: 404)

***Pogonopoma wertheimeri* (Steindachner, 1867)**

Plecostomus wertheimeri Steindachner, 1867a: 119, pl. 1 (fig. 1) in Steindachner (1867b). Type locality: dem Fluss Mucuri im gleichnamige Districte bei Santa Clara, in Brasilien. Holotype: NMW 44288.

Maximum length: 22.3 cm SL

Distribution: South America: Mucuri and São Mateus River basins.

Countries: Brazil

Remarks and references: Redescription (as species of *Pogonopoma*) in Armbruster (1998b: 629).

PSEUDORINELEPIS

Pseudorinelepis Bleeker, 1862: 3. Type species: *Rinelepis genibarbis* Valenciennes, in Cuvier and Valenciennes 1840. Type by original designation. Gender: feminine.

Canthopomus Eigenmann, 1910: 407. Type species: *Rhinelepis genibarbis* Valenciennes, in Cuvier and Valenciennes, 1840. Type by original designation. Gender: feminine. Subsequent designation by Eigenmann & Allen (1942: 183) of *Rhinelepis agassizii* Steindachner as type is invalid.

Monistancistrus Fowler, 1940a: 236. Type species: *Monistancistrus carachama* Fowler, 1940. Type by original designation. Gender: masculine. Synonymized by Armbruster & Page (1997: 228).

Redescription in Armbruster (1998b: 631)

***Pseudorinelepis genibarbis* (Valenciennes, 1840)**

Rinelepis genibarbis Valenciennes, in Cuvier & Valenciennes, 1840: 484 [357 in Strasbourg deluxe ed.], pl. 453. Type locality: probablement du Brésil. Holotype: MNHN (not found).

Rhinelepis Agassizii Steindachner, 1877b: 228. Type locality: am See Manacapouru [Brazil]. Syntypes: MCZ 8007 (1); NMW 44559-61 (3, 1, 1). Synonymized by Armbruster & Hardman (1999: 57).

Plecostomus pellegrini Regan, 1904: 218. Type locality: from Upper Amazon. Holotype: MNHN A.3956. Synonymized by Armbruster & Hardman (1999: 57).

Monistancistrus carachama Fowler, 1940a: 236, fig. 26. Type

locality: Contamana, Río Ucayali basin, Ucayali, Peru. Holotype: ANSP 68654. Synonymized by Armbruster & Hardman (1999: 57).

Maximum length: 35.6 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil, Peru

Remarks and references: Redescription in Armbruster & Hardman (1999); lives in large rivers, backwaters and floodplain lakes.

Common names: Carachama negro, carachama sin costilla (Peru).

PTERYGOPLICHTHYS

Pterygoplichthys Gill, 1858: 408. Type species: *Hypostomus duodecimalis* Valenciennes, 1840. Type by subsequent designation by Bleeker (1862: 2). Gender: masculine. Type designation with genus spelled *Pterygoplichtys*. Redescription in Weber (1992: 8).

***Pterygoplichthys etentaculatus* (Spix & Agassiz, 1829)**

Hypostoma etentaculatum Spix & Agassiz, 1829: 7, pl. 4 (fig. 1). Type locality: in Brasiliae septentrionalis fluviis [restricted to São Francisco River at Januaria, Minas Gerais State, Brazil, by designation of the neotype]. Neotype: MZUSP 35821, designated by Weber (1992: 25).

Hypostomus duodecimalis Valenciennes in Cuvier & Valenciennes, 1840: 498 [367 in Strasbourg deluxe ed.], pl. 454. Type locality: dans la rivière Saint-François au Brésil. Holotype: MNHN A.9446. Synonymized by Weber (1992: 25).

Hypostomus brevitentaculatus Ranzani, 1841: 63. Type locality: nelle aqua dolci della Provincia di S. Paulo nel Brasile [restricted by Weber (1992: 25) to São Francisco River]. Holotype: MZUB, without cat. number. Synonymized by Weber (1992: 25).

Ancistrus longimanus Kner, 1854: 283, pl. 5 (fig. 1). Type locality: Not explicitly stated. Syntypes (2): not found in NMW. Originally proposed as *Anc. longimanus*. Synonymized by Weber (1992: 25).

Maximum length: 30 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Remarks and references: New combination in Eigenmann and Eigenmann (1889: 44).

***Pterygoplichthys undecimalis* (Steindachner, 1878)**

Chaetostomus undecimalis Steindachner, 1878b: 90. Type locality: Cienaga Grande de Santa Marta, Magdalena basin, 40 km east of Barranquilla, Colombia. Lectotype: NMW 47224. Illustrated in Steindachner (1879: pl. 8).

Maximum length: 50 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

Remarks and references: New combination in Eigenmann and Eigenmann (1889: 44). Complementary description and lectotype designated in Weber (1992: 26).

Common names: Cacucho, choque, coroncoro negro, rascón (Colombia).

***Pterygoplichthys zuliaensis* Weber, 1991**

Pterygoplichthys zuliaensis Weber, 1991: 638. Type locality: Río Santa Ana, bassin du Maracaibo, Hacienda Río Grande, 9°36'20"N, 72°07'00"W, état de Zulia, Venezuela. Holotype: MBUCV-V 14653. Illustrated in Weber (1992: pl. 4b).

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

Remarks and references: Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig. 2; EMBL/GenBank AJ318360).

RHINELEPIS

Rhinelepis Spix & Agassiz, 1829: 2. Type species: *Rhinelepis aspera* Spix & Agassiz, 1829. Type by monotypy. Gender: feminine. Redescription in Armbruster (1998b: 632).

***Rhinelepis aspera* Spix & Agassiz, 1829**

Rhinelepis aspera Spix & Agassiz, 1829: 4, pl. 2 (figs. 1-2). Type locality: in flumine S. Francisci [Brazil].

Holotype: destroyed.

Maximum length: 33 cm TL

Distribution: South America: São Francisco and upper paran River basins.

Countries: Brazil

Common names: Acari roncador (Brazil).

***Rhinelepis strigosa* Valenciennes, 1840**

Rhinelepis strigosa Valenciennes, in Cuvier and Valenciennes, 1840: 480 [354 in Strasbourg deluxe ed.]. Type locality: dans le Parana et d'autres rivires de la province de Corrientes [Argentina]. Holotype: MNHN A.9571.

Maximum length: 40 cm SL

Distribution: South America: Paran and Uruguay River basins.

Countries: Argentina, Brazil, Paraguay and Uruguay.

Common names: Cascudo-preto, mulita-tatu (Brazil); vieja (Argentina); tandey (Uruguay)

SQUALIFORMA

Squaliforma Isbrcker & Michels, in Isbrcker et al., 2001: 22. Type species: *Hypostomus horridus* Heckel, 1854. Type by original designation. Gender: feminine. This genus fits in with *Hypostomus emarginatus* group in phylogeny of Montoya-Burgos et al. (2002, fig. 2).

***Squaliforma annae* (Steindachner, 1881)**

Plecostomus annae Steindachner, 1881a: 112, pl. 3 (figs. 2-2a). Type locality: Par [= Belem, Brazil]. Holotype: NMW 44073. Listed as *Chaetostomus annae* in figure caption (p. 146).

Maximum length: 9.8 cm SL

Distribution: South America: Guam River basin.

Countries: Brazil

Remarks and references: New combination by Isbrcker & Michels, in Isbrcker et al. (2001: 22).

***Squaliforma biseriata* (Cope, 1872)**

Plecostomus biseriatus Cope, 1872: 285. Type locality: the Amazon [Peru or Brazil]. Holotype: ANSP 8279.

Maximum length: 11.3 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil

Remarks and references: New combination by Isbrcker & Michels, in Isbrcker et al. (2001: 22).

***Squaliforma emarginata* (Valenciennes, 1840)**

Hypostomus emarginatus Valenciennes in Cuvier & Valenciennes, 1840: 500 [369 in Strasbourg deluxe ed.]. Type locality: Probablement originaire du Brsil. Holotype: MNHN A.9447 (dry).

Maximum length: 15 cm TL

Distribution: South America: Lower, middle and upper Amazon River basin.

Countries: Bolivia, Brazil, Peru

Remarks and references: Lives in banks without vegetation, beaches or slopes of the rivers. New combination by Isbrcker & Michels, in Isbrcker et al. (2001: 22). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318364).

Common names: Acari-de-praia, chicote (Brazil, Tocantins basin); Delta-cat (English); L011 (Aqualog).

***Squaliforma gomesi* (Fowler, 1941)**

Plecostomus iheringi Fowler, 1941: 150, fig. 51. Type locality: Cear [Brazil]. Holotype: ANSP 69409. Preoccupied by *Plecostomus iheringii* Regan, 1908.

Plecostomus gomesi Fowler, 1942: [1, unpaginated]. Replacement name for *Plecostomus iheringi* Fowler, 1941.

Maximum length: 14.3 cm SL

Distribution: South America: Jaguaribe River basin.

Countries: Brazil

Remarks and references: New combination based on morphological characters. Holotype examined by S. Fisch-Muller.

***Squaliforma horrida* (Kner, 1854)**

Hypostomus horridus Kner, 1854: 259, pl. 1 (fig. 1). Type locality: Forte do Principe am Rio Guapor, Brazil. Syntypes: two of three found: NMW 16325 (1, dry), 86604 (1, dry). Originally proposed as *Hyp. horridus*.

Maximum length: 35.5 cm SL

Distribution: South America: Madeira River basin.

Countries: Brazil

Remarks and references: New combination by Isbrcker & Michels, in Isbrcker et al. (2001: 22).

***Squaliforma phrixosoma* (Fowler, 1940)**

Plecostomus phrixosoma Fowler, 1940a: 233, figs. 21-23. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68650.

Maximum length: 10.1 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Remarks and references: New combination by Isbrcker & Michels, in Isbrcker et al. (2001: 22).

Common names: Carocha de brada (Peru).

***Squaliforma scopularia* (Cope, 1871)**

Plecostomus scopularius Cope, 1871: 55. Holotype illustrated in Cope (1872: pl. 16, no. 1). Type locality: the Amazon above the mouth of the Rio Negro. Lectotype: ANSP 8081, designated by Fowler (1915a: 233).

Maximum length: 49.5 cm SL

Distribution: South America: Middle Amazon River basin.

Countries: Brazil

Remarks and references: New combination by Isbrcker & Michels, in Isbrcker et al. (2001: 22).

***Squaliforma squalina* (Jardine, 1841)**

Hypostoma squalinum Jardine in Schomburgk, 1841: 142, pl. 2. Type locality: Rios Branco, Negro, and Essequibo. Holotype: unknown.

Maximum length: 33.6 cm TL

Distribution: South America: Negro and Branco River basins; Essequibo River basin.

Countries: Brazil, Guyana

Remarks and references: New combination by Isbrcker & Michels, in Isbrcker et al. (2001: 22). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002, fig 2; EMBL/GenBank AJ318363). Biology: lives under the roots of trees and among rocks, and they issue from their hiding places to the sand-banks to feed at night.

***Squaliforma tenuis* (Boeseman, 1968)**

Hypostomus tenuis Boeseman, 1968: 64, pl. 14 (fig. 3). Type locality: Near Paramaribo, Surinam. Holotype: RMNH 16198.

Maximum length: 19.5 cm SL

Distribution: South America: Suriname River basin (?).

Countries: Suriname (?)

Remarks and references: Only known from holotype. Type locality doubtful: labeled "Paramaribo" (Boeseman, 1968:65). New com-

ination by Isbrücker & Michels, in Isbrücker et al. (2001: 22).

***Squaliforma tenuicauda* (Steindachner, 1878).**

Plecostomus tenuicauda Steindachner, 1878b: 90. A type specimen illustrated in Steindachner (1879: pl. 6). Type locality: Río Magdalena, Colombia. Syntypes: MSNG 8856 (1); NMW 42596 (1), 44263 (1), 44264 (1), 44265 (1), 44266 (3), 44268 (1), 44294 (1); ZMUC 85 (1).

Maximum length: 33.8 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

Remarks and references: New combination based on morphological characters of syntypes.

Common names: Bebechicha, cacucho, choque, coroncoro perro, coroto, ramirez, rascón, raspacanoa (Colombia).

***Squaliforma villarsi* (Lütken, 1874)**

Plecostomus villarsi Lütken, 1874a: 211. Type locality: Venezuela. Syntypes: ZMUC 64, 65.

Maximum length: 32 cm SL

Distribution: South America: Venezuela (?).

Countries: Venezuela

Remarks and references: New combination by Isbrücker & Michels, in Isbrücker et al. (2001: 22).

***Squaliforma virescens* (Cope, 1874)**

Plecostomus virescens Cope, 1874: 137. Type locality: not explicitly given [Upper Amazon]. Syntypes: ANSP 21280-83 (4, 1, part.).

Maximum length: 7.3 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru (?)

Remarks and references: Type series includes only juvenile specimens. New combination by Isbrücker & Michels, in Isbrücker et al. (2001: 22).

Subfamily Ancistrinae (Armored catfishes)

Sonia Fisch-Muller

The members of the Ancistrinae share cheek odontodes that can be everted, conferring them a defensive as well as an offensive advantage. Despite the existence of this complex mechanism, this subfamily which was recognized by Isbrücker (1980) does not form a natural group according to molecular data. The present work is based on the classification established at that time. It integrates the numerous new names and nomenclatural changes that occurred during these last twenty years. Based on personal observations, we also propose novel genera combinations and species synonymies.

The subfamily is particularly diversified, including more than 200 known species grouped in 27 genera but most of them need prompt revision. The Ancistrinae are distributed through all main Neotropical basins from Panama to Chile on the Western side of the Andes and to Argentina on the Eastern side. Typically, Andean species are represented by *Chaetostoma* although numerous other Ancistrinae are found on rocky substrata of fast flowing rivers and falls. Highest species diversity is found in the Amazon basin. To date, only three cave-living loricariid species have been discovered. They belong to the type genus *Ancistrus* and present classical morphological adaptation to life in caves such as blindness and loss of pigmentation.

Apart from *Megalancistrus* and *Pseudacanthicus*, which can grow up to close to one meter size, most Ancistrinae are small to medium sized, the latter being particularly suited for aquarium life. As some species were successfully reproduced in captivity, it was possible to obtain the first descriptions of breeding and parental care.

Secondary dimorphism includes often more developed odontodes on pectoral fins or on body scutes of males, as it is the case for many other Loricariidae. The genus *Neblinichthys* developed them on the snout front, and *Pseudancistrus barbatus*, although not unique in that, shows them magnificently developed along its snout border. *Ancistrus* males show also a large development of their characteristic fleshy tentacles on snout. Differences in the ventral fin, anal fin and genital papilla occur in *Chaetostoma jegui*

It seems that most Ancistrinae are active during the night while staying in their woody or rocky refuges during the day. Various species are gregarious, and it is not rare to observe several Ancistrinae species sharing the same habitats.

ACANTHICUS

Acanthicus Spix & Agassiz, 1829: 2. Type species: *Acanthicus hystrix* Spix & Agassiz, 1829. Type by monotypy. Gender: masculine. See Isbrücker & Nijssen (1988) for a taxonomic account.

***Acanthicus adonis* Isbrücker & Nijssen, 1988**

Acanthicus adonis Isbrücker & Nijssen, 1988: 166, fig. 5. Type locality: Brasilien, Est. Pará, Rio Tocantins bei Cametá (0°14'S, 49°30.5'W). Holotype: MZUSP 38580.

Maximum length: 20.6 cm SL

Distribution: South America: Lower Tocantins River basin.

Countries: Brazil

Common names: Acary avion

***Acanthicus hystrix* Spix & Agassiz, 1829**

Acanthicus hystrix Spix & Agassiz, 1829: 3, pl. 1 (fig. 1). Type locality: flumine Amazonum [Amazon River]. Holotype: destroyed in 1944 (Terofal, 1983).

Rinelepis acanthicus Valenciennes in Cuvier & Valenciennes, 1840: 487 [360 in Strasbourg deluxe ed.]. Replacement name for, and objective synonym of, *Acanthicus hystrix* Spix & Agassiz, 1829.

Maximum length: 53 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil and/or Peru

Remarks and references: See Isbrücker and Nijssen (1988) for a discussion based on specimens identified as *Acanthicus hystrix* in

Museum collections; 12S and 16S mitochondrial rRNA gene sequences used in a molecular phylogeny of Loricariidae by Montoya-Burgos et al. (1998: figs. 3,4,6; EMBL/GenBank Y08277, Y08325).

Common names: Carachama (Peru)

ANCISTRUS

Ancistrus Kner, 1854: 272. Type species: *Hypostomus cirrhosus* Valenciennes, 1836. Type by subsequent designation by Bleeker (1862: 2). Gender: masculine. Diagnosis based on osteological characters by Schaefer (1986: 100); revision by Fisch-Muller (1999), with redescription of species and a phylogenetic analysis based on allozymes.

Xenocara Regan, 1904: 251. Type species: *Chaetostomus latifrons* Günther, 1869. Type by subsequent designation by Eigenmann (1910: 405, 410). Gender: neuter.

Thysanocara Regan, 1906: 96. Type species: *Hypostomus cirrhosus* Valenciennes, 1836. Type by monotypy. Gender: neuter. Proposed as a subgenus of *Xenocara*.

Pristiancistrus Fowler, 1945a: 121. Type species: *Pristiancistrus eustictus* Fowler, 1945. Type by original designation. Gender: masculine.

***Ancistrus aguaboensis* Fisch-Muller, Mazzoni & Weber, 2001**

Ancistrus aguaboensis Fisch-Muller, Mazzoni & Weber, 2001:

293, fig. 4 (middle). Type locality: Brazil: Goiás: Minaçu: córrego Água Boa: small tributary of rio Bonito, a left bank tributary of the upper rio Tocantins, 10 km from Minaçu on road Minaçu-Campinaçu (13°35'S 48°14'W). Holotype: MNRJ 20850.

Maximum length: 6.7 cm SL

Distribution: South America: Upper Tocantins River basin.

Countries: Brazil

***Ancistrus bodenhameri* Schultz, 1944**

Ancistrus brevifilis bodenhameri Schultz, 1944a: 305, pl. 10 (fig. A). Type locality: Río San Pedro at the bridge south of Mene Grande, Motatán system; Venezuela. Holotype: USNM 121066.

Maximum length: 11.4 cm SL

Distribution: South America: Eastern and western Maracaibo lake tributaries.

Countries: Venezuela

Remarks and references: Raised to species level by Isbrücker (1980: 66).

Common names: Barbón (Venezuela)

***Ancistrus bolivianus* (Steindachner, 1915)**

Xenocara boliviana Steindachner, 1915b: 95, pl. 9 (figs. 5-6). Type locality: Rio Songo [= Zongo], Nord Yungas, Bolivia. Syntypes: NMW 43475 (2), 43476 (27). Species described conditionally "*Xenocara bufonia* (C.V.) Regan, juv.? (an *Xenocara boliviana* n. sp.)".

Maximum length: 8.8 cm SL

Distribution: South America: Beni, Mamoré and Madre de Dios River basins.

Countries: Bolivia, Peru

Remarks and references: New combination by Gosline (1945: 96), no other record and description of species, mensurations of teeth in Muller and Weber (1992: tab. 4, as *Ancistrus* cf. *bufonius*).

***Ancistrus brevifilis* Eigenmann, 1920**

Ancistrus brevifilis Eigenmann, 1920a: 7, pl. 1. Type locality: El Concejo, Rio Tiquirito, Venezuela. Holotype: CAS 64609 [ex IU 15080].

Maximum length: 11.8 cm SL

Distribution: South America: Tuy River basin.

Countries: Venezuela

Common names: Barbón (Venezuela)

***Ancistrus brevipinnis* (Regan, 1904)**

Xenocara brevipinnis Regan, 1904: 257. Type locality: Rio Grande do Sul [Sistema da Laguna dos Patos, Brazil]. Holotype: BMNH 1891.3.16.76. Type locality restricted by Malabarba (1989: 148).

Maximum length: 8 cm SL

Distribution: South America: Laguna dos Patos basin.

Countries: Brazil

Remarks and references: New combination by Eigenmann (1910: 411); see Muller (1989: 894, fig. 3, tab. 3) for morphological data and illustration of the holotype.

***Ancistrus bufonius* (Valenciennes, 1840)**

Hypostomus bufonius Valenciennes in Cuvier & Valenciennes, 1840: 511 [377 in Strasbourg deluxe ed.]. Type locality: Rio Apurimac, qui descend des montagnes du haut Pérou, à environ 2000 mètres de hauteur. Syntypes: MNHN 2228 (2).

Hypostomus calamita Valenciennes in Cuvier & Valenciennes, 1840: 515 [380 in Strasbourg deluxe ed.]. Type locality: dans les montagnes du haut Pérou, dans le rio Apurimac. Syntypes: MNHN 2227 (2).

Maximum length: 11.5 cm SL

Distribution: South America: Apurimac River basin.

Countries: Peru

Remarks and references: New combination by Eigenmann (1910: 411); synonymy based on personal observation and examination of type specimens, but already proposed by Regan (1904: 258)

with a redescription of species; see also Muller and Weber (1992: 750, fig. 2i) for description of teeth.

Common names: Carachama (Peru)

***Ancistrus caucanus* Fowler, 1943**

Ancistrus caucanus Fowler, 1943: 253, fig. 43. Type locality: Sonsón, Cauca River basin, Colombia. Holotype: ANSP 70516.

Maximum length: 5.2 cm SL

Distribution: South America: Cauca River basin.

Countries: Colombia

Remarks and references: Known only from the holotype; see Muller and Weber (1992) for a descriptive note of teeth.

Common names: Corroncho (Colombia)

***Ancistrus centrolepis* Regan, 1913**

Ancistrus centrolepis Regan, 1913: 470. Type locality: Choco, R. San Juan, Colombia. Syntypes: BMNH 1910.7.11.122 (1), 1913.10.1.58 (1).

Ancistrus melas Eigenmann, 1916: 83. Type locality: Condoto [San Juan basin, Colombia]. Holotype: FMNH 58339 [ex CM 7335].

Ancistrus baudensis Fowler, 1945a: 122, fig. 34. Type locality: Alto Rio Baudó, Pacific slope at 3000 feet elevation, Colombia. Holotype: ANSP 71709.

Maximum length: 18.4 cm SL

Distribution: South America: Coastal drainages of Northern Andes, rivers of Northern Colombia, Atrato, Baudó and San Juan basins.

Countries: Colombia

Remarks and references: Synonymies listed above are based on personal observations and examination of type specimens, but Eigenmann in a later publication (1922: 87, pl. 12 fig. 2, fig. 20) redescribed and figured the holotype of *Ancistrus melas* already in synonymy of *A. centrolepis*.

***Ancistrus chagresi* Eigenmann & Eigenmann, 1889**

Ancistrus chagresi Eigenmann & Eigenmann, 1889: 47. Type locality: Rio Chagres [Panama Canal Zone, Panama]. Syntypes: MCZ 8026 (2).

Maximum length: 19.5 cm SL

Distribution: Central America: Panama Canal Zone, Chagres, Gatun and Chorrera River basins.

Countries: Panama

Remarks and references: See for complementary descriptions of species Regan (1904: 256, pl. 14 fig. 7) (redescription of the two syntypes) and Meek and Hildebrand (1916: 250); see Kramer and Graham (1976), Graham (1997) and Power (1984a-c, as *Ancistrus spinosus*) for physiological, ethological and ecological observations.

***Ancistrus cirrhosus* (Valenciennes, 1836)**

Hypostomus cirrhosus Valenciennes, 1836, pl. 7 (fig. 3). Type locality: Not stated [Missions (but actually Corrientes), and Buénos-Ayres, in Cuvier & Valenciennes, 1840: 511]. Holotype: not found and apparently not preserved. Name available from plate. Species subsequently described in Cuvier & Valenciennes (1840: 511 [378 in Strasbourg deluxe ed.]), with the indication that the species was found in two localities. One of them was given as Misiones. However, according to the description of d'Orbigny's travels (Papavero, 1971) the collector visited Corrientes and not Misiones during his travels. Isbrücker's designation (1980: 68) of MNHN B.603 as lectotype is invalid.

Maximum length: 8.9 cm SL

Distribution: South America: Paraná River basin.

Countries: Argentina

Remarks and references: The numerous references to *Ancistrus cirrhosus* must be taken with care until a revision of the species with designation of a neotype.

***Ancistrus claro* Knaack, 1999**

Check List of the Freshwater Fishes of South and Central America

- Ancistrus claro* Knaack, 1999a: 71, fig. 1. Type locality: Brazil, Mato Grosso, Rio Claro, above the bridge, in the direction of Chappada dos Guimarães. Holotype: MCP 28667 (ex ZMB 32918).
Maximum length: 6.6 cm SL
Distribution: South America: Cuiabá River basin in upper Paraguay River drainage.
Countries: Brazil
- Ancistrus clementinae* Rendahl, 1937**
Ancistrus clementinae Rendahl, 1937: 4, fig. 2 (upper). Type locality: Ecuador, Syst. Rio de Clementina [=Rio Pozuelos], nw. von Babahoyo. Holotype: NRM 10369.
Maximum length: 10.2 cm SL
Distribution: South America: Pozuelos River basin in the Guayas River drainage.
Countries: Ecuador
Common names: Raspabalsa
- Ancistrus cryptophthalmus* Reis, 1987**
Ancistrus cryptophthalmus Reis, 1987: 82, fig. 1b. Type locality: Caverna Passa Três (about 300 m into the cave), Rio Sao Vicente system, Sao Domingos, Goias, Brazil. Holotype: MZUSP 28809.
Maximum length: 6 cm SL
Distribution: South America: São Vicente and Angélica-Bezerra Cave system in upper Paranã River, Tocantins River drainage.
Countries: Brazil
Remarks and references: Ecological observations in Reis (1992); ethological study by Trajano and de Souza (1994).
- Ancistrus cuiabae* Knaack, 1999**
Ancistrus cuiabae Knaack, 1999b: 151, fig. on p. 150. Type locality: Brazil, Mato Grosso, Pantanal, 36 km SE Pocone, in a permanent remnant water of Rio Bento Gome [=Gomes]. Holotype: MCP 28671 (ex ZMB 32920).
Maximum length: 11.5 cm SL
Distribution: South America: Cuiabá River basin in upper Paraguay River drainage.
Countries: Brazil
- Ancistrus damasceni* (Steindachner, 1907)**
Xenocara damasceni Steindachner, 1907: 292. Type locality: dem Parnaíba [=Parnaíba River] bei Victoria [=Vitoria do alto Parnaíba] und Sa. Filomena [Brazil]. Syntypes: NMW 43489 (4), 43490 (7), ZSM 7579, and additional specimens.
Maximum length: 6.5 cm SL
Distribution: South America: Upper Parnaíba River basin.
Countries: Brazil
Remarks and references: New combination and Portuguese translation of the original description by Miranda Ribeiro (1911: 30).
- Ancistrus dolichopterus* Kner, 1854**
Hypostoma punctatum Jardine in Schomburgk, 1841: 145, fig. on p. 145 (Schomb. Drawings, No 68). Type locality: Rio Branco [Rio Negro tributary, Brazil]. Holotype: not preserved (Isbrücker 1980: 72). Name preoccupied by *Hypostomus punctatus* Valenciennes, 1840. Rejected and replaced here by an available synonym following ICZN art. 60.1.
Ancistrus dolichopterus Kner, 1854: 274, pl. 3 (fig. 1). Type locality: Barra do Rio negro [Manaus, Brazil]. Syntypes: NMW 46276: 1-2 (2), 47164: 1-2 (2). Originally as *Anc. dolichopterus*.
Maximum length: 11.8 cm SL
Distribution: South America: Upper and middle Brazilian Amazon River basin; Negro, lower Trombetas, Tefé, Madeira and Tapajós River basins.
Countries: Brazil, Guyana
Remarks and references: Synonymy based on examination of numerous specimens including syntypes of *Ancistrus dolichopterus*; no recent redescription, but see Eigenmann and Eigenmann (1890: 448, as *Ancistrus temminckii*) for a complementary description, and Römer (1990) and Holota (1990) (both references as *Ancistrus cf. hoplogenyus*) for figures of living specimens and reproduction observations in aquarium; 12S and 16S mitochondrial rRNA gene sequences used in molecular phylogenies by Montoya-Burgos et al. (1997: fig. 4; 1998: figs. 3 & 6; EMBL/GenBank Y08276; Y08324).
Common names: Cascudo negro aba branca (Brazil), Bodó seda (Brazil).
- Ancistrus dubius* Eigenmann & Eigenmann, 1889**
Ancistrus cirrhosus dubius Eigenmann & Eigenmann, 1889: 48. Type locality: Gurupa, Tabatinga [Brazil]. Syntypes: MCZ 7983 (5), 7984 (6), 7993 (1).
Maximum length: 12.6 cm SL
Distribution: South America: Amazon River basin; middle Paraná and Paraguay River basins.
Countries: Brazil, Paraguay, Peru
Remarks and references: Raised to species level by Isbrücker (1980: 68); generally referred to as *Ancistrus cirrhosus*.
Common names: Vieja (Brazil), Pirambocaya (Paraguay)
- Ancistrus erinaceus* (Valenciennes, 1840)**
Hypostomus erinaceus Valenciennes in Cuvier & Valenciennes, 1840: 510 [376 in Strasbourg deluxe ed.]. Type locality: Chili. Holotype: MNHN A.9568.
Maximum length: 7.5 cm SL
Distribution: South America: Chile (?).
Countries: Chile (?)
Remarks and references: New combination by Isbrücker (1980: 68); only the holotype known, in very bad state of conservation; no other report of *Ancistrus* from Chile, type locality doubtful.
- Ancistrus eustictus* (Fowler, 1945)**
PristiAncistrus eustictus Fowler, 1945a: 121, fig. 32. Type locality: Alto Rio Baudó, Pacific slope at 3000 feet elevation, Colombia. Holotype: ANSP 71710.
Maximum length: 18 cm SL
Distribution: South America: Upper Baudó River basin.
Countries: Colombia
Remarks and references: Known only from the holotype.
- Ancistrus formoso* Sabino & Trajano, 1997**
Ancistrus formoso Sabino & Trajano, 1997: 74, fig. 4. Type locality: Buraco do Ducho cave, Serra da Bodoquena, Município de Bonito (21°08'S, 56°28'W), State of Mato Grosso do Sul, Brazil. Holotype: MZUSP 51386.
Maximum length: 7.9 cm SL
Distribution: South America: Buraco do Ducho Cave in Formoso phreatic system.
Countries: Brazil
Remarks and references: Ethological study and ecological observations in Trajano and Gerhard (1997).
- Ancistrus fulvus* (Holly, 1929)**
Xenocara fulva Holly, 1929: 119. Type locality: Alto Rio Acara (Brasilien). Holotype: NMW 57203.
Maximum length: 8.8 cm SL
Distribution: South America: Acará River basin in lower Amazon drainage.
Countries: Brazil
Remarks and references: Known only from the holotype.
- Ancistrus galani* Perez & Vilorio, 1994**
Ancistrus galani Perez & Vilorio, 1994: 105, fig. 3. Type locality: Cueva de Los Laureles (Zu. 31), Río Socuy, Sierra de Perijá, Zulia State; Venezuela, 72°27'42"W, 10°45'04"N; elevation 650 m. Holotype: MBLUZ 04351.
Maximum length: 5.6 cm SL
Distribution: South America: Los Laureles Cave in Socuy River basin, Lake Maracaibo drainage.

phreatic system, Los Laureles Cave.

Countries: Venezuela

Remarks and references: Known from only two specimens.

***Ancistrus gymnorhynchus* Kner, 1854**

Ancistrus gymnorhynchus Kner, 1854: 275. Type locality: Puerto Cabello [Venezuela]. Holotype: NMW 43495. Originally as *Anc. gymnorhynchus*.

Hypostomus karstenii Lütken (ex Kröyer), 1874: 204. Not available, name published in the synonymy of *Chaetostomus gymnorhynchus* (Kner, 1854).

Xenocara rothschildi Regan, 1905: 242. Type locality: San Esteban, near Porto Cabello, Venezuela. Syntypes: BMNH 1904.11.9.27-31 (5).

Maximum length: 13.5 cm SL

Distribution: South America: Coastal rivers of Carabobo and Yaracuy States; upper Pao River basin in Orinoco River drainage.

Countries: Venezuela

Remarks and references: Redescription of the holotype of *Ancistrus gymnorhynchus* by Steindachner (1917: 93, pl. 9, figs. 7-8); synonymy with *Xenocara rothschildi* by Schultz (1944a: 305), confirmed here based on personal observation and examination of types.

***Ancistrus heterorhynchus* (Regan, 1912)**

Xenocara heterorhynchus Regan, 1912: 668, pl. 76 (fig. 2). Type locality: Uruhuasi [=Urohuasi, Inambari basin] Peru (4000 ft). Syntypes: BMNH 1911.12.20.35-36 (2).

Maximum length: 6.3 cm SL

Distribution: South America: Inambari River basin in Madre de Dios River drainage.

Countries: Peru

Remarks and references: New combination by Gosline (1945: 96); only the two syntypes known.

Common names: Carachama

***Ancistrus hoplogeny* (Günther, 1864)**

Chaetostomus hoplogeny Günther, 1864: 247. Type locality: River Capin [=Capim, tributary of Guamá River, Pará State, Brazil]. Syntypes: BMNH 1849.11.8.89-91 (3).

Chaetostomus alga Cope, 1872: 287, pl. 15 (fig. 3). Type locality: The Ambyiacu river [=Ampiyacu River], which empties into the Amazon near to Pebas, in Eastern Ecuador, some distance east of the Napo [Peru]. Syntypes: ANSP 16461 (1), 16462 (1).

Chaetostomus tectirostris Cope, 1872: 288, pl. 15 (fig. 2). Type locality: The Ambyiacu river [=Ampiyacu River], which empties into the Amazon near to Pebas, in Eastern Ecuador, some distance east of the Napo [Peru]. Syntypes: ANSP 8298 (1), 8300 (1).

Chaetostomus (Ancistrus) cirrhosus punctata Steindachner, 1881: 123. Type locality: Rio Branco und Rio Guapore in Mato Grosso, Coary und Tabatinga [Amazonas, Brazil]. Syntypes: NMW 47163 (3), 47279: 1-3 (3), 47280: 1-2 (2), 47281: 1-2 (2), 47288 (1). Originally as *Chaetostomus (Ancistrus) cirrhosus* var. *punctata*.

Maximum length: 15.8 cm SL

Distribution: South America: Amazon, Essequibo, and Paraguay River basins.

Countries: Brazil, Guyana, Paraguay, Peru

Remarks and references: Synonymies listed above based on personal observations and examination of type specimens, including new synonymization of *Chaetostomus (Ancistrus) cirrhosus punctata*; see Regan (1904: 255) for a redescription including types, Eigenmann (1912b: 239) for description based on Guyanese specimens, Saul (1975: 118) for ecological observations, and Muller and Weber (1992) for description and illustration of teeth.

Common names: Bodozinho (Brazil), Carachama (Peru)

***Ancistrus jelskii* (Steindachner, 1876)**

Chaetostomus Jelskii Steindachner, 1876: 603. Type locality: Amable Maria, Monterico, den Gebirgsbächen der hohen Anden in Peru [Tulumayo River basin, tributary of Péréné River]. Syntypes: NMW (not found).

Maximum length: 8 cm TL

Distribution: South America: Tulumayo River basin in upper Ucayali River drainage.

Countries: Peru

Remarks and references: New combination by Isbrücker (1980: 69); validity of species, often considered as a synonym of *Ancistrus bufonius*, needs confirmation.

Common names: Carachama

***Ancistrus latifrons* (Günther, 1869)**

Chaetostomus latifrons Günther, 1869: 426. Type locality: Upper Amazons, Peruvian Amazons [Marañón]. Holotype: BMNH 1869.5.21.9. Type locality restricted to Marañón by Eigenmann & Eigenmann (1891: 43; see also Eigenmann & Allen 1942: 18).

Maximum length: 15.4 cm SL

Distribution: South America: Upper Amazon and Solimões River basins.

Countries: Brazil, Peru

Remarks and references: New combination by Isbrücker (1980: 69); see Regan (1904: 253, pl. 15 fig. 1) for a redescription and illustration of the holotype.

Common names: Carachama

***Ancistrus leucostictus* (Günther, 1864)**

Chaetostomus leucostictus Günther, 1864: 248. Type locality: Essequibo [Guyana]. Holotype: BMNH 1864.1.21.85. Type status of specimen registered as holotype is doubtful (Muller 1989: 886).

Maximum length: 10 cm SL (?)

Distribution: South America: Essequibo River basin, possibly all main Guianan rivers to Oyapock River in the East.

Countries: French Guiana (?), Guyana, Suriname (?)

Remarks and references: New combination by Isbrücker (1980: 69); see Le Bail et al. (2000: 228) for description, illustration and distribution of the form found in French Guiana tentatively reported to the species.

Common names: Goré-so (Creole), Militemala (Wayana Amerindian), Silure à antennes (French), Suceur (French), Wawa (Boni Amerindian)

***Ancistrus lineolatus* Fowler, 1943**

Ancistrus lineolatus Fowler, 1943: 255, fig. 47. Type locality: Florencia, Rio Orteguausa [=Orteguaza], Colombia. Holotype: ANSP 70517.

Maximum length: 9 cm SL

Distribution: South America: Orteguaza River basin in upper Japurá River drainage.

Countries: Colombia

Remarks and references: Known only from holotype.

***Ancistrus lithurgicus* Eigenmann, 1912**

Ancistrus lithurgicus Eigenmann, 1912b: 241, pl. 25 (fig. 3). Type locality: Crab Falls; Lower Essequibo, British Guiana. Holotype: FMNH 53091 [ex CM 1524]. Details of type locality found in introduction.

Maximum length: 13.2 cm SL

Distribution: South America: Essequibo River basin.

Countries: Guyana

Remarks and references: See Muller and Weber (1992: 752, fig. 2k) for a description of teeth shape.

***Ancistrus macrophthalmus* (Pellegrin, 1912)**

Xenocara macrophthalma Pellegrin, 1912: 271, fig. 1. Type locality: Orénoque [Orinoco River, Venezuela]. Holotype: MNHN

1887-650.
 Maximum length: 7.9 cm SL
 Distribution: South America: Orinoco River and lower parts of some of its tributaries.
 Countries: Venezuela
 Remarks and references: New combination by Gosline (1945: 95); note on teeth shape in Muller and Weber (1992: 752).
 Common names: Corroncho (Venezuela)

***Ancistrus maculatus* (Steindachner, 1881)**

Chaetostomus (Ancistrus) cirrhosus maculatus Steindachner, 1881: 123. Type locality: Cudajas [=Codajas], Obidos, dem Rio Tajapouru [=Tajapuru] [Brazil], und dem Rio Chagres [Panama]. Syntypes: NMW 47282 (1), 47289: 1-2 (2), 47290 (1), 55035 (1). Originally as *Chaetostomus (Ancistrus) cirrhosus* var. *maculatus*.
 Maximum length: 11.8 cm SL
 Distribution: South America: Amazon River basin.
 Countries: Brazil
 Remarks and references: Raised to species level by Isbrücker (1980: 70); as syntypes belong to more than one species, a lectotype should be designated; specimens from Chagres River belong to *Ancistrus chagresi*.

***Ancistrus malacops* (Cope, 1872)**

Chaetostomus malacops Cope, 1872: 287, pl. 5 (figs. 2a-b). Type locality: The Ambyiacu river [=Ampiyacu River], which empties into the Amazon near to Pebas, in Eastern Ecuador, some distance east of the Napo [Peru]. Syntypes: ANSP 8299 (2).
 Maximum length: 7.7 cm SL
 Distribution: South America: Ampiyacu River basin.
 Countries: Peru
 Remarks and references: New combination by Isbrücker (1980: 70); validity of species, based on specimens actually in very bad conditions, needs confirmation.
 Common names: Carachama (Peru)

***Ancistrus maracasae* Fowler, 1946**

Ancistrus maracasae Fowler, 1946: 2, fig. 3. Type locality: Maracas River, Trinidad. Holotype: ANSP 71723.
 Maximum length: 8.3 cm SL
 Distribution: South America: Maracas River basin.
 Countries: Trinidad and Tobago
 Remarks and references: Only the holotype known.

***Ancistrus martini* Schultz, 1944**

Ancistrus triradiatus martini Schultz, 1944a: 302, pl. 9 (fig. C). Type locality: Río Táchira, 7 km. north of San Antonio, Catatumbo system; Venezuela. Holotype: USNM 121064.
 Maximum length: 8.9 cm SL
 Distribution: South America: Zulia River basin in the Catatumbo River drainage, Lake maracaibo drainage.
 Countries: Venezuela
 Remarks and references: Raised to species level by Isbrücker (1980: 70).
 Common names: Corroncho (Venezuela)

***Ancistrus mattogrossensis* Miranda Ribeiro, 1912**

Ancistrus mattogrossensis Miranda Ribeiro, 1912: 5. Type locality: Not stated [Mato Grosso?, Brazil]. Syntypes: 2 specimens, not found at MNRJ or MZUSP. Spelling of name corrected by Miranda Ribeiro (1918a: 114).
 Maximum length: Not known
 Distribution: South America: Not known. Mato Grosso?
 Countries: Brazil
 Remarks and references: No report of other specimen than the probably lost paratypes; validity of species not confirmed here.

***Ancistrus megalostomus* Pearson, 1924**

Ancistrus megalostomus Pearson, 1924: 23, pl. 7 (fig. 1). Type locality: Huachi; at the junction of the Bopi and Cochabamba

ivers, altitude 2,235 feet, Bolivia. Syntypes: CAS 64614 (2).
 Maximum length: 8.3 cm SL
 Distribution: South America: Beni River basin in Madeira River drainage.
 Countries: Bolivia
 Remarks and references: No later record of species known from the syntypes only; description of teeth in Muller and Weber (1992: 113, 115, pl. 1c).

***Ancistrus minutus* Fisch-Muller, Mazzoni & Weber, 2001**

Ancistrus minutus Fisch-Muller, Mazzoni & Weber, 2001: 298, fig. 5 (middle). Type locality: Brazil: Goiás: Minaçu: córrego Batéias, a left bank tributary of the upper rio Tocantins (13°49'S 48°20'W). Holotype: MNRJ 20851.
 Maximum length: 5.7 cm SL
 Distribution: South America: Upper Tocantins tributaries in Goiás State upstream of the dam of Serra da Mesa.
 Countries: Brazil

***Ancistrus montanus* (Regan, 1904)**

Xenocara montana Regan, 1904: 258, pl. 14 (fig. 6). Type locality: Tumupara [=Tumupasa], Andes of Bolivia, 1500 ft. Holotype: BMNH 1902.12.18.4.
 Maximum length: 9.2 cm SL
 Distribution: South America: Beni River basin in upper Madeira River drainage.
 Countries: Bolivia
 Remarks and references: New combination by Eigenmann (1910: 411); cited from several localities of Beni River basin by Pearson (1924: 24).

***Ancistrus multispinis* (Regan, 1912)**

Xenocara multispinis Regan, 1912: 668, pl. 76 (fig. 1). Type locality: Humboldt and Novo Rivers, Sta. Catherina, S. E. Brazil [restricted to Humboldt, Rio Itapocú basin]. Lectotype: BMNH 1910.7.26.32, designated by Muller (1989: 894).

Hemiancistrus albocinctus Ahl, 1936: 111. Type locality: Umbebung von Rio de Janeiro [Brazil]. Holotype: ZMB 20955. New synonymy based on examination of extensive material including type specimens of both species.

Maximum length: 14.2 cm SL
 Distribution: South America: Atlantic coastal drainages of eastern Brazil, from Macacú River in the north to Maquiné River in the south.
 Countries: Brazil

Remarks and references: See Steindachner (1911c: 432, as *Ancistrus stigmaticus*) for a description of species, Muller (1989: 894, fig. 4, tab. 3) for morphological data and illustration of the lectotype, Buck and Sazima (1995, as *Ancistrus* sp.) for ecological observations and illustration of living specimen, and Montoya-Burgos et al. (1997: fig. 4; 1998: figs. 3, 5, 6) for phylogenetic relationships based on 12S and 16S mitochondrial rRNA gene sequences (EMBL/GenBank Y08279, Y08327).
 Common names: Barbadinho (Brazil)

***Ancistrus nudiceps* (Müller & Troschel, 1848)**

Hypostomus nudiceps Müller & Troschel, 1848: 631. Type locality: dem Takutu, British Guiana [Guyana]. Holotype: ZMB 3180.
 Maximum length: 7.9 cm SL
 Distribution: South America: Takutu River basin in upper Branco River drainage.
 Countries: Guyana
 Remarks and references: New combination by Isbrücker (1980: 71); only the holotype known, see Eigenmann (1912b: 236, footnote 24) for its redescription.

***Ancistrus occidentalis* (Regan, 1904)**

Xenocara occidentalis Regan, 1904: 257, pl. 14 (fig. 5). Type

Check List of the Freshwater Fishes of South and Central America

locality: Canelos [=Chambria], E. Ecuador. Syntypes: BMNH 1880.12.8.69-74 (6).

Maximum length: 8.6 cm SL

Distribution: South America: Bobonaza River basin.

Countries: Ecuador

Remarks and references: New combination by Eigenmann (1910: 411); no later work.

Common names: Carachama (Peru)

***Ancistrus occlloi* Eigenmann, 1928**

Ancistrus occlloi Eigenmann in Myers, 1928: 86. Type locality: Ollantaytambo [=Ollantaitambo], Rio Urubamba, Peru, 9000 feet. Holotype: CAS 66847.

Maximum length: 11.6 cm SL

Distribution: South America: Upper Urubamba River basin.

Countries: Peru

Remarks and references: See Eigenmann and Allen (1942: 197, pl. 10 figs. 1-2) for a complementary description.

Common names: Carachama (Peru)

***Ancistrus pirareta* Muller, 1989**

Ancistrus pirareta Muller, 1989: 891, fig. 2 (middle). Type locality: Salto Pirareta, sud de Piribebuy, affluent du Rio Tebicuary-mi (Cordillera, Paraguay), 25°30'S/56°55'W. Holotype: MHNG 2450.10.

Maximum length: 15.6 cm SL

Distribution: South America: Upper Tebicuary-mi River basin in lower Paraguay River drainage.

Countries: Paraguay

Remarks and references: See Muller (1990) for a complementary description and discussion of morphological characters.

Common names: Pirambocaya (Paraguay)

***Ancistrus piriformis* Muller, 1989**

Ancistrus piriformis Muller, 1989: 887, fig. 1 (middle). Type locality: Rio Acaray, en dessous du lac de barrage (Alto Paraná, Paraguay), 25°23'S/54°42'W. Holotype: MHNG 2450.11.

Maximum length: 8.3 cm SL

Distribution: South America: Acaray River basin in middle Paraná River drainage.

Countries: Paraguay

Remarks and references: See Muller (1990) for a complementary description and discussion of morphological characters.

Common names: Pirambocaya (Paraguay)

***Ancistrus ranunculus* Muller, Rapp Py-Daniel & Zuanon, 1994**

Ancistrus ranunculus Muller, Rapp Py-Daniel & Zuanon, 1994: 290, fig. 1 (middle). Type locality: Brazil, Pará, Rio Xingú, furo do Tucum Seco, near Arroz Cru. Holotype: INPA 9509.

Maximum length: 12.9 cm SL

Distribution: South America: Xingu and Tocantins River basins.

Countries: Brazil

Remarks and references: 12S and 16S mitochondrial rRNA gene sequences used in molecular phylogenies by Montoya-Burgos et al. (1997: fig. 4; 1998: figs. 3 & 6; EMBL/GenBank Y08280; Y08328).

Common names: Cascudo preto velho (Brazil), Bristle-bushmouth or frog-cat (English)

***Ancistrus spinosus* Meek & Hildebrand, 1916**

Ancistrus spinosus Meek & Hildebrand, 1916: 252. Type locality: Rio Calobre, tributary of the Rio Bayano, Panama. Holotype: FMNH 8942.

Maximum length: 17.6 cm SL

Distribution: Central America: Pacific and Caribbean river drainages of eastern Panama.

Countries: Panama

Remarks and references: Based on personal observation, the iden-

tity of the specimen registered as holotype is doubtful; see Breder (1927: 109) for a complementary description of species.

***Ancistrus stigmaticus* Eigenmann & Eigenmann, 1889**

Ancistrus stigmaticus Eigenmann & Eigenmann, 1889: 48. Type locality: Sao Matheos [= Sao Mateus]; Goyaz [restricted to Goyaz, =Goiás, Rio Araguaia drainage, upper course of Rio Vermelho at Goiás, 15°47'S, 50°07'W]. Lectotype: MCZ 77659, designated by Muller (1989: 895). Description appears in key on p. 47.

Maximum length: 15.2 cm SL

Distribution: South America: Upper Araguaia River basin.

Countries: Brazil

Remarks and references: See Muller (1989: 895, fig. 5, tab. 3) for morphological data and illustration of the lectotype, and conspecificity of the unique paralectotype from Sao Mateus Eastern coastal drainage not established.

***Ancistrus tamboensis* Fowler, 1945**

Ancistrus tamboensis Fowler, 1945b: 9, fig. 13. Type locality: Satipo, at 600 meters elevation in upper Tambo basin, Rio Ucayali drainage, Peru. Holotype: ANSP 71643.

Maximum length: 8.2 cm SL

Distribution: South America: Tambo River basin in upper Ucayali drainage.

Countries: Peru

Remarks and references: Known only from holotype.

Common names: Carachama (Peru)

***Ancistrus taunayi* Miranda Ribeiro, 1918**

Ancistrus taunayi Miranda Ribeiro, 1918b: 631. Type locality: Itaqui -Rio Lageado. Rio Grande do Sul; Brasil. Lectotype: MZUSP 975, designated by Britski (1969: 208).

Maximum length: 11.9 cm SL

Distribution: South America: Middle Uruguay River basin.

Countries: Argentina, Brazil

Remarks and references: See Muller (1989: 896, fig. 6, tab. 3) for morphological data and illustration of the lectotype.

Common names: Cascudo de espinhos (Brazil)

***Ancistrus temminckii* (Valenciennes, 1840)**

Hypostomus Temminckii Valenciennes in Cuvier & Valenciennes, 1840: 514 [380 in Strasbourg deluxe ed.]. Type locality: Cayenne [corrected to: Suriname, region near Paramaribo by Boeseman, 1972: 305]. Holotype: RMNH 3123.

Plecostomus aculeatus Gronow in Gray, 1854: 158. Type locality: America Meridionali. No types known (Eschmeyer 1998: 35).

Maximum length: 9.8 cm SL

Distribution: South America: Saramacca, Suriname, and Maroni River basins.

Countries: Suriname

Remarks and references: New genus combination, synonymization, description and illustration of a specimen (not type) with a short note on the holotype in Bleeker (1864: 11, pl. 1 fig. 3, pl. 3 fig. 2); van der Stigchel (1946: 164) also gives a redescription of species based on same two specimens; see Boeseman (1972: 305) for identification of the holotype and discussion on type locality.

***Ancistrus triradiatus* Eigenmann, 1918**

Ancistrus triradiatus Eigenmann, 1918: 680. Type locality: Quebrada Cramalote, Villavicencio; Andes east of Bogotá [upper Meta basin, Colombia]. Holotype: CAS 60164 [ex IU 13935a].

Maximum length: 9.2 cm SL

Distribution: South America: Middle and lower Orinoco River tributaries; Valencia Lake and Los Guayos River basin; southern tributaries of Lake Maracaibo basin.

Countries: Colombia, Venezuela

Remarks and references: Holotype later figured by Eigenmann (1922: pl. 12, fig. 8; pl. 13, figs. 3-4).

***Ancistrus variolus* (Cope, 1872)**

Chaetostomus variolus Cope, 1872: 288. Type locality: The Ambyiacu river [=Ampiyacu River], which empties into the Amazon near to Pebas, in Eastern Ecuador, some distance east of the Napo [now Peru]. Syntypes: ANSP 21284 (1), 21285 (1).

Maximum length: 4.8 cm SL

Distribution: South America: Ampiyacu River basin.

Countries: Peru

Remarks and references: New combination by Isbrücker (1980: 74); validity of species, based on juvenile specimens actually in bad condition, needs confirmation.

Common names: Carachama (Peru)

BARYANCISTRUS

Baryancistrus Rapp Py-Daniel, 1989: 245. Type species: *Hypostomus niveatus* Castelnau, 1855. Type by original designation. Gender: masculine.

***Baryancistrus niveatus* (Castelnau, 1855)**

Hypostomus niveatus Castelnau, 1855: 43, pl. 21 (fig. 3). Type locality: du Rio Araguay, de la province de Goyaz [Brazil]. Possible syntypes: MNHN A.9453 and A.9454 (dry specimens). Literature mentions 2 syntypes (e.g., Regan 1904, Bertin & Estève 1950), but the description appears to be based on a single specimen, which was preserved in alcohol. No alcohol preserved specimen was found at MNHN.

Maximum length: 23.5 cm SL

Distribution: South America: Tocantins, Xingu, Tapajós, and Trombetas River basins.

Countries: Brazil

Remarks and references: New combination with genus description by Rapp Py-Daniel (1989: 245); redescription based on possible syntypes by Regan (1904: 235); see Santos et al. (1984: 56, as *Hemiancistrus niveatus*) and Stawikowski (1991: 261) for coloration of living specimens and ecological notes.

Common names: Acari (Brazil), Maníta peixe (Amerindian, Trombetas River)

***Baryancistrus longipinnis* (Kindle, 1895)**

Hemiancistrus longipinnis Kindle, 1895: 255. Type locality: Trocera on Tocantins, Brazil. Holotype: MCZ 29051.

Maximum length: 20 cm TL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Remarks and references: New combination by Isbrücker (2001: 26).

CHAETOSTOMA

Chaetostoma Tschudi, 1846: 25. Type species: *Chaetostoma loborhynchos* Tschudi, 1846. Type by monotypy. Gender: neuter. Key to Venezuelan species by Schultz (1944a: 287) and in Fernández-Yépez (1945: 29; translated in Spanish from Schultz, loc. cit., with a new species added). Diagnosis based on osteological characters by Schaefer (1986: 101). Comparison of species from Venezuela with diagnostic characters by Ceas & Page (1996: 674). Biogeographical distribution discussed by Lasso and Provenzano (1997: 62).

Hypocolpaterus Fowler, 1943: 259. Type species: *Hypocolpaterus analis* Fowler, 1943. Type by original designation. Gender: masculine.

***Chaetostoma aburrensis* (Posada, 1909)**

Hypostomus aburrensis Posada, 1909: 297. Type locality: Medellín? Holotype: not known.

Maximum length: not known

Distribution: South America: Cauca River basin (?).

Countries: Colombia

Remarks and references: New combination based here on the brief

original description.

Common names: Corroncho de Medellín (Colombia)

***Chaetostoma aequinoctiale* Pellegrin, 1909**

Chaetostomus aequinoctialis Pellegrin, 1909: 518. Type locality: Rio Pove, Santo Domingo de los Colorados (560 mètres), Équateur [Ecuador, 0°13'S, 79°09'W]. Holotype: MNHN 1904-17. Description also published in Pellegrin (1911: B₁.2, pl. 1 fig. 3), with an illustration.

Maximum length: 7 cm SL

Distribution: South America: Guayas River basin.

Countries: Ecuador

Remarks and references: See observations on recent capture by Barriga (1989: 25).

Common names: Guaña (Ecuador)

***Chaetostoma alternifasciatum* Fowler, 1945**

Chaetostoma alternifasciatum Fowler, 1945a: 116, fig. 23. Type locality: Morelia, Rio Caquetá basin, Colombia. Holotype: ANSP 71711.

Maximum length: 15.3 cm SL

Distribution: South America: Caqueta River basin in upper Japurá River drainage.

Countries: Colombia

***Chaetostoma anale* (Fowler, 1943)**

Hypocolpaterus analis Fowler, 1943: 261, fig. 58. Type locality: Florencia, Rio Ortegusa, Colombia. Holotype: ANSP 70525.

Maximum length: 16 cm SL

Distribution: South America: Ortegusa River basin in upper Japurá River drainage.

Countries: Colombia

Remarks and references: New combination by Rapp Py-Daniel (1991: 245); no redescription; holotype [total] length is 320 mm in original description, but the specimen registered measures only 210 mm in total length (160 mm SL; pers. obs.).

***Chaetostoma anomalum* Regan, 1903**

Chaetostomus anomalus Regan, 1903: 599. Type locality: Merida, Venezuela, altitude 1500 meters and from the Albireggas and Milla rivers, above Merida, altitude 3500 meters. Syntypes: BMNH 1903.6.30.91-101, USNM 133135 (Eschmeyer 1998: 110).

Maximum length: 16 cm TL

Distribution: South America: Lake Maracaibo basin, upper Chama, Capazon and Escalante River basins.

Countries: Venezuela

Remarks and references: Morphometric data in Schultz (1944a: 295), diagnostic characters in Ceas & Page (1996: 674).

Common names: Corroncho (Venezuela), Charoca (Venezuela)

***Chaetostoma branickii* Steindachner, 1881**

Chaetostomus branickii Steindachner, 1881: 118, pl. 6 (fig. 1). Type locality: Callacate [= Peru: Cajamarca: Rio Chota (= rio Chotano), alt. ca. 1465-1585 m., ca. 12 km from Cutervo N of Chota; 06°25'S / 78°56'W]. Syntypes: NMW 47270 (2), 47271 (3) (Eschmeyer, 1998: 267).

Maximum length: 13.5 cm TL

Distribution: South America: Upper Chamaya River basin in upper Marañón River drainage.

Countries: Peru

Remarks and references: Localization of the type locality in Stephens and Traylor (1983: 28, reference to Sztolcman, collector of the syntypes).

Common names: Carachama

***Chaetostoma breve* Regan, 1904**

Chaetostomus brevis Regan, 1904: 247, pl. 13 (fig. 3). Type locality: Bomboiza and Zamora Rivers [Santiago basin], Eastern Ecuador. Syntypes originally 6; BMNH 1898.11.4.33-36 (4).

Maximum length: 30 cm TL
 Distribution: South America: Zamora River basin in upper Ma-
 rañón River drainage.
 Countries: Ecuador
 Common names: Carachama (Ecuador)

***Chaetostoma brevilabiatum* Dahl, 1942**

Chaetostomus brevilabiatum Dahl, 1942: 80, fig. 1. Type locality:
 Rio Volcán near its junction to Rio San Bartolomé (tributary to
 Rio Magdalena on the left side, between Rios Nare and Ité) mu-
 nicipio of Remedios, department of Antioquia, Republic of Co-
 lombia. Altitude approximately 600 m. Magdalena system. Holo-
 type: ZMUL.
 Maximum length: 11.9 cm SL
 Distribution: South America: Magdalena and Cimitarra River
 basins.
 Countries: Colombia
 Remarks and references: Known only from the holotype.

***Chaetostoma dermorhynchum* Boulenger, 1887**

Chaetostomus dermorhynchus Boulenger, 1887a: 277, pl. 22 (up-
 per fig.). Type locality: Canelos [Bobonaza River]; eastern Ecu-
 ador. Syntypes: BMNH 1880.12.8.64-66 (3).
 Maximum length: 25 cm TL
 Distribution: South America: Pastaza, upper Bobonaza, Napo, and
 upper Curaray River basins.
 Countries: Ecuador
 Remarks and references: See Regan (1904: 248) for a redescription
 including syntypes.
 Common names: Carachama (Ecuador)

***Chaetostoma dorsale* Eigenmann, 1922**

Chaetostomus dorsalis Eigenmann, 1922: 226. Type locality:
 Quebrada Cramalote, Villavicencio [Meta River basin of Eastern
 Colombia]. Holotype: CAS 77093 [ex IU 13940]. New name and
 species described in a footnote referring to *Chaetostomus anoma-
 lus* Regan, 1903.
 Maximum length: 8.8 cm SL
 Distribution: South America: Upper Meta and upper Apuré River
 basins.
 Countries: Colombia, Venezuela
 Remarks and references: Diagnostic characters based on the ex-
 amination of type material in Ceas & Page (1996: 674).

***Chaetostoma dupouii* Fernández-Yépez, 1945**

Chaetostoma dupouii Fernández-Yépez, 1945: 27. Type locality:
 el rio Encantado, en el sitio indicado en los planos adjuntos y
 más o menos a un kilómetro más arriba de la confluencia do los
 ríos Encantado y Río Grande, tributario éste del Tuy; Venezuela.
 Holotype: AFY.
 Maximum length: 7.9 cm SL
 Distribution: South America: Tuy River basin.
 Countries: Venezuela
 Common names: Corroncho (Venezuela)

***Chaetostoma fischeri* Steindachner, 1879**

Chaetostomus Fischeri Steindachner, 1879c: 150. Type locality:
 Mamoni-Fluss; bei Chepo im Isthmus von Panama. Syntypes:
 NMW 47170 (1), 47171 (1), 47172 (2), 47173 (1), 54991 (2)
 (Eschmeyer 1998: 584). Species illustrated and described in more
 detail in Steindachner (1879d: 162, pl. 4).
 Maximum length: about 30 cm TL
 Distribution: Central and South America: Bayano, Tuira, San Juan
 and Guyas River basins in the Pacific versant; Chagres, Atrato,
 Sinú, and Magdalena River basins in the Caribbean versant.
 Countries: Colombia, Ecuador, Panama
 Remarks and references: See Meek and Hildebrand (1916: 249) for
 a complementary description of Panamanian material, and Ei-
 genmann (1922: 82) for comparison of specimens from diverse
 countries.

Common names: Boca de manteca (Colombia), Cucho (Colombia,
 Panama), Trompilisa (Colombia)

***Chaetostoma greeni* Isbrücker, 2001**

Chaetostomus maculatus Regan, 1904: 246, pl. 14 (fig. 4). Type
 locality: Rozmaiu, Upper Peru. Syntypes: BMNH 1903.10.12.3-4
 (2).
Chaetostoma greeni Isbrücker in Isbrücker et al., 2001: 24. Type
 locality: Rozmaiu, Upper Peru. Syntypes: BMNH 1903.10.12.3-4
 (2). Replacement name for *Chaetostomus maculatus* Regan,
 1904, preoccupied by *Chaetostomus cirrhosus* var. *maculata*
 Steindachner, 1881.
 Maximum length: 6.5 cm TL
 Distribution: South America: Roz River basin (?).
 Countries: Peru
 Remarks and references: Type locality, "Rozmaiu", means Roz
 River in Quechua idiom, not localized.
 Common names: Carachama (Peru)

***Chaetostoma guairense* Steindachner, 1881**

Chaetostomus guairensis Steindachner, 1881: 121, pl. 3 (fig. 1).
 Type locality: dem Guaire bei Carácas [Venezuela]. Syntypes:
 NMW 47183 (2), 47184 (2), 47185 (3) (Eschmeyer, 1988: 684).
 Maximum length: 8.1 cm SL
 Distribution: South America: Tuy and Guaire River and Lake
 Valencia basins.
 Countries: Venezuela
 Remarks and references: See diagnostic characters in Ceas & Page
 (1996: 674); 12S and 16S mitochondrial rRNA gene sequences
 used in a molecular phylogeny of Loricariidae by Montoya-
 Burgos et al. (1998: figs. 3,5,6; EMBL/GenBank Y08281,
 Y08329).
 Common names: Corroncho (Venezuela)

***Chaetostoma jegui* Rapp Py-Daniel, 1991**

Chaetostoma jegui Rapp Py-Daniel, 1991: 240, fig. 2 (middle).
 Type locality: Brazil: Federal Territory of Roraima: Rio Urari-
 coera, Maracá Island, rocks above Furo Maracá, 3°21'N
 61°26'W. Holotype: INPA 2822.
 Maximum length: 16.8 cm SL
 Distribution: South America: Uraricoera and Tacutu River basins
 in the Branco River drainage.
 Countries: Brazil
 Remarks and references: Geographical distribution discussed by
 Lasso and Provenzano (1998: 62).

***Chaetostoma lepturum* Regan, 1912**

Chaetostomus lepturus Regan, 1912: 667, pl. 75 (fig. 1). Type
 locality: Rio Tamana, Rio San Juan, Choco, S. W. Colombia.
 Syntypes: BMNH 1910.7.11.116-118 (3).
 Maximum length: 21.5 cm SL
 Distribution: South America: Upper San Juan River basin.
 Countries: Colombia
 Remarks and references: See Eigenmann (1922: 86, pl. 12 fig. 7)
 for a complementary description of species.

***Chaetostoma leucomelas* Eigenmann, 1918**

Chaetostomus leucomelas Eigenmann, 1918: 681. Type locality:
 Rio Patia, halfway between the Rios Magui and Telembi [Co-
 lombia]. Holotype: CAS 60167 [ex IU 13652, largest specimen].
 Maximum length: 14.3 cm TL
 Distribution: South America: Patia and upper Cauca River basins.
 Countries: Colombia
 Remarks and references: See redescription of types and illustra-
 tions by Eigenmann (1922: 84, pl. 12, figs. 5-6); Note on buccal
 papillae of type material by Rapp Py-Daniel (1991: 244).
 Common names: Corroncho (Colombia)

***Chaetostoma lineopunctatum* Eigenmann & Allen,**

1942

Chaetostoma lineopunctata Eigenmann & Allen, 1942: 192, pl. 6 (fig. 1). Type locality: Río Azupizú [Río Pachitea drainage, Upper Amazon system, Peru]. Holotype: CAS 64650 [ex IU 15373]. Maximum length: 14.3 cm SL
Distribution: South America: Aguaytia, Pachitea and Pisqui River basins in the Ucayali River drainage.
Countries: Peru
Remarks and references: Note on buccal papillae of the holotype by Rapp Py-Daniel (1991: 244).
Common names: Carachama (Peru)

***Chaetostoma lobarhynchos* Tschudi, 1846**

Chaetostoma lobarhynchos Tschudi, 1846: 26, pl. 4. Type locality: dem Río Tullumayo in der Montaña de Vitoc, am Ostabhang der Anden; Peru. Holotype: NMW 47190.
Maximum length: 13.7 cm TL
Distribution: South America: Tambo River basin in the Ucayali River drainage.
Countries: Peru

***Chaetostoma machiquense* Fernández-Yépez & Martín S., 1953**

Chaetostoma machiquense Fernández-Yépez & Martín S., 1953: 238, fig. on p. 239. Type locality: Río Negro, a 16 kms. Oeste de Machiques; Perijá; Hoya del Lago de Maracaibo, Edo. Zulia, Venezuela. Holotype: MHNLS 1558 [not MHNLS 46, ex AFY 50145].
Maximum length: 6.6 cm SL
Distribution: South America: Negro River basin in the Lake Maracaibo drainage.
Countries: Venezuela
Remarks and references: Diagnostic characters in Ceas & Page (1996: 674).
Common names: Corroncho (Venezuela)

***Chaetostoma marcapatae* Regan, 1904**

Chaetostomus marcapatae Regan, 1904: 246, pl. 14 (fig. 1). Type locality: Marcapata Valley, E. Peru. Holotype: BMNH 1902.5.29.211.
Maximum length: 10 cm TL
Distribution: South America: Inambari River basin in the Madeira River drainage.
Countries: Peru
Remarks and references: Known only from the holotype.
Common names: Carachama (Peru)

***Chaetostoma marginatum* Regan, 1904**

Chaetostomus marginatus Regan, 1904: 249, pl. 13 (fig. 1). Type locality: Salidero, N.W. Ecuador [= Ecuador: Esmeraldas: río Bogota, near Bulún (= Pulún), alt. 50-110m alt., ca. 01°05'N 78°40'W]. Syntypes: (3); BMNH 1902.5.27.44 (1) (Eschmeyer 1998: 1019).
Maximum length: 19 cm TL
Distribution: South America: Bogota, Chimbo and San Juan River basins.
Countries: Colombia, Ecuador
Remarks and references: Localization of the type locality in Paynter (1993: 177); see complementary description by Eigenmann (1922: 84) and by Barriga (1989: 25).
Common names: Guanã (Ecuador), Raspabalsa (Ecuador)

***Chaetostoma marmorescens* Eigenmann & Allen, 1942**

Chaetostoma marmorescens Eigenmann & Allen, 1942: 193. Type locality: Huanacachupa Creek, near Huánuco, elevation 6000 feet. [in ichthyological gazetteer part, p.73] A small tumultuous stream from the eastern slope of the Central Cordillera to the Huallaga, a league above Huánuco [Peru]. Holotype: IU 15403

(largest specimen) not found at CAS (Eschmeyer 1998: 1029).
Maximum length: 13.5 cm SL
Distribution: South America: Upper Huallaga River basin in Marañón River drainage.
Countries: Peru

***Chaetostoma microps* Günther, 1864**

Chaetostomus microps Günther, 1864: 250. Type locality: Andes of Western Ecuador. Syntypes: BMNH 1860.6.16.137-143 (7).
Maximum length: 8.9 cm TL
Distribution: South America: Andes of western Ecuador.
Countries: Ecuador, Peru (?)
Remarks and references: See Regan (1904: 251, pl. 14 fig. 3) for a redescription of syntypes with illustration.
Common names: Raspabalsa (Ecuador)

***Chaetostoma milesi* Fowler, 1941**

Chaetostomus milesi Fowler, 1941b: 2, fig. 3. Type locality: Honda, Colombia. Holotype: ANSP 69330.
Maximum length: 13 cm SL
Distribution: South America: Magdalena and Apuré River basins.
Countries: Colombia, Venezuela
Remarks and references: Diagnostic characters based on the examination of several specimens including the holotype in Ceas & Page (1996: 674).
Common names: Corroncho (Colombia, Venezuela)

***Chaetostoma mollinasum* Pearson, 1937**

Chaetostomus mollinasus Pearson, 1937: 96, pl. 13 (fig. 1). Type locality: Balsas, 3500 feet, and Cajamarca, 9843 feet, Peru. Syntypes: CAS 64653 (8) [ex IU 17654], 64654 (5) [ex IU 17655].
Maximum length: 6.8 cm SL
Distribution: South America: Marañón and Cajamarca River basins.
Countries: Peru
Remarks and references: Note on buccal papillae of type material by Rapp Py-Daniel (1991: 244).
Common names: Carachama (Peru)

***Chaetostoma niveum* Fowler, 1944**

Chaetostoma niveum Fowler, 1944: 238, fig. 15. Type locality: clear waters of Río Jurubidá, Nuquí; northwestern Colombia. Holotype: ANSP 71432.
Maximum length: 9.1 cm SL
Distribution: South America: Jurubida River basin.
Countries: Colombia

***Chaetostoma nudirostre* Lütken, 1874**

Chaetostomus nudirostris Lütken, 1874: 207. Type locality: Valencia (Venezuela). Holotype: ZMUC 71.
Maximum length: 12.6 cm TL
Distribution: South America: Lake Valencia basin.
Countries: Venezuela
Remarks and references: Redescription and illustrations of the holotype by Steindachner (1881: 120, pl. 5 figs. 2, 2a); diagnostic characters in Ceas & Page (1996: 674).
Common names: Corroncho (Venezuela)

***Chaetostoma palmeri* Regan, 1912**

Chaetostomus palmeri Regan, 1912: 667, pl. 75 (fig. 3). Type locality: Río Tamana, Río San Juan, Choco, S. W. Colombia. Syntypes: BMNH 1910.7.11.120-121 (2).
Maximum length: 9.5 cm TL
Distribution: South America: Tamana River basin in the San Juan River drainage.
Countries: Colombia
Remarks and references: Considered as a synonym of *Chaetostomus fischeri* Steindachner, 1879, by Eigenmann (1922: 82).

***Chaetostoma patiae* Fowler, 1945**

- Chaetostoma patiae* Fowler, 1945a: 118, fig. 28. Type locality: Rio Patia, at 3000 feet elevation, Pacific slope of southwestern Colombia. Holotype: ANSP 71716.
Maximum length: 15.8 cm SL
Distribution: South America: Patia River basin.
Countries: Colombia
- Chaetostoma paucispinis* Regan, 1912**
Chaetostomus paucispinis Regan, 1912: 667, pl. 75 (fig. 2). Type locality: Tado, Rio San Juan, Choco, Colombia. Holotype: BMNH 1910.7.11.119.
Maximum length: 9 cm TL
Distribution: South America: San Juan River basin.
Countries: Colombia
Remarks and references: Possible synonym of *Chaetostomus fischeri* Steindachner, 1879 (see Eigenmann 1922: 82).
- Chaetostoma pearsei* Eigenmann, 1920**
Chaetostomus pearsei Eigenmann, 1920a: 8, pl. 2. Type locality: Rio Castaño [Lago de Valencia basin] at Maracay, under rocks, Venezuela. Holotype: CAS 64655 [ex IU 15077].
Maximum length: 15 cm TL
Distribution: South America: Lake Valencia and Tuy River basins.
Countries: Venezuela
Remarks and references: Note on buccal papillae of the holotype by Rapp Py-Daniel (1991: 244); diagnostic characters based on the examination of several specimens including the holotype by Ceas & Page (1996: 674).
Common names: Corroncho (Venezuela)
- Chaetostoma sericeum* Cope, 1872**
Chaetostomus sericeus Cope, 1872: 288. Type locality: The Ambiacu river [=Ampiyacu River], which empties into the Amazon near to Pebas, in Eastern Ecuador, some distance east of the Napo [Peru]. Lectotype: ANSP 22005, designated by Fowler (1915: 234).
Maximum length: 5 cm SL
Distribution: South America: Ampiyacu River basin.
Countries: Peru
Common names: Carachama (Peru)
- Chaetostoma sovichthys* Schultz, 1944**
Chaetostoma anomala sovichthys Schultz, 1944a: 292, pl. 8 (fig. B). Type locality: near the bridge over the Río San Pedro, a tributary of the Río Motatán, southeast of Mene Grande, in the Maracaibo basin; Venezuela. Holotype: USNM 121053.
Maximum length: 7.2 cm SL
Distribution: South America: Lake Maracaibo, Motatán River and tributaries.
Countries: Venezuela
Remarks and references: Raised to species level by Isbrücker (1980: 1963); diagnostic characters based on the examination of type material in Ceas & Page (1996: 674, as a subspecies of *Chaetostoma anomalum*).
Common names: Corroncho (Venezuela)
- Chaetostoma stannii* Lütken, 1874**
Chaetostomus Stannii Lütken, 1874: 206. Type locality: Puerto Cabello [Venezuela]. Holotype: ZMUC 72.
Maximum length: 20.5 cm TL
Distribution: South America: Caribbean coastal drainages of Venezuela: Aroa, Tocuyo, Urama and Yaracuy River basins.
Countries: Venezuela
Remarks and references: Redescription and illustrations of the holotype by Steindachner (1881: 120, pl. 5 fig. 4, 4a); diagnostic characters, with illustration and remarks on habitat in Ceas & Page (1996: 673, 674, fig. 2, bottom); see Page et al. (1993) for biological observations and description of larvae.
Common names: Corroncho (Venezuela)
- Chaetostoma tachiraense* Schultz, 1944**
Chaetostoma tachiraensis Schultz, 1944a: 288, pl. 7 (fig. C). Type locality: Río Táchira, 7 km. north of San Antonio, Estado de Táchira, Venezuela; the Río Táchira is a tributary of the Río Zulia, Catatumbo system, Maracaibo basin. Holotype: USNM 121052.
Maximum length: 8.7 cm SL
Distribution: South America: Catatumbo River basin in the Lake Maracaibo drainage (up to altitudes between 1,000 and 2,000 m above sea level).
Countries: Colombia, Venezuela
Remarks and references: See diagnostic characters based on the examination of type material in Ceas & Page (1996: 674).
Common names: Chorrosco (Venezuela); Corroncho (Colombia and Venezuela); Panche (Venezuela)
- Chaetostoma taczanowskii* Steindachner, 1882**
Chaetostomus Taczanowskii Steindachner, 1882a: 177. Type locality: Rio de Tortora [Peru: Amazon: Upper rio Huambo basin, Río de la Tortora, 06°26' S 77°18' W]. Species illustrated and described in more detail in Steindachner (1882b: 23, pl.5, figs. 2-2a). Syntypes: (several) NMW 47219(2) (Eschmeyer, 1998: 1640). Number of specimens not indicated in the original description. Subsequent description based on two specimens from Rio Huambo (not types) and one from Rio de Tortora, which was considered to be the holotype by Isbrücker (1980: 64).
Maximum length: 17 cm TL
Distribution: South America: Huallaga and Urubamba River basins.
Countries: Peru
Remarks and references: See redescription with geographical distribution by Eigenmann & Allen (1942: 192); localization of the type locality in Stephens and Traylor (1983: 221).
Common names: Carachama (Peru)
- Chaetostoma thomsoni* Regan, 1904**
Chaetostomus thomsoni Regan, 1904: 250, pl. 14 (fig. 2). Type locality: Villeta [Rio Negro basin, Magdalena basin], Colombia. Syntypes: BMNH 1902.5.15.28-30 (3).
Maximum length: 10.1 cm TL
Distribution: South America: Magdalena River basin.
Countries: Colombia
Remarks and references: See Eigenmann (1922: 85, pl. 12 fig. 4) for a complementary description.
- Chaetostoma vagum* Fowler, 1943**
Chaetostomus vagus Fowler, 1943: 258, figs. 52-55. Type locality: Florencia, Rio Orteguala [=Orteguala], Colombia. Holotype: ANSP 70521.
Maximum length: 9.9 cm SL
Distribution: South America: Orteguala River basin in the upper Japurá River drainage.
Countries: Colombia
- Chaetostoma vasquezzi* Lasso & Provenzano, 1998**
Chaetostoma vasquezzi Lasso & Provenzano, 1998: 55, fig. 1B. Type locality: Raudales del Caño El Cambur, afluyente del Río Caura, 20 km al suroeste del puente del mismo río, Estado Bolívar, Venezuela. Holotype: MHNLS 8791.
Maximum length: 18.7 cm SL
Distribution: South America: Orinoco, Caura and Caroni River basins.
Countries: Venezuela
- Chaetostoma venezuelae* (Schultz, 1944)**
Corymbophanes venezuelae Schultz, 1944b: 41, pl. 1 (fig. 1). Type locality: Río Caripe, Caripito, Venezuela. Holotype: USNM 120752.
Maximum length: 7.3 cm SL

Distribution: South America: San Juan River basin.

Countries: Venezuela

Remarks and references: New combination by Isbrücker (1980: 65); diagnostic characters based on the examination of type material in Ceas & Page (1996: 674).

***Chaetostoma yurubiense* Ceas & Page, 1996**

Chaetostoma yurubiense Ceas & Page, 1996: 672, fig. 2 (top).

Type locality: Río Mayorica (Río Yaracuy system) at Hwy 3, 9 km N Albarico near the town of Mayorica, State of Lara, Venezuela (10°25'43"N, 68°40'47"W). Holotype: INHS 34942.

Maximum length: 5.1 cm SL

Distribution: South America: Yaracuy, Urama, and Aroa River basins.

Countries: Venezuela

CORDYLANCISTRUS

Cordylancistrus Isbrücker, 1980: 48. Type species: *Pseudancistrus torbesensis* Schultz, 1944. Type by original designation. Gender: masculine. See diagnosis based on osteological characters in Schaefer (1986: 103).

***Cordylancistrus daguae* (Eigenmann, 1912)**

Hemiancistrus daguae Eigenmann, 1912a: 11. Type locality: Caldas, Colombia. Holotype: FMNH 56052 [ex CM 4842].

Maximum length: 9.5 cm TL

Distribution: South America: Dagua River basin.

Countries: Colombia

Remarks and references: See complementary description with illustrations of the holotype by Eigenmann (1922: 78, pl. 12 figs. 1-2); new combination by Isbrücker (2001: 26).

Common names: Corroncho (Colombia)

***Cordylancistrus perijae* Perez & Provenzano, 1996**

Cordylancistrus perijae Perez & Provenzano, 1996: 29, fig. 2 (top). Type locality: Venezuela, Zulia State, Maracaibo basin, Sierra de Perijá, Caño Colorado, tributary to the Palmar River, 100 meters from dam site (under construction), approx. 10°37'12"N 72°25'34"W; elevation 150 m. Holotype: MBLUZ 4413.

Maximum length: 12 cm SL

Distribution: South America: Palmar and Socuy River basins in the Lake Maracaibo drainage.

Countries: Venezuela

***Cordylancistrus platycephalus* (Boulenger, 1898)**

Chaetostomus platycephalus Boulenger, 1898b: 12. Type locality: Río Bomboiza [Zamora basin, Santiago tributary], Equateur oriental. Syntypes: BMNH 1898.11.4.42 (1); MZUT 1551 (1) (Eschmeyer 1998: 1349).

Maximum length: 14.5 cm TL

Distribution: South America: Zamora River basin in upper Marañón River drainage.

Countries: Ecuador

Remarks and references: New combination proposed here based on the original description of species; see Regan (1904: 235, pl. 12 fig. 4) for a complementary description.

Common names: Carachama (Ecuador)

***Cordylancistrus platyrhynchus* (Fowler, 1943)**

Hemiancistrus platyrhynchus Fowler, 1943: 252, fig. 37. Type locality: Florencia; Río Orteguala [=Orteguaza] basin in the district of Caquetá, Colombia. Holotype: ANSP 70512.

Maximum length: 9.5 cm TL

Distribution: South America: Upper Caquetá River basin in upper Japurá River drainage.

Countries: Colombia

Remarks and references: New combination by Isbrücker (2001: 26).

***Cordylancistrus torbesensis* (Schultz, 1944)**

Pseudancistrus torbesensis Schultz, 1944a: 296, pl. 8 (fig. C).

Type locality: 1 km. above Táriba in the Río Torbes [Uribante tributary, Apuré basin], Orinoco system, Venezuela. Holotype: USNM 121001.

Maximum length: 6.5 cm SL

Distribution: South America: Torbes River basin in Apuré River drainage.

Countries: Venezuela

Remarks and references: New combination with genus description by Isbrücker (1980: 48); compared to *Cordylancistrus perijae* in Pérez and Provenzano (1996) with a discussion on geographic distribution.

Common names: Corroncho, Panche (Venezuela)

DEKEYSERIA

Dekeyseria Rapp Py-Daniel, 1985: 178. Type species: *Dekeyseria amazonica* Rapp Py-Daniel, 1985. Type by original designation.

Gender: feminine.

Zonancistrus Isbrücker in Isbrücker et al., 2001: 23. Type species: *Ancistrus brachyurus* Kner, 1854. Type by original designation.

Gender: masculine. Based on the examination of a large material, characters indicated as diagnostic are estimated insufficient to define a genus, which is here synonymized.

***Dekeyseria amazonica* Rapp Py-Daniel, 1985**

Dekeyseria amazonica Rapp Py-Daniel, 1985: 180, fig. 2. Type locality: Complexo do Janaucá, Rio Solimões, Amazonas, Brasil. Holotype: INPA 104.4.

Maximum length: 17.8 cm SL

Distribution: South America: Mainly Solimões River basin, also middle and lower Amazon River basin.

Countries: Brazil

***Dekeyseria brachyura* (Kner, 1854)**

Ancistrus brachyurus Kner, 1854: 279, pl. 4 (fig. 1). Type locality: Barra do Rio negro [=Manaus, Brazil]. Holotype: NMW 47268. Originally as *Anc. brachyurus*.

Maximum length: 16 cm TL

Distribution: South America: Lower Negro River basin.

Countries: Brazil

Remarks and references: New combination by Rapp Py-Daniel (1985: 180); see van der Stigchel (1946: 150) for a redescription.

***Dekeyseria niveata* (La Monte, 1929)**

Plecostomus niveatus La Monte, 1929: 3, fig. 2. Type locality: Caño Pescado; about five miles north of Esmeralda, at an elevation of 325 feet, Upper Orinoco drainage, Venezuela. Holotype: AMNH 9601 [not 9061 (Eschmeyer 1998: 1191)].

Maximum length: 13 cm SL

Distribution: South America: Upper Orinoco River basin.

Countries: Venezuela

Remarks and references: New combination by Isbrücker (2001: 26).

***Dekeyseria picta* (Kner, 1854)**

Ancistrus pictus Kner, 1854: 277, pl. 4 (fig. 2). Type locality: Barra do Rio negro [=Manaus, Brazil]. Syntypes: NMW 47200 (2), 47201 (1), 47202 (1) (Eschmeyer 1998: 1336). Originally as *Anc. pictus*.

Maximum length: 14 cm TL

Distribution: South America: Lower Negro River basin.

Countries: Brazil

Remarks and references: New combination by Rapp Py-Daniel (1985: 180); possible synonym of *Dekeyseria brachyura*.

***Dekeyseria pulcher* (Steindachner, 1915)**

Aneistrus (Hemiancistrus) pulcher Steindachner, 1915a: 219. Type locality: Rio Negro bei Moura [Brazil, 1°32'S, 61°38'W in

Isbrücker (1980: 56)]. Holotype: NMW.
 Maximum length: 10 cm SL
 Distribution: South America: Upper Negro and Orinoco rivers and Canal Casiquiare basin.
 Countries: Brazil, Colombia, Venezuela
 Remarks and references: New combination by Rapp Py-Daniel (1985: 180); see Steindachner (1917: 89, pl. 11, figs. 1-2) for a detailed description.
 Common names: Brazil-butterfly (English), Corroncho (Venezuela)

***Dekeyseria scaphirhyncha* (Kner, 1854)**

Ancistrus scaphirhynchus Kner, 1854: 280, pl. 3 (fig. 2). Type locality: Barra do Rio negro [Manaus, Brazil]. Syntypes: NMW 47207-10 (Eschmeyer 1998: 1513). Originally as *Anc. scaphirhynchus*.

Maximum length: 21 cm SL
 Distribution: South America: Negro River basin.
 Countries: Brazil
 Remarks and references: New combination and redescription by Rapp Py-Daniel (1985: 181, figs.), with comparison to *Dekeyseria amazonica* and geographic distribution.

DOLICHANCISTRUS

Dolichancistrus Isbrücker, 1980: 47. Type species: *Pseudancistrus pediculatus* Eigenmann, 1918. Type by original designation. Gender: masculine. See diagnosis based on osteological characters in Schaefer (1986: 103).

***Dolichancistrus atratoensis* (Dahl, 1960)**

Pseudancistrus atratoensis Dahl, 1960: 455, fig. on p. 456. Type locality: Quebrada La Noche, tributary to the upper Atrato, approximate height above sea level 550 m; western Colombia. Holotype: ICNMHN 51.

Maximum length: 8.2 cm SL
 Distribution: South America: Upper Atrato River basin.
 Countries: Colombia
 Remarks and references: New combination by Isbrücker (1980: 47).
 Common names: Cacucho (local)

***Dolichancistrus carnegiei* (Eigenmann, 1916)**

Pseudancistrus carnegiei Eigenmann, 1916: 85. Type locality: Río San Gil, Santander, Colombia. Holotype: FMNH 58350 [ex CM 7346].

Maximum length: 17 cm TL
 Distribution: South America: Magdalena River basin.
 Countries: Colombia
 Remarks and references: See complementary description with illustration of the holotype by Eigenmann (1922: 79, pl. 10 fig. 3); new combination by Isbrücker (2001: 26).
 Common names: Barbón (Colombia), Roncho (Colombia)

***Dolichancistrus cobrensis* (Schultz, 1944)**

Pseudancistrus pediculatus cobrensis Schultz, 1944a: 299, pl. 9 (fig. B). Type locality: Río Cobre, tributary to Río Quinta, latter tributary to Río La Grita, below La Grita, Catatumbo system, Maracaibo basin, Venezuela. Holotype: USNM 121036.

Maximum length: 7.9 cm SL
 Distribution: South America: Catatumbo River basin in Lake Maracaibo drainage.
 Countries: Venezuela
 Remarks and references: New combination by Isbrücker (1980: 48).
 Common names: Corroncho, Panche (Venezuela)

***Dolichancistrus fuesslii* (Steindachner, 1911)**

Ancistrus fuesslii Steindachner, 1911a: 373. Type locality: Sosomoco, Ostkolumbien, in 800 m Höhe. Holotype: NMW 48026.

Maximum length: 13.1 cm TL
 Distribution: South America: Western Colombia (?).
 Countries: Colombia
 Remarks and references: New combination by Isbrücker (2001: 27); known only from the holotype.

***Dolichancistrus pediculatus* (Eigenmann, 1918)**

Pseudancistrus pediculatus Eigenmann, 1918: 679. Type locality: Río Negro at Villavicencio, Colombia. Holotype: FMNH 58352 [ex CM 7348].

Maximum length: 12 cm TL
 Distribution: South America: Upper Meta River basin.
 Countries: Colombia
 Remarks and references: Complementary description by Eigenmann (1922: 78, 224, fig. 17, pl. 10 fig. 4, pl. 12 fig. 3); new combination with genus description by Isbrücker (1980: 47).

***Dolichancistrus setosus* (Boulenger, 1887)**

Chaetostomus setosus Boulenger, 1887b: 349. Type locality: Andes of Columbia [Colombia]. Syntypes: BMNH 1880.2.26.9-10 (2).

Maximum length: 12 cm TL
 Distribution: South America: Andes of Colombia, river basin unknown.
 Countries: Colombia
 Remarks and references: New combination by Isbrücker (2001: 27); see Regan (1904: 239, pl. 12 fig. 2) for a complementary description based on syntypes.

EXASTILITHOXUS

Exastilithoxus Isbrücker & Nijssen in Isbrücker, 1979: 91. Type species: *Pseudacanthicus fimbriatus* Steindachner, 1915. Type by original designation. Gender: masculine. See diagnosis based on osteological characters in Schaefer (1986: 103).

***Exastilithoxus fimbriatus* (Steindachner, 1915)**

Pseudacanthicus (Lithoxus) fimbriatus Steindachner, 1915c: 201. Type locality: Coquenanfluss [=Kukenan River, also Coquenan, Caroni basin, Venezuela]. Holotype: NMW 44418. Species illustrated and described in more detail in Steindachner (1917: 92, pl. 10, figs. 1-3).

Maximum length: 6 cm SL
 Distribution: South America: Caroni and Matacuni River basins in the Orinoco drainage.
 Countries: Venezuela
 Remarks and references: For complementary descriptions see Isbrücker & Nijssen (1985), with illustrations of the holotype and comparison to *Exastilithoxus hoedemani*, and Lasso (1990: 242, fig. 33); additional collection localities in Provenzano et al. (1995).

***Exastilithoxus hoedemani* Isbrücker & Nijssen, 1985**

Exastilithoxus hoedemani Isbrücker & Nijssen, 1985: 227, fig. 3 (middle). Type locality: Brazil, Est. Amazonas, Rio Marauíá, foot of the Sierra Neblina, Cachoeira "Pora Comeschie", Rio Negro basin. Holotype: INPA 506.

Maximum length: 5.1 cm SL
 Distribution: South America: Maurauíá River in the upper Negro River drainage.
 Countries: Brazil

GUYANANCISTRUS

Guyanancistrus Isbrücker in Isbrücker et al., 2001: 19. Type species: *Lasiancistrus brevispinis* Heitmans, Nijssen & Isbrücker, 1983. Type by original description. Gender: masculine. No unique character indicated in original description, but a comparative diagnosis to *Lasiancistrus* (see text under that genus); monophyly of the genus not shown.

***Guyanancistrus brevispinis* (Heitmans, Nijssen & Isbrücker, 1983)**

Lasiancistrus brevispinis Heitmans, Nijssen & Isbrücker, 1983: 38, fig. 4 (middle). Type locality: Surinam, Nickerie River system, district Nickerie, Fallawatra River, rapid 5 km S. W. of Stondansie Fall. Holotype: ZMA 107.740.

Maximum length: 14.2 cm SL

Distribution: South America: Atlantic coastal drainages of the Guianas, from Nickerie to Oyapock River basins.

Countries: French Guiana, Suriname

Remarks and references: New combination by Isbrücker in Isbrücker et al. (2001: 19); see Le Bail et al. (2000: 236, fig.) for complementary description with biological observations and geographical distribution; 12S and 16S mitochondrial rRNA gene sequences used in a molecular phylogeny of Loricariidae by Montoya-Burgos et al. (1998: figs. 3,4,6 as *Lasiancistrus niger*).

Common names: Aoutombo (Galibi Amerindian), Djaka (Boni Amerindian), Gangou (Boni Amerindian)

***Guyanancistrus longispinis* (Heitmans, Nijssen & Isbrücker, 1983)**

Lasiancistrus longispinis Heitmans, Nijssen & Isbrücker, 1983: 45, fig. 8 (middle). Type locality: French Guiana, Oyapock River system: Camopi River at Pauwé Jean-Jean, upstream of Saut Mauvais (03°11'N 52°22'W). Holotype: IRSNB 612.

Maximum length: 10.4 cm SL

Distribution: South America: Oyapock River basin.

Countries: French Guiana

Remarks and references: New combination by Isbrücker in Isbrücker et al. (2001: 19); see Le Bail et al. (2000: 238, fig.) for complementary description with biological observations and geographical distribution.

***Guyanancistrus niger* (Norman, 1926)**

Hemiancistrus niger Norman, 1926: 96. Type locality: Oyapock River at "Sant" Cafesoca [=Saut Cafesoca], French Guiana. Lectotype: BMNH 1926: 3.2.756, designated by Heitmans et al. (1983: 35).

Maximum length: 15.9 cm SL

Distribution: South America: Oyapock River basin.

Countries: French Guiana

Remarks and references: New combination by Isbrücker in Isbrücker et al. (2001: 19); see complementary descriptions by Heitmans et al. (1983: 35, figs. 2-3), including type specimens, and by Le Bail et al. (2000: 240, fig.), with biological observations and geographical distribution.

***Guyanancistrus schomburgkii* (Günther, 1864)**

Chaetostomus schomburgkii Günther, 1864: 245. Type locality: British Guiana [Essequibo River?]. Syntypes: BMNH 1845.3.5.26-27 (2).

Maximum length: 7.5 cm TL

Distribution: South America: Atlantic coastal drainage, unknown locality in Guyana.

Countries: Guyana

Remarks and references: New combination by Isbrücker in Isbrücker et al. (2001: 19); see complementary description by Regan (1904: 233) which is based on syntypes (apparently the only specimens known).

***Guyanancistrus trinitatis* (Günther, 1864)**

Chaetostomus trinitatis Günther, 1864: 246. Type locality: Trinidad. Syntypes: lost.

Maximum length: 127 cm TL

Distribution: South America: Trinidad Island.

Countries: Trinidad and Tobago

Remarks and references: New combination by Isbrücker in Isbrücker et al. (2001: 19); description of future type material by Gill (1858: 409) as *Ancistrus guacharote*, but no other redescription;

information on type material and questions about validity of species in Regan (1904: footnote on p. 238; 1906: 95).

Common names: Tata (Trinidad)

HEMIANCISTRUS

Hemiancistrus Bleeker, 1862: 2. Type species: *Ancistrus medians* Kner, 1854. Type by original designation. Gender: masculine. Genus in need of a revision; no skeletal autapomorphies found by Schaefer (1986: 105); polyphyletic on the base of mitochondrial D-loop sequences (Montoya-Burgos et al., 2002: 379, fig. 2).

***Hemiancistrus annectens* (Regan, 1904)**

Ancistrus annectens Regan, 1904: 225, pl. 11 (fig. 2). Type locality: St. Javier [San Javier de Cachavi] and the Rio Durango [tributary of Rio Bogotá], N. W. Ecuador. Syntypes: (2) BMNH 1902.5.27.49 (Eschmeyer 1998: 107).

Maximum length: 28 cm TL

Distribution: South America: Pacific coastal rivers of NW Ecuador (Cayapas basin) and of SW Colombia (Patia basin).

Countries: Colombia, Ecuador

Remarks and references: New combination by Eigenmann (1910: 408); complementary description based on Colombian material in Eigenmann (1922: 73, pl. 9 figs 1-2).

Common names: Raspabalsa (Ecuador)

***Hemiancistrus aspidolepis* (Günther, 1867)**

Chaetostomus aspidolepis Günther, 1867: 603. Type locality: Veragua [probably Veraguas province]; Panama. Holotype: BMNH 1866.11.5.1 (skin).

Plecostomus plecostomus panamensis Eigenmann, 1922: 69. Type locality: the Rio Gatun [...] at Monte Liria and at Gatun, Panama. Syntypes: probably in FMNH, collected by Meek & Hildebrand at type localities. *Chaetostomus aspidolepis* first considered synonymous with *Plecostomus plecostomus panamensis* by Hildebrand (1938: 238); priority of *Hemiancistrus aspidolepis* emphasized by Isbrücker (2001: 31).

Maximum length: 40 cm SL

Distribution: Central America: Gatun River basin in Caribbean coastal drainage.

Countries: Panama

Remarks and references: New combination by Eigenmann (1910: 408); complementary description of the holotype in Günther (1968c: 477) and in Regan (1904: 230); known only from holotype.

Common names: Arrisuaca (Panama)

***Hemiancistrus chlorostictus* Cardoso & Malabarba, 1999**

Hemiancistrus chlorostictus Cardoso & Malabarba, 1999: 144, fig. 3. Type locality: Passo Fundo dam, Gerasul UHPF, Ronda Alta, Rio Grande do Sul, Brazil (approximately 27°40'09"S, 52°45'25"W). Holotype: MCP 21153.

Maximum length: 14.7 cm SL

Distribution: South America: Upper Uruguay River basin, Passo Fundo dam.

Countries: Brazil

Remarks and references: Known only from the type locality; mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002: 379, fig. 2; EMBL/GenBank AJ318350).

Common names: Cascudo (Brazil)

***Hemiancistrus fugleri* Ovchynnyk, 1971**

Hemiancistrus fugleri Ovchynnyk, 1971: 108, fig. 13. Type locality: Ecuador. Province Esmeraldas, Rio Bogota, Parroquia Candondelet [=Carondelet] (78°45' west longitude. 1°6' north latitude). Holotype: MSUM 5133.

Maximum length: 9.1 cm SL

Distribution: South America: Cayapas River basin.

Check List of the Freshwater Fishes of South and Central America

Countries: Ecuador

Remarks and references: Known only from holotype.

Common names: Raspabalsa (Ecuador)

***Hemiancistrus fuliginosus* Cardoso & Malabarba, 1999**

Hemiancistrus fuliginosus Cardoso & Malabarba, 1999: 148, fig. 6. Type locality: rio Jacutinga, road Seara-Concórdia (BR283), Concórdia, Santa Catarina, Brazil (approx. 27°10'S, 52°09'W). Holotype: MCP 21155.

Maximum length: 16.2 cm SL

Distribution: South America: Upper and middle Uruguay River basin.

Countries: Brazil

Remarks and references: Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002: 379, fig. 2; EMBL/GenBank AJ318359).

Common names: Cascudo (Brazil)

***Hemiancistrus hammarlundi* Rendahl, 1937**

Hemiancistrus hammarlundi Rendahl, 1937: 2, fig. 1 (up). Type locality: Ecuador, Syst. Rio de Clementina [= Rio Pozuelos] nw. von Babahoyo. Holotype: NRM 10370.

Maximum length: 7.4 cm SL

Distribution: South America: Guayas River basin.

Countries: Ecuador

Remarks and references: 12S and 16S mitochondrial rRNA gene sequences used in a molecular phylogeny of Loricariidae by Montoya-Burgos et al. (1998: figs. 3, 4, 6; EMBL/GenBank Y08284, Y08332).

Common names: Raspabalsa (Ecuador)

***Hemiancistrus holostictus* Regan, 1913**

Hemiancistrus holostictus Regan, 1913: 469. Type locality: the Condoto, a tributary of the San Juan, a river of the Pacific slope in S. W. Colombia. Holotype: BMNH 1913.10.1.57.

Maximum length: 18 cm TL

Distribution: South America: San Juan River basin.

Countries: Colombia

Remarks and references: Redescribed by Eigenmann (1922: 73, pl. 9 fig. 4).

***Hemiancistrus landoni* Eigenmann, 1916**

Hemiancistrus landoni Eigenmann, 1916: 84. Type locality: Naranjito [Chimbo tributary, Babahoyo basin], Ecuador. Holotype: CAS 59939 [ex IU 13654].

Maximum length: 25 cm TL

Distribution: South America: Guayas River basin.

Countries: Ecuador

Remarks and references: Complementary description of the holotype by Eigenmann (1922: 72, pl. 9 fig. 3, pl. 10 fig. 2).

Common names: Raspabalsa (Ecuador)

***Hemiancistrus macrops* (Lütken, 1874)**

Chaetostomus macrops Lütken, 1874: 209. Type locality: Surinam. Holotype: ZMUC 74.

Maximum length: 9.4 cm SL

Distribution: South America: Suriname (?).

Countries: Suriname

Remarks and references: Complementary description of the holotype in Steindachner (1881: 124, pl. 5 figs. 3-3a); revalidation of species long considered synonym of *Hemiancistrus megacephalus* by Isbrücker (1980: 50).

***Hemiancistrus maracaiboensis* Schultz, 1944**

Hemiancistrus maracaiboensis Schultz, 1944a: 317, pl. 10 (fig. C). Type locality: near the mouth of the Río Concha in Lago Maracaibo; Venezuela. Holotype: USNM 121012.

Maximum length: 28.5 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

***Hemiancistrus medians* (Kner, 1854)**

Ancistrus medians Kner, 1854: 256. Type locality: No locality [restricted to Rivière Marouini, Maroni system, French Guiana by Isbrücker 1992]. Holotype: lost. Originally as *Anc. medians*.

Maximum length: 39 cm TL

Distribution: South America: Maroni River basin.

Countries: French Guiana, Suriname

Remarks and references: New combination with type species designation by Bleeker (1862: 2); information on the holotype and type locality in Isbrücker (1992); complementary descriptions in Günther (1864: 242) and in Regan (1904: 229); recent material redescribed with ecological observations in Le Bail et al. (2000: 234, fig.). Mitochondrial D-loop sequences used in a molecular phylogeny of *Hypostomus* and related genera by Montoya-Burgos et al. (2002: 379 fig. 2; EMBL/GenBank AJ318368).

Common names: Gangou (Boni Amerindian), Goré-djab (Creole), Mili (Wayana Amerindian), Yani an (Oyampi Amerindian)

***Hemiancistrus megacephalus* (Günther, 1868)**

Chaetostomus megacephalus Günther, 1868a: 476. Type locality: Surinam [probably from Surinam in Günther, 1868b: 232]. Holotype: BMNH 1978.9.12.3.

Maximum length: 12.3 cm SL

Distribution: South America: Atlantic coastal drainage of Suriname, precise locality unknown, and of Guyana, Essequibo basin.

Countries: Guyana, Suriname

Remarks and references: New combination by Eigenmann and Eigenmann (1889: 408); see Regan (1904: 234) and Eigenmann (1912b: 231) for complementary descriptions.

***Hemiancistrus punctulatus* Cardoso & Malabarba, 1999**

Hemiancistrus punctulatus Cardoso & Malabarba, 1999: 152, fig. 8. Type locality: rio dos Sinos, João Fernandes beach, Caraá, Rio Grande do Sul, Brazil (approx. 29°45'87"S, 50°25'68"W). Holotype: MCP 21154.

Maximum length: 19 cm SL

Distribution: South America: Laguna dos Patos basin.

Countries: Brazil

Common names: Cascudo (Brazil)

***Hemiancistrus wilsoni* Eigenmann, 1918**

Hemiancistrus wilsoni Eigenmann, 1918: 678. Type locality: Truando [tributary of Río Atrato, Colombia]. Holotype: FMNH 58550 [ex CM 7570 (largest specimen)].

Maximum length: 32.5 cm TL

Distribution: South America: Truando River basin in Atrato River drainage.

Countries: Colombia

Remarks and references: See Eigenmann (1922: 74, pl. 9 fig. 5, pl. 10 fig. 1) for a complementary description of type specimens.

HOPLIANCISTRUS

Hopliancistrus Isbrücker & Nijssen, 1989: 543. Type species: *Hopliancistrus tricornis* Isbrücker & Nijssen, 1989. Type by original designation. Gender: masculine.

***Hopliancistrus tricornis* Isbrücker & Nijssen, 1989**

Hopliancistrus tricornis Isbrücker & Nijssen, 1989: 543, fig. 6. Type locality: Brasilien, Est. Pará, Poça de Pedra no Rio Tapajós, São Luis. Holotype: MZUSP 22007.

Maximum length: 10.4 cm SL

Distribution: South America: Tapajós and Xingu River basins.

Countries: Brazil

Remarks and references: Analysed in molecular phylogenies based on 12S and 16S mitochondrial rRNA gene sequences by Montoya-Burgos et al. (1998: figs. 3, 4, 6) and on mitochondrial D-loop sequence by Montoya-Burgos et al. (2002: fig. 2; EMBL/GenBank AJ318367).

HYPANCISTRUS

Hypancistrus Isbrücker & Nijssen, 1991: 347. Type species: *Hypancistrus zebra* Isbrücker & Nijssen, 1991. Type by original designation. Gender: masculine. See Armbruster (2002) for a phylogenetic diagnosis of the genus based on osteological characters.

***Hypancistrus inspector* Armbruster, 2002**

Hypancistrus inspector Armbruster, 2002: 87, fig. 2 (middle). Type locality: Venezuela, Amazonas, Dpto. Casiquiare, río Casiquiare, río Negro-río Amazonas drainage, approximately 10 river km above the río Negro (below Solano), 1°58'N, 67°05'W. Holotype: MCNG 12133.

Maximum length: 12.6 cm SL

Distribution: South America: Upper Negro, Casiquiare, and upper Orinoco River basin.

Countries: Venezuela

***Hypancistrus zebra* Isbrücker & Nijssen, 1991**

Hypancistrus zebra Isbrücker & Nijssen, 1991: 348, fig. 1 (middle). Type locality: Brazil, Est. Pará, anastomoses of Rio Xingú, about one hour upstream of Altamira by speedboat (Altamira: 03°13'S 53°15'W). Holotype: MZUSP 41668.

Maximum length: 6.4 cm SL

Distribution: South America: Xingu River basin.

Countries: Brazil

Remarks and references: 12S and 16S mitochondrial rRNA gene sequences used in a molecular phylogeny of Loricariidae by Montoya-Burgos et al. (1998: figs. 3 & 6).

Common names: Zebra pleco (English)

LASIANCISTRUS

Lasiancistrus Regan, 1904: 224. Type species: *Chaetostomus heteracanthus* Günther, 1869. Type by subsequent designation by Eigenmann (1910: 409). Gender: masculine. Proposed in a key of species as a subgenus of *Ancistrus* Kner; raised to genus level by Eigenmann (1910: 409). See Armbruster & Provenzano (2000) for discussion on phylogenetic relationships. *Lasiancistrus* sensu Isbrücker (1980) was found polyphyletic (Armbruster & Provenzano, 2000: 242); subsequent assignments of numerous species formerly included in *Lasiancistrus* to several other Ancistrinae genera by Isbrücker (2001: 29) restrict the genus to species with slender hair-like odontodes on cheek, in addition to the spinous odontodes of Ancistrinae. This character was originally proposed by Regan (1904: 224) for diagnosing *Lasiancistrus*. The genus as actually redefined may prove to be monophyletic (see Schaefer, 1986: 107, and Armbruster & Provenzano, 2000: 242).

***Lasiancistrus caquetae* (Fowler, 1945)**

Hemiancistrus caquetae Fowler, 1945a: 115, fig. 19. Type locality: Morelia, Río Caquetá drainage, Colombia. Holotype: ANSP 71708.

Maximum length: 4.2 cm SL

Distribution: South America: Caquetá River basin in upper Japurá River drainage.

Countries: Colombia

Remarks and references: New combination based here tentatively on examination of the holotype, which is a juvenile specimen.

***Lasiancistrus castelnaui* (Miranda Ribeiro, 1911)**

Hypostomus pictus Castelnau, 1855: 44, pl. 22 (fig. 2). Type locality: l'Ucayale [=Ucayali River, Peru]. Holotype: MNHN A.9573. Secondarily preoccupied in *Hemiancistrus* by *Ancistrus pictus* Kner, 1854. Replaced by *Hemiancistrus castelnaui* Miranda Ribeiro, 1911.

Hemiancistrus castelnaui Miranda Ribeiro, 1911: 58. Replacement name for *Hypostomus pictus* Castelnau, 1855, secondarily preoccupied in *Hemiancistrus* by *Ancistrus pictus* Kner, 1854. Valid name according to ICZN (1999, art. 59.3).

Maximum length: 10.6 cm SL

Distribution: South America: Ucayali River basin.

Countries: Peru

Remarks and references: New combination by Eigenmann (1910: 409); redescription by Regan (1904: 237) based on the holotype.

Common names: Carachama (Peru)

***Lasiancistrus caucanus* Eigenmann, 1912**

Lasiancistrus caucanus Eigenmann, 1912a: 11. Type locality: Cartago; the Cauca, Colombia. Holotype: FMNH 56034 [ex CM 4824].

Maximum length: 17.5 cm TL

Distribution: South America: Cauca River basin.

Countries: Colombia

Remarks and references: See complementary description with illustrations of the holotype and a paratype by Eigenmann (1922: 76, pl. 11 figs. 4-5).

Common names: Corronchito (Colombia), Corroncho (Colombia)

***Lasiancistrus guacharote* (Valenciennes, 1840)**

Hypostomus guacharote Valenciennes in Cuvier & Valenciennes, 1840: 508 [375 in Strasbourg deluxe ed.]. Type locality: les eaux douces de Porto-Ricco [=Puerto Rico]. Syntypes: MNHN A.9567 (1 of several).

Maximum length: 135 cm TL

Distribution: Caribbean Islands: Puerto Rico (?).

Countries: Puerto Rico

Remarks and references: New combination by Eigenmann (1910: 409); see description of one syntype by Regan (1904: 238), with question on geographic distribution; species placed in *Guyanancistrus* by Isbrücker in Isbrücker et al. (2001:19), but reassigned here to *Lasiancistrus* for presence of two types of odontodes on cheek (see Regan 1904: 238; also personal observation on the uniquely preserved syntype).

***Lasiancistrus guapore* Knaack, 2000**

Lasiancistrus guapore Knaack, 2000: 57, unnumbered fig. on p. 58. Type locality: Brasilien, Mato Grosso, im Hauptstrom des Rio Guaporé im Stadtgebiet von Pontes E Lacerda; S 15°07.627', W 58°57.786'. Holotype: MCP 28678 (ex ZMB 33137).

Maximum length: 12.9 cm SL

Distribution: South America: Upper Guaporé River basin.

Countries: Brazil

***Lasiancistrus heteracanthus* (Günther, 1869)**

Chaetostomus heteracanthus Günther, 1869: 425, fig. 3. Type locality: Upper Amazons, Peruvian Amazons [Marañón]. Holotype: BMNH 1869.5.21.3. Type locality restricted by Eigenmann & Eigenmann 1891: 41 (see also Eigenmann & Allen 1942: 18).

Maximum length: 15.3 cm SL

Distribution: South America: Marañón River basin.

Countries: Peru

Remarks and references: New combination with designation as type species of the genus by Eigenmann (1910: 409); see complementary descriptions based on the holotype by Regan (1904: 237), and by Nijssen & Isbrücker (1985: 246) with comparison to *Lasiancistrus scolymus*.

Common names: Carachama (Peru)

***Lasiancistrus maracaiboensis* Schultz, 1944**

Lasiancistrus maracaiboensis Schultz, 1944a: 314, pl. 11 (fig. A).
Type locality: Río Socuy, 3 km. above its mouth. Venezuela.
Holotype: USNM 121038.
Maximum length: 11.9 cm SL
Distribution: South America: Lake Maracaibo basin.
Countries: Venezuela

***Lasiancistrus mayoloi* (Eigenmann, 1912)**

Hemiancistrus mayoloi Eigenmann, 1912a: 10. Type locality: Istmina [5°11'N, 76°39'W]. San Juan River, Colombia. Holotype: FMNH 56036 [ex CM 4826].
Maximum length: 12.5 cm TL
Distribution: South America: San Juan River basin.
Countries: Colombia
Remarks and references: New combination and complementary description with illustrations of a paratype by Eigenmann (1922: 76, pl. 11 figs. 6-7).

***Lasiancistrus multispinis* (Holly, 1929)**

Ancistrus multispinis Holly, 1929: 119. Type locality: Mercado Blèin [=market of Belem?] (Brasilien). Holotype: NMW (?).
Maximum length: 14.8 cm TL
Distribution: South America: Probably lower Amazon River basin.
Countries: Brazil
Remarks and references: New combination by Isbrücker (1980: 45).

***Lasiancistrus mystacinus* (Kner, 1854)**

Ancistrus mystacinus Kner, 1854: 276. Type locality: Carracas [=Caracas, Venezuela]. Holotype: NMW 44200. Originally as *Anc. mystacinus*.
Maximum length: 11.4 cm TL
Distribution: South America: Vicinity of Caracas.
Countries: Venezuela
Remarks and references: New combination by Eigenmann (1910: 409); holotype compared to *Lasiancistrus guacharote* by Steindachner (1881: 125).

***Lasiancistrus nationi* Fernández-Yépez, 1972**

Lasiancistrus nationi Fernández-Yépez, 1972: 23, pl. 23. Type locality: Venezuela, la estación No 140 del Complejo Hidrográfico (4), Río Yaracuy. Holotype: AFY.
Maximum length: 14.2 cm SL
Distribution: South America: Yaracuy River basin.
Countries: Venezuela

***Lasiancistrus planiceps* (Meek & Hildebrand, 1913)**

Ancistrus planiceps Meek & Hildebrand, 1913: 79. Type locality: Río Tuyra, Boca de Cupe, Panama. Holotype: FMNH 7580.
Maximum length: 23.5 cm SL
Distribution: Central America: Tuira and Sambu River basins.
Countries: Panama
Remarks and references: New combination by Eigenmann (1920b: 14); see complementary description by Meek & Hildebrand (1916: 253, pl. 10) based on more numerous specimens, with comparison to *Lasiancistrus caucanus*, including types of both species.

***Lasiancistrus scolymus* Nijssen & Isbrücker, 1985**

Lasiancistrus scolymus Nijssen & Isbrücker, 1985: 242, fig. 1. Type locality: Brazil, Est. Mato Grosso do Sul, Rio Aripuanã, Humboldt (10°10'S 59°27'W), Rio Madeira system. Holotype: MZUSP 26809.
Maximum length: 14.4 cm SL
Distribution: South America: Madeira River basin.
Countries: Brazil

***Lasiancistrus volcanensis* Dahl, 1942**

Lasiancistrus volcanensis Dahl, 1942: 83, fig. 3. Type locality: Rio Volcán near its junction to Rio San Bartolomé [(tributary to Rio

Magdalena, on the left side, between Rios Narés and Ité, municipio of Remedios, department of Antioquia, Republic of Colombia). Altitude approx. 600 m (p. 81)]. Holotype: ZMUL (Eschmeyer 1998: 1774).
Maximum length: 7.9 cm SL
Distribution: South America: Volcán River basin in Magdalena Rive drainage.
Countries: Colombia
Remarks and references: Apparently known from only holotype.

LEPORACANTHICUS

Leporacanthicus Isbrücker & Nijssen, 1989: 544. Type species: *Leporacanthicus galaxias* Isbrücker & Nijssen, 1989. Type by original designation. Gender: masculine. See Isbrücker et al. (1992) for complementary description of genus and key to species, and Stawikowski (1992b) for an account of species distribution, and for figures and notes on aquarium specimens.

***Leporacanthicus galaxias* Isbrücker & Nijssen, 1989**

Leporacanthicus galaxias Isbrücker & Nijssen, 1989: 546, fig. 10. Type locality: Brasilien, Est. Pará, Rio Tocantins, Lagoa em frente a Jacobal. Holotype: MZUSP 24136.
Maximum length: 21.1 cm SL
Distribution: South America: Southern tributaries of the middle and lower Amazon, Madeira, Tocantins and Guamá rivers; Ventuari River basin in upper Orinoco drainage.
Countries: Brazil, Venezuela
Remarks and references: Reference to Venezuelan material with figure in Provenzano (1995); 12S and 16S mitochondrial rRNA gene sequences used in a molecular phylogeny of Loricariidae by Montoya-Burgos et al. (1998: figs. 3, 4, 6).

***Leporacanthicus heterodon* Isbrücker & Nijssen, 1989**

Leporacanthicus heterodon Isbrücker & Nijssen, 1989: 547, fig. 12. Type locality: Brasilien, Est. Mato Grosso, Rio Xingú, Cachoeira von Martius, oberer Xingú. Holotype: IRSNB 693.
Maximum length: 10.3 cm SL
Distribution: South America: Xingu River basin.
Countries: Brazil

***Leporacanthicus joselimai* Isbrücker & Nijssen, 1989**

Leporacanthicus joselimai Isbrücker & Nijssen, 1989: 546, fig. 11. Type locality: Brasilien, Est. Pará, Maloquinha, perto de Itaituba, Rio Tapajós. Holotype: MZUSP 21921.
Maximum length: 9.8 cm SL
Distribution: South America: Tapajós River basin.
Countries: Brazil

***Leporacanthicus triactis* Isbrücker, Nijssen & Nico, 1992**

Leporacanthicus triactis Isbrücker, Nijssen & Nico, 1992: 3, fig. 3. Type locality: Venezuela, Territorio Federal Amazonas, oberer Orinoco, Caño Mavaquita etwa einen Kilometer flussaufwärts von der Mündung in den Río Mavaca, ungefähr 2°12'30"N, 65°05'30"W. Holotype: MCNG 25357.
Maximum length: 24.7 cm SL
Distribution: South America: Upper Orinoco River basin.
Countries: Colombia, Venezuela

LEPTOANCISTRUS

Leptoancistrus Meek & Hildebrand, 1916: 254. Type species: *Acanthicus canensis* Meek & Hildebrand, 1913. Type by original designation. Gender: masculine. See diagnosis based on osteological characters in Schaefer (1986: 108).

***Leptoancistrus canensis* (Meek & Hildebrand, 1913)**

Acanthicus canensis Meek & Hildebrand, 1913: 80. Type locality:

Rio Cana, Cana, Darien, Panama. Holotype: FMNH 7581.
 Maximum length: 7.6 cm SL
 Distribution: Central America: Pacific drainages of Eastern Panama and Armila River basin on Atlantic slope.
 Countries: Panama
 Remarks and references: Species described more in detail and figured by Meek & Hildebrand (1916: 254, pl. 11).

***Leptoancistrus cordobensis* Dahl, 1964**

Leptoancistrus cordobensis Dahl, in Dahl et al., 1964: 32, unnum. plate. Type locality: río Batatal, Alro río Uré [upper San Jorge tributary, Magdalena basin, Colombia]. Holotype: whereabouts unknown.
 Maximum length: 3.7 cm SL
 Distribution: South America: Upper Sinú River basin, and upper San Jorge River basin in Magdalena River drainage.
 Countries: Colombia
 Remarks and references: Species also figured and discussed in Dahl (1971: 90).

LIPOPTERICHTHYS

Lipoptericthys Norman, 1935: 627. Type species: *Lipoptericthys carrioni* Norman, 1935. Type by original designation. Gender: masculine. See diagnosis based on osteological characters in Schaefer (1986: 109).

***Lipoptericthys carrioni* Norman, 1935**

Lipoptericthys carrioni Norman, 1935: 628, fig. on p. 628 (up). Type locality: the Zamora River, near Loja, Ecuador. Holotype: BMNH 1933.5.29.1-5 (1 of 5) (Eschmeyer 1998: 335).
 Maximum length: 7.8 cm SL
 Distribution: South America: Marañón River basin.
 Countries: Ecuador

LITHOXANCISTRUS

Lithoxancistrus Isbrücker, Nijssen & Cala, 1988: 14. Type species: *Lithoxancistrus orinoco* Isbrücker, Nijssen & Cala, 1988. Type by original designation. Gender: masculine.

***Lithoxancistrus genisetiger* (Fowler, 1941)**

Pseudancistrus genisetiger Fowler, 1941a: 155, fig. 60. Type locality: Rio Jaguaribe, Orós, Ceará; eastern Brazil. Holotype: ANSP 69441.
 Maximum length: 10.3 cm SL
 Distribution: South America: Jaguaribe River basin.
 Countries: Brazil
 Remarks and references: New combination by Isbrücker (2001: 29).

***Lithoxancistrus orinoco* Isbrücker, Nijssen & Cala, 1988**

Lithoxancistrus orinoco Isbrücker, Nijssen & Cala, 1988: 14, fig. 1 (up). Type locality: Colombie, Province de Vichada, Rio Orinoco, à la cascade (=raudal) près de l'embouchure du Rio Tuparro. Holotype: ICNMHN 1200.
 Maximum length: 7.6 cm SL
 Distribution: South America: Orinoco River basin.
 Countries: Colombia, Venezuela

***Lithoxancistrus papariae* (Fowler, 1941)**

Pseudancistrus papariae Fowler, 1941a: 157, fig. 64. Type locality: Lago Papary [=Papari Lake], Rio Grande do Norte; eastern Brazil. Holotype: ANSP 69442.
 Maximum length: 15.3 cm SL
 Distribution: South America: Lake Papari and Jaguaribe River basin.
 Countries: Brazil
 Remarks and references: New combination by Isbrücker (2001:

29).

LITHOXUS

Lithoxus Eigenmann, 1910: 405. Type species: *Lithoxus lithoides* Eigenmann, 1910. Type by original designation (p. 412). Gender: masculine. Diagnostic characters given in key in footnote. Revised by Boeseman (1982), later by Nijssen & Isbrücker (1990) with synonymisation of *Paralithoxus*; see diagnosis based on osteological characters in Schaefer (1986: 110).

Paralithoxus Boeseman, 1982: 46. Type species: *Ancistrus bovallii* Regan, 1906. Type by original designation. Gender: masculine. Proposed as a subgenus of *Lithoxus*. Spelled *Paralithoides* in author's abstract (p. 41).

***Lithoxus boujardi* Muller & Isbrücker, 1993**

Lithoxus boujardi Muller & Isbrücker, 1993: 72, fig. 1 (middle). Type locality: Guyane française, bassin de l'Approuague, Arataye, entre le Saut Japigny et le Saut Pararé. Holotype: MNHN 1992-1321.

Maximum length: 6.5 cm SL
 Distribution: South America: Approuague and Oyapock River basins.

Countries: French Guiana
 Remarks and references: See Le Bail et al. (2000: 242, fig.) for a complementary description with biological observations and geographical distribution.
 Common names: Yanian wili (Amerindian)

***Lithoxus bovallii* (Regan, 1906)**

Ancistrus Bovallii Regan, 1906: 96. Type locality: the Kaat River, tributary to the Treng River [= probably Ireng River, tributary of Takutu River, Amazonas basin; see Boeseman (1982: 49), and Schindler (1996)], Upper Potaro, British Guiana. Lectotype: BMNH 1905.11.1.43, designated by Nijssen & Isbrücker (1990: 332).

Maximum length: 5.9 cm SL
 Distribution: South America: Ireng River basin in upper Negro River drainage.

Countries: Guyana
 Remarks and references: New combination by Isbrücker (1979: 88), see Nijssen & Isbrücker (1990) and Muller & Isbrücker (1993: 75) for morphological data of type specimens, and Schindler (1996) for a redescription of material from the Ireng River.

***Lithoxus lithoides* Eigenmann, 1910**

Lithoxus lithoides Eigenmann, 1910: 412. Type locality: Cataracts of British Guiana [=Amatuk, Guyana]. Holotype: FMNH 53557 [ex CM 1527]. Original description identical to genus description (p. 405). Species illustrated and more fully described in Eigenmann (1912b: 242, pl. 29, figs. 1-4).

Maximum length: 8.6 cm SL
 Distribution: South America: Essequibo and upper Correntyne River basin.

Countries: Guyana, Suriname
 Remarks and references: See Boeseman (1982: 46, fig. 1, tab. 2) for a complementary description, Nijssen & Isbrücker (1990: tab. 1) for morphological data of the holotype, and Lowe McConnell (1964: 117, 132) for ecological information.

***Lithoxus pallidimaculatus* Boeseman, 1982**

Lithoxus (Paralithoxus) pallidimaculatus Boeseman, 1982: 50, pl. 3 (top). Type locality: Kwambaolo Creek, right tributary of Sara Creek above Dam, Suriname River system, Surinam. Holotype: RMNH 28368.

Maximum length: 4.7 cm SL
 Distribution: South America: Suriname River basin.
 Countries: Suriname
 Remarks and references: See Nijssen & Isbrücker (1990: tab. 1)

for morphological data of the holotype.

***Lithoxus planquettei* Boeseman, 1982**

Lithoxus (Paralithoxus) planquettei Boeseman, 1982: 53, pl. 4 (top). Type locality: Crique Boulenger, Comté system, French Guiana. Holotype: RMNH 28304 (1 of 3).

Maximum length: 7 cm SL

Distribution: South America: Atlantic coastal drainages from Maroni to Kaw River basins.

Countries: French Guiana

Remarks and references: See Le Bail et al. (2000: 244, fig.) for a complementary description with biological observations and geographical distribution, also Nijssen & Isbrücker (1990: tab. 1) and Muller & Isbrücker (1993: 75) for morphological data of types.

Common names: Yanian wili (Amerindian)

***Lithoxus stocki* Nijssen & Isbrücker, 1990**

Lithoxus stocki Nijssen & Isbrücker, 1990: 329, fig. 2. Type locality: Marouini River, downstream of village Epoia, French Guiana. Holotype: IRSNB 639.

Maximum length: 6.6 cm SL

Distribution: South America: Maroni and Mana River basins.

Countries: French Guiana

Remarks and references: See Le Bail et al. (2000: 246, fig.) for a complementary description with biological observations and geographical distribution, and Muller & Isbrücker (1993: 75) for morphological data of types.

Common names: Yanian wili (Amerindian)

***Lithoxus surinamensis* Boeseman, 1982**

Lithoxus (Paralithoxus) surinamensis Boeseman, 1982: 54, pl. 5 (top). Type locality: near Awaradam, Gran Rio, upper Suriname River system, Surinam. Holotype: RMNH 28361 (largest specimen).

Maximum length: 4.1 cm SL

Distribution: South America: Gran Rio River basin in upper Suriname River drainage.

Countries: Suriname

Remarks and references: See Nijssen & Isbrücker (1990: tab. 1) for morphological data of the holotype.

MEGALANCISTRUS

Megalancistrus Isbrücker, 1980: 52. Type species: *Chaetostomus gigas* Boulenger, 1895. Type by original designation. Gender: masculine.

***Megalancistrus barrae* (Steindachner, 1910)**

Ancistrus barrae Steindachner, 1910: 58. Type locality: Rio San Francisco bei Barra [Brazil]. Syntypes: NMW 48019 (1), 48020 (1).

Maximum length: 38.5 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

***Megalancistrus parananus* (Peters, 1881)**

Pterygoplichthys (Ancistrus) parananus Peters, 1881: 637. Type locality: Parana fluss bei La Paz in Entre-Rios [Argentina]. Holotype: ZMB 11328.

Chaetostomus aculeatus Perugia, 1891: 637. Type locality: Asuncion (Rio Paraguay) [Paraguay]. Holotype: MSNG 8937.

Chaetostomus gigas Boulenger, 1895: 526. Type locality: Paraguay. Holotype: BMNH 1895.5.17.72.

Maximum length: 60 cm TL

Distribution: South America: Paraguay, Paraná, and Uruguay River basins.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: New combination by Isbrücker (2001: 30); see redescription in Pignatelli et al. (1970: 379).

Common names: Cascudo-abacaxi (Brazil), Vieja espinosa (Uruguay)

NEBLINICHTHYS

Neblichthys Ferraris, Isbrücker & Nijssen, 1986: 70. Type species: *Neblichthys pilosus* Ferraris, Isbrücker & Nijssen, 1986.

Type by original designation. Gender: masculine. See Provenzano et al. (1995) for a discussion on geographical distribution.

***Neblichthys pilosus* Ferraris, Isbrücker & Nijssen, 1986**

Neblichthys pilosus Ferraris, Isbrücker & Nijssen, 1986: 70, fig. 1 (top). Type locality: Venezuela, Territorio Federal Amazonas; Dept. Rio Negro, Rio Baria basin. Rio Mawarinuma tributary at Neblina base camp, on right bank in riffle, 0°55'N, 66°10'W, elevation 120 m. Holotype: AMNH 56137.

Maximum length: 8.9 cm SL

Distribution: South America: Upper Negro, Casiquiare, and Baria River basins.

Countries: Venezuela

***Neblichthys roraima* Provenzano, Lasso & Ponte, 1995**

Neblichthys roraima Provenzano, Lasso & Ponte, 1995: 245, fig. 1. Type locality: Venezuela: Estado Bolivar: río Caroni system, first creek (quebrada) NW of base camp Roraima tepui, tributary of río Kukenan (5°15'N, 60°40'W), at an elevation of 1200-1400 m. Holotype: MHNLS 8753.

Maximum length: 5.1 cm SL

Distribution: South America: Kukenan River basin in upper Caroni drainage.

Countries: Venezuela

OLIGANCISTRUS

Oligancistrus Rapp Py-Daniel, 1989: 246. Type species: *Chaetostomus punctatissimus* Steindachner, 1881. Type by original designation. Gender: masculine.

***Oligancistrus punctatissimus* (Steindachner, 1881)**

Chaetostomus punctatissimus Steindachner, 1881: 119, pl. 3 (fig. 3). Type locality: aus dem Amazonen-Strome ohne nähere Angabe des Fundortes [Brazil, Est. Pará, Pôrto do Mós, on the eastern shore of Rio Xingú, 1°45'S, 52°10'W]. Holotype: NMW 47206. Restriction of type locality with identification of holotype by Isbrücker & Nijssen (1991: 349).

Maximum length: 10.6 cm SL

Distribution: South America: Xingu River basin.

Countries: Brazil

Remarks and references: New combination with genus description by Rapp Py-Daniel (1989: 246); illustration and description of mouth characters by Stawikowski (1991: 262).

PANAQUE

Panaque Eigenmann & Eigenmann, 1889: 44. Type species: *Chaetostomus nigrolineatus* Peters, 1877. Type by original designation. Gender: masculine. See Schaefer & Stewart (1993) for diagnosis and relationships of the genus, distribution and ecology, and for description of the *Panaque dentex* species group, with a key, species descriptions, geographical distributions and phylogenetic analysis. Study of wood digestion by Nelson et al. (1999). Revised key to *Panaque dentex* species group and description of an additional synapomorphy for the group in Chockley & Armbruster (2002).

Panaqolus Isbrücker & Schraml in Isbrücker et al. (2001: 20). Type species: *Panaque gnomus* Schaefer & Stewart, 1993. Type by original designation. Gender: masculine. Synonymised by Chockley & Armbruster (2002: 88).

***Panaque albomaculatus* Kanazawa, 1958**

Panaque albomaculatus Kanazawa, 1958: 327, fig. 1 (top). Type locality: Ecuador, tributary of the Río Suno, upper Napo River, 0°47' south latitude, 77°16' west longitude, Río Pucuno. Holotype: USNM 167909.

Maximum length: 12.4 cm SL

Distribution: South America: Headwaters of Napo, Marañón and Ucayali rivers.

Countries: Ecuador, Peru

Remarks and references: See redescription by Schaefer & Stewart (1993: 327, fig. 13), with geographical distribution, and phylogenetic relationships.

Common names: Carachama (Ecuador)

***Panaque cochliodon* (Steindachner, 1879)**

Chaetostomus cochliodon Steindachner, 1879a: 194. Type locality: Aus dem Cauca, dem grössten Nebenflusse des Magdalena-Stromes [Colombia]. Syntypes: NMW 47297 (1), 47298 (1). Species described in few more details in Steindachner (1879b: 187).

Chaetostomus cochliodon (sive *gibbosus*) Steindachner, 1880: 63, pl. 4. Type locality: Replacement name proposed conditionally for *Chaetostomus cochliodon*. Objective synonym.

Maximum length: 30 cm TL

Distribution: South America: Cauca and Magdalena River basins.

Countries: Colombia

Remarks and references: See the most complete description by Steindachner as *Chaetostomus cochliodon* (sive *gibbosus*).

Common names: Casasola, Corroncho, Corroncorro, Guacarote (local names)

***Panaque changae* Chockley & Armbruster, 2002**

Panaque changae Chockley & Armbruster, 2002: 83, fig. 1 (middle). Type locality: Peru: Loreto: río Itaya, río Amazonas drainage, 11 km SSW center of Iquitos at bearing 39°, 3°49'47.6"S 73°18'2.9"W. Holotype: MUSM 17107.

Maximum length: 8.4 cm SL

Distribution: South America: Itaya and Momon River basins.

Countries: Peru

***Panaque dentex* (Günther, 1868)**

Chaetostomus dentex Günther, 1868a: 477. Type locality: Xeberos [Peru, Departamento Loreto, Xeberos (or Jeberos), upper Río Aipena system, tributary to Río Huallaga near its confluence with Río Marañón, approx. 5°18'S 76°17'W]. Holotype: BMNH 1867.6.13.37. Details of type locality in Schaefer & Stewart (1993: 321).

Maximum length: 8 cm SL

Distribution: South America: Napo, Pastaza and Marañón River basins.

Countries: Ecuador, Peru

Remarks and references: New combination by Eigenmann & Eigenmann (1889: 44); see redescription by Schaefer & Stewart (1993: 321, fig. 9), with geographical distribution, and phylogenetic relationships.

Common names: Carachama (Peru)

***Panaque gnomus* Schaefer & Stewart, 1993**

Panaque gnomus Schaefer & Stewart, 1993: 333, fig. 17 (top). Type locality: Ecuador, Morona-Santiago Province, Río Cushuimi at Cushuimi, approx. 2°39'S 77°43'W, just over 300 m alt., upper Río Morona/ Marañón basin. Holotype: FMNH 70860.

Maximum length: 7.1 cm SL

Distribution: South America: Pastaza and upper Marañón basins.

Countries: Ecuador, Peru

Remarks and references: Comparison to *Panaque changae* in Chockley & Armbruster (2002: 83).

***Panaque maccus* Schaefer & Stewart, 1993**

Panaque maccus Schaefer & Stewart, 1993: 335, fig. 18 (top). Type locality: Venezuela, Estado Portuguesa, Río Las Marinas, upstream from bridge on Route 5 east of Guanare, tributary of Río Portuguesa, Río Orinoco basin, approx. 9°05'N 69°40'W. Holotype: MBUCV V-24010.

Maximum length: 8.8 cm SL

Distribution: South America: Apuré and Caroni River basins.

Countries: Venezuela

Remarks and references: Updated geographic distribution and comparison to *Panaque changae* in Chockley & Armbruster (2002).

***Panaque nigrolineatus* (Peters, 1877)**

Chaetostomus nigrolineatus Peters, 1877: 471, fig. on an unnumb. pl. ff. p. 556. Type locality: Calabozo [Guaricó River, tributary of Apuré River, Orinoco basin], Venezuela. Syntypes: ZMB 10046 (1), 10047 (1).

Maximum length: 43 cm SL

Distribution: South America: Orinoco and southern middle and lower Amazon River tributaries.

Countries: Brazil, Colombia, Venezuela

Remarks and references: New combination by Eigenmann & Eigenmann (1889: 44); 12S and 16S mitochondrial rRNA gene sequences used in a molecular phylogeny of Loricariidae by Montoya-Burgos et al. (1998: figs. 3,4,6).

Common names: Acari-da-pedra (Venezuela), Panaque (Brazil, Venezuela), Royal panaque (English)

***Panaque nocturnus* Schaefer & Stewart, 1993**

Panaque nocturnus Schaefer & Stewart, 1993: 330, fig. 15. Type locality: Peru, Departamento Amazonas, Río Santiago, near la Poza, Río Marañón basin, 4°01'24"S 77°45'06"W. Holotype: LACM 41729-51.

Maximum length: 13.9 cm SL

Distribution: South America: Santiago and Pastaza River basins in upper Napo drainage.

Countries: Ecuador, Peru

***Panaque purusiensis* La Monte, 1935**

Panaque purusiensis La Monte, 1935: 4, fig. 3. Type locality: Rio Purus, Brazil; in the vicinity of the mouth of Rio Macauhan [=Macauá], a tributary of Rio Yaco [=Iaco], which, in turn, is a tributary of Rio Purus (69°W, 9°20'S) [9°11'S, 68°44'W; about 20 km S. W. of Sena Madureira, 135 m alt]. Holotype: AMNH 12600. Details of type locality are given in introduction and in Schaefer & Stewart (1993: 325).

Maximum length: 11 cm SL

Distribution: South America: Macauá River basin in upper Purus drainage.

Countries: Brazil

Remarks and references: See redescription by Schaefer & Stewart (1993: 325, fig. 12), with geographical distribution, and phylogenetic relationships.

***Panaque suttonorum* Schultz, 1944**

Panaque suttoni Schultz, 1944a: 308, pl. 10 (fig. B). Type locality: Río Negro [tributary of Santa Ana River] below the mouth of the Río Yasa, Maracaibo basin, Venezuela. Holotype: USNM 121033.

Maximum length: 28 cm SL

Distribution: South America: Western and eastern tributaries of Maracaibo Lake.

Countries: Venezuela

Common names: Blue-eyed pleco (English), Panaque (Venezuela)

PARANCISTRUS

Parancistrus Bleeker, 1862: 2. Type species: *Hypostomus aurantiacus* Castelnau, 1855. Type by original designation. Gender: masculine. See Rapp Py-Daniel (1989) for redefinition of the

genus and redescription of the type species.

Acanthodemus Marschall, 1873: 63. Type species: *Hypostomus aurantiacus* Castelnau, 1855. Type by subsequent designation by Jordan (1919: 264). Gender: masculine.

***Parancistrus aurantiacus* (Castelnau, 1855)**

Hypostomus aurantiacus Castelnau, 1855: 43, pl. 21 (fig. 2). Type locality: l'Ucayale [Ucayali River, Peru]. Holotype: MNHN A.9452 (dry). Name spelled *aurentiacus* on figure caption.

Hypostomus nigricans Castelnau, 1855: 44, pl. 22 (fig. 1). Type locality: l'Amazone [Amazon River, Brazil]. Holotype: MNHN A.9576.

Hypostomus vicinus Castelnau, 1855: 45, pl. 23 (fig. 1). Type locality: l'Ucayale [Ucayali River, Peru]. Holotype: MNHN A.9572.

Maximum length: 19.3 cm SL

Distribution: South America: Ucayali, Tocantins and Xingu Rivers.

Countries: Brazil, Peru

Remarks and references: Redescription and synonymies based on examination of types by Regan (1904: 236) and by Rapp Py-Daniel (1989: 239), including also material from Tocantins; illustrations and color description of living specimens by Stawikowski (1991), with ecological notes; analysed in molecular phylogenies based on 12S and 16S mitochondrial rRNA gene sequences by Montoya-Burgos et al. (1998: figs. 3,4,6; EMBL/GenBank Y08282, Y08330), and on mitochondrial D-loop sequences by Montoya-Burgos, et al. (2002: fig 2; EMBL/GenBank AJ318366).

Common names: Acari (Brazil), Carachama (Peru)

PECKOLTIA

Peckoltia Miranda Ribeiro, 1912: 7. Type species: *Chaetostomus vittatus* Steindachner, 1882. Type by monotypy. Gender: feminine. No skeletal autapomorphies found by Schaefer (1986: 113).

Peckoltichthys Miranda Ribeiro, 1917: 49. Type species: *Peckoltichthys filicaudatus* Miranda Ribeiro, 1917. Type by monotypy. Gender: masculine. Miranda Ribeiro (1920) stated that this name was intended as a replacement for *Peckoltia*, but that publication was delayed and preceded by Miranda Ribeiro (1917), in which *Peckoltichthys* was published with only one included species, *P. filicaudatus*.

Ancistomus Isbrücker & Seidel in Isbrücker et al., 2001: 17. Type species: *Ancistrus snethlageae* Steindachner, 1911. Type by original designation. Gender: masculine. Awaiting a revision and a redefinition of *Peckoltia*; based on the examination of a large material, its diagnostic characters are found insufficient to define this genus which is therefore here synonymized.

Sophiancistrus Isbrücker & Seidel in Isbrücker et al., 2001: 21. Type species: *Hemiancistrus ucayalensis* Fowler, 1940. Type by original designation. Gender: masculine. Synonymized here for the same reasons as indicated for *Ancistomus*.

***Peckoltia arenaria* (Eigenmann & Allen, 1942)**

Hemiancistrus arenarius Eigenmann & Allen, 1942: 185, pl. 6 (fig. 2). Type locality: Yurimaguas [head of navigation on Rio Huallaga; town, provinci capital, cotton port; elevation 570 feet; eastern terminus of trails from Pacasmayo and Cajamarca over the mountains; between the mouths of Rios Shanusi and Parapura (p. 81)], Peru. Holotype: CAS 77323 [ex IU 15356].

Maximum length: 12.9 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Remarks and references: New combination by Isbrücker (1980: 55); possible synonym of *Peckoltia ucayalensis*.

Common names: Carachama (Peru)

***Peckoltia bachi* (Boulenger, 1898)**

Chaetostomus bachi Boulenger, 1898a: 425, pl. 41 (fig. 1). Type

locality: Rio Jurua, Brazil. Holotype: BMNH 1897.12.1.61.

Maximum length: 11.2 cm TL

Distribution: South America: Juruá River basin.

Countries: Brazil

Remarks and references: New combination by Isbrücker (1980: 55); complementary description of the holotype in Regan (1904: 233).

***Peckoltia braueri* (Eigenmann, 1912)**

Hemiancistrus braueri Eigenmann, 1912b: 232, pl. 28 (fig. 1).

Type locality: British Guiana [Takutu River?]. Holotype: ZMB 3174 (larger specimen).

Maximum length: 88.6 cm SL

Distribution: South America: Negro and Branco River basins.

Countries: Guyana

Remarks and references: New combination by Isbrücker (2001: 31); short description of the future type specimens by Kner (1854: footnote on p. 254, 281; ZMB specimens registered as *Hypostomus itacua*).

***Peckoltia brevis* (La Monte, 1935)**

Hemiancistrus brevis La Monte, 1935: 3, fig. 2. Type locality: Rio Purus, Brazil; in the vicinity of the mouth of Rio Macauhan [=Macauá], a tributary of Rio Yaco [=Iaco], which, in turn, is a tributary of Rio Purus (69°W., 9°20'S.) [9°11'S, 68°44'W; about 20 km S. W. of Sena Madureira, 135 m alt.]. Holotype: AMNH 12602. Details of type locality from introduction and Schaefer & Stewart (1993: 325).

Maximum length: 9.1 cm SL

Distribution: South America: Purus River basin.

Countries: Brazil

Remarks and references: New combination by Isbrücker (1980: 55).

***Peckoltia filicaudata* (Miranda Ribeiro, 1917)**

Peckoltichthys filicaudatus Miranda Ribeiro, 1917: 49. Type locality: Fluvio "Solimões" [Brazil]. Holotype: MNRJ 969.

Maximum length: 14 cm TL

Distribution: South America: Solimões River basin.

Countries: Brazil

Remarks and references: New combination by Isbrücker (1980: 55); only the holotype known.

***Peckoltia furcata* (Fowler, 1940)**

Chaetostomus furcatus Fowler, 1940: 238, fig. 29. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68655.

Maximum length: 9.2 cm SL

Distribution: South America: Ucayali River basin.

Countries: Peru

Remarks and references: New combination based on examination of the holotype (only specimen known).

Common names: Carachama (Peru)

***Peckoltia kuhlmanni* (Miranda Ribeiro, 1920)**

Peckoltichthys kuhlmanni Miranda Ribeiro, 1920: 10, unnum. pl. 5th (middle). Type locality: Tapajóz [Brazil]. Lectotype: MNRJ 2044A, designated by Miranda Ribeiro (1953: 401), but specimens not isolated.

Maximum length: 12 cm TL

Distribution: South America: Tapajós River basin.

Countries: Brazil

Remarks and references: New combination by Isbrücker (1980: 56).

***Peckoltia oligospila* (Günther, 1864)**

Chaetostomus oligospilus Günther, 1864: 244. Type locality: River Capin [=Capim, Para State, Brazil]. Holotype: BMNH 1849.11.8 (Eschmeyer 1998: 1237).

Maximum length: 10.5 cm SL

Distribution: South America: Lower Amazon River basin.

Countries: Brazil

Remarks and references: New combination by Isbrücker (1980: 56); complementary description of the holotype in Regan (1904: 232, pl. 12 fig. 1).

***Peckoltia snethlageae* (Steindachner, 1911)**

Ancistrus snethlageae Steindachner, 1911b: 328. Type locality: Rio Tapajoz [=Tapajós] bei Villa Braga [=Vila Braga] und Goyana [=Ilha da Goiânia ?] [Brazil]. Syntypes: NMW 48049 (1), 48050 (1).

Maximum length: 22 cm TL

Distribution: South America: Tapajós River basin.

Countries: Brazil

Remarks and references: New combination based here on original description and examination of specimens from Tapajós River; see figures of living specimens in Isbrücker et al. (2001: 17-18, 2 unnumb. figs, as *Ancistomus snethlegeae*).

***Peckoltia ucayalensis* (Fowler, 1940)**

Hemiancistrus ucayalensis Fowler, 1940: 235, fig. 24. Type locality: Ucayali River, Contamana, Peru [7°19'S, 75°04'W]. Holotype: ANSP 68651.

Maximum length: 13 cm SL

Distribution: South America: Ucayali River basin.

Countries: Peru

Remarks and references: New combination by Isbrücker (1980: 57); see figures in Isbrücker et al. (1991: 22, 2 unnumb. figs, as *Sophiancistrus cf. ucayalensis*).

Common names: Carachama (Peru)

***Peckoltia vermiculata* (Steindachner, 1908)**

Ancistrus vittatus vermiculata Steindachner, 1908: 166. Type locality: dem mittleren Laufe des Amazonestrommes, den Gewässern um Pará, Brasiliens. Syntypes: NMW 48056 (1), 48059 (1), 48064 (1) (Eschmeyer, 1998: 1753). Originally as *Ancistrus vittatus* var. *vermiculata*.

Maximum length: 13 cm SL

Distribution: South America: Middle and lower Amazon River basin.

Countries: Brazil

Remarks and references: Raised to species level by Isbrücker (1980: 57).

***Peckoltia vittata* (Steindachner, 1881)**

Chaetostomus vittatus Steindachner, 1881: 115, pl. 2 (fig. 5). Type locality: Amazonen-Strom, Tajapouru [Furo Tajapuru at Tajapuru, Marajó Island], Xingu bei Porto de Moz, Rio Madeira [Brazil]. Syntypes: MCZ 7999 (1), 8017 (1); NMW 47225 (1), 47226 (1), 47227 (1), 47228 (2) (Eschmeyer 1998: 1753).

Maximum length: 14 cm TL

Distribution: South America: Middle and lower Amazon River basin.

Countries: Brazil

Remarks and references: New combination with genus description by Miranda Ribeiro (1912: 7); cited by several authors but no recent redescription; 12S and 16S mitochondrial rRNA gene sequences used in a molecular phylogeny of Loricariidae by Montoya-Burgos et al. (1998: figs. 3,4,6; EMBL/GenBank Y08285, Y08333).

***Peckoltia yaravi* (Steindachner, 1915)**

Ancistrus (Hemiancistrus) yaravi Steindachner, 1915b: 73. Type locality: Rio Coquenán [=Kukenan, also Cuquenán, Caroni basin], Venezuela. Holotype: NMW.

Maximum length: 4.7 cm SL

Distribution: South America: Kukenan River basin in upper Caroni River drainage.

Countries: Venezuela

Remarks and references: Description also in Steindachner (1917: 87); new combination by Isbrücker (1980: 57); known only from

the holotype.

Common names: Yaravi (in Steindachner 1915b: 88)

PSEUDACANTHICUS

Pseudacanthicus Bleeker, 1862: 2. Type species: *Hypostomus serratus* Valenciennes, 1840. Type by original designation. Gender: masculine. Last revision by Regan (1904); diagnosis based on osteological characters by Schaefer (1986: 113); see also Stawikowski (1992a) for an account on described species and figures of living specimens.

Stoneiella Fowler, 1914: 271. Type species: *Stoneiella leopardus* Fowler, 1914. Type by original designation. Gender: feminine.

***Pseudacanthicus fordii* (Günther, 1868)**

Chaetostomus Fordii Günther, 1868a: 476. Type locality: Surinam [Probably Suriname (Günther, 1868b)]. Syntypes: (4), BMNH 1848.8.14.148 (1), 1848.8.14.152 (1) (in Eschmeyer 1998: 599).

Maximum length: 23 cm TL

Distribution: South America: Coastal drainages of Suriname.

Countries: Suriname

Remarks and references: Species illustrated and described in more detail, with additional comments on type locality, in Günther (1868b: 231, pl. 21); new combination and redescription of type specimens by Regan (1904: 261).

***Pseudacanthicus histrix* (Valenciennes, 1840)**

Rinelepis histrix Valenciennes in Cuvier & Valenciennes, 1840: 486 [359 in Strasbourg deluxe ed.]. Type locality: No locality [Negro River]. Holotype: lost, but photographs still preserved in MB (historical archives).

Loricaria spinosae Ferreira in França, 1922: 84, fig. 9. Type locality: in Fluminis Amazonici [Negro River]. Holotype: see indications under holotype of *Rinelepis histrix* Valenciennes in Cuvier & Valenciennes, 1840, same specimen. Objective synonym.

Maximum length: 90 cm TL

Distribution: South America: Negro and lower Amazon River basins.

Countries: Brazil

Remarks and references: Original description based on drawings included in an unpublished manuscript by D. Vandelli (preserved in MNHN, central library, Ms 510); Capello (1870: 64, pl. 7) redescribed and figured the holotype (specimen collected by A. Ferreira, sent in 1786 from Barcelos to Lisbon along with his description of species and a drawing from Freire, and later studied by Vandelli) and traced its historic and geographic origin; Ferreira's description was published later on by França (1922: 84, Freire's drawing on fig. 9), who also discussed history of the species; new combination by Regan (1904: 261).

Common names: Uacari-guassú (Brazil)

***Pseudacanthicus leopardus* (Fowler, 1914)**

Stoneiella leopardus Fowler, 1914: 271, fig. 17. Type locality: Rupununi River, British Guiana [in the highlands of British Guiana, approximately secured in North Latitude 2° to 3°, and West Longitude 50°20' (p. 229)]. Holotype: ANSP 39345.

Maximum length: 15 cm TL

Distribution: South America: Rupununi River basin.

Countries: Guyana

Remarks and references: New combination by Isbrücker (1980: 77).

***Pseudacanthicus serratus* (Valenciennes, 1840)**

Hypostomus serratus Valenciennes in Cuvier & Valenciennes, 1840: 503 [372 in Strasbourg deluxe ed.]. Type locality: Surinam [Region around Paramaribo]. Holotype: RMNH 3125.

Maximum length: 32 cm SL

Distribution: South America: Coastal drainages of the Guianas.

Countries: French Guiana, Suriname

Remarks and references: New combination with type species

designation by Bleeker (1862: 2); information on type and locality by Boeseman (1972: 304); see Le Bail et al. (2000: 250, fig.) for a complementary description with biological observations.

Common names: Baaka wawa (Boni Amerindian), Mekolo (Wayana Amerindian), Tyobo wawa (Boni Amerindian)

***Pseudacanthicus spinosus* (Castelnau, 1855)**

Hypostomus spinosus Castelnau, 1855: 45, pl. 22 (fig. 3). Type locality: la rivière des Amazones. Holotype: MNHN A.9577.

Maximum length: 26 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

Remarks and references: New combination and redescription of species including the holotype by Regan (1904: 260); 12S and 16S mitochondrial rRNA gene sequences used in a molecular phylogeny of Loricariidae by Montoya-Burgos et al. (1998: figs. 3, 4, 6; EMBL/GenBank Y08283, Y08331).

Common names: Acari

PSEUDANCISTRUS

Pseudancistrus Bleeker, 1862: 2. Type species: *Hypostomus barbatus* Valenciennes, 1840. Type by original designation. Gender: masculine. See diagnosis based on osteological characters in Schaefer (1986: 114), with transfer from Hypostominae to Ancistrinae; no recent revision.

***Pseudancistrus barbatus* (Valenciennes, 1840)**

Hypostomus barbatus Valenciennes in Cuvier & Valenciennes, 1840: 506 [374 in Strasbourg deluxe ed.]. Type locality: La Mana [Mana River, French Guiana]. Holotype: MNHN A.9564.

Hypostomus guttatus Valenciennes in Cuvier & Valenciennes, 1840: 508 [375 in Strasbourg deluxe ed.]. Type locality: Surinam [Region near Paramaribo]. Holotype: RMNH 3126. Information on type and locality in Boeseman (1972: 305).

Pterygoplichthys barbatus (Steindachner, 1911): name proposed inadvertently by Isbrücker (1980: 40) (Nijssen & Isbrücker, 1987: 94).

Maximum length: 20 cm SL

Distribution: South America: Oyapock, Mana, Maroni, Suriname, Corantijn, and Essequibo River basins.

Countries: French Guiana, Guyana, Suriname

Remarks and references: Redescription of the holotype of *Hypostomus guttatus* by Bleeker (1864: 10, pl. 2 fig. 2, pl. 3 fig. 3); synonymy by Regan (1904: 240); see Le Bail et al. (2000: 252, fig.) for a complementary description of species, with biological observations and geographical distribution.

Common names: Goré-so (Creole), Pataede wawa (Boni Amerindian), Peulé (Wayana Amerindian), Yani anape (Oyampi Amerindian)

***Pseudancistrus coquenani* (Steindachner, 1915)**

Ancistrus (Pseudancistrus) coquenani Steindachner, 1915b: 76, pl. 11 (fig. 3). Type locality: dem Coquenanus, einem Nebenflusse des Caroni in Venezuela [=Kukenan River, also Cuquenán, Caroni basin]. Syntypes (3): NMW 48023 (2) (Eschmeyer 1998: 441). Name proposed conditionally as “*coquenani* n. sp.? an *A. güntneri* Regan female”.

Maximum length: 8.1 cm SL

Distribution: South America: Kukenan River basin in upper Caroni River drainage.

Countries: Venezuela

Common names: Corroncho (Venezuela)

***Pseudancistrus depressus* (Günther, 1868)**

Chaetostomus depressus Günther, 1868a: 476. Type locality: Surinam [Probably from Suriname]. Holotype: BMNH 1866.8.14.139.

Maximum length: 13 cm TL

Distribution: South America: Unknown locality in Suriname (?).

Countries: Suriname

Remarks and references: Discussion on type locality and information on holotype in Günther (1868b: 232); new combination by Eigenmann & Eigenmann (1889: 45); see Regan (1904: 240) for a complementary description.

***Pseudancistrus guentheri* (Regan, 1904)**

Ancistrus guentheri Regan, 1904: 241, pl. 12 (fig. 3). Type locality: British Guiana. Holotype: BMNH uncat. (Eschmeyer 1998: 685).

Maximum length: 12 cm TL

Distribution: South America: Unknown locality in Guyana.

Countries: Guyana

Remarks and references: New combination by Eigenmann (1910: 409).

***Pseudancistrus nigrescens* Eigenmann, 1912**

Pseudancistrus nigrescens Eigenmann, 1912b: 234, pl. 25 (fig. 2).

Type locality: British Guiana, Amatuk. Holotype: FMNH 53105 [ex CM 1539].

Maximum length: 18.2 cm TL

Distribution: South America: Upper Potaro River basin.

Countries: Guyana

PSEUDOLITHOXUS

Pseudolithoxus Isbrücker & Werner in Isbrücker et al., 2001: 21.

Type species: *Lasiancistrus tigris* Armbruster & Provenzano, 2000. Type by original designation. Gender: masculine. Genus description proposed for the *Lasiancistrus anthrax* species group as defined by Armbruster & Provenzano (2000: 242). See also this work for descriptions of all four species, key to species, and for discussions on biogeography and phylogenetic relationships.

***Pseudolithoxus anthrax* (Armbruster & Provenzano, 2000)**

Lasiancistrus anthrax Armbruster & Provenzano, 2000: 243, fig. 1B. Type locality: Venezuela, Estado Amazonas, Río Orinoco backwater behind sand beach ca. 0.5 hr. upstream from Isla Temblador, 03°04'N 66°28'W.

Holotype: MBUCV V-18384.

Maximum length: 12.4 cm SL

Distribution: South America: Upper and lower Orinoco tributaries, Caura and Aro rivers.

Countries: Venezuela

Remarks and references: New combination by Isbrücker & Werner in Isbrücker et al. (2001: 21).

***Pseudolithoxus dumus* (Armbruster & Provenzano, 2000)**

Lasiancistrus dumus Armbruster & Provenzano, 2000: 246, fig. 3B. Type locality: Venezuela, Estado Amazonas, Río Orinoco, backwater behind sand playa circa 0.5 hr. upstream from Isla Temblador, 03°04'N 66°28'W. Holotype: MBUCV V-17544.

Maximum length: 10.1 cm SL

Distribution: South America: Upper Orinoco, upper Negro and Casiquiare River basins.

Countries: Venezuela

Remarks and references: New combination by Isbrücker & Werner in Isbrücker et al. (2001: 21).

***Pseudolithoxus nicoi* (Armbruster & Provenzano, 2000)**

Lasiancistrus nicoi Armbruster & Provenzano, 2000: 249, fig. 4B.

Type locality: Venezuela, Estado Amazonas, Departamento Río Negro, Río Manipitare (Río Siapa drainage), from about 5 to 8 km upstream from confluence with Río Siapa. Holotype: MCNG 37033.

Maximum length: 11.4 cm SL

Distribution: South America: Upper Negro River basin, including Canal Casiquiare basin.
 Countries: Venezuela
 Remarks and references: New combination by Isbrücker & Werner in Isbrücker et al. (2001: 21).

***Pseudolithoxus tigris* (Armbruster & Provenzano, 2000)**

Lasiancistrus tigris Armbruster & Provenzano, 2000: 251, fig. 5B.
 Type locality: Venezuela, Estado Amazonas, backwater of Río Orinoco behind sand playa circa 0.5 hr. upstream from Isla Temblador, 03°04'N 66°28'W. Holotype: MBUCV-V 17546.

Maximum length: 9.4 cm SL
 Distribution: South America: Upper Orinoco and Ventuari River basins.
 Countries: Venezuela
 Remarks and references: New combination by Isbrücker & Werner in Isbrücker et al. (2001: 21).

SCOBINANCISTRUS

Scobinancistrus Isbrücker & Nijssen, 1989: 542. Type species: *Scobinancistrus pariolispos* Isbrücker & Nijssen, 1989. Type by original designation. Gender: masculine.

***Scobinancistrus aureatus* Burgess, 1994**

Scobinancistrus aureatus Burgess, 1994: 237, unnumbered fig. on p. 236. Type locality: Ilha da Fazenda, Rio Xingu, Estado Para, Brazil. Holotype: MZUSP 47690.

Maximum length: 25 cm SL
 Distribution: South America: Xingu River basin.
 Countries: Brazil
 Common names: Acari-da-pedra (Brazil)

***Scobinancistrus pariolispos* Isbrücker & Nijssen, 1989**

Scobinancistrus pariolispos Isbrücker & Nijssen, 1989: 542, fig. 1. Type locality: Brasilien, Est. Pará, Rio Tocantins, Jatobal. Holotype: INPA 1076.

Maximum length: 24.1 cm SL
 Distribution: South America: Tocantins and Tapajós River basins.
 Countries: Brazil
 Remarks and references: See Santos et al. (1984: 55, as *Panaque* sp.) for coloration of living specimens and ecological note; 12S and 16S mitochondrial rRNA gene sequences used in a molecular phylogeny of Loricariidae by Montoya-Burgos et al. (1998: figs. 3 & 6).
 Common names: Acari-da-pedra (Brazil)

SPECTRACANTHICUS

Spectracanthicus Nijssen & Isbrücker, 1987: 93. Type species: *Spectracanthicus murinus* Nijssen & Isbrücker, 1987. Type by original designation. Gender: masculine.

***Spectracanthicus murinus* Nijssen & Isbrücker, 1987**

Spectracanthicus murinus Nijssen & Isbrücker, 1987: 94, fig. 1 (middle). Type locality: Brésil, Est. Pará, système du Rio Tapajós: Poça de Pedra no Rio Tapajós, São Luis. Holotype: MZUSP 22011.

Maximum length: 6.4 cm SL
 Distribution: South America: Tapajós River basin.
 Countries: Brazil

Family Pseudopimelodidae (Bumblebee catfishes, dwarf marbled catfishes)

Oscar Akio Shibatta

Pseudopimelodidae can be considered the least known family among the naked Neotropical freshwater catfishes. By the monophyly of the group demonstrated by Lundberg et al. (1991) and its relationship with Loricarioidei suggested by de Pinna (1998), it is possible to sustain the family level. In relation to the species, in this checklist it is presented some new combinations based on the study of Shibatta (1998).

Members of the family can be distinguished from other fishes by their wide mouth, small eyes without free orbital margin and short barbels. Some genus has a beautiful pattern of coloration with wide dark brown blotches in the trunk. The size is variable, ranging from ca. 5 to 40 cm.

Although a relatively small family, with only 26 known species, the Pseudopimelodidae is widely distributed in South America. The distribution of the genus *Microglanis* is the widest, with 12 species ranging from the western slope of the Andes in Peru to the La Plata River basin in Argentina. New species of this genus have been recently discovered both in the Amazon region as in the eastern Brazil. The second genus of widest distribution is *Pseudopimelodus*, with five species presented since Atrato until La Plata, but it is not present in the Pacific slope of Andes. The genus *Cephalosilurus* comprises four species distributed in the Orinoco, Amazon and São Francisco River basins. The genus *Batrochoglanis* is represented in the Orinoco, Magdalena, and Amazon River basins and in Maracaibo basin. The monotypic genus *Lophiosilurus* is represented only in São Francisco River basin and certainly it is one of the most interesting species of catfish in South America.

The biology of the species of the family is poorly known. *Lophiosilurus alexandri* is being studied because its interest in the aquaculture (Bazzoli & Godinho, 1997) and because it is considered an animal threatened by extinction (Rosa & Menezes, 1996). This species is sedentary, living in calm waters, where it adopts an anglerfish like strategy of capture of preys. Its eggs are adhesive, with large diameter (1,51 mm) and the male takes care of its fry. The species of the genus *Batrochoglanis* and *Microglanis* are appreciated by aquarists because they are considered more sociable fishes than *Pseudopimelodus* and *Cephalosilurus* (Burgess, 1989). *Microglanis iheringi* was investigated by Winemiller (1989) and, like *L. alexandri*, its eggs have a large diameter (1.1 mm) and the parents take a brief period of care.

There are a lot of common names in Brazil, mainly to the species of the genera *Pseudopimelodus* and *Cephalosilurus*. In this Country these fishes are known as bagre-sapo, jaú-sapo (in Portuguese) or piracururu (in the native language Tupi-Guarani, pirá = fish and cururú = toad, Ihering, 1968; Bueno, 1998) because their gross morphology that resembles a toad. The species *Lophiosilurus alexandri* is known as pacamã or pacamão, a name derived from Tupi-guarani pacamõ (Bueno, op. cit.) that means the same. In English language the common names of the genus *Pseudopimelodus* and *Microglanis* are bumblebee catfishes or dwarf marble catfishes. In Brazil, the species of the genus *Microglanis* receive the name bagrinho, a general common name for small catfishes.

BATROCHOGLANIS

Batrochoglanis Gill, 1858: 389. Type species: *Pimelodus raninus* Valenciennes, 1840. Type by original designation. Gender: masculine. *Batrachoglanis*, first used in Gill (1861), is an emendation that was widely adopted. Genus revised by Shibatta (1998) within which the generic name was resurrected from synonymy.

***Batrochoglanis acanthochiroides* (Güntert, 1942)**

Pseudopimelodus acanthochiroides Güntert, 1942: 29. Type locality: Santander, Colombia. Syntypes: NMBA 5277-78.

Pseudopimelodus villosus butcheri Schultz, 1944: 199, pl. 1 (fig. b). Type locality: Río San Juan near bridge south of Mene Grande, tributary to Río Motatán, Maracaibo basin, Venezuela. Holotype: USNM 121270.

Maximum length: 80 cm TL

Distribution: South America: Catatumbo River basin in Lake Maracaibo drainage.

Countries: Colombia, Venezuela

Remarks and references: Common names according to Galvis et al. (1997) and Kenney (1985). Species revised by Shibatta (1998).

Common names: Bagre sapo (Colombia), Bumblebee catfish (used by aquarists)

***Batrochoglanis raninus* (Valenciennes, 1840)**

Pimelodus raninus Valenciennes in Cuvier & Valenciennes, 1840: 157 [117 in the Strasbourg deluxe ed.], pl. 434. Type locality: La Mana; near Rio de Janeiro, Brazil. Syntypes: MNHN A.9942 (3).

Pseudopimelodus acanthochirus Eigenmann & Eigenmann, 1888: 122. Type locality: Brazil. Syntypes: MCZ 8133 (Gurupa), MCZ 8157 (Tajapuru), MCZ 7732 (Teffé), MCZ 7332 (Jutahy).

Maximum length: 20 cm SL

Distribution: South America: Amazon River basin, Guyana and French Guiana.

Countries: Bolivia, Brazil, French Guiana, Guyana, Peru, Suriname

Remarks and references: Common names according to Valenciennes (1840) and Kenney (1985). The stated type locality of this species, Rio de Janeiro, is an error. Species revised by Shibatta (1998).

Common names: Bumblebee catfish (used by aquarists), Pimélode ranin (France)

***Batrochoglanis transmontanus* (Regan, 1913)**

Pseudopimelodus transmontanus Regan, 1913: 467. Type locality: Río San Juan, Colombia. Syntypes: (9) BMNH 1910.7.11.105, BMNH 1910.7.11.104, BMNH 1913.10.1.36, BMNH 1902.5.27.37-40.

Maximum length: 25 cm TL

Distribution: South America: Baudó, San Juan, Patia, and Durango River basins.

Countries: Colombia, Ecuador

Remarks and references: Common name according to Kenney (1985). In Axelrod et al. (1977: 494) there is a reference to the range of distribution of this species to the Peruvian Amazon, near Iquitos with the common name Peruvian mottled catfish. However, the photograph shown on the page resembles *B. raninus*, a species mentioned by Mees (1974) from the Peruvian Amazon.

Common names: Bumblebee catfish (used by aquarists)

***Batrochoglanis villosus* (Eigenmann, 1912)**

Pseudopimelodus villosus Eigenmann, 1912: 152, fig. 32, pl. 10 (fig. 1). Type locality: Potaro Landing, British Guiana. Holotype: FMNH 53219.

Maximum length: 14.8 cm TL

Distribution: South America: Demerara, Essequibo, Orinoco, and Amazon River basins.

Countries: Brazil, Guyana, Suriname, Venezuela

Remarks and references: Common name according to Kenney (1985).

Common names: Bumblebee catfish (used by aquarists)

CEPHALOSILURUS

Cephalosilurus Haseman, 1911: 317. Type species: *Cephalosilurus fowleri* Haseman, 1911. Type by monotypy. Gender: masculine. Genus revised by Shibatta (1998).

***Cephalosilurus albomarginatus* (Eigenmann, 1912)**

Pseudopimelodus albomarginatus Eigenmann, 1912: 153, pl. 11 (fig. 1). Type locality: Tukeit, British Guiana. Holotype: FMNH 53221.

Maximum length: 8.5 cm SL

Distribution: South America: Tukeit, Guyana.

Countries: Guyana

Remarks and references: Common name according to Kenney (1985).

Common names: Bumblebee catfish (used by aquarists)

***Cephalosilurus apurensis* (Mees, 1978)**

Pseudopimelodus apurensis Mees, 1978: 253, pl. 1. Type locality: Río Arichuna, near San Pedro, Rincón hondo, Apure, Venezuela. Holotype: RMNH 27644.

Maximum length: 29 cm SL

Distribution: South America: Arichuna River basin, Apure State.

Countries: Venezuela

Remarks and references: Species revised by Shibatta (1998).

***Cephalosilurus fowleri* Haseman, 1911**

Cephalosilurus fowleri Haseman, 1911: 317, pl. 46. Type locality: Río São Francisco, Cidade de Barra, Bahia, Brazil. Holotype: FMNH 54254.

Maximum length: 40.5 cm TL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Remarks and references: Common names according to Britski et

al. (1986) and Kenney (1985).

Common names: Bumblebee catfish (used by aquarists), Peixe-sapo (Brazil)

***Cephalosilurus nigricaudus* (Mees, 1974)**

Pseudopimelodus nigricauda Mees, 1974: 218, figs. 37d, 38d; pls. 11-12. Type locality: Sipaliwini, Suriname. Holotype: RMNH 26739.

Maximum length: 35 cm TL

Distribution: South America: Sipaliwini River basin.

Countries: Suriname

LOPHIOSILURUS

Lophiosilurus Steindachner, 1877: 154. Type species: *Lophiosilurus alexandri* Steindachner, 1877. Type by monotypy. Gender: masculine.

***Lophiosilurus alexandri* Steindachner, 1877**

Lophiosilurus alexandri Steindachner, 1877: 154, pl. 15. Type locality: Probably Amazonas, Brazil. Holotype: NMW 46123.

Lophiosilurus agassizi Steindachner, 1880: 61. Type locality: Probably Amazonas, Brazil. Holotype: NMW 46123. Unneeded new name for *Lophiosilurus alexandri* Steindachner, 1877.

Maximum length: 72 cm TL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Remarks and references: Common names according to Britski et al. (1986) and Ihering (1968). The name *L. agassizi* was mentioned by Steindachner to refer to *L. alexandri*. It is possible to conclude because he indicated the same reference of description of *L. alexandri* (Steindachner, Ichthyol. Beitr. V, p. 106, pl. XV). Species redescribed in Pinto & Marzulo (1975: 3).

Common names: Pacamã (Brazil), Pacamão (Brazil)

MICROGLANIS

Microglanis Eigenmann, 1912: 130, 155. Type species: *Microglanis poecilus* Eigenmann, 1912. Type by original designation. Gender: masculine.

***Microglanis ater* Ahl, 1936**

Microglanis ater Ahl, 1936: 109. Type locality: Brazil. Holotype: ZMB 20932.

Maximum length: 8.1 cm TL

Distribution: South America: Brazil (?).

Countries: Brazil

Remarks and references: Common name according to Kenney (1985).

Common names: Bumblebee catfish (used by aquarists)

***Microglanis cibela* Malabarba & Mahler, 1998**

Microglanis cibela Malabarba & Mahler, 1998: 249, figs. 1, 4-6. Type locality: arroio do Ouro, Rio Maquiné, between Maquiné and Barra do Ouro, Rio Grande do Sul, Brasil. Holotype: MZUSP 48653.

Maximum length: 7.1 cm SL

Distribution: South America: Coastal drainages in northern Rio Grande do Sul and Santa Catarina States.

Countries: Brazil

***Microglanis cottoides* (Boulenger, 1891)**

Pimelodus (Pseudopimelodus) cottoides Boulenger, 1891: 233, pl. 25 (fig. 2). Type locality: Rio Camaquã, Rio Grande do Sul, Brazil. Syntypes: BMNH 1891.3.16.36-45 and BMNH 1891.3.16.106.

Maximum length: 5.24 cm SL

Distribution: South America: Laguna dos Patos and Uruguay River basins.

Countries: Brazil

***Microglanis eurystoma* Malabarba & Mahler, 1998**

Microglanis eurystoma Malabarba & Mahler, 1998: 248, fig. 3.
Type locality: Rio Uruguay, Itá, Santa Catarina, Brazil. Holotype: MCP 13405.
Maximum length: 7.76 cm SL
Distribution: South America: Upper Uruguay River basin.
Countries: Brazil

***Microglanis iheringi* Gomes, 1946**

Microglanis iheringi Gomes, 1946: 9, pl. 1. Type locality: Río Turmero, Aragua, Venezuela. Holotype: FMNH 35350.
Maximum length: 6 cm TL
Distribution: South America: Turmero River basin.
Countries: Venezuela
Remarks and references: Common name according to Kenney (1985) and Barrow (1997). Biological observations in Winemiller (1989: 240).
Common names: Bumblebee catfish (used by aquarists)

***Microglanis nigripinnis* Bizerril & Perez-Neto, 1992**

Microglanis nigripinnis Bizerril & Perez-Neto, 1992: 97, figs. 1-2.
Type locality: Rio Macacu, Cidade de Papucaia, Município de Cachoeira do Macacu, Rio de Janeiro, Brazil. Holotype: MZUSP 42308.
Maximum length: 4 cm SL (holotype)
Distribution: South America: Macacu River basin in Rio de Janeiro State.
Countries: Brazil

***Microglanis parahybae* (Steindachner, 1880)**

Pseudopimelodus parahybae Steindachner, 1880: 60, pl. 1 (figs. 2-2b). Type locality: Rio Paraíba and Santa Cruz, Brazil. Syntypes: MCZ 8161 (25), MCZ 8162 (6); NMW 44433 (9), NMW44436 (1).
Maximum length: 8 cm TL
Distribution: South America: Paraíba do Sul River basin.
Countries: Brazil
Remarks and references: Common name according to Kenney (1985).
Common names: Bumblebee catfish (used by aquarists)

***Microglanis pellopterygius* Mees, 1978**

Microglanis pellopterygius Mees, 1978: 256, pl. 2. Type locality: Tributary stream of Río Aguarico at Santa Cecilia, 0°06'N, 76°51'W, Napo, Ecuador. Holotype: ANSP 130437.
Maximum length: 5.4 cm SL (holotype)
Distribution: South America: Aguarico River basin.
Countries: Ecuador

***Microglanis poecilus* Eigenmann, 1912**

Microglanis poecilus Eigenmann, 1912: 155, pl. 12 (fig. 2). Type locality: Below Packeo Falls, British Guiana. Holotype: FMNH 46365.
Maximum length: 6.9 cm SL
Distribution: South America: Essequibo River basin and French Guiana.
Countries: French Guiana, Guyana
Remarks and references: Common names according to Axelrod et al. (1977: 400) and Kenney (1985).
Common names: Bumblebee catfish (used by aquarists), Dwarf marbled catfish

***Microglanis secundus* Mees, 1974**

Microglanis secundus Mees, 1974: 235, fig. 40e; pl. 14. Type locality: Sipaliwini, Suriname. Holotype: RMNH 26525.
Maximum length: 4 cm SL
Distribution: South America: Catatumbo River basin; Guyana; Sipaliwini River basin.
Countries: Guyana, Suriname, Colombia.

Remarks and references: Common name according to Kenney (1985).
Common names: Bumblebee catfish (used by aquarists)

***Microglanis variegatus* Eigenmann & Henn, 1914**

Microglanis variegatus Eigenmann & Henn in Eigenmann, Henn & Wilson, 1914: 14. Type locality: Near Vinces, Ecuador. Holotype: CAS 17971.
Maximum length: 4.5 cm SL
Distribution: South America: Forest pool near Vinces, Ecuador.
Countries: Ecuador
Common names: Bumblebee catfish (used by aquarists)

***Microglanis zonatus* Eigenmann & Allen, 1942**

Microglanis zonatus Eigenmann & Allen, 1942: 89, pl. 3 (figs. 1-2). Type locality: Río Morona, Upper Amazon system. Holotype: CAS 17970.
Maximum length: 2 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Peru
Remarks and references: Common name according to Kenney (1985).
Common names: Bumblebee catfish (used by aquarists)

PSEUDOPIMELODUS

Pseudopimelodus Bleeker, 1858: 196, 204, 207. Type species: *Pimelodus bufonius* Valenciennes, 1840. Type by subsequent designation by Gill, 1861. Gender: masculine. Genus revised by Shibatta (1998).

***Pseudopimelodus bufonius* (Valenciennes, 1840)**

Pimelodus Bufonius Valenciennes in Cuvier & Valenciennes, 1840: 154 [115 in the Strasbourg deluxe ed.]. Type locality: Probably Cayenne, French Guiana. Holotype: RMNH (lost).
Maximum length: 24.5 cm SL
Distribution: South America: Rivers of northeastern South America from Lake Maracaibo basin to eastern Brazil.
Countries: Brazil, Colombia, French Guiana, Suriname, Venezuela and Guyana.
Remarks and references: Common names according to Valenciennes (1840), Galvis et al. (1997) and Kenney (1985). Maybe the species from the Maracaibo basin is a new species, not described yet. I have seen fishes from Northern Brazil, from the Amazon basin that are very close to the original description. Therefore, the distribution range of this species will change with clarification of the taxonomic situation.
Common names: Bagre sapo (Brazil), Bumblebee catfish (used by aquarists), Jaú sapo (Brazil), Pimélode crapaudin (France)

***Pseudopimelodus charus* (Valenciennes, 1840)**

Pimelodus charus Valenciennes in Cuvier & Valenciennes, 1840: 159 [118 in the Strasbourg deluxe ed.]. Type locality: Sabara River, Brazil. No types known, but Mees (1974, frontispiece) reproduced a figure used by Valenciennes to describe the species.
Maximum length: 20.2 cm SL
Distribution: South America: São Francisco River basin.
Countries: Brazil
Remarks and references: Common names according to Valenciennes (1840) and Britski et al. (1986). Species removed from synonymy of *Pseudopimelodus bufonius* by Shibatta (1998).
Common names: Peixe-sapo (Brazil), Pimélode charu (France)

***Pseudopimelodus mangurus* (Valenciennes, 1835)**

Pimelodus mangurus Valenciennes, 1835: pl. 1 (figs. 4-6). Type locality: Río de la Plata, Argentina. Syntypes: MNHN A.8401, MNHN A.9417.
Pseudopimelodus roosevelti Borodin, 1927: 1, fig. 1. Type locality: Parassununga, Estado São Paulo, Brazil. Holotype: AMNH 8638.

Maximum length: 34.5 cm SL

Distribution: South America: Uruguay, Paraná, Paraguay and La Plata River basins.

Countries: Argentina, Bolivia, Brazil, Paraguay, Uruguay

Remarks and references: Common names according to Valenciennes (1840), Galvis et al. (1997), Godoy (1986), MacDonagh (1937), Kenney (1985) and Ihering (1968).

Common names: Bagresapo (Colombia), Bumblebee catfish (used by aquarists), Jaú sapo (Brazil), Manguruyú amarillo (Argentina), Pimélode manguru (French), Piracururu (Brazil)

***Pseudopimelodus pulcher* (Boulenger, 1887)**

Pimelodus (Pseudopimelodus) pulcher Boulenger, 1887: 276, pl. 21 (fig. 1). Type locality: Canelos, e. Ecuador. Syntypes: BMNH 1880.12.8.105-107.

Pseudopimelodus variolosus Miranda Ribeiro, 1914: 4, pls. 1 (fig. 2), 2 (figs. 1-2). Type locality: Coxim, Rio Taquary, Mato Grosso, Brazil. Lectotype: MNRJ 818A, designated by Miranda Ribeiro (1953: 404).

Maximum length: 8.7 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil, Ecuador

***Pseudopimelodus schultzi* (Dahl, 1955)**

Zungaro zungaro schultzi Dahl, 1955: 13. Type locality: Cereté, Colombia. Holotype: no repository stated.

Maximum length: 20.7 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

SPECIES INQUIRENDA

Zungaro mathisoni Fernández-Yépez, 1972: 22, pl. 41. Type locality: Río Yaracuy drainage, Venezuela. Holotype: no repository stated.

Family Heptapteridae (Heptapterids)

Flávio A. Bockmann and Gizelani M. Guazzelli

The family Heptapteridae, as here delimited, closely corresponds to the subfamily Rhamdiinae of Lundberg et al. (1991a), and Heptapterinae of de Pinna (1998). Thus, the Heptapteridae includes many catfishes long classified together in the Pimelodidae but now placed in a more restricted version of Pimelodidae (Lundberg & Littmann, this volume) and Pseudopimelodidae (Shibatta, this volume). Despite being a highly distinctive clade, the family Heptapteridae remained undiagnosed and even unknown as a monophyletic group until recently. Some of its genera have even been historically associated to members of families other than Pimelodidae, such as *Heptapterus*, *Nannoglanis*, and *Pariolius*, assigned to the family Trichomycteridae (e.g. Günther, 1864; Cope, 1872; Boulenger, 1887), and *Taunayia*, traditionally treated as a member of the Doradidae or Auchenipteridae (e.g. Jordan, 1923; Gosline, 1945). The genus *Phreatobius*, due its highly distinct morphology, ecology, and habitat (phreatic environments), is one of the greatest puzzles in catfish systematics (de Pinna, 1998), having been referred to the families Cetopsidae, Clariidae, Heptapteridae, Olyridae (a monogeneric family presently synonymized in Bagridae – Mo, 1991), old Pimelodidae, and Trichomycteridae (e.g. Goeldi, 1905; Fuhrmann, 1906; Eigenmann, 1910; Myers, 1944; de Pinna, 1993; Stewart, 1986a; Buckup, 1988).

The earliest version of the family Heptapteridae, as currently conceived, goes back to the beginning of the last century when Regan (1911), based on osteological characters, recognized within the family Pimelodidae (in its old conception) a group composed exclusively of *Heptapterus*, *Nannoglanis*, *Pimelodella*, and *Rhamdia*, genera currently included in the family Heptapteridae. One of the diagnostic features used by Regan (1911) - “anterior and posterior rami of parapophysis of fourth vertebra connected at the base only” - is an early definition of one of most conspicuous synapomorphies for this group (cf. Lundberg & McDade, 1986; Lundberg et al, 1991a). However, it was only 17 years ago that Heptapteridae was recognized as a monophyletic on basis of cladistic methodology by Lundberg & McDade (1986). This group, then treated only as an unnamed “pimelodid” clade, includes the following taxa: *Brachyglanis*, *Brachyrhamdia*, *Cetopsorhamdia*, *Goeldiella*, *Heptapterus*, *Imparfinis*, *Myoglanis*, *Nannorhamdia*, *Pariolius*, *Pimelodella*, *Pimelodus heteropleura*, *Rhamdella*, *Rhamdia*, and *Typhlobagrus*. This group was only formally named five years later, as the subfamily Rhamdiinae Bleeker (1862) of the ancient family Pimelodidae (Lundberg et al., 1991a). De Pinna (1993) raised Rhamdiinae to family category in his unpublished Ph.D. thesis. Silfvergrip (1996) rightly pointed out the priority of the name Heptapterinae Gill (1861) over Rhamdiinae Bleeker (1862). Indeed, the first published usage of familial rank for this group, as Rhamdiidae, was made by Swarça et al. (2000), based on de Pinna’s thesis (1993). This group is therefore dealt as the family Heptapteridae.

Due its morphological and habitats peculiarities, *Phreatobius* is one of the most intriguing heptapterid genus. Goeldi (1905), when described it, speculated on its affinities to Cetopsidae and Trichomycteridae, but concluded its characters should exclude it from those groups. Fuhrmann (1906) considered it closely related to marine catfishes currently dealt as Plotosidae. Norman (1926) assigned it to the family Trichomycteridae, and this purpose was followed by Myers (1944), Gosline (1945), and Thinès (1969). Eigenmann (1910) included *Phreatobius*, with doubts, in the old family Pimelodidae. This opinion was followed by Jordan (1923). Eigenmann (1918) cited *Phreatobius* in an addendum to its monograph on the family Pygidiidae [=Trichomycteridae], but not assigned it to this group in any moment. The first reference to the family Heptapteridae can be found in Eigenmann (1919a), who mentioned that *Phreatobius* was be remotely related to *Heptapterus*. Reichel (1927), in his classical monograph on anatomy of *Phreatobius cisternarum*, did not express his opinion on the systematic position of this fish, but compared it intensively with *Heptapterus*. Myers (1928) considered *Phreatobius* related to a “pimelodid” group including several heptapterids. This hypothesis was also supported by Stewart (1986a), Buckup (1988), Lundberg et al. (1991a), and Bockmann (1998). Buckup (1988) went further, synonymizing *Phreatobius* in *Heptapterus*. Bockmann (1998) corroborated it a member of Heptapteridae, as closely related to *Brachyglanis*, *Gladioglanis*, *Myoglanis*, and *Leptorhamdia*. However, this hypothesis might be questioned because several of the characters are reductive or missing and therefore impossible to code for phylogenetic analysis. De Pinna (1993) proposed a sister-group relationship between *Phreatobius* and the family Olyridae, currently included in Bagridae. Later de Pinna (1998) speculated on its putative alignment as the sister group to all Clariidae, or as a highly derived heptapterid, based on comparison of some anatomical specializations. This question remains unresolved and, as pointed out de Pinna (1998), to state accurately its phylogenetic position, a large cladistic analysis involving heptapterids, clariids, and many other catfishes, is need. Molecular data might be particularly useful in this task (de Pinna, 1998), since most of morphological complexes of *Phreatobius* are highly modified, making homologies difficult to identify.

Among those valid heptapterid genera, only *Gladioglanis* (Lundberg et al., 1991a) and *Mastiglanis* (Bockmann, 1994) were diagnosed under phylogenetic methodology. All remaining genera were stated through combination of characters, or by wrong or imprecise traits, rather than uniquely derived features. As consequence, several heptapterid species had an almost free transit through the permeable boundaries of the heptapterid genera. Most of taxonomic actions involving heptapterid genera has weak or no support. Eigenmann (1910) and Haseman (1911a) emphatically treated *Rhamdioglanis* as a junior synonym of *Imparfinis*, a procedure widely followed until our times, despite no critical analysis on these question has been carried to date (cf. Mees, 1974). The validity of *Brachyrhamdia* has been questioned on occasion, and this genus treated as a junior synonym of *Pimelodella* (cf. Schultz, 1944b, Innes & Myers, 1950). However, this decision is unfounded since no character analysis supported it, both genera have quite different type species, and the monophyly of *Pimelodella* was never demonstrated. Gosline (1940, 1941) considered *Pariolius* as a senior synonym of *Nannoglanis*, but no evidence to support this procedure was provided. This was also the case regarding the inclusion of *Leptorhamdia* in the synonymy of *Myoglanis* (Gosline, 1941). The most influential taxonomic acts concerning the family were made by Mees (1967, 1974), who synonymized the genera *Acentronichthys*, *Chasmocranus*, *Imparales*, *Medemichthys*, *Nannoglanis*, *Pariolius*, and *Phenacorhamdia* in *Heptapterus*, and treated *Nannorhamdia* as a junior synonym of *Imparfinis*. Even though Mees' proposals have been followed by several authors, his works failed because he used non-informative features or characters with uncertain polarities (Buckup, 1988). Buckup (1988) considered *Phreatobius* as a highly modified species of *Heptapterus*, based mainly on the common possession of a long adipose fin connected to the caudal fin, and high number of vertebrae and anal-fin rays, features occurring in several other heptapterid genera. On the other hand, five proposals on generic taxonomy of the family Heptapteridae appears to be correct, since they were based on careful comparisons: *Pimelenotus* as junior synonym of *Rhamdia* (cf. Gill, 1861; Silfvergrip, 1996), *Typhlobagrus* as junior synonym of *Pimelodella* (cf. Pavan, 1946), *Caecorhamdella* as junior synonym of *Pimelodella* (cf. Trajano & Britski, 1992), *Caecorhamdia* as junior synonym of *Rhamdia* (cf. Mees, 1974; Silfvergrip, 1996). Bockmann (1998), in a yet unpublished Doctoral thesis, performed a phylogenetic analysis of Heptapteridae as a whole, providing a new classification for the family, especially at generic level. In order to adjust the generic nomenclature of the family Heptapteridae to reflect the components produced in the cladistic analysis, heavy modifications were implemented: among its 31 nominal genera, eight genera were sunk, and 11 new genera were erected. However, a systematic revision is not the proposal of this catalog. Then, in order to avoid increasing of the confusion on heptapterid taxonomy, none of those nomenclatural conclusions will be employed.

The state of species level taxonomy is poorly developed, paralleling the situation presented by their genera. Among those genera, only *Gladioglanis* (Lundberg et al., 1991a), *Mastiglanis* (Bockmann, 1994), *Nemuroglanis* (Ferraris, 1988), *Rhamdia* (Silfvergrip, 1996), and *Taunayia* (Oliveira & Britski, 2000) had their taxonomies studied in some detail. *Mastiglanis* and *Taunayia* are monotypic, *Gladioglanis* and *Nemuroglanis* comprised only two described species each, and *Rhamdia* possess 11 valid species (Silfvergrip, 1996). Until seven years ago, the only revisionary study on a multispecific heptapterid genus was that of Eigenmann (1917) on *Pimelodella*. In that study, 12 new species were described and overall comments on the species known to date were made (Eigenmann, 1917). However, that contribution did not involve a detailed morphological comparison among species known, and many species were added to *Pimelodella* since that date. For this reason, most of nominal *Pimelodella* species are here maintained as valid by default, waiting for the complete revision of the genus (Guazzelli, in prep.). Silfvergrip (1996) reviewed the taxonomy of the doubtless paraphyletic genus *Rhamdia*, reducing the about 100 described species to only 11 valid species. In this study was made a detailed and almost complete revision of the literature about the nominal species historically assigned to *Rhamdia*. Most of the conclusions of that author are followed herein. Britski (1993), besides describing a new species for *Phenacorhamdia*, characterized morphologically this genus and distinguished it from *Heptapterus*, including four other species in its composition. Oliveira & Britski (2000) assigned the genus *Taunayia* to the family Heptapteridae, and redescribed *T. bifasciata* (Eigenmann & Norris, 1900), its unique valid species.

To calculate the diversity of the family Heptapteridae is a hard task, taking into account the poor state of knowledge of its taxonomy. It can be roughly estimated that the family is composed of around 150-200 valid species, plus about 40-50 species to be described.

The family Heptapteridae is diagnosed through the following five synapomorphies (Lundberg & McDade, 1986; Ferraris, 1988; Lundberg et al., 1991a):

- posterior limb of fourth transverse process laterally expanded above swimbladder and notched once to several times;
- neural spines of Weberian complex centrum joined by a straight-edged, horizontal or sometimes sloping bony lamina;
- process for insertion of levator operculi muscle on posterodorsal corner of hyomandibula is greatly expanded;
- quadrate with free dorsal margin and bifid shape, its posterior and anterior limbs articulate separately with hyomandibula and metapterygoid;
- presence of an anteriorly recurved process (“mesethmoid hook”) drawn out from ventrolateral corner of mesethmoid.

In spite of being easily diagnosed by means of anatomical features, heptapterids lack unique externally visible characteristics, making difficult its distinction from some members of the families Pimelodidae and Pseudopimelodidae. Most of its members can be identified among South American siluriforms, by a combination of features:

- skin naked (a few species have slightly enlarged lateral line ossicles);
- cutaneous laterosensory canals simple (few species have branched laterosensory canals on the head and anterior trunk);

- small sized, usually with 20 cm SL or less (species of *Goediella*, *Rhamdella*, *Pimelodella*, *Rhamdia*, *Rhamdioglanis*, can exceed);
- nares well separated and lacking barbels;
- 3 pairs of barbels: maxillary, inner and outer mentals;
- adipose fin well developed;
- caudal fin deeply forked, emarginate, rounded, or lanceolate;
- gill membranes free, branchial openings not restricted;
- orbital rim free or not;
- first dorsal- and pectoral-fin rays varying from having pungent spines to completely flexible or mostly segmented.

The phylogenetic relationships of Heptapteridae at suprageneric level are less known. Stewart (1986a) recognized a monophyletic group within that “pimelodid” group proposed by Lundberg & McDade (1986) which corresponds to Heptapteridae, on basis in the common possession of “flexible first pectoral fin-ray”. This clade, called *Heptapterus* group, was composed of genera *Acentronichthys*, *Cetopsorhamdia*, *Heptapterus*, *Imparfinis*, *Nannorhamdia*, *Pariolius*, and perhaps *Phreatobius*. Besides proposing the first phylogenetically recognized version of Heptapteridae, Lundberg & McDade (1986) speculated on the closely relationships among *Brachyrhamdia*, *Cetopsorhamdia*, *Goediella*, *Pimelodella*, *Pimelodus heteropleura*, *Rhamdella*, *Rhamdia*, *Typhlobagrus*, and an unidentified species of *Nannorhamdia*, on basis of the following synapomorphy: “...the fifth transverse process smaller than fourth, but similarly expanded and notched”. Stewart (1986b) treated in greater detail his *Heptapterus* group, adding the then described *Horiomyzon*, but not mentioning in its composition the genera *Acentronichthys* and *Phreatobius*. Stewart (1986b) also briefly discussed the incompatibilities of his *Heptapterus* group and that subgroup suggested by Lundberg & McDade (1986). Stewart (1986b) also mentioned another putative synapomorphy for the *Heptapterus* group: “the relatively low total number of vertebrae [39 or less]”. However, most of species of *Acentronichthys*, *Heptapterus*, and *Phreatobius*, genera included in his *Heptapterus* group, have much more vertebrae. Ferraris (1988) proposed a clade comprising the majority of the small-sized heptapterids, called *Nemuroglanis* sub-clade, based on the following derived characteristics: 1- “the laminar portion of complex centrum transverse process, posterior to branched segment, is triangular and extends nearly to the lateral tip of the fifth vertebral transverse process”; 2- “the first dorsal-fin basal pterygiophore is inserted behind Weberian complex, usually above vertebrae 7 and 10”; 3- “the “dorsal-fin spine” is thin and flexible and the dorsal-fin lock (=first dorsal spine) is absent”; e 4- “the pectoral-fin “spine” is thin and flexible for its distal half, rather than pungent”. This assemblage approximately corresponds to the *Heptapterus* group of Stewart (1986a, b). Based on the sharing of “...reduction and loss of the free orbital rim...”, Lundberg et al. (1991a) hypothesized a heptapterid subgroup more inclusive than the *Nemuroglanis* sub-clade, also including the genera *Brachyglanis*, *Gladioglanis*, *Leptorhamdia*, and *Myoglanis*, which is an equivalent of that called “Rhamdiinae I” by de Pinna (1993). Bockmann (1994) proposed eleven new synapomorphies to corroborate the monophyly of the *Nemuroglanis* sub-clade. At same time, this author also proposed a new genus, *Mastiglanis*, hypothesized as the sister group of the *Nemuroglanis* sub-clade, and *Nemuroglanis* as the next sister group to the rest of the clade. Bockmann (1998), in his Doctoral dissertation, made an encompassing phylogenetic analysis of the family Heptapteridae, producing major rearrangements in the generic and suprageneric classification. The monophyly of the family was corroborated, as well as of the *Nemuroglanis* subclade, and that group proposed by Lundberg et al. (1991a). As novelties, we can mention: the monophyly of that group composed of *Brachyglanis*, *Gladioglanis*, *Leptorhamdia*, *Myoglanis*, and *Phreatobius*, which is the sister group to the *Nemuroglanis* subclade; *Rhamdella* as the sister group this encompassing group mentioned; and *Goediella* as the most basal heptapterid genus.

The relationships of the family Heptapteridae among siluriforms are still less investigated, with only five proposed hypotheses, all supported by weak character evidence. Lundberg et al. (1988) suggested that two then unnamed clades of the old family Pimelodidae, equivalent to the families Heptapteridae and Pseudopimelodidae, should be closely related. This proposal is weakly supported, since that feature is present in several other catfish families (Lundberg et al., 1991a). Mo (1991) carried out a phylogenetic analysis of the order Siluriformes, including the family Heptapteridae. However, the unique heptapterid examined in this study was *Rhamdia*, which was considered forming a clade with Ariidae, Auchenipteridae, Doradidae, Mochokidae, and Pimelodidae, based on number of infraorbitals. Arratia (1992) produced a phylogenetic analysis of siluriforms considered as primitive by her, including the heptapterids *Heptapterus* and *Rhamdia*. These two genera were considered closely to the pimelodid *Parapimelodus* and ariids genera *Bagre* and *Galeichthys*. However, *Heptapterus* and *Rhamdia* did not form a clade, but successive sister groups of those other genera. This is probably due to fact that the synapomorphies proposed for the family by Lundberg et al. (1991a) were not taken into account. According to de Pinna (1993), the sister group of the family Heptapteridae should be an Asiatic section of the non-monophyletic family Bagridae. Bockmann (1998) suggested that Heptapteridae can be one of the most basal lineage, if not the most basal, of a large clade proposed by de Pinna (1993) which also includes Ariidae, Auchenipteridae, Austroglanididae, Bagridae, Chacidae, Clariidae, Cranoglanididae, Doradidae, Horabagridae, Ictaluridae, Malapteruridae, Mochokidae, Pangasiidae, Plotosidae, Pimelodidae, Schilbidae, and Siluridae.

Heptapterids are endemic to the Neotropics, being one of the most representative components of the order Siluriformes in small body waters from Central and South America. The members of this family occur in rivers draining into Atlantic Ocean from northern Mexico to southern Argentina, and from Pacific slopes, from northern Mexico to southern Peru. Some species have a wide distribution throughout this vast region. The family also has several locally exclusive representatives in

all areas of ichthyological endemism recognized in the Neotropics. However, no biogeographical study considering heptapterids has been carried out to this moment, due to the paucity of phylogenetic, taxonomic, and distributional information available for the group.

The adults of heptapterid species rarely surpasses a size of 20 cm SL (e.g. species of *Goeldiella*, *Heptapterus*, *Pimelodella*, *Rhamdia*, *Rhamdioglanis*), and more than 60% of the species herein considered have a maximum length of 10 cm SL. *Horiomyzon retropinnatus*, that is slightly longer than 2 cm SL, was included in the list of miniature fishes from South America (Weitzman & Vari, 1988). Species of *Gladioglanis*, *Imparales*, *Medemichthys*, *Nemuroglanis*, and *Pariolius* should be treated as miniatures also, despite sometimes exceed the size limit of 2.6 cm SL stated by Weitzman & Vari to characterize a miniature fish (1988). *Phreatobius cisternarum*, despite reaching 5.5 cm SL, fits into the definition of "elongated miniature" (Weitzman & Vari, 1988) since it has a great number of paedomorphic traits.

Due the small size of most of its species, the family Heptapteridae has little or no importance in commercial and recreational fisheries. Species of *Brachyrhamdia* and *Pimelodella* are appreciated as ornamental fishes.

Ecologically, heptapterids do not differ from most of other siluriforms, being usually adapted to benthic life. Generalizing, heptapterids live in small to medium size rivers (mainly in second to fifth order streams). They occur in clear or black, cold, and moderate to fast flowing waters, occupying low to medium depths. Some species live in crevices formed in rocky bottom (e.g. *Chasmocranus*, *Heptapterus*, *Phenacorhamdia*, *Rhamdioglanis*), others are found associated to the marginal vegetation (e.g. *Rhamdiopsis*), and other buried in sand (e.g. *Imparfinis pristus*, *Mastiglanis*). Most of heptapterids are active mainly at night (cf. Costa, 1987, Caramaschi, 1991; Casatti & Castro, 1998). Heptapterids tend to be solitary or to organize in small groups up to 10 individuals (e.g. species of *Acentronichthys*, *Brachyrhamdia*, *Heptapterus*, and *Pimelodella*; pers. obs.). One of most interesting habitat adaptations are those of *Phreatobius cisternarum*, which inhabits phreatic waters around mouth of the Amazon River, in Brazil (Trajano, 1996). However, Carvalho (1967) kept in aquarium one specimen for one year, observing that the fish did not display cryptic behavior, and swam in midwater, occasionally resting on top of aquatic plants. Some members of the family are not exclusive bottom dwelling, such as species of *Brachyrhamdia* (Innes & Myers, 1950) and *Pimelodella* (pers. obs.), which frequently swim to middle of water column. When occurring in large rivers, they are often associated to their margins. *Horiomyzon retropinnatus* is an exception, since it lives in deep-river channels, as those of the Amazon, Napo, and Solimões rivers, in which are found in places deeper than 20 m (Lundberg, pers. comm.). Heptapterids are rare or absent in stagnant swamps. The presence and greater abundance of heptapterids in streams with dense vegetal coverage and waters of good quality is remarkable, so that they can work as efficient indicators to the health of the environment.

The family Heptapteridae includes several genera with troglomorphic species (Proudlove, 1997; Trajano, 1997): *Pimelodella kronei*, from State of São Paulo, southeastern Brazil, *Phreatobius* spp., from Brazilian Amazon, *Rhamdia* spp. from Mexico and Belize, *Rhamdiopsis* sp., an undescribed species from upper course of São Francisco River basin (Bockmann & Castro, in prep.), *Taunayia* sp., from northern State of Bahia, northeastern Brazil, and a new genus from Chapada Diamantina, State of Bahia, northeastern Brazil (Castro et al., in prep.). Also, an undescribed blind heptapterid, likely assignable to *Rhamdia*, was recently found in northwestern Venezuela (Lundberg, pers. comm.). Trajano & Bockmann (1999) presented a study on the evolution of ecology and behavior of Brazilian heptapterid cave catfishes. Several behavioral features of the species known to date were interpreted as appearing homoplastically, including regression of photophobia, of cryptobiotic habits and of circadian locomotor rhythms. Solitary habit is probably an autapomorphy of *P. kronei*, but a plesiomorphy for *Taunayia* sp. and the new genus. Non-strictly benthic habit may be an autapomorphy for the two latter. Adaptations to phreatic life are apomorphic for *Phreatobius*, *Taunayia* and the new genus. An overview on population size and densities, use of space, feeding, and life history of subterranean heptapterids is presented by Trajano (2001).

Species of *Acentronichthys* (Sato, 1987), *Cetopsorhamdia* (Casatti & Castro, 1998), *Imparfinis* (Saul, 1975; Casatti & Castro, 1998), *Pariolius* (Saul, 1975), *Pimelodella* (Saul, 1975; Soares-Porto, 1994; Aranha et al., 1998), *Rhamdia* (Costa, 1987; Castro & Casatti, 1997), and *Rhamdiopsis* (Castro & Casatti, 1997) had their dietary habits studied. Most of those heptapterids are generalized carnivores or omnivores that consume chiefly arthropods in all stages, from autochthonous and allochthonous sources, as well as, fishes, nematods, algae, debris of vascular plants etc. Lepidophagy, but not exclusive, has been reported in species for *Pimelodella* (Costa, 1987; Saul, 1975; Soares-Porto, 1994). An exception to carnivory appears to be *Phreatobius cisternarum*. During one entire year, an aquarium specimen of *P. cisternarum* did not eat any of the live or dead food items offered (Carvalho, 1967), so that it likely fed on microorganisms since it stayed in good health for the entire period of captivity (de Pinna, 1998). Species of *Cetopsorhamdia*, *Imparfinis*, *Phenacorhamdia*, *Pimelodella* were found hunting their prey by excavating the substrate, using their mouths and barbels to turn over the sand-gravel substrate (Casatti & Castro, 1998; Casatti et al., 2001). Feeding of *Pimelodella pappenheimi* was described by Aranha et al. (1998), who considered it having an opportunistic behavior of picking up items in the substrate.

Sex dimorphism is not present or scarcely developed in heptapterids. Juveniles of most species are miniature replicas of adults. There are few data on reproductive cycle of heptapterids, probably due its reduced importance in commercial fisheries and aquarium hobbyist. These catfishes are externally fertilizing and are not known to practice parental care. Amaral et al. (1998) described reproductive females of *Pimelodella pappenheimi* burrowing in the clay palisades of the sediments of a small coastal stream in southern Brazil, a behavior adaptation to protect the offspring from being washed away by seasonal

floods. Apparently, these fishes have long reproductive periods along the year and do not make noteworthy migratory displacements during the reproductive and spawning epochs (cf. Caramaschi, 1991; São-Tiago, 1990), which are efficient strategies for fishes that inhabit small-sized rivers, known for their small physical stability due seasonal floods. However, *Pimelodella pappenheimi* has been mentioned to reproduce mainly seasonally (Amaral et al., 1998). There are reports of migration of *R. quelen* (see references in Lamas, 1993), but this can be the case of large specimens, which likely only realize moderate movements.

Fossils of Heptapteridae are apparently rare, being restrict to broken spiny portions of the dorsal and pectoral fins, found in the Cenozoic of Buenos Aires Province, in Argentina. These fragments were identified as pertaining to "*Pimelodella cf. P. laticeps*" and "*Rhamdia cf. R. sapo*" in the localities "Arroyo del Azul" and "Paso de Otero", Pleistocenian formation of Luján (Arratia & Cione, 1996; Cione, 1982; 1986). Arratia & Cione (1996) reported "*Rhamdia cf. R. sapo*" from "Paso de Otero". These materials, however, deserve further studies to verify those identifications.

SPECIES INCERTAE SEDIS IN HEPTAPTERIDAE

***Pimelodus parvus* Boulenger, 1898**

Pimelodus (Rhamdia) parvus Boulenger, 1898: 7. Type locality: du Rio Santiago, du Rio Zamora et du Rio Bomboiza. Syntypes: BMNH 1898.11.4.5-6, BMNH 1898.11.4.7.

Maximum length: 8 cm SL

Distribution: South America: Maraón River basin.

Countries: Ecuador

Remarks and references: Silfvergrip (1996: 29) assigned it to *Nannorhamdia* [= *Imparfinis*].

ACENTRONICHTHYS

Acentronichthys Eigenmann & Eigenmann, 1889: 28. Type species: *Acentronichthys leptos* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: masculine.

***Acentronichthys leptos* Eigenmann & Eigenmann, 1889**

Acentronichthys leptos Eigenmann & Eigenmann, 1889: 29. Type locality: Sao Matheos [=São Mateus, State of Espírito Santo, Brazil]. Holotype: MCZ 7532.

Maximum length: 9.1 cm SL

Distribution: South America: Coastal streams from Rio de Janeiro to Santa Catarina State, and in São Mateus, in Espírito Santo State (in Espírito Santo it is known only from its type locality).

Countries: Brazil

Common names: bagre, bagrinho, mandizinho.

BRACHYGLANIS

Brachyglanis Eigenmann, 1912: 156. Type species: *Brachyglanis frenata* Eigenmann, 1912. Type by original designation. Gender: masculine. Written as *Breviglanis* in Eigenmann (1910: 384), but without available species.

***Brachyglanis frenata* Eigenmann, 1912**

Brachyglanis frenata Eigenmann, 1912: 156. Type locality: Amatak [in Essequibo River basin, Guyana]. Holotype: FMNH [ex CM 1670] (missing).

Maximum length: 9.9 cm SL

Distribution: South America: Essequibo, Negro, Orinoco, and Urubu River basins.

Countries: Brazil, Guyana, Venezuela

***Brachyglanis magoi* Fernández-Yépez, 1967**

Brachyglanis magoi Fernández-Yépez, 1967: 162, pl. 1. Type locality: río Uruyén medio. Holotype: AFY 56611.

Maximum length: 8.3 cm SL

Distribution: South America: Caroní River basin in Orinoco River drainage.

Countries: Venezuela.

Common names: valentón, laulao

***Brachyglanis melas* Eigenmann, 1912**

Brachyglanis melas Eigenmann, 1912: 157, pl. 11 (fig. 2). Type locality: Crab Falls. Holotype: FMNH 53217 [ex CM 1672].

Maximum length: 6 cm TL

Distribution: South America: Essequibo River basin.

Countries: Guyana

***Brachyglanis microphthalmus* Bizerril, 1991**

Brachyglanis microphthalmus Bizerril, 1991: 2, fig. 1. Type locality: Brasil, Pará, Município de Oriximiná, Bacia do rio Trombetas, drenagem do Lago Sapucaá, Igarapé Saracá. Holotype: MNRJ 11788.

Maximum length: 6.8 cm SL

Distribution: South America: Trombetas River basin.

Countries: Brazil

***Brachyglanis nocturnus* Myers, 1928**

Brachyglanis nocturnus Myers, 1928: 84. Type locality: Rock-pools at São Gabriel Rapids, Rio Negro, Brazil. Holotype: CAS 63393.

Maximum length: 8.1 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

***Brachyglanis phalacra* Eigenmann, 1912**

Brachyglanis phalacra Eigenmann, 1912: 157, pl. 12 (fig. 1), pl. 13 (fig. 1). Type locality: Amatak [in Essequibo River basin, Guyana]. Holotype: FMNH 53216 [ex CM 1671].

Maximum length: 8.1 cm TL

Distribution: South America: Essequibo River basin.

Countries: Guyana

BRACHYRHAMDIA

Brachyrhamdia Myers, 1927: 123. Type species: *Brachyrhamdia imitator* Myers, 1927. Type by original designation and monotypy. Gender: feminine.

***Brachyrhamdia heteropleura* (Eigenmann, 1912)**

Pimelodus heteropleurus Eigenmann, 1912: 176, pl. 16 (fig. 2). Type locality: Rupununi Pan [in Essequibo River basin, Guyana]. Holotype: FMNH 53336 [ex CM 1734].

Maximum length: 4.3 cm SL

Distribution: South America: Coratijn, Essequibo, and Negro River basins.

Countries: Brazil, Guyana, Suriname

Remarks and references: Suggested to be closely related to *Brachyrhamdia* and *Pimelodella* (Lundberg et al., 1991b: 860).

***Brachyrhamdia imitator* Myers, 1927**

Brachyrhamdia imitator Myers, 1927: 123. Type locality: Caño de Quiribana, near Caicara. Holotype: CAS 54359 [ex IU 17695].

Maximum length: 5.4 cm SL

Distribution: South America: Caura River basin in Orinoco River drainage.

Countries: Venezuela.

***Brachyrhamdia marthae* Sands & Black, 1985**

Brachyrhamdia marthae Sands & Black, 1985: 58 (4), photographs on p. 58 (7). Type locality: Peru, aquarium import. Holotype: RMNH 29424.

Maximum length: 7.6 cm SL

Distribution: South America: Juruá and Mamoré/Madeira River basins.

Countries: Bolivia, Brazil, Peru

***Brachyrhamdia meesi* Sands & Black, 1985**

Brachyrhamdia meesi Sands & Black, 1985: 58 (5), photographs on p. 58 (7). Type locality: Near Belem, Brazil. Holotype: RMNH 29425.

Maximum length: 6.1 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Brachyrhamdia rambarrani* (Axelrod & Burgess, 1987)**

Pimelodella rambarrani Axelrod & Burgess in Axelrod, 1987: 24, figs. Type locality: Rio Unini, trib. of Rio Negro, Amazonas, Brazil. Holotype: MZUSP 37693.

Maximum length: 5.5 cm SL

Distribution: South America: Unini River basin in upper Negro River drainage.

Countries: Brazil

CETOPSORHAMDIA

Cetopsorhamdia Eigenmann & Fisher in Eigenmann, 1916: 83. Type species: *Cetopsorhamdia nasus* Eigenmann, 1916. Type by original designation and monotypy. Gender: feminine.

***Cetopsorhamdia boquillae* Eigenmann & Fisher in Eigenmann, 1922**

Cetopsorhamdia boquillae Eigenmann & Fisher in Eigenmann, 1922: 37, pl. 1 (fig. 3). Type locality: Boquilla. Holotype: FMNH 55212 [ex CM 3923].

Maximum length: 7.2 cm SL

Distribution: South America: Cauca River basin in Magdalena River drainage.

Countries: Colombia

***Cetopsorhamdia filamentosa* Fowler, 1945**

Cetopsorhamdia filamentosa Fowler, 1945: 4, fig. 5. Type locality: San Ramón, Vallé de Chanchamayo, at 800 meters elevation, Peru. Holotype: ANSP 71637.

Maximum length: 2.9 cm TL

Distribution: South America: Tulumayo River basin in upper Ucayali River drainage.

Countries: Peru

***Cetopsorhamdia iheringi* Schubart & Gomes, 1959**

Cetopsorhamdia iheringi Schubart & Gomes, 1959: 1, fig. 1. Type locality: Ribeirão Areia Branca, próximo à estrada carroçável para Piraçununga, bacia do Rio Mogi Guaçu, Município de Descalvado [Brazil]. Holotype: EEBP 368.

Maximum length: 10.6 cm SL

Distribution: South America: Upper reaches of the Paraná and São Francisco River basins.

Countries: Brazil

Common names: bagrinho, lobó

***Cetopsorhamdia insidiosa* (Steindachner, 1917)**

Imparfinis insidiosus Steindachner, 1917: 61, pl. 12 (fig. 7). Type locality: Rio branco bei Bem Querer und im Rio Surumú, einem Nebenflusse des Rio Miang. Syntypes: NMW 46095.

Maximum length: 7.7 cm SL

Distribution: South America: Branco River basin.

Countries: Brazil

Remarks and references: The article containing the original description of *I. insidiosus* was presented in a meeting two years earlier (Steindachner, 1917: 58), but this species was not included in the respective abstract (Steindachner, 1915).

***Cetopsorhamdia molinae* Miles, 1943**

Cetopsorhamdia molinae Miles, 1943: 26. Type locality: Bugalagrande. Holotype: ICNMHN probably lost (see Cala, 1981: 1).

Cetopsorhamdia shermani Schultz, 1944b: 220, pl. 2 (fig. c). Type locality: Río Guárico and tributaries between San Sebastián and San Casimiro (Orinoco system), Estado de Aragua, Venezuela. Holotype: USNM 121216.

Maximum length: 3.6 cm SL

Distribution: South America: Magdalena, Orinoco, and Tocantins River basins.

Countries: Brazil, Colombia, Venezuela

Common names: bagrecito (Venezuela)

***Cetopsorhamdia nasus* Eigenmann & Fisher, 1916**

Cetopsorhamdia nasus Eigenmann & Fisher in Eigenmann, 1916: 83. Type locality: Honda, Colombia. Holotype: FMNH 58126 [ex CM 7124].

Maximum length: 7.2 cm TL

Distribution: South America: Magdalena River basin.

Countries: Colombia

Common names: bobito, ciego

Remarks and references: Holotype illustrated in Eigenmann & Fisher in Eigenmann (1922: 36, fig. 10, 285, pl. 4, fig. 1).

***Cetopsorhamdia orinoco* Schultz, 1944**

Cetopsorhamdia orinoco Schultz, 1944b: 225, pl. 3 (fig. A). Type locality: Río Torbes, 1 km. above Tárriba, Orinoco system, Venezuela. Holotype: USNM 121214.

Maximum length: 5.4 cm SL

Distribution: South America: Napo and Orinoco River basins.

Countries: Ecuador, Venezuela

Common names: bagrecito

***Cetopsorhamdia phantasia* Stewart, 1985**

Cetopsorhamdia phantasia Stewart, 1985: 340, fig. 1. Type locality: Ecuador, Río Jivino, west of Limoncocha, approx. 0°24.6'S, 76°39.0'W. Holotype: FMNH 94601.

Maximum length: 4 cm SL

Distribution: South America: Napo River basin.

Countries: Ecuador

***Cetopsorhamdia picklei* Schultz, 1944**

Cetopsorhamdia picklei Schultz, 1944b: 222, pl. 2 (fig. D). Type locality: Río Motatán, 4 km. above Motatán, Maracaibo basin. Holotype: USNM 121217.

Maximum length: 12 cm SL

Distribution: South America: Maracaibo Lake basin.

Countries: Venezuela

Common names: bagrecito, bagresito

CHASMOCRANUS

Chasmocranus Eigenmann, 1912: 160. Type species: *Chasmocranus longior* Eigenmann, 1912. Type by original designation. Gender: masculine. Named *Chasmocephalus* in Eigenmann (1910: 384) but without available species.

***Chasmocranus brachynema* Gomes & Schubart, 1958**

Chasmocranus brachynema Gomes & Schubart, 1958: 413, fig. 1. Type locality: Rio Mogi Guaçu, Cachoeira de Emas, Município de Piraçununga, Estado de São Paulo. Holotype: EEBP 617.

Maximum length: 13.1 cm SL

Distribution: South America: Mogi Guaçu River basin in upper

Paraná River drainage.
Countries: Brazil

***Chasmocranus brevior* Eigenmann, 1912**

Chasmocranus brevior Eigenmann, 1912: 162, pl. 15 (fig. 1). Type locality: Waratuk. Holotype: FMNH 53213 [ex CM 1662].
Maximum length: 7.9 cm SL
Distribution: South America: Mana and Marowijne/Maroni River basins, and Potaro River.
Countries: French Guiana, Guyana, Suriname

***Chasmocranus chimantanus* Inger, 1956**

Chasmocranus chimantanus Inger, 1956: 425, fig. 92. Type locality: Rio Abácapa on west side of Chimantá-tepui. Holotype: FMNH 45704.
Maximum length: 8.9 cm SL
Distribution: South America: Caroní and Carapo River basins in Orinoco River drainage.
Countries: Venezuela

***Chasmocranus longior* Eigenmann, 1912**

Chasmocranus longior Eigenmann, 1912: 160, pl. 14 (fig. 2). Type locality: Amatuk. Holotype: FMNH 53208 [ex CM 1655].
Maximum length: 17 cm SL
Distribution: South America: Coastal drainages from Guyana to Surinam, Negro, Orinoco, and Xingu River basins.
Countries: Brazil, Guyana, Surinam, Venezuela
Remarks and references: Populations of *Chasmocranus* currently assigned to *C. longior* from the Maroni River, in French Guiana, to State of Amapá, in Brazil, pertain to an undescribed species.

***Chasmocranus lopezi* Miranda Ribeiro, 1968**

Chasmocranus Lopezi Miranda Ribeiro, 1968: 4, fig. 2. Type locality: Corrego Quente - Cubatão? - Estado de São Paulo - Brasil. Holotype: MNRJ 9705.
Maximum length: 5.4 cm TL
Distribution: South America: Undetermined stream in São Paulo State.
Countries: Brazil

***Chasmocranus peruanus* Eigenmann & Pearson, 1942**

Chasmocranus peruanus Eigenmann & Pearson in Eigenmann & Allen, 1942: 91, pl. 3 (fig. 4). Type locality: Puerto Melendez below Pongo de Manseriche, Rio Marañon. Holotype: CAS 63627 [ex IU 15869] smaller specimen.
Maximum length: 5.2 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Peru
Common names: bagre

***Chasmocranus quadrizonatus* Pearson, 1937**

Chasmocranus quadrizonatus Pearson, 1937: 93. Type locality: Tingo de Pauca, Rio Marañon, Peru. Holotype: CAS 63628 [ex IU 17659].
Maximum length: 4.9 cm SL
Distribution: South America: Marañon River basin.
Countries: Peru
Common names: bagre

***Chasmocranus rosae* Eigenmann, 1919**

Chasmocranus rosae Eigenmann, 1919b: 127. Type locality: Rio Negro, Villavicencio. Holotype: FMNH 55140 [ex CM 3841].
Maximum length: 5.5 cm SL
Distribution: South America: Meta River basin.
Countries: Colombia

***Chasmocranus surinamensis* (Bleeker, 1862)**

Heptapterus surinamensis Bleeker, 1862: 387. Type locality: Surinama. Holotype: RMNH 2984.

Maximum length: 12.3 cm SL
Distribution: South America: Suriname River basin.
Countries: Suriname.
Remarks and references: According to Mees (1967: 226), type locality of *H. surinamensis* in the Suriname River is presumably not far from Paramaribo.

***Chasmocranus truncatorostris* Borodin, 1927**

Chasmocranus truncatorostris Borodin, 1927b: 5, fig. 4. Type locality: Col. Hansa Joinville, Sta. Catharina Prov., Brazil. Holotype: AMNH 8640.
Maximum length: 11 cm SL
Distribution: South America: Known only from the type locality.
Countries: Brazil.

GLADIOGLANIS

Gladioglanis Ferraris & Mago-Leccia, 1989: 166. Type species: *Gladioglanis machadoi* Ferraris & Mago-Leccia, 1989. Type by original designation. Gender: masculine.

***Gladioglanis conquistador* Lundberg, Bornbusch & Mago-Leccia, 1991**

Gladioglanis conquistador Lundberg, Bornbusch & Mago-Leccia, 1991: 192, fig. 7A. Type locality: Ecuador, Napo Province, Río Napo basin, Río Aguarico sub-basin, north tributary of Río Cuyabeno, ca 3 km above Laguna Grande de Cuyabeno, 0°1.5'S, 76°13.2'W. Holotype: FMNH 99288.
Maximum length: 3.9 cm SL
Distribution: South America: Capim, Napo, Purus, and Solimões River basins.
Countries: Brazil, Ecuador

***Gladioglanis machadoi* Ferraris & Mago-Leccia, 1989**

Gladioglanis machadoi Ferraris & Mago-Leccia, 1989: 167, fig. 1. Type locality: Territorio Federal Amazonas, Venezuela, Departamento Río Negro, Caño Manu of Casiquiare canal, approx. 250 m upstream of Solano, 2°00'N, 66°57'W. Holotype: MBUCV V-16000.
Maximum length: 3.4 cm SL
Distribution: South America: Negro and Orinoco River basins.
Countries: Brazil, Venezuela
Common names: bagre (Venezuela)

GOELDIELLA

Goeldiella Eigenmann & Norris, 1900: 353. Type species: *Pimelodus eques* Müller & Troschel, 1848. Type by original designation. Gender: feminine.

***Goeldiella eques* (Müller & Troschel, 1848)**

Pimelodus eques Müller & Troschel in Schomburgk, 1848: 628. Type locality: in allen Flüssen Guiana's. Holotype: ZMB 3049.
Maximum length: 28.9 cm SL
Distribution: South America: Guyana and Amazon River basins.
Countries: Brazil, Guyana, Peru, Venezuela
Common names: bagre

HEPTAPTERUS

Heptapterus Bleeker, 1858: 197. Type species: *Pimelodus mustelinus* Valenciennes, 1835. Type by monotypy. Gender: masculine.

***Heptapterus bleekeri* Boeseman, 1953**

Heptapterus bleekeri Boeseman, 1953: 3, fig. 1a. Type locality: Marowijne basin [Type locality was corrected to creek on eastern side of the Nassau Mountains, belonging to the Marowijne/Maroni River basin, Suriname by Mees (1983: 55)]. Nassau Mountains in brooklet. Holotype: RMNH 19421 (largest of 2).

Maximum length: 14.4 cm SL
 Distribution: South America: Marowijne/Maroni River basin, and State of Amapá.
 Countries: Brazil, French Guiana, Suriname

Heptapterus collettii (Steindachner, 1881)

Heptapterus collettii Steindachner, 1881a: 98. Type locality: La Plata (?). Syntype: NMW 46191:1.
 Maximum length: 5.8 cm SL
 Distribution: South America: La Plata (?).
 Countries: Argentina (?)
 Remarks and references: Species first described in above abstract, later illustrated and described in more detail in Steindachner (1881b: 7, pl. 5, fig. 1) and Steindachner (1882: 7, pl. 5, fig. 1).

Heptapterus fissipinnis Miranda Ribeiro, 1911

Heptapterus fissipinnis Miranda Ribeiro, 1911: 240. Text says pl. 35 (fig. 5), but there is no illustration. Type locality: corrego afluyente do Rio Estrella [probably in the State of Rio de Janeiro, Brazil]. Holotype: MNRJ (probably lost). Misspelled *ñssipinnis* in heading for account.
 Maximum length: 6 cm TL
 Distribution: South America: Stream tributary to the Estrela River.
 Countries: Brazil

Heptapterus multiradiatus Ihering, 1907

Heptapterus multiradiatus Ihering, 1907: 20. Type locality: ribeirão do Alto da Serra, Estado de S. Paulo. Holotype: MZUSP 294.
 Maximum length: 9.6 cm SL
 Distribution: South America: Upper Tietê River basin.
 Countries: Brazil

Heptapterus mustelinus (Valenciennes, 1835)

Pimelodus mustelinus Valenciennes, 1835: pl. 2 (fig. 1). Type locality: Rio de la Plata. No types known.
Heptapterus eigenmanni Steindachner, 1907: 487. Type locality: Maldonado. Lectotype: MCZ 7597, designated by Buckup (1988: 650) but wrongly cited as MCZ 7579.
 Maximum length: 20.9 cm SL
 Distribution: South America: La Plata and Uruguay River basins, and coastal drainages of southern Brazil.
 Countries: Argentina, Brazil, Uruguay
 Common names: bagre, bagre-de-pedra (Brazil); bagre, bagre anguilla, refalosa, resbalisa, resbalosa, tusca, yusca (Argentina)
 Remarks and references: Name available from plate (cf. Sherborn & Griffin, 1934: 131); the correspondent text appeared only in Valenciennes (1847: 7) as *Pimelodus mustelinus*.

Heptapterus ornaticeps Ahl, 1936

Heptapterus ornaticeps Ahl, 1936: 110. Type locality: Rio de Janeiro [probably incorrect]. Holotype: ZMB 20933.
 Maximum length: 6.8 cm SL
 Distribution: South America: Rio de Janeiro, Brazil (?).
 Countries: Brazil (?)

Heptapterus stewarti Haseman, 1911

Heptapterus stewarti Haseman, 1911b: 376, pl. 74. Type locality: Serrinha Paraná, in a creek about one-half mile from the Rio Iguassú. Holotype: FMNH 54234 [ex CM 2850].
 Maximum length: 13.9 cm SL
 Distribution: South America: Iguaçú River basin.
 Countries: Brazil
 Common names: bagre da pedra, chicote, cobriッサ

Heptapterus sympterygium Buckup, 1988

Heptapterus sympterygium Buckup, 1988: 644, fig. 1. Type locality: Canal at east side of highway BR-471 near pumping house of the Departamento Nacional de Obras de Saneamento (DNOS), 52°31'W, 32°32'S, Ecological Station of Taim (EET), Rio

Grande, State of Rio Grande do Sul (RS), Brazil. Holotype: MZUSP 19179.
 Maximum length: 4.7 cm SL
 Distribution: South America: Coastal lowlands of eastern Rio Grande do Sul State.
 Countries: Brazil

Heptapterus tapanahoniensis Mees, 1967

Heptapterus tapanahoniensis Mees, 1967: 223, fig. 2. Type locality: Tapanahoni, about two kilometres [sic] downstream from its confluence with the Paloemeu. Holotype: RMNH 25546.
 Maximum length: 11.1 cm SL
 Distribution: South America: Maroni/Marowijne and Sinnamary River basins.
 Countries: French Guiana, Suriname

Heptapterus tenuis Mees, 1986

Heptapterus tenuis Mees, 1986: 322, fig. 3. Type locality: Crique Cascade Moyen, Maroni. Holotype: RMNH 29422.
 Maximum length: 7.3 cm SL
 Distribution: South America: Maroni/Marowijne River basin.
 Countries: French Guiana

HORIOMYZON

Horiomyzon Stewart, 1986b: 47. Type species: *Horiomyzon retropinnatus* Stewart, 1986. Type by original designation. Gender: masculine.

Horiomyzon retropinnatus Stewart, 1986

Horiomyzon retropinnatus Stewart, 1986b: 48, fig. 1. Type locality: Ecuador, Napo Province, Río Napo at Añangu, just downstream from confluence with Río Añangu Cocha, lat. 0°31.6'S, long. 76°22.9'W. Holotype: FMNH 96553.
 Maximum length: 2.4 cm SL
 Distribution: South America: Amazon and Napo River basins.
 Countries: Brazil, Ecuador

IMPARALES

Imparales Schultz, 1944a: 93. Type species: *Imparales mariaii* Schultz, 1944a. Type by original designation. Gender: masculine.

Imparales mariaii Schultz, 1944

Imparales mariaii Schultz, 1944a: 94, fig. 1. Type locality: Río Meta system at Villavicencio, Colombia (Orinoco drainage). Holotype: USNM 121251.
 Maximum length: 3.8 cm SL
 Distribution: South America: Meta River basin.
 Countries: Colombia

Imparales panamensis Bussing, 1970

Imparales panamensis Bussing, 1970: 7, fig. 2. Type locality: Panamá: Veraguas Prov., creek crossing road on s side of Santa Fe (elev. 305 m). Holotype: USNM 204692.
 Maximum length: 7.2 cm SL
 Distribution: Central America: River basin draining Veraguas Province, Tuirá River basin in the Darién Province, Frijoles River in the Panamá Province.
 Countries: Panama

IMPARFINIS

Imparfinis Eigenmann & Norris, 1900: 351. Type species: *Imparfinis piperatus* Eigenmann & Norris, 1900. Type by monotypy. Gender: masculine.

Nannorhamdia Regan, 1913b: 467. Type species: *Nannorhamdia spurrellii* Regan, 1913. Type by monotypy. Gender: feminine.

Imparfinis borodini Mees & Cala, 1989

Imparfinis longicauda Borodin, 1927b: 4, fig. 3. Type locality:

Franca, Rio Grande, Prov. of S. Paulo, Brazil. Holotype: AMNH 8639. Preoccupied in *Imparfinis* by *Pimelodus longicauda* Boulenger, 1887, replaced by *Imparfinis borodini* Mees & Cala (1989).

Imparfinis borodini Mees & Cala, 1989: 387. Type locality: Franca, Rio Grande, Prov. of S. Paulo, Brazil. Holotype: AMNH 8639. Replacement for *Imparfinis longicauda* Borodin, 1927.

Maximum length: 15.7 cm SL

Distribution: South America: Upper Paraná, São Francisco, and Tocantins River basins

Countries: Brazil

Common names: Bagre, mané-comprido

***Imparfinis cochabambae* (Fowler, 1940)**

Pimelodella cochabambae Fowler, 1940b: 80, fig. 36. Type locality: Boca Chapare, Cochabamba, Bolivia. Holotype: ANSP 69066.

Maximum length: 6 cm SL

Distribution: South America: Beni River basin.

Countries: Bolivia

***Imparfinis guttatus* (Pearson, 1924)**

Nannorhamdia guttatus Pearson, 1924: 11, pl. 2 (fig. 2). Type locality: Popoi River, Upper Beni. Holotype: CAS 63689 [ex IU 17268].

Maximum length: 12.7 cm SL

Distribution: South America: Mamoré and Pilcomayo River basins.

Countries: Bolivia, Peru

***Imparfinis hasemani* Steindachner, 1917**

Imparfinis hasemani Steindachner, 1917: 59, fig. 1. Type locality: Rio Surumú bei Serra do Mello, dem Rio branco bei Bem Querer und dem Rio Tapajos bei Santarem. Syntypes: NMW 46093: 1.

Maximum length: 8.1 cm SL

Distribution: South America: Branco and Tapajós River basins.

Countries: Brazil

Remarks and references: The article containing the original description of *I. hasemani* was presented in a meeting two years earlier (cf. Steindachner, 1917: 58), but this species was not included in the respective abstract (Steindachner, 1915).

***Imparfinis hollandi* Haseman, 1911**

Imparfinis hollandi Haseman, 1911b: 383, pl. 48 (fig. 2). Type locality: Porto União da Victoria, Rio Iguassú. Holotype: FMNH 54244 [ex CM 2864].

Maximum length: 23 cm SL

Distribution: South America: Iguazu River basin.

Countries: Argentina, Brazil

Common names: Guasco

***Imparfinis lineatus* (Bussing, 1970)**

Nannorhamdia lineata Bussing, 1970: 1, fig. 1. Type locality: Costa Rica: Puntarenas Prov., Quebrada 36 (elev. 80 m) 12 km W of Pueblo Río Claro at Interamerican Highway. Holotype: LACM 30688-1.

Maximum length: 7 cm SL

Distribution: Central America: Streams in Puntarenas Province.

Countries: Costa Rica

***Imparfinis longicaudus* (Boulenger, 1887)**

Pimelodus (Rhamdia) longicauda Boulenger, 1887: 275, pl. 20 (fig. 2). Type locality: Canelos [Ecuador]. Syntypes: BMNH 1880.12.8.100-104.

Maximum length: 11.7 cm.

Distribution: South America: Bobonaza River basin in upper Parata River drainage.

Countries: Ecuador

Common names: Bagre

***Imparfinis microps* Eigenmann & Fisher, 1916**

Imparfinis microps Eigenmann & Fisher in Eigenmann, 1916: 82.

Type locality: Rio Negro at Villavicencio, Colombia. Holotype: FMNH 57793 [ex CM 6776 (78 mm), not 8778].

Maximum length: 6.1 cm SL

Distribution: South America: Meta River basin.

Countries: Colombia

Remarks and references: Holotype illustrated in Eigenmann & Fisher in Eigenmann (1922: 285, pl. 4, fig. 2-3). Wrongly described as a new species in Eigenmann & Fisher in Eigenmann (1919b: 128).

***Imparfinis minutus* (Lütken, 1874)**

Rhamdia minuta Lütken, 1874: 35. Type locality: in provincia Minas-geraes circa oppidulum Lagoa Santa, praecipue in flumine Rio das Velhas et affluentibus. Syntypes: ZMUC 325x, 327x, 328.

Maximum length: 7.2 cm SL

Distribution: South America: Upper São Francisco River basin.

Countries: Brazil

Common names: bagre, bagrinho, mandizinho

Remarks and references: Detailed description and illustration of *R. minuta* appeared in Lütken (1875: 179-180, pl. 3, fig. 6).

***Imparfinis mirini* Haseman, 1911**

Imparfinis mirini Haseman, 1911a: 318, pl. 47. Type locality: Near Piracicaba above the falls of Rio Piracicaba-mirini. Holotype: FMNH 54335 [ex CM 2981].

Maximum length: 8.5 cm SL

Distribution: South America: Upper Araguaia and Paraná River basins.

Countries: Brazil

Common names: bagrinho, lobó, mandizinho

***Imparfinis nemacheir* (Eigenmann & Fischer, 1916)**

Nannorhamdia nemacheir Eigenmann & Fisher in Eigenmann, 1916: 83. Type locality: Girardot, Colombia. Holotype: FMNH 58127 [ex CM 7125].

Maximum length: 9.9 cm SL

Distribution: South America: Upper Amazon and Orinoco River basins, and Lake Maracaibo basin.

Countries: Colombia, Peru, Venezuela

Common names: bagrecito, bagresito (Venezuela)

Remarks and references: Holotype illustrated in Eigenmann & Fisher in Eigenmann (1922: 41, fig. 13, 285, pl. 4, fig. 4).

***Imparfinis pijpersi* (Hoedeman, 1961)**

Cetopsorhamdia pijpersi Hoedeman, 1961: 132, fig. 2. Type locality: Surinam: ... Sipaliwini river, sta. 43, 20 km from frontier with Brasil. Holotype: ZMA 102230.

Maximum length: 9.5 cm SL

Distribution: South America: Coratijn River basin.

Countries: Suriname

***Imparfinis piperatus* Eigenmann & Norris, 1900**

Imparfinis piperatus Eigenmann & Norris, 1900: 352. Type locality: S. Paulo, Brazil. Holotype: CAS 63636 [ex IU 9298].

Maximum length: 3.2 cm SL

Distribution: South America: State of São Paulo

Countries: Brazil

Remarks and references: The locality where the holotype of *Imparfinis piperatus* was collected, according the title of the article in which was described, is "S. Paulo, Brazil" [=State of São Paulo, Brazil], either in tributaries of upper Paraná River and coastal streams (Eigenmann & Norris, 1900: 349).

***Imparfinis pristos* Mees & Cala, 1989**

Imparfinis pristos Mees & Cala, 1989: 391, fig. 3. Type locality: Colombia: ... second tributary, left side, from the mouth of the

Rio Tomo, Vichada. Holotype: ICNMHN 1401.
Maximum length: 3.8 cm SL
Distribution: South America: Negro and Orinoco River basins.
Countries: Brazil, Venezuela

***Imparfinis pseudonemacheir* Mees & Cala, 1989**

Imparfinis pseudonemacheir Mees & Cala, 1989: 387, fig. 2. Type locality: Venezuela: ... Rio Tucuragua, near Caicara, Bolívar. Holotype: RMNH 30489 (1 of 3, 37.5 mm SL).

Maximum length: 4 cm SL
Distribution: South America: Orinoco and Ucayali River basins.
Countries: Colombia, Peru, Venezuela

***Imparfinis schubarti* (Gomes, 1956)**

Nannorhamdia schubarti Gomes, 1956: 404, fig. 1. Type locality: da Cachoeira de Emas, Rio Mogi Guaçu, e do Córrego do Tijuco Prêto, um seu afluente, Município de Pirassununga, São Paulo. Holotype: EEBP 379.

Maximum length: 9.3 cm SL
Distribution: South America: Upper Paraná River basin.
Countries: Brazil
Common names: bagrinho, lobó, mandizinho

***Imparfinis spurrellii* (Regan, 1913)**

Nannorhamdia spurrellii Regan, 1913b: 467. Type locality: R. Condoto. Holotype: BMNH 1913.10.1.41.

Maximum length: 6.2 cm SL
Distribution: South America: San Juan River basin.
Countries: Colombia

***Imparfinis stictionotus* (Fowler, 1940)**

Nannorhamdia stictionotus Fowler, 1940b: 66, fig. 22. Type locality: Todos Santos, Rio Chapare, Bolivia. Holotype: ANSP 68892.

Maximum length: 4.8 cm SL
Distribution: South America: Mamoré/Madeira, Paraguay, and Ucayali River basins.
Countries: Bolivia, Brazil, Ecuador
Common names: bagrinho, mandizinho (Brazil)

LEPTORHAMDIA

Leptoglanis Eigenmann, 1912: 158. Type species: *Leptoglanis essequibensis* Eigenmann, 1912. Type by original designation. Gender: masculine. Preoccupied by *Leptoglanis* Boulenger, 1902.

Leptorhamdia Eigenmann, 1918: 260. Type species: *Leptoglanis essequibensis* Eigenmann, 1912. Type by being a replacement name. Gender: feminine. Replacement for *Leptoglanis* Eigenmann, 1912.

***Leptorhamdia essequibensis* (Eigenmann, 1912)**

Leptoglanis essequibensis Eigenmann, 1912: 158, pl. 13 (fig. 2). Type locality: Crab Falls. Holotype: FMNH 53331 [ex CM 1652].

Maximum length: 16 cm SL
Distribution: South America: Essequibo and lower Tocantins River basins.
Countries: Brazil, Guyana

***Leptorhamdia marmorata* Myers, 1928**

Leptorhamdia marmorata Myers, 1928: 83. Type locality: Rockpools at São Gabriel Rapids, Rio Negro, Brazil. Holotype: CAS 63671.

Maximum length: 12.8 cm SL
Distribution: South America: Negro River basin.
Countries: Brazil, Venezuela

***Leptorhamdia schultzi* (Miranda Ribeiro, 1964)**

Rhamdella schultzi Miranda Ribeiro, 1964: 1, fig. 1. Type locality: Alto Rio Xingú. Holotype: MNRJ 9549.

Maximum length: 9.4 cm SL (Miranda Ribeiro, 1964: 1).
Distribution: South America: Upper Xingu River basin.
Countries: Brazil

MASTIGLANIS

Mastiglanis Bockmann, 1994: 762. Type species: *Mastiglanis asopos* Bockmann, 1994. Type by original designation. Gender: masculine.

***Mastiglanis asopos* Bockmann, 1994**

Mastiglanis asopos Bockmann, 1994: 762, fig. 1. Type locality: Brazil, Pará, Igarapé Saracazinho, tributary of rio Trombetas, near Porto Trombetas. Holotype: MNRJ 12227.

Maximum length: 6.6 cm SL
Distribution: South America: Amazon, Capim, and Orinoco River basins.
Countries: Brazil, Venezuela
Common names: bagrinho, mandizinho (Brazil)

MEDEMICHTHYS

Medemichthys Dahl, 1961: 490. Type species: *Medemichthys guayaberensis* Dahl, 1961. Type by original designation. Gender: masculine.

***Medemichthys guayaberensis* (Dahl, 1961)**

Medemichthys guayaberensis Dahl, 1961: 491, unnum. fig. [2] on p. 493. Type locality: small brook near the Expedition's camp I, on the left side of the Guayabero River. Holotype: probably lost (see Cala, 1981: 1).

Maximum length: 4.1 cm SL
Distribution: South America: Guaviare River basin.
Countries: Colombia

MYOGLANIS

Myoglanis Eigenmann, 1912: 159. Type species: *Myoglanis potaroensis* Eigenmann, 1912. Type by original designation. Gender: masculine.

***Myoglanis koepcke* Chang, 1999**

Myoglanis koepcke Chang, 1999: 434, fig. 1. Type locality: Peru, Departamento Loreto, Provincia Maynas, Quebrada of the Mishana camp, small tributary of the Río Nanay, 03°52'S, 73°29'W, 107 m elevation. Holotype: MUSM 10045.

Maximum length: 5.9 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Peru

***Myoglanis potaroensis* Eigenmann, 1912**

Myoglanis potaroensis Eigenmann, 1912: 159, pl. 14 (fig. 1). Type locality: Creek at Tukeit [Guyana]. Holotype: FMNH 53333 [ex CM 1664].

Maximum length: 11.3 cm TL
Distribution: South America: Essequibo River basin.
Countries: Guyana

NANNOGLANIS

Nannoglanis Boulenger, 1887: 278. Type species: *Nannoglanis fasciatus* Boulenger, 1887. Type by monotypy. Gender: masculine.

***Nannoglanis fasciatus* Boulenger, 1887**

Nannoglanis fasciatus Boulenger, 1887: 278, pl. 21 (fig. 3). Type locality: eastern Ecuador. Syntypes: BMNH 1880.12.5.149-150.

Maximum length: 4.5 cm SL
Distribution: South America: Napo River basin.
Countries: Ecuador

NEMUROGLANIS

Nemuroglanis Eigenmann & Eigenmann, 1889: 29. Type species: *Nemuroglanis lanceolatus* Eigenmann & Eigenmann, 1889. Type by original designation. Gender: masculine.

***Nemuroglanis lanceolatus* Eigenmann & Eigenmann, 1889**

Nemuroglanis lanceolatus Eigenmann & Eigenmann, 1889: 29. Type locality: Jutahy [= Jutaf River, tributary of the Solimões River, State of Amazonas, Brazil]. Holotype: MCZ 8169.

Maximum length: 3.8 cm SL

Distribution: South America: Napo and Solimões River basins.

Countries: Brazil, Ecuador

***Nemuroglanis pauciradiatus* Ferraris, 1988**

Nemuroglanis pauciradiatus Ferraris, 1988: 510, fig. 1. Type locality: Venezuela: Territorio Federal Amazonas; morichal 26.9 km from Puerto Ayacucho along Puerto Ayacucho to Caicara highway. Holotype: MBUCV V-16450.

Maximum length: 3.3 cm SL

Distribution: South America: Negro, Orinoco and Sanabani River basins.

Countries: Brazil, Venezuela

PARIOLIUS

Pariolius Cope, 1872: 289. Type species: *Pariolius armillatus* Cope, 1872. Type by monotypy. Gender: masculine.

***Pariolius armillatus* Cope, 1872**

Pariolius armillatus Cope, 1872: 289. Type locality: Ambyiacu [=Ambyiacu River, tributary of the Amazon River basin, Peru]. Holotype: ANSP 22004.

Maximum length: 3.2 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil, Peru

Common names: bagre

PHENACORHAMDIA

Phenacorhamdia Dahl, 1961: 504. Type species: *Phenacorhamdia macarenensis* Dahl, 1961. Type by original designation. Gender: feminine.

***Phenacorhamdia anisura* (Mees, 1987)**

Heptapterus anisurus Mees, 1987: 451, fig. 1. Type locality: Río Guarapiche near Maturin, Monagas, Venezuela. Holotype: RMNH 30499.

Maximum length: 4 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Phenacorhamdia boliviana* (Pearson, 1924)**

Imparfinis bolivianus Pearson, 1924: 12, pl. 2 (fig. 3). Type locality: Huachi. Syntypes: CAS 63632 [IU 17269].

Maximum length: 5.8 cm SL

Distribution: South America: Upper Mamoré/Madeira River basin.

Countries: Bolivia

Common names: bagre

***Phenacorhamdia hoehnei* (Miranda Ribeiro, 1914)**

Nannoglanis hoehnei Miranda Ribeiro, 1914: 3, pl. 1 (fig. 1). Type locality: Rio Taquary, Matto Grosso. Lectotype: MNRJ 787A, designated by Miranda Ribeiro (1953: 403).

Maximum length: 3 cm SL

Distribution: South America: Taquari River basin in Paraguari River drainage.

Countries: Brazil

Common names: bagrinho, lobó, mandizinho

***Phenacorhamdia macarenensis* Dahl, 1961**

Phenacorhamdia macarenensis Dahl, 1961: 504, unnum. fig. [6] on p. 507. Type locality: Caño Lozada. Holotype: probably lost (see Cala, 1981: 1).

Maximum length: 4.3 cm SL

Distribution: South America: Guaviare River basin.

Countries: Colombia

***Phenacorhamdia nigrolineata* Zarske, 1998**

Phenacorhamdia nigrolineata Zarske, 1998: 27, fig. 1. Type locality: Tierra Roja na der Strabe Campoverde – Tournavista, nahe Pucallpa, Departamento Ucayali, Peru. Holotype: MTD F 20 728.

Maximum length: 3.8 cm SL

Distribution: South American: Ucayali River basin.

Countries: Peru

***Phenacorhamdia somnians* (Mees, 1974)**

Heptapterus somnians Mees, 1974: 184, fig. 36. Type locality: Sangadina, a tributary of the Rio das Mortes, 2 km from Xaventina, Mato Grosso, Brazil [Nova Xavantina, State of Mato Grosso]. Holotype: BMNH 1971.7.29.4.

Maximum length: 6.3 cm SL

Distribution: South America: Das Morte River basin.

Countries: Brazil

Common names: bagrinho, mandizinho

***Phenacorhamdia tenebrosa* (Schubart, 1964)**

Imparfinis tenebrosus Schubart, 1964: 9, fig. 3. Type locality: Rio Mogi Guaçu, entre o pesqueiro da EE [=Estação Experimental de Piscicultura de Pirassununga] e o pesqueiro do Sr. Firmino (Faz. Graciosa) ca. 1 km abaixo da Cachoeira [=cachoeira de Emas]. Syntypes: EEBP 109, 197, 197 (bis), 630.

Maximum length: 6.7 cm SL

Distribution: South America: Upper Paraná and São Francisco River basins.

Countries: Brazil

Common names: bagrinho, lobó, mandizinho

***Phenacorhamdia unifasciata* Britski, 1993**

Phenacorhamdia unifasciata Britski, 1993: 42, fig. 1. Type locality: Ribeirão Santana, afluente do Rio São Bartolomeu (15°50'N, 47°40'W), Distrito Federal. Holotype: MZUSP 36691.

Maximum length: 6.2 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

Common names: bagrinho, lobó, mandizinho

PHREATOBIUS

Phreatobius Goeldi, 1905: 549. Type species: *Phreatobius cisternarum* Goeldi, 1905. Type by monotypy. Gender: masculine.

***Phreatobius cisternarum* Goeldi, 1905**

Phreatobius cisternarum Goeldi, 1905: 549. Type locality: Wasser einer Binnenlandzisterne tief im Innern der Mündung des Amazonenstromes vorgelagertern Rieseninsel Marajó. Syntypes (2): MHNG 2623.30 (1) plus one of the following: FMNH 58580 [ex CM 7603] (1), MHNG 1213.97 (1), and MHNG 1505.91 (2 entire specimens plus one sectioned and mounted on microscopic preparations). According to Claude Weber (pers. comm.), only MHNG 2623.30 (1, in several microscopic preparations) can be surely considered as syntype (slide labeled as “type”); it is not possible anymore to distinguish the other one syntype studied by Goeldi (1905) from the four topotypes studied by Reichel (1927).

Maximum length: 5.5 cm SL

Distribution: South America: Phreatic environments in the Marajó island, mouth of the Amazon River.

Countries: Brazil

PIMELODELLA

Pimelodella Eigenmann & Eigenmann, 1888: 131. Type species: *Pimelodus cristatus* Müller & Troschel, 1848. Type by original designation. Gender: feminine.

Typhlobagrus Miranda Ribeiro, 1907a: 526. Type species: *Typhlobagrus kronei* Miranda Ribeiro, 1907. Type by monotypy. Gender: masculine.

Caecorhamdella Borodin, 1927a: 1. Type species: *Caecorhamdella brasiliensis* Borodin, 1927. Type by original designation. Gender: feminine.

***Pimelodella altipinnis* (Steindachner, 1864)**

Pimelodus altipinnis Steindachner, 1864: 213, pl. 2 (fig. 3). Type locality: Demerara in Guiana. Holotype: NMW 45601.

Maximum length: 6.4 cm SL

Distribution: South America: Essequibo River basin.

Countries: Guyana

Remarks and references: Eschmeyer (1998: 80) wrongly assigned its original description to Steindachner (1866). Specimens at Zoologisk Museum, Copenhagen, listed as syntypes (ZMUC 276a-b) in Nielsen (1974: 50), have no type status (Lundberg, pers. comm.). According to Mees (1974: 144, 148) is a junior synonym of *P. cristata* Müller & Troschel (1848).

***Pimelodella australis* Eigenmann, 1917**

Pimelodella laticeps australis Eigenmann, 1917: 243. Type locality: Uruguayana [State of Rio Grande do Sul, Brazil]. Holotype: FMNH 57962 [ex CM 6950].

Pimelodella garbei Miranda Ribeiro, 1918: 639. Type locality: Itaqui - Rio Grande do Sul. Lectotype: MNRJ 923A, designated by Miranda Ribeiro (1953: 403).

Maximum length: 10.6 cm SL

Distribution: South America: Uruguay River basin, and coastal river drainages from Tubarão River, in Santa Catarina State to coastal lagoons of Rio Grande do Sul State.

Countries: Brazil

Common names: mandi-chorão

***Pimelodella avanhandavae* Eigenmann, 1917**

Pimelodella avanhandavae Eigenmann, 1917: 240, pl. 29 (fig. 3). Type locality: Rio Tietê at Salto Avanhandava, above the fall [State of São Paulo, Brazil]. Holotype: FMNH 57981 [ex CM 6969a].

Maximum length: 9.6 cm TL

Distribution: South America: Tietê River basin.

Countries: Brazil

Common names: mandi, mandi-chorão, mandizinho

***Pimelodella boliviana* Eigenmann, 1917**

Pimelodella boliviana Eigenmann, 1917: 245, pl. 31 (fig. 2). Type locality: Santa Cruz de la Sierra, Bolivia. Holotype: FMNH 57976 [ex CM 6964a].

Maximum length: 9 cm SL

Distribution: South America: Mamoré River basin.

Countries: Bolivia

Common names: bagre, cunshi

***Pimelodella boschmai* Van der Stigchel, 1964**

Pimelodella boschmai Van der Stigchel, 1964: 327, fig. 1. Type locality: Rio Mogi-Guassu, below Emas falls, Pirassununga, Brazil. Holotype: RMNH 23248.

Pimelodella insignis Schubart, 1964: 6, fig. 1. Type locality: Rio Mogi Guaçu, abaixo do pesqueiro da EEBP; Cochoeira [sic] de Emas, na topava; Rio Mogi Guaçu, abaixo do pesqueiro; Rio Mogi Guaçu, abaixo da cachoeira; Rio Mogi Guaçu; Rio Mogi Guaçu, pesqueiro da EEBP. Syntypes: EEBP 497, 497 [bis], 498, 499, 620, 620a, 647.

Maximum length: 10 cm SL

Distribution: South America: Mogi Guaçu River basin.

Countries: Brazil

Common names: mandi, mandi-chorão, mandizinho

***Pimelodella brasiliensis* (Steindachner, 1877)**

Pimelodus (Pseudorhamdia) brasiliensis Steindachner, 1877: 608, pl. 7. Type locality: Rio Parahyba [Brazil]. Holotype: NMW 45612.

Maximum length: ± 18 cm TL

Distribution: South America: Paraíba do Sul River basin.

Countries: Brazil

Common names: mandi-chorão, mandizinho

***Pimelodella breviceps* (Kner, 1857)**

Pimelodus breviceps Kner, 1857: 418. Type locality: Marabitanos [Marabitanas, State of Amazonas, Brazil]. Holotype: NMW 45615.

Maximum length: 36 cm SL

Distribution: South America: Upper Negro River basin.

Countries: Brazil

Common names: mandi-chorão

Remarks and references: This species was tentatively transferred to *Pimelodella*, following suggestion of Silfvergrip (1996: 16).

***Pimelodella buckleyi* (Boulenger, 1887)**

Pimelodus buckleyi Boulenger, 1887: 275, pl. 20 (fig. 1). Type locality: Canelos [Ecuador]. Syntypes: BMNH 1880.12.8.98-99.

Pimelodella copei Fowler, 1915: 216, fig. 5. Type locality: Ambyiacu River, near Pebas, Ecuador [now Peru]. Holotype: ANSP 8362.

Maximum length: 16 cm TL

Distribution: South America: Ambyiacu and Bobonaza River basins.

Countries: Ecuador, Peru

***Pimelodella chagresi* (Steindachner, 1876)**

Pimelodus (Pseudorhamdia) Chagresi Steindachner, 1876: 584.

Type locality: Rio Chagres und dessen Nebenflüsse bei Obispo. Syntypes: apparently at NMW.

Maximum length: 15.4 cm TL

Distribution: Central America: Chagres River basin.

Countries: Panama

***Pimelodella chaparae* Fowler, 1940**

Pimelodella chaparae Fowler, 1940b: 75, fig. 30. Type locality: Boca Chapare, Cochabamba, Bolivia. Holotype: ANSP 69021.

Maximum length: 5.1 cm SL

Distribution: South America: Beni River basin.

Countries: Bolivia

Common names: bagre

***Pimelodella conquetaensis* Ahl, 1925**

Pimelodella conquetaensis Ahl, 1925: 106. Type locality Rio Coquetá [sic], S.O. Columbien [Caquetá River]. Holotype: ZMB 32030.

Maximum length: 9.4 cm SL

Distribution: South America: Caquetá River basin in upper Japurá River drainage.

Countries: Colombia

***Pimelodella cristata* (Müller & Troschel, 1848)**

Pimelodus cristatus Müller & Troschel in Schomburgk, 1848: 628.

Type locality: Takutu und Mahu [tributaries of the upper course of the Branco River, Guyana]. Syntypes: ZMB 3052, 3053.

Maximum length: 34 cm SL

Distribution: South America: Guyana and French Guiana.

Countries: French Guiana, Guyana.

Common names: komairu (Guyana)

***Pimelodella cruxenti* Fernández-Yépez, 1950**

Pimelodella cruxenti Fernández-Yépez, 1950: 5, pl. 1 (fig. 2).

Type locality: Río Autana, Venezuela. Holotype: AFY 48161.
Maximum length: 11.1 cm SL
Distribution: South America: Autana River basin in Orinoco River drainage.
Countries: Venezuela

***Pimelodella cyanostigma* (Cope, 1870)**

Rhamdia cyanostigma Cope, 1870: 569. Type locality: Pebas, Ecuador [Peru]. Syntypes: ANSP 8381-83.
Maximum length: not stated in the original description.
Distribution: South America: Ampyiacu River basin.
Countries: Peru
Common names: cunshi

***Pimelodella dorseyi* Fowler, 1941**

Pimelodella dorseyi Fowler, 1941: 127, fig. 5. Type locality: Rio Salgade, Icó, CE [Salgado River, State of Ceará, Brazil]. Holotype: ANSP 69375 (with paratype).
Maximum length: 12.4 cm TL
Distribution: South America: Jaguaribe River basin.
Countries: Brazil
Common names: mandi-chorão

***Pimelodella eigenmanni* (Boulenger, 1891)**

Pimelodus (Pimelodella) eigenmanni Boulenger, 1891: 232. Type locality: Macacos [Brazil]. Holotype: BMNH 1889.11.14.6.
Maximum length: 9.4 cm SL
Distribution: South America: Paraíba do Sul River basin.
Countries: Brazil
Common names: mandi-chorão
Remarks and references: Species described in footnote, based on the description of specimens of *Pimelodella buckleyi* from “Macacos” of Eigenmann & Eigenmann (1888: 233; 1890: 158). Notice that Miranda Ribeiro (1911: 273) described *Rhamdia eigenmanniorum* based on the description of specimens of *Pimelodella buckleyi* “from the Rio Parahyba and from Macacos” of Eigenmann & Eigenmann (1890: 158), a species herein tentatively placed in the genus *Pimelodella*.

***Pimelodella eigenmanniorum* (Miranda Ribeiro, 1911)**

Rhamdia eigenmanniorum Miranda Ribeiro, 1911: 273. Type locality: from the Rio Parahyba and from Macacos. Holotype: not designated.
Distribution: South America: Paraíba do Sul River basin and coastal rivers in Rio de Janeiro State.
Countries: Brazil
Common names: mandi-chorão

Remarks and references: Species based on the description of specimens of *Pimelodella buckleyi* “from the Rio Parahyba and from Macacos” of Eigenmann & Eigenmann (1890: 158), and herein tentatively placed in the genus *Pimelodella*. Notice that Boulenger (1891: 232, footnote) also described *Pimelodus (Pimelodella) eigenmanni*, based on a specimen of *Pimelodella buckleyi* from “Macacos” of Eigenmann & Eigenmann (1888: 233; 1890: 158).

***Pimelodella elongata* (Günther, 1860)**

Pimelodus elongatus Günther, 1860: 238, pl. 10 (fig. B). Type locality: Fresh waters of Esmeraldas.
Maximum length: 16.9 cm TL
Distribution: South America: Esmeraldas River basin.
Countries: Ecuador

***Pimelodella enochi* Fowler, 1941**

Pimelodella enochi Fowler, 1941: 130, fig. 13. Type locality: Açude Piloes, Parahyba [Açude Pilões, State of Paraíba, Brazil]. Holotype: ANSP 69378 (with paratype).
Maximum length: 5.9 cm TL
Distribution: South America: Paraíba River basin in Paraíba State.

Countries: Brazil
Common names: mandi-chorão

***Pimelodella eutaenia* Regan, 1913**

Pimelodella eutaenia Regan, 1913b: 466. Type locality: from the Rio Condoto and the Rio Sipi. Syntypes: BMNH 1913.10.1.37-40.
Maximum length: 14.5 cm TL
Distribution: South America: San Juan River basin.
Countries: Colombia

***Pimelodella figueroai* Dahl, 1961**

Pimelodella figueroai Dahl, 1961: 498, unnumbered figure on p. 500. Type locality: Caño Lozada, approx. 17 kilometers above its junction with Guayabero River. Holotype: probably lost (see Cala, 1981: 1).
Maximum length: 9.1 cm SL
Distribution: South America: Guaviare River basin.
Countries: Colombia
Common names: barbilla

***Pimelodella geryi* Hoedeman, 1961**

Pimelodella geryi Hoedeman, 1961: 134. Type locality: French Guiana: ... mainland, Litany River, village Aloiké, sta. 29S [Alowike, Surinam – Mees, 1974: 144]. Holotype: ZMA 100168 [ex ZMA 102235].
Maximum length: 5.8 cm SL
Distribution: South America: Maroni/Marowijne River basin.
Countries: Suriname
Remarks and references: According to Mees (1974: 144, 148) is a junior synonym of *P. cristata* Müller & Troschel (1848).

***Pimelodella gracilis* (Valenciennes, 1835)**

Pimelodus gracilis Valenciennes, 1835: pl. 2 (fig. 5). Type locality: Corrientes dans le Parana et les aues rivières au-dessus de 28° de latitud sud [Argentina]. Holotype: MNHN A.9284. Name available from plate, mentioned and briefly described in Valenciennes (1847: 7).
Maximum length: 17 cm SL
Distribution: South America: Orinoco, Amazon and La Plata River basins.
Countries: Brazil, Peru
Common names: mandi-chorão (Brazil), cunshi (Peru)
Remarks and references: Name available from plate (cf. Sherborn & Griffin, 1934: 131); the correspondent text appeared only in Valenciennes (1847: 7).

***Pimelodella griffini* Eigenmann, 1917**

Pimelodella griffini Eigenmann, 1917: 250, pl. 32 (fig. 3). Type locality: montain rills near Sapucay, Paraguay. Holotype: FMNH 57974 [ex CM 6962].
Maximum length: 8.8 cm TL
Distribution: South America: Lower Paraguay River basin.
Countries: Paraguay

***Pimelodella grisea* (Regan, 1903)**

Pimelodus (Pimelodella) griseus Regan, 1903: 625. Type locality: Durango, Sapayo and Vaqueria Rivers, NW Ecuador. Syntypes: BMNH 1902.5.27.36, 1902.7.29.47, 1902.7.29.58.
Maximum length: 14 cm TL
Distribution: South America: Durango, Sapayo and Vaqueria rivers in NW Ecuador.
Countries: Ecuador

***Pimelodella hartii* (Steindachner, 1877)**

Pimelodus (Pseudorhamdia) Hartii Steindachner, 1877: 611. Type locality: Rio Parahyba [Brazil]. Holotype: NMW 45784.
Maximum length: 15 cm SL
Distribution: South America: Paraíba do Sul River basin.
Countries: Brazil

***Pimelodella hartwelli* Fowler, 1940**

Pimelodella hartwelli Fowler, 1940a: 222, fig. 7. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68644. Maximum length: 12.5 cm TL
Distribution: South America: Ucayali River basin.
Countries: Peru
Common names: cunshi

***Pimelodella hasemani* Eigenmann, 1917**

Pimelodella hasemani Eigenmann, 1917: 241, pl. 30 (fig. 1 -- not 7 as published). Type locality: San Antonio de Rio Madeira. Holotype: FMNH 57980 [ex CM 6968a]. Maximum length: 8.1 cm TL
Distribution: South America: Madeira River basin.
Countries: Brazil, Peru
Common names: mandi-chorão (Brazil); cunshi (Peru)

***Pimelodella howesi* Fowler, 1940**

Pimelodella howesi Fowler, 1940b: 77, fig. 30. Type locality: Boca Chapare, Chimore River, Bolivia. Holotype: ANSP 69036. Maximum length: 7.9 cm SL
Distribution: South America: Beni River basin.
Countries: Bolivia
Common names: bagre

***Pimelodella itapicuruensis* Eigenmann, 1917**

Pimelodella itapicuruensis Eigenmann, 1917: 247, pl. 31 (fig. 3). Type locality: Queimadas, Rio Itapicuru [State of Bahia, Brazil]. Holotype: FMNH 57986 [ex CM 6974a]. Maximum length: 10.4 cm SL
Distribution: South America: Itapicuru River basin.
Countries: Brazil
Common names: mandi-chorão

***Pimelodella kronoi* (Miranda Ribeiro, 1907)**

Typhlobagrus kronoi Miranda Ribeiro, 1907a: [1], unnum. fig. [1] on unnum. p. [1]. Type locality: Iguape, em aguas das cavernas do Iporanga, também no estado de S. Paulo. Holotype: MNRJ 836.
Caecorhamdella brasiliensis Borodin, 1927a: 1, fig. 1C. Type locality: Estado de São Paulo, Brazil. Holotype: AMNH 8604. Maximum length: 20.2 cm SL
Distribution: South America: Caves in the Ribeira do Iguape River basin, in São Paulo State.
Countries: Brazil
Common names: ceguinho

***Pimelodella lateristriga* Lichtenstein, 1823**

Pimelodes lateristrigus Lichtenstein, 1823: 112. Type locality: Brasil [near Rio de Janeiro – Mees, 1983: 53]. Holotype: ZMB 3038.
Pimelodus lateristrigus Müller & Troschel, 1849: 3. Type locality: Brasilien. Holotype: Probably ZMB 3038. Maximum length: 15.1 cm SL
Distribution: South America: Paraíba do Sul River basin.
Countries: Brazil
Common names: mandi, mandi-chorão, mandizinho
Remarks and references: Probably Müller & Troschel (1849) based their description on the same exemplar of Lichtenstein, 1823 (Silfvergrip & Paepke, 1997: 170).

***Pimelodella laticeps* Eigenmann, 1917**

Pimelodella laticeps Eigenmann, 1917: 243, pl. 30 (fig. 2). Type locality: Sapucay, Paraguay. Holotype: FMNH 57969 [ex CM 6957a]. Maximum length: 9 cm TL
Distribution: South America: Lower Paraguay River basin.
Countries: Paraguay

***Pimelodella laurenti* Fowler, 1941**

Pimelodella laurenti Fowler, 1941: 132, fig. 17. Type locality: Jatobá, Rio São Francisco, Pernambuco. Holotype: ANSP 69380. Maximum length: 7.1 cm SL
Distribution: South America: Lower São Francisco River basin.
Countries: Brazil
Common names: mandi-chorão

***Pimelodella linami* Schultz, 1944**

Pimelodella linami Schultz, 1944b: 210, pl. 1 (fig. D). Type locality: Río Torbes, 1 km. above Táriba, Orinoco system. Holotype: USNM 121132. Maximum length: 7.5 cm SL
Distribution: South America: Orinoco River basin.
Countries: Venezuela

***Pimelodella macrocephala* (Miles, 1943)**

Nannorhamdia macrocephala Miles, 1943: 25. Type locality: Valle del Cauca [Colombia]. Holotype: ICNMHN probably lost (see Cala, 1981: 1). Maximum length: 2.6 cm SL
Distribution: South America: Cauca River basin.
Countries: Colombia
Common names: chiriri, chirirri, micudo

***Pimelodella macturki* Eigenmann, 1912**

Pimelodella macturki Eigenmann, 1912: 170, pl. 16 (fig. 1). Type locality: Creek in Mora Passage, coastal Guyana. Holotype: FMNH 53234 [ex CM 1695]. Maximum length: 11 cm SL
Distribution: South America: Approuague, Coratijn, and Nickerie River basins, and eastern coastal drainages of Suriname.
Countries: French Guiana, Guyana, Suriname

***Pimelodella martinezi* Fernández-Yépez, 1970**

Pimelodella martinezi Fernández-Yépez, 1970: pl. 35. Type locality: bajo Unare. Holotype: AFY ? [number for holotype not mentioned; all specimens examined for description catalogued under AFY 70-403]. Maximum length: 6.8 cm SL
Distribution: South America: Unare River basin.
Countries: Venezuela
Common names: puyapuya

***Pimelodella meeki* Eigenmann, 1910**

Pimelodella eigenmanni Meeke, 1905: 241. Type locality: Sao Paulo, Brazil. Holotype: FMNH 3400. Preoccupied in *Pimelodella* by *Pimelodus eigenmanni* Boulenger, 1891. Replaced by *Pimelodella meeki* Eigenmann, 1910.
Pimelodella meeki Eigenmann, 1910: 389. Type locality: São Paulo. Holotype: FMNH 3400. Replacement for *Pimelodella eigenmanni* Meeke, 1905. Maximum length: 10.2 cm TL
Distribution: South America: Tietê River basin.
Countries: Brazil
Common names: mandi, mandi-chorão, mandizinho

***Pimelodella megalops* Eigenmann, 1912**

Pimelodella megalops Eigenmann, 1912: 169, pl. 15 (fig. 2). Type locality: Tumatumari [Guyana]. Holotype: FMNH 53231 [ex CM 1692]. Maximum length: 7.9 cm SL
Distribution: South America: Approuague and Essequibo River basins.
Countries: French Guiana, Guyana

***Pimelodella megalura* Miranda Ribeiro, 1918**

Pimelodella megalura Miranda Ribeiro, 1918: 638. Type locality: S. Luiz de Cáceres: Matto-Grosso. Lectotype: MNRJ 865A, designated by Miranda Ribeiro (1953: 403). Maximum length: 22 cm TL

Check List of the Freshwater Fishes of South and Central America

Distribution: South America: Upper Paraguay River basin.
Countries: Brazil
Common names: mandi-chorão

***Pimelodella metae* Eigenmann, 1917**

Pimelodella metae Eigenmann, 1917: 244, pl. 31 (fig. 1). Type locality: Rio Negro, Villavicencio. Holotype: FMNH 58441 [ex CM 7441a].

Maximum length: 10 cm TL

Distribution: South America: Meta River basin.

Countries: Colombia

Common names: barbilla

***Pimelodella modestus* (Günther, 1860)**

Pimelodus modestus Günther, 1860: 239, pl. 10 (fig. C). Type locality: Fresh waters of Esmeraldas. Syntypes: BMNH 1860.6.16.190-191.

Maximum length: 12.1 cm TL

Distribution: South America: Esmeraldas River basin.

Countries: Ecuador

***Pimelodella montana* Allen, 1942**

Pimelodella montana Allen in Eigenmann & Allen, 1942: 100, pl. 13 (fig. 2). Type locality: Rio Huallaga, Huánuco. Syntypes: CAS 63719 [ex IU 17830]. Holotype perhaps established in plate 13, but length greater than listed on p. 100.

Maximum length: 9.3 cm SL

Distribution: South America: Upper Marañón River basin.

Countries: Peru

Common names: cunshi

***Pimelodella mucosa* Eigenmann & Ward, 1907**

Pimelodella mucosa Eigenmann & Ward in Eigenmann, McAtee & Ward, 1907: 114, pl. 32 (fig. 1). Type locality: Bahia Negra. Holotype: CAS 63720 [ex IU 10125].

Distribution: South America: Paraguay River basin.

Countries: Paraguay

***Pimelodella nigrofasciata* (Perugia, 1897)**

Pimelodus nigrofasciatus Perugia, 1897: 18. Type locality: Rio Beni. Misión Mosetenes. Holotype: MSNG 8039 (not found in 1995 (Eschmeyer, 1998)).

Distribution: South America: Beni River basin.

Countries: Bolivia

Common names: bagre

***Pimelodella notomelas* Eigenmann, 1917**

Pimelodella notomelas Eigenmann, 1917: 244, pl. 30 (fig. 3). Type locality: San Luiz de Caceres. Holotype: FMNH 57967 [ex CM 6955].

Maximum length: 6 cm TL

Distribution: South America: Upper Paraguay River basin.

Countries: Brazil

Common names: mandi-chorão

***Pimelodella odynea* Schultz, 1944**

Pimelodella chagresi odynea Schultz, 1944b: 213, pl. 2 (fig. A). Type locality: Río San Juan at the bridge south of Mene Grande, Motatán system, Maracaibo basin. Holotype: USNM 121133.

Maximum length: 10 cm SL

Distribution: South America: Maracaibo Lake basin.

Countries: Venezuela

***Pimelodella ophthalmica* (Cope, 1878)**

Pimelodus ophthalmicus Cope, 1878: 675. Type locality: Peruvian Amazon. Holotype: ANSP 21102.

Maximum length: 14.5 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Remarks and references: Cope (1878: 673) mentioned that most of

collections of 1873, as it was the case of *P. ophthalmicus*, came from Nauta [a city located in the margin of the Marañón River, tributary of the Amazon River basin, Loreto Department, Peru].

***Pimelodella pallida* Dahl, 1961**

Pimelodella pallida Dahl, 1961: 501, unnum. fig. [5] on p. 503. Type locality: Caño Lozada, about 500 meters above its junction with Guayabero River. Holotype: probably lost (see Cala, 1981: 1).

Maximum length: 9.4 cm SL

Distribution: South America: Guaviare River basin.

Countries: Colombia

Common names: barbilla

***Pimelodella pappenheimi* Ahl, 1925**

Pimelodella pappenheimi Ahl, 1925: 107. Type locality: Rio Pedro bei Humboldt, Sta Catharina, Brasilien. Syntypes: ZMB 31951.

Maximum length: 12.1 cm SL

Distribution: South America: Itajaí-Açú, Itapocú and Cubatão River basins in Santa Catarina State, and Paranaguá River basin in Paraná State.

Countries: Brazil

Common names: mandi-chorão

***Pimelodella parnahybae* Fowler, 1941**

Pimelodella parnahybae Fowler, 1941: 129, fig. 9. Type locality: Rio Parnahyba, Therezina, Piauí. Holotype: ANSP 69377.

Maximum length: 9.5 cm TL

Distribution: South America: Parnaíba River basin.

Countries: Brazil

Common names: mandi-chorão

***Pimelodella parva* Güntert, 1942**

Pimelodella parva Güntert, 1942: 34, fig. 4. Type locality: Río Paraguay, Paraguay. Holotype: NMBA 5302.

Maximum length: 2.8 cm TL

Distribution: South America: Paraguay River basin.

Countries: Paraguay

***Pimelodella pectinifer* Eigenmann & Eigenmann, 1888**

Pimelodella pectinifer Eigenmann & Eigenmann, 1888: 132. Type locality: Campos. Holotype: MCZ 7508.

Maximum length: ± 15 cm SL

Distribution: South America: Muriaé River basin.

Countries: Brazil

Common names: mandi-chorão

***Pimelodella peruana* Eigenmann & Myers, 1942**

Pimelodella peruana Eigenmann & Myers in Eigenmann & Allen, 1942: 101, pl. 3 (fig. 5). Type locality: Inahuaya, Rio Ucayali. Holotype: CAS 63721.

Maximum length: 5.2 cm TL

Distribution: South America: Ucayali River basin.

Countries: Peru

***Pimelodella peruensis* Fowler, 1915**

Pimelodella peruense Fowler, 1915: 214, fig. 4. Type locality: Peruvian Amazon. Holotype: ANSP 21932.

Maximum length: 5.2 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Common names: cunshi

***Pimelodella procera* Mees, 1983**

Pimelodella procera Mees, 1983: 49, fig. 3. Type locality: Crique Balaté. Holotype: RMNH 28588.

Maximum length: 10 cm SL

Distribution: South America: Maroni/Marowijne River basin.

Countries: French Guiana

***Pimelodella rendahli* Ahl, 1925**

Pimelodella rendahli Ahl, 1925: 106. Type locality: No locality stated. Holotype: ZMB 32031.
Maximum length: 8.7 cm SL
Distribution: South America: Locality unknown.
Countries: Country unknown

***Pimelodella reyesi* Dahl, 1964**

Pimelodella reyesi Dahl in Dahl & Medem, 1964: 37, unnum. Fig. on page 503. Type locality: Río Manso del Sinú, Colombia. Holotype: not located.
Maximum length: 9.9 cm SL
Distribution: South America: Sinú River basin.
Countries: Colombia
Common names: casimiro

***Pimelodella rocae* Eigenmann, 1917**

Pimelodella rocae Eigenmann, 1917: 240, pl. 35 (fig. 7). Type locality: Lower Urubamba Valley. Holotype: MCZ 30975.
Maximum length: 18.2 cm TL
Distribution: South America: Urubamba and Beni River basins.
Countries: Bolívia, Peru
Remarks and references: Eigenmann (1917: 240) mentioned the name *Pimelodella rocae*, without a description, as a reference to an unpublished manuscript, but presenting an illustration of the pectoral spine of its holotype (Pl. 35, fig. 7; legend at p. 257). This species was described in greater detail and illustrated in Eigenmann & Allen (1942: 98, pl. 10, fig. 4). Eigenmann & Allen (1942: 98) clarified that the holotype came from "Rio Comberciato, 1800 feet elevation".

***Pimelodella rudolphi* Miranda Ribeiro, 1918**

Pimelodella rudolphi Miranda Ribeiro, 1918: 637. Type locality: Mercado de São Paulo. Lectotype: MNRJ 857A, designated by Miranda Ribeiro (1953: 404).
Maximum length: 10.5 cm SL
Distribution: South America: São Paulo State.
Countries: Brazil
Common names: mandi, mandi-chorão, mandizinho

***Pimelodella serrata* Eigenmann, 1917**

Pimelodella serrata Eigenmann, 1917: 235, pl. 29 (fig. 1). Type locality: San Joaquin, Bolivia. Holotype: FMNH 57979 [ex CM 6967a].
Maximum length: 11 cm TL
Distribution: South America: ?Machupo River basin in upper Guaporé River drainage.
Countries: Bolivia
Common names: bagre

***Pimelodella steindachneri* Eigenmann, 1917**

Pimelodella steindachneri Eigenmann, 1917: 237. Type locality: Maués, Rio Madeira... Para... Cudajas... Santarem... Rio Puty... Manacapuru. Syntypes: MCZ 7542a, MCZ 7566a-b, MCZ 7567a, MCZ 7547a, MCZ 7587a, MCZ 7588a.
Maximum length: 21.2 cm SL
Distribution: South America: Amazon River basin.
Countries: Brazil
Common names: mandi-chorão
Remarks and references: Based on *Pimelodella wesselli* of Eigenmann & Eigenmann, 1888 (not Steindachner, 1877).

***Pimelodella taeniophora* (Regan, 1903)**

Pimelodus (Pimelodella) taeniophorus Regan, 1903: 625. Type locality: Descalvados, Matto Grosso [Descalvado, State of Mato Grosso, Brazil]. Syntypes: BMNH 1895.5.17.27-28.
Maximum length: 8.5 cm TL
Distribution: South America: Paraguay River basin.
Countries: Brazil

Common names: mandi-chorão

***Pimelodella taenioptera* Miranda Ribeiro, 1914**

Pimelodella taenioptera Miranda Ribeiro, 1914: 5, unnum.fig. [1] on p. 5. Type locality: Tapyrapoan, Rio Sepotuba [Tapirapuã, State of Mato Grosso]. Lectotype: MNRJ 691A, designated by Miranda Ribeiro (1953: 404).
Distribution: South America: Upper Paraguay River basin.
Countries: Brazil
Common names: mandi-chorão

***Pimelodella tapatapae* Eigenmann, 1920**

Pimelodella tapatapae Eigenmann, 1920: 5. Type locality: Mouth of Rio Tapa Tapa. Holotype: CAS 57469 [ex IU 15094].
Maximum length: 15.6 cm TL
Distribution: South America: Tapa Tapa River basin in Lake Valencia drainage.
Countries: Venezuela

***Pimelodella transitoria* Miranda Ribeiro, 1907**

Pimelodella transitoria Miranda Ribeiro, 1907b: 186. Type locality: Ribeirão do Alambary - Iporanga. Holotype: MNRJ.
Maximum length: 13 cm SL
Distribution: South America: Ribeira de Iguape River basin.
Countries: Brazil
Common names: mandi, mandi-tinga

***Pimelodella vittata* (Lütken, 1874)**

Pseudorhamdia vittatus Lütken, 1874: 34. Type locality: in flumine Rio das Velhas. Syntypes: ZMB 9175; ZMUC 271, 274, 275, 283-285.
Maximum length: 9.7 cm SL
Distribution: South America: Upper São Francisco River basin.
Countries: Brazil
Common names: choralambre, chué;, mandi-chorão
Remarks and references: Detailed description and illustration of *P. vittata* appeared in Lütken (1875: 173-174, unnum. fig. on p. 173).

***Pimelodella wessellii* (Steindachner, 1877)**

Pimelodus (Pseudorhamdia) Wessellii Steindachner, 1877: 614.
Type locality: Essequibo. Holotype: NMW 79188.
Maximum length: 19.8 cm TL
Distribution: South America: Essequibo River basin.
Countries: Guyana
Remarks and references: According to Mees (1974: 144) is a junior synonym of *P. cristata* Müller & Troschel (1848).

***Pimelodella witmeri* Fowler, 1941**

Pimelodella witmeri Fowler, 1941: 133, fig. 21. Type locality: Rio Jaguaribe, Orós, Ceará. Holotype: ANSP 69383 (together with paratypes).
Maximum length: 16.8 cm TL
Distribution: South America: Jaguaribe River basin.
Countries: Brazil
Common names: mandi-chorão

***Pimelodella yuncensis* Steindachner, 1902**

Pimelodella yuncensis Steindachner, 1902: 135. Type locality: Pacasmayo, Nord peru. Holotype: NMW.
Maximum length: 4.8 cm TL
Distribution: South America: Jequetepeque River basin.
Countries: Peru
Common names: bagre

RHAMDELLA

Rhamdella Eigenmann & Eigenmann, 1888: 129. Type species: *Rhamdia eriarcha* Eigenmann & Eigenmann, 1888. Type by original designation. Gender: feminine. Originally proposed as a

subgenus of *Rhamdia*.

***Rhamdella aymarae* Miquelarena & Menni, 1999**

Rhamdella aymarae Miquelarena & Menni, 1999: 203, fig. 1.

Type locality: Argentina, Salta Province, Río Itiyuro, 500 m below the Itiyuro Dam, route 34 between Estación Pocitos and Araguay, 22°07'S, 63°11'W.

Maximum length: 18.8 cm SL

Distribution: South America: Itiyuro River basin.

Countries: Argentina

Remarks and references: Though the Itiyuro River is endorheic during some periods, it probably connects with the Pilcomayo and/or Bermejo River basins during floods and has probably been connected in the past (Miquelarena & Menni, 1999: 206-207).

***Rhamdella eriarcha* (Eigenmann & Eigenmann, 1888)**

Rhamdia eriarcha Eigenmann & Eigenmann, 1888: 129. Type locality: Rio Grande do Sul. Holotype: MCZ 27272.

Rhamdella straminea Cope, 1894: 93, pl. 8 (fig. 10). Type locality: Rio Grande do Sul. Syntypes: ANSP 21604.

Rhamdella lemai Bertolotti, 1967: 78, fig. 2. Type locality: Pôrto Alegre, Guaíba River (Ponta Grossa). Holotype: MCN 1897.

Maximum length: 20.9 cm SL

Distribution: South America: Jacuí River basin.

Countries: Brazil

Common names: mandi

***Rhamdella exsudans* (Jenyns, 1842)**

Pimelodus exsudans Jenyns, 1842: 111. Type locality: ?Rio de Janeiro. Syntypes: Department of Zoology, University of Cambridge V.132.

Maximum length: 8.9 cm TL

Distribution: South America: Rio de Janeiro State.

Countries: Brazil

***Rhamdella gilli* (Starks, 1906)**

Rhamdia gilli Starks, 1906: 769, pl. 65 (fig. 1). Type locality: Eten, Peru, in the Rio Eten. Holotype: USNM 53472.

Maximum length: 12.5 cm SL

Distribution: South America: Eten River basin.

Countries: Peru

Remarks and references: This species is treated as *Rhamdella*, following suggestions of Eigenmann (1910: 387; Gosline, 1945: 35). Silfvergrip (1996: 31) also tentatively recognized it as *Rhamdella*, although cited in his synonymy of *Rhamdia quelen* (Silfvergrip, 1996: 96).

***Rhamdella ignobilis* Steindachner, 1907**

Rhamdella ignobilis Steindachner, 1907: 484. Type locality: Flusse Cubataõ um Staate Santa Catharina bei Theresopolis (Brazilien).

Maximum length: 10 cm SL

Distribution: South America: Cubatão River basin (southern) in Santa Catarina State.

Countries: Brazil

***Rhamdella jenynsii* (Günther, 1864)**

Pimelodus jenynsii Günther, 1864: 128. Type locality: Rio de Janeiro. Syntypes: ? Department of Zoology, University of Cambridge.

Maximum length: 8.9 cm TL

Distribution: South America: Rio de Janeiro State.

Countries: Brazil

Remarks and references: Based on *Pimelodus gracilis* of Jenyns, 1842 (not Valenciennes, 1835).

***Rhamdella leptosoma* Fowler, 1914**

Rhamdella leptosoma Fowler, 1914: 260, fig. 12. Type locality: Rupununi River, British Guiana. Holotype: ANSP 39340.

Maximum length: 8 cm TL

Distribution: South America: Rupununi River basin.

Countries: Guyana

***Rhamdella longipinnis* Borodin, 1927**

Rhamdella longipinnis Borodin, 1927b: 6. Type locality: Prov. St. Paulo, Brazil. Holotype: AMNH 8642.

Maximum length: 8.8 cm SL

Distribution: South America: River basins São Paulo State.

Countries: Brazil.

Common names: mandi, mandi-chorão, mandzinho

***Rhamdella longiuscula* Lucena & Silva, 1991**

Rhamdella longiuscula Lucena & Silva, 1991: 32, figs. 2A (male), 3 A (female). Type locality: Rio Grande do Sul: arroio Passo do Alto, próximo a localidade de Mineral, São Nicolau (aproximadamente 55°20'O – 28°08'S). Holotype: MCP 14441.

Maximum length: 14.2 cm SL

Distribution: South America: Middle Uruguay River basin.

Countries: Brazil

Common names: mandi

***Rhamdella montana* Eigenmann, 1913**

Rhamdella montana Eigenmann, 1913: 421, pl. 32 (fig. 1). Type locality: Queta. Small brook in highlands southeast of Tarma.

Holotype: FMNH 56067 [ex CM 4858].

Maximum length: 3.7 cm SL

Distribution: South America: Ucayali River basin.

Countries: Peru

Common names: bagre

***Rhamdella papariae* Fowler, 1941**

Rhamdella papariae Fowler, 1941: 135, fig. 28. Type locality: Lago Papary, Rio Grande do Norte, Brazil. Holotype: ANSP 69387.

Maximum length: 13.5 cm TL

Distribution: South America: Lake Parary basin (?).

Countries: Brazil

Common names: mandi

***Rhamdella robinsoni* Fowler, 1941**

Rhamdella robinsoni Fowler, 1941: 135, fig. 24. Type locality: São José do Egito, Pernambuco. Holotype: ANSP 69386.

Maximum length: 9.7 cm TL

Distribution: South America: Lower São Francisco River basin.

Countries: Brazil

Common names: mandi chorão

***Rhamdella rusbyi* Pearson, 1924**

Rhamdella rusbyi Pearson, 1924: 12, pl. 2 (fig. 4). Type locality: Rio Colorado, Lower Bopi, Bolivia. Holotype: CAS 63728 [ex IU 17275].

Maximum length: 18.4 cm.

Distribution: South America: Beni River basin.

Countries: Bolivia

***Rhamdella wolffi* Fowler, 1941**

Rhamdella wolffi Fowler, 1941: 136, fig. 32. Type locality: Rio Choró, Ceará. Holotype: ANSP 69388.

Maximum length: 11.6 cm TL

Distribution: South America: Choró River basin.

Countries: Brazil

Common names: mandi

RHAMDIA

Pteronotus Swainson, 1839: 190. Type species: *Heterobranchus sextentaculatus* Agassiz, 1829. Type by original designation. Gender: masculine. Preoccupied by *Pteronotus* Gray, 1838 in Mammalia (see Miller, 1905: 223), not replaced.

- Rhamdia* Bleeker, 1858: 197. Type species: *Pimelodus sebae* Cuvier, 1829. Type by subsequent designation by Gill (1861: 48). Gender: feminine.
- Pimelotus* Gill, 1858: 387. Type species: *Pimelotus vilsoni* Gill, 1858. Type by subsequent designation by Eigenmann & Eigenmann (1890: 116). Gender: masculine.
- Caecorhamdia* Norman, 1926: 325. Type species: *Caecorhamdia urichi* Norman, 1926. Type by monotypy. Gender: feminine.
- Rhamdia foina* (Müller & Troschel, 1848)**
Pimelodus foina Müller & Troschel in Schomburgk, 1848: 628. Type locality: an den felsreichen Stellen des Takutu [tributary of the upper course of the Branco River, Guyana]. Holotype: ZMB 3039.
- Rhamdia holomelas rupununi* Fowler, 1914: 258, fig. 11. Type locality: Rupununi River, British Guiana. Holotype: ANSP 39339.
- Maximum length: 16.5 cm SL
 Distribution: South America: Essequibo, Branco, Negro, Tocantins, and Trombetas River basins.
 Countries: Brazil, Guyana
- Rhamdia humilis* (Günther, 1864)**
Pimelodus humilis Günther, 1864: 129. Type locality: Venezuela. Lectotype: BMNH 1965.2.19.1 (140.4 mm SL, largest), designated by Silfvergrip (1996: 25).
- Rhamdia guairensis* Eigenmann, 1920: 6. Type locality: Rio Guaire near Caracas. Lectotype: CAS 76655 [ex IU 15091] (108.1 mm SL), designated by Silfvergrip (1996: 34).
- Nannorhamdia benedetti* Fernández-Yépez & Martin S., 1952: 35, unnum. fig. [1] on p. 37. Type locality: Quebrada Ojo de Agua, Baruta. Holotype: MHNLS 82.
- Maximum length: 18.1 cm SL
 Distribution: South America: Rivers around Caracas, along the Caribbean coast.
 Countries: Venezuela
 Common names: bagre
- Rhamdia itacaiunas* Silfvergrip, 1996**
Rhamdia itacaiunas Silfvergrip, 1996: 83, pl. 2 (fig. 1). Type locality: Brazil, Est. Amazonas, Rio Tocantins basin, 'Igarapé Repartimento'. Holotype: INPA 7985 (130.9 mm SL).
- Maximum length: 23.8 cm SL
 Distribution: South America: Middle Tocantins River basin.
 Countries: Brazil
- Rhamdia jequitinhonha* Silfvergrip, 1996**
Rhamdia jequitinhonha Silfvergrip, 1996: 84, pl. 3 (fig. 2). Type locality: Brazil, Est. Minas Gerais, Rio Araçuaí, Santa Rita. Holotype: MZUSP 38630.
- Maximum length: 16.1 cm SL
 Distribution: South America: Jequitinhonha River basin.
 Countries: Brazil
- Rhamdia laticauda* (Kner, 1857)**
Pimelodus laticaudus Kner, 1857: 420. Type locality: Mexico. Type series not found at NMW (Silfvergrip, 1996: 16).
- Pimelodus hypselurus* Günther, 1864: 126. Type locality: Mexico. Holotype: BMNH 1858.11.22.32.
- Pimelodus petenensis* Günther, 1864: 126. Type locality: Lake Peten. Holotype: BMNH 1864.1.26.371.
- Pimelodus motaguensis* Günther, 1864: 127. Type locality: Rio Motagua. Holotype: BMNH 1865.4.29.39.
- Pimelodus salvini* Günther, 1864: 130. Type locality: Guatemala...Rio de San Geronimo. Holotype: BMNH 1861.8.2.16.
- Pimelodus polycaulus* Günther, 1864: 131. Type locality: Guatemala...Rio San Geronimo. Holotype: BMNH 1864.1.26.93.
- Pimelodus (Rhamdia) brachypterus* Cope, 1867: 404. Type locality: Orizava, Mexico. Holotype: ANSP 16471.
- Rhamdia Parryi* Eigenmann & Eigenmann, 1888: 130. Type locality: Rio Zanaleneo, near Tonalá, Chiapas, Mexico. Lectotype: MCZ 27273 (82.5 mm SL), designated by Silfvergrip (1996: 29).
- Rhamdia sacrificii* Barbour & Cole, 1906: 156, pl. 2. Type locality: Sacrificial Cenote, near Chichen Itza, Yucatan. Lectotype: MCZ 29073 (230.0 mm SL), designated by Silfvergrip (1996: 30).
- Rhamdia cabreræ* Meek, 1906: 93. Type locality: Amatitlan, Guatemala. Holotype: FMNH 5501.
- Pimelodus brachycephalus* Regan, 1907a: 258. Type locality: Guatemala, Rio Nacasil. Lectotype: BMNH 1875.6.9.5 (166.4 mm SL), designated by Silfvergrip (1996: 31).
- Pimelodus Rogersi* Regan, 1907a: 259. Type locality: Costa Rica, Irazu. Lectotype: BMNH 1907.2.11.1 (117.1 mm SL, largest), designated by Silfvergrip (1996: 31).
- Rhamdia regani* Meek, 1907b: 144. Type locality: Turrialba, Costa Rica. Holotype: FMNH 6019.
- Rhamdia underwoodi* Regan, 1907b: 135, pl. 23 (fig. 4). Type locality: Costa Rica, Juan Viñas. Lectotype: BMNH 1907.6.28.33 (84.5 mm SL, largest of four), designated by Silfvergrip (1996: 32).
- Rhamdia amatitlanensis* Fowler, 1936: 518, fig. 10. Type locality: Stream issuing from Lake Amatitlan. Holotype: ANSP 64136.
- Rhamdia laticauda typhla* Greenfield, Greenfield & Woods, 1982: 564, fig. 1. Type locality: A cave in Belize, in an area known as Las Cuevas, near Millionario in the Mountain Pine Ridge (16.45°N 89.00°W). Holotype: FMNH 71605.
- Rhamdia reddelli* Miller, 1984: 136, fig. 1. Type locality: Cueva del Nacimiento del Río San Antonio, ca. 9 km SW of Acatlán, Oaxaca, on Atlantic slope of eastern Mexico. Holotype: UMMZ 211164.
- Rhamdia zongolicensis* Wilkens, 1993: 375, fig. 1. Type locality: Cueva del Ostoc, Sierra de Zongolica (Veracruz, Mexico), road from Comalapa to Tezonapa. Holotype: ZMH 9249.
- Maximum length: 23 cm SL
 Distribution: North and Central America: River basins from central Mexico to northern Panama, in both Pacific and Caribbean slopes.
 Countries: Belize, Costa Rica, Guatemala, Honduras, Mexico, Panama.
 Common names: barbudo (Costa Rica)
- Rhamdia laukidi* Bleeker, 1858**
Rhamdia laukidi Bleeker, 1858: 208. Type locality: Venezuela, Est. Amazonas, first Río Casiquirae caño, ca. 5 min. from confluence of Río Casiquiare and Río Orinoco left side, Caño Caripo, ca. 3 km from mouth; 03°06'N, 65°50'W. Neotype: ANSP 174652 (217.1 mm SL), designated by Silfvergrip (1996: 17).
- Pimelodus holomelas* Günther, 1863: 442. Type locality: Essequibo. Lectotype: BMNH 1864.1.21.8 (95.4 mm SL, smallest of four), designated by Silfvergrip (1996: 23).
- Rhamdia tenella* Eigenmann & Eigenmann, 1888: 127. Type locality: Cudajas. Holotype: MCZ 7547.
- Maximum length: 33 cm SL
 Distribution: South America: Amazon, Essequibo, and Orinoco River basins.
 Countries: Brazil, Colombia, Guyana
- Rhamdia muelleri* (Günther, 1864)**
Pimelodus mülleri Günther, 1864: 119. Type locality: Brazil, Surinam... River Capin, Para...Para...Surinam. Lectotype: BMNH 1849.11.8.? (133.6 mm SL), designated by Silfvergrip (1996: 23).
- Pimelodus (Rhamdia) Knerii* Steindachner, 1877: 631. Type locality: Marabitanos [Marabitanas, State of Amazonas, Brazil]. Lectotype: NMW 45790 (139.3 mm SL), designated by Silfvergrip (1996: 27).
- Rhamdia obesa* Eigenmann & Eigenmann, 1888: 124. Type locality: Teffé. Holotype: MCZ 7518.
- Maximum length: 20.8 cm SL

Distribution: South America: Amazon, Ambyiacu, Aripuanã, Capim, Essequibo, Madeira, Negro, Orinoco, Solimões, Tocantins, and Trombetas River basins.

Countries: Brazil, Guyana, Peru, Venezuela

***Rhamdia nicaraguensis* (Günther, 1864)**

Pimelodus nicaraguensis Günther, 1864: 125. Type locality: Lake of Nicaragua. Holotype: BMNH 1864.1.26.212.

Pimelodus managuensis Günther, 1867: 603. Type locality: Lake Managua. Holotype: BMNH 1865.7.20.37.

Rhamdia alfaroi Fowler, 1932: 382, unnumbered fig on p. 381. Type locality: Escobal, 400 meters elevation, Costa Rica. Holotype: ANSP 53934.

Rhamdia luigiana Villa, 1977: 133, fig. 1. Type locality: Nicaragua: Departamento de Granada; Lake Nicaragua, between Ometepe and Zapatera Islands. Holotype: USNM 217535.

Maximum length: 19.1 cm SL

Distribution: Central America: River basins in Costa Rica and Nicaragua.

Countries: Costa Rica, Nicaragua.

Common names: barbudo (Costa Rica); bagre, chuchin (Nicaragua)

***Rhamdia poeyi* Eigenmann & Eigenmann, 1888**

Rhamdia poeyi Eigenmann & Eigenmann, 1888: 127. Type locality: Goyaz. Holotype: MCZ 8196.

Maximum length: 19.7 cm SL

Distribution: South America: Mamoré, upper Napo, and Tocantins River basins.

Countries: Bolivia, Brazil, Ecuador

***Rhamdia quelen* (Quoy & Gaimard, 1824)**

?*Silurus quadrimaculatus* Bloch, 1794: 37, pl. 368 (fig. 2). Type locality: Amerika. Holotype: ZMB 2944. Probably lost (Silfvergrip, 1996: 9).

Pimelodus quelen Quoy & Gaimard in Freycinet, 1824: 228, pl. 49 (fig. 3). Type locality Peru, Depto Loreto, right bank quebradita tributary to R. Samiria between Caño Pastos and Hamburgo. Neotype: NRM 16091 (100.5 mm SL), designated by Silfvergrip (1996: 12, 97, 139).

Pimelodus sebae Cuvier, 1829: 294. Type locality: Peru, Depto Loreto, right bank quebradita tributary to R. Samiria between Caño Pastos and Hamburgo. Neotype: NRM 16091 (100.5 mm SL). Lectotype designated but subsequently lost; neotype selected by Silfvergrip (1996: 13).

Pimelodus namdia Cuvier, 1829: 294. Type locality: Peru, Depto Loreto, right bank quebradita tributary to R. Samiria between Caño Pastos and Hamburgo. Neotype: NRM 16091 (100.5 mm SL), designated by Silfvergrip (1996: 12).

?*Heterobranchus sextentaculatus* Spix & Agassiz, 1829: 28, pl. 11. Type locality: Peru, Depto Loreto, right bank quebradita tributary to Río Samiria between Caño Pastos and Hamburgo. Neotype: NRM 16091 (100.5 mm SL), designated by Silfvergrip (1996: 13).

Pimelodus sapo Valenciennes, 1835: pl. 2 (fig. 6). Type locality: not stated. Type locality "Buéno-Ayres" appeared in Valenciennes in Cuvier & Valenciennes (1840: 180). Holotype: MNHN 1576. Name available from plate (cf. Sherborn & Griffin, 1934: 131); the correspondent text appeared only in Valenciennes (1847: 7).

Pimelodus Hilarii Valenciennes in Cuvier & Valenciennes, 1840: 180 (134 in the Strasbourg deluxe ed.). Type locality: les rivières qui se jettent dans celle de Saint-François au Brésis...., ... Monté-Vidéo [São Francisco River, Brazil and Montevideo, Argentina]. Lectotype: MNHN A.9415 (190.4 mm SL; dry), designated by Silfvergrip (1996: 14, 147).

Pimelodus Pentlandii Valenciennes in Cuvier & Valenciennes, 1840: 183 (135 in the Strasbourg deluxe ed.), pl. 435. Type locality: de l'Apurimac [tributary of the Ucayali River, tributary of the

Amazon River, Peru]. Lectotype: BMNH 1862.11.15.11 (221.0 mm SL, smaller spec.), designated by Silfvergrip (1996: 14, 139).

Pimelodus stegelichii Müller & Troschel in Schomburgk, 1848: 628. Type locality: Britisch-Guiana. Types from Surinam (Müller & Troschel, 1849: 3). Lectotype: ZMB 3043 (182.2 mm SL), designated by Silfvergrip (1996: 15).

Pimelodus Sellonis Müller & Troschel, 1849: 2. Type locality: Brasilien. Holotype: ZMB 3041 (291.0 mm SL).

Pimelodus Deppei Müller & Troschel, 1849: 3. Type locality: Sandwich-Inseln [=Hawaii]. Probably southern Mexico (Silfvergrip, 1996: 15). Lectotype: ZMB 3046 (112.2 mm SL), designated by Silfvergrip (1996: 15, 133).

Pimelodus musculus Müller & Troschel, 1849: 4. Type locality: America. Holotype: ZMB 3048.

?*Silurus sapipoca* Natterer in Kner, 1857: 418. Type locality: Marabitanos [Marabitanas, State of Amazonas, Brazil]. Not available, described as a junior synonym of *Pimelodus Sebae* Valenciennes (see Silfvergrip, 1996: 16).

Pimelotus Vilsoni Gill, 1858: 391. Type locality: Trinidad. Holotype: probably lost (see Ferraris & Vari, 1992: 2). Possible holotype is USNM 5927 (111.5 mm SL) (Silfvergrip, 1996: 22). Genus as *Pimelotus* but corrected in errata at rear of volume to *Pimelotus*; *Pimelotus* used in separate.

Pimelodus cinerascens Günther, 1860: 237, pl. 10 (fig. A). Type locality: Fresh waters of Guayaquil and Esmeraldas [Ecuador]. Lectotype: BMNH 1860.6.16.193 (155.0 mm SL), designated by Silfvergrip (1996: 22, 134).

Pimelodus guatemalensis Günther, 1864: 122. Type locality: Guatemala ... Huamuchal. Lakes with brackish water. Lectotype: BMNH 1864.1.26.210, designated by Silfvergrip (1996: 24).

Pimelodus wuchereri Günther, 1864: 123. Type locality: Bahia [Brazil]. Lectotype: BMNH 1864.1.19.18 (147.5 mm, smallest of four), designated by Silfvergrip (1996: 24).

Pimelodus godmanni Günther, 1864: 124. Type locality: Guatemala, Mexico ... Lower Vera Paz ... Rio Motagua ... Mexico. Lectotype: BMNH 1864.1.26.94 (218.2 mm SL), designated by Silfvergrip (1996: 24, 133).

?*Pimelodus micropterus* Günther, 1864: 124. Type locality: Guatemala ... River of San Geronimo. Holotype: BMNH 1864.1.26.92.

Pimelodus (Rhamdia) Baronis Mülleri Troschel in Müller, 1865: 636. Type locality: Still. Oc. [apparently from Pacific side of Mexico - Silfvergrip, 1996: 25]. Type (s): Probably lost (Silfvergrip, 1996: 25).

Pimelodus wagneri Günther, 1868: 474. Type locality: Pacific and Atlantic rivers of Panama. Type(s): not stated. Type series may include NMW 45618, 45619 (Silfvergrip, 1996: 26). Species based on the description of specimens from "Rio Chagres, Guayaquil und Neu-Granada" identified as *Pimelodella cinerascens* by Kner & Steindachner (1865: 52).

Rhamdia dorsalis Gill, 1870: 94. Type locality: the Marañon, or Upper Amazon, and Napo Rivers. Holotype: USNM 35334.

Pimelodus (Rhamdia) Parahybae Steindachner, 1877: 615. Type locality: Rio Parahyba. Holotype: NMW 45852.

Pimelodus (Rhamdia) Queleni var. *cuprea* Steindachner, 1877: 623. Type locality: aus dem Parahyba bei Juiz de Fora (im mittleren lauf des Stromes). Lectotype: NMW 45877:1 (155.5 mm SL), designated by Silfvergrip (1996: 146).

Pimelodus (Rhamdia) Cuyabae Steindachner, 1877: 633. Type locality: Cuyaba. Lectotype: NMW 45919: 1 (123.1 mm SL), designated by Silfvergrip (1996: 28).

Rhamdia bransfordii Gill, 1877: 337. Type locality: Panama ... Camp Marie Caretta. Holotype: USNM 16674.

Pimelodus bathyurus Cope, 1878: 674. Type locality: Peruvian Amazon. Lectotype: ANSP 21437-38 (45.6 mm SL, smaller of two), designated by Silfvergrip (1996: 28).

Rhamdia oaxacae Meek, 1902: 74, pl. 14. Type locality: Rio Quiotepec, Cuicatlan, Oaxaca, Mexico. Holotype: FMNH 3717.

- Rhamdia depressa* Barbour & Cole, 1906: 155, pl. 1. Type locality: Ikil Cenote, near Chichen-Itza, Yucatan. Lectotype: MCZ 29072 (193.2 mm SL), designated by Silfvergrip (1996: 30, 133).
- Pimelodus Boucardi* Regan, 1907a: 258. Type locality: Yucatan. Holotype: BMNH 1880.7.13.33.
- Rhamdia heteracantha* Regan, 1907b: 134. Type locality: Costa Rica, Juan Viñas. Holotype: BMNH 1907.6.28.32.
- Rhamdia barbata* Meek, 1907a: 106. Type locality: San Francisco, Guatemala. Holotype: FMNH 5906.
- Rhamdia nasuta* Meek, 1909: 207. Type locality: Buenos Aires de Terraba, Costa Rica. Holotype: FMNH 6480.
- Rhamdia branneri* Haseman, 1911b: 377, pl. 75. Type locality: Creek of the Rio Iguassú near Serrinha, Paraná, Brazil. Holotype: FMNH 54235 [ex CM 2851].
- Rhamdia branneri voulezi* Haseman, 1911b: 378, pl. 76. Type locality: Porto União da Victoria, Rio Iguassú. Holotype: FMNH 54238 [ex CM 2854].
- Rhamdia mounseyi* Regan, 1913a: 282. Type locality: River Ucayali, Peru. Lectotype: BMNH 1913.7.30.13 (115.3 mm SL), designated by Silfvergrip (1996: 33, 139).
- Rhamdia riojae* Fowler, 1915: 209, fig. 2. Type locality: Rioja, near Moyabamba and Baka Puerto, on or near the lower course of the Huallagua River, Peru. Holotype: ANSP 21101.
- Rhamdia ortonii* Fowler, 1915: 211, fig. 3. Type locality: Peruvian Amazon. Holotype: ANSP 21928.
- Rhamdia microps* Eigenmann in Eigenmann & Fisher, 1917: 394, pl. 38 (text says pl. 28). Type locality: Uruguayana. Holotype: FMNH 58285 [ex CM 7283] (largest).
- Rhamdia pubescens* Miranda Ribeiro, 1920: 11, unnum. pl. 6. Type locality: Urucum (proximo de Corumbá), Matto Grosso. Lectotype: MNRJ 925A, designated by Miranda Ribeiro (1953: 404), but perhaps specimen not isolated. Lectotype also selected by Silfvergrip (1996: 34) as MNRJ 925 (180.3 mm SL, largest of five).
- ?*Silurus rivularis* Larrañaga, 1923: 376. Type locality: Peru, Depto Loreto, right bank quebradita tributary to R. Samiria between Caño Pastos and Hamburgo. Neotype: NRM 16091 (100.5 mm SL), designated by Silfvergrip (1996: 35). Appeared as *ribularis*; corresponds to *Silurus 9-radiatus* on p. 385.
- Rhamdia micayi* Eigenmann in Pearson, 1924: 11. Not available, no distinguishing features.
- Caecorhamdia urichi* Norman, 1926: 325, fig. 1. Type locality: Pool in interior of the Guacharo Cave, Trinidad. Lectotype: BMNH 1926.7.28.1-2 (99.7 mm SL, smaller of two), designated by Silfvergrip (1996: 35).
- Rhamdia guatemalensis muriei* Hubbs, 1935: 7, pl. 4 (fig. 1). Type locality: a stagnant aguada ... at edge of swamp, in the high tropical "bush" region at Uaxactun, Petén, Guatemala. Holotype: UMMZ 97881.
- Rhamdia guatemalensis decolor* Hubbs, 1936: 201, pl. 1 (fig. 3). Type locality: Mexico ... San Bulha Cave, Motul, Yucatan. Holotype: UMMZ 102217.
- Rhamdia guatemalensis stygaea* Hubbs, 1936: 203, pl. 1 (fig. 2). Type locality: Mexico ... San Isidro Cave in Salar Colony, near Merida. Holotype: UMMZ 102218.
- Rhamdia saijaensis* Rendahl, 1941: 2. Type locality: Rio Saija, südl. von Buenaventura, zwischen B. und Guapi [Saija River, in Pacific slope, Colombia]. Holotype: NRM 10675.
- Rhamdia duquei* Eigenmann & Pearson in Eigenmann & Allen, 1942: 93. Type locality: Rio Urubamba, Santa Ana. Holotype: SU 57895; holotype is mixed with the paratypes and cannot be distinguished (Silfvergrip, 1996: 36).
- Rhamdia sebae Martyi* Güntert, 1942: 33. Type locality: Riactis Canâwé, Dept. Ita, Paraguay. Holotype: NMBA 5279.
- Rhamdia lehmanni* Dahl, 1961: 487, unnum. fig. [1] on p. 489. Type locality: a small pool in a brook tributary to the Guayabero River, approx. 1500 meters from Expedition's camp No. I, and about 1000 meters from the mouth of the brook, on the left side of the river. Holotype: probably lost (Silfvergrip, 1996: 37; see Cala, 1981: 1).
- Maximum length: 38.7 cm SL
Distribution: North, Central, and South America: Rivers in Mexico in the north to central Argentina in the south.
Countries: Argentina, Belize, Bolivia, Brazil, Colombia, Costa Rica, Ecuador, El Salvador, French Guiana, Guatemala, Guyana, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, Suriname, Trinidad and Tobago, Uruguay, Venezuela
Remarks and references: The nominal species *Rhamdia eigenmanniorum* Miranda Ribeiro (1911: 273), herein tentatively placed in the genus *Pimelodella*, was not treated in Silfvergrip (1996).
Common names: bagre, bagre de arroyo, bagre lagunero, bagre negro, bagre sapo, bagre sapo de las piedras, mandi hú, moncholo lagunero (Argentina); bagre (Bolivia); bagre, bagre-morcego, bagre-das-lagoas, bagre-sapo, mandi-chorão, mandi-moela, nhandiá, jandiá, jandiá-tingá, jundiá-tingá, peixe-sapo (Brazil); barbilla, barbudo negro, cantilero, capitán, guabina, lisa, liso, liso negro (Colombia); bagre, chuchin (Nicaragua); bagre (Peru)
- Rhamdia xetequepeque* Silfvergrip, 1996**
Rhamdia xetequepeque Silfvergrip, 1996: 98, pl. 2 (fig. 3). Type locality: Peru, Jequetepeque River, just W of Chilete (06°19'90"S, 78°25'90"W). Holotype: ROM 70112.
Maximum length: 7.2 cm SL
Distribution: South America: Jequetepeque River basin.
Countries: Peru
- RHAMDIOGLANIS**
Rhamdioglanis Ihering, 1907: 16. Type species: *Rhamdioglanis frenatus* Ihering, 1907. Type by original designation. Gender: masculine.
- Rhamdioglanis frenatus* Ihering, 1907**
Rhamdioglanis frenatus Ihering, 1907: 16. Type locality: riverlets of the Island of S. Sebastião, State of S. Paulo. Lectotype: MZUSP 154, designated by Britski (1969: 205).
Maximum length: 22 cm TL
Distribution: South America: Streams in the Island of São Sebastião, São Paulo State.
Countries: Brazil
Common names: mandi
- Rhamdioglanis transfasciatus* Miranda Ribeiro, 1908**
Rhamdioglanis transfasciatus Miranda Ribeiro, 1908: [3]. Type locality: Rio Bethary. Syntypes: MNRJ 965.
Maximum length: 19 cm SL
Distribution: South America: Coastal streams in Rio de Janeiro to Santa Catarina State.
Countries: Brazil
Common names: bagre, jundiá, mandi-pintado
- RHAMDIOPSIS**
Rhamdiopsis Haseman, 1911b: 375. Type species: *Rhamdiopsis moreirai* Haseman, 1911. Type by monotypy. Gender: feminine.
- Rhamdiopsis microcephala* (Lütken, 1874)**
Rhamdia microcephala Lütken, 1874: 35. Type locality: in flumine Rio das Velhas. Syntypes: ZMUC 324, 325, 327.
Maximum length: 7.8 cm SL
Distribution: South America: Upper Paraná and São Francisco River basins.
Countries: Brazil
Common names: bagre
Remarks and references: Detailed description and illustration of *R. microcephala* appeared in Lütken (1875: 177-179, pl. 3, fig. 7).
- Rhamdiopsis moreirai* Haseman, 1911**
Rhamdiopsis moreirai Haseman, 1911b: 375, pl. 73. Type locality: Serrinha Paraná, Rio Iguassú. Holotype: FMNH 54372 [ex CM

2849].

Maximum length: 11.7 cm SL

Distribution: South America: Iguaçu and Ribeira de Iguape River basins.

Countries: Brazil

Common names: bagre, jundiá, mandzinho

TAUNAYIA

Taunayia Miranda Ribeiro, 1918: 642. Type species: *Taunayia marginata* Miranda Ribeiro, 1918. Type by monotypy. Gender: feminine.

***Taunayia bifasciata* (Eigenmann & Norris, 1900)**

Nannoglanis bifasciatus Eigenmann & Norris, 1900: 350. Type locality: S. Paulo, Brazil. Holotype: CAS 75771 [IU 09291].

Taunayia marginata Miranda Ribeiro, 1918: 642. Type locality: Piquete. Holotype: MZUSP 2273.

Maximum length: 14 cm SL

Distribution: South America: Upper Paraíba do Sul and Tietê River basins.

Countries: Brazil

Common names: bagre

Remarks and references: The locality where the holotype of *Nannoglanis bifasciatus* was collected, according the title of Eigenmann & Norris (1900) article is "S. Paulo, Brazil" [=State of São Paulo, Brazil], either in tributaries of upper Paraná River and coastal streams (1900: 349). Considering its known distribution, its type locality can be restricted to the headwaters of the Paraíba do Sul and Tietê River basins, in the State of São Paulo (Oliveira & Britski, 2000: 128).

SPECIES INQUIRENDA

Pimelodus velifer Humboldt in Humboldt & Valenciennes, 1821: 171. Type locality: Río Magdalena, Colombia. No types known.

Family Pimelodidae (Long-whiskered catfishes)

John G. Lundberg and Michael W. Littmann

As here delimited the family Pimelodidae closely corresponds to subfamily Pimelodinae of Lundberg et al. (1991), Nass (1991) and de Pinna (1998). Thus, Pimelodidae includes *Hypophthalmus* and excludes the many catfishes long classified in Pimelodidae but now placed in Heptapteridae (Bockmann & Guazzelli, this volume) and Pseudopimelodidae (Shibatta, this volume). Furthermore, we remove *Conorhynchos conirostris* from Pimelodidae and place that species as Incertae Sedis at the family level within Siluriformes. Pimelodidae are a moderately species rich family of South American and lower Isthmian catfishes, with over ninety recognized and known but unnamed species. Pimelodid species are currently placed among thirty genera, but ongoing revisions and descriptions of new taxa will likely change the classification of genera.

Although pimelodids lack unique externally visible characteristics, its members can be identified among South American siluriforms, by a combination of features:

- skin naked (a few species have slightly enlarged lateral line ossicles);
- cutaneous laterosensory canals branched or anastomosing on the head and anterior trunk;
- skull roof never covered by jaw or epaxial musculature and its skin usually thin;
- skull roof bones ornamented with striate ridges, small tubercles, grooves or pits, not smooth;
- nares well separated and lacking barbels;
- 3 pairs of barbels: maxillary, inner and outer mentals;
- adipose fin well developed;
- caudal fin deeply emarginate, lobed or forked;
- gill membranes free, branchial openings not restricted;
- orbital rim free;
- dorsal- and pectoral-fin spines pungent or at least moderately stiffened, never completely flexible or mostly segmented.

The adults of most pimelodid species fall within an approximate size range of 20 - 80cm SL. However, the extremes of adult size in the family span two orders of magnitude from the giant >2 m *Brachyplatystoma filamentosum* down to a ~25 mm miniature, undescribed species from the deep channels of the Amazon. In body shape most pimelodids have moderately depressed snouts and laterally compressed tails. The “sorubimines” or shovel-nosed catfishes have markedly flattened heads and elongate, nearly circular caudal peduncles. *Hypophthalmus* have deep, strongly compressed bodies, and *Platynemateichthys notatus* has a streamlined, torpedo-shape.

Most pimelodids are generalized macrophagous to mesophagous carnivores or omnivores that consume large numbers of small fishes and invertebrates. Some (e.g. *Brachyplatystoma*) are active swimming predators, whereas others (e.g. *Pseudoplatystoma*) appear to be more sedentary, lie and wait predators. *Calophysus* are flesh-biting scavengers equipped with incisor-like teeth. *Hypophthalmus* are microphagous zooplanktivores. Most are benthic or bottom oriented, but *Hypophthalmus* and *Platynemateichthys* are distinctly pelagic.

Although most species exhibit standard countershading of black, gray or brown above a bright white or cream-colored or yellowish venter, pimelodids are wonderfully diverse in color and pigment pattern. In life some have a metallic sheen of silver, gold, blue or green. Many species present exuberant combinations of black to brown and even white stripes or spots or marblings on backgrounds of silver, white, yellow, orange, brown or black.

Sex dimorphism is scarcely developed in pimelodids. These catfishes are externally fertilizing and are not known to practice parental care. Juveniles of most species are miniature replicas of adults. However, some “sorubimines” have highly specialized young with tremendously elongated barbels and fin-ray filaments or enlarged wing-like pectoral fins (Mago-Leccia et al., 1986, Lundberg et al. 1991). Some species of *Brachyplatystoma* undertake long distance upriver migrations in the Amazon and Orinoco basins, presumably for spawning (Barthem and Goulding, 1997). The larvae and juveniles of these species float downstream high in the water column of the main channels.

Pimelodids inhabit a wide range of habitats in small to the very largest white, black and clear-water rivers and lakes where they are among the most abundant fishes. Pimelodids are most common in base level and lowland rivers with strong currents, and the migrating species are able to negotiate cataracts. However, these catfishes do not reach high-gradient upland or mountain streams, and they are rare or absent from small forest streams and stagnant swamps.

Pimelodids are endemic to the Neotropics with their species diversity highest in the Amazon, Paraná and Orinoco basins, and large rivers of the Guianas. Some species have a wide distribution throughout this vast region. The family also has locally endemic representatives in the Magdalena, Maracaibo, larger rivers of northwestern Colombia and eastern Panama, and southeastern Brazil. Fossil pimelodids have been found in rocks of Miocene age, and there are a few older records from the Oligocene and Eocene.

Many large-size pimelodine species are especially important, and in places overexploited, food resources throughout much of tropical South America. *Brachyplatystoma* spp. and *Pseudoplatystoma* spp. are the most important in commercial fisheries (Barthem and Goulding, 1997). Several species including shovel-nosed catfishes (*Sorubim* spp.), and *Pimelodus* spp. are popular in the aquarium fish industry. So-called “red-tailed” catfish (*Phractocephalus hemiliopterus*) and “tiger” catfish (*Merodontodus tigrinus*) are currently high-priced ornamental species.

Lundberg et al. (1988, 1991), Nass (1991) and de Pinna (1998) presented or reviewed morphological evidence supporting monophyly of the Pimelodidae. The most complex anatomical character shared by all pimelodids is a uniquely elongated moveable joint between the lateral ethmoid and palatine bones. The dendritic arrangement of the lateral line tubes in the skin of the head and anterior trunk is a clear synapomorphy, although a similar condition is found in Ariidae that is presumed to have evolved independently. Also, there is a deep sutural joint between the fifth and sixth centra, but this feature appears to be secondarily lost within the genus *Megalonema*, and similar sutural intervertebral joints appear to have evolved in some other siluriform clades. De Pinna (1993) described an unusual bifurcated dorsal process arising from the premaxilla that may be generally present in pimelodids.

The generic-level taxonomy of Pimelodidae signals the current need for phylogenetic systematic attention. There is an abundance (22 of 30) of monotypic or 2-species genera, and one large, catch-all or paraphyletic genus *Pimelodus* that includes about 38% of the species. Nevertheless, the results of recent research offer some well-supported hypotheses of relationship and this framework serves to identify targets for further study.

Phractocephalus, *Leiarius* and *Perrunichthys* comprise a small clade that is sister to all other pimelodines. Fossils of *Phractocephalus* of Middle to Late Miocene age provide important dates for calibrating pimelodine diversification. The distributions of modern *Perrunichthys* (Maracaibo) and fossil *Phractocephalus* (La Venta, Colombia; Urumaco, Venezuela) signal important vicariance events and major changes in the drainage patterns of northern South America's largest rivers. The *Phractocephalus* fossils are extraordinarily well-preserved skulls that document detailed aspects of morphological change and conservatism.

Most remaining pimelodines fall among three large subclades: *Calophysus* and *Pimelodus* groups, and “sorubimines.” The first two of these are sister groups. The *Calophysus* group is a clade of highly apomorphic and widespread big-river catfishes first indicated in 1919 by Driver, and phylogenetically delimited by Stewart (1986). Lundberg et al. (1991) confirmed the *Calophysus* group and added to it the uncertainly monophyletic genus *Megalonema*. *Megalonema* includes a complex of species, some undescribed, distributed in the Amazon, Orinoco, Maracaibo and Magdalena, that is likely to be biogeographically informative.

The *Pimelodus* group was diagnosed by Lundberg et al. (1991). This clade includes the likely paraphyletic genus *Pimelodus*, several possibly “segregate” genera each characterized by conspicuous specializations, and a few poorly-known nominal genera that have not been recently examined. It is possible that subgroups of *Pimelodus* are most closely related to some of the latter taxa. *Pimelodus* has an old and complex taxonomic history involving catfishes from all over the world. Even restricted as it is now to a group of South American catfishes, *Pimelodus* is complex. The species-level taxonomy of the species and populations similar to the type species *P. maculatus* is unsettled. Lundberg et al. (1991) identified derived characters of cranial nerves and skeleton that appear to diagnose a restricted subset of species including the type species.

The other *Pimelodus* group taxa include some of the most highly derived and biogeographically significant Neotropical catfishes. Systematic understanding of these catfishes is mixed and overall much phylogenetic resolution remains to be achieved. Of special biogeographic interest, *Platysilurus* (Bestor, 1995) and *Cheirocerus* (Stewart, 1986) each contain sister group pairs containing endemic species in the Maracaibo basin and others widespread in the Amazon, Orinoco or Guianas. There is an undescribed clade of four or five “miniature” *Pimelodus*-like species that live in deep river channels of the Amazon and Orinoco. The odd zooplanktivorous catfishes of the genus *Hypophthalmus* were long isolated in their own family but have been shown to be pimelodines (Howes, 1983; Lundberg et al., 1991). Recently de Pinna (1993, 1998) has located synapomorphies of the trophic apparatus that place *Hypophthalmus* sister to *Parapimelodus* within the *Pimelodus* group.

Pimelodines possessing large, palatal tooth plates have been taxonomically united and most recently named the Sorubiminae (Schultz, 1944). Thus diagnosed, Sorubiminae comprises 15, about half, of the genera and a little less than 1/3 of the species. The results of phylogenetic studies by Lundberg et al. (1991) and Nass (1991) based on morphological data suggest that Sorubiminae is not monophyletic and it has already been partly disassembled into smaller monophyletic subgroups. The clade containing *Phractocephalus*, *Leiarius* and *Perrunichthys*, all with palatal dentition and originally included in Sorubiminae, was noted above. *Zungaro* and *Steindachneridion* were also placed among sorubimines by Schultz

(1944). However, Lundberg et al. (1991) found no evidence for resolving the position of these catfishes within a large clade that also includes the *Calophysus* and *Pimelodus* groups.

The remaining genera of sorubimines fall into two groups that were partly analyzed by Nass (1991) and Littmann (1998). The first, comprising *Pseudoplatystoma*, *Sorubim*, *Sorubimichthys*, and possibly *Hemisorubim*, include the distinctive and colorful "sorubim" or shovel-nosed catfishes. *Pseudoplatystoma* and *Sorubim* have wide cis/trans-Andean distributions that partly reflect former drainage linkages among the present São Francisco, Paraná, Amazon, Orinoco, Maracaibo and Magdalena basins. The second group includes three monotypic genera *Platynemichthys*, *Goslinia* and *Merodontodus* plus the likely paraphyletic *Brachyplatystoma*. These are a diverse array of commercially important catfishes from the Amazon, Orinoco and Guianas.

AGUARUNICHTHYS

Aguarunichthys Stewart, 1986: 662. Type species: *Aguarunichthys torosus* Stewart, 1986. Type by original designation. Gender: masculine.

***Aguarunichthys inpai* Zuanon, Rapp Py-Daniel & Jégu, 1993**

Aguarunichthys inpai Zuanon, Rapp Py-Daniel & Jégu, 1993: 258, figs. 2b, 6. Type locality: Brazil: Amazonas state: Solimões River drainage, north of the Marchantaria Island, at about 15 km above confluence with Rio Negro drainage. Holotype: INPA 5398.

Maximum length: 42 cm SL

Distribution: South America: Middle Amazon River basin.

Countries: Brazil

Remarks and references: Collected at depth ~30 m, bottom trawl.

***Aguarunichthys tocantinsensis* Zuanon, Rapp Py-Daniel & Jégu, 1993**

Aguarunichthys tocantinsensis Zuanon, Rapp Py-Daniel & Jégu, 1993: 252, figs. 2a, 4. Type locality: Brazil, Pará State: Tocantins River drainage, rapids above Marabá. Holotype: INPA 5400.

Maximum length: 31.7 cm SL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Remarks and references: Collected in areas with strong currents, rocky bottom.

***Aguarunichthys torosus* Stewart, 1986**

Aguarunichthys torosus Stewart, 1986: 663, figs. 7-8. Type locality: Peru, Departamento Amazonas, Río Cenepa, 1.6 km west of Huampami and near Peruvian military camp Chavez Valdivia, about 210 m elev., Approx. 4°28'S, 78°10'W. Holotype: LACM 39651-1.

Maximum length: 34.6 cm SL

Distribution: South America: Cenepa River basin in Amazon River drainage.

Countries: Peru

BAGROPSIS

Bagropsis Lütken, 1874b: 32. Type species: *Bagropsis reinhardti* Lütken, 1874. Type by monotypy. Gender: feminine.

***Bagropsis reinhardti* Lütken, 1874**

Bagropsis reinhardti Lütken, 1874b: 32. Type locality: Rio das Velhas [Minas Gerais, Brazil]. Syntypes: ZMUC 223, 225, 227. Species illustrated and described in Lütken (1875: 160 (and p. V of summary), pl. 1, fig. 2).

Maximum length: at least 22.7 cm SL

Distribution: South America: Das Velhas River basin in São Francisco River drainage.

Countries: Brazil

Common names: Mandi bagre

BERGIARIA

Bergiella Eigenmann & Norris, 1900: 355. Type species: *Pimelodus westermanni* Reinhardt, 1874. Type by original designation.

Gender: feminine. Preoccupied by *Bergiella* Baker, 1897 in Hymenoptera, replaced by *Bergiaria* Eigenmann & Norris, 1901.

Bergiaria Eigenmann & Norris, 1901: 272. Type species: *Pimelodus westermanni* Reinhardt, 1874. Type by being a replacement name. Gender: feminine. Replacement for *Bergiella* Eigenmann & Norris, 1900.

***Bergiaria platana* (Steindachner, 1908)**

Bergiella platana Steindachner, 1908d: 111. Type locality: La Plata [Argentina]. Holotype: whereabouts unknown.

Distribution: South America: Paraná River basin.

Countries: Argentina

***Bergiaria westermanni* (Lütken, 1874)**

Pimelodus westermanni Lütken, 1874b: 33. Type locality: Rio das Velhas [Minas Gerais, Brazil]. Syntypes: ZMUC 258, 259. Species illustrated and described in Lütken (1875: 167 (and p. VI of summary), pls. 2 (fig. 4), pl. 3 (fig. 4a-b)).

Distribution: South America: Das Velhas River basin in São Francisco River drainage.

Countries: Brazil

BRACHYPLATYSTOMA

Piramutana Bleeker, 1858: 356. Type species: *Bagrus piramuta* Kner, 1858. Type by monotypy. Gender: feminine.

Piratinga Bleeker, 1858: 355. Type species: *Bagrus reticulatus* Kner, 1858. Type by subsequent designation by Bleeker (1862a: 11). Gender: feminine.

Brachyplatystoma Bleeker, 1862a: 11. Type species: *Platystoma vaillanti* Valenciennes, 1840. Type by original designation. Gender: neuter. We have retained the younger name *Brachyplatystoma* of Bleeker for purposes of stability, there has been little use of either *Piratinga* or *Piramutana* since their original descriptions. Mees (1974) treated *Piratinga* and *Malacobagrus* as synonyms of *Brachyplatystoma*. Barthem and Goulding (1997) reviewed species biology.

Malacobagrus Bleeker, 1862a: 11. Type species: *Pimelodus filamentosus* Lichtenstein, 1819. Type by original designation. Gender: masculine.

Ginesia Fernández-Yépez, 1951: [1]. Type species: *Ginesia cunaguaro* Fernández-Yépez, 1951. Type by original designation. Gender: feminine.

***Brachyplatystoma filamentosum* (Lichtenstein, 1819)**

Pimelodes filamentosus Lichtenstein, 1819: 60. Type locality: Brazil. Holotype: ZMB 2973.

Platystoma affine Valenciennes in Cuvier & Valenciennes, 1840: 24 [18 in the Strasbourg deluxe edition]. Type locality: Rio de Janeiro [Brazil]. Holotype: MNHN A.9360 (mounted).

Platystoma gigas Günther, 1872: 450. Type locality: River Hualaga, Upper Amazon [Peru]. Holotype: BMNH uncat. (stuffed).

Piratinga pirá-aiba Goeldi, 1898: 464, 477, pl. (fig. 4). Type

locality: Pará, Brazil. Name available from plate.
Brachyplatystoma goeldii Eigenmann & Bean, 1907: 661, fig. 1.
 Type locality: Brazil: Amazon River, between Para and Manaos.
 Holotype: USNM 52561.
 Maximum length: 360 cm TL
 Distribution: South America: Amazon and Orinoco River basins and major rivers of the Guianas and NE Brazil.
 Countries: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Peru, Suriname, Venezuela
 Common names: Piraíba, Pirahiba, Filhote, Lau lau, Valentón, Lechero, Zúngaro saltón

***Brachyplatystoma juruense* (Boulenger, 1898)**

Platystoma juruense Boulenger, 1898b: 421, pl. 39. Type locality: Brazil, Rio Juruá. Holotype: BMNH 1897.11.26.11.
Ginesia cunaguaro Fernández-Yépez, 1951: [2], fig. Type locality: Río Apure, 3 km east of San Fernando de Apure, Venezuela. Holotype: AFY 51189.
 Maximum length: 60 cm TL
 Distribution: South America: Amazon and Orinoco River basins.
 Countries: Bolivia (?), Brazil, Colombia (?), Ecuador (?), Peru, Venezuela
 Common names: Flamengo, Zebra, Cunaguaro, Siete babas, Zúngaro alianza

***Brachyplatystoma rousseauxii* (Castelnaud, 1855)**

Bagrus rousseauxii Castelnaud, 1855: 32, pl. 14 (fig. 1). Type locality: Amazon R., Brazil. Holotype: MNHN A.9457 (dry).
Bagrus goliath Kner, 1858a: 379. Type locality: Salto Theotonio [Brazil]. Holotype: whereabouts unknown.
Brachyplatystoma paraense Steindachner, 1909: 195. Type locality: Fischmarkt von Pará [Brazil]. Holotype: NMW 47590.
 Maximum length: 192 cm TL
 Distribution: South America: Amazon and Orinoco River basins and major rivers of French Guiana.
 Countries: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Peru, Venezuela
 Remarks and references: Synonymy above based on personal observation and examination of types; see *Zungaro zungaro* for synonymy of *Bagrus flavicans* Castelnaud.
 Common names: Dourada, Dorado, Zúngaro Dorado, Plateado

***Brachyplatystoma vaillantii* (Valenciennes, 1840)**

Platystoma Vaillantii Valenciennes in Cuvier & Valenciennes, 1840: 21 [16 of Strasbourg deluxe ed.], pl. 423. Type locality: Cayenne [French Guiana]; Suriname. Syntypes: MNHN B.158 (1), B.159 (1).
Bagrus reticulatus Kner, 1858a: 376, pl. 1 (fig. 1). Type locality: Salto Theotonio, am Flusse Araguay, Forte do Rio branco und Rio Madeira [Brazil]. Holotype: whereabouts unknown.
Bagrus piramuta Kner, 1858a: 382. Type locality: Barra do Rio negro und Borba Rio Madeira [Brazil]. Type: unknown.
Brachyplatystoma parnahybae Steindachner, 1908c: 126. Type locality: Rio Parnahyba [Brazil]. Holotype: NMW.
 Maximum length: 150 cm TL
 Distribution: South America: Amazon and Orinoco River basins and major rivers of the Guianas and NE Brazil.
 Countries: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Peru, Suriname, Trinidad and Tobago, Venezuela
 Common names: Atero, Piramutaba, Piramutana, Pira-botão, Mulher-ingrata, Manitoa,

Species inquirenda

Bagrus punctulatus Castelnaud, 1855: 33, pl. 14 (fig. 2). Type locality: de la rivière des Amazones [Brazil]. Holotype: whereabouts unknown.

CALOPHYSUS

Calophysis Müller & Troschel in Müller, 1843: 318. Type species: *Pimelodus macropterus* Lichtenstein, 1819. Type by subsequent designation by Bleeker (1862a: 12). Gender: masculine.
Pimeleotropis Gill, 1859: 196. Type species: *Pimeleotropis lateralis* Gill, 1859. Type by monotypy. Gender: feminine.
Pseudocallophysus Bleeker, 1862a: 12. Type species: *Pimelodus ctenodus* Spix & Agassiz, 1829. Type by original designation. Gender: masculine.

***Calophysis macropterus* (Lichtenstein, 1819)**

Pimelodes macropterus Lichtenstein, 1819: 59. Type locality: Brazil. Holotype: ZMB 3055.
Pimelodus ctenodus Spix & Agassiz, 1829: 21, pl. 8a. Type locality: aequitorialis fluviis [Brazil]. Holotype: whereabouts unknown.
Pimeleotropis lateralis Gill, 1859: 196. Type locality: Amazon River. Holotype: originally at Lyceum Nat. Hist. NY (whereabouts unknown).
 Maximum length: 40 cm TL
 Distribution: South America: Amazon and Orinoco River basins.
 Countries: Bolivia, Brazil, Colombia, Ecuador (?), Peru, Venezuela
 Common names: Zumurito, Mota pintada

CHEIROCERUS

Cheirocerus Eigenmann, 1917: 398. Type species: *Cheirocerus eques* Eigenmann, 1917. Type by original designation. Gender: masculine.
Sovichthys Schultz, 1944: 190. Type species: *Sovichthys abuelo* Schultz, 1944. Type by original designation. Gender: masculine.

***Cheirocerus abuelo* (Schultz, 1944)**

Sovichthys abuelo Schultz, 1944: 191, pl. 1 (fig. A). Type locality: Venezuela, Río de Los Pájaros, 3 km above Lago Maracaibo, at depth of 15 ft. Holotype: USNM 121183.
 Maximum length: 20 cm SL
 Distribution: South America: Lake Maracaibo basin.
 Countries: Colombia, Venezuela
 Remarks and references: See Stewart and Pavlik (1985) for recent revision.
 Common names: Abuelo

***Cheirocerus eques* Eigenmann, 1917**

Cheirocerus eques Eigenmann, 1917: 398, pl. 39. Type locality: Bolivia, Villa Bella. Holotype: FMNH 58255 [ex CM 7254].
 Distribution: South America: Amazon River basin.
 Countries: Bolivia, Brazil, Colombia, Ecuador, Peru
 Remarks and references: See Stewart and Pavlik (1985) for recent revision.

***Cheirocerus goeldii* (Steindachner, 1908)**

Pimelodina goeldii Steindachner, 1908a: 83. Type locality: Rio Purus [Brazil]. Holotype: NMW 45503.
Pimelodus leptus Eigenmann & Pearson in Eigenmann & Allen, 1942: 104, pl. 4 (fig. 3). Type locality: Peru, Río Pachitea. Holotype: CAS 47288 [ex IU 15858].
 Maximum length: 15.2 cm SL
 Distribution: South America: Purus River basin.
 Countries: Brazil, Colombia, Peru
 Remarks and references: See Stewart and Pavlik (1985) for recent revision.

DUOPALATINUS

Duopalatinus Eigenmann & Eigenmann, 1888: 136. Type species: *Platystoma emarginatum* Valenciennes, 1840. Type by monotypy. Gender: masculine.

***Duopalatinus emarginatus* (Valenciennes, 1840)**

Platystoma emarginatum Valenciennes in Cuvier & Valenciennes, 1840: 25 [19 of Strasbourg deluxe ed.]. Type locality: rivière de Saint-Francois [Rio São Francisco, Brazil]. Holotype: MNHN A.9353 (mounted).

Maximum length: 14 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

***Duopalatinus peruanus* Eigenmann & Allen, 1942**

Duopalatinus peruanus Eigenmann & Allen, 1942: 107, pl. 4 (fig. 4). Type locality: Peru, Río Puinagua, mouth of Río Pacaya, Río Ucayali system. Holotype: CAS 63630 [ex IU 15798].

Maximum length: 15 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Bolivia (?), Brazil, Colombia (?), Ecuador (?), Peru, Venezuela

EXALLODONTUS

Exallodontus Lundberg, Mago-Leccia & Nass, 1991: 843. Type species: *Exallodontus aguanai* Lundberg, Mago-Leccia & Nass, 1991. Type by original designation. Gender: masculine.

***Exallodontus aguanai* Lundberg, Mago-Leccia & Nass, 1991**

Exallodontus aguanai Lundberg, Mago-Leccia & Nass, 1991: 847, figs. 2-10, 13. Type locality: Venezuela, Territorio Federal Delta Amacuro, Río Orinoco near Los Castillos, 159 n mi from sea buoy at the terminus of the ship navigation channel in Boca Grande, 8°32'N, 62°23'W, 20-30 m. Holotype: MBUCV-V-18930.

Maximum length: ~20 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Bolivia (?), Brazil, Colombia, Ecuador (?), Peru, Venezuela

GOSLINIA

Taenionema Eigenmann & Bean, 1907: 662. Type species: *Taenionema steerei* Eigenmann & Bean, 1907. Type by original designation. Gender: neuter. Preoccupied by *Taenionema* Banks, 1905 in Plecoptera and by *Taenionema* Bolivar, 1906 in Orthoptera; replaced by *Goslinia* Myers, 1941.

Goslinia Myers, 1941: 88. Type species: *Taenionema steerei* Eigenmann & Bean, 1907. Type by being a replacement name. Gender: feminine. Replacement for *Taenionema* Eigenmann & Bean, 1907.

***Goslinia platynema* (Boulenger, 1898)**

Brachyplatystoma platynema Boulenger, 1898a: 477. Type locality: Brazil, Pará. Holotype: BMNH 1898.10.11.20.

Taenionema steerei Eigenmann & Bean, 1907: 662, fig. 2. Type locality: Brazil, Amazon River, between Para and Manaos. Holotype: USNM 52571.

Maximum length: 100 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru, Venezuela

HEMISORUBIM

Hemisorubim Bleeker, 1862a: 10. Type species: *Platystoma platyrhynchus* Valenciennes, 1840. Type by original designation. Gender: masculine.

***Hemisorubim platyrhynchus* (Valenciennes, 1840)**

Platystoma platyrhynchus Valenciennes in Cuvier & Valenciennes, 1840: 27 [20 of Strasbourg deluxe ed.]. Type locality: No locality. Holotype: MNHN 1203.

Silurus gerupoca Natterer in Kner, 1858a: 399. Type locality: Not

available, Natterer manuscript name mentioned in passing under *Platysoma platyrhynchus*.

Maximum length: 52.5 cm SL

Distribution: South America: Amazon, Maroni, Orinoco, and Paraná River basins.

Countries: Argentina, Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Paraguay, Peru, Suriname, Uruguay (?), Venezuela

Common names: Toa

HYPOPHTHALMUS

Hypophthalmus Cuvier, 1829: 293. Type species: *Hypophthalmus edentatus* Spix & Agassiz, 1829. Type by subsequent designation by Bleeker (1862a: 15). Gender: masculine. See Kottelat (1988: 78). See Howes (1983) and Lundberg et al. (1991) on relationships of *Hypophthalmus* within Pimelodidae. Lopez-Fernandez et al. (2000) treat Venezuelan *Hypophthalmus*.

Hypophthalmus Spix & Agassiz, 1829: 16. Type species: *Hypophthalmus edentatus* Spix & Agassiz, 1829. Type by subsequent designation Bleeker (1862a: 15). Gender: masculine.

Notophthalmus Hyrtl, 1859: 17. Type species: *Hypophthalmus marginatus* Valenciennes, 1840. Type by monotypy. Gender: masculine. Preoccupied by *Notophthalmus* Rafinesque, 1820 in Amphibia; apparently not replaced.

Pseudohypophthalmus Bleeker, 1862a: 15. Type species: *Hypophthalmus fimbriatus* Kner, 1858. Type by original designation. Gender: masculine.

***Hypophthalmus edentatus* Spix & Agassiz, 1829**

Hypophthalmus edentatus Spix & Agassiz, 1829: 16, pl. 9. Type locality: influviis Brasiliae equatorialis. Syntypes: MHNN 706 (2).

Hypophthalmus Spixii Valenciennes in Cuvier & Valenciennes, 1840: 231 [172 of Strasbourg deluxe ed.]. Type locality: Brazil. Holotype: whereabouts unknown. Unneeded new name for *Hypophthalmus edentatus* Spix & Agassiz, 1829.

Maximum length: 57.5 cm TL

Distribution: South America: Amazon and Orinoco River basins and Atlantic coastal rivers of Guyana and Suriname.

Countries: Brazil, Guyana, Peru, Suriname, Trinidad and Tobago, Venezuela

Common names: Maparate

***Hypophthalmus fimbriatus* Kner, 1858**

Hypophthalmus fimbriatus Kner, 1858a: 444, pl. 9 (fig. 30). Type locality: Rio negro [Brazil]. Syntypes: NMW 50519.

Distribution: South America: Known from Santarém and the Negro River basin.

Countries: Brazil, Venezuela

***Hypophthalmus marginatus* Valenciennes, 1840**

Hypophthalmus marginatus Valenciennes in Cuvier & Valenciennes, 1840: 225 [168 of Strasbourg deluxe ed.], pl. 439. Type locality: Cayenne [French Guiana]; Suriname. Syntypes: MNHN A.8961 (1); RMNH D1932 (1), 1933 (1).

Distribution: South America: Amazon and Orinoco River basins and major rivers of French Guiana and Suriname.

Countries: Brazil, French Guiana, Peru, Suriname

Common names: Maparate

***Hypophthalmus oremaculatus* Nani & Fuster, 1947**

Hypophthalmus oremaculatus Nani & Fuster, 1947: 3, figs. 2-3. Type locality: Brazil, Puerto Gaboto, Rio Paraná. Holotype: MACN 3496.

Distribution: South America: Paraná River basin.

Countries: Brazil

Species inquirendae

Hypophthalmus longifilis Valenciennes in Cuvier & Valenciennes, 1840: 230 [171 of Strasbourg deluxe ed.]. Type locality: Surinam. Syntypes: RMNH D1931 (1), 2974 (1), 2988 (1).

Hypophthalmus perporosus Cope, 1878: 673. Type locality: Peru, probably Nauta. Holotype: whereabouts unknown.

Hypophthalmus devall Röhl, 1942: 383. Type locality: Venezuela, rios Apure y Orinoco. Types: whereabouts unknown.

IHERINGICHTHYS

Iheringichthys Eigenmann & Norris, 1900: 354. Type species: *Pimelodus labrosus* Lütken, 1874. Type by original designation. Gender: masculine.

***Iheringichthys labrosus* (Lütken, 1874)**

Pimelodus labrosus Lütken, 1874a: 200. Type locality: La Plata. Syntypes: ZMUC 255-257, 310.

Distribution: South America: Paraná River basin.

Countries: Argentina, Brazil, Paraguay, Uruguay

***Iheringichthys megalops* Eigenmann & Ward, 1907**

Iheringichthys megalops Eigenmann & Ward in Eigenmann, McAtee & Ward, 1907: 115, pl. 32 (figs. 3-4). Type locality: Paraguay, Bahía Negra, Río Paraguay. Holotype: CAS 63631 [ex IU 10126].

Distribution: South America: Paraná River basin.

Countries: Paraguay

LEIARIUS

Leiarius Bleeker, 1862a: 10. Type species: *Arius? longibarbis* Castelnau, 1855. Type by original designation. Gender: masculine.

Sciadeoides Eigenmann & Eigenmann, 1888: 136. Type species: *Sciades marmoratus* Gill, 1870. Type by monotypy. Gender: masculine.

***Leiarius marmoratus* (Gill, 1870)**

Sciades marmoratus Gill, 1870: 95. Type locality: Peru or Ecuador, Amazon system, Río Marañón or Río Napo. Holotype: USNM 8447 (head and attached skin).

Maximum length: 60 cm TL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Bolivia, Brazil, Colombia, Peru, Venezuela

Common names: Achara comun

***Leiarius pictus* (Müller & Troschel, 1849)**

Bagrus (Sciades) pictus Müller & Troschel, 1849: 8, pl. 1 (fig. 1). Type locality: No locality stated. Holotype: ZMB 2991.

Maximum length: 60 cm TL

Distribution: South America: Amazon, Essequibo, and Orinoco River basins.

Countries: Bolivia (?), Brazil, Colombia, Ecuador (?), Guyana, Peru, Venezuela

Common names: Achara corbata

Species inquirendae

Pimelodus arekaima Jardine & Schomburgk in Schomburgk 1841: 178, pl. 5. Type locality: Upper Essequibo, Rio Branco. Holotype: whereabouts unknown.

Arius longibarbis Castelnau, 1855: 36, pl. 15 (fig. 2). Type locality: rivièrè des Amazones. Holotype: MNHN 1189. Originally as *Arius? longibarbis*.

Pimelodus multiradiatus Kner, 1858a: 414. Type locality: Borba am Rio Madeira and Forte do Rio branco am Rio Facutu [Brazil]. Syntypes: NMW 16515 (1), 16518 (1).

Silurus schandia Natterer in Kner, 1858a: 415. Type locality: ?

LUCIOPIMELODUS

Luciopimelodus Eigenmann & Eigenmann, 1888: 122. Type spe-

cies: *Pimelodus pati* Valenciennes, 1836. Type by original designation. Gender: masculine.

***Luciopimelodus pati* (Valenciennes, 1836)**

Pimelodus pati Valenciennes, 1836: pl. 1 (figs. 7-9). Type locality: Corrientes [Argentina]. Holotype: ?MNHN A.9419 (1, dry). Name available from plate, mentioned in Valenciennes (1847: 6), as *Platystoma pardale*.

Silurus pati Larrañaga, 1923: 376. Type locality: Uruguay. Perhaps not intended as new; corresponds to *Silurus 11-radiatus* on p. 386. Appeared as *Silurus pati* vel *11-radiatus* in Devincenzi 1925: 322, 308; Devincenzi treated as a synonym of *Luciopimelodus pati* (C. V.) [= *Pimelodus pati* Valenciennes, 1836].

Silurus 11-radiatus Larrañaga, 1923: 386. Type locality: Uruguay. Type(s): unknown. Same as *Silurus pati* on p. 376. Appeared as *Silurus pati* vel *11-radiatus* in Devincenzi 1925: 322, 308; Devincenzi treated as a synonym of *Luciopimelodus pati* (C. V.) [= *Pimelodus pati* Valenciennes 1836].

Maximum length: 96 cm SL

Distribution: South America: La Plata and Blanco River basins.

Countries: Argentina, Brazil, Paraguay, Uruguay (?)

Remarks and references: See also Cuvier & Valenciennes 1840: 176.

Common names: Pati

MEGALONEMA

Megalonema Eigenmann, 1912b: 150. Type species: *Megalonema platycephalum* Eigenmann, 1912. Type by original designation. Gender: neuter.

***Megalonema argentina* (MacDonagh, 1938)**

Perugia argentina MacDonagh 1938: 157. Type locality: Argentina, rio Paraná, Posadas, Territorio de Misiones. Holotype: MLP 5.V.I.35.

Maximum length: at least 27.1 cm SL

Distribution: South America: Paraná River basin.

Countries: Argentina

Common names: Pati de aletas negras

***Megalonema pauciradiatum* Eigenmann, 1919**

Megalonema pauciradiatum Eigenmann in Driver, 1919: 455. Type locality: Paraguay, Villa Rica. Holotype: CAS 63672 [ex IU 15029].

Maximum length: at least 3.8 cm SL

Distribution: South America: Paraná River basin.

Countries: Paraguay

Remarks and references: Catalog number listed for holotype in Eschmeyer (1998) is incorrect.

***Megalonema platanum* (Günther, 1880)**

Pimelodus platanus Günther, 1880: 10. Type locality: Parana. Holotype: BMNH 1872.6.8.18.

Distribution: South America: Paraná River basin.

Countries: Argentina, Brazil, Paraguay

***Megalonema platycephalum* Eigenmann, 1912**

Megalonema platycephalum Eigenmann, 1912b: 150, fig. 31, pl. 10 (fig. 2). Type locality: Tumatumari British Guiana. Holotype: FMNH 53224 [ex CM 1684].

Maximum length: 30 cm TL

Distribution: South America: Amazon, Essequibo, and Orinoco River basins.

Countries: Bolivia (?), Brazil, Colombia, Ecuador, Guyana, Peru, Venezuela

***Megalonema psammium* Schultz, 1944**

Megalonema platycephalum psammium Schultz, 1944: 216, pl. 2 (fig. b). Type locality: Venezuela, Rio Palmar at the bridge 70 km southwest of Maracaibo. Holotype: USNM 121175.

Distribution: South America: Lake Maracaibo basin.
Countries: Colombia, Venezuela
Common names: Ballo, Ballito

***Megalonema xanthum* Eigenmann, 1912**

Megalonema xanthum Eigenmann, 1912a: 16. Type locality: Colombia, Girardot. Holotype: FMNH 56032 [ex CM 4822].
Distribution: South America: Magdalena River basin.
Countries: Colombia

MERODONTOTUS

Merodontotus Britski, 1981: 109. Type species: *Merodontotus tigrinus* Britski, 1981. Type by original designation. Gender: masculine.

***Merodontotus tigrinus* Britski, 1981**

Merodontotus tigrinus Britski, 1981: 110, figs. 1-2. Type locality: Brazil, Cachoeira do Teotônio, rio Madeira, Território de Rondônia. Holotype: MZUSP 14004.
Maximum length: 60 cm TL
Distribution: South America: Amazon River basin.
Countries: Brazil, Colombia, Peru
Common names: Tiger-striped catfish, Tigrinus, Tigrino

PARAPIMELODUS

Parapimelodus La Monte, 1933: 226. Type species: *Pimelodus valenciennis* Lütken, 1874. Type by original designation. Gender: masculine.
Remarks and references: See Lucena et al. (1992) for recent revision.

***Parapimelodus nigribarb* (Boulenger, 1889)**

Pimelodus (Pseudorhamdia) nigribarb Boulenger, 1889: 266. Type locality: Brazil, Rio Grande do Sul, Camaquam River [not Camapuam]. Lectotype: BMNH 1889.8.24.6, designated by Lucena et al. (1992: 145).
Maximum length: 18.6 cm SL
Distribution: South America: Laguna dos Patos basin.
Countries: Brazil
Remarks and references: Bertaco & Becker (2000) ecology.

***Parapimelodus valenciennis* (Lütken, 1874)**

Pimelodus valenciennis Lütken, 1874a: 200. Type locality: La Plata [Argentina]. Holotype: ZMUC 250.
Pimelodus spegazzinii Perugia, 1891: 632. Type locality: Rio Durazno. Syntypes: MSNG 8026 (2).
Distribution: South America: Paraná River basin.
Countries: Argentina, Brazil, Paraguay, Uruguay
Remarks and references: Species redescribed by Lucena et al. (1992).

PERRUNICHTHYS

Perrunichthys Schultz, 1944: 229. Type species: *Perrunichthys perruno* Schultz, 1944. Type by original designation. Gender: masculine.

***Perrunichthys perruno* Schultz, 1944**

Perrunichthys perruno Schultz, 1944: 230, pl. 3 (fig. B); fig. 3. Type locality: Venezuela, Río Negro, below the mouth of the Río Yasa, about 75 km. south of Rosario, west side of Lago Maracaibo. Holotype: USNM 121189.
Maximum length: 60 cm TL
Distribution: South America: Lake Maracaibo basin.
Countries: Colombia, Venezuela
Common names: Jeta de perro, Perruno, toruno

PHRACTOCEPHALUS

Phractocephalus Spix & Agassiz, 1829: 10. Type species: *Phrac-*

tocephalus bicolor Spix & Agassiz, 1829. Type by monotypy. Gender: masculine. For a discussion of authorship and date see Kottelat (1988; 1989).

Pirarara Agassiz in Spix & Agassiz, 1829: 23. Type species: *Silurus hemioliopterus* Bloch & Schneider, 1801. Type by monotypy. Gender: feminine. Appeared first as name in synonymy under *Phractocephalus* and legend for pl. 6; made available by Bleeker (1862a: 11) back to Agassiz.

***Phractocephalus hemioliopterus* (Bloch & Schneider, 1801)**

Silurus hemioliopterus Bloch & Schneider, 1801: 385. Type locality: in flumine Maranh [Brazil].
Pimelodus grunniens Humboldt, in Humboldt & Valenciennes 1821: 172. Type locality: le Bas-Orénoque. No types known.
Phractocephalus bicolor Spix & Agassiz, 1829: 23, pl. 6. Type locality: in fluvio Amazonum [Brazil]. No types known. As *Pirarara bicolor* on plate.
Maximum length: 132 cm TL
Distribution: South America: Amazon and Orinoco River basins.
Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru, Venezuela
Common names: Cajaro, Pirarara, Bagre papagayo, Red-tail catfish

PIMELODINA

Pimelodina Steindachner, 1877b: 149. Type species: *Pimelodina flavipinnis* Steindachner, 1877. Type by monotypy. Gender: feminine.

***Pimelodina flavipinnis* Steindachner, 1877**

Pimelodina flavipinnis Steindachner, 1877b: 150, pl. 13 (fig. 2). Type locality: Amazonenstrom bei Para [Pará, Brazil]. Holotype: NMW 45498.
Pimelodina nasus Eigenmann & Eigenmann, 1888: 120. Type locality: Para [Brazil]. Holotype: MCZ 7490.
Distribution: South America: Amazon and Orinoco River basins.
Countries: Bolivia (?), Brazil, Colombia, Ecuador (?), Peru, Venezuela
Remarks and references: See Stewart (1986) for recent revision.

PIMELODUS

Pimelodus La Cepède, 1803: 93. Type species: *Pimelodus maculatus* La Cepède, 1803. Type by subsequent designation, by Gill 1861. Gender: masculine.
Pseudariodes Bleeker, 1862a: 11. Type species: *Silurus clarias* Linnaeus, 1758. Type by original designation. Gender: masculine. Type species designation given as “*Pseudariodes clarias* = *Silurus clarias* Bl. [Bloch]”.
Pseudorhamdia Bleeker, 1862a: 11. Type species: *Pimelodus maculatus* La Cepède, 1803. Type by original designation. Gender: feminine.

***Pimelodus absconditus* Azpelicueta, 1995**

Pimelodus absconditus Azpelicueta, 1995: 72, figs. 1-2. Type locality: Argentina, Misiones, San Javier, Uruguay River. Holotype: MLP 8781.
Maximum length: 15.2 cm SL
Distribution: South America: Paraná River basin.
Countries: Argentina, Brazil (?), Uruguay (?)
Remarks and references: See original description for comments on diet.

***Pimelodus albicans* (Valenciennes, 1840)**

Arius albicans Valenciennes in Cuvier & Valenciennes, 1840: 80 [60 of Strasbourg deluxe ed.]. Type locality: Buéno-Ayres [Argentina]. Syntype: MNHN A.9400 (dry). Based on one specimen and literature sources. As *Arius albidus* in Valenciennes (1836:

pl. 3, fig. 2).

Silurus muticus Larrañaga, 1923: 386. Type locality: Uruguay. See Devincenzi (1925).

Distribution: South America: Paraná River basin.

Countries: Argentina

Remarks and references: We have retained the younger name *P. albicans* Valenciennes for purposes of stability, there has been virtually no use of *P. albidus* since its original description, thus we treat it as a Nomen oblitum.

***Pimelodus albofasciatus* Mees, 1974**

Pimelodus albofasciatus Mees, 1974: 137, pl. 4. Type locality: Suriname, Sipaliwini. Holotype: RMNH 26156.

Maximum length: 25 cm TL

Distribution: South America: Amazon, Orinoco, upper Corantijn and Sipaliwini River basins.

Countries: Brazil, Suriname, Venezuela

***Pimelodus altissimus* Eigenmann & Pearson, 1942**

Pimelodus altissimus Eigenmann & Pearson in Eigenmann & Allen, 1942: 106, pl. 5 (fig. 5). Type locality: Peru, Rio Ucayali, near Orellana. Holotype: CAS 55369 [ex IU 15797].

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia (?), Peru

***Pimelodus argenteus* Perugia, 1891**

Pimelodus argenteus Perugia 1891: 631. Type locality: Río della Plata; Río Paraná (Colonia Resistencia) [Argentina]. Syntypes: MSNG 14570 (2).

Maximum length: 20 cm SL.

Distribution: South America: Paraná River basin.

Countries: Argentina

Remarks and references: Eschmeyer (1998) listed this name as permanently invalid as a junior primary homonym of *Pimelodus argenteus* La Cepède, 1803 (a synonym of the ariid *Selenaspis herzbergi*). However, herein we continue to recognize Perugia's name as valid, which has long been so treated for the pimelodid species in question (e.g., Ringulet et al., 1967; López et al., 1987; Burgess, 1989; Britski et al., 1999; and others (M. Azpelicueta, pers. comm)), as required by art. 23.9.5 of the current Code (ICZN, 1999).

***Pimelodus atrobrunneus* Vidal & Lucena, 1999**

Pimelodus atrobrunneus Vidal & Lucena, 1999: 123, figs. 1-3, tab.

1. Type locality: Brasil: rio Ligeiro na estrada entre Marcelino Ramos e Maximiliano de Almeida, Marcelino Ramos, 27°38'S-51°52'O, Rio Grande do Sul. Holotype: MCP 19678.

Maximum length: ~15 cm SL

Distribution: South America: Upper Uruguay River basin.

Countries: Brazil

***Pimelodus blochii* Valenciennes, 1840**

Pimelodus Blochii Valenciennes in Cuvier & Valenciennes, 1840: 188 [139 of Strasbourg deluxe ed.]. Type locality: Suriname. Lectotype: MNHN B.72. On *Silurus clarias* of Bloch (1782: pl. 35, figs. 1-2).

Pseudorhamdia macronema Bleeker, 1864: 79, pls. 13 (fig 7), 14. Type locality: Suriname. Lectotype: RMNH 3069, designated by Boeseman (1972: 317).

Pseudorhamdia piscatrix Cope, 1870: 569. Type locality: Peru, Pebas. Syntypes: ANSP 8386-87.

Maximum length: 35 cm TL

Distribution: South America: Gulf of Paria, Amazon, Corantijn, Essequibo, and Orinoco River basins.

Countries: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Peru, Suriname, Venezuela

***Pimelodus brevis* Marini, Nichols & La Monte, 1933**

Pimelodus brevis Marini, Nichols & La Monte, 1933: 1, fig. 1. Type locality: Argentina, Rio de la Plata, San Fernando. Holo-

type: AMNH 12240 (missing since 1960s).

Maximum length: 28.5 cm SL

Distribution: South America: Paraná River basin; Durazno River.

Countries: Argentina

Remarks and references: This species description was based on one specimen that is now missing.

***Pimelodus coprophagus* Schultz, 1944**

Pimelodus clarias coprophagus Schultz, 1944: 203, fig. 2. Type locality: Venezuela, Río Agua Caliente, 2- to 3 km above the southwestern corner of Lago Maracaibo. Holotype: USNM 121150.

Maximum length: 25 cm SL

Distribution: South America: lake Maracaibo basin.

Countries: Colombia, Venezuela

Remarks and references: Mierderito

***Pimelodus fur* (Lütken, 1874)**

Pseudorhamdia fur Lütken, 1874b: 33. Type locality: Rio das Velhas [Minas Gerais, Brazil]. Syntypes: ZMUC 271, 274, 275, 283-285. Illustrated and described in more detail in Lütken (1875: 169 (and p. VI of summary), pl. 2 (fig. 3), pl. 3 (fig. 3a)).

Distribution: South America: Das Velhas River basin in São Francisco River drainage.

Countries: Brazil

***Pimelodus garciabarrigai* Dahl, 1961**

Pimelodus garcia-barrigai Dahl, 1961: 494. Type locality: Colombia, Deep pool in Caño Lozada, about 11 km above its junction with the Guayabero River. Holotype: whereabouts unknown.

Distribution: South America: Guayabero River basin in Orinoco River drainage.

Countries: Colombia

***Pimelodus grosskopfii* Steindachner, 1879**

Pimelodus (Pimelodus) grosskopfii Steindachner, 1879a: 194. Type locality: Río Cauca [Colombia]. Syntypes: NMW ?. Species described in more detail in Steindachner (1879b: 186).

Pimelodus longifilis Posada, 1909: 294. Type locality: Río Cauca, Colombia. No types known.

Distribution: South America: Magdalena River and Lake Maracaibo basins.

Countries: Colombia, Venezuela

Remarks and references: Miles (1947: p. 71) lists *P. longifilis* Posada as synonym.

***Pimelodus heraldoi* Azpelicueta, 2001**

Pimelodus heraldoi Azpelicueta 2001: 194, figs. 1-2 Type locality: Brazil, Estado de São Paulo: Município de Pirassununga, rio Mogi Guaçu in Emas. Holotype: MZUSP 22713.

Maximum length: 17.9 cm SL

Distribution: South America: Upper Paraná River basin.

Countries: Brazil

***Pimelodus jivaro* Eigenmann & Pearson, 1942**

Pimelodus jivaro Eigenmann & Pearson in Eigenmann & Allen, 1942: 105, pl. 4 (fig. 2). Type locality: Peru, Rio Morona. Syntypes: CAS 55891 [ex IU 15859 (3), 15813 (2)].

Distribution: South America: Upper Amazon River basin.

Countries: Ecuador, Peru

***Pimelodus maculatus* La Cepède, 1803**

Pimelodus maculatus La Cepède, 1803: 94. Type locality: Argentina, le grand fleuve de la Plata. No types known.

Silurus lima Natterer in Kner, 1858a: 414. Type locality: Not available, Natterer manuscript name mentioned in passing under *Pimelodus maculatus*.

Maximum length: 36 cm SL

Distribution: South America: Paraná and São Francisco River basins.

Countries: Argentina, Brazil

***Pimelodus microstoma* Steindachner, 1877**

Pimelodus microstoma Steindachner, 1877a: 604. Type locality: Brazil, von Irisanga, Rio branco und Barra do Rio negro. Syntypes: NMW 45823-45824. Maximum length: 14.9 cm SL. Distribution: South America: Amazon River basin. Countries: Brazil

***Pimelodus misteriosus* Azpelicueta, 1998**

Pimelodus misteriosus Azpelicueta, 1988: 88, figs. 1-3, 5-6, 8, 10, 12, 14. Type locality: Argentina, Misiones, Candelaria, arroyo Anselmo. Holotype: MLP 9191. Maximum length: 14.3 cm SL. Distribution: South America: Paraná River basin. Countries: Argentina, Brazil

***Pimelodus navarroi* Schultz, 1944**

Pimelodus grosskopfii navarroi Schultz, 1944: 207, pl. 1 (fig. C). Type locality: Venezuela, Río Palmar at the bridge 70 km south-west of Maracaibo. Holotype: USNM 121174. Maximum length: 30 cm SL. Distribution: South America: Lake Maracaibo basin. Countries: Colombia, Venezuela. Common names: Rampuche

***Pimelodus ornatus* Kner, 1858**

Pimelodus ornatus Kner, 1858a: 411, pl. 6 (fig. 18). Type locality: Surinam; Rio negro und Cujaba [Brazil]. Syntypes: NMW 45832 (2), 45843 (1). *Megalonema rhabdostigma* Fowler, 1914: 256, fig. 10. Type locality: Rupununi R., 2°-3°N, 50°20'W [Guyana]. Holotype: ANSP 39338. Maximum length: 38.5 cm SL. Distribution: South America: Amazon, Corantijn, Essequibo, Orinoco, and Paraná River basins and major rivers of the Guianas. Countries: Brazil, Colombia, Ecuador, French Guiana, Guyana, Paraguay, Peru, Suriname, Venezuela

***Pimelodus ortmanni* Haseman, 1911**

Pimelodus ortmanni Haseman, 1911b: 379, pl. L (fig. 2). Type locality: Brazil, Porto União da Victoria, Rio Iguassú. Holotype: FMNH 54240 [ex CM 2856]. Distribution: South America: Paraná River basin. Countries: Brazil

***Pimelodus paranaensis* Britski & Langeani, 1988**

Pimelodus paranaensis Britski & Langeani, 1988: 410, figs. 1-2. Type locality: Brazil, Ilha Solteira, Rio Paraná, SP. Holotype: MZUSP 23089. Distribution: South America: Upper Paraná River basin. Countries: Brazil

***Pimelodus pictus* Steindachner, 1877**

Pimelodus pictus Steindachner, 1877b: 144. Type locality: Amazonenstrom, Hyavary [Peru-Brazil border]. Syntypes: ?NMW. Maximum length: 11 cm TL. Distribution: South America: Amazon and Orinoco River basins. Countries: Brazil, Colombia, Peru, Venezuela

***Pimelodus platycirris* Borodin, 1927**

Pimelodus platycirris Borodin, 1927: 2. Type locality: Brazil, Salto de Pirassunungo, Rio Mogy Guassu, São Paulo Prov. Holotype: AMNH 8628. Distribution: South America: Paraná River basin. Countries: Brazil. Remarks and references: This species is known only from one specimen.

***Pimelodus punctatus* (Meek & Hildebrand, 1913)**

Megalonema punctatum Meek & Hildebrand, 1913: 77. Type locality: Río Tuyra, Boca de Cupe, Panama. Holotype: FMNH 7577. *Megalonema robustum* Meek & Hildebrand, 1913: 78. Type locality: Panama, Río Tuyra, Marriganti. Holotype: FMNH 7578. Distribution: Central America: Tuira River basin. Countries: Panama

Species inquirendae

Pimelodes lateristrigus Lichtenstein, 1823: 112. Type locality: Brazil. Holotype: unknown. *Pimelodus rigidus* Spix & Agassiz, 1829: 19, pl. 7 (fig. 2). Type locality: Brazil aequatoriali. Holotype: unknown. *Pseudorhamdia ascita* Bleeker, 1862b: 384. Type locality: Suriname. *Pseudariodes pantherinus* Lütken, 1874a: 192. Type locality: Caracas [Venezuela]. Syntypes: BMNH 1876.1.10.10 (1), NMW 45851 (1), USNM 44970 (1), ZMB 9180 (3). *Piramutana macropila* Günther, 1880: 10, pl. 2. Type locality: Rio de la Plata. Holotype: BMNH 1878.9.10.14.

PINIRAMPUS

Pinirampus Bleeker, 1858: 198. Type species: *Pimelodus pinirampus* Agassiz [= *pirinampu* Spix & Agassiz, 1829]. Type by monotypy. Gender: masculine. *Pirinampus* Günther, 1864: 135. Type species: *Pimelodus pirinampu* Spix & Agassiz, 1829. Gender: masculine. Unjustified emendation of *Pinirampus* Bleeker. *Perugia* Eigenmann & Norris, 1900: 355. Type species: *Pirinampus* [sic] *agassizii* Steindachner, 1876. Type by original designation. Gender: feminine.

***Pinirampus pirinampu* (Spix & Agassiz, 1829)**

Pimelodus barbancho Humboldt in Humboldt & Valenciennes, 1821: 172. Type locality: Guarico, l'Apure et d'autres rivières des steppes de Venezuela. Holotype: whereabouts unknown. *Pimelodus pirinampu* Spix & Agassiz, 1829: 20, pl. 8. Type locality: Brasiliae fluvii. No types known. *Pimelodus insignis* Jardine in Schomburgk, 1841: 180, pl. 6. Type locality: Rio Branco [Brazil]. Holotype: unknown. *Galeichthys araguayensis* Castelnau, 1855: 37, pl. 17 (fig. 3). Type locality: Rio Araguay [Brazil]. Holotype: MNHN A.9366 (mounted). *Pinirampus typus* Bleeker, 1862a: 11. Type locality: Brasiliae fluvii. Unneeded replacement for *Pimelodus pinirampu* Spix & Agassiz, 1829, apparently to avoid Stricklandian tautonymy. *Pirinampus agassizii* Steindachner, 1876: 607, pl. 12. Type locality: Brazil, Parà. Holotype: NMW 45955. Maximum length: 120 cm TL. Distribution: South America: Amazon, Essequibo, Orinoco, and Paraná River basins. Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Paraguay, Peru, Venezuela. Remarks and references: We have retained the younger name *P. pirinampu* (Spix & Agassiz) for purposes of stability, there has been virtually no use of *P. barbancho* since its original description, thus we treat it as a nomen oblitum. Common names: Barbancho, Mota blanca

PLATYNEMATICHTHYS

Platynematichthys Bleeker, 1858: 356. Type species: *Bagrus punctulatus* Kner, 1858a. Type by monotypy. Gender: masculine. *Platypogon* Starks, 1913: 28. Type species: *Platypogon caerulostriis* Starks, 1913. Type by monotypy. Gender: masculine.

***Platynematichthys notatus* (Jardine, 1841)**

Pimelodus notatus Jardine in Schomburgk, 1841: 181, pl. 7. Type locality: Brazil: Fort St. Joaquim on the Rio Branco. Holotype: unknown.

Bagrus punctulatus Kner, 1858a: 380. Type locality: Forte do Principe am Rio Guapore und Rio branco [Brazil]. Holotype: unknown. Preoccupied by *Bagrus punctulatus* Castelnau, 1855; replaced by *Bagrus nigropunctatus* Kner, 1858b.

Bagrus nigropunctatus Kner, 1858b: 345. Type locality: Forte do Principe am Rio Guapore und Rio branco [Brazil]. Holotype: unknown. Replacement for *Bagrus punctulatus* Kner, 1858b, preoccupied by *Bagrus punctulatus* Castelnau, 1855.

Platypogon caerulostris Starks, 1913: 29, pl. 5. Type locality: Brazil, Pará. Holotype: SU 22228.

Maximum length: 80 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Bolivia (?), Brazil, Colombia, Ecuador (?), Peru (?), Venezuela

Common names: Bagre tigre, Coroaá

PLATYSILURUS

Platysilurus Haseman, 1911a: 320. Type species: *Platysilurus barbatus* Haseman, 1911. Type by monotypy. Gender: masculine.

Platysilurus malarmo Schultz, 1944

Platysilurus malarmo Schultz, 1944: 234, pl. 3 (fig. C); fig. 3g. Type locality: Venezuela, Lago Maracaibo near the mouth of the Río Concho. Holotype: USNM 121179.

Maximum length: 70 cm SL

Distribution: South America: Lake Maracaibo basin.

Countries: Colombia, Venezuela

Common names: Malarmo

Platysilurus mucosus (Vaillant, 1880)

Platystoma mucosa Vaillant, 1880: 151. Type locality: à Caldéron (Haute-Amazone) [Brazil]. Holotype: MNHN A.1955.

Duoplatinus goeldii Steindachner, 1908b: 65. Type locality: Rio Purus [Brazil]. Holotype: NMW (not located).

Platysilurus barbatus Haseman, 1911a: 320, pl. 52. Type locality: São Antonio de R. Madeira [Brazil]. Holotype: FMNH 60306 [ex CM 2987].

Maximum length: at least 20 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Bolivia, Brazil, Colombia, Peru, Venezuela

PLATYSTOMATICHTHYS

Platystomatichtsys Bleeker, 1862a: 10. Type species: *Platystoma sturio* Kner, 1858a. Type by original designation. Gender: masculine.

Platystomatichtsys sturio (Kner, 1858)

Platystoma sturio Kner, 1858a: 395, pl. 3 (figs. 9-9a). Type locality: Rio branco [Brazil]. Holotype: whereabouts unknown.

Maximum length: 40 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil, Ecuador, Peru, Venezuela

Common names: Zorrito cat.

PROPIMELODUS

Propimelodus Lundberg & Parisi, 2002:77. Type species: *Pimelodus eigenmanni* van der Stigchel, 1946. Type by original designation.

Propimelodus eigenmanni (van der Stigchel, 1946)

Pimelodus eigenmanni van der Stigchel, 1946: 64. Type locality: Brazil. Holotype: RMNH 15465.

Maximum length: 24 cm SL

Distribution: South America: Amazon, Approuague, Kourou, and Oyapock River basins.

Countries: Brazil, French Guiana

Remarks and references: *Pimelodus eigenmanni* is treated as the valid name for the species, despite being a primary junior homonym of *Pimelodus eigenmanni* Boulenger (currently considered a valid species in *Pimelodella*), following Art. 23.9.5 of the current Code of Zoological Nomenclature. Widely misidentified as *Pimelodus altipinnis* (e.g., Steindachner, 1877b, and Eigenmann & Eigenmann, 1888). Redescribed in Lundberg and Parisi (2002).

PSEUDOPLATYSTOMA

Pseudoplatystoma Bleeker, 1862a: 10. Type species: *Silurus fasciatus* Linnaeus, 1766. Type by original designation. Gender: neuter. *Pseudoplatystoma* treated as valid by first reviser action of Eigenmann and Eigenmann (1888).

Hemiplatystoma Bleeker, 1862a: 10. Type species: *Platystoma tigrinum* Valenciennes, 1840. Type by original designation. Gender: neuter.

Pseudoplatystoma corruscans (Spix & Agassiz, 1829)

Platystoma corruscans Spix & Agassiz, 1829: 26 [pl. 13]. Type locality: in flumine S. Francisci [Brazil]. Holotype: whereabouts unknown. As *Sorubim caparary* on plate.

Sorubim caparary Spix & Agassiz, 1829: pl. 13. Type locality: in flumine S. Francisci [Brazil]. Holotype: whereabouts unknown. Name available from plate.

Platystoma coruscans Valenciennes in Cuvier & Valenciennes, 1840: 17 [p. 13 in the Strasbourg deluxe edition]. Type locality: unknown.

Silurus macrocephalus Larrañaga, 1923: 386. Type locality: Uruguay. Corresponds to *Silurus mangrullo* on p. 377, as name only (See Devincenzi 1925: 310, 322).

Maximum length: 114 cm SL

Distribution: South America: São Francisco and Paraná River basins.

Countries: Argentina, Brazil, Paraguay, Uruguay

Common names: Spotted sorubim

Pseudoplatystoma fasciatum (Linnaeus, 1766)

Silurus fasciatus Linnaeus, 1766: 505. Type locality: Brazil, Suriname. Holotype: whereabouts unknown.

Platystoma artedii Günther, 1864: 106. Type locality: South America. Type(s): whereabouts unknown.

Pseudoplatystoma fasciatum intermedium Eigenmann & Eigenmann, 1888: 138. Type locality: Obidos [Brazil]. Holotype: MCZ 7321.

Pseudoplatystoma fasciatum brevifile Eigenmann & Eigenmann, 1889: 31. Type locality: Goyaz [Brazil]. Holotype: MCZ 7317.

Pseudoplatystoma fasciatum reticulatum Eigenmann & Eigenmann, 1889: 30. Type locality: Rio Negro [Brazil]. Holotype: MCZ 23813.

Pseudoplatystoma fasciatum nigricans Eigenmann & Eigenmann, 1889: 31. Type locality: Xingu [Brazil]. Syntypes: MCZ 7301, 7311 (2).

Maximum length: 90 cm FL

Distribution: South America: Amazon, Corantijn, Essequibo, Orinoco, and Paraná River basins.

Countries: Argentina, Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Paraguay (?), Peru, Suriname, Uruguay (?), Venezuela

Remarks and references: See Loubens and Panfili (2000) for reproductive biology and ecology.

Common names: Barred sorubim, Doncella, Bagre tigre, Rayao

Pseudoplatystoma tigrinum (Valenciennes, 1840)

Platystoma truncatum Spix & Agassiz, 1829: 27, pl. 13a. Type locality: Brazil, Japurá and Solimoen.

Platystoma tigrinum Valenciennes in Cuvier & Valenciennes, 1840: 10 [8 of Strasbourg deluxe ed.], pl. 422. Type locality:

Probably Brazil. Holotype: MNHN A.9354 (mounted).
Platystoma punctatum Valenciennes in Cuvier & Valenciennes, 1840: 20 [15 of Strasbourg deluxe ed.]. Type locality: ?
 Maximum length: 130 cm TL
 Distribution: South America: Amazon and Orinoco River basins.
 Countries: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Peru, Venezuela
 Remarks and references: We believe based on the original description, plate, and locality that *Platystoma truncatum* is a synonym of *Pseudoplatystoma tigrinum*. We have retained the younger name *P. tigrinum* (Valenciennes, 1840) for purposes of stability, there has been virtually no use of *P. truncatum* since its original description, thus we treat it as a Nomen oblitum. For reproductive biology and ecology, see Loubens and Panfili (2000).
 Common names: Tiger sorubim, Tigre zúngaro, Bagre tigre, Rayao

Species inquirendae

Platystoma pardalis Valenciennes, 1836: pl. 4 (fig. 2). Type locality: Buenos Aires, Argentina. Holotype: MNHN A.8833. Name available from plate, mentioned in Valenciennes (1847: 6), as *Platystoma panthale*. Also in Cuvier & Valenciennes (1840: 15), as *Platystoma pardale*.
Platystoma orbignianus Valenciennes, 1836: pl. 4 (fig. 3). Type locality: Brazil. Holotype: MNHN B.160. Name available from plate, description in Valenciennes (1847: 6), as *Platystoma orbignyanum*. See also Cuvier & Valenciennes (1840: 12).
Platystoma panthale Valenciennes, 1847: 6. Type locality: No locality. Holotype: MNHN A.8833. New name proposed for *Platystoma pardalis* Valenciennes, 1836, without explanation.
Platystoma punctifer Castelnau, 1855: 40, pl. 19 (fig. 2). Type locality: de l' Amazone [Brazil]. Holotype: MNHN 1582.
Platystoma forschammeri Lütken, 1875: 154. Type locality: unknown. Not available, name in the synonymy of *Platystoma orbignianum* Valenciennes, 1836.

SORUBIM

Platystoma Spix & Agassiz, 1829: 23. Type species: *Silurus lima* Bloch & Schneider, 1801. Type by subsequent designation by Jordan (1917: 131). Gender: neuter. Preoccupied by *Platystoma* Meigen, 1803 in Diptera.
Sorubim Cuvier, 1829: 293. Type species: *Silurus lima* Bloch & Schneider, 1801. Type by subsequent designation. Gender: masculine.
Sorubim Spix & Agassiz, 1829: 24. Type species: *Silurus lima* Bloch & Schneider, 1801. Type by subsequent designation by Bleeker (1862a). Gender: masculine. First appeared in synonymy in Spix & Agassiz as above, but made available back to that authorship and date because of use as a valid name by Bleeker (1862a: 10).
Abron Gistel, 1848: X. Type species: *Silurus lima* Bloch & Schneider, 1801. Type by being a replacement name. Gender: neuter. Replacement for *Platystoma* Valenciennes [= Spix & Agassiz, 1829].

Sorubim cuspicaudus Littmann, Burr & Nass, 2000

Sorubim cuspicaudus Littmann, Burr & Nass, 2000: 903, fig. 2b, 3, 4c. Type locality: Colombia, Departamento de Tolima, Río Magdalena drainage, at Puerto Soplaviento. Holotype: FMNH 56223.
 Maximum length: ~80 cm SL
 Distribution: South America: Lake Maracaibo, Magdalena and Sinu River basins.
 Countries: Colombia, Venezuela
 Common names: Antioqueno, Bagre blanco, Blanco pobre, Blanquillo, Cucharó, Gallego, Trans-Andean hocico de paletón

Sorubim elongatus Littmann, Burr, Schmidt & Isern, 2001

Sorubim elongatus Littmann, Burr, Schmidt & Isern, 2001: 4, fig. 2. Type locality: Peru: Departamento Loreto, Maynas Province, Ullpa Caño, 50 m upstream of confluence with Moena Caño, Río Itaya drainage, Río Amazonas basin (approx. 3°46'20''S 73°14'17''W). Holotype: SIUC 30303.
 Maximum length: 30 cm SL
 Distribution: South America: Amazon, Essequibo, and Orinoco River basins.
 Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru, Venezuela
 Common names: Slender shovelnose catfish, Paleta delgada

Sorubim lima (Bloch & Schneider, 1801)

Silurus lima Bloch & Schneider, 1801: 384. Type locality: in flumine Maranhã [Brazil]. Holotype: ZMB 3185 (stuffed).
Sorubim infraoculare Spix in Spix & Agassiz, 1829: 24, pl. 15. Type locality: Brazil. Not available, first published in the synonymy of *Platystoma lima* (Bloch & Schneider 1801).
Silurus gerupensis Natterer in Kner, 1858a: 399. Type locality: stemmen von Rio Guaporé, Rio blanco und Rio negro. Holotype: whereabouts unknown. Not available, Natterer manuscript name mentioned in synonymy under *Platystoma lima*.
Platystoma luceri Weyenbergh, 1877: 10, pl. 3 (figs. 1-3). Type locality: Argentina, Santa-Fe. Holotype: whereabouts unknown.
Sorubim latirostris Miranda Ribeiro, 1920: 14, pl. [12]. Type locality: Amazonas [Brazil]. Holotype: MNRJ 631.
 Maximum length: 50.5 cm SL
 Distribution: South America: Amazon, Orinoco, Paraná and Paranaíba River basin.
 Countries: Argentina, Bolivia, Brazil, Colombia, Ecuador, Paraguay, Peru, Uruguay, Venezuela
 Common names: Lima shovelnose, Duckbill catfish, Chiripira, Chucharón, Pico de pato

Sorubim maniradii Littmann, Burr & Buitrago-Suárez, 2001

Sorubim maniradii Littmann, Burr & Buitrago-Suárez, 2001: 88, figs. 1 a-c. Type locality: Ecuador, Napo State, Río Yasuni, Río Napo drainage, 0°59'06"S 75°25'36"W. Holotype: FMNH 108814.
 Maximum length: 25 cm SL
 Distribution: South America: Amazon River basin.
 Countries: Bolivia, Brazil, Ecuador, Peru

Sorubim trigonocephalus Miranda Ribeiro, 1920

Sorubim trigonocephalus Miranda Ribeiro, 1920: 12, pls. [10, 11]. Type locality: Porto Velho [Brazil]. Holotype: MNRJ 882.
 Maximum length: 50.7 cm SL
 Distribution: South America: Madeira and Tapajós River basins.
 Countries: Brazil
 Remarks and references: Extremely rare in collections; known from only three specimens.
 Common names: Arrowhead shovelnose

SORUBIMICHTHYS

Sorubimichthys Bleeker, 1862a: 10. Type species: *Sorubim jandia* Spix & Agassiz, 1829. Type by original designation. Gender: masculine.
Pteroglanis Eigenmann & Pearson in Pearson, 1924: 9. Type species: *Pteroglanis manni* Eigenmann & Pearson, 1924. Type by monotypy. Gender: masculine.

Sorubimichthys planiceps (Spix & Agassiz, 1829)

Platystoma planiceps Spix & Agassiz, 1829: 25, pl. 12. Type locality: Brazil: in fluminae Amazonum, Solimoëns, Rio Negro. Lectotype: MHNN 811 (see Lundberg et al., 1989).
Sorubim Pirauáca Spix & Agassiz, 1829: pl. 12. Type locality: Brazil: in fluminae Amazonum, Solimoëns, Rio Negro.
Sorubim jandia Spix & Agassiz, 1829: pl. 14. Type locality: equa-

torialis fluviis [Brazil]. No types known.
Platystoma spatula Spix & Agassiz, 1829: 26, pl. 14. Type locality: equatorial fluviis [Brazil]. No types known.
Sorubimichthys ortonii Gill, 1870: 94. Type locality: Marañon, or Upper Amazon, and Napo Rivers [Peru or Ecuador]. Holotype: USNM 8238.
Pteroglanis manni Eigenmann & Pearson in Pearson, 1924: 9, pl. 1 (fig. 1). Type locality: Bolivia, Little Rio Negro, tributary to Rio Beni. Holotype: CAS 59623 [ex IU 16001].
 Maximum length: 150 cm SL
 Distribution: South America: Amazon and Orinoco River basins.
 Countries: Bolivia, Brazil, Colombia, Ecuador, Peru, Venezuela
 Remarks and references: Lundberg et al. (1989) treat taxonomy and development.
 Common names: Achacubo, Doncella

STEINDACHNERIDION

Steindachneria Eigenmann & Eigenmann, 1888: 137. Type species: *Steindachneria amblyurus* Eigenmann & Eigenmann, 1888. Type by original designation. Gender: feminine. Preoccupied by *Steindachneria* Goode & Bean, 1888 in fishes, replaced by *Steindachneridion* Eigenmann & Eigenmann, 1919.
Steindachneridion Eigenmann & Eigenmann, 1919: 525. Type species: *Steindachneria amblyurus* Eigenmann & Eigenmann, 1888. Type by being a replacement name. Gender: neuter. Replacement for *Steindachneria* Eigenmann & Eigenmann, 1888.

***Steindachneridion amblyurus* (Eigenmann & Eigenmann, 1888)**

Steindachneria amblyurus Eigenmann & Eigenmann, 1888: 137. Type locality: Jequitinhonha [Brazil]. Syntypes: MCZ 7324 (3).
 Distribution: South America: Jequitinhonha River basin.
 Countries: Brazil

***Steindachneridion doceana* (Eigenmann & Eigenmann, 1889)**

Steindachneria doceana Eigenmann & Eigenmann, 1889: 30. Type locality: Rio Doce [Brazil]. Syntypes: MCZ 23792 (1), 23793 (1), 23794 (7).
 Distribution: South America: Doce River basin.
 Countries: Brazil

***Steindachneridion parahybae* (Steindachner, 1877)**

Platystoma parahybae Steindachner, 1877a: 640, pl. 9. Type locality: Rio Parahyba bei Juiz de Fora; Rio Jequitinhonha [Brazil]. Syntypes: MCZ 7323 (2), 25521 (2).
 Distribution: South America: Paraíba do Sul and Jequitinhonha River basins.
 Countries: Brazil

***Steindachneridion scripta* (Miranda Ribeiro, 1918)**

Steindachneria scripta Miranda Ribeiro, 1918: 640. Type locality: Itaqui, Rio Grande do Sul [Brazil]. Lectotype: MZUSP 2286, designated by Britski (1969).
 Distribution: South America: Upper Uruguay River basin.
 Countries: Brazil, Uruguay

ZUNGARO

Zungaro Bleeker, 1858: 1916. Type species: *Pimelodus humboldtii* Bleeker [= *Pimelodus zungaro* Humboldt 1821]. Type by absolute tautonymy. Gender: masculine. See Silvergrip (1992: 306).
Paulicea Ihering, 1898: 108. Type species: *Paulicea jahu* Ihering, 1898. Type by subsequent designation by Eigenmann (1910). Gender: feminine.

***Zungaro jahu* (Ihering, 1898)**

Paulicea jahu Ihering, 1898: 108. Type locality: [Brazil]: Sao Paulo. Types: Unknown (see Haseman (1911a, p. 321)).

Maximum length: 140 cm SL
 Distribution: South America: Paraná-Paraguay River basin.
 Countries: Argentina, Bolivia, Brazil, Paraguay (?)
 Common names: Jau (Brazil)
 Remarks and references: Recognition of *Z. jahu* based on *O. shibatta* (pers. comm.).

***Zungaro zungaro* (Humboldt, 1821)**

Pimelodus zungaro Humboldt in Humboldt & Valenciennes, 1821: 170, pl. 46 (fig. 1). Type locality: Near Tomependa, Río Marañón, Amazon R. basin, Peru. Holotype: not preserved.
Bagrus flavicans Castelnau, 1855: 31, pl. 13 (fig. 2). Type locality: Brazil, l'Amazone. Holotype: MNHN A.8823 (mounted).
Zungaro humboldtii Bleeker, 1858: 207. Type locality: Tomedenda, Río Marañón, Amazon R. basin, Peru. Holotype: not preserved. Proposed as a replacement name for *Pimelodus zungaro*.
Platystoma lütkeni Steindachner, 1876: 609, pl. 13. Type locality: Laufe des Amazonenstromes gefangen. Syntypes: NMW (missing).
 Maximum length: 140 cm SL
 Distribution: South America: Amazon and Orinoco River basins.
 Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru, Venezuela
 Common names: Jau (Brazil), Cunchimama, Toruno

GENUS INQUIRENDUM

Zungaropsis Steindachner 1908b: 67. Type species: *Zungaropsis multimaculatus* Steindachner 1908b. Type by monotypy. Gender: feminine.

SPECIES INQUIRENDAE

Pimelodus (Bagrus) maculatus Jardine in Schomburgk 1841: 175, fig. Type (s): Unknown. Type locality: Most rivers of Guyana, also Rio Negro and Amazon R. Permanently invalid, preoccupied by *Pimelodus maculatus* La Cépède 1803.
Zungaropsis multimaculatus Steindachner 1908b: 67. Type locality: Rio Xingu [Brazil]. Holotype: NMW 43537.

Family Ariidae (Sea catfishes)

Alexandre P. Marceniuk and Carl J. Ferraris, Jr.

The family Ariidae is a large group of medium to very large-sized (20-120 cm TL) catfishes with world wide distribution. Species are all very similar in general appearance. Shape and arrangement of the vomer and accessory toothplates are usually used to distinguish species and genera. Head with a conspicuous bony shield covered with thin skin in some species or by thick skin and muscles in others. Maxillary, mandibular and mental barbels usually present, although maxillary or mandibular barbels may be absent in some species. Anterior and posterior nostrils close together, the posterior with a valve and without barbel. Eyes usually have a free orbital margin, but subcutaneous in some species. Vomerine and accessory vomerine toothplates usually present. Teeth on vomer and accessory toothplates conical or granular. Gill membranes united and connected with isthmus, with at most a narrow free posterior flap. Pectoral and dorsal fin each possess a spine anteriorly. Pelvic fin with 6 soft rays, inner rays modified in mature females of certain species. Adipose fin present, its origin at vertical through origin of anal fin. Anal fin with 14 to 40 soft rays. Caudal fin deeply forked. Lateral line complete, branching at caudal fin onto dorsal and or ventral lobes.

Sea catfishes are found along the coastline, in estuaries, and in tidal rivers of warm-temperate and tropical regions. Some marine species are known to occur at depths more than 100 m while, at the other extreme, a few are confined to freshwater. The males commonly practice oral incubation of the eggs, carrying these in the mouth until hatched.

Some of the larger species are fished from coastlines up to 100 m depth, mainly with bottom trawls and lines. These fishes have a high economic value, as the flesh is usually of good quality. At least one species from Ecuador is sold in the pet trade in North America.

The taxonomy presented here follows the conclusions reached in the doctoral dissertation research of the senior author (Marceniuk, 2003).

ARIUS

Arius Valenciennes in Cuvier & Valenciennes, 1840b: 53 [40 of Strasbourg deluxe ed.]. Type species: *Pimelodus arius* Hamilton, 1822. Type by absolute tautonymy. Gender: masculine.

Hemiaris Bleeker, 1862a: 7, 29. Type species: *Cephalocassis stormii* Bleeker, 1858. Type by original designation. Gender: masculine.

Pseudarius Bleeker, 1862a: 8. Type species: *Pimelodus arius* Hamilton, 1822. Type by original designation. Gender: masculine.

Neoarius Castelnau, 1878: 237. Type species: *Arius curtisii* Castelnau, 1878. Type by monotypy. Gender: masculine.

Pachyula Ogilby, 1898: 33. Type species: *Hemipimelodus crassilabris* Ramsay & Ogilby, 1886. Type by original designation. Gender: feminine.

Nemapteryx Ogilby, 1908: 3, 10. Type species: *Arius stirlingi* Ogilby, 1898. Type by original designation. Gender: feminine.

Pararius Whitley, 1940: 409. Type species: *Arius proximus* Ogilby, 1898. Type by original designation. Gender: masculine. Originally proposed as a subgenus of *Tachysurus*.

Arius cookei Acero & Betancur, 2002

Arius cookei Acero & Betancur, 2002a: 134, fig. 1. Type locality: 7 km from the mouth of Rio Santa Maria, Paris, Herrera, Panama (8°9'N, 80°33'W). Holotype: INVEMAR-PEC 3752.

Maximum length: 42.8 cm SL

Distribution: Central and South America: Pacific coastal rivers and estuaries from Costa Rica to Colombia

Countries: Colombia, Costa Rica, Panama.

Remarks and references: Provisionally placed in *Arius* at this time.

Arius neogranatensis Acero & Betancur, 2002

Arius neogranatensis Acero & Betancur, 2002b: 7, fig. 1. Type locality: mouth of Río Tinajones medio, San Antero, Córdoba, Colombia (9°25'N 75°48'W). Holotype: INVEMAR-PEC 3754.

Maximum length: 30 cm SL

Distribution: South America: Caribbean coast of Colombia and nearby rivers mouths.

Countries: Colombia

Common names: Bagre parindera (Colombia), Caribbean sculptured sea catfish (USA).

Remarks and references: Provisionally placed in *Arius* at this time.

Arius phrygiatus (Valenciennes, 1840)

Arius phrygiatus Valenciennes in Cuvier & Valenciennes, 1840b: 79 [59 of Strasbourg deluxe ed.]. Type locality: Cayenne [interpreted by Boeseman (1972) as having come from Suriname]. Holotype: RMNH 3038.

Arius dieperinki Bleeker, 1862: 375. Type locality: Suriname. Holotype: RMNH 3038.

Maximum length: 30 cm TL

Distribution: South America: Atlantic coastal rivers and estuaries from Guyana to the mouth of the Amazon River.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela (?)

Remarks and references: Provisionally placed in *Arius* at this time. Boeseman (1972) considered RMNH 3038 as the holotype of *A. phrygiatus*.

Arius rugispinis (Valenciennes, 1840)

Arius rugispinis Valenciennes in Cuvier & Valenciennes, 1840b:

Check List of the Freshwater Fishes of South and Central America

77 [58 of Strasbourg deluxe ed.]. Type locality: Cayenne. Syntypes: MNHN A.9403 (1).
Tachysurus atropilumbeus Fowler, 1931: 394, fig. 2. Type locality: Vessigny Beach, Brighton, Trinidad I., West Indies. Holotype: ANSP 53316.
 Maximum length: 45 cm TL
 Distribution: South America: Atlantic coastal rivers from Guyana to mouth of Amazon River.
 Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago (?), Venezuela (?)
 Remarks and references: Provisionally placed in *Arius* at this time.

ASPISTOR

Aspistor Jordan & Evermann, 1898: 2763. Type species: *Arius luniscutis* Valenciennes, 1840. Type by original designation. Gender: masculine.

***Aspistor luniscutis* (Valenciennes, 1840)**

Arius luniscutis Valenciennes in Cuvier & Valenciennes, 1840b: 109 [82 of Strasbourg deluxe ed.]. Type locality: Brésil. Syntypes: MNHN A.8980 (2), B.595 (1).
Arius physacanthus Vaillant, 1899: 155. Type locality: le Mahury [French Guiana]. Holotype: MNHN 1899-58.
Arius bonneti Puyo, 1936: 107, fig. 17 (middle). Type locality: not stated [Cayenne River, French Guiana]. Holotype: MNHN 1936-162.
Arius clavispinosus Puyo, 1936: 103, fig. 16 (left). Type locality: ile de Cayenne (rivière de Cayenne) [French Guiana]. Holotype: MNHN 1936-163.
Arius despaxi Puyo, 1936: 110, fig. 17 (right). Type locality: not stated [Cayenne River, French Guiana]. Holotype: MNHN 1936-161.
 Maximum length: 120 cm TL
 Distribution: South America: Atlantic coastal rivers from French Guiana to southern Brazil.
 Countries: French Guiana, Brazil

***Aspistor quadriscutis* (Valenciennes, 1840)**

Arius quadriscutis Valenciennes in Cuvier & Valenciennes, 1840b: 111 [83 of Strasbourg deluxe ed.]. Type locality: Cayenne ou de la Mana; Cayenne. Syntypes: MNHN A.9402 (1), B.596 (1), B.613 (1); RMNH 3049 (1), 3050 (1).
 Maximum length: 50 cm TL
 Distribution: South America: Atlantic coastal rivers from Guyana to northeastern Brazil.
 Countries: Brazil, French Guiana, Guyana, Suriname

BAGRE

Bagre Cloquet, 1816: 52. Type species: *Silurus bagre* Linnaeus, 1766. Type by absolute tautonymy. Gender: masculine. Placed on Official List (Opinion 1402).
Glanis Spix & Agassiz, 1829: 46. Type species: *Silurus bagre* Linnaeus, 1766. Type by subsequent designation by Kottelat (1988). Gender: masculine.
Stearopterus Minding, 1832: 116. Type species: *Stearopterus bagre* Minding, 1832. Type by monotypy. Gender: masculine.
Breviceps Swainson, 1838: 328, 343. Type species: *Silurus bagre* of Bloch, 1794. Type by monotypy. Gender: neuter. Preoccupied by *Breviceps* Merrem, 1820 in herpetology; replaced by *Felichthys* Swainson, 1839.
Felichthys Swainson, 1839: 305. Type species: *Silurus bagre* Bloch, 1794. Type by being a replacement name. Gender: masculine. Replacement for *Breviceps* Swainson, 1838.
Ailurichthys Baird & Girard, 1854: 26. Type species: *Silurus marinus* Mitchill, 1815. Type by subsequent designation by Jordan & Evermann (1896: 116). Gender: masculine.
Mystus Gray, 1854: 155. Type species: *Mystus carolinensis* Gronow, 1854. Type by subsequent designation by Jordan & Ever-

mann (1896: 116). Gender: masculine.
Paradiplomystes Bleeker, 1862a: 8. Type species: *Pimelodus coruscans* Lichtenstein, 1819. Type by original designation. Gender: masculine.
Anemanotus Fowler, 1944: 171. Type species: *Ailurichthys panamensis* Gill, 1863. Type by original designation. Gender: masculine. Originally proposed as a subgenus of *Ailurichthys*.

***Bagre bagre* (Linnaeus, 1766)**

Silurus bagre Linnaeus, 1766: 505. Type locality: America meridionali. No types known.
 ?*Pimelodus coruscans* Lichtenstein, 1819: 58. Type locality: Brazil. Holotype: Not known, not ZMB 2978.
Felichthys filamentosus Swainson, 1839: 392. Type locality: Estuaries of rivers near Pernambuco, Brazil. No types known.
Galeichthys Gronovii Valenciennes & Valenciennes, 1840b: 40 [30 of Strasbourg deluxe ed.]. Type locality: Terre-Ferme ou de la Guyane, Maracaibo; la Mana, Cayenne, Bahia. Syntypes: MNHN A.8977 (1), A.9368 (1).
Bagrus macronemus Ranzani, 1841: 65. Type locality: Fiume Brasiliano detto di S. Francesco. Holotype: MZUB 930. Illustrated and described in additional detail in Ranzani (1842: 334, pl. 28).
Mystus carolinensis Gronow in Gray, 1854: 156. Type locality: fluminibus majoribus Americis Meridionalis. No types known.
 Maximum length: 55 cm TL
 Distribution: South America: Colombia to the mouth of the Amazon River.
 Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela
 Common names: Bagre-bandeira (Brazil)

***Bagre marinus* (Mitchill, 1815)**

Silurus marinus Mitchill, 1815: 433. Type locality: New York, U.S.A. No types known.
Galeichthys Blochii Valenciennes in Cuvier & Valenciennes, 1840b: 44 [33 of Strasbourg deluxe ed.]. Type locality: Surinam; Bahia. No types known.
Galeichthys Parrae Valenciennes in Cuvier & Valenciennes, 1840b: 33 [25 of Strasbourg deluxe ed.]. Type locality: New-York ... ou de Charlestown, Nouvelle-Orléans, Rio-Janéiro. Syntypes: MNHN 1565 (1), A.8988 (1), A.9367 (1), B-0056 (1), B-0074 (1).
Galeichthys bahiensis Castelnau, 1855: 37, pl. 18 (fig. 1). Type locality: Bahia. Holotype: MNHN B.692.
Aelurichthys longispinis Günther, 1864: 178. Type locality: South America; Mexico. Syntypes: (3) BMNH 1976.2.18.1 (1), 1976.2.18.2 (1).
 Maximum length: 60 cm TL
 Distribution: North, Central and South America and Caribbean Islands: Coast of Gulf of Mexico, Cuba, western margin of Caribbean, and northern margin of South America: sometimes in rivers and estuaries
 Countries: Brazil, Colombia, Costa Rica, Cuba, French Guiana, Guatemala, Guiana, Honduras, Mexico, Panama, Suriname, Venezuela

***Bagre panamensis* (Gill, 1863)**

Aelurichthys panamensis Gill, 1863: 172. Type locality: Western coast of Central America. Holotype: USNM (not found).
Aelurichthys nuchalis Günther, 1864: 179, fig. Type locality: Pacific coast of Panama. Holotype: BMNH 1864.1.26.344.
Aelurichthys scutatus Regan, 1907: 116, pl. 15 (fig. 2), 19 (fig. 2). Type locality: Panama or Ecuador. Syntypes: (2) BMNH 1903.5.15.328.
Aelurichthys isthmensis Regan, 1907: 117, pl. 15 (fig. 1), 19 (fig. 1). Type locality: Colón, Panama.
 Maximum length: 38 cm TL
 Distribution: Eastern Pacific: From off Santa Ana River in southern California, USA to Peru. Rare north of southern Baja Cali-

fornia.

Countries: Colombia, Costa Rica, Ecuador, El Salvador, Mexico, Nicaragua, Panama, Peru, USA

***Bagre pinnimaculatus* (Steindachner, 1876)**

?*Galeichthys Eydouxii* Valenciennes in Cuvier & Valenciennes, 1840b: 43 [32 of Strasbourg deluxe ed.]. Type locality: la rivière de Guayaquil. Holotype: MNHN 1572. Name spelled *Eydouxii* on p. 43 and *Eydouxii* in table of contents (p. xviii). First reviser apparently Eschmeyer, Ferraris, Hoang, & Long (in Eschmeyer, 1998).

Aelurichthys pinnimaculatus Steindachner, 1876: 565, pl. 8. Type locality: Panama, Altata, Westküste von Costa-Rica. Syntypes: (several) MCZ 4941 (1), 23746(3); 23747 (1); NMW 47895 (1), 47897-99 (1 each), 50577 (1); USNM 123011 [ex MCZ 23746] (2) Panama.

Maximum length: 50 cm TL

Distribution: North, Central, and South America: Pacific draining rivers from the Gulf of California to Ecuador.

Countries: Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama

Remarks and references: Species treated as valid in Kailola & Bussing in Fischer et al. (1995: 878), but with *Galeichthys eydouxii* as a possible senior synonym. Therefore, the name *G. eydouxii* is tentatively placed here.

CATHOROPS

Cathorops Jordan & Gilbert, 1882: 39. Type species: *Arius hypophthalmus* Steindachner, 1876. Type by monotypy. Gender: masculine. Originally proposed as a subgenus of *Arius*. Name dates to key on p. 39, which is part of a signature dated as 25 Sept 1882.

***Cathorops agassizii* (Eigenmann & Eigenmann, 1888)**

Tachysurus agassizii Eigenmann & Eigenmann, 1888: 145. Type locality: Rio Grande do Sul. Holotype: MCZ 7670.

Arius pleurops Boulenger, 1897: 296. Type locality: Magoarisinho, Cape Magoary [Marajo I., Brazil]. Holotype: BMNH 1897.7.17.7 (plus eggs and embryos in mouth).

Maximum length: 22 cm TL

Distribution: South America: Guyana, north and northeast Brazil.

Countries: Brazil, Guyana

Remarks and references: Species found primarily in estuarine waters.

***Cathorops aguadulce* (Meek, 1904)**

Galeichthys aguadulce Meek, 1904: 9, pl. 4. Type locality: Río Tesehocacán, Pérez, Vera Cruz. basin of the Rio Papaloapam [Mexico]. Holotype: FMNH 4678.

Maximum length: 21 cm TL

Distribution: North America: Papaloapam River basin.

Countries: Mexico

Common names: Coruco, Bagre (Mexico)

***Cathorops arenatus* (Valenciennes, 1840)**

Arius arenatus Valenciennes in Cuvier & Valenciennes, 1840b: 106 [79 of Strasbourg deluxe ed.]. Type locality: Cayenne [interpreted by Boeseman (1972) as having come from Suriname]. Holotype: RMNH 3099.

Arius fissus Valenciennes in Cuvier & Valenciennes, 1840b: 107 [79 of Strasbourg deluxe ed.]. Type locality: Cayenne [interpreted by Boeseman (1972) as having come from Suriname]. Holotype: RMNH 3036.

Maximum length: 25 cm SL

Distribution: South America: Atlantic coastal rivers from Guyana to northeastern Brazil.

Countries: Brazil, French Guiana, Guyana, Suriname

***Cathorops dasycephalus* (Günther, 1864)**

Arius dasycephalus Günther, 1864: 157, fig. on p. 157. Type locality: Oahu, Sandwich Islands. Holotype: BMNH 1855.9.19.1100.

Tachysurus longicephalus Eigenmann & Eigenmann, 1888: 143.

Type locality: Gulf of Panama, Panama. Holotype: MCZ 4972.

Name spelled *longicephalus* in account heading, *longicephalus* in introduction. The latter spelling considered valid herein.

Maximum length: 29 cm TL

Distribution: South and Central America: Pacific coast.

Countries: Costa Rica, Ecuador, Panama

Remarks and references: Placed by Kailola & Bussing (in Fischer et al., 1995: 867) tentatively in *Arius*. Possibly restricted to marine environments.

***Cathorops fuerthii* (Steindachner, 1876)**

Arius Fürthii Steindachner, 1876: 579. Type locality: Panama. Syntypes: (4) MCZ 4943 (2), 4973 (3), 7691 (1); NMW 50568 (2).

Tachysurus evermanni Gilbert & Starks, 1904: 32, pl. 5 (fig. 10).

Type locality: Panama Bay, e. Pacific. Holotype: SU 6706.

Maximum length: 28 cm TL

Distribution: North, Central, and South America: Pacific draining rivers from Mexico to Ecuador.

Countries: Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Mexico, Nicaragua, Panama

Remarks and references: Placed by Kailola & Bussing (in Fischer et al., 1995: 880) tentatively in *Cathorops*.

***Cathorops hypophthalmus* (Steindachner, 1876)**

Arius hypophthalmus Steindachner, 1876: 581, pl. 10. Type locality: Panama. Holotype: NMW (not found).

Tachysurus gulosus Eigenmann & Eigenmann, 1888: 146. Type locality: Panama. Syntypes: MCZ 4974 (2).

Maximum length: 35 cm TL

Distribution: Central America: Pacific draining rivers, in brackish and fresh water.

Countries: Panama

***Cathorops melanopus* (Günther, 1864)**

Arius melanopus Günther, 1864: 172. Type locality: Rio Motagua. Syntypes: (apparently 2) BMNH 1865.4.29.51-53 (3).

Maximum length: 23 cm

Distribution: Central America: Motagua River basin.

Countries: Guatemala

***Cathorops multiradiatus* (Günther, 1864)**

Bagrus arioides Kner, 1863: 227, fig. 15. Type locality: Rio Bayano im Staate Panama, Südseite. Holotype: NMW (not found). Preoccupied by *Bagrus arioides* Valenciennes 1840; permanently invalid.

Arius multiradiatus Günther, 1864: 173. Type locality: Rio Bayano im Staate Panama, Südseite. Holotype: NMW (not found). New name for *Bagrus arioides* Kner.

Tachysurus emmelane Gilbert in Jordan & Evermann, 1898: 2785. Type locality: Panama. Holotype: SU 5818.

Tachysurus equatorialis Starks, 1906: 766, fig. 3. Type locality: Guayaquil, Ecuador. Holotype: USNM 53470.

Maximum length: 30 cm TL

Distribution: Central America: Rivers and bays of Pacific coast, from Guatemala to Panama.

Countries: Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama

Remarks and references: Kailola & Bussing (in Fischer et al. 1995: 881) tentatively placed the species in *Cathorops*.

***Cathorops spixii* (Spix & Agassiz, 1829)**

Pimelodus spixii Spix & Agassiz, 1829: 19, Pl. 7 (fig. 1). Type locality: Brasilia aequatoriali. No types known.

Pimelodus albidus Spix & Agassiz, 1829: Pl. 7 (fig. 1). Type locality not stated. No types known. Name available from plate.

Maximum length: 30 cm TL

Check List of the Freshwater Fishes of South and Central America

Distribution: South America: Atlantic and Caribbean rivers and estuaries from Colombia to Brazil.

Countries: Brazil, Colombia, French Guiana, Guyana, Suriname, Venezuela

Remarks and references: Taylor & Menezes (1978) indicate that two or more species may be included here.

Common names: Bagre-amarelo (Brazil)

***Cathorops steindachneri* (Gilbert & Starks, 1904)**

Tachysurus steindachneri Gilbert & Starks, 1904: 29, pl. 5 (fig. 9).

Type locality: Panama Bay. Holotype: SU 7026.

Arius taylori Hildebrand, 1925: 250, fig. 10. Type locality: Río Lempa, San Marcos, El Salvador. Holotype: USNM 87224.

Maximum length: 36 cm TL

Distribution: Central America: Pacific draining rivers and estuaries.

Countries: Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama

Remarks and references: Kailola & Bussing (in Fischer et al. 1995: 882) tentatively placed the species in *Cathorops*.

***Cathorops tuyra* (Meek & Hildebrand, 1923)**

Arius tuyra Meek & Hildebrand, 1923: 128, pl. 5. Type locality: Río Tuyra, mouth of Río Yape, Darien, Panama (Pacific). Holotype: USNM 79413.

Maximum length: 29 cm TL

Distribution: South and Central America: Pacific drainage rivers and estuaries, from Panama to Peru.

Countries: Colombia, Ecuador, Panama, Peru

Remarks and references: Placed by Kailola & Bussing (in Fischer et al., 1995: 883) tentatively in *Cathorops*.

Species inquirendae

Arius variolosus Valenciennes in Cuvier & Valenciennes, 1840b: 107 [80 of Strasbourg deluxe ed.]. Type locality: Cayenne. Holotype: MNHN 4169.

Arius punctulatus Valenciennes in Cuvier & Valenciennes, 1840b: 108 [81 of Strasbourg deluxe ed.]. Type locality: Buénos-Ayres. Holotype: MNHN.

Arius nuchalis Günther, 1864: 171, fig. on p. 171. Type locality: Guyana. Syntypes: (at least 6) BMNH 1975.1.17.3-5 (3), BMNH uncat. (? 2).

Arius laticeps Günther, 1864: 171, figs. on p. 171. Type locality: Trinidad [and] British Guiana. Syntypes: BMNH 1863.6.18.8 (1) Trinidad, 1976.2.25.1 (1) Guyana.

Tachysurus liropus Bristol in Gilbert, 1897: 438. Type locality: San Juan Lagoon, near mouth of Río Ahome, Sonora, Mexico. Syntypes: (6) SU 324 (3); USNM 47584 (2).

GALEICHTHYS

Galeichthys Valenciennes in Cuvier & Valenciennes, 1840b: 28 [21 of Strasbourg deluxe ed.]. Type species: *Galeichthys feliceps* Valenciennes, 1840. Type by subsequent designation by Bleeker (1862). Gender: masculine.

***Galeichthys peruvianus* Lütken, 1874**

Galeichthys peruvianus Lütken, 1874: 205. Type locality: Callao. Syntypes: ZMUC 150 (1), 490 (1).

Maximum length: 35 cm TL

Distribution: South America: Pacific coast.

Countries: Ecuador, Peru

Remarks and references: Possibly restricted to marine environments.

GENIDENS

Genidens Castelnau, 1855: 33. Type species: *Bagrus genidens* Cuv. Val. [= *Pimelodus genidens* Cuvier, 1829]. Type by absolute tautonymy. Gender: masculine.

Guiritinga Bleeker, 1858: 62, 67. Type species: *Pimelodus commersonii* La Cepède, 1803. Type by monotypy. Gender: feminine. Higuchi et al. (1982: 3) suggest that this may be the valid genus for the Neotropical species generally placed in *Netuma*.

***Genidens barbuis* (La Cepède, 1803)**

Pimelodus commersonii La Cepède, 1803: 95, 103, pl. 3 (fig. 1). Type locality: No locality stated. No types known.

Pimelodus barbuis La Cepède, 1803: 94, 102. Type locality: Amérique méridionale. No types known.

Bagrus barbatus Quoy & Gaimard, 1824: 230, pl. 49 (figs. 1-2). Type locality: Río de la Plata, South America. No types known.

Pimelodus versicolor Castelnau, 1855: 35, pl. 16 (fig. 3). Type locality: río Araguay, dans la province de Goyaz (Brésil). Syntypes: MNHN 1206 (2).

Tachysurus upsulonophorus Eigenmann & Eigenmann, 1889: 31. Type locality: Rio Grande do Sul, Brazil. Holotype: MCZ 23750.

Silurus 16-radiatus Larrañaga, 1923: 386. Type locality: Uruguay. No types known.

Silurus marinus Larrañaga, 1923: 376. Type locality: Uruguay. No types known.

Maximum length: 120 cm TL

Distribution: South America: Atlantic coast from La Plata River to eastern Brazil.

Countries: Argentina, Brazil, Uruguay

Remarks and references: Synonymy follows Higuchi et al (1982).

Common names: Bagre-branco (Brazil)

***Genidens genidens* (Cuvier, 1829)**

Pimelodus genidens Cuvier, 1829: 294. Type locality: Not stated. Syntypes: MNHN 1213 (2), MNHN B-0678 (1). Species described in more detail as *Bagrus genidens* in Cuvier & Valenciennes (1840a: 453 [335 of Strasbourg deluxe ed.], pl. 419), with type locality: Rio-Janéiro.

Genidens granulatus Castelnau, 1855: 34, pl. 16 (fig. 1). Type locality: la riviere d'Araguay, dans la province bresilienne de Goyaz. Holotype: MNHN 1197.

Genidens cuvieri Castelnau, 1855: 34. Type locality: la Plata. Syntypes: MNHN 1213 (2), MNHN B-0678 (1). Unneeded replacement name for *Bagrus genidens* Cuv. Val. [= *Pimelodus genidens* Cuvier].

Genidens valenciennesii Bleeker, 1858: 68. Type locality: Rio de Janeiro, Brazil; Argentina. Syntypes: MNHN 1213 (2) Rio de Janeiro, B.678 (1) Rio de la Plata. Unneeded replacement name for *Bagrus genidens* Cuv. Val. [= *Pimelodus genidens* Cuvier].

Maximum length: 35 cm TL

Distribution: South America: Atlantic draining rivers of southern South America.

Countries: Argentina, Brazil, Uruguay

Common names: Bagre urutu (Brazil)

***Genidens machadoi* (Miranda Ribeiro, 1918)**

Tachysurus machadoi Miranda Ribeiro, 1918: 108. Type locality: Macaé, Rio de Janeiro, Brasil. Holotype: MNRJ 661.

Maximum length: 80 cm TL

Distribution: South America: Coastal rivers of southern Atlantic, from Rio de Janeiro to Argentina and possibly Chile.

Countries: Argentina, Brazil, Chile (?), Uruguay

Remarks and references: Known only from marine environments.

Possible inclusion of this species in the fauna of Chile is based on report by Sielfeld (1979).

Common names: bagre do Corso (Brazil).

***Genidens planifrons* (Higuchi, Reis & Araújo, 1982)**

Netuma planifrons Higuchi, Reis & Araújo, 1982: 12, fig. 1. Type locality: Lagoa dos Patos, RS, Brazil. Holotype: MZUSP 14828.

Maximum length: 57 cm SL

Distribution: South America: Laguna dos Patos drainage and nearby Atlantic Ocean.

Countries: Brazil

HEXANEMATICHTHYS

?*Sciades* Müller & Troschel, 1849: 6. Type species: *Bagrus (Sciades) emphysetus* Müller & Troschel, 1849. Type by subsequent designation by Bleeker (1862a: 8). Gender: masculine. Originally proposed as a subgenus of *Bagrus*.

Hexanematichtys Bleeker, 1858: 61, 126. Type species: *Bagrus sondaicus* Valenciennes, 1840. Type by monotypy. Gender: masculine.

?*Sciadeichthys* Bleeker, 1858: 62. Type species: *Bagrus (Sciades) emphysetus* Müller & Troschel, 1849. Type by monotypy. Gender: masculine.

Selenaspis Bleeker, 1858: 62. Type species: *Silurus herzbergii* Bloch, 1794. Type by subsequent designation, apparently by Jordan & Evermann (1896: 119). Gender: feminine.

Leptarius Gill, 1863: 170. Type species: *Leptarius dowii* Gill, 1863. Type by monotypy. Gender: masculine.

***Hexanematichtys assimilis* (Günther, 1864)**

Arius assimilis Günther, 1864: 146. Type locality: Lake of Yzabal, Guatemala. Holotype: BMNH 1864.1.26.98.

Maximum length: 32 cm TL

Distribution: Central America: Belize River basin, Monkey River.

Countries: Belize, Guatemala

***Hexanematichtys bonillai* (Miles, 1945)**

Galeichthys bonillai Miles, 1945: 454, figs. 4-4a. Type locality: Río Magdalena, Honda, Colombia. Holotype: Sec. Caza y Pesca, Min. Nat. Econ. Bogotá.

Maximum length: 80 cm TL

Distribution: South America: Caribbean draining rivers, including Magdalena River.

Countries: Colombia

Common names: Bagre cazón (Colombia), Cazón (Colombia)

***Hexanematichtys couma* (Valenciennes, 1840)**

Bagrus couma Valenciennes in Cuvier & Valenciennes, 1840a: 459 [340 of Strasbourg deluxe ed.]. Type locality: Cayenne. Syntypes: MNHN A.9338 (1), MNHN A.9339 (1).

Sciadeichthys (Selenaspis) walrechtii Boeseman, 1954: 60, pl. 3. Type locality: Suriname. Holotype: RMNH 2141.

Maximum length: 97 cm TL

Distribution: South America: Gulf of Paria to the mouth of the Amazon.

Countries: Brazil, Colombia, French Guiana, Guyana, Suriname, Venezuela

***Hexanematichtys dowii* (Gill, 1863)**

Leptarius dowii Gill, 1863: 171. Type locality: Western coast of Central America. Holotype: USNM (not found).

Arius alatus Steindachner, 1876: 569, pl. 6. Type locality: Panama. Holotype: MCZ 7725.

Maximum length: 90 cm TL

Distribution: South and Central America: Fresh and brackish water along Pacific side of Panama to Ecuador.

Countries: Colombia, Ecuador, Panama

***Hexanematichtys guatemalensis* (Günther, 1864)**

Arius guatemalensis Günther, 1864: 145. Type locality: Guatemala [and] Chiapan. Syntypes: (2) BMNH 1853.1.11.6 (1).

Arius caeruleascens Günther, 1864: 149, fig. on p. 149. Type locality: Huamuchal, Guatemala. Syntypes: BMNH 1864.1.26.208-209 (2).

Galeichthys azureus Jordan & Williams in Jordan, 1895: 398, pl. 27. Type locality: Estuary at Mazatlán, Sinaloa, w. Mexico. Holotype: SU 11575 [originally printed as 1575].

Maximum length: 37 cm TL

Distribution: North and Central America: Pacific coast from Mex-

ico to Honduras.

Countries: El Salvador, Guatemala, Honduras, Mexico

Remarks and references: Placed by Kailola & Bussing (in Fischer et al., 1995: 868) tentatively in *Arius*.

***Hexanematichtys herzbergii* (Bloch, 1794)**

Silurus herzbergii Bloch, 1794: 33, pl. 367. Type locality: Suriname. Syntypes: ZMB 2962 (1), 8785 (1, skin).

Pimelodus argenteus La Cèpède, 1803: 94, 102. Type locality: Suriname. ZMB 2962 (1), 8785 (1). Unneeded new name for *Silurus herzbergii* Bloch.

Bagrus mesops Valenciennes in Cuvier & Valenciennes, 1840a: 456 [338 of Strasbourg deluxe ed.]. Type locality: not stated [Puerto Rico]. Holotype: MNHN A.9347.

Bagrus pemecus Valenciennes in Cuvier & Valenciennes, 1840a: 456 [338 of Strasbourg deluxe ed.]. Type locality: Cayenne, French Guiana. Holotype: MNHN A.9348 (dry).

Bagrus coelestinus Müller & Troschel, 1849: 7. Type locality: Guiana. Syntypes: ZMB 2970 (1), 2977 (1).

Hexanematichtys hymenorrhinos Bleeker, 1862b: 377. Type locality: Perhaps Suriname. Holotype: RMNH 3056.

Netuma dubia Bleeker, 1862b: 382. Type locality: Suriname. Syntypes: RMNH 3051-52 (1, 1).

Maximum length: 54 cm TL

Distribution: South America: Caribbean and Atlantic draining rivers and estuaries from Colombia to Brazil.

Countries: Brazil, Colombia, French Guiana, Guyana, Suriname, Venezuela

***Hexanematichtys kessleri* (Steindachner, 1876)**

Arius Kessleri Steindachner, 1876: 574, pl. 5. Type locality: Panama, Altata. Syntypes: MCZ 4944 (6); NMW 48112 (1), 48247 (1), 48248 (1), 48249 (2).

Arius elatturus Jordan & Gilbert, 1882: 45. Type locality: Panama. Holotype: USNM 29408.

Arius insculptus Jordan & Gilbert, 1882: 41. Type locality: Panama. Syntypes: USNM 29415 (1), 30977 (2).

Netuma insularum Greene in Gilbert, 1897: 439. Type locality: Galapagos Archipelago [later corrected to: Gulf of Panama]. Holotype: USNM 47577.

Maximum length: 45 cm TL

Distribution: Central America: Pacific coast .

Countries: Costa Rica, Panama

Remarks and references: Placed by Kailola & Bussing (in Fischer et al., 1995: 869) tentatively in *Arius*. Possibly restricted to marine environments.

***Hexanematichtys osculus* (Jordan & Gilbert, 1882)**

Arius osculus Jordan & Gilbert, 1882: 46. Type locality: Panama. Holotype: USNM 29476.

Maximum length: 28 cm SL

Distribution: Central America: Pacific coast in Costa Rica and Panama.

Countries: Costa Rica, Panama

Remarks and references: Placed by Kailola & Bussing (in Fischer et al., 1995: 871) tentatively in *Arius*. Possibly restricted to marine environments.

***Hexanematichtys parkeri* (Traill, 1832)**

Silurus parkeri Traill, 1832: 377, pl. 6 (fig. 1). Type locality: Guiana. Holotype: whereabouts unknown.

?*Bagrus (Sciades) emphysetus* Müller & Troschel, 1849: 8. Type locality: Surinam. Holotype: ZMB 2990.

Maximum length: 150 cm SL

Distribution: South America: Coastal rivers from Guyana to northern Brazil.

Countries: Brazil, French Guiana, Guyana, Suriname, (?) Venezuela

***Hexanematichtys passany* (Valenciennes, 1840)**

Check List of the Freshwater Fishes of South and Central America

- Bagrus passany* Valenciennes in Cuvier & Valenciennes, 1840a: 458 [340 of Strasbourg deluxe ed.]. Type locality: Cayenne. Holotype: MNHN A.9399.
Maximum length: 100 cm TL
Distribution: Western Atlantic: Guyana to the mouth of the Amazon River.
Countries: Brazil, French Guiana, Guyana, Suriname
- Hexanemachthys platypogon* (Günther, 1864)**
Arius platypogon Günther, 1864: 147, figs. Type locality: San Jose, Guatemala. Syntypes: BMNH 1964.1.26.316-319 (4).
Netuma mazatlana Gilbert, 1904: 255, pl. 25. Type locality: Mazatlán, Sinaloa, w. Mexico. Holotype: SU 7138.
Maximum length: 45 cm TL
Distribution: North, Central, and South America: Pacific coast from Mexico to Ecuador.
Countries: Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama
Remarks and references: Placed by Kailola & Bussing (in Fischer et al., 1995: 873) tentatively in *Arius*. Possibly restricted to marine environments.
- Hexanemachthys proops* (Valenciennes, 1840)**
Bagrus proops Valenciennes in Cuvier & Valenciennes, 1840a: 457 [339 of Strasbourg deluxe ed.]. Type locality: Cayenne ou de Surinam; Porto-Rico. Syntypes: MNHN A-9331 (1), A-9332 (1), A-9333 (1), B-0245 (1), B-0618 (2).
Maximum length: 100 cm TL
Distribution: South America and Caribbean Islands: Caribbean and Atlantic draining rivers and estuaries from Colombia to Brazil.
Countries: Brazil, Colombia, French Guiana, Guyana, Puerto Rico, Suriname, Venezuela
- Hexanemachthys seemanni* (Günther, 1864)**
Arius seemanni Günther, 1864: 147, fig. Type locality: Central America. Holotype: BMNH 1855.9.19.1107.
Tachisurus jordani Eigenmann & Eigenmann, 1888: 142. Type locality: Panama. Syntypes: MCZ 4945 (2).
Galeichthys gilberti Jordan & Williams in Jordan, 1895: 395, pl. 26. Type locality: Upper part of astillero at Mazatlán, Sinaloa, w. Mexico. Holotype: USNM 29213.
Galeichthys eigenmanni Gilbert & Starks, 1904: 21, pl. 4 (fig. 8 [incorrectly listed as fig. 7]). Type locality: Panama. Holotype: SU 6986.
Galeichthys simonsi Starks, 1906: 764, fig. 1. Type locality: Callao, Peru. Holotype: USNM 53466.
Maximum length: 35 cm TL
Distribution: North, Central, and South America: Pacific draining rivers and estuaries from Mexico to Peru.
Countries: Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Mexico, Nicaragua, Panama, Peru
Remarks and references: Placed by Kailola & Bussing (in Fischer et al., 1995: 874) tentatively in *Arius*.
- Species inquirendae***
Bagrus albicans Valenciennes in Cuvier & Valenciennes, 1840a: 461 [342 of Strasbourg deluxe ed.], pl. 420. Type locality: Cayenne [French Guiana]. Holotype: MNHN A.9350.
Hexanemachthys surinamensis Bleeker, 1862b: 380. Type locality: Suriname. Holotype: RMNH 3055.
- NOTARIUS**
Notarius Gill, 1863: 171. Type species: *Arius grandicassis* Valenciennes, 1840. Type by monotypy. Gender: masculine.
Sciadeops Fowler, 1944: 211. Type species: *Sciades troschelii* Gill, 1863. Type by original designation. Gender: masculine. Originally proposed as a subgenus of *Sciades*.
- Notarius grandicassis* (Valenciennes, 1840)**
Arius grandicassis Valenciennes in Cuvier & Valenciennes, 1840b: 54 [41 of Strasbourg deluxe ed.], pl. 427. Type locality: Guyane. Holotype: MNHN A.4608.
Arius parmocassis Valenciennes in Cuvier & Valenciennes, 1840b: 57 [43 of Strasbourg deluxe ed.]. Type locality: Bahia. Holotype: MNHN A.8966.
Arius stricticassis Valenciennes in Cuvier & Valenciennes, 1840b: 58 [44 of Strasbourg deluxe ed.]. Type locality: Cayenne. Syntypes: MNHN A.9406 (1), RMNH 3034 (1).
Arius vandeli Puyo, 1936: 123, figs. 21G. Type locality: not stated [French Guiana]. Holotype: MNHN 1936-160.
Maximum length: 63 cm TL
Distribution: South America: Rivers and estuaries from Gulf of Venezuela to mouth of the Amazon River.
Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela
Common names: Bagre-papai (Brazil)
- Notarius lentiginosus* (Eigenmann & Eigenmann, 1888)**
Tachisurus lentiginosus Eigenmann & Eigenmann, 1888: 139. Type locality: Panama. Syntypes: MCZ 4970 (2).
Galeichthys xenauchen Gilbert in Jordan & Evermann, 1898: 2777. Type locality: Panama. Holotype: SU 5821. Holotype figured in Gilbert & Starks 1904, Pl. 4 (fig. 7).
Maximum length: 35 cm TL
Distribution: Central America: Pacific coast in Panama.
Countries: Panama
Remarks and references: Placed by Kailola & Bussing (in Fischer et al., 1995: 870) tentatively in *Arius*. Possibly restricted to marine environments.
- Notarius planiceps* (Steindachner, 1876)**
Arius planiceps Steindachner, 1876: 576, pl. 4. Type locality: Panama, Altata. Syntypes: NMW 48194 (1); NMW 48195 (1); NMW 48196 (1); NMW 48197 (1); NMW 48198 (1); NMW 48199 (2); ZMUC 839 (1).
Maximum length: 59 cm TL
Distribution: North and Central America: Pacific draining rivers and estuaries from Mexico to Panama.
Countries: Costa Rica, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama
Remarks and references: Placed by Kailola & Bussing (in Fischer et al., 1995: 872) tentatively in *Arius*.
- Notarius troschelii* (Gill, 1863)**
Sciades troschelii Gill, 1863: 171. Type locality: Western coast of Central America. Holotype: USNM (not found).
Arius Brandtii Steindachner, 1876: 571, pl. 3. Type locality: Altata, Panama. Syntypes: (several) ?MCZ 4964 (1); NMW 48107 (3), 48110 (1).
Maximum length: 52 cm TL
Distribution: Eastern Pacific: Pacific coast from Mexico to Peru.
Countries: Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama, Peru
Remarks and references: Possibly restricted to marine environments.
- POTAMARIUS**
Potamarius Hubbs & Miller, 1960: 101. Type species: *Conorhynchos nelsoni* Evermann & Goldsborough, 1902. Type by original designation. Gender: masculine.
- Potamarius grandoculis* (Steindachner, 1877)**
Arius grandoculis Steindachner, 1877: 644, pl. 11. Type locality: Rio doce (nach Salmin). Holotype: NMW 48272.
Maximum length: 35 cm SL
Distribution: South America: Doce and Paraíba do Sul rivers, at and near their mouths.
Countries: Brazil

Remarks and references: Name spelled *granducolis* in plate caption.

***Potamarius izabalensis* Hubbs & Miller, 1960**

Potamarius izabalensis Hubbs & Miller, 1960: 104, figs. 2. Type locality: Lago de Izabal, Guatemala, 1 mi. west of El Paraíso. Holotype: USNM 134347.

Maximum length: 44 cm SL

Distribution: Central America: Izabal Lake and, possibly, Polochic River.

Countries: Guatemala

***Potamarius nelsoni* (Evermann & Goldsborough, 1902)**

Conorhynchos nelsoni Evermann & Goldsborough, 1902: 140, fig. 1. Type locality: Río Usumacinta, Montecristo, Yucatán, Mexico. Holotype: USNM 50001.

Maximum length: 39 cm SL

Distribution: North America: Usumacinta River basin.

Countries: Mexico

Common names: Bagre lacadon (Mexico)

SPECIES INQUIRENDAE

Arius nigricans Valenciennes, 1835: pl. 3 (fig. 3). Type locality: No locality stated [La Plata River, Montevideo, Uruguay]. Holotype: MNHN 176. Name available from plate.

Arius molliceps Valenciennes in Cuvier & Valenciennes, 1840b: 108 [80 of Strasbourg deluxe ed.]. Type locality: No locality stated. Holotype: MNHN (? Not found).

Arius festae Boulenger, 1898: 5. Type locality: Narrangal, Equateur occidental. Holotype: MZUT 1479.

Arius labiatus Boulenger, 1898: 6. Type locality: Rio Peripa, Equateur. Holotype: MZUT 1540.

Netuma aulometopon Fowler, 1915: 204, fig. 1. Type locality: Suriname. Holotype: ANSP 8372.

Hexanematichthys henni Fisher & Eigenmann, in Eigenmann, 1922: 30, fig. 9. Type locality: Colimes, Rio Daule, Ecuador. Holotype: CAS 60620 [ex IU 15045]. Authorship based on footnote on p. 27.

Netuma hassleriana Borodin, 1934: 33, fig. B. Type locality: Panama. Holotype: MCZ 33213 [ex MCZ 4965].

Family Doradidae (Thorny catfishes)

Mark H. Sabaj and Carl J. Ferraris, Jr.

The Doradidae is a monophyletic family of freshwater catfishes endemic to South America that can be diagnosed by at least three synapomorphies: tympanic area delimited by supracleithrum, postoccipital process, infranuchal scute and humeral process of cleithrum; presence of at least two ossified lateral scutes in the postcranial region, one articulating with posterior nuchal plate and first pleural rib; and reduction or absence of middle posterodorsal process of cleithrum, between the articular and humeral processes (Higuchi, 1992; see also de Pinna, 1998). In all but a few species, the ossified tubules of the lateral-line are variously expanded to form a conspicuous row of midlateral scutes each with a medial retrorse spine or thorn. Most species also are characterized by a well-developed cephalic shield, subterminal mouth, large exposed humeral processes, sturdy serrated pectoral- and dorsal-fin spines, and ventrally-flattened bodies.

A total of 127 species (over half published before 1900) and 41 genera of doradids (plus three replacement names) have been proposed in a taxonomic history that dates back to Linnaeus (1758). In the only published revision of the family, Eigenmann (1925) recognized 68 valid species in 26 genera including 9 new species and 10 new genera. A number of species and/or generic descriptions and a review of Venezuelan doradids (Fernández-Yépez, 1968) followed, accounting for a total of 16 new species, 5 new genera and many questionable or apparent synonyms (11 at the species level, 6 at the generic). Higuchi's (1992) unpublished doctoral dissertation presented a classification of nearly all nominal forms and the first cladistic analysis of intergeneric relationships based on 115 morphological characters (plus 85 autapomorphies, see de Pinna 1998). Higuchi demonstrated the monophyly of Doradidae (including *Wertheimeria*) and presented a phylogeny for 32 genera, three of which were newly proposed (but remain unavailable). Herein, we recognize 72 valid species in 30 genera. In addition, four nominal forms are treated as Species inquirendae in their appropriate genera, and one is a Species inquirendae whose generic identity was not precisely determined.

Doradids range considerably in size from *Physopyxis lyra*, a specialized form that rarely exceeds 3.5 cm SL (Sabaj, pers. obs.), to *Oxydoras niger*, a widely distributed species that reaches about 120 cm fork length and 20 kg (Goulding, 1980). A few other large river forms (*Lithodoras*, *Megalodoras*, *Pterodoras*) can exceed 50 cm, but most doradids attain lengths between 10 and 20 cm SL. Doradids are often separated into two easily-recognized groups, one with simple, and the other with fimbriate, maxillary barbels. Doradids with simple barbels include the two basal-most species and appear to be non-monophyletic (Higuchi, 1992). Many have large broadly rounded heads, are moderately depressed anteriorly and heavily armored with well-developed midlateral scutes. In a few (*Doraops*, *Kalyptodoras*, *Wertheimeria*) the row of midlateral scutes are variously reduced or interrupted. The fimbriate-barbel taxa form a monophyletic group sister to *Oxydoras* (Higuchi, 1992), a genus with simple barbels. *Oxydoras* and most fimbriate-barbel taxa are further characterized by long, conical snouts, relatively narrow heads with deeper bodies; and, like the remaining taxa, many are ventrally flattened. A few fimbriate species are fusiform or torpedo-shaped (e.g., *Anduzedoras*, *Hassar*, some *Leptodoras*, some *Nemadoras*) with features streamlined for midwater or swiftwater habitats (e.g., eyes covered with adipose tissue, slender fin spines, and midlateral plates significantly reduced anteriorly). The morphology of barbels and associated labial membranes exhibit considerable intergeneric/interspecific variation and is useful for diagnosing fimbriate taxa.

Doradids occur in all of the major river basins of South America and inhabit coastal drainages from the Orinoco Delta to the Parnaíba River (possibly further east) and the Paraguaçu and Jequitinhonha rivers on the east-central coast of Brazil. Doradids are not known from Pacific Coast drainages, nor have they been reported from Atlantic Coast drainages south of the La Plata River, or west of the Magdalena River.

Over 70% of the 72 valid species are found in the Amazonas basin (52 total) and 28 species are presently known only from this basin. The nearby Tocantins River is inhabited by a small number of Amazonian species (7) and one possible endemic (*Hassar wilderi*). The Orinoco basin supports the second largest doradid fauna with about 22 species, 7 of which appear to be endemic. The Essequibo basin has 17 species, only one of which (*Doras micropoeus*) is not among the Amazonian fauna. The other Guiana drainages are relatively depauperate with 8 species total, all of which also occur in the Essequibo and/or Amazonas basins. Seven species are known from the Paraguay-Paraná basin, four of which appear to be endemic. The remaining drainages support only a few species, nearly all of which are endemic and many representing monotypic genera: Magdalena (*Centrochir crocodili*), Maracaibo (*Doraops zuloagai*, *Rhinodoras thomersoni*), Parnaíba (*Hassar affinis*, *Platydoras costatus*), São Francisco (*Franciscodoras marmoratus*, *Oxydoras niger*, ? *Platydoras costatus*), Paraguaçu (*Kalyptodoras bahiensis*), and Jequitinhonha (*Wertheimeria maculata*). Unfortunately, estimations of species distributions

are confused by the fact that many museum specimens are miss- or unidentified.

As one might guess from their distributions, doradids are particularly abundant and species-rich in large river systems and lowland habitats (below 200 m) that experience prolonged seasonal flooding. Adults of the large heavy-bodied taxa typically inhabit the main channels of large rivers (*Centrodoras*, *Pterodoras*) or migrate into such habitats during the low-water season (*Lithodoras*, *Megalodoras*). The latter forms move into flooded forests when the lowlands become inundated. *Oxydoras* also occupies flooded forests during the high-water season and retires to large oxbows, floodplain lakes and the depths of large river channels when waters subside. Some fimbriate-barbel doradids (*Leptodoras*, *Nemadoras*, *Trachydoras*) are particularly common in deepwater channels and move into shallower water near shore at night. Many of the smaller taxa (*Opsodoras*, *Hemidoras*, *Trachydoras*) also prefer larger rivers and are sometimes encountered in extensive heterospecific schools of up to five similar-looking species. Other small-sized taxa (*Acanthodoras*, *Agamyxis*, *Amblydoras*, *Anadoras*, *Physopyxis*) inhabit the calm shallow waters of ponds, lowland creeks, sluggish channels and sheltered margins of rivers. Most are active at night and remain hidden in submerged cavities in wood or partially buried along silted or sandy beaches during the day. A few species are adapted for the swift currents of large cataracts (*Anduzedoras*, *Hassar*) or open water (*Nemadoras elongatus*, *N. hemipeltis*). Some species appear restricted to black or clear-water river systems (*Anduzedoras oxyrhynchus*, *Centrodoras hasemani*, *Hassar* spp., *Leptodoras copei*, *Scorpiodoras heckelii*) and at least one species (*Lithodoras dorsalis*) is presumably tolerant of brackish water. *Lithodoras* is especially common in estuaries near the mouth of the Amazon River; adults seasonally migrate upstream while juveniles remain in the estuary (Goulding et al., 1996).

Information on ecology and life history is scarce and largely anecdotal. Doradids are generally considered opportunistic omnivores and are known to feed on detritus, fruits and other vegetable matter, mollusks, aquatic insects and annelids, crustaceans and small fishes (Eigenmann, 1925; Schultz, 1944; Menezes & Menezes, 1948; Menezes, 1949; Ringuelet et al., 1967; Goulding, 1980; Galvis et al., 1997). Gut contents of a few species (*Hassar*, *Leptodoras*) also may include substantial amounts of sand grains and/or small pebbles (Menezes, 1949; Sabaj, pers. obs.). *Oxydoras* and presumably other long-snouted forms forage the bottom for aquatic invertebrates and may derive some nutrition from ingesting detritus (Goulding, 1980). *Lithodoras dorsalis* migrates into flooded forests to forage on fruits and grasses and may be an effective dispersal agent for certain tree species (Goulding, 1980). The diets of *Megalodoras* and *Pterodoras* are evidently dominated by pulmonate snails and bivalves respectively (Mago-Leccia, 1978; Goulding, 1980; Sabaj, pers. obs.). The uniquely bizarre *Rhynchodoras* has vertical bill-like jaws which it may use as tweezers to extract prey from small cavities (Klauser & Rössel, 1961). Trematode, nematode and acanthocephalan parasites reportedly infest doradid species in the Paraná River (Hamman, 1982).

Very little is known of doradid reproduction. A few species (in *Acanthodoras*, *Agamyxis*, *Amblydoras*, and *Platydoras*) have been observed spawning in aquaria (Franke, 1989). As in the closely related Auchenipteridae, the male's body clasps that of the female as gametes are shed. However, unlike auchenipterids, males do not have an intromittent organ, fertilization is external and sexual dimorphism has not been reported. In nature, *Hassar wilderi* reaches sexual maturity at about 15 cm and spawns in the Tocantins River when waters ascend from November to January (Santos et al., 1984). *Oxydoras* participates in mass heterospecific fish runs in the Madeira River, Brazil, in periods of low water (Smith, 1981). The large species of the Paraguay-Paraná basin (*Oxydoras kneri*, *Pterodoras granulosus*, *Rhinodoras dorgibnyi*) also partake in seasonal migrations (Ringuelet et al., 1967) presumably related to their reproductive cycles.

Two other features of doradid morphology and behavior are of particular interest. Doradids often are called "talking catfishes" because many species can produce audible sounds described as groans, chatters or purrs (Burgess, 1989; Nelson, 1994). Some species (*Acanthodoras*, *Agamyxis*, *Doras*) produce stridulation sounds by moving their pectoral-fin spines (Le Bail et al., 2000; Sabaj, pers. obs.) and the pectoral girdle may serve as an acoustic radiator as in ictalurid catfishes (Fine et al., 1997). Doradids also can produce harmonic sounds via the elastic-spring apparatus (Tavolga, 1962; Pfeiffer & Eisenberg, 1965; Kastenberger, 1977), a special arrangement of the parapophyses of the fourth vertebra, swim bladder and associated muscles and ligaments (Higuchi, 1992; de Pinna 1993).

Doradid taxonomy and systematics have been somewhat neglected since Eigenmann's (1925) revision. The most recent paper was published over a decade ago (Higuchi et al., 1990). Taxonomic progress on the family remains guarded by the uncertain placement and identity of many nominal forms. Further investigation of the taxa treated herein as Species inquirenda may result in additional valid species or effect further name changes. Synonymies of species in five genera (*Hassar*, *Megalodoras*, *Oxydoras*, *Platydoras* and especially *Pterodoras*) must be considered tentative at this time. Thorough revision of widely distributed taxa (e.g., *Platydoras costatus*, *Trachydoras*, *Leptodoras* and *Amblydoras*) will likely yield new species; however, their discovery awaits the taxonomic resolution of nominal forms.

The larger doradids (e.g., *Megalodoras*, *Pterodoras*, *Oxydoras*) are commonly marketed for consumption; however, their commercial value is moderate. In the Amazonas estuary, *Lithodoras dorsalis* is a relatively important subsistence and commercial fish, especially in smaller local markets. *Oxydoras* is said to be of little importance to commercial fisherman in the Orinoco River because the dark color of its flesh reduces its marketability (Novoa & Ramos, 1978). A few of the small and relatively "colorful" species (*Acanthodoras*, *Agamyxis*, *Amblydoras*, *Platydoras*) are routinely harvested and exported as ornamental fishes.

SPECIES INCERTAE SEDIS IN DORADIDAE

***Doras fimbriatus* Kner, 1855**

Doras lorricatus Kner, 1853: 146, fig. 2 on unnumbered plate. Type locality: not stated. Syntypes: NMW 45407-09 (4). Name made available on illustration of a swimbladder. Species description and illustration in Kner (1855: 134, pl. 3, fig. 5), as *Doras fimbriatus*, with locality given as: "Rio Guaporé." Published prior to *Doras fimbriatus* but not treated as valid since 1899 and, therefore, considered a nomen oblitum.

Doras fimbriatus Kner, 1855: 134, pl. 3 (fig. 5). Type locality: Rio Guaporé. Syntypes: NMW 45407-09 (4).

Maximum length: 8 cm SL

Distribution: South America: Guaporé River basin.

Countries: Bolivia, Brazil

Remarks and references: Species to be transferred to new genus (Sabaj, in prep.).

***Doras punctatus* Kner, 1853**

Doras (Corydoras) punctatus Kner, 1853: 146, fig. 5 on unnumbered plate. Type locality: not stated. Syntypes (17): NMW 45434-41 (14), RMNH 2966 (1). Name made available on illustration of a swimbladder. Later described and illustrated in Kner (1855: 136, pl. 6, fig. 10) on 17 specimens with locality given as: "Mato-grosso und Rio Guaporé."

Maximum length: 11 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru

Remarks and references: Species to be transferred to new genus (Sabaj, in prep.).

Common names: Bagre hueso (Ecuador), Pirillo (Peru)

***Oxydoras eigenmanni* Boulenger, 1895**

Oxydoras eigenmanni Boulenger, 1895: 524. Type locality: Descalvados, Matto Grosso. Syntypes: BMNH 1895.5.17.50-52 (3); BMNH 1895.5.17.53 (1).

Maximum length: 9.7 cm SL

Distribution: South America: Amazon and upper Paraguay River basins.

Countries: Argentina, Bolivia, Brazil, Paraguay, Peru

Remarks and references: Species to be transferred to new genus (Sabaj, in prep.).

Common names: Armado (Argentina)

ACANTHODORAS

Cataphractus Edwards in Catesby, 1771: appendix. Type species: *Silurus cataphractus* Linnaeus, 1758. Type by absolute tautonymy. Gender: masculine. Predates *Acanthodoras* Bleeker, 1862, but the latter has not been treated as valid since before 1899 and *Acanthodoras* is in wide use. Therefore, *Cataphractus* is considered a nomen oblitum.

Acanthodoras Bleeker, 1862: 5. Type species: *Silurus cataphractus* Linnaeus, 1758. Type by original designation. Gender: masculine. Nomen protectum.

***Acanthodoras cataphractus* (Linnaeus, 1758)**

Silurus cataphractus Linnaeus, 1758: 307. Type locality: America. Syntype: BMNH 1853.11.12.193 (1). Type figured in Gronow (1754: pl. 3, figs. 3 & 4).

Cataphractus Americanus Bloch & Schneider, 1801: 107, pl. 28. Type locality: America, pedalis. Syntype: BMNH 1853.11.12.193 (1). Syntype figured in Gronow (1754: pl. 3, figs. 3 & 4).

Cataphractus americanus La Cépède, 1803: 124. Type locality: les deux Indes...l'américain...particulièrement dans la Caroline. Syntype: BMNH 1853.11.12.193 (1). Type locality evidently misinterpreted by La Cépède.

Doras Blochii Valenciennes in Cuvier & Valenciennes, 1840: 277 [207 of Strasbourg deluxe ed.]. Type locality: Not stated. Syntype: BMNH 1853.11.12.193 (1). Syntype figured in (Gronow 1754: pl. 3, figs. 3 & 4).

Callichthys asper Gronow in Gray, 1854: 157. Type locality: Americes Meridionalis rivulis. Syntype: BMNH 1853.11.12.193 (1). Syntype figured in Gronow (1754: pl. 3, figs. 3 & 4).

Maximum length: 11.5 cm SL

Distribution: South America: Amazon River basin; coastal drainages of French Guiana, Guyana and Suriname.

Countries: Bolivia, Brazil, Colombia, French Guiana, Guyana, Peru, Suriname

Common names: Bacu (Brazil), Bagre hueso (Ecuador), Baiacu (Brazil), Daqueiro (Brazil), Kronkron dilé (French Guiana), Silure cataphracte (French Guiana), Spiny catfish (USA), Talking catfish (USA)

***Acanthodoras depressus* (Steindachner, 1881)**

Doras (Rhinodoras) depressus Steindachner, 1881: 103, pl. 1 (fig. 3). Type locality: Ausstände (Lago Alexo) am mittleren Laufe des Amazonen-Stromes. Holotype: NMW 46870.

Maximum length: 8.1 cm SL

Distribution: South America: Amazon and Negro River basins.

Countries: Brazil

***Acanthodoras spinosissimus* (Eigenmann & Eigenmann, 1888)**

Doras brunnescens Jardine in Schomburgk, 1841: 163. Type locality: Upper Essequibo [British Guiana]. No types known. Predates *Doras spinosissimus* Eigenmann & Eigenmann, but not treated as valid since before 1899 and *D. spinosissimus* is in wide use. Therefore, *Doras brunnescens* considered a nomen oblitum.

Doras spinosissimus Eigenmann & Eigenmann, 1888: 161. Type locality: Coary [Brazil]. Holotype: MCZ 7222. Nomen protectum.

Maximum length: 13.7 cm SL

Distribution: South America: Amazon and Essequibo River basins.

Countries: Brazil, Colombia, Guyana, Peru

Common names: Bagre hueso (Ecuador), Kiru-kiru (Guyana), Macusi (Guyana), Sierra espinosa (Venezuela), Spiny catfish (USA), Talking catfish (USA)

Species inquirendae

Doras castaneo-ventris Jardine in Schomburgk, 1841: 161, pl. 3. Type locality: river Pasawiri. No types known.

Doras polygramma Kner, 1853: 145, fig. 1 on unnumbered plate. Type locality: not stated. Syntypes: NMW 46844 (2). Name made available on an illustration of a swimbladder. Treated in Kner (1855: 126-127) as *Doras cataphractus*, based on specimens from "Rio Guaporé and Barra do Rio negro".

AGAMYXIS

Agamyxis Cope, 1878: 679. Type species: *Doras pectinifrons* Cope, 1870. Type by monotypy. Gender: feminine.

***Agamyxis albomaculatus* (Peters, 1877)**

Doras albomaculatus Peters, 1877: 470. Type locality: Calabozo [Venezuela]. Syntypes (2): ZMB 10043 (1).

Maximum length: 15 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Common names: Sierra pintada (Venezuela), Spotted raphael catfish (USA)

***Agamyxis pectinifrons* (Cope, 1870)**

Doras pectinifrons Cope, 1870: 568. Type locality: Pebas, Ecuador [now Peru]. Holotype: ANSP 8346.

Doras (Agamyxis) flavopictus Steindachner, 1908a: 84. Type

locality: Iquitos [Amazonasgebiet]. Syntypes: NMW 46598-99 (2).
 Maximum length: 15 cm SL
 Distribution: South America: Amazon River basin.
 Countries: Bolivia, Brazil, Colombia, Peru
 Common names: Bagre (Peru), Bagre hueso (Ecuador), Spotted raphael catfish (USA)

AMBLYDORAS

Amblydoras Bleeker, 1862: 5. Type species: *Doras affinis* Kner, 1855. Type by original designation. Gender: masculine.
Zathorax Cope, 1871a: 112. Type species: *Zathorax monitor* Cope, 1872. Type by subsequent monotypy. Gender: masculine. Appeared first with no included species, subsequently described with one species (Cope 1872: 271).

***Amblydoras affinis* (Kner, 1855)**

Doras affinis Kner, 1855: 121, pl. 2 (fig. 1). Type locality: Rio branco und Guaporé. Syntypes (11): NMW 46822-23 (4); NMW 46826 (3); RMNH 2973 (1).
 Maximum length: 10 cm SL
 Distribution: South America: Guaporé, Branco and Essequibo River basins.
 Countries: Bolivia, Brazil, Guyana
 Remarks and references: Syntypes include one specimen (RMNH 2973) designated the holotype of *Amblydoras truncatus* Bleeker 1863; syntypes from Guaporé River (NMW 46823, 46826) also may be referable to this species if distinct.
 Common names: Saurauwari (Guyana), Yarauira (Guyana)

***Amblydoras bolivarensis* (Fernández-Yépez, 1968)**

Hildadoras bolivarensis Fernández-Yépez, 1968: 43, fig. 18. Type locality: Qda. El Pílon, al este del Río Parguaza, afluente (margen derecho) del Río Orinoco, frente a Pararuma [Estado Bolívar, Venezuela]. Holotype: FMNH 84067 [ex AFY 66121].
 Maximum length: 10.2 cm SL
 Distribution: South America: Orinoco River basin.
 Countries: Venezuela
 Common names: Sierra puyona (Venezuela)

***Amblydoras gonzalezi* (Fernández-Yépez, 1968)**

Zathorax gonzalezi Fernández-Yépez, 1968: 70, fig. 36. Type locality: Laguna "Punta Vista", a orillas del Río Caroní (margen izquierda) en el Parque Cachamay [Venezuela]. Holotype: MBUCV V-3940 [ex AFY 66119].
 Maximum length: 9.8 cm SL
 Distribution: South America: Orinoco River basin and Casiquiare Canal.
 Countries: Colombia, Venezuela
 Common names: Sierra del Caroní (Venezuela)

***Amblydoras monitor* (Cope, 1872)**

Zathorax monitor Cope, 1872: 272, pl. 4 (figs. 1a-1c). Type locality: [small streams tributary to the Ambyiacu, as well as ... the river itself ... which empties into the Amazon near Pebas, in Eastern Ecuador, some distance east of the Napo]. Lectotype: ANSP 8296, designated and figured in Eigenmann (1925: 363, pl. 16, fig. 3).
 Maximum length: 9 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Brazil, Colombia, Peru
 Common names: Bagre (Peru)

***Amblydoras nauticus* (Cope, 1874)**

Zathorax nauticus Cope, 1874: 133. Type locality: Nauta [Upper Amazon]. Syntypes: ANSP 21390-95 (6).
 Maximum length: 7.5 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Peru

Remarks and references: Four of six syntypes (excluding largest) are juvenile *Amblydoras monitor* Cope.
 Common names: Bagre (Peru)

Species inquirenda

Amblydoras truncatus Bleeker, 1863: 18. Type locality: flumine Guapore. Holotype: RMNH 2973. Holotype is also a syntype of *Doras affinis* Kner.

ANADORAS

Anadoras Eigenmann, 1925: 327. Type species: *Doras grypus* Cope, 1872. Type by original designation. Gender: masculine.

***Anadoras grypus* (Cope, 1872)**

Doras grypus Cope, 1872: 270, pl. 15 (figs. 1, 1a). Type locality: [small streams tributary to the Ambyiacu, as well as ... the river itself ... which empties into the Amazon near Pebas, in Eastern Ecuador, some distance east of the Napo]. Syntypes: ANSP 8345 (1), 16460 (1).
 Maximum length: 11.4 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Ecuador, Peru
 Common names: Bagre (Peru), Bagre hueso (Ecuador)

***Anadoras regani* (Steindachner, 1908)**

Doras regani Steindachner, 1908b: 163. Type locality: Fischmerke von Pará [Amazonasgebiete innerhalb Brasiliens]. Syntypes: NMW 46889 (4).
 Maximum length: 11 cm SL
 Distribution: South America: Amazon and Oyapock River basins.
 Countries: Brazil, French Guiana
 Remarks and references: Specimen from Oyapock River figured as *Amblydoras hancockii* in Le Bail et al. (2000: 41) appears to be *A. regani*.
 Common names: quiri-quiri (Brazil)

***Anadoras weddellii* (Castelnau, 1855)**

Doras weddellii Castelnau, 1855: 48, pl. 17 (fig. 1). Type locality: petites flaques d'eau de la province des Chiquitos. Holotype: MNHN 4155.
 Maximum length: 12 cm TL
 Distribution: South America: Upper Mamoré, Paraguay and Pilcomayo River basins.
 Countries: Argentina, Bolivia, Brazil, Paraguay
 Common names: Armado (Argentina), Carataí (Argentina, Brazil), Iagivá (Paraguay), Uarioroch (Brazil), Yagivá (Argentina)

ANDUZEDORAS

Anduzedoras Fernández-Yépez, 1968: 28. Type species: *Anduzedoras arleoi* Fernández-Yépez, 1968. Type by original designation. Gender: masculine.

***Anduzedoras oxyrhynchus* (Valenciennes, 1821)**

Doras Oxyrhynchus Valenciennes in Humboldt & Valenciennes, 1821: 184. Type locality: Probablement ... originaires d'Amérique. Holotype: MNHN 4190.
Doras (Corydoras) ophthalmus Kner, 1853: 146, fig. 3 on unnumbered plate. Type locality: not stated. Syntypes: NMW 45418-20 (4). Name made available on an illustration of a swimbladder. Species illustrated and described in more detail in Kner (1855: 147, pl. 5, fig. 8), as *D. (Oxydoras) lipophthalmus*, based on four specimens, with locality given as: "Rio negro."
Doras (Oxydoras) lipophthalmus Kner, 1855: 147, pl. 5 (fig. 8). Type locality: Rio negro [Brazil]. Syntypes: NMW 45418-20 (4).
Opsodoras steindachneri Eigenmann, 1925: 354. Type locality: Mouth of Rio Negro [Brazil]. Holotype: NMW 46379.
Anduzedoras arleoi Fernández-Yépez, 1968: 29, fig. 9. Type locality: Río Autana, al este de Puerto Ayacucho, terr. Fed. Amazonas [Venezuela]. Holotype: FMNH 84068 [ex AFY 66,122].

Maximum length: 32.3 cm SL

Distribution: South America: Negro and upper Orinoco River basins.

Countries: Brazil, Venezuela

Common names: Sierra ojona (Venezuela)

ASTRODORAS

Astrodoras Bleeker, 1862: 5. Type species: *Doras asterifrons* Kner, 1853. Type by original designation. Gender: masculine.

Astrodoras asterifrons (Kner, 1853)

Doras asterifrons Kner, 1853: 146, fig. 4 on unnumbered plate. Type locality: not stated. Syntypes (12): NMW 46412 (2), 46611 (6), 58211 (3), RMNH 2972 (1). Name made available on an illustration of a swimbladder. Species later described and illustrated in Kner (1855: 123, pl. 2, fig. 2), with the locality given as: "Barra do Rio negro und R. Guaporé."

Maximum length: 8 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil

CENTROCHIR

Centrochir Spix & Agassiz, 1829: 14. Type species: *Doras crocodili* Humboldt, 1821. Type by monotypy. Gender: feminine.

Centrochir crocodili (Humboldt, 1821)

Doras Crocodili Humboldt in Humboldt & Valenciennes, 1821: 181, pl. 48 (fig. 2). Type locality: Rio Magdalena...Nouvelle-Grenade...entre Pinto et Mompoix, par les 9° et 9°1/2 de latitude...[&] près du confluent du Rio Cauca [Colombia]. No types known.

Doras longispinis Steindachner, 1878: 89. Type locality: [Magdalena-Stromes]. Syntypes: NMW 46624 (4). Species illustrated and described in more detail in Steindachner (1879: 39, pls. 4 (fig. 2), 5 (fig. 1)).

Maximum length: 21 cm SL

Distribution: South America: Magdalena River basin.

Countries: Colombia

Common names: Cachegua (Colombia), Matacaimán (Colombia)

CENTRODORAS

Centrodoras Eigenmann, 1925: 309. Type species: *Doras brachiatus* Cope, 1872. Type by original designation. Gender: masculine.

Centrodoras brachiatus (Cope, 1872)

Doras brachiatus Cope, 1872: 270. Type locality: Between the mouth of the Rio Negro and the Huallaga, in the Marañon. Holotype: ANSP 8342. Appeared first as name only in Cope (1871b: 55).

Rhinodoras amazonum Steindachner, 1875: 141, pl. 2. Type locality: Amazonenstrom bei Teffé [brasilianische]. Holotype: ?NMW.

Maximum length: 41 cm TL

Distribution: South America: Amazon River basin (except Negro River).

Countries: Brazil, Colombia, Peru

Common names: Bagre (Peru)

Centrodoras hasemani (Steindachner, 1915)

Oxydoras (Rhinodoras) amazonum hasemani Steindachner, 1915a: 54. Type locality: Mündung des Rio Negro. Holotype: ?NMW. Name available from offprint that pre-dates the release of main work (Steindachner, 1917).

Maximum length: 21 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

DORAOPS

Doraops Schultz, 1944: 270. Type species: *Doraops zuloagai* Schultz, 1944. Type by original designation. Gender: masculine.

Doraops zuloagai Schultz, 1944

Doraops zuloagai Schultz, 1944: 271, pl. 7 (fig. A). Type locality: Río de Los Pajaros, 3 km above Lago Maracaibo [southwestern end of lake, Venezuela]. Holotype: USNM 121015.

Maximum length: 50 cm SL

Distribution: South America: Lake Maracaibo basin including lake itself (along southwest shore) and Apon, Santa Ana, Catatumbo, Escalante and de Los Pajaros River basins.

Countries: Colombia, Venezuela

Common names: Mariana (Colombia), Sierra malarma (Venezuela), Sierra mariano (Venezuela)

DORAS

Doras La Cèpède, 1803: 116. Type species: *Silurus carinatus* Linnaeus, 1766. Type by subsequent designation by Bleeker (1862: 5). Gender: masculine.

Mormyrostoma Miranda Ribeiro, 1911: 192. Type species: *Silurus carinatus* Linnaeus, 1766. Type by original designation. Gender: neuter.

Doras carinatus (Linnaeus, 1766)

Silurus carinatus Linnaeus, 1766: 504. Type locality: Surinami. No types known.

Maximum length: 30 cm SL

Distribution: South America: Essequibo River basin and other coastal drainages east to mouth of Amazon River, possibly in lower Amazon and lower Orinoco River basins.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Remarks and references: Forms inhabiting lower Amazon and lower Orinoco are tentatively identified as *D. carinatus* and may represent one or more undescribed species.

Common names: Agunosu (French Guiana), Akuwi (French Guiana), Botinho (Brazil), Bukuturuma (French Guiana), Gonibita (French Guiana), Mandi-serra (Brazil), Poson agouti (French Guiana), Wakui (French Guiana)

Doras micropoeus (Eigenmann, 1912)

Hemidoras micropoeus Eigenmann, 1912: 195. Type locality: Wismar [Demerara, British Guiana]. Holotype: FMNH [ex CM 1636] (missing).

Maximum length: 35 cm SL

Distribution: South America: Essequibo, Demerara and Corantijn River basins, possibly other coastal drainages east to mouth of Amazon River.

Countries: French Guiana (?), Guyana, Suriname

Remarks and references: Le Bail et al. (2000) tentatively identified *Doras* cf. *micropoeus* from French Guiana.

Common names: Agunosu (French Guiana), Akuwi (French Guiana), Botinho (Brazil), Bukuturuma (French Guiana), Gonibita (French Guiana), Mandi-serra (Brazil), Poson agouti (French Guiana), Wakui (French Guiana)

Species inquirenda

Doras insculptus Miranda Ribeiro, 1912: 22. Type locality: Manáos. Lectotype: MNRJ 656A, designated by Miranda Ribeiro (1953: 398). [Species inquirenda and Incertae Sedis. Generic placement is likely *Anadoras* or *Amblydoras*].

FRANCISCODORAS

Franciscodoras Eigenmann, 1925: 317. Type species: *Doras marmoratus* Reinhardt, 1874. Type by original designation. Gender: masculine.

Franciscodoras marmoratus (Reinhardt, 1874)

Doras marmoratus Reinhardt in Lütken, 1874: 30. Type locality: flumine Rio das Velhas [in provincia Minas-geraës circa oppidulum Lagoa Santa, Brasiliae centralis]. Holotype: ZMUC 87. Also described and illustrated in Lütken (1875: 146 (and p. III of summary), pl. 1 (fig. 1)).

Maximum length: 36 cm TL

Distribution: South America: São Francisco River basin.

Countries: Brazil

Common names: Bozó (Brazil), Caboje (Brazil), Caborje (Brazil), Serrudo (Brazil), Vasconcellos (Brazil)

HASSAR

Hassar Eigenmann & Eigenmann, 1888: 158. Type species: *Doras orestis* Steindachner, 1875. Type by subsequent designation by Eigenmann (1910: 394). Gender: masculine.

Hassar affinis (Steindachner, 1881)

Oxydoras affinis Steindachner, 1881: 107, pl. 1 (fig. 1). Type locality: Rio Puty. Holotype: NMW 45394. Originally as *Oxydoras affinis*? (an *Oxyd. Orestes* var.?).

Hassar woodi Fowler, 1941: 139, fig. 36. Type locality: Rio Parnahyba, Therezina, Piahy [eastern Brazil]. Holotype: ANSP 69392.

Hassar iheringi Fowler, 1941: 140, fig. 39. Type locality: Rio Parnahyba, Therezina, Piahy [eastern Brazil]. Holotype: ANSP 69393.

Maximum length: 20 cm SL

Distribution: South America: Parnaíba River basin.

Countries: Brazil

Remarks and references: Questionable records from Itapicuru River and Fortaleza, Brazil (Steindachner 1917: 73, Fowler 1941: 142).

Common names: Bagre (Brazil), Cabeça de burro (Brazil), Mandí bicudo (Brazil), Mandí cachorro (Brazil), Mandí pirá (Brazil)

Hassar orestis (Steindachner, 1875)

Oxydoras Orestis Steindachner, 1875: 138, pl. 1. Type locality: Rio Xingu (bei den Wasserfällen) und Rio Iça [brasilianische]. Syntypes: NMW 45427-30 (7), NMW 78651 (1). Steindachner consistently spelled the name *orestis* in 1875, but later changed the spelling to *orestes*, which had been widely adopted.

Hemidoras notospilus Eigenmann, 1912: 196, pl. 19 (fig. 2). Type locality: Crab Falls [Essequibo, British Guiana]. Holotype: FMNH 53184 [ex CM 1623] (missing).

?*Hassar ucayalensis* Fowler, 1940: 228, fig. 16. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68647.

Maximum length: 20.6 cm SL

Distribution: South America: Amazon, Orinoco and Essequibo River basins.

Countries: Brazil, Colombia, Ecuador, Guyana, Peru, Venezuela

Remarks and references: Occurrence in Colombia and Peru tentative, based on questionable synonym *Hassar ucayalensis* Fowler. Common names: Bagre hueso (Ecuador), Botinho (Brazil), Chanchito (Peru), Sierra barbona (Venezuela)

Hassar wilderi Kindle, 1895

Hassar wilderi Kindle, 1895: 251. Type locality: Trocera, on Tocantins, Brazil. Lectotype: CAS 60711 [ex IU 5120 in part], designated and figured in Eigenmann (1925: 364, pl. 22, fig. 2); lectotype designation in Myers & Weitzman (1956: 4) not valid.

Maximum length: 25 cm TL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Common names: Botinho (Brazil)

HEMIDORAS

Hemidoras Bleeker, 1858: 53. Type species: *Doras (Oxydoras) stenopeltis* Kner, 1855. Type by monotypy. Gender: masculine.

Hemidoras morrisoni Eigenmann, 1925

Hemidoras morrisoni Eigenmann, 1925: 347, pl. 27 (fig. 3). Type locality: Iquitos. Holotype: CAS 52130 [ex IU 15962, in part].

Maximum length: 14 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil, Colombia, Ecuador, Peru

Remarks and references: Related to and possibly a junior synonym of *Opsodoras boulengeri* (Steindachner).

Common names: Bagre hueso (Ecuador), Rego rego (Peru)

Hemidoras stenopeltis (Kner, 1855)

Doras (Oxydoras) stenopeltis Kner, 1855: 142, pl. 4 (fig. 7). Type locality: Rio negro. Syntypes: NMW 45443 (2).

Maximum length: 12.5 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Peru

Common names: Rego rego (Peru)

HYPODORAS

Hypodoras Eigenmann, 1925: 329. Type species: *Hypodoras forficulatus* Eigenmann, 1925. Type by original designation. Gender: masculine.

Hypodoras forficulatus Eigenmann, 1925

Hypodoras forficulatus Eigenmann, 1925: 330, pl. 25 (fig. 3). Type locality: Iquitos. Holotype: CAS 37246 [ex IU 15876].

Maximum length: 10.4 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Common names: Pirillo (Peru)

KALYPTODORAS

Kalyptodoras Higuchi, Britski & Garavello, 1990: 220. Type species: *Kalyptodoras bahiensis* Higuchi, Britski & Garavello, 1990. Type by original designation. Gender: masculine.

Kalyptodoras bahiensis Higuchi, Britski & Garavello, 1990

Kalyptodoras bahiensis Higuchi, Britski & Garavello, 1990: 222, fig. 1. Type locality: Brazil, Bahia State, Rio Paraguaçu, lower course, downstream from Bananeiras dam, portion just before construction site of Pedra do Cavalo dam (12°32'05"S, 38°29'30"W to 12°35'50"S, 39°05'15"W). Holotype: MZUSP 38565.

Maximum length: 24.5 cm SL

Distribution: South America: Paraguaçu River River in Bahia State.

Countries: Brazil

Common names: Peracuca (Brazil)

LEPTODORAS

Leptodoras Boulenger, 1898a: 477. Type species: *Oxydoras acipenserinus* Günther, 1868a. Type by subsequent designation by Eigenmann (1910: 395). Gender: masculine.

Leptodoras acipenserinus (Günther, 1868)

Oxydoras acipenserinus Günther, 1868a: 475. Type locality: Xeberos [Upper Amazons]. Holotype: BMNH 1867.6.13.32. Species described in more detail and illustrated in Günther (1868b: 230, pl. 20).

Maximum length: 20.3 cm SL

Distribution: South America: Upper Amazon and Orinoco River basins.

Countries: Brazil, Colombia, Ecuador, Peru, Venezuela

Remarks and references: Böhlke (1970) briefly discussed taxonomy and relationships. Specimens from Venezuela identified as *Opsodoras limelli* (Eigenmann) by Fernández-Yépez (1968: 49-

50) appear to be closer to *L. acipenserinus*. Specimens from Orinoco and Negro River basins are tentatively identified as *Leptodoras acipenserinus* and may warrant recognition as one or more distinct species upon thorough revision.

Common names: Bagre hueso (Ecuador), Mandi-serra (Brazil), Pirillo (Peru), Sierra barbata (Venezuela)

***Leptodoras copei* (Fernández-Yépez, 1968)**

Anduzedoras copei Fernández-Yépez, 1968: 31, fig. 10. Type locality: una laguna al lado del Río Capanaparo [Venezuela].

Holotype: FMNH 84069 [ex AFY 51311].

Maximum length: 14.2 cm SL

Distribution: South America: Capanaparo, upper Orinoco and Negro River basins.

Countries: Brazil, Venezuela

Common names: Botinho (Brazil), Sierra del capanaparo (Venezuela)

***Leptodoras hasemani* (Steindachner, 1915)**

Hemidoras hasemani Steindachner, 1915b: 218. Type locality: [Amazonas, Südamerikas]. Syntypes: NMW 46381-85 (15), NMW 46470 (3). Species later illustrated and described in Steindachner (1917: 75, pl. 10, figs. 4-7), with locality as: "des Rio branco bei Boa Vista und Serra grande und an der Mündung des Rio negro."

Maximum length: 16.7 cm SL

Distribution: South America: Branco, Orinoco and Essequibo River basins.

Countries: Brazil, Guyana, Venezuela

Remarks and references: One syntype (NMW 46384) is *Hemidoras stenopeltis*.

***Leptodoras juruensis* Boulenger, 1898**

Leptodoras juruensis Boulenger, 1898a: 478. Type locality: Juruá River, Brazil. Holotype: BMNH 1898.10.11.25.

Maximum length: 28.8 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Peru

Remarks and references: Böhlke (1970) briefly discussed taxonomy and relationships.

***Leptodoras linnelli* Eigenmann, 1912**

Leptodoras linnelli Eigenmann, 1912: 191, pl. 18 (fig. 1). Type locality: Tumatumari [lower Potaro, British Guiana]. Holotype: FMNH 53561 [ex CM 1626].

Maximum length: 23 cm SL

Distribution: South America: Upper Orinoco (Mavaca River), Essequibo and Demerara River basins and northern (left bank) tributaries to lower Amazon.

Countries: Brazil, Guyana, Venezuela

Remarks and references: Böhlke (1970) briefly discussed taxonomy and relationships.

Common names: Mandi-serra (Brazil)

***Leptodoras myersi* Böhlke, 1970**

Leptodoras myersi Böhlke, 1970: 54, fig. 1. Type locality: Peru, vicinity of Iquitos, Rio Amazonas (Marañon) between Isla Iquitos and Isla Lapuna, near Isla Lapuna shore. Holotype: ANSP 112318.

Maximum length: 7.7 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Remarks and references: Böhlke (1970) briefly discussed taxonomy and relationships.

***Leptodoras praelongus* (Myers & Weitzman, 1956)**

Hassar praelongus Myers & Weitzman, 1956: 2, fig. 1. Type locality: São Gabriel Rapids of the Rio Negro,

Amazonas, Brazil. Holotype: SU 48679.

Maximum length: 17.3 cm SL

Distribution: South America: Negro and Orinoco River basins.

Countries: Brazil, Venezuela

Common names: Botinho (Brazil)

LITHODORAS

Lithodoras Bleeker, 1862: 5. Type species: *Doras lithogaster* Kner, 1855. Type by original designation. Gender: masculine.

***Lithodoras dorsalis* (Valenciennes, 1840)**

Doras dorsalis Valenciennes in Cuvier & Valenciennes, 1840: 284 [211 in Strasbourg deluxe ed.]. Type locality: not stated. Holotype: MNHN 4156.

Doras papilionatus De Filippi, 1853: 167. Type locality: in flumine Amazonum. Holotype: MZUT 229.

Doras lithogaster Kner, 1855: 132. Type locality: Forte do Rio branco. Syntypes (2): ?NMW. Name credited to Heckel manuscript; however, availability of name appears attributable solely to Kner.

Megalodoras paucisquamatus Van der Stigchel, 1946: 71, fig. 1. Type locality: Brazil. Holotype: RMNH 15480.

Maximum length: 100 cm TL

Distribution: South America: Amazon River basin and estuary near Cayenne, French Guiana.

Countries: Brazil, French Guiana

Common names: Bacu pedra (Brazil), Cascudo (Brazil), Doras à écussons dorsaux (French Guiana), Pacú (Brazil), Rock-bacu (USA), Vacú (Brazil)

MEGALODORAS

Megalodoras Eigenmann, 1925: 306. Type species: *Megalodoras irwini* Eigenmann, 1925. Type by original designation. Gender: masculine.

Hoplodoras Eigenmann, 1925: 310. Type species: *Doras uranoscopus* Eigenmann & Eigenmann, 1888. Type by original designation. Gender: masculine. Spelled *Haplodoras* on p. 311, *Hoplodoras* on fig. 12c, and *Hoplodoras* in key and main account. First reviser apparently Eschmeyer & Bailey, in Eschmeyer (1990).

Deltadoras Fernández-Yépez, 1968: 36. Type species: *Deltadoras guayoensis* Fernández-Yépez, 1968. Type by original designation. Gender: masculine.

***Megalodoras guayoensis* (Fernández-Yépez, 1968)**

Deltadoras guayoensis Fernández-Yépez, 1968: 37, fig. 14. Type locality: Caño de Guayo, Territorio Delta Amacuro, Venezuela. Holotype: MBUCV V-15211 [ex AFY 54818].

Hoplodoras ramirezi Fernández-Yépez, 1968: 47, fig. 19. Type locality: bajo Orinoco [Venezuela]. Holotype: AFY 66117 (missing).

Maximum length: 53 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Common names: Sierra conchua (Venezuela), Sierra gruñona (Venezuela)

***Megalodoras uranoscopus* (Eigenmann & Eigenmann, 1888)**

Doras uranoscopus Eigenmann & Eigenmann, 1888: 159. Type locality: Lake Hyanuary [Brazil]. Holotype: MCZ 7235.

?*Oxydoras (Rhinodoras) huberi* Steindachner, 1911: 324. Type locality: Rio Tocantins, bei Cameté [Amazonasgebiete]. Holotype: NMW 12615.

Doras libertatis Miranda Ribeiro, 1912: 20. Type locality: Manáos. Holotype: MNRJ 718 (missing). Holotype figured in Eigenmann (1925: Pl. 7).

Megalodoras irwini Eigenmann, 1925: 308, pl. 25 (fig. 2). Type locality: Iquitos. Holotype: CAS 80243 [ex IU 15427 in part]. Species account appears twice in paper; the first (p. 307) based on a single specimen (CAS 20735) intended as the holotype of

another new species description, which was recanted (except for word "holotype", which is considered here a lapsus calami) in the species account.

Maximum length: 53 cm SL

Distribution: South America: Amazon, Tocantins and Essequibo River basins.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru

Remarks and references: Species-level distinctiveness of Tocantins and Amazonas *Megalodoras* not investigated.

Common names: Bacu (Brazil), Bagre hueso (Ecuador), Key-way-mamma (Guyana), Rebeca (Brazil), Rego rego (Peru)

NEMADORAS

Nemadoras Eigenmann, 1925: 359. Type species: *Oxydoras elongatus* Boulenger, 1898. Type by original designation. Gender: masculine.

Nemadoras elongatus (Boulenger, 1898)

Oxydoras elongatus Boulenger, 1898b: 424, pl. 40 (fig. 4). Type locality: Rio Jurua, an affluent of the Amazons, Brazil. Holotype: BMNH 1971.4.13.1.

Opsodoras parallelus Eigenmann, 1925: 350, pl. 19 (fig. 3). Type locality: Iquitos. Holotype: CAS 60229 [ex IU 15964].

Maximum length: 12.7 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Peru

Common names: Pirillo (Peru)

Nemadoras hemipeltis (Eigenmann, 1925)

Opsodoras hemipeltis Eigenmann, 1925: 349, pl. 19 (fig. 2). Type locality: Rio Ucayali at Contamana. Holotype: CAS 60236 [ex IU 15879].

Maximum length: 14.4 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Peru

Common names: Pirillo (Peru)

Nemadoras humeralis (Kner, 1855)

Doras humeralis Kner, 1855: 140, pl. 4 (fig. 6). Type locality: Barra do Rio negro. Syntypes: NMW 45410 (2).

Oxydoras bachi Boulenger, 1898b: 423, pl. 40 (fig. 3). Type locality: Rio Jurua, an affluent of the Amazons, Brazil. Holotype: BMNH 1897.12.1.46.

Maximum length: 13 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Colombia, Peru

Common names: Pirillo (Peru)

Nemadoras leporhinus (Eigenmann, 1912)

Hemidoras leporhinus Eigenmann, 1912: 195, pl. 19 (fig. 1). Type locality: Tumatumari [lower Potaro, British Guiana]. Holotype: FMNH 53185 [ex CM 1624].

Maximum length: 8.1 cm SL

Distribution: South America: Orinoco, Branco and Essequibo River basins.

Countries: Brazil, Guyana, Venezuela

Remarks and references: Steindachner (1917: 72) appears to have correctly identified (in part) specimens of *N. leporhinus* from Branco River, Brazil.

Common names: Sierra llanera (Venezuela)

Nemadoras trimaculatus (Boulenger, 1898)

Oxydoras trimaculatus Boulenger, 1898b: 422, pl. 40 (fig. 1). Type locality: Rio Jurua, an affluent of the Amazons, Brazil. Syntypes: BMNH 1897.12.1.41-43 (3).

Leptodoras trimaculatus Fowler, 1914: 264, fig. 14. Type locality: Rupununi River, British Guiana [approximately ... North Latitude 2° to 3° and West Longitude 50°20']. Holotype: ANSP

39342. Preoccupied in *Opsodoras* by *Opsodoras trimaculatus* (Boulenger, 1898), replaced by *Opsodoras ogilviei* Fowler, 1958. *Opsodoras ogilviei* Fowler, 1958: 13. Type locality: Rupununi River, British Guiana [approximately ... North Latitude 2° to 3°, and West Longitude 50°20']. Holotype: ANSP 39342. Replacement for *Leptodoras trimaculatus* Fowler, 1914, preoccupied in *Opsodoras* by *Opsodoras trimaculatus* (Boulenger, 1898).

Maximum length: 10.8 cm SL

Distribution: South America: Amazon, Orinoco and Essequibo River basins.

Countries: Brazil, Colombia, Ecuador, Guyana, Peru, Venezuela

Common names: Bagre hueso (Ecuador)

OPSODORAS

Opsodoras Eigenmann, 1925: 348. Type species: *Opsodoras orthacanthus* Eigenmann, 1925. Type by original designation. Gender: masculine.

Opsodoras boulengeri (Steindachner, 1915)

Hemidoras boulengeri Steindachner, 1915b: 218. Type locality: Mündung des Rio negro [Südamerikas]. Holotype: NMW (not found in 2000). Species illustrated and described in more detail as *Hemidoras (Leptodoras) boulengeri* in Steindachner (1917: 77, pl. 8, figs. 1-3) and separate preprint Steindachner (1915a).

Maximum length: 14.2 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil

Remarks and references: Related to and possibly a senior synonym of *Hemidoras morrisi* Eigenmann.

Opsodoras morei (Steindachner, 1881)

Oxydoras Morei Steindachner, 1881: 106, pl. 1 (fig. 2). Type locality: Rio Negro. Holotype: NMW 45433.

Maximum length: 10.3 cm SL

Distribution: South America: Negro River basin.

Countries: Brazil

Remarks and references: Related to *Opsodoras boulengeri* (Steindachner) and *Hemidoras morrisi* Eigenmann.

Common names: Pirillo (Peru)

Opsodoras stuebelii (Steindachner, 1882)

Oxydoras Stuebelii Steindachner, 1882: 175. Type locality: Aus dem Huallaga. Syntypes (3): NMW (not found in 2000). Species illustrated and described in more detail in Steindachner (1883: 5, pl. 3, figs. 1-1b).

Opsodoras orthacanthus Eigenmann, 1925: 351, pl. 22 (fig. 3). Type locality: Iquitos. Holotype: CAS 60231 [ex IU 15884].

Maximum length: 11 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru

Remarks and references: Related or possibly conspecific form present in Orinoco basin.

Common names: Bagre hueso (Ecuador), Pirillo (Peru), Shitari (Brazil)

Opsodoras ternetzi Eigenmann, 1925

Opsodoras ternetzi Eigenmann, 1925: 353. Type locality: Tapajos at Santarem. Holotype: CAS 60230 [ex IU 16173].

Maximum length: 12.2 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Peru

Remarks and references: Related form in Negro River basin; also related or possibly conspecific form in Orinoco basin.

ORINOCODORAS

Orinocodoras Myers, 1927: 124. Type species: *Orinocodoras eigenmanni* Myers, 1927. Type by original designation. Gender: masculine.

***Orinocodoras eigenmanni* Myers, 1927**

Orinocodoras eigenmanni Myers, 1927: 124. Type locality: Venezuela: Caño de Quiribana near Caicara. Holotype: SU 58747 [ex IU 17689].

Maximum length: 20 cm SL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Common names: Sierra paeña (Venezuela)

OXYDORAS

Oxydoras Kner, 1855: 115. Type species: *Doras niger* Valenciennes, 1821. Type by subsequent designation by Eigenmann & Eigenmann (1890: 246). Gender: masculine. Designation of *Oxydoras kneri* Bleeker, 1862 [= *Doras (Oxydoras) niger* of Kner 1855] in Bleeker (1862: 5) considered invalid because the name *O. kneri* was not listed in Kner (1855).

Pseudodoras Bleeker, 1858: 53. Type species: *Doras niger* Valenciennes, 1821. Type by subsequent designation by Jordan (1919: 278). Gender: masculine.

Hildadoras Fernández-Yépez, 1968: 41. Type species: *Hildadoras orinocensis* Fernández-Yépez, 1968. Type by original designation. Gender: masculine.

***Oxydoras kneri* Bleeker, 1862**

Oxydoras kneri Bleeker, 1862: 5. Type locality: not stated. Holotype: ?NMW (not found in 2000). Based on *Doras niger* of Kner (1855), from Cujaba.

Maximum length: 70 cm TL

Distribution: South America: Paraná River basin.

Countries: Argentina, Bolivia, Brazil, Paraguay, Uruguay

Common names: Armado (Argentina), Armado blanco (Argentina), Armado chanco (Argentina, Uruguay), Armao (Argentina), Armao chanco (Argentina), Focinho de porco (Brazil), Itagua-pochih (Paraguay), Ytaguá pochic (Argentina), Ytaguá-poschú (Argentina)

***Oxydoras niger* (Valenciennes, 1821)**

Doras niger Valenciennes in Humboldt & Valenciennes, 1821: 184. Type locality: Probablement ... Originaires d' Amérique. Holotype: MNHN 4189.

?*Corydoras edentatus* Spix in Spix & Agassiz, 1829: pl. 5. Type locality: not stated. Type(s): apparently lost. Name available from plate illustrating syntype of *Doras humboldti* Spix & Agassiz, 1829.

?*Doras humboldti* Spix & Agassiz, 1829: 14, pl. 5. Type locality: fluvio S. Francisci mediae Brasiliae. Syntypes: apparently lost.

Rhinodoras prianomus Cope, 1874: 134. Type locality: Nauta [upper Amazon]. Holotype: ANSP 21203.

Rhinodoras teffeanus Steindachner, 1875: 145, pl. 3. Type locality: Teffé am Amazonenstrom [brasilianische]. Syntypes: NMW 44568-69 (2).

?*Oxydoras holdeni* Fernández-Yépez, 1968: 54, fig. 24. Type locality: Río Apure, frente a Mango Verde [Venezuela]. Holotype: AFY 51265 (missing).

Maximum length: 100 cm SL

Distribution: South America: Amazon, São Francisco and Essequibo River basins, possibly Orinoco River basin.

Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru, Venezuela (?)

Remarks and references: Occurrence in Orinoco basin tentative, dependent upon identification of questionable synonym *Oxydoras holdeni* Fernández-Yépez; specimens of *Oxydoras niger* reported from Venezuela by Fernández-Yépez (1968: 57) pertain to *Oxydoras sifontesi* Fernández-Yépez. Species-level distinctiveness of São Francisco and Amazon *Oxydoras* not investigated.

Common names: Bagre hueso (Ecuador), Black doras (USA), Cuiu-cuiu (Brazil, Guyana), Cuyú-cuyú (Brazil, Guyana), Macusi (Guyana), Saurawari (Guyana), Toro (Brazil, Guyana), Turu-

shuqui (Peru)

***Oxydoras sifontesi* Fernández-Yépez, 1968**

Oxydoras sifontesi Fernández-Yépez, 1968: 58, fig. 28. Type locality: Laguna rebalsera "El Medio", Ciudad Bolívar [Venezuela]. Holotype: MBUCV V-1584.

Hildadoras orinocensis Fernández-Yépez, 1968: 41, fig. 17. Type locality: Boca del caño San Juan, Terr. Delta Amacuro [Venezuela]. Holotype: MBUCV V-3939 [ex AFY 61111].

Maximum length: 76 cm TL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

Remarks and references: Specimens of *Oxydoras niger* reported by Fernández-Yépez (1968: 57) pertain to this species.

Common names: Guitarrilla (Venezuela), Guitarrilla amarilla (Venezuela), Sierra lagunera (Venezuela), Sierra negra (Venezuela), Sierrita (Venezuela), Trompa de cochino (Venezuela)

PHYSOPYXIS

Physopyxis Cope, 1871a: 112. Type species: *Physopyxis lyra* Cope, 1871. Type by monotypy. Gender: feminine. More complete description in Cope (1872: 273).

***Physopyxis lyra* Cope, 1871**

Physopyxis lyra Cope, 1871a: 112. Type locality: Amazon. Holotype: ANSP 8282. Illustrated and described in more detail in Cope (1872: 273, pl. 5, figs. 1a-1c), with locality as Ambyiacu River, Ecuador [now Peru].

Maximum length: 3.5 cm SL

Distribution: South America: Amazon and Essequibo River basins.

Countries: Brazil, Colombia, Guyana, Peru

Remarks and references: Smallest known species of Doradidae.

Common names: Pirillo (Peru)

PLATYDORAS

Platydoras Bleeker, 1862: 5. Type species: *Silurus costatus* Linnaeus, 1758. Type by original designation. Gender: masculine.

***Platydoras armatulus* (Valenciennes, 1840)**

Doras armatulus Valenciennes in Cuvier & Valenciennes, 1840: 273 [204 in Strasbourg deluxe ed.]. Type locality: Brésil, ... le Parana, mais non au-dessous du 27°30' de latitude sud. Holotype: MNHN 4152.

Maximum length: 20 cm SL

Distribution: South America: Paraná River basin.

Countries: Argentina, Bolivia, Brazil, Paraguay, Uruguay

Common names: Armadillo (Brazil), Armado (Argentina), Botoado (Brazil), Itagwa (Paraguay)

***Platydoras costatus* (Linnaeus, 1758)**

Silurus costatus Linnaeus, 1758: 306. Type locality: Indiis. Type(s): apparently lost. More detailed description and illustration of type in Gronow (1754: 24-25, pl. 5, figs. 1 & 2).

Mystus ascita Gronow in Gray, 1854: 156. Type locality: Not stated. Type(s): apparently lost. Permanently invalid, preoccupied by *Mystus ascita* Walbaum (1792).

?*Doras dentatus* Kner, 1855: 118, pl. 3 (fig. 3). Type locality: Surinam. Holotype: NMW 46869. Originally proposed as *Doras dentatus*?

?*Doras helicophilus* Günther, 1868a: 475. Type locality: Surinam [Maroni River]. Syntypes: BMNH 1866.8.19.1-3 (3). Type locality confirmed in Günther (1868b: 229-230).

Maximum length: 24 cm SL

Distribution: South America: Amazon, Tocantins, Parnaíba, Orinoco, Essequibo River basins and coastal drainages in French Guiana and Suriname.

Countries: Bolivia, Brazil, Colombia, French Guiana, Guyana, Peru, Suriname, Venezuela

Remarks and references: Widespread and geographically variable species. Le Bail et al. (2000) recognized two distinct species of *Platydoras* in the Maroni River, however, their use of available names is questionable. Accurate determination of available names and the likely discovery of undescribed species await thorough revision.

Common names: Alasawa (French Guiana), Bacu (Brazil), Bacurebeca (Brazil), Corome (Suriname), Graviola (Brazil), Kiri kiri (Brazil), Okye okye (French Guiana), Rego rego (Peru), Roque roque (Brazil), Sierra rayada (Venezuela), Silure rayé (French Guiana), Soké (French Guiana), Striped raphael catfish (USA), Urutu (Brazil), Yaranira (Brazil)

Species inquirenda

Doras Hancockii Valenciennes in Cuvier & Valenciennes, 1840: 279 [207 in Strasbourg deluxe ed.]. Type locality: not stated. Holotype: BMNH 1857.6.13.163. Based on *Doras costata* of Hancock (1828), from Demerara [Guyana].

PTERODORAS

Pterodoras Bleeker, 1862: 5. Type species: *Doras granulosus* Valenciennes, 1821. Type by original designation. Gender: masculine.

Apuredoras Fernández-Yépez, 1950a: 195. Type species: *Apuredoras rivasi* Fernández-Yépez, 1950a. Type by original designation. Gender: masculine.

Parapterodoras Risso & Morra, 1964: 1. Type species: *Parapterodoras paranensis* Risso & Morra, 1964. Type by original designation. Gender: masculine.

Sachsdoras Fernández-Yépez, 1968: 66. Type species: *Sachsdoras apurensis* Fernández-Yépez, 1968. Type by original designation. Gender: masculine.

***Pterodoras granulosus* (Valenciennes, 1821)**

Doras granulosus Valenciennes in Humboldt & Valenciennes, 1821: 184. Type locality: Probablement Originaires d'Amérique. Holotype: MNHN 4187.

?*Doras maculatus* Valenciennes, 1836: pl. 5 (fig. 3). Type locality: not stated. Holotype: MNHN 8201 (1 of 2). Name available from plate that, according to Valenciennes (in Cuvier & Valenciennes 1840: 210 in Strasbourg deluxe ed.), was based on single specimen, but description in Cuvier & Valenciennes (1840: 209-211 in Strasbourg deluxe ed.) based on holotype (MNHN 4187) of *Doras granulosus* Valenciennes 1821 and two specimens (MNHN 8201) with locality as Buéno-Ayres.

?*Doras murica* Kner, 1855: 129. Type locality: Cujaba. Holotype: NMW. Name credited to Natterer manuscript; however, availability of name appears attributable solely to Kner.

?*Doras laevigatulus* Berg, 1901: 298. Type locality: Dock Sud, que comunica con el Río de la Plata y el Riachuelo de la Boca. Holotype: MACN 2118.

?*Doras lentiginosus* Eigenmann, 1917: 401, pl. 40. Type locality: Santarem. Holotype: FMNH 58056 [ex CM 7048a].

?*Silurus 12-radiatus* Larrañaga, 1923: 386. Type locality: [Uruguay]. No types known.

?*Silurus armatus* Larrañaga, 1923: 377. Type locality: [Uruguay]. No types known. Originally as *Silurus* (armado) *armatus*.

?*Parapterodoras paranensis* Risso & Morra, 1964: 2, pl. 1. Type locality: Río Paraná, frente a Corrientes. Holotype: Mus. Cien. Nat. del Chaco X-64-1.

Maximum length: 70 cm TL

Distribution: South America: Amazon and Paraná River basins and coastal drainages in Guyana and Suriname.

Countries: Argentina, Bolivia, Brazil, Colombia, Guyana, Paraguay, Peru, Suriname, Uruguay

Remarks and references: Specimens from Guyana and Suriname tentatively referred to *P. granulosus*.

Species-level distinctiveness of Paraná and Amazon *Pterodoras*

not investigated.

Common names: Abotoado (Brazil), Armado común (Argentina, Uruguay), Bacu (Brazil), Barriga-de-folha (Brazil), Botoado (Brazil), Itagivá (Paraguay), Rego rego (Peru)

***Pterodoras rivasi* (Fernández-Yépez, 1950)**

Apuredoras rivasi Fernández-Yépez, 1950a: 195, fig. on p. 196. Type locality: Río Apure, 2 km al este de San Fernando. Holotype: AFY 51062 (missing).

Pterodoras angeli Fernández-Yépez, 1968: 65, fig. 32. Type locality: Río Arauca, Edo. Apure [Venezuela]. Holotype: AFY 66803 (missing). Name spelled *Ptedoras angelis* in description heading but *Pterodoras angeli* seven times. Previous first reviser not found.

Sachsdoras apurensis Fernández-Yépez, 1968: 66, fig. 33. Type locality: Río Orinoco, cerca de la boca del Río Apure [Venezuela]. Holotype: AFY 66802 (missing).

Maximum length: 55 cm SL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

Remarks and references: Seven of eight paratypes (paratopotypes) designated by Fernández-Yépez (1950a: 196) for *Apuredoras rivasi* are extant as FMNH 84066.

Common names: Sierra apureña (Venezuela), Sierra cochina (Venezuela), Sierra manteca (Venezuela)

RHINODORAS

Rhinodoras Bleeker, 1862: 5. Type species: *Doras (Oxydoras) dorbignyi* Kner, 1855. Type by original designation. Gender: masculine.

***Rhinodoras boehlkei* Glodek, Whitmire & Orcés, 1976**

Rhinodoras boehlkei Glodek, Whitmire & Orcés, 1976: 3, fig. 1. Type locality: Eastern Ecuador, Río Bobonaza between Montalvo and Chicherato. Holotype: FMNH 79203.

Maximum length: 13.3 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Ecuador, Peru

Common names: Bagre hueso (Ecuador)

***Rhinodoras dorbignyi* (Kner, 1855)**

Doras (Oxydoras) d'Orbignyi Kner, 1855: 149, pl. 5 (fig. 9). Type locality: Río de la Plata. Holotype: NMW 44551. Name spelled *d'Orbigny* in description heading, *d'Orbignyi* three times in introduction to section on doradids. Previous first reviser not found; *dorbignyi* herein selected as correct original spelling. Name credited to Krøyer in Heckel manuscript; however, availability of name appears attributable solely to Kner.

Doras nebulosus Eigenmann & Kennedy, 1903: 500. Type locality: either in Mato Grosso [at Descalvados, Brazil] or [in the Paraguay at] Asuncion. Holotype: CAS 31186 [ex IU 9837].

Maximum length: 50 cm TL

Distribution: South America: Paraná River basin.

Countries: Argentina, Bolivia, Brazil, Paraguay, Uruguay

Common names: Armado (Argentina, Uruguay), Armado amarillo (Argentina), Botoado (Brazil), Marieta (Argentina, Brazil, Uruguay)

***Rhinodoras thomersoni* Taphorn & Lilyestrom, 1984**

Rhinodoras thomersoni Taphorn & Lilyestrom, 1984: 87, fig. 1. Type locality: Venezuela Noroccidental. Cuenca del Lago Maracaibo, Estado Zulia, desembocadura del Río Catatumbo, cerca de El Congo. Holotype: MCNG 368.

Maximum length: 20 cm SL

Distribution: South America: River basins along southwest shore of Lake Maracaibo (Santa Ana, Catatumbo and Escalante rivers).

Countries: Colombia, Venezuela

Common names: Mariano (Colombia)

RHYNCHODORAS

Rhynchodoras Klausewitz & Rösse, 1961: 45. Type species: *Rhynchodoras xingui* Klausewitz & Rösse, 1961. Type by original designation. Gender: masculine.

Rhynchodoras woodsi Glodek, 1976

Rhynchodoras woodsi Glodek, 1976: 44, fig. 1. Type locality: Eastern Ecuador, Moreta Bobonaza, between Sarayacu and Montalvo. Río Bobonaza, a tributary of Río Pastaza, itself a tributary of Río Marañon in Peru. Holotype: FMNH 77008.

Maximum length: 10.5 cm SL

Distribution: South America: Pastaza River basin in Marañon River drainage.

Countries: Ecuador

Common names: Bagre hueso (Ecuador)

Rhynchodoras xingui Klausewitz & Rösse, 1961

Rhynchodoras xingui Klausewitz & Rösse, 1961: 46, fig. 1. Type locality: Südamerika, Brasilien, Oberlauf des Rio Xingu. Holotype: SMF 5281.

Maximum length: 6.3 cm SL

Distribution: South America: Upper Xingu River basin.

Countries: Brazil

SCORPIODORAS

Scorpiodoras Eigenmann, 1925: 324. Type species: *Doras heckelii* Kner, 1855. Type by original designation. Gender: masculine.

Autanadoras Fernández-Yépez, 1950b: 8. Type species: *Autanadoras milesi* Fernández-Yépez, 1950b. Type by original designation. Gender: masculine.

Scorpiodoras heckelii (Kner, 1855)

Doras Heckelii Kner, 1855: 125, pl. 3 (fig. 4). Type locality: R. negro. Holotype: NMW 46613.

Doras Calderonensis Vaillant, 1880: 154. Type locality: [Caldéron (Haute-Amazone)]. Holotype: MNHN A.1980.

Autanadoras milesi Fernández-Yépez, 1950b: 8, pl. 1 (fig. 4). Type locality: Río Autana [Territorio Amazonas, Venezuela]. Holotype: MBUCV V-15210 [ex AFY 48163].

Maximum length: 16.1 cm SL

Distribution: South America: Negro, Orinoco, and upper Amazon River basins.

Countries: Brazil, Venezuela

Common names: Sierra gñere (Venezuela)

TRACHYDORAS

Trachydoras Eigenmann, 1925: 337. Type species: *Trachydoras atripes* Eigenmann, 1925. Type by original designation. Gender: masculine.

Trachydoras brevis (Kner, 1853)

Doras (Corydoras) brevis Kner, 1853: 146, fig. 8 on unnumbered plate. Type locality: Not stated. Syntypes (8): NMW 45397-99 (5), NMW 46375 (2), RMNH 2965 (1). Name made available on illustration of swimbladder. Species later described and illustrated in Kner (1855: 138-140, pl. 6, fig. 11), on 8 specimens with locality given as Barra do Rio negro; and swimbladder illustration in Kner (1853) corrected from fig. 6 to fig. 8.

Maximum length: 9.3 cm SL

Distribution: South America: Negro and Essequibo River basins.

Countries: Brazil, Guyana

Remarks and references: Larger (73.6 mm SL) of two specimens in NMW 45398 is referable to an undescribed species of *Trachydoras*.

Trachydoras microstomus (Eigenmann, 1912)

Hemidoras microstomus Eigenmann, 1912: 193, pl. 18 (fig. 2). Type locality: Rockstone [Essequibo, British Guiana]. Holotype:

FMNH 53206 [ex CM 1650].

Maximum length: 5.9 cm SL

Distribution: South America: Amazon, Orinoco and Essequibo River basins.

Countries: Bolivia, Brazil, Colombia, Guyana, Peru, Venezuela

Remarks and references: Specimens from Amazon and Orinoco rivers are tentatively identified as *Trachydoras microstomus* and may warrant recognition as one or more distinct species upon thorough revision.

Common names: Sierra culata (Venezuela)

Trachydoras nattereri (Steindachner, 1881)

Oxydoras Nattereri Steindachner, 1881: 104, pl. 2 (fig. 1). Type locality: Amazonen-Strome bei Teffe. Holotype: NMW (not found in 2000).

Maximum length: 10.3 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Colombia, Peru

Common names: Pirillo (Peru)

Trachydoras paraguayensis (Eigenmann & Ward, 1907)

Hemidoras paraguayensis Eigenmann & Ward in Eigenmann, McAtee & Ward, 1907: 116, pl. 34 (fig. 1). Type locality: [Paraguay River at ...] Corumba [in Matto Grosso, Brazil]. Holotype: CAS 37216 [ex IU 10127].

Maximum length: 10.4 cm SL

Distribution: South America: Paraná River basin.

Countries: Argentina, Bolivia, Brazil, Paraguay

Common names: Armado (Argentina, Paraguay), Rique-rique (Brazil)

Trachydoras steindachneri (Perugia, 1897)

Oxydoras steindachneri Perugia, 1897: 20. Type locality: Rio Beni [Bolivia]. Syntypes: MSNG 8834 (17).

Oxydoras trachyparia Boulenger, 1898b: 423, pl. 40 (fig. 2). Type locality: Rio Jurua, an affluent of the Amazons, Brazil. Syntypes: BMNH 1897.12.1.44-45 (2).

Trachydoras atripes Eigenmann, 1925: 339, pl. 26 (fig. 4). Type locality: Brook near R. Itaya, above Iquitos. Holotype: CAS 60234 [ex IU 15877].

Maximum length: 8.6 cm SL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru

Common names: Bagre hueso (Ecuador), Pirillo (Peru)

WERTHEIMERIA

Wertheimeria Steindachner, 1877: 659. Type species: *Wertheimeria maculata* Steindachner, 1877. Type by monotypy. Gender: feminine.

Wertheimeria maculata Steindachner, 1877

Wertheimeria maculata Steindachner, 1877: 660, pl. 10. Type locality: Rio Jequitinhonha. Syntypes: NMW 43460 (1, lost), NMW 43461 (1).

Maximum length: 30 cm SL

Distribution: South America: Jequitinhonha River basin.

Countries: Brazil

Remarks and references: Placement in Doradidae first suggested by Miranda Ribeiro (1911); later corroborated by Higuchi et al. (1990) who briefly discussed possible relationship with *Kalyptodoras bahiensis*.

Family Auchenipteridae (Driftwood catfishes)

Carl J. Ferraris, Jr.

The Auchenipteridae comprise a group of small to medium sized catfishes that are endemic to the Neotropics. The family can be readily recognized by the following combination of characters: Body without bony plates; dorsal region of body, between head and dorsal fin origin, covered with bony plates that are sutured together and readily visible beneath a thin skin; nasal barbel absent; adipose dorsal fin small, rarely absent; eye covered with adipose tissue and not possessing a distinct orbital rim. Internally, the family possesses a number of osteological features, especially of the cranium and anterior vertebrae, which serve as the basis of the hypothesis that the species form a natural group.

Auchenipterids are unique among catfishes in at least one aspect of their reproductive biology. All species are thought to undergo internal insemination and the female does not necessarily expel her mature ova immediately following spawning. Instead, females may carry mature, unfertilized eggs and packets of sperm inside her reproductive organs for an extended period of time before triggering fertilization and deposition of the eggs. This presumably allows the female time to search for a suitable location for egg deposition after spawning. In all genera for which nuptial males and females have been found, there is a pronounced sexual dimorphism of the anal fin and, in some species, the dorsal fin, maxillary barbels, and other parts of the body. Some of the anterior rays of the anal fin in males become enlarged and modified in shape, forming an intromittent organ for the deposition of sperm packets inside the female. In most cases, the urogenital opening of the male is at the end of an elongated tube that is sometimes attached to the anterior margin of the anal fin, which presumably facilitates transfer of the sperm. Elongated dorsal-fin spines and stiffened maxillary barbels in nuptial males appear to act as clasping organs, which hold the female near to the male during spawning. The surface of the maxillary barbels, along with the dorsal surface of the head, may be covered with fine bumps or ridges, composed of unculi, which may also assist the males in firmly grasping the female. Except for the modified anal-fin rays, the secondary sexually dimorphic characters found in male auchenipterids disappear at the end of the reproductive season.

Auchenipterids are typically nocturnal, although species of *Auchenipterus*, *Ageneiosus*, and some *Centromochlus* appear to actively feed during the daylight hours. Most species for which food habits have been studied feed on insects, especially those that fall onto the surface of the water. At night, auchenipterids can be observed swimming just below the surface of the water, darting around picking at insects that struggle on the water's surface. A few auchenipterids, such as species of *Auchenipterus*, are planktivores, and species of *Ageneiosus* as well as *Asterophysus batrachus* appear to be primarily piscivorous. During the day, many of the nocturnal species retreat to deeper water and hide. They can often be found in crevices in submerged logs, giving rise to the common name for the family: the driftwood, or wood, catfish. Most species of auchenipterids are quite small, not reaching beyond 20 cm SL. The smallest species is *Gelanoglanis nanonocticolus*, which is known to reach only 2.2 cm. The largest auchenipterids are species of *Ageneiosus*, several of which reach to nearly one-half meter in length.

Auchenipterids are widely distributed in South America. One or more species is found in all major river drainages east of the Andes, and species are known from the Caribbean trans-Andean drainages and one Pacific basin: the Tuira River of Panama. Auchenipterids are otherwise not known from the Pacific versant drainages of the Americas. One species, *Pseudoauchenipterus nodosus*, is routinely found in estuarine waters; all other species appear to be restricted to freshwaters.

Some species of *Ageneiosus* reach large enough size to be valuable food fishes. However, most auchenipterids are not large enough, or abundant enough, to be important for food. In recent years, *Auchenipterus osteomystax* has become the most abundant species of the Itaipú Reservoir of the upper Paraná River (Agostino et al., 1994), where it could become an important food source. A few auchenipterid species are exported into the ornamental fish trade, but inasmuch as most species are nocturnal, they are often kept only by advanced hobbyists.

As currently recognized, the Auchenipteridae includes two subfamilies: the Centromochlinae, which includes the genera *Centromochlus*, *Gelanoglanis*, *Glanidium* and *Tatia*; and the Auchenipterinae, which includes all the remaining genera. The Auchenipterinae, as now recognized, includes the genera *Ageneiosus* and *Tetranematichthys* which until recently comprised the family Ageneiosidae. In keeping with the other family accounts in this volume, all genera of the family are not subdivided into subfamilies but are instead listed below in alphabetical order. The taxonomy of the Auchenipteridae has changed dramatically over the past few decades as studies of the relationships among species have been completed. There are still a number of unresolved problems that will most likely result in the proposal of additional generic names to accom-

moderate newly recognized natural groups of species. In addition, the number of species recognized for this family will likely increase dramatically, especially when additional collecting of the small, secretive species brings more specimens to the attention of catfish taxonomists.

AGENEIOSUS

Ageneiosus La Cèpède, 1803: 132. Type species: *Ageneiosus armatus* La Cèpède, 1803. Type by subsequent designation by Eigenmann & Eigenmann (1890: 299). Gender: masculine. Earlier type designation by Bleeker (1862: 14) of *Ageneiosus militaris* Blkr (nec Val.) = *Silurus militaris* Bl not valid. Genus revised, with key to species, in Walsh (pers. comm. and 1990).

Ceratorhynchus Spix & Agassiz, 1829: 10. Type species: *Silurus militaris* [= ? *Silurus militaris* of Bloch, nec Linnaeus]. Type by monotypy. Gender: masculine.

Agenius Agassiz, 1846: 11. Type species: *Ageneiosus armatus* La Cèpède, 1803. Gender: masculine. Unjustified emendation of *Ageneiosus*, therefore taking the same type species.

Davalla Bleeker, 1858: 58, 64. Type species: *Davalla schomburgkii* Bleeker, 1858. Type by monotypy. Gender: feminine.

Pseudogeneiosus Bleeker, 1862: 14. Type species: *Ageneiosus brevifilis* Valenciennes, 1840. Type by original designation. Gender: masculine.

Tympanopleura Eigenmann, 1912: 203. Type species: *Tympanopleura piperata* Eigenmann, 1912. Type by original designation. Gender: feminine.

Ageneiosus atronasus Eigenmann & Eigenmann, 1888

Ageneiosus atronasus Eigenmann & Eigenmann, 1888: 149. Type locality: exact locality unknown [South America]. Holotype: MCZ 27270.

Ageneiosus melanopogon Miranda Ribeiro, 1917: 51. Type locality: Fluvio Solimões, Brazil. Holotype: Not found.

Tympanopleura nigricollis Eigenmann & Allen, 1942: 139, pl. 5 (figs. 2-3), 6 (fig. 3). Type locality: Iquitos [Peru]. Holotype: CAS 57940 [ex IU 15788].

Maximum length: 12 cm SL

Distribution: South America: Middle and upper Amazon River basin.

Countries: Bolivia, Brazil, Peru

Remarks and references: Redescribed with new synonymy in Walsh (pers. comm., and 1990).

Common names: Cunshi novia (Peru)

Ageneiosus brevis Steindachner, 1881

Ageneiosus brevis Steindachner, 1881b: 16. Type locality: Amazonenstrom bei Coary und aus dem Hyavary [Brazil]. Syntypes: (4) NMW 47801 (2).

Ageneiosus rondoni Miranda Ribeiro, 1914: 12, pl. 1 (fig. 3). Type locality: Rio Negro (Mañaos) [Brazil]. Lectotype: MNRJ 962A, designated by Miranda Ribeiro (1953: 394).

Ageneiosus madeirensis Fisher, 1917: 426, pl. 42. Type locality: San Joaquín, Bolivia. Holotype: FMNH 58143 [ex CM 7143].

Tympanopleura alta Eigenmann & Myers in Myers, 1928: 85. Type locality: Iquitos, Rio Marañon, Peru. Holotype: CAS 58258 [ex IU 15790].

Maximum length: 16 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Bolivia, Brazil, Peru

Remarks and references: Redescribed, with new synonymy, in Walsh (pers. comm., and 1990).

Common names: Cunshi novia (Peru)

Ageneiosus inermis (Linnaeus, 1766)

Silurus inermis Linnaeus, 1766: 503. Type locality: Surinam. No types known.

Ageneiosus armatus La Cèpède, 1803: 132, 133. Type locality: les eaux de Surinam, et peut-etre dans celles des Grandes Indes.

Types: On Bloch, pl. 362; *Silurus militaris* Linné; and others.

Ageneiosus brevifilis Valenciennes in Cuvier & Valenciennes, 1840: 242 (180 in Strasbourg deluxe ed.). Type locality: Cayenne [but changed to Suriname in Boeseman (1972: 303)]. Holotype: RMNH 2975 (larger of 2).

Hypothalmus dawalla Jardine in Schomburgk, 1841: 191, pl. 9. Type locality: Junction of Rupununi and Essequibo [Guyana], and Fort St. Joaquim, in the Rio Bronco. No types known. Name spelled dawalla in text; *davalla* on plate; first reviser not found.

Davalla schomburgkii Bleeker, 1858: 64. Type locality: Junction of Rupununi and Essequibo rivers [Guyana]. No types known. Unneeded replacement for *Hypothalmus dawalla* Jardine, 1841.

Ageneiosus axillaris Günther, 1864: 431. Type locality: Surinam. Holotype: BMNH 1864.6.2.2.

Ageneiosus sebae Günther, 1864: 192. Type locality: Suriname. Syntypes: MNHN ?(1) and Seba specimen.

?*Ageneiosus (Pseudogeneiosus) therezinae* Steindachner, 1909: 341. Type locality: Rio Parnahyba und Rio Puty bei Therezina [Brazil]. Syntypes: NMW 47840-41 (2 of "several").

Ageneiosus ogilviei Fowler, 1914: 266, fig. 15. Type locality: Rupununi River, British Guiana. Holotype: ANSP 39343.

Ageneiosus gabardinii Risso & Risso, 1964: 12, pl. 3 (fig. 1). Type locality: Río Paraná, a la altura de la Ciudad de Corrientes [Argentina]. Holotype: Mus. Cienc. Nat. del Chaco 3, VI-63-2.

Maximum length: 47 cm SL

Distribution: South America.

Countries: Argentina, Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Paraguay, Suriname, Venezuela

Remarks and references: Redescribed in Walsh (pers. comm., and 1990) as *Ageneiosus brevifilis* Valenciennes.

Common names: Doncella (Venezuela), Palmito (Brazil)

Ageneiosus magoi Castillo & Brull, 1989

Ageneiosus magoi Castillo & Brull, 1989: 73, fig. 1-2. Type locality: Los esteros de Camaguán, km 270, Estado Guárico [Venezuela]. Holotype: MBUCV-V-15666.

Maximum length: 18.1 cm SL

Distribution: South America: Orinoco basin.

Countries: Venezuela

Common names: Doncella (Venezuela)

Ageneiosus marmoratus Eigenmann, 1912

Ageneiosus marmoratus Eigenmann, 1912: 206, pl. 22 (fig. 1). Type locality: Creek below Potaro Landing [Guyana]. Holotype: FMNH 53245 [ex CM 1710].

?*Ageneiosus barranquerensis* Risso & Risso, 1964: 11, pl. 2. Type locality: frente a la desembocadura del Río Negro, Riacho Barranqueras [Argentina]. Holotype: Mus. Cien. Nat. del Chaco 11, III-63.

Maximum length: 18.5 cm SL

Distribution: South America.

Countries: Argentina, Ecuador, Guyana, Peru, Suriname

Remarks and references: Redescribed in Walsh (pers. comm., and 1990).

Common names: Doncella (Venezuela)

Ageneiosus militaris Valenciennes, 1836

Ageneiosus militaris Valenciennes, 1836: pl. 4 (fig. 1). Type locality: not stated. Holotype: MNHN B.690, B.691, or B.3167. Name available from plate; later described in Cuvier & Valenciennes (1840: 233; 173 in Strasbourg deluxe ed.), with type locality as: La Plata.

Ageneiosus valenciennesi Bleeker, 1864: 82. Type locality: La Plata. Holotype: MNHN B.690, B.691 or B.3167. New name for *Ageneiosus militaris* Valenciennes.

- Silurus 38-radiatus* Larrañaga, 1923: 386. Type locality: Uruguay. No types known.
- Silurus imberbis* Larrañaga, 1923: 376. Type locality: Uruguay. No types known.
- Ageneiosus uruguayensis* Devincenzi, 1933: 3, pl. 1. Type locality: Río Uruguay frente a Paysandú [Uruguay]. Holotype: MHNM CI 317.
- Ageneiosus marquesi* Risso & Risso, 1964: 20, pl. 6 (fig. 1). Type locality: Río Paraná, frente al tanque de obras Sanitarias de la ciudad de Corrientes, Argentina. Holotype: Mus. Cienc. Nat. del Chaco 12-V-64-1.
- Maximum length: 30 cm SL
Distribution: South America: La Plata River basin.
Countries: Argentina, Brazil, Paraguay, Uruguay
Remarks and references: Redescribed in Walsh (pers. comm., and 1990) as *Ageneiosus valenciennesi* Bleeker.
- Ageneiosus pardalis* Lütken, 1874**
Ageneiosus pardalis Lütken, 1874a: 190. Type locality: Caraccas [apparently in error, S. Walsh (pers. comm., and 1990)]. Holotype: ZMUC 207.
- Ageneiosus caucanus* Steindachner, 1880: 61, pl. 6 (fig. 1-1a). Type locality: [Río] Cauca [Colombia]. Syntypes: NMW 47811 (2).
- Ageneiosus virgo* Posada, 1909: 295. Type locality: [Río] Magdalena [Colombia]. No types known. *Ageneiosus freiei* Schultz, 1944: 240, pl. 4 (fig. B). Type locality: Río Agua Caliente, 2 to 3 km above Lago Maracaibo. Holotype: USNM 121260.
- Maximum length: 44 cm SL
Distribution: South America: Lake Maracaibo basin and Magdalena, Cauca, San Juan, and Tuirá River basins.
Countries: Colombia, Panama, Venezuela
Remarks and references: Redescribed in Walsh (pers. comm., and 1990).
Common names: Barbul rollera (Colombia), Doncella (Colombia, Venezuela), Fria (Colombia), Gata (Colombia), Niña (Colombia), Señorita (Colombia)
- Ageneiosus piperatus* (Eigenmann, 1912)**
Tympanopleura piperata Eigenmann, 1912: 203, pl. 20 (fig. 3). Type locality: Crab Falls [Essequibo R., Guyana]. Holotype: FMNH 53243 [ex CM 1708].
- Maximum length: 4.8 cm SL
Distribution: South America: Essequibo and upper Negro rivers near confluence of Branco River.
Countries: Brazil, Guyana
Remarks and references: Redescribed in Walsh (pers. comm., and 1990).
- Ageneiosus polystictus* Steindachner, 1915**
Ageneiosus polystictus Steindachner, 1915b: 217. Type locality: not stated. Holotype: NMW 47839. Redescribed and illustrated in Steindachner (1917: 84, pl. 7, figs. 1-3) with origin of specimen reported as "Mündung des Rio Negro".
- Maximum length: 45 cm SL
Distribution: South America: Negro and lower Branco River basins.
Countries: Brazil
Remarks and references: Redescribed in Walsh (pers. comm., and 1990).
- Ageneiosus ucayalensis* Castelnau, 1855**
Ageneiosus ucayalensis Castelnau, 1855: 49, pl. 17 (fig. 2). Type locality: un lac, près de l'Ucayale, et qui communiquait avec cette rivière. Holotype: MNHN B.611.
- ?*Ageneiosus dentatus* Kner, 1858: 441. Type locality: Surinam. Syntypes: NMW 47823 (6).
- ?*Ageneiosus porphyreus* Cope, 1867: 404. Type locality: Surinam. Lectotype: ANSP 8389, designated by Fowler (1915: 224).
- ?*Ageneiosus parnaguensis* Steindachner, 1910: 399, figured on p. 400. Type locality: see von Lake Parnaguá in brasilienischen Staate Piauhy, Brazil. Syntypes: NMW 47832, 47837, 47838.
- ?*Ageneiosus guianensis* Eigenmann, 1912: 204, pl. 21 (fig. 2). Type locality: Wismar [Guyana]. Holotype: FMNH 53247 [ex CM 1712a].
- Maximum length: 28.3 cm SL
Distribution: South America: Amazon and Orinoco River basins; Guianas, and upper Paraná River basin.
Countries: Argentina, Brazil, Colombia, Ecuador, Guyana, Peru, Suriname, Venezuela
Remarks and references: Redescribed in Walsh (pers. comm., and 1990).
Common names: Cunshi novia (Peru)
- Ageneiosus vittatus* Steindachner, 1908**
Ageneiosus vittatus Steindachner, 1908: 64. Type locality: Rio Purús [Brazil]. Holotype: NMW 47853.
- Maximum length: 22 cm SL
Distribution: South America: Middle Orinoco and upper Amazon River basins.
Countries: Bolivia, Brazil, Ecuador, Venezuela
Remarks and references: Redescribed in Walsh (pers. comm., and 1990).
- ASTEROPHYSUS**
Asterophysus Kner, 1858: 402. Type species: *Asterophysus batrachus* Kner, 1858. Type by monotypy. Gender: masculine.
- Astrophysus* Bleeker, 1858: 356. Type species: *Asterophysus batrachus* Kner, 1858. Gender: masculine. Unjustified emendation of *Asterophysus* Kner, therefore taking the same type species.
- Asterophysus batrachus* Kner, 1858**
Asterophysus batrachus Kner, 1858: 403, pl. 5 (fig. 13). Type locality: Marabitanos [Brazil]. Syntypes: NMW 47515-16 (2).
- Maximum length: 25 cm SL
Distribution: South America: Orinoco and Negro River basins.
Countries: Brazil, Venezuela
Common names: Bagre sapo (Venezuela)
- AUCHENIPTERICHTHYS**
Auchenipterichthys Bleeker, 1862: 7. Type species: *Auchenipterus thoracatus* Kner, 1858. Type by original designation. Gender: masculine.
- Auchenipterichthys coracoideus* (Eigenmann & Allen, 1942)**
Trachycorystes coracoideus Eigenmann & Allen, 1942: 120. Type locality: Iquitos [Peru]. Syntypes: CAS 63746 [ex IU 15974] (3).
- Maximum length: 10 cm SL
Distribution: South America: Upper Amazon River basin.
Countries: Peru
- Auchenipterichthys longimanus* (Günther, 1864)**
Auchenipterus longimanus Günther, 1864: 195. Type locality: River Capin [Pará, Brazil]. Syntypes: BMNH 1849.121.8; ZMB 5059.
- Maximum length: 15 cm SL
Distribution: South America: Amazon River basin.
Countries: Brazil
- Auchenipterichthys punctatus* (Valenciennes, 1840)**
Auchenipterus punctatus Valenciennes in Cuvier & Valenciennes, 1840: 219 (163 in Strasbourg deluxe ed.). Type locality: Probablement de Brésil. Holotype: MNHN B.216.
- Auchenipterichthys dantei* Soares-Porto, 1994: 282, fig. 3. Type locality: Brazil, Amazonas, Paricatuba, Rio Negro (3°07'S,

60°26'W). Holotype: MZUSP 43332.
 Maximum length: 15.1 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Brazil

***Auchenipterichthys thoracatus* (Kner, 1858)**

Auchenipterus thoracatus Kner, 1858: 425, pl. 7 (fig. 22). Type locality: Rio Guaporé [Brazil]. Syntypes: NMW 47452 (2).
Auchenipterus thoracicus Günther, 1864: 194. Type locality: Rio Guaporé. Syntypes: NMW 47452 (2). Unjustified emendation of *Auchenipterus thoracatus* Kner, 1858.
 Maximum length: 11 cm TL
 Distribution: South America: Amazon River basin.
 Countries: Peru
 Common names: Bagre (Peru), Barbudo (Ecuador)

AUCHENIPTERUS

Auchenipterus Valenciennes in Cuvier & Valenciennes, 1840: 207 (154 in Strasbourg deluxe ed.). Type species: *Hypophthalmus nuchalis* Spix & Agassiz, 1829. Type by subsequent designation by Bleeker (1862: 15). Gender: masculine. Revised, with a key to species, in Ferraris & Vari (1999).

Euanemus Müller & Troschel in Müller, 1842: 203. Type species: *Euanemus colymbetes* Müller & Troschel, 1842. Type by monotypy. Gender: masculine.

Auchenipterus Agassiz, 1846: 40. Type species: *Hypophthalmus nuchalis* Spix & Agassiz, 1829. Gender: masculine. Unjustified emendation of *Auchenipterus* Valenciennes, 1840, therefore taking the same type species.

Ceratocheilus Miranda Ribeiro, 1918: 644. Type species: *Ceratocheilus osteomystax* Miranda Ribeiro, 1918. Type by monotypy. Gender: masculine. Preoccupied by *Ceratocheilus* Wesché, 1810, in Diptera, replaced by *Osteomystax* Whitley, 1940.

Osteomystax Whitley, 1940: 242. Type species: *Ceratocheilus osteomystax* Miranda Ribeiro, 1918. Type by original designation. Gender: masculine. Replacement for *Ceratocheilus* Miranda Ribeiro, 1918, preoccupied by *Ceratocheilus* Wesché, 1810, in Diptera.

***Auchenipterus ambyiacus* Fowler, 1915**

Auchenipterus ambyiacus Fowler, 1915: 222, fig. 6. Type locality: Ambyiacu R., Ecuador [= Ampiyacu River, Peru]. Holotype: ANSP 21484.
 Maximum length: 24.4 cm SL
 Distribution: South America: Upper and middle Amazon and Orinoco River basins, coastal rivers of Guyana.
 Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru, Venezuela
 Remarks and references: Redescribed in Ferraris & Vari (1999).
 Common names: Barbudo (Ecuador), Mararate (Peru)

***Auchenipterus brachyurus* (Cope, 1878)**

Euanemus brachyurus Cope, 1878: 676. Type locality: Peruvian Amazon. Holotype: ANSP 21552.
 Maximum length: 16.5 cm SL
 Distribution: South America: Upper Amazon River basin.
 Countries: Bolivia, Brazil, Ecuador, Peru
 Remarks and references: Redescribed in Ferraris & Vari (1999).
 Common names: Barbudo (Ecuador), Mararate (Peru)

***Auchenipterus brevior* Eigenmann, 1912**

Auchenipterus brevior Eigenmann, 1912: 202. Type locality: Tumatumari, British Guiana [= Guyana]. Holotype: FMNH 53249 [ex CM 1715].
 Maximum length: 8.4 cm SL
 Distribution: South America: Potaro River basin.
 Countries: Guyana
 Remarks and references: Redescribed in Ferraris & Vari (1999).

***Auchenipterus britskii* Ferraris & Vari, 1999**

Auchenipterus britskii Ferraris & Vari, 1999: 414, figs. 10-11.
 Type locality: Lago Janaucá, vicinity of Rio Solimões (approx. 3°28'S, 60°17'W), Amazonas, Brazil. Holotype: MZUSP 48358.
 Maximum length: 14 cm SL
 Distribution: South America: Middle Amazon River.
 Countries: Brazil

***Auchenipterus demerarae* Eigenmann, 1912**

Auchenipterus demerarae Eigenmann, 1912: 202, pl. 21 (fig. 1).
 Type locality: Wismar, British Guiana [= Guyana]. Holotype: FMNH 53248 [ex CM 1714].
 Maximum length: 10.3 cm SL
 Distribution: South America: Demerara, Rupununi, Essequibo and Cuyuni River basins.
 Countries: Guyana, Venezuela
 Remarks and references: Redescribed in Ferraris & Vari (1999).

***Auchenipterus dentatus* Valenciennes, 1840**

Auchenipterus dentatus Valenciennes in Cuvier & Valenciennes, 1840: 210 (163 in Strasbourg deluxe ed.). Type locality: Cayenne [= Paramaribo, Suriname]. Holotype: MNHN B.592.
Euanemus colymbetes Müller & Troschel in Müller, 1842: 203. Type locality: Suriname. Lectotype: ZMB 3095, designated by Ferraris & Vari (1999).
 Maximum length: 12.1 cm SL
 Distribution: South America: Northern coastal rivers of the Guianas: Corantijn, Suriname, Arataye, Sinnamary, and Oyapock rivers.
 Countries: French Guiana, Suriname
 Remarks and references: Redescribed in Ferraris & Vari (1999).

***Auchenipterus fordicei* Eigenmann & Eigenmann, 1888**

Auchenipterus fordicei Eigenmann & Eigenmann, 1888: 151. Type locality: Coary [=Coari, Amazonas, Brazil]. Holotype: MCZ 7289.
 Maximum length: 9.9 cm SL
 Distribution: South America: Middle Amazon River basin.
 Countries: Brazil
 Remarks and references: Redescribed in Ferraris & Vari (1999).

***Auchenipterus menezesi* Ferraris & Vari, 1999**

Auchenipterus menezesi Ferraris & Vari, 1999: 426, fig. 17. Type locality: Lago de Viana, Rio Pindaré. Mirim basin, Maranhão, Brazil. Holotype: MZUSP 43591.
 Maximum length: 13.1 cm SL
 Distribution: South America: Parnaíba and Pindaré-Mirim River basins of Maranhão and Piauí States.
 Countries: Brazil
 Common names: Peixe-gato (Brazil)

***Auchenipterus nigripinnis* (Boulenger, 1895)**

Euanemus nigripinnis Boulenger, 1895: 524. Type locality: Paraguay. Lectotype: BMNH 1895.5.17.37, designated by Ferraris & Vari (1999).
Auchenipterus paysanduani Devincenzi, 1933: 2. Type locality: Río Uruguay, frente a Paysandú [Uruguay]. Holotype: MNHM 4889 [ex CI 318].
 Maximum length: 20.2 cm SL
 Distribution: South America: La Plata River basin.
 Countries: Argentina, Brazil, Paraguay, Uruguay
 Remarks and references: Redescribed in Ferraris & Vari (1999).
 Common names: Hocicón (Brazil), Palmitinho (Brazil)

***Auchenipterus nuchalis* (Spix & Agassiz, 1829)**

Hypophthalmus nuchalis Spix & Agassiz, 1829: 17, pl. 17. Type locality: Brasilia aequatoriali, now restricted to Rio Capim, near São Domingos do Capim, Brazil. Neotype: MZUSP 47945, des-

ignated in Ferraris & Vari (1999).
 Maximum length: 15.4 cm SL
 Distribution: South America: Lower Amazon and Tocantins rivers northward to Marowijne River. Possibly also Rupununi River, Guyana, and Negro River, Brazil.
 Countries: Brazil, French Guiana
 Remarks and references: Redescribed in Ferraris & Vari (1999).

Auchenipterus osteomystax Miranda Ribeiro, 1918
Ceratocheilus osteomystax Miranda Ribeiro, 1918: 644, unnumbered pl. Type locality: Santa Rita das Antas, Rio Vermelho [Goiás], Brazil. Holotype: MZUSP 2317.
 Maximum length: 23 cm SL
 Distribution: South America: La Plata River basin, Tocantins River, and several rivers of lower Amazon River basin.
 Countries: Argentina, Brazil, Paraguay
 Remarks and references: Redescribed in Ferraris & Vari (1999).
 Common names: Buzo (Argentina), Hocicón (Argentina), Palmintinho (Brazil)

CENTROMOCHLUS

Centromochlus Kner, 1858: 430. Type species: *Centromochlus megalops* Kner, 1858. Type by subsequent designation by Bleeker (1862: 7). Gender: masculine. Expanded species membership follows Soares-Porto (1998), except for continued recognition of *Gelanoglanis*.

Centromochlus altae Fowler, 1945
Centromochlus altae Fowler, 1945: 109, fig. 8. Type locality: Morelia, Río Caquetá basin, Colombia. Holotype: ANSP 71700.
 Maximum length: 3.5 cm SL
 Distribution: South America: Caquetá River basin.
 Countries: Colombia
 Common names: Barbudito (Ecuador)

Centromochlus concolor (Mees, 1974)
Tatia concolor Mees, 1974: 84, fig. 22. Type locality: Headwaters of Coppename Rivier [sic] (3°49'N, 56°57'W), Suriname. Holotype: ZMA 106210.
 Maximum length: 3.3 cm SL
 Distribution: South America: Coppename River basin.
 Countries: Suriname

Centromochlus existimatus Mees, 1974
Centromochlus existimatus Mees, 1974: 50, fig. 8 (right). Type locality: Harbour of Manaus [Brazil]. Holotype: ANSP 73154.
 Maximum length: 6.6 cm SL
 Distribution: South America: Amazon River basin.
 Countries: Brazil, Peru
 Common names: Pirillo (Peru)

Centromochlus heckelii (De Filippi, 1853)
Auchenipterus Heckelii De Filippi, 1853: 167. Type locality: Rio Napo. Syntype: ZMUT 233.
Centromochlus Steindachneri Gill, 1870: 95. Type locality: Marañón River, upper Amazon and Napo Rivers. Type(s) not found at USNM (Ferraris & Vari, 1992).
 Maximum length: 7 cm SL
 Distribution: South America: Amazon and Orinoco River basins.
 Countries: Peru
 Common names: Barbudito (Ecuador), Pirillo (Peru)

Centromochlus macracanthus Soares-Porto, 2000
Centromochlus macracanthus Soares-Porto, 2000: 282, fig. 1. Type locality: Brazil: Amazonas: São Pedro, rio Negro. Holotype: MZUSP 30620.
 Maximum length: 7.1 cm SL
 Distribution: South America: Upper Negro River basin.
 Countries: Brazil

Centromochlus megalops Kner, 1858
Centromochlus megalops Kner, 1858: 430, pl. 8 (fig. 24). Type locality: Bogota [Colombia]. Syntypes: NMW 47359-60.
 Distribution: South America: Bogota (?).
 Countries: Colombia
 Remarks and references: Type locality probably in error.

Centromochlus punctatus (Mees, 1974)
Tatia punctata Mees, 1974: 88, fig. 24. Type locality: Creeks between Kabel and Lombé [Suriname]. Holotype: RMNH 26495.
 Maximum length: 4.5 cm SL
 Distribution: South America: Atlantic coastal rivers above Amazon River mouth.
 Countries: Suriname

Centromochlus reticulatus (Mees, 1974)
Tatia reticulata Mees, 1974: 90, fig. 25. Type locality: Karanambo, Rupununi, British Guiana. Holotype: BMNH 1972.7.27.702.
 Maximum length: 2.7 cm SL
 Distribution: South America: Rupununi River basin.
 Countries: Guyana

Centromochlus romani (Mees, 1988)
Tatia romani Mees, 1988: 412, fig. 3. Type locality: Río Guaraipiche, affluent of the Río San Juan, near Maturín, Monagas [Venezuela]. Holotype: RMNH 30490.
 Maximum length: 3.1 cm SL
 Distribution: South America: San Juan River basin.
 Countries: Venezuela

Centromochlus schultzi Rössel, 1962
Centromochlus schultzi Rössel, 1962: 27, fig. 1. Type locality: Brasilien, oberer Rio Xingu. Holotype: SMF 5462.
 Maximum length: 10.2 cm SL
 Distribution: South America: Upper Xingu and Tocantins River basins.
 Countries: Brazil
 Remarks and references: Redescribed in Mees (1974).

ENTOMOCORUS

Entomocorus Eigenmann, 1917: 403. Type species: *Entomocorus benjamini* Eigenmann, 1917. Type by monotypy. Gender: masculine.

Entomocorus benjamini Eigenmann, 1917
Entomocorus benjamini Eigenmann, 1917: 403, pl. 41. Type locality: San Joaquin [Bolivia]. Holotype: FMNH 58109 [ex CM 7006a].
 Maximum length: 7 cm SL
 Distribution: South America: Upper Madeira River basin.
 Countries: Bolivia

Entomocorus gameroi Mago-Leccia, 1984
Entomocorus gameroi Mago-Leccia, 1984: 217, figs. 1-6. Type locality: Boca del Río Apurito en el Río Apuré, cerca de San Fernando de Apuré, Guárico State, Venezuela. Holotype: MBUCV V-13808.
 Maximum length: 7 cm SL
 Distribution: South America: Apuré River basin in Orinoco River drainage.
 Countries: Venezuela

EPAPTERUS

Epapterus Cope, 1878: 677. Type species: *Epapterus dispilurus* Cope, 1878. Type by monotypy. Gender: masculine. Revised, with a key to species, in Vari & Ferraris (1998).

Epapterus blohmi Vari, Jewett, Taphorn & Gilbert,

1984

Epapterus blohmi Vari, Jewett, Taphorn & Gilbert, 1984: 463, fig. 1. Type locality: Laguna Los Guácimos, a broad shallow lagoon located on Fundo Pecuario Masaguaral, Guarico State, Venezuela, 8°34'N, 67°35'W. Holotype: MBUCV V-14100.

Maximum length: 8.5 cm SL

Distribution: South America: Orinoco River basin and Tuy River of the Caribbean coast of Venezuela.

Countries: Venezuela

Remarks and references: Reviewed in Vari & Ferraris (1998).

Epapterus dispilurus Cope, 1878

Epapterus dispilurus Cope, 1878: 677. Type locality: Peruvian Amazon. Lectotype: ANSP 21353, designated by Fowler (1941).

Euanemus longipinnis Steindachner, 1881b: 17. Type locality: Hyavary [=Rio Javary (Javari)]. Lectotype: NMW 46682.1, designated by Vari & Ferraris (1998: 992).

Epapterus chaquensis Risso & Risso, 1962: 5, figs. 1-3. Type locality: La laguna concida como "del Golf", en la proximidades de la ciudad de Resistencia, Provincia del Chaco, Argentina. Holotype: Univ. Nac. del Nordeste 17/VII/961-1.

Maximum length: 12.3 cm SL

Distribution: South America: Central and western parts of the Amazon River basin along and south of the main channel of the Amazon River, and Paraguay River basin in Paraguay, northern Argentina and southern Brazil.

Countries: Argentina, Bolivia, Paraguay, Peru

Remarks and references: Redescribed in Vari & Ferraris (1998).

Common names: Maparate (Peru)

GELANOGLANIS

Gelanoglanis Böhlke, 1980: 150. Type species: *Gelanoglanis stroudi* Böhlke, 1980. Type by original designation. Gender: masculine.

Gelanoglanis nanonotocolus Soares-Porto, Walsh, Nico & Netto, 1999

Gelanoglanis nanonotocolus Soares-Porto, Walsh, Nico & Netto, 1999: 65, fig. 1. Type locality: Venezuela: Amazonas State: Río Asisa 22-30 km upstream from confluence with Río Paru, Río Ventuari drainage, Orinoco River basin (approximately 4°33'N, 65°54'W). Holotype: MCNG 22690.

Maximum length: 2.22 cm SL

Distribution: South America: Asisa River basin in Orinoco drainage and Negro River basin.

Countries: Brazil, Venezuela

Gelanoglanis stroudi Böhlke, 1980

Gelanoglanis stroudi Böhlke, 1980: 152, fig. 1. Type locality: Colombia, Depto. Meta, Río Metica, ca. 22 km (air) SW of Puerto Lopez and 3 km SE of Hacienda Mozambique, 3°56'42"N, 73°02'23"W. Holotype: ANSP 142937.

Maximum length: 3.6 cm SL

Distribution: South America: Meta, Apure and Masparro River basins.

Countries: Colombia, Venezuela

GLANIDIUM

Glanidium Lütken, 1874b: 31. Type species: *Glanidium albescens* Lütken, 1874. Type by monotypy. Gender: neuter.

Gephyromochlus Hoedeman, 1961: 135. Type species: *Centromochlus (Gephyromochlus) leopardus* Hoedeman, 1961. Type by monotypy. Gender: masculine.

Glanidium albescens Lütken, 1874

Glanidium albescens Lütken, 1874b: 31. Type locality: Rio das Velhas [Minas Gerais, Brazil]. Syntypes: MNHN 9571 (1); NMW 46572 (1); ZMB 9176 (1); ZMUC 335-338, 341-342 (6).

Distribution: South America: Das Velhas River basin.

Countries: Brazil

Glanidium catharinensis Miranda Ribeiro, 1962

Glanidium catharinensis Miranda Ribeiro, 1962: 3, fig. 2. Type locality: Rio do Braço do Norte, São Ludgero, Município de Tubarão, Estado de Santa Catarina, Brazil. Holotype: MNRJ 5169.

Maximum length: 8.8 cm SL

Distribution: South America: Tubarão River basin in Santa Catarina State.

Countries: Brazil

Glanidium cesarpinto Ihering, 1928

Glanidium cesarpinto Ihering, 1928: 46, fig. 1. Type locality: Cachoeira de Emas (Pirassununga), Rio Mogy-guassú, Est. de S. Paulo, Brazil. Syntypes: (3), location unknown.

Distribution: South America: Mogi-guassú River basin, São Paulo State.

Countries: Brazil

Glanidium leopardum (Hoedeman, 1961)

Centromochlus (Gephyromochlus) leopardus Hoedeman, 1961: 135, fig. 3. Type locality: Litany River, village Aloiké, sta. 295 [French Guiana]. Holotype: ZMA 102233.

Maximum length: 10.9 cm SL

Distribution: South America: Coastal rivers of the Guianas.

Countries: French Guiana, Guyana, Suriname

Glanidium melanopteron Miranda Ribeiro, 1918

Glanidium melanopteron Miranda Ribeiro, 1918: 643. Type locality: Piquete, S. Paulo [Brazil]. Lectotype: MZUSP 345, designated in Britski (1969).

Maximum length: 15.1 cm SL

Distribution: South America: Piquete, São Paulo, Brazil.

Countries: Brazil

Glanidium ribeiroi Haseman, 1911

Glanidium ribeiroi Haseman, 1911: 381, pl. 78. Type locality: Porto União da Victoria, Paraná, Brazil, from Rio Iguassú. Holotype: FMNH 54253.

Distribution: South America: Iguazu River basin.

Countries: Brazil

LIOSOMADORAS

Liosomadoras Fowler, 1940: 226. Type species: *Liosomadoras morrowi* Fowler, 1940. Type by original designation. Gender: masculine.

Liosomadoras morrowi Fowler, 1940

Liosomadoras morrowi Fowler, 1940: 226, fig. 13. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68646.

Distribution: South America: Ucayali River basin.

Countries: Peru

Liosomadoras oncinus (Jardine, 1841)

Arius oncinus Jardine in Schomburgk, 1841: 173, pl. 4. Type locality: Padauri River No types known. Name spelled *oncinus* in text, *oncina* on figure caption. Mees (1978) serves as first reviser in selecting *oncinus*.

Maximum length: 17 cm TL

Distribution: South America: Branco River basin.

Countries: Brazil

PSEUDAUCHENIPTERUS

Pseudauchenipterus Bleeker, 1862: 6. Type species: *Silurus nodosus* Bloch, 1794. Type by original designation. Gender: masculine.

Silvaichthys Fernández-Yépez, 1973: [3]. Type species: *Silvaichthys aguilerae* Fernández-Yépez, 1973. Type by original designa-

tion. Gender: masculine.

***Pseudauchenipterus affinis* (Steindachner, 1877)**

Auchenipterus (Pseudauchenipterus) affinis Steindachner, 1877: 651. Type locality: Rio S. Matheus; Rio Mucury bei Porto Allegre [Brazil]. Syntypes: NMW 47384-87 (8).

Maximum length: 12 cm SL

Distribution: South America: Mucuri and São Mateus River basins.

Countries: Brazil

***Pseudauchenipterus flavescens* (Eigenmann & Eigenmann, 1888)**

Felichthys flavescens Eigenmann & Eigenmann, 1888: 152. Type locality: Rio San Francisco [Brazil]. Holotype: MCZ 7362.

Distribution: South America: São Francisco River basin.

Countries: Brazil

***Pseudauchenipterus jequitinhonhae* (Steindachner, 1877)**

Auchenipterus (Pseudauchenipterus) Jequitinhonhae Steindachner, 1877: 647, pl. 6 (fig. 1). Type locality: Rio Jequitinhonha, Brazil. Syntypes: NMW 19785-92 (8).

Maximum length: 11 cm SL

Distribution: South America: Jequitinhonha River basin.

Countries: Brazil

***Pseudauchenipterus nodosus* (Bloch, 1794)**

Silurus nodosus Bloch, 1794: 35, pl. 368 (fig. 1). Type locality: Tranquebar [South America]. Syntypes: ZMB 3096, 3097.

Auchenipterus furcatus Valenciennes in Cuvier & Valenciennes, 1840: 211 (157 in Strasbourg deluxe ed.). Type locality: Cayenne ou de Surinam. Syntypes: MNHN B.213 (1), 3049 (1), A.8855 (1).

Pseudauchenipterus guppyi Regan, 1906: 387, pl. 23 (not 24 as stated in the species account). Type locality: Caroni River [Trinidad]. Syntypes: BMNH 1906.6.23.49-50.

Pseudauchenipterus nigrolineatus Fowler, 1911: 434, fig. 5. Type locality: Pedernales, Venezuela. Holotype: ANSP 37876.

Silvaichthys aguilerae Fernández-Yépez, 1973: [4], unnumbered fig. Type locality: Gulfo de Paria, noreste de Venezuela, frente a IRAPA, Estado Suene. Syntypes: (4) originally as "Holotipo macho AFY 731.201, Holotipo hembra AFY 731.202, y los paratipos ... AFY 731.203 (2);" said to have been transferred to ANSP, but there are no records of the specimens having been cataloged there.

Maximum length: 22 cm SL

Distribution: South America: Lower reaches of rivers and into estuaries from Venezuela to Brazil, at least to Bahia, including southern Trinidad.

Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela

PSEUDEPAPTERUS

Pseudepapterus Steindachner, 1915b: 199. Type species: *Auchenipterus (Pseudepapterus) hasemani* Steindachner, 1915. Type by monotypy. Gender: masculine. Revised, with a key to species, in Ferraris & Vari (2000).

***Pseudepapterus cucuhyensis* Böhlke, 1951**

Pseudepapterus cucuhyensis Böhlke, 1951: 38, fig. 1. Type locality: Sandbank at Cucuhy on the Columbian [sic] border, Rio Negro, Brazil. Holotype: SU 16788.

Maximum length: 5.9 cm SL

Distribution: South America: Amazon and Negro River basins.

Countries: Brazil

Remarks and references: Redescribed in Ferraris & Vari (2000).

***Pseudepapterus gracilis* Ferraris & Vari, 2000**

Pseudepapterus gracilis Ferraris & Vari, 2000: 109, fig. 5. Type locality: Venezuela, Bolivar, Caño Chuapo, approximately 20 minutes downstream from Jabillal (on opposite bank) along Rio Caura, 7°07'N, 65°00'W. Holotype: ANSP 139502.

Maximum length: 8.1 cm SL

Distribution: South America: Caura River basin.

Countries: Venezuela

***Pseudepapterus hasemani* (Steindachner, 1915)**

Auchenipterus (Pseudepapterus) hasemani Steindachner, 1915b: 199. Type locality: Pará (Belem) [Brazil]. Holotype: NMW 47397.

Maximum length: 9.9 cm SL

Distribution: South America: Amazon River and many of its major tributary rivers, and Tocantins River basin.

Countries: Brazil, Peru

Common names: Bagre (Peru)

PSEUDOTATIA

Pseudotatia Mees, 1974: 105. Type species: *Pseudotatia parva* Mees, 1974. Type by original designation. Gender: feminine.

***Pseudotatia parva* Mees, 1974**

Pseudotatia parva Mees, 1974: 105, fig. 29. Type locality: Joazeiro, Brazil. Holotype: FMNH 70580.

Maximum length: 4.6 cm SL

Distribution: South America: São Francisco River basin.

Countries: Brazil

TATIA

Tatia Miranda Ribeiro, 1911: 360. Type species: *Centromochlus intermedius* Steindachner, 1877. Type by subsequent designation by Jordan (1920: 545). Gender: feminine.

***Tatia aulopygia* (Kner, 1858)**

Centromochlus aulopygius Kner, 1858: 432, pl. 8 (fig. 25). Type locality: Rio Guaporé [Brazil]. Syntypes: NMW 47329-33 (15), 47388 (1).

Maximum length: 6.5 cm TL

Distribution: South America: Guaporé River basin.

Countries: Brazil

***Tatia boemia* Koch & Reis, 1996**

Tatia boemia Koch & Reis, 1996: 86, fig. 2. Type locality: Rio Pelotas (tributary of the Rio Uruguai) approx. 27°47'S, 51°11'W, Rio Grande do Sul, Brazil. Holotype: MCP 17438.

Maximum length: 6.9 cm SL

Distribution: South America: Upper Uruguay River basin.

Countries: Brazil

***Tatia brunnea* Mees, 1974**

Tatia brunnea Mees, 1974: 84, fig. 21. Type locality: Compagnie Kreek [Suriname]. Holotype: RMNH 26196.

Maximum length: 7 cm SL

Distribution: South America: Suriname and Marowijne River basins.

Countries: French Guiana, Suriname

***Tatia creutzbergi* (Boeseman, 1953)**

Centromochlus creutzbergi Boeseman, 1953: 7, fig. 1c. Type locality: Djaijkreek, Surinam. Holotype: RMNH.

Maximum length: 3.3 cm SL

Distribution: South America: Suriname coastal rivers and Cudajas.

Countries: Brazil, Suriname

Remarks and references: Redescribed by Mees (1974).

***Tatia dunnii* Fowler, 1945**

Centromochlus dunnii Fowler, 1945: 111, fig. 11. Type locality: Morelia, Río Caquetá drainage, Colombia. Holotype: ANSP

71705.

Maximum length: 12 cm SL

Distribution: South America: Caquetá River basin.

Countries: Colombia

***Tatia galaxias* Mees, 1974**

Tatia galaxias Mees, 1974: 86, fig. 23. Type locality: Caño de Quiribana into Río Orinoco, Venezuela. Holotype: CAS 6567.

Maximum length: 9 cm TL

Distribution: South America: Middle Orinoco River basin.

Countries: Venezuela

***Tatia gyrina* (Eigenmann & Allen, 1942)**

Centromochlus gyrinus Eigenmann & Allen, 1942: 118, pl. 5 (fig. 4). Type locality: Río Itaya, Iquitos [Peru]. Holotype: CAS 36979 [ex IU 15795].

Maximum length: 4 cm

Distribution: South America: Upper Amazon River basin.

Countries: Peru

Common names: Kere kere (Peru)

***Tatia intermedia* (Steindachner, 1877)**

Centromochlus intermedius Steindachner, 1877: 664. Type locality: Marabitanos, Pará, Brazil. Holotype: NMW 47355.

Maximum length: 12 cm SL

Distribution: South America: Amazon River basin and rivers of Guianas.

Countries: Brazil, French Guiana, Guyana, Peru

Common names: Kere kere (Peru)

***Tatia musaica* Royero, 1992**

Tatia musaica Royero, 1992: 301, fig. 1. Type locality: Río Atuana, Caño Cabeza de Manteco, aproximadamente a 12 kms debajo del raudel Perezza, en el piedemonte del tepui Autana, Territorio Federal, Amazonas, Venezuela, 4°47'N, 67°23'W. Holotype: MBUCV-V15663.

Maximum length: 4.7 cm SL

Distribution: South America: Atabapo and Autana River basins in upper Orinoco River drainage.

Countries: Venezuela

***Tatia neivai* (Ihering, 1930)**

Glanidium neivai Ihering, 1930: 99, pl. 13 (fig. 1). Type locality: Piracicaba, Rio Piracicaba, Est. de S. Paulo [Brazil]. Holotype: not found.

Maximum length: 5.7 cm SL

Distribution: South America: Piracicaba River basin in São Paulo State.

Countries: Brazil

***Tatia perugiae* (Steindachner, 1882)**

Centromochlus Perugiae Steindachner, 1882a: 178. Type locality: Canelos [Ecuador]. Syntypes: NMW 47358 (3), SMF 5355 (1). Species described in more detail and illustrated in Steindachner (1882b: 29, pl. 7, figs. 2-2a).

Maximum length: 5 cm SL

Distribution: South America: Upper Amazon River basin.

Countries: Ecuador, Peru

Common names: Pirillo (Peru)

***Tatia simplex* Mees, 1974**

Tatia simplex Mees, 1974: 90, fig. 26. Type locality: Xaventina house beach, Rio das Mortes, Mato Grosso, Brazil. Holotype: BMNH 1971.7.29.5.

Maximum length: 2.8 cm SL

Distribution: South America: Das Mortes River in Mato Grosso State.

Countries: Brazil

***Tatia strigata* Soares-Porto, 1995**

Tatia strigata Soares-Porto, 1995: 202, fig. 1. Type locality: Brazil, Amazonas, Municipio de Maués, Igarapé Limãozinho. Holotype: MZUSP 44065.

Distribution: South America: Amazon River basin and upper reaches of the Orinoco River.

Countries: Brazil, Venezuela

TETRANEMATICHTHYS

Tetranematichtys Bleeker, 1858: 357. Type species: *Ageneosus quadrifilis* Kner, 1858. Type by monotypy. Gender: masculine.

***Tetranematichtys quadrifilis* (Kner, 1858)**

Ageneosus quadrifilis Kner, 1858: 442, pl. 9 (fig. 29). Type locality: Rio Guaporé [Brazil]. Holotype: NMW 43343.

Maximum length: 16 cm SL

Distribution: South America: Amazon and Orinoco River basins.

Countries: Brazil, Colombia, Venezuela

TOCANTINSIA

Tocantinsia Mees, 1974: 108. Type species: *Tocantinsia depressa* Mees, 1974. Type by original designation. Gender: feminine.

***Tocantinsia piresi* (Miranda Ribeiro, 1920)**

Glanidium piresi Miranda Ribeiro, 1920: 14, unnumbered pls. 15-17. Type locality: Rio S. Manoel [Mato Grosso, Brazil]. ?MNRJ.

Tocantinsia depressa Mees, 1974: 108, fig. 30. Type locality: Tocantins near Porto Nacional, Goyaz, Brazil. Holotype: CAS 6573.

Maximum length: 10 cm SL

Distribution: South America: Upper Tocantins River basin.

Countries: Brazil

Remarks and references: Synonymy follows Mees (1984).

TRACHELYICHTHYS

Trachelyichthys Mees, 1974: 111. Type species: *Trachelyichthys decaradiatus* Mees, 1974. Type by original designation. Gender: masculine.

***Trachelyichthys decaradiatus* Mees, 1974**

Trachelyichthys decaradiatus Mees, 1974: 112, fig. 31. Type locality: Karanambo area, Rupununi, British Guiana [= Guyana]. Holotype: BMNH 1971.7.29.30.

Maximum length: 8 cm SL

Distribution: South America: Rupununi River basin.

Countries: Guyana

***Trachelyichthys exilis* Greenfield & Glodek, 1977**

Trachelyichthys exilis Greenfield & Glodek, 1977: 49, fig. 2. Type locality: Río Mamón, a tributary of Río Nanay, approximately 25 km west of Iquitos, 3°42'S, 73°16'W, Peru. Holotype: FMNH 80476.

Maximum length: 8 cm SL

Distribution: South America: Nanay River basin in upper Amazon River drainage.

Countries: Peru

Common names: Cunshi novia (Peru)

TRACHELYOPTERICHTHYS

Trachelyopterichthys Bleeker, 1862: 16. Type species: *Trachelyopterus taeniatus* Kner, 1858. Type by original designation. Gender: masculine.

***Trachelyopterichthys anduzei* Ferraris & Fernandez, 1987**

Trachelyopterichthys anduzei Ferraris & Fernandez, 1987: 257, fig. 1. Type locality: Laguna de Carida at the mouth of Caño Carida, Río Orinoco, Terr. Federal Amazonas, Venezuela. Holo-

type: MBUCV V-14627.
 Maximum length: 14 cm SL
 Distribution: South America: Upper Orinoco River basin.
 Countries: Venezuela

***Trachelyopterichthys taeniatus* (Kner, 1858)**

Trachelyopterus taeniatus Kner, 1858: 434, pl. 8 (fig. 26). Type locality: Rio Guaporé [Brazil]. Holotype: NMW 43346.
 Maximum length: 15 cm TL
 Distribution: South America: Upper Amazon River basin.
 Countries: Brazil, Venezuela

TRACHELYOPTERUS

Trachelyopterus Valenciennes in Cuvier and Valenciennes, 1840: 220 (163 in Strasbourg deluxe ed.). Type species: *Trachelyopterus coriaceus* Valenciennes, 1840. Type by monotypy. Gender: masculine.

Parauchenipterus Bleeker, 1862: 7. Type species: *Silurus galeatus* Bloch [= *Silurus galeatus* Linnaeus, 1766]. Type by original designation. Gender: masculine.

***Trachelyopterus albicrux* (Berg, 1901)**

Trachycorystes albicrux Berg, 1901: 303. Type locality: Río de la Plata, cerca de la embocadura del Río Santiago, Buenos Aires [Argentina]. Holotype: MACN 5161.
 Maximum length: 14 cm TL
 Distribution: South America: La Plata River basin.
 Countries: Argentina

***Trachelyopterus amblops* (Meek & Hildebrand, 1913)**

Felichthys amblops Meek & Hildebrand, 1913: 77. Type locality: Río Tuyra, Marriganti, Panama. Holotype: FMNH 7576.
 Maximum length: 19 cm SL
 Distribution: Central America: Tuira River basin.
 Countries: Panama

***Trachelyopterus ceratophysus* (Kner, 1858)**

Auchenipterus ceratophysus Kner, 1858: 427, pl. 7 (fig. 23). Type locality: Rio Guaporé, Rio Branco, und Rio Negro [Brazil]. Syntypes: NMW 47390-93 (4), 50585 (1).
 Distribution: South America: Guaporé, Branco, and Negro River basins.
 Countries: Brazil

***Trachelyopterus coriaceus* Valenciennes, 1840**

Trachelyopterus coriaceus Valenciennes in Cuvier & Valenciennes, 1840: 221 (164 in Strasbourg deluxe ed.), fig. 438. Type locality: Unknown [= Cayenne, French Guiana]. Holotype: MNHN B.242.

Trachelyopterus coriaceus maculosus Eigenmann & Eigenmann, 1888: 157. Type locality: Rio Xingu at Porto do Moz, Amazon delta, Pará, Brazil. Holotype: MCZ 7337.

Maximum length: 18 cm TL
 Distribution: South America: Coastal rivers of Guianas and Brazil and Amazon River basin.
 Countries: Brazil, French Guiana

***Trachelyopterus fisheri* (Eigenmann, 1916)**

Trachycorystes fisheri Eigenmann, 1916: 82. Type locality: Río Sucio [Colombia]. Holotype: FMNH 57695 [ex CM 6667a].
 Maximum length: 28 cm TL
 Distribution: South America: Sucio River basin.
 Countries: Colombia

***Trachelyopterus galeatus* (Linnaeus, 1766)**

Silurus galeatus Linnaeus, 1766: 503. Type locality: in America australi. No types known.
Auchenipterus maculosus Valenciennes, 1840: 216 (161 in Strasbourg deluxe ed.). Type locality: Cayenne [French Guiana]. Syn-

types: MNHN A.8856; ?RMNH D3007.

Parauchenipterus paseae Regan, 1906: 387, pl. 24 (not 23 as stated in account). Type locality: Caroni River [Trinidad]. Holotype: BMNH 1906.6.23.48.

Maximum length: 22 cm SL
 Distribution: South America: Widespread in northern South America.
 Countries: Brazil, French Guiana, Peru, Suriname, Trinidad and Tobago
 Common names: Jauzinho (Brazil)

***Trachelyopterus insignis* (Steindachner, 1878)**

Auchenipterus Magdalenae Steindachner, 1878: 89. Type locality: Magdalenen-Stromes [Colombia]. Syntypes: NMW 47409-12 (4).

Auchenipterus insignis Steindachner, 1878: 89. Type locality: Magdalenen-Stromes [Colombia]. Syntypes: NMW (several).

Maximum length: 20 cm SL
 Distribution: South America: Lower Magdalena River basin.
 Countries: Colombia
 Remarks and references: The name *insignis* given precedence over *magdalenae* by first reviser action of Miles (1947: 73).
 Common names: Chivo (Colombia), Rengue (Colombia)

***Trachelyopterus lacustris* (Lütken, 1874)**

Auchenipterus lacustris Lütken, 1874b: 30. Type locality: Rio das Velhas et in lacu Lagoa Santa [Minas Gerais, Brazil]. Syntypes: ?NMW 47402; ZMB 9179; ZMUC 91, 97 (Rio das Velhas), ZMUC 92-93 (Lagoa Santa).

Distribution: South America: Das Velhas River and Lagoa Santa basins.
 Countries: Brazil

***Trachelyopterus leopardinus* (Borodin, 1927)**

Trachycorystes leopardinus Borodin, 1927: 3, fig. 2. Type locality: Rio S. Francisco, Minas Geraes [sic] Province, Brazil. Holotype: AMNH 8637.

Maximum length: 18 cm TL
 Distribution: South America: São Francisco River basin.
 Countries: Brazil

***Trachelyopterus lucenai* Bertoletti, da Silva, & Pereira, 1995**

Trachelyopterus lucenai Bertoletti, da Silva & Pereira, 1995: 71, fig. 2-3. Type locality: Rio Jacuí at Saco do Quilombo, Ilha das Flores, Porto Alegre, Rio Grande do Sul, Brazil, approximately 29°58'S, 51°15'W. Holotype: MCP 17174.

Maximum length: 16.5 cm SL
 Distribution: South America: Jacuí River basin in Rio Grande do Sul State.
 Countries: Brazil

***Trachelyopterus peloichthys* (Schultz, 1944)**

Trachycorystes insignis peloichthys Schultz, 1944: 236, pl. 4 (fig. A). Type locality: Río Agua Caliente, 2 to 3 km above Lake Maracaibo, Venezuela. Holotype: USNM 121281.

Maximum length: 20 cm TL
 Distribution: South America: Maracaibo River basin.
 Countries: Venezuela

***Trachelyopterus striatulus* (Steindachner, 1877)**

Auchenipterus (Pseudauchenipterus) striatulus Steindachner, 1877: 656, pl. 5. Type locality: Rio Parahyba, Rio Doce, Rio Mucury [Brazil]. Syntypes: MCZ 25506 (1); NMW 10852 (1), 47445-47 (8).

Distribution: South America: Coastal rivers in southeastern Brazil.
 Countries: Brazil
 Common names: Jauzinho (Brazil)

***Trachelyopterus teaguei* (Devincenzi, 1942)**

Trachycorystes teaguei Devincenzi in Devincenzi & Teague, 1942: 37, pl. 7 (figs. 1-2). Type locality: Río Queguay [Río Uruguay, Paysandú, Uruguay]. Holotype: MHNM CI 350.

Maximum length: 19.6 cm SL

Distribution: South America: Queguay River basin in lower Uruguay River drainage.

Countries: Uruguay

Species inquirendae

Auchenipterus immaculatus Valenciennes, 1840: 218 (161 in Strasbourg deluxe ed.). Type locality: Cayenne. Holotype: RMNH 3008. For information on type locality see Boeseman 1972: 302.

Auchenipterus robustus Günther, 1864: 197. Type locality: Demerara [Guyana]. Holotype: BMNH uncat..

Auchenipterus glaber Steindachner, 1877: 655. Type locality: Demerara [Guyana]. Holotype: NMW (not found).

Auchenipterus isacanthus Cope, 1878: 677. Type locality: Peruvian Amazon. Syntypes: ANSP 21444-45 (2).

Auchenipterus brevibarbis Cope, 1878: 676. Type locality: Peruvian Amazon. Holotype: ANSP 21519.

Trachycorystes analis Eigenmann & Eigenmann, 1888: 156. Type locality: Arary [= Lago Arari, Pará, Brazil]. Holotype: MCZ 7354.

Trachycorystes insignis badeli Dahl, 1955: 13, fig. on p. 14. Type locality: Cereté [Colombia]. Holotype: whereabouts unknown.

Trachycorystes jokeanna Hoedeman, 1961: 138. Type locality: French Guiana, Ile de Cayenne, ruisseaux du Rorota. Holotype: ZMA 102371.

TRACHYCORYSTES

Trachycorystes Bleeker, 1858: 200. Type species: *Auchenipterus trachycorystes* Valenciennes, 1840. Type by absolute tautonymy. Gender: masculine.

Trachycorystes cratensis Miranda Ribeiro, 1937

Trachycorystes cratensis Miranda Ribeiro, 1937: 55. Type locality: Rio Granjeiro, Crato, Ceará [Brazil]. Holotype: MNRJ 947.

Distribution: South America: Granjeiro River basin in Ceará State.

Countries: Brazil

Trachycorystes obscurus (Günther, 1863)

Auchenipterus obscurus Günther, 1863: 442. Type locality: the Essequibo Guiana [= Guyana]. Syntypes: BMNH 1864.1.21.13-14 (2).

Distribution: South America: Essequibo River basin.

Countries: Guyana

Trachycorystes trachycorystes (Valenciennes, 1840)

Auchenipterus trachycorystes Valenciennes in Cuvier & Valenciennes, 1840: 214 (159 in Strasbourg deluxe ed.), pl. 437. Type locality: Bresil [= Brazil]. Holotype: MNHN A.9422.

Trachycorystes typus Bleeker, 1862: 6. Type locality: Bresil [= Brazil]. Holotype: MNHN A.9422. Unneeded replacement for *Auchenipterus trachycorystes* Valenciennes, 1840, therefore taking the same type.

Maximum length: 35 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

GENUS INQUIRENDUM

Laimumena Sauvage, 1884: 147. Type species: *Laimumena barbonica* Sauvage, 1884. Type by monotypy. Gender: feminine.

SPECIES INQUIRENDAE

Arius obesus Jardine in Schomburgk, 1841: 174. Type locality: Rio Branco. No types known.

Laimumena barbonica Sauvage, 1884: 147. Type locality: Réunion I. No types known. Original stated locality (Réunion I.) probably in error, appears to be a South American species referable to the family Auchenipteridae.

Pimelodus coeruleus La Cepède, 1803: 95, 103. Type locality: Cayenne. No types known. Name spelled *coeruleus* on p. 95; *caeruleus* on 103.

Trachycorystes porosus Eigenmann & Eigenmann, 1888: 154. Type locality: Brazil. Syntypes: MCZ 7351 (2).

Family Gymnotidae (Naked-back knifefishes)

Ricardo Campos-da-Paz

For much of the 20th Century, the family Gymnotidae was considered monotypic, only including the genus *Gymnotus* Linnaeus (e.g., Mago-Leccia, 1994). That situation changed, however, when Albert and Campos-da-Paz (1998) presented an extensive re-evaluation of gymnotiform higher-level systematics and taxonomy, and proposed the inclusion of *Electrophorus* Gill in that family, a suggestion recently followed by Albert (2001). In fact, a close relationship between those two genera had been noticed by a number of authors (e.g., Regan, 1911; Ellis, 1913) long before cladistic methods became established as the current paradigm in Comparative Biology.

The Gymnotidae (i.e., the *Gymnotus* plus *Electrophorus* group), according to recent studies by Albert and Campos-da-Paz (1998) and Albert (2001), for instance, should be viewed as the sister-group to all remaining gymnotiforms; alternative phylogenetic schemes, however, are available (e.g., Triques, 1993; Gayet et al., 1994; Alves-Gomes et al., 1995), and the reader is referred to a presentation by Campos-da-Paz and Albert (1998), and Albert (2001), where more detailed historical analyses concerning that subject are offered.

Compared to closely related gymnotiforms, members of both gymnotid genera have a more cylindrical body (sometimes referred to as "sub-cylindrical"; vs. compressed body), depressed head, and considerably shorter tails (i.e., ca. 4-10% of body length to the end of anal fin [LEA] in *Gymnotus* and juveniles of *Electrophorus* [adults in this latter genus have no tail at all] vs. 20-80% of LEA). *Gymnotus* species all present cycloid scales, superior mouth, the lower jaw conspicuously prognathous, and are only weakly electric; *Electrophorus*, on the other hand, has no scales, and terminal mouth. The single species currently assigned to that genus, *E. electricus* (Linnaeus, 1766) (i.e., the notorious "electric eel", or "poraquê") is strongly electric, with larger adults capable of shocks approaching 500-600V. Gymnotids are usually aggressive nocturnal predators, with a number of species exhibiting territorial behavior and building nests. They also can breathe atmospheric air - individuals of *Gymnotus* species are able to use part of their swim-bladder system for doing that in certain occasions, while members of *Electrophorus*, considered obligatory air-breathers, have a vascularized oral respiratory organ.

Gymnotus, although formally established by Linnaeus in 1758, was at that time known from previous contributions (e.g., Artdi, 1738; Linnaeus, 1746, 1749, and 1754). Despite a number of morphological characters have been presented in available literature as diagnostic of *Gymnotus* within the Gymnotiformes (e.g., Mago-Leccia, 1994), monophyly of that genus was only recently discussed in a more objective framework (e.g., Campos-da-Paz and Costa, 1996). As previously noted (e.g., Albert and Miller, 1995), *Gymnotus* stands as the most widespread genus in that order, with its included members being reported in shallow-water habitats from South America (in Argentina, approximately 35°S), to North America (in Mexico, approximately 18°N), with records also in Trinidad, Granada, and Trans-Andean regions of Colombia and Ecuador (e.g., Eigenmann and Ward, 1905; Ellis, 1913; Eigenmann and Fisher, 1914). That genus currently includes eighteen valid species (see below; commonly named in Brazil as "sarapó", or "carapó"), representing one of the most diverse gymnotiform genera (descriptions of additional new species are currently being presented elsewhere; J. S. Albert and W. G. R. Crampton, pers. comm.). Moreover, many undescribed forms are represented in museum collections and await formal descriptions (pers. obs.).

Electrophorus, in turn, has been poorly investigated objectively concerning its taxonomy and, as a result, currently stands as monotypic. A species described more than six decades ago from Peru (*E. multivalvulus* Nakashima, 1941) remains uncertain concerning its taxonomic status. Difficulties for obtaining good series including a number of adult individuals (which can grow to usually 1-2 meters long) are one of the main problems precluding major investigations leading to the establishment of new species in that genus. Populations of *Electrophorus* are widespread in shallow-water habitats throughout northern South America (especially in the Amazon and Orinoco River basins), including small streams ("igrapés"), lakes and muddy-waters systems.

ELECTROPHORUS

Electrophorus Gill, 1864: 152. Type species: *Gymnotus electricus* Linnaeus, 1766. Type by monotypy. Gender: masculine.

***Electrophorus electricus* (Linnaeus, 1766)**

Gymnotus tremulus Houuttyn, 1764: 111. Type locality: Not stated in the original description. No types known. A specimen de-

scribed and figured by Seba (1758, III, pl. 34, fig.6), and possibly currently housed in RMNH, probably deserves a type status; see "Remarks" below.

Gymnotus electricus Linnaeus, 1766: 427. Type locality: in Suriname aliisque Americae meridionalis ostiis fluviorum [= Suriname]. No types known. A specimen described and figured by Seba (1758, III, pl. 34, fig.6), and possibly currently housed in

RMHN, probably deserves a type status; see "Remarks" below.
Gymnotus Regius Chiaje, 1847a: 273. Type locality: South America [apparently indicated (erroneously) as "Rio-Gianeiro" (Chiaje, 1847b: 3)]. No types known.
Electrophorus multivalvulus Nakashima, 1941: 462, fig. on p. 465. Type locality: la cocha Zapote, del rio Pacaya, departamento de Loreto, Peru. No types known. Specific name spelled *multivalvulus* in table on p. 463.
 Maximum length: 250 cm SL
 Distribution: South America: Amazon and Orinoco River basins, and related areas in northern South America.
 Countries: Brazil, French Guiana, Guyana, Peru, Suriname, Venezuela
 Remarks and references: If confirmed as having been actually made available before *Gymnotus electricus* Linnaeus (1766), *Gymnotus tremulus* Houttuyn (1764) should be regarded as the senior synonym. However, following Articles 23.9.1 and 23.9.2 of the Code (ICZN, 1999), *Gymnotus electricus* must be regarded as the valid name, and qualified as a nomen protectum, and *Gymnotus tremulus* as a nomen oblitum. It seems that both Houttuyn's (1764) and Linnaeus' (1766) descriptions were based on previous descriptions by other authors (i.e., primarily, Gronovius and Seba), and that no specimens were actually examined by these authors regarding their proposals of new species. Gronovius' specimen (or specimens) is currently probably lost, but Seba's specimen, which apparently have come from the Essequibo River (Seba, 1758, III, p.108, pl. 34, fig. 6) is probably housed in RMNH. That should, then, be considered the remaining name-bearing type for both names above (ICZN, 1999, Article 72.5.6).

GYMNOTUS

Gymnotus Linnaeus, 1758: 246. Type species: *Gymnotus carapo* Linnaeus, 1758. Type by Linnean tautonymy. Gender: masculine.
Gymnotus Bloch & Schneider (1801: 521) is an unjustified emendation of *Gymnotus* Linnaeus. Until the first years of the 20th Century, most authors dealing with the Gymnotidae established great confusion concerning the names *Gymnotus* Linnaeus, *Carapus* Cuvier, and *Giton* Kaup. While *Carapus* and *Giton* were frequently used to include species referred herein to *Gymnotus*, this latter was used to include only the nominal *Gymnotus electricus* (= *Electrophorus electricus*).
Carapus Cuvier, 1816: 237. Type species: *Gymnotus macrourus* Bloch & Schneider, 1801. Gender: masculine. Type species designation not by monotypy, because additional species are cited along with *Gymnotus macrourus* in original description of the genus; type species, perhaps, *Gymnotus fasciatus* Pallas, 1767, by subsequent designation by Müller (1846: 194). Preoccupied by *Carapus* Rafinesque, 1810 in fishes; replaced by *Giton* Kaup, 1856.
Carapo Oken, 1817: 101. Type species: *Gymnotus fasciatus* Pallas, 1767 (?). Gender: masculine.
Giton Kaup in Duméril, 1856: 201. Type species: *Gymnotus fasciatus* Pallas, 1767. Gender: masculine. Apparently proposed as a replacement name for *Carapus* Cuvier.

***Gymnotus anguillaris* Hoedeman, 1962**

Gymnotus anguillaris Hoedeman, 1962: 55, figs. 1b, 2. Type locality: Surinam, Coropina Creek, sta. 18, pool. Holotype: ZMA 100338.
Gymnotus coropinae Hoedeman, 1962: 55, fig. 1c. Type locality: Surinam, Coropina Creek, sta. 17. Holotype: ZMA 100185.
 Maximum length: 30 cm SL
 Distribution: South America: Amazon and Orinoco River basins, and related areas in northern South America.
 Countries: French Guiana, Suriname

***Gymnotus arapaima* Albert & Crampton, 2001**

Gymnotus arapaima Albert & Crampton, 2001: 250, fig. 6. Type

locality: Brazil: Amazonas: Paraná Apara: 10 km nw of confluence of Juruá and Solimões rivers, Mamirauá Reserve, 3°20'S, 64°51'W. Holotype: INPA 13505.
 Maximum length: 35 cm TL
 Distribution: South America: Juruá and Solimões River basins.
 Countries: Brazil

***Gymnotus bahianus* Campos-da-Paz & Costa, 1996**

Gymnotus bahianus Campos-da-Paz & Costa, 1996: 938, fig. 1. Type locality: fazenda Almada, Ilhéus, approximately 14°49'S, 39°02'W, Rio Almada basin, State of Bahia, Brazil. Holotype: MNRJ 12316.
 Maximum length: 27.6 cm TL
 Distribution: South America: Known only from its type locality and surrounding areas, near Ilhéus, Bahia State.
 Countries: Brazil

***Gymnotus carapo* Linnaeus, 1758**

Gymnotus carapo Linnaeus, 1758: 246. Type locality: America. Syntypes: NRM 8224; UUZM 56. All collected in the 18th Century near paramaribo, Suriname.
Gymnotus albus Pallas, 1767: 36. Type locality: Not stated in original description. No types known.
Gymnotus fasciatus Pallas, 1767: 36. Type locality: Not stated in original description. No types known.
Gymnotus brachiurus Bloch, 1786: 61, pl. 157 (fig. 1). Type locality: Gewässern von Brasilien [p.62]. No types known.
Gymnotus putaol La Cèpède, 1800: 145, 176. Type locality: Brazil. No types known.
 Maximum length: 38 cm TL
 Distribution: North, Central, and South America: Southern Mexico to Paraguay, including Trinidad.
 Countries: Argentina, Bolivia, Brazil, French Guiana, Guatemala, Mexico, Paraguay, Trinidad and Tobago, Uruguay, Venezuela

***Gymnotus cataniapo* Mago-Leccia, 1994**

Gymnotus cataniapo Mago-Leccia, 1994: 90, fig. 100. Type locality: lagoon NE of Airport of San Carlos de Rio Negro, 1°55'N, 67°02'W, Territorio Amazonas, Venezuela. Holotype: MBUCV-V-14736.
 Maximum length: 31.6 cm TL
 Distribution: South America: Amazon and Orinoco River basins, and related areas in northern South America.
 Countries: Brazil, Colombia, Suriname, Venezuela

***Gymnotus coatesi* La Monte, 1935**

Gymnotus coatesi La Monte, 1935: 1, fig. 1. Type locality: rio Moju (State of Pará, Brazil), or some point close to that drainage. Holotype: AMNH 12624.
Rhamphichthys cingulatus Brind, 1935: 5, unnumbered fig. Type locality: one of the side streams which connect with the main stream of the Amazon River on its southern bank, about three hundred miles from Para at the mouth of the river. No types known.
 Maximum length: 30 cm TL
 Distribution: South America: Amazon River basin, and additional areas in northern South America.
 Countries: Brazil

***Gymnotus cylindricus* La Monte, 1935**

Gymnotus cylindricus La Monte, 1935: 2. Type locality: Brook east of Los Amates, Rio Motagua basin, Guatemala. Holotype: AMNH 1358.
 Distribution: Central America: Motagua River basin.
 Countries: Guatemala

***Gymnotus diamantinensis* Campos-da-Paz, 2002**

Gymnotus diamantinensis Campos-da-Paz, 2002: 187, fig. 1. Type locality: Creek (riacho 1) trib. of rio Preto, upper rio Arinos at rio Tapajós system, road to São Francisco, Diamantino municipality,

ca. 14°20'S, 56°30'W, Mato Grosso, Brazil. Holotype: MZUSP 57505

Distribution: South America: Tapajós River basin.

Countries: Brazil

***Gymnotus inaequilabiatus* (Valenciennes, 1839)**

Carapus inaequilabiatus Valenciennes, 1839: pl. 14. Type locality: Not stated in original description. Holotype: MNHN 4615.

Distribution: South America: Paraguay River basin (also probably in lower Paraná basin).

Countries: Argentina

Remarks and references: Sherborn & Griffin (1934) have reported that the plates with the figure of the holotype of the nominal *Carapus inaequilabiatus* was actually published in 1839, while the text description was published some years later (Valenciennes, 1847). In the text description, the generic name appears as *Carapeus* (a misspelling, Valenciennes, 1847: 11). The type locality of *Gymnotus inaequilabiatus* has been sometimes cited elsewhere as "Rio de La Plata" (e.g., Mago-Leccia, 1994: 55).

***Gymnotus jonasi* Albert & Crampton, 2001**

Gymnotus jonasi Albert & Crampton, 2001:253, fig. 8. Type locality: Brazil: Amazonas: Cano do Lago Rato, Mamirauá Reserve, 3°02'48"S, 65°51'22"W. Holotype: INPS 13507.

Maximum length: 13 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Gymnotus maculosus* Albert & Miller, 1995**

Gymnotus maculosus Albert & Miller, 1995: 666, fig. 1. Type locality: Diversion of channel from María Linda, 14°04'N, 90°37'W, c. 20 km East of Escuintla, Departamento Santa Rosa, Guatemala. Holotype: UMMZ 230830.

Distribution: Central America: Guatemala.

Countries: Guatemala

***Gymnotus mamiraua* Albert & Crampton, 2001**

Gymnotus mamiraua Albert & Crampton, 2001: 245, fig. 4. Type locality: Brazil: Amazonas: Cano do Lago Rato, Mamirauá Reserve, 3°02'36"S, 64°51'02"W. Holotype: INPA 13503.

Maximum length: 24 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil

***Gymnotus melanopleura* Albert & Crampton, 2001**

Gymnotus melanopleura Albert & Crampton, 2001: 258, fig. 14. Type locality: Brazil: Amazonas: Cano do Lago Rato, Mamirauá Reserve, 3°02'36"S, 64°51'02"W. Holotype: INPA 9966.

Maximum length: 10 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil

***Gymnotus onca* Albert & Crampton, 2001**

Gymnotus onca Albert & Crampton, 2001: 256, fig. 12. Type locality: Brazil: Amazonas: Cano do Lago Rato, Mamirauá Reserve, 3°36"S, 64°51'02"W. Holotype: INPA 11512.

Maximum length: 12 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil

***Gymnotus pantherinus* (Steindachner, 1908)**

Giton fasciatus var. *pantherinus* Steindachner, 1908: 129. Type locality: Gewässern von Santos [Brazil]. Syntypes: NMW 11275, 76443-4.

Distribution: South America: Coastal drainages in southeastern Brazil.

Countries: Brazil

***Gymnotus pedanopterus* Mago-Leccia, 1994**

Gymnotus pedanopterus Mago-Leccia, 1994: 92, fig. 98. Type

locality: Caño Tremblador, where crossed by road from San Carlos de Rio Negro to Solano, upstream portion 01°58'N, 67°00'W, Territorio Amazonas, Venezuela. Holotype: MBUCV-V-14738.

Maximum length: 28.1 cm TL

Distribution: South America: Southern part of Venezuela, including State of Amazonas and south of Apure; also known from tributaries of Negro River in Brazil.

Countries: Brazil, Venezuela

***Gymnotus stenoleucus* Mago-Leccia, 1994**

Gymnotus stenoleucus Mago-Leccia, 1994: 94, fig. 101. Type locality: caño Caripo, tributary of Río Casiquiare, near the bifurcation with Rio Orinoco, Territorio Amazonas, Venezuela. Holotype: MBUCV-V-6218.

Maximum length: 14.2 cm TL

Distribution: South America: Southern Venezuela, including Venezuelan Guiana and State of Amazonas.

Countries: Venezuela

***Gymnotus sylvius* Albert & Fernandes-Matioli, 1999**

Gymnotus sylvius Albert & Fernandes-Matioli in Albert et al., 1999: 412, fig. 1. Type locality: Brazil, São Paulo State, Rio Ribeira de Iguape, near Miracatu, 24°32'50"S, 47°26'13"W. Holotype: LGP 0925.1 (D48/P1990).

Distribution: South America: Ribeira de Iguape, Paraíba do Sul, and Pardo River basins.

Countries: Brazil

Family Sternopygidae (Glass knifefishes, Rattail knifefishes)

James S. Albert

Species diversity and systematics of the Sternopygidae has been reviewed by Mago-Leccia (1978), Lundberg and Mago-Leccia (1986), Albert and Fink (1996), Albert and Campos-da-Paz (1998), Alves-Gomes (1998), and Albert (2001). Sternopygid species possess the following unique combination of characters among gymnotiforms: multiple rows of small, villiform (brush-like) teeth in both jaws; large eye (diameter equal to or greater than distance between nares); infraorbital bones large and bag-like, with expanded bony arches; anterior nares located outside gape; anal-fin origin at isthmus; no urogenital papilla, caudal fin or dorsal organ. Sternopygids possess a tone-type electric organ discharge, characterized by a monophasic hyperpolarization from negative baseline.

There are currently 40 names available in the literature for sternopygid genera and species. Of these, 6 generic and 30 species names are valid. There are in addition 11 manuscript names for species currently in preparation, bringing the known diversity of Sternopygidae to 41 species. Many more sternopygid species are anticipated, as the rate of description is accelerating.

Sternopygid are relatively conservative in terms of overall external morphology. Like all gymnotiforms the shape is culteriform, with an elongate body and anal fin.

Higher level sternopygid taxonomy emphasizes differences in orbital margin, extent of body compression, and osteological features. Many sternopygid species specialized for life in main river channels. Many species are highly compressed laterally and translucent in life (e.g., some *Eigenmannia*, *Rhabdolichops*). Sternopygids are medium to large-sized gymnotiforms, exhibiting substantial diversity in total adult body size, from 12 cm (*Sternopygus vicentespelaea*) to 140 cm (*Sternopygus macrurus*).

The Sternopygidae is confined to the humid Neotropics, ranging the La Plata River of Argentina (35°S) to the Tuira River of Panama (8°N). Sternopygids are known from the continental waters of all South American countries except Chile (Albert, 2001), and are most diverse -- both taxonomically and ecologically -- in the Amazon basin.

The ecology and natural history of most sternopygid species is very poorly understood. *Sternopygus* is the most widely distributed sternopygid genus, in terms of both geography and habitat, extending the full range of the family. *Sternopygus* species inhabit both floodplain and tierra firme (non-floodplain) streams and rivers. Many sternopygids forage on small aquatic animals (e.g., dipteran larvae) from the benthos or roots of aquatic vegetation; *Rhabdolichops* species are planktivorous, consuming insect and crustacean larvae.

Sternopygid systematics and taxonomy is rapidly changing as new species and previously undocumented phenotypes are discovered. The total expected number of species cannot currently be estimated with confidence. A large number of undescribed sternopygid species are known in museum collections and many more are likely to be captured from continued field studies, particularly in Western Amazonia.

There is little direct commercial exploitation of sternopygid species. Some *Eigenmannia* species are ecologically important in many riverine systems, often constituting a large proportion of the biomass, and are presumed to form an important base of the food web in main Amazonian river channels (Lundberg et al., 1987). Two species, *Sternopygus macrurus* and *Eigenmannia* cf. *virescens* are common in the aquarium trade. Sternopygids are not usually eaten by humans, although some large (40 - 60 cm) specimens of riverine *Sternopygus* spp. are sometimes caught on hook and line.

ARCHOLAEMUS

Archolaemus Korrington, 1970: 267. Type species: *Archolaemus blax* Korrington, 1970. Type by original designation. Gender: masculine.

***Archolaemus blax* Korrington, 1970**

Archolaemus blax Korrington, 1970: 268, figs. 1-2. Type locality: Porto Nacional, Rio Tocantins, Estado de Goiás, Brazil. Holotype: CAS 24743.

Maximum length: 43.5 cm TL

Distribution: South America: Amazon, Tocantins and Branco River basins and Amapa State.

Countries: Brazil, French Guiana

DISTOCYCLUS

Distocyclus Mago-Leccia, 1978: 17, 25. Type species: *Eigenmannia conirostris* Eigenmann & Allen, 1942. Type by original designation. Gender: masculine.

***Distocyclus conirostris* (Eigenmann & Allen, 1942)**

Eigenmannia conirostris Eigenmann & Allen, 1942: 316, pl. 16

(figs. 2, 5). Type locality: Iquitos. Holotype: CAS 41753 (1 of 3). Holotype not clearly distinguished from paratypes in original description.

Maximum length: 50 cm TL

Distribution: South America: Amazon River basin.

Countries: Bolivia, Brazil, Colombia, Ecuador, Peru, Venezuela

***Distocyclus goajira* (Schultz, 1949)**

Eigenmannia goajira Schultz, 1949: 63, pl. 1 (fig. B). Type locality: Río Socuy, 3 km above its mouth [Maracaibo Lake basin, Venezuela]. Holotype: USNM 121596.

Maximum length: 49.6 cm TL

Distribution: South America: Lake Maracaibo basin.

Countries: Colombia, Venezuela

EIGENMANNIA

Cryptops Eigenmann, 1894: 626. Type species: *Sternopygus humboldtii* Steindachner, 1878. Type by original designation. Gender: masculine. Preoccupied by *Cryptops* Leach, 1814, in Myriapoda, *Cryptops* Schoenherr, 1823, and *Cryptops* Solier, 1851, in Coleoptera, replaced by *Eigenmannia* Jordan & Evermann, 1896.

Eigenmannia Jordan & Evermann, 1896: 340, 341. Type species: *Sternopygus humboldtii* Steindachner, 1878. Type by being a replacement name. Gender: feminine. Replacement for *Cryptops* Eigenmann, 1894.

***Eigenmannia humboldtii* (Steindachner, 1878)**

Sternopygus humboldtii Steindachner, 1878: 91. Type locality: Río Magdalena, Colombia. Syntypes: NMW 64988 (2), ? NMW 64989 (1).

Maximum length: 44.6 cm TL

Distribution: South America: Northern portions of South America.

Countries: Brazil, Colombia, Venezuela

***Eigenmannia limbata* (Schreiner & Miranda Ribeiro, 1903)**

Sternopygus limbatus Schreiner & Miranda Ribeiro, 1903: 5, fig. 1. Type locality: Amazonas, Brazil. Holotype: MNRJ 1186.

Maximum length: 48.5 cm TL

Distribution: South America: Guianas and Amazon River basin.

Countries: Brazil, Venezuela

***Eigenmannia macrops* (Boulenger, 1897)**

Sternopygus macrops Boulenger, 1897: 305. Type locality: Higher Potaro R. dist., Guyana. Holotype: BMNH 1897.8.6.1.

Maximum length: 25.2 cm TL

Distribution: South America: Guianas and Amazon River basin.

Countries: Brazil, Guyana

***Eigenmannia microstoma* (Reinhardt, 1852)**

Sternopygus microstomus Reinhardt, 1852: 147. Type locality: Lagoa Santa, Brazil.

Maximum length: 18.7 cm TL

Distribution: South America: Upper São Francisco River basin.

Countries: Brazil

***Eigenmannia nigra* Mago-Leccia, 1994**

Eigenmannia nigra Mago-Leccia, 1994: 77, figs. 86a, 86b. Type locality: Caño Urama, above Santa Lucía, Río Negro system, Amazonas, Venezuela. Holotype: MBUCV-V-14184.

Maximum length: 47.6 cm TL

Distribution: South America: Negro River basin and Casiquiare in Venezuela, Colombian Amazon, and Rupununi River basin.

Countries: Brazil, Colombia, Guyana, Venezuela

***Eigenmannia trilineata* López & Castello, 1966**

Eigenmannia trilineata López & Castello, 1966: 8. Type locality: Río de la Plata, near Nuñez, City of Buenos Aires, Argentina. Holotype: MACN 5470.

Maximum length: 25 cm TL

Distribution: South America: Paraguay-Paraná River basin.

Countries: Argentina, Brazil, Paraguay, Uruguay

***Eigenmannia vicentespelaea* Triques, 1996**

Eigenmannia vicentespelaea Triques, 1996: 3, figs. 4-5. Type locality: 13°35'00"S, 46°22'30"W, Rio São Vicente system, Rio Tocantins basin, at São Domingos, State of Goiás, Brazil. Holotype: MZUSP 42605.

Maximum length: 12 cm TL

Distribution: South America: Caves in São Vicente River, Tocantins River basin.

Countries: Brazil

***Eigenmannia virescens* (Valenciennes, 1842)**

Sternatchus virescens Valenciennes, 1842: pl. 13 (fig. 2). Type locality: South America. No types known.

Sternopygus lineatus Müller & Troschel, 1849: 14. Type locality: Guiana, im See Amucu. Holotype: ZMB 4083.

Sternopygus tumifrons Müller & Troschel, 1849: 14. Type locality: Südamerika. Holotype: ZMB 4084.

Maximum length: 35 cm TL

Distribution: South America: Widely distributed east of Andes from Orinoco to La Plata River basins.

Countries: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Paraguay, Peru, Suriname, Uruguay, Venezuela

RHABDOLICHOPS

Rhabdolichops Eigenmann & Allen, 1942: 316. Type species: *Rhabdolichops longicaudatus* Eigenmann & Allen, 1942. Type by monotypy. Gender: masculine.

Guichthys Fernández-Yépez, 1968: [5]. Type species: *Guichthys caviceps* Fernández-Yépez, 1968. Type by original designation. Gender: masculine.

***Rhabdolichops caviceps* (Fernández-Yépez, 1968)**

Guichthys caviceps Fernández-Yépez, 1968: [4], 3rd unnumbered pl. Type locality: Río Apure Seco, al SW. de San Fernando de Apure, Estado Apure [Venezuela]. Holotype: MACLPI 51101.

Maximum length: 31 cm TL

Distribution: South America: Orinoco and Amazon River basins.

Countries: Bolivia, Brazil, Ecuador, Peru, Venezuela

***Rhabdolichops eastwardi* Lundberg & Mago-Leccia, 1986**

Rhabdolichops eastwardi Lundberg & Mago-Leccia, 1986: 76, figs. 5, 7, 11, 17, 18. Type locality: Río Orinoco, old shipping channel south of Isla Portuguesa, Delta Amacuro Terr., Venezuela, 8°37'N, 61°48'W. Holotype: MBUCV-V-10443.

Maximum length: 27.6 cm TL

Distribution: South America: Orinoco and Amazon River basins.

Countries: Bolivia, Brazil, Ecuador, Venezuela

***Rhabdolichops electrogrammus* Lundberg & Mago-Leccia, 1986**

Rhabdolichops electrogrammus Lundberg & Mago-Leccia, 1986: 70, figs. 6, 8, 9, 13, 14. Type locality: Río Orinoco, near s. shore of Caño Araguaito, Delta Amacuro Terr., 8°40'N, 61°59'W, Venezuela. Holotype: MBUCV-V-10489.

Maximum length: 29.2 cm TL

Distribution: South America: Orinoco, Negro and Branco River basins.

Countries: Brazil, Venezuela

***Rhabdolichops jegui* Keith & Meunier, 2000**

Rhabdolichops jegui Keith & Mannier, 2000: 402, fig. Type locality: French Guiana: Maroni River, Atecume Pata. Holotype: MNHN 1999-1024.

Distribution: South America: Maroni River basin.

Check List of the Freshwater Fishes of South and Central America

Countries: French Guiana.

***Rhabdolichops stewarti* Lundberg & Mago-Leccia, 1986**

Rhabdolichops stewarti Lundberg & Mago-Leccia, 1986: 79, fig. 19. Type locality: Rio Tapajós, 26 km east of Jacaréacanga, Pará State, Brazil, 6°43'S, 57°40'W. Holotype: ANSP 158687.

Maximum length: 20.7 cm TL

Distribution: South America: Orinoco and Tapajós River basins.

Countries: Brazil, Venezuela

***Rhabdolichops troscheli* (Kaup, 1856)**

Sternopygus troscheli Kaup, 1856: 139. Type locality: British Guiana. Syntypes: MNHN, ZMB 4083 (1), ? ZMB 4085 (1).

Sternopygus axillaris Günther, 1868: 481. Type locality: Pará, Brazil. Holotype: BMNH 1848.11.8.31.

Rhabdolichops longicaudatus Eigenmann & Allen, 1942: 317, pl. 16 (figs. 3-4). Type locality: Iquitos, Amazon system, Peru. Holotype: CAS 41752 [IU 15436].

Maximum length: 49 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru, Venezuela

***Rhabdolichops zareti* Lundberg & Mago-Leccia, 1986**

Rhabdolichops zareti Lundberg & Mago-Leccia, 1986: 74, figs. 6, 10-12, 15, 16. Type locality: North bank of Río Orinoco at Isla Tres Caños, Terr. Delta Amacuro, Venezuela, 8°40'N, 62°0'W. Holotype: MBUCV-V-14242.

Maximum length: 22.5 cm TL

Distribution: South America: Orinoco basin, found only in river channels and lagoons of Orinoco mainstream and Apuré River.

Countries: Venezuela

STERNOPYGUS

Sternopygus Müller & Troschel, 1848: 639. Type species: *Gymnotus macrurus* Bloch & Schneider, 1801. Type by subsequent designation. Gender: masculine.

Gymnotes Gill, 1864: 152. Type species: *Gymnotus aequilabiatus* Humboldt, 1811. Type by monotypy. Gender: masculine.

Hildatia Fernández-Yépez, 1968: [3]. Type species: *Hildatia brasiliensis* Fernández-Yépez, 1968. Type by original designation. Gender: feminine.

***Sternopygus aequilabiatus* (Humboldt, 1805)**

Gymnotus aequilabiatus Humboldt, 1805: 47, pl. 10 (figs. 1-2). Type locality: Río Magdalena, Colombia. No types known.

Maximum length: unknown

Distribution: South America: Magdalena River basin.

Countries: Colombia

***Sternopygus arenatus* (Eydoux & Souleyet, 1850)**

Carapus arenatus Eydoux & Souleyet, 1850: 210, pl. 8 (fig. 2). Type locality: Río Guayaquil, Ecuador.

Maximum length: 54.5 cm TL

Distribution: South America: Guayaquil River basin.

Countries: Ecuador

***Sternopygus astrabes* Mago-Leccia, 1994**

Sternopygus astrabes Mago-Leccia, 1994: 79, fig. 87. Type locality: Caño Pozo Azul, Aqua Linda, approx. 23 km northeast of Puerto Ayacucho, Amazonas, Venezuela, 5°51'N, 67°31'W. Holotype: MBUCV-V-14182.

Maximum length: 19.6 cm TL

Distribution: South America: Orinoco, Casiquiare, and Negro River basins.

Countries: Brazil, Venezuela

***Sternopygus castroi* Triques, 1999**

Sternopygus castroi Triques, 1999: 21, fig. Type locality: Igarape

Jaradá, Rio Cuieiras, 40 km from mouth of Rio Negro, Amazonas. Holotype: MZUSP 48912.

Maximum length: 19.6 cm TL

Distribution: South America: Negro River basin.

Countries: Brazil

***Sternopygus dariensis* Meek & Hildebrand, 1916**

Sternopygus dariensis Meek & Hildebrand, 1916: 309, pl. 26. Type locality: Río Tuyra at Marriganti, Darién, Atlantic slope of Panama. Holotype: FMNH 8949.

Maximum length: 40 cm TL

Distribution: Central America: Panama.

Countries: Panama

***Sternopygus macrurus* (Bloch & Schneider, 1801)**

Gymnotus macrurus Bloch & Schneider, 1801: 522. Type locality: Brazil. Holotype: ZMB 8701 (stuffed).

Sternopygus marcgravii Reinhardt, 1852: 146. Type locality: Rio das Velhas, Rio São Francisco, Brazil.

?*Carapus sanguinolentus* Castelnau, 1855: 85, pl. 46 (fig. 1). Type locality: Río Urubamba or upper Río Ucayali, Peru. Holotype: MNHN 3971.

Hildatia brasiliensis Fernández-Yépez, 1968: [2], 1st unnumbered pl. Type locality: Sarapo, Piauí, Brazil. Holotype: MCZ 9461.

Maximum length: 140.5 cm TL

Distribution: South America: Magdalena River basin; entire extent of the Amazon and Orinoco River basins below c. 500 m elevation including Napo River of western Ecuador and Madre de Dios River of Peru; all drainages of the Guianas Shield; Atlantic drainages of Northeastern Brazil (Tocantins, Parnaíba, Pindaré, Itapicuru, and Salgado rivers); São Francisco River basin; Southeastern Brazil (Rio de Janeiro); Paraguay-Paraná River basin.

Countries: Argentina, Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Paraguay, Peru, Surinam, Venezuela

***Sternopygus obtusirostris* Steindachner, 1881**

Sternopygus obtusirostris Steindachner, 1881: 143, pl. 2 (fig. 3).

Type locality: Amazonen-Strom bei Teffé, Rio Puty, Rio Madeira [Brazil]. Syntypes: MCZ 9413 (1), MCZ 9453 (1), MCZ 9425 (1), NMW 64977 (1).

Maximum length: 56 cm TL

Distribution: South America: Main stem of Amazon River, lower Negro River basin.

Countries: Brazil

***Sternopygus pejeraton* Schultz, 1949**

Sternopygus pejeraton Schultz, 1949: 60, pl. 1 (fig. A). Type locality: Río Apón, about 35 km south of Rosario, in the Maracaibo basin [Venezuela]. Holotype: USNM 121752.

Maximum length: 50 cm TL

Distribution: South America: Lake Maracaibo basin.

Countries: Venezuela

***Sternopygus xingu* Albert & Fink, 1996**

Sternopygus xingu Albert & Fink, 1996: 90, figs. 7-8. Type locality: Tributary of Batovi River, Waura Indian Village, sta. X, Rio Xingú, Mato Grosso do Sul, Brazil. Holotype: MZUSP 48374.

Maximum length: 52.5 cm TL

Distribution: South America: Xingu and lower Tocantins River basins.

Countries: Brazil

SPECIES INQUIRENDAE

Gymnotus macrurus Bloch, 1786: 59, pl. 157 (fig. 2). Type locality: Not known.

Gymnotus aequilabiatus nigriceps Ihering, 1907: 285. Type locality: Maranhao, Brazil.

Family Rhamphichthyidae (Sand knifefishes)

Carl J. Ferraris, Jr.

The Rhamphichthyidae are a small family of electric knifefishes that can be easily recognized by following combination of characters: body very highly compressed; snout elongated and tubular; mouth small, devoid of jaw teeth; dorsal and caudal fins absent (Planquette et al., 1996). A detailed list of anatomical characters that diagnose rhamphichthyids is presented in Albert (2001).

The family consists of thirteen species, distributed among three genera. Albert (2001) considers the taxonomy of this family to be only tentatively resolved at present. The classification presented here is based primarily on the works of Nijssen et al. (1976), Mago-Leccia (1994) and Triques (1999).

Rhamphichthyids are distributed through the Atlantic and Caribbean draining rivers of South America, from the La Plata basin in the south to the Orinoco River in the North. They occur in coastal rivers of the Guianas and eastern Brazil to the Ucayali basin in Peru. There are no records of rhamphichthyids in any trans-Andean river basins, and they do not occur in Central America. Rhamphichthyids live in tributary streams, marginal lagoons of large rivers and deeper portions of main river channels (Mago-Leccia, 1976). They remain partially buried in sand or mud during the day, and little else is known of their biology.

GYMNORHAMPHICHTHYS

Gymnorhamphichthys Ellis in Eigenmann, 1912: 423, 436. Type species: *Gymnorhamphichthys hypostomus* Ellis, 1912. Type by monotypy. Gender: masculine. Also appeared as new in Ellis (1913:139).

Urumarã Miranda Ribeiro 1920: 6. Type species: *Urumara rondoni* Miranda Ribeiro, 1920. Type by monotypy. Gender: feminine.

***Gymnorhamphichthys hypostomus* Ellis, 1912**

Gymnorhamphichthys hypostomus Ellis in Eigenmann, 1912: 436. Type locality: San Joaquin, Bolivia. Holotype: FMNH 54554. Also appeared in Ellis (1913:139, pl. 23, fig. 2).

Distribution: South America: Upper Mamoré and Orinoco River basins.

Countries: Bolivia, Colombia

***Gymnorhamphichthys petiti* Géry & Vu-Tân-Tuê, 1964**

Gymnorhamphichthys hypostomus petiti Géry & Vu-Tân-Tuê, 1964: 486, pl. 1. Type locality: Ilha do Bananal, haut Rio Araguaia, Brésil. Holotype: Géry coll. M.340.

Distribution: South America: Upper Araguaia River basin.

Countries: Brazil

***Gymnorhamphichthys rondoni* (Miranda Ribeiro, 1920)**

Urumara rondoni Miranda Ribeiro, 1920: 6. Type locality: Rio 17 de Fevereiro, trib. of Alto Cautário, Amazonas, Brazil. Holotype: MNRJ 3631.

Distribution: South America: Amazon, upper Paraná, and Orinoco River basins, and coastal rivers of the Guianas.

Countries: Brazil, Colombia, Guyana, Paraguay, Suriname, Venezuela

***Gymnorhamphichthys rosamariae* Schwassmann, 1989**

Gymnorhamphichthys rosamariae Schwassmann, 1989: 159, figs.

1-3. Type locality: Upper Rio Negro at Rosa Maria, State of Amazonas, Brazil 0.5°S, 64°W. Holotype: MZUSP 30202.

Distribution: South America: Negro River basin.

Countries: Brazil

IRACEMA

Iracema Triques, 1996: 91. Type species: *Iracema caiana* Triques, 1996. Type by original designation. Gender: feminine.

***Iracema caiana* Triques, 1996**

Iracema caiana Triques, 1996: 91, fig. 1. Type locality: Jauaperi R., beach ca. 40-50 km above its mouth on the Rio Negro, ca. 1°05'S, 61°35'W, Amazonas/Roraima border, Brazil. Holotype: MZUSP 8952.

Maximum length: 36 cm TL

Distribution: South America: Jauaperi River basin in Negro River drainage.

Countries: Brazil

RHAMPHICHTHYS

Rhamphichthys Müller & Troschel, 1848: 640. Type species: *Gymnotus rostratus* Linnaeus, 1766. Type by monotypy. Gender: masculine. Apparently appeared first as *Ramphichthys*, without description or species, in Müller (1844).

Altona Kaup in Duméril, 1856: 201. Type species: *Gymnotus rostratus* Linnaeus, 1766. Type by monotypy. Gender: feminine. Recorded in list of genera and species as *Altona rostrata*, presumed to refer to *Gymnotus rostratus* Linnaeus.

***Rhamphichthys apurensis* (Fernández-Yépez, 1968)**

Gymnorhamphichthys apurensis Fernández-Yépez, 1968: [5], 4th unnumbered pl. Type locality: Río Bucaral (Paso Don Pancho), afluyente del Río Apure [Orinoco basin, Venezuela]. Holotype: MBUCV-V-10838 [ex AFY 51169].

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Rhamphichthys atlanticus* Triques 1999**

Rhamphichthys atlanticus Triques 1999: 3, fig. 4. Type locality: Viana Lake, Pindaré-Mearim river system, MA, Brazil, approximately 3°14'S, 45°01'W. Holotype: MZUSP 43612

Maximum length: 67 cm SL

Distribution: South America: Pindaré-Mearim River basin.

Countries: Brazil

***Rhamphichthys drepanium* Triques 1999**

Rhamphichthys drepanium, Triques 1999: 1, Figs. 1-3. Januári Lake, at confluence of Rio Negro and Rio Solimões, Manaus County, AM, Brazil, approximately. 3°20'S, 60°12'W. Holotype: MZUSP 6893.

Maximum length: 43 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Rhamphichthys hahni* (Meinken, 1937)**

Sternarchorhamphus hahni Meinken, 1937: 79, fig. 3. Type locality: Río Paraná basin, near Corrientes, Argentina. Holotype: ZMB 31367.

Distribution: South America: Paraná River basin.

Countries: Argentina

***Rhamphichthys lineatus* Castelnau, 1855**

Rhamphichthys lineatus Castelnau, 1855: 87, pl. 47 (fig. 1). Type locality: d'un lac de la rivièrè d'Ucayale. Holotype: MNHN 3982.

Maximum length: 54 cm TL

Distribution: South America: Ucayali River basin.

Countries: Peru

***Rhamphichthys longior* Triques, 1999**

Rhamphichthys longior Triques, 1999: 4. Paru Lake (formed in the confluence of the Rios Trombetas and Paru-do-Oeste) at Oriximiná, PA, Brazil, approximately 1°45'S, 55°52'W. Holotype: MZUSP 48507.

Maximum length: 80 cm SL

Distribution: South America: Paru Lake in lower Amazon River basin.

Countries: Brazil

***Rhamphichthys marmoratus* Castelnau, 1855**

Rhamphichthys marmoratus Castelnau, 1855: 86, pl. 46 (fig. 2). Type locality: l'Araguay, Brazil. Holotype: MNHN 3959.

?*Rhamphichthys pantherinus* Castelnau, 1855: 86, pl. 46 (fig. 3). Type locality: d'un lac près de l'Ucayale. Holotype: MNHN 3993

Maximum length: 65 cm TL

Distribution: South America: Amazon, Araguaia and Ucayali River basins.

Countries: Brazil, Peru

***Rhamphichthys rostratus* (Linnaeus, 1766)**

Gymnotus rostratus Linnaeus, 1766: 428. Type locality: America [South America]. No types known.

?*Gymnotus longirostratus* La Cèpède, 1800: 145, 178. Type locality: South America. No types known.

?*Rhamphichthys blochii* Kaup, 1856: 133, fig. 9. Type locality: No locality stated. No types known

?*Rhamphichthys reinhardti* Kaup, 1856: 132, fig. 8. Type locality: No locality. Holotype: MNHN 3956.

?*Rhamphichthys schneideri* Kaup, 1856: 136, fig. 11. Type locality: Cayenne. No types known.

?*Rhamphichthys schomburgki* Kaup, 1856: 135, fig. 10. Type locality: Rivers of Demerara, British Guiana. Holotype: MNHN 3958.

Maximum length: 90 + cm TL

Distribution: South America: Coastal rivers of northeastern South America

Countries: Brazil, French Guyana, Guyana, Suriname

Family Hypopomidae (Bluntnose knifefishes)

James S. Albert & William G. R. Crampton

Species diversity and systematics of the Hypopomidae has been reviewed by Mago-Leccia (1994), Sullivan (1997), Albert and Campos-da-Paz (1998), and Albert (2001). Hypopomid species possess the following unique combination of characters among gymnotiforms: teeth absent from both jaws; snout moderate to short length (preorbital region less than 38% head length); eye small (diameter less than distance between nares); nasal capsule near eye, anterior nares located outside gape; infraorbital bones ossified as slender tubes; operculum trapezoidal; hyomandibula oriented oblique to long axis of head; anal-fin origin ventral or posterior to pectoral fin-base; no urogenital papilla; no caudal fin or dorsal organ. Hypopomids also possess a multiphasic (usually biphasic) electric organ discharge produced as discrete pulses.

There are currently 23 names available in the literature for hypopomid genera and species. Of these, 6 generic and 25 species names are valid. There are in addition 10 manuscript names for species currently in preparation, bringing the known diversity of Hypopomidae to 35 species. Many more hypopomid species are anticipated, as the rate of description is accelerating.

Hypopomids are relatively conservative in terms of overall external morphology. Like all gymnotiforms the shape is typically culteriform, with an elongate body and anal fin.

Higher level hypopomid taxonomy emphasizes differences in: snout length and body profile, ranging from highly compressed laterally (e.g., *Steatogenys*) to cylindrical and worm-like (e.g., *Microsternarchus*). Hypopomids are small to medium sized electric fishes, ranging in total adult body size, from the smallest extant gymnotiform species *Hypopygus lepturus* (80 mm) to *Brachyhypopomus brevirostris* (350 mm).

The Hypopomidae is confined to the Humid Neotropics, ranging the La Plata River of Argentina (35°S) to the Tuira River of Panama (8°N). Hypopomids are known from the continental waters of all South American countries except Chile (Albert, 2001), and are most diverse -- both taxonomically and ecologically -- in the Amazon basin.

The ecology and natural history of most hypopomid species is very poorly understood. *Brachyhypopomus* is perhaps the most well studied group; it is also the most widely distributed hypopomid genus, in terms of both geography and habitat, extending the full range of the family. *Brachyhypopomus* species inhabit seasonal streams in the relative to highly desertified areas of northwest Venezuela (Falcón), Gran Sabana (central Guyana), northeast Brazil, southeast Brazil, and northern Argentina (Chaco) (Costa and Campos-da-Paz, 1992). *Brachyhypopomus* is also highly diverse and abundant in floating meadows of Central Amazonia. *Brachyhypopomus* is able to tolerate protracted periods of hypoxic water conditions, at least in part because they can hold air bubbles in the gill chamber for use in aerial respiration.

Hypopomid systematics and taxonomy is rapidly changing as new species and previously undocumented phenotypes are discovered. The total expected number of species cannot currently be estimated with confidence. A large number of undescribed hypopomid species are known in museum collections and many more are likely to be captured from continued field studies, particularly in Western and Central Amazonia.

There is little direct commercial exploitation of hypopomid species. *Brachyhypopomus* species are ecologically important in floating meadows of white water floodplains, often constituting a significant fraction of the biomass (Crampton, 1996). *Steatogenys elegans* is an important part of the biomass in the main channels of Amazonian channels. Hypopomid species are not common in the aquarium trade and are not usually eaten.

BRACHYHYPOPOMUS

Brachyhypopomus Mago-Leccia, 1994: 47. Type species: *Rhamphichthys brevirostris* Steindachner, 1868. Type by original designation. Gender: masculine.

***Brachyhypopomus beebei* (Schultz, 1944)**

Hypopomus beebei Schultz, 1944: 40, pl. 1 (fig. 4); fig. 1. Type locality: Caripito, Venezuela. Holotype: USNM 120753 (tail missing).

Maximum length: 20.4 cm TL

Distribution: South America: Tropical areas east of Andes.

Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Paraguay, Peru, Suriname, Venezuela

Remarks and references: Ecology: Associated with floating vegetation.

***Brachyhypopomus brevirostris* (Steindachner, 1868)**

Rhamphichthys brevirostris Steindachner, 1868a: 177. Type locality: Rio Guaporé, Amazonenstrom bei Santarem, Rio Cauca. Syn-types: NMW 65038-40.

Maximum length: 34.7 cm TL

Distribution: South America: Eastern South America from Orinoco to La Plata River.

Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru, Suriname, Venezuela

Remarks and references: Ecology: Associated with emergent and floating vegetation.

***Brachyhypopomus diazi* (Fernández-Yépez, 1972)**

Hypopomus diazi Fernández-Yépez, 1972: 20, pl. 21. Type locality: Estación 138 de el Análise Ictiológico del Complejo Hidrográfico (04), "Río Yaracuy" [Río Alpargatón, Río Yaracuy drainage, Estado Carabobo, Venezuela]. Holotype: no repository stated, whereabouts unknown.

Maximum length: 17.5 cm TL

Distribution: South America: Northwest Venezuela, from Tocuyo River to Alpargatón River, also northern Llanos of Orinoco basin.

Countries: Venezuela

***Brachyhypopomus janeiroensis* (Costa & Campos-da-Paz, 1992)**

Hypopomus janeiroensis Costa & Campos-da-Paz, 1992: 118, fig. 2-3. Type locality: Corrego Salto-d'água, trib. of Rio Sao Joao, 6 km north of Silva Jardim, 22°39'S, 42°23'W, Rio de Janeiro, Brazil. Holotype: MZUSP 43130.

Maximum length: 18.6 cm TL

Distribution: South America: São João and Paraíba do Sul River basins in Rio de Janeiro State.

Countries: Brazil

***Brachyhypopomus occidentalis* (Regan, 1914)**

Hypopomus occidentalis Regan, 1914: 32. Type locality: Río Condoto [Pacific slope of Colombia]. Syntypes: BMNH 1914.5.18.94-98.

Maximum length: 17.5 cm TL

Distribution: Central and South America: Magdalena, Atrato, Catatumbo and Pacific slope rivers.

Countries: Colombia, Panama

***Brachyhypopomus pinnicaudatus* (Hopkins, 1991)**

Hypopomus pinnicaudatus Hopkins, 1991: 153, fig. 1. Type locality: Coastal swamp if French Guiana called "Grand Pripris," 3.5 km northwest of center of old Kourou, 52°40'00"W and 5°10'45"N, approx. 0.1 km N of old Route Nationale # 1. Holotype: ANSP 163463.

Maximum length: 18.6 cm TL

Distribution: South America: Eastern South America from Catatumbo River basin, Orinoco and Guianas to La Plata River basin; Amazon River basin in Peru.

Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Paraguay, Peru, Suriname, Uruguay, Venezuela

HYPOPOMUS

Hypopomus Gill, 1864: 152. Type species: *Rhamphichthys mulleri* Kaup, 1856. Type by monotypy. Gender: feminine.

Brachyrhamphichthys Günther, 1870: 6. Type species: *Rhamphichthys artedi* Kaup, 1856. Type by subsequent designation. Gender: masculine.

Parupygus Hoedeman, 1962b: 58. Type species: *Parupygus savannensis* Hoedeman, 1962. Type by monotypy. Gender: masculine.

***Hypopomus artedi* (Kaup, 1856)**

Rhamphichthys artedi Kaup, 1856: 128, fig. 3. Type locality: The Mona, a river in French Guiana. Holotype: MNHN 3157.

Rhamphichthys mulleri Kaup, 1856: 129, fig. 4. Type locality: Cayenne [French Guiana]. Syntypes: MNHN 3983.

Parupygus litaniensis Hoedeman, 1962a: 98, fig. 2, 3b. Type locality: French Guiana, Litany, village Aloiké, sta. 29. Holo-

type: ZMA 100248.

Parupygus savannensis Hoedeman, 1962b: 58, fig. 5. Type locality: Surinam, Sipaliwini, Paru savannah, sta. 44a. Holotype: ZMA 102375.

Maximum length: 50 cm SL

Distribution: South America: Guianas.

Countries: Brazil, French Guiana, Guyana, Suriname

HYPOPYGUS

Hypopygus Hoedeman, 1962a: 99. Type species: *Hypopygus lepturus* Hoedeman, 1962. Type by monotypy. Gender: masculine.

***Hypopygus lepturus* Hoedeman, 1962**

Hypopygus lepturus Hoedeman, 1962a: 99, fig. 4. Type locality: Maroni basin, Suriname. Holotype: RMNH 19466.

Maximum length: 10 cm TL

Distribution: South America: Amazon and Orinoco River basins, also coastal rivers of the Guianas.

Countries: Brazil, French Guiana, Suriname, Venezuela

***Hypopygus neblinae* Mago-Leccia, 1994**

Hypopygus neblinae Mago-Leccia, 1994: 86, fig. 96. Type locality: Río Baria, 3 km downriver of Neblina base camp, Amazonas, Venezuela. Holotype: MBUCV-V-14694.

Maximum length: 12.2 cm TL

Distribution: South America: Atabapo and Negro rivers, the Casiquiare Canal and La Neblina National Park; also Meta River basin in Colombia and some localities in Bolivia.

Countries: Bolivia, Colombia, Venezuela

MICROSTERNARCHUS

Microsternarchus Fernández-Yépez, 1968: [4]. Type species: *Microsternarchus bilineatus* Fernández-Yépez, 1968. Type by original designation. Gender: masculine.

***Microsternarchus bilineatus* Fernández-Yépez, 1968**

Microsternarchus bilineatus Fernández-Yépez, 1968: [3], 2nd unnumbered pl. Type locality: Río San José, afluyente del Río Guariquito al SW. de Calabozo [Venezuela]. Holotype: MACLPI 65562-B.

Maximum length: 12 cm TL

Distribution: South America: Upper Orinoco and Negro River basins.

Countries: Brazil, Venezuela

RACENISIA

Racenisia Mago-Leccia, 1994: 51. Type species: *Racenisia fimbriipinna* Mago-Leccia, 1994. Type by original designation. Gender: feminine.

***Racenisia fimbriipinna* Mago-Leccia, 1994**

Racenisia fimbriipinna Mago-Leccia, 1994: 88, fig. 66a, 74c-d, 77, 97a-b. Type locality: El Pozo de Lucas, San Fernando de Atabapo, Amazonas, Venezuela. Holotype: MBUCV-V-7540.

Maximum length: 11.7 cm TL

Distribution: South America: Upper Negro and Orinoco rivers, around San Fernando de Atabapo and San Carlos de Rio Negro.

Countries: Venezuela

STEATOGENYS

Steatogenys Boulenger, 1898: 428. Type species: *Rhamphichthys (Brachyrhamphichthys) elegans* Steindachner, 1880. Type by monotypy. Gender: feminine.

Tateichthys La Monte, 1929: 1. Type species: *Tateichthys duidae* La Monte, 1929. Type by monotypy. Gender: masculine.

***Steatogenys duidae* (La Monte, 1929)**

Tateichthys duidae La Monte, 1929: 1, fig. 1. Type locality:

Burned Mountain Creek, ca. 5 mi. northeast of Caño Pescado, Mt. Duida neighborhood, Venezuela. Holotype: AMNH 9599.
Maximum length: 19 cm TL
Distribution: South America: Venezuela, Brazil.
Countries: Brazil, Venezuela
Remarks and references: Ecology: Small streams.

Steatogenys elegans (Steindachner, 1880)

Rhamphichthys (Brachyrhamphichthys) elegans Steindachner, 1880: 89. Type locality: Mouth of the Rio Negro, Brazil. Syn-types: NMW 76413.
Rhamphichthys (Brachyrhamphichthys) mirabilis Steindachner, 1880: 104, pl. 9 (figs. 1-1a). Type locality: Rio Negro Amazonas, Brazil. Holotype: ?.
Maximum length: 29.4 cm TL
Distribution: South America: Guianas and Amazon River basin.
Countries: Bolivia, Brazil, Colombia, Ecuador, Peru, Venezuela

STEGOSTENOPOS

Stegostenopos Triques, 1997: 32. Type species: *Stegostenopos cryptogenes* Triques, 1997. Type by original designation. Gender: masculine.

Stegostenopos cryptogenes Triques, 1997

Stegostenopos cryptogenes Triques, 1997: 33, fig. 5. Type locality: Igarapé (creek) Sirinau, right margin of Rio Cuieiras, ca. 25 km from its mouth on Rio Negro, ca. 2°70'S, 60°40'W, Brazil. Holotype: MZUSP 47985.
Maximum length: 9.8 cm TL
Distribution: South America: Negro River basin.
Countries: Brazil

Family Apterontidae (Ghost knifefishes)

James S. Albert

Species diversity and systematics of the Apterontidae has been reviewed by Mago-Leccia (1994), Albert and Campos-da-Paz (1998), and Albert (2001). Apterontid species are readily recognized as the only gymnotiform fishes with a caudal fin and a dorsal organ (a longitudinal strip of fleshy tissue firmly attached to posterodorsal midline). Among gymnotiforms, apterontid species also possess the following unique combination of characters: small eye (its diameter less than distance between nares); infraorbital and supraorbital laterosensory lines connected anterior to eye; infraorbital bones ossified as slender tubes; anterior nares located outside gape; no urogenital papilla; 1-2 rows of conical teeth in both jaws; anal-fin origin at, or anterior to, isthmus; no urogenital papilla. Apterontids also possess a high frequency tone-type electric organ discharge (more than 750 Hz at maturity).

There are currently 72 names available in the literature for apterontid genera and species. Of these, 13 generic and 52 species names are valid. There are in addition 12 manuscript names for species currently in preparation, bringing the known diversity of Apterontidae to 64 species. Many more apterontid species are anticipated, as the rate of description is accelerating.

Apterontids are relatively conservative in terms of overall external morphology. Like all other gymnotiforms the shape is typically culteriform, with an elongate body and anal fin. Higher level apterontid taxonomy emphasizes differences in snout length and shape, and shape and position of the mouth. Apterontids exhibit substantial diversity in total adult body size, ranging from an undescribed Amazonian species of *Adontosternarchus*, and *Megadontognathus kaitukaensis* (each growing to about 160 mm) to *Apterontus* (formerly *Ubidia*) *magdalenese* (1.3 M) (Campos-da-Paz, 1999).

The Apterontidae is confined to the humid Neotropics, ranging the La Plata River of Argentina (35°S) to the Tuira River of Panama (8°N). Apterontids are known from the continental waters of all South American countries except Chile (Albert, 2001), and are most diverse -- both taxonomically and ecologically -- in the Amazon basin.

The ecology and natural history of most apterontid species is poorly understood. *Apterontus* species are the most widely distributed, extending the full range of the family. *Apterontus* species inhabit both floodplain and tierra firme (non-floodplain) streams and rivers. Like many apterontids, *Apterontus* are aggressive predators of small aquatic insect larvae and fishes. Apterontids are most diverse in the Amazonian floodplain, where many species are specialized to inhabit deep portions of the river channel. Some main channel apterontids are aggressive piscivores (e.g., *Sternarchella*), whereas other are planktivores (*Adontosternarchus*). *Magosternarchus* spp. predate the tails of other electric fishes. Other species (e.g., *Sternarchorhynchus*, *Sternarchorhamphus*) have tubular snouts and forage on the beds of aquatic insect larvae on the rivers bottoms. At least one species (*Sternarchogiton nattereri*) eats freshwater sponges which grow on submerged trees, stumps, and other woody debris. *Orthosternarchus* is perhaps the most specialized for life at the river bottom, in many ways resembling cave fishes; they are almost entirely blind, with minute, asymmetrically arranged eyes; and they have almost no pigments or scales, appearing bright pink in life due to the underlying blood hemoglobin.

An important aspect of apterontid diversity is sexual dimorphism in snout size and shape. Reproductively mature males of *Parapterontus hasemani* have highly elongate jaws, which are presumed to be involved in male-male competition. Mature males of *Sternarchorhynchus roseni* possess numerous teeth on their lower jaw. Mature male *Sternarchogiton nattereri* grow teeth externally over the snout, giving them an appearance to unusual that for 40 years they have been regarded as representing an entirely different genus (*Oedemognathus*)

Apterontid systematics and taxonomy is rapidly changing as new species and previously undocumented phenotypes are discovered. The total expected number of species cannot currently be estimated with confidence. A large number of undescribed apterontid species are known in museum collections and many more are likely to be captured from continued field studies, particularly in Western and Central Amazonia.

There is little direct commercial exploitation of Apterontid species. Many species are ecologically important in Amazonian floodplains, often constituting a significant fraction of the biomass (Crampton, 1996). Two species (*Apterontus albifrons* and *A. leptorhynchus*) are common in the aquarium trade. Apterontids are not an important food resource.

ADONTOSTERNARCHUS

Adontosternarchus Ellis in Eigenmann, 1912: 424 (in key). Type species: *Sternarchus sachsii* Peters, 1877. Gender: masculine.

***Adontosternarchus balaenops* (Cope, 1878)**

Sternarchus balaenops Cope, 1878: 682. Type locality: Pebás, Amazon system, Peru. Holotype: ANSP 21462.

Maximum length: 25 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil, Peru

Common names: Macana (Peru)

***Adontosternarchus clarkae* Mago-Leccia, Lundberg & Baskin, 1985**

Adontosternarchus clarkae Mago-Leccia, Lundberg & Baskin, 1985: 14, figs. 1c, 16. Type locality: Raudal (Rapids) de Mavahate, Río Negro near San Carlos de Río Negro, Amazonas Territory, Venezuela. Holotype: MBUCV V-12703.

Maximum length: 18.6 cm TL

Distribution: South America: Negro River basin.

Countries: Brazil, Venezuela

***Adontosternarchus devenanzii* Mago-Leccia, Lundberg & Baskin, 1985**

Adontosternarchus devenanzii Mago-Leccia, Lundberg & Baskin, 1985: 11, figs. 1b, 2-6, 14. Type locality: Caño Cuajarito, trib. of Río Portuguesa, 3 km above La Unión, Estado Guárico, Venezuela. Holotype: MBUCV V-7513.

Maximum length: 18.6 cm TL

Distribution: South America: Portuguesa and Orinoco rivers, and Amazon River basin.

Countries: Brazil, Venezuela

***Adontosternarchus sachsii* (Peters, 1877)**

Sternarchus sachsii Peters, 1877: 473. Unnumbered plate following p. 556. Type locality: San Fernando de Apure, Río Orinoco basin, Venezuela. Holotype: ZMB 10044.

Maximum length: 32.2 cm TL

Distribution: South America: Orinoco River basin.

Countries: Brazil, Venezuela

APTERONOTUS

Apteronotus La Cepède, 1800: 208. Type species: *Apteronotus passan* La Cepède, 1800. Type by monotypy. Gender: masculine.

Sternarchus Bloch & Schneider, 1801: 497. Type species: *Gymnotus albifrons* Linnaeus, 1766. Type by subsequent designation. Gender: masculine.

Memarchus Kaup in Duméril, 1856: 201. Type species: *Gymnotus albifrons* Linnaeus, 1766. Gender: masculine.

Ubidia Miles, 1945: 461. Type species: *Ubidia magdalenensis* Miles, 1945. Type by original designation. Gender: feminine.

***Apteronotus albifrons* (Linnaeus, 1766)**

Gymnotus albifrons Linnaeus, 1766: 428. Type locality: Suriname. No types known.

Apteronotus passan La Cepède, 1800: 209, pl. 6 (fig. 3). Type locality: Suriname. Holotype: MNHN 3808.

Sternarchus maximiliani Castelnau, 1855: 93, pl. 45 (fig. 4). Type locality: Río Urubamba, Peru. No types known.

Sternarchus lacepedii Castelnau, 1855: 93, pl. 45 (fig. 3). Type locality: Suriname. No types known.

Maximum length: 50 cm TL

Distribution: South America: Venezuela to Paraguay and Paraná River basins.

Countries: Brazil, Ecuador, French Guiana, Guyana, Paraguay, Peru, Suriname, Venezuela

Common names: Black ghost (Venezuela), Bloblo (French Guiana), Bobo (French Guiana), Itouí cavalo (Brazil)

***Apteronotus apurensis* Fernández-Yépez, 1968**

Apteronotus apurensis Fernández-Yépez, 1968: [6], 5th unnumb pl.

Type locality: Río Bucaral, Paso Mirabal, Río Apure system, Oronoco basin, Venezuela. Holotype: MBUCV-V-10840.

Maximum length: 30.8 cm TL

Distribution: South America: Apure River basin.

Countries: Venezuela

***Apteronotus bonapartii* (Castelnau, 1855)**

Sternarchus bonapartii Castelnau, 1855: 92, pl. 45 (fig. 2). Type locality: Lake emptying into Río Ucayali, Peru. Holotype: MNHN 3807.

Maximum length: 27 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Common names: Macana (Peru)

***Apteronotus brasiliensis* (Reinhardt, 1852)**

Sternarchus brasiliensis Reinhardt, 1852: 148. Type locality: Rio das Velhas, Brazil. Syntypes: ?NMW 65015; ZMB 9185 and/or 9195; ZMUC 35-36, 41.

Maximum length: 29 cm TL

Distribution: South America: Das Velhas River basin.

Countries: Brazil

***Apteronotus cuchillejo* (Schultz, 1949)**

Sternarchogiton cuchillejo Schultz, 1949: 72, pl. 3 (fig. B). Type locality: Río Motatán, 8 km below Motatán, Maracaibo basin, Venezuela. Holotype: USNM 121600.

Maximum length: 18.9 cm TL

Distribution: South America: Catatumbo River basin.

Countries: Venezuela

***Apteronotus cuchillo* Schultz, 1949**

Apteronotus cuchillo Schultz, 1949: 69, pl. 3 (fig. A). Type locality: Río Socuy, 3 km above mouth, Maracaibo basin, Venezuela. Holotype: USNM 121591.

Maximum length: 39 cm TL

Distribution: South America: Lake Maracaibo basin.

Countries: Colombia, Venezuela

Common names: Cuchillo (Colombia)

***Apteronotus ellisi* (Arámburu, 1957)**

Porotergus ellisi Arámburu, 1957: 154, fig. 1. Type locality: Lower Río Paraná, San Pedro, Buenos Aires Prov., Argentina. Holotype: MLP 1-V-37-3.

Maximum length: 32.8 cm TL

Distribution: South America: Paraná River basin.

Countries: Argentina

***Apteronotus jurubidae* (Fowler, 1944)**

Sternarchus jurubidae Fowler, 1944: 242, fig. 20. Type locality: Río Jurubidá, Nuquí, Colombia. Holotype: ANSP 71435.

Maximum length: 25.3 cm TL

Distribution: South America: Jurubidá River basin.

Countries: Colombia

***Apteronotus leptorhynchus* (Ellis, 1912)**

Sternarchus leptorhynchus Ellis in Eigenmann, 1912: 439. Type locality: Amatuk, Guyana. Holotype: FMNH 53294.

Maximum length: 26.9 cm TL

Distribution: South America: The Guianas, Brazil and Peru; rivers of Colombia and Venezuela, including the Catatumbo River.

Countries: Brazil, Colombia, French Guiana, Guyana, Peru, Suriname, Venezuela

Common names: Cuchillo (Colombia)

***Apteronotus macrolepis* (Steindachner, 1881)**

Sternarchus macrolepis Steindachner, 1881a: 98. Type locality: Ausstände des Amazonenstromes zunächst der Mündung des Río

negro [Brazil]. Syntypes: (several) NMW 65333 (2).
Maximum length: 18 cm TL
Distribution: South America: Amazon River basin.
Countries: Brazil, Peru

Apteronotus macrostomus (Fowler, 1943)

Sternarchus macrostomus Fowler, 1943: 263, fig. 63. Type locality: Villavicencio, Río Meta basin, Colombia. Holotype: ANSP 70528.

Maximum length: 26 cm TL
Distribution: South America: Meta River basin.
Countries: Colombia

Apteronotus magdalenensis (Miles, 1945)

Ubidia magdalenensis Miles, 1945: 461, figs. 11-12. Type locality: Río Magdalena, Honda, Tolima, Colombia. Holotype: Sec. Caza y Pesca, Min. Nat. Econ. Bogotá.

Maximum length: 129 cm TL
Distribution: South America: Magdalena River basin.
Countries: Colombia

Apteronotus marauna (Triques, 1998)

Tembeassu marauna Triques, 1998: 6, figs. 1-3. Type locality: Ilha Solteira, Rio Paraná, Mato Grosso do Sul State, Brazil, ca. 20°30'S, 51°00'W. Holotype: MZUSP 48510.

Maximum length: 19.6 cm TL
Distribution: South America: Paraná River basin.
Countries: Brazil

Apteronotus mariae (Eigenmann & Fisher, 1914)

Sternarchus mariae Eigenmann & Fisher, 1914: 236. Type locality: Girardot, Colombia. Holotype: FMNH 56774.

Maximum length: 20.4 cm TL
Distribution: South America: Magdalena River basin.
Countries: Colombia

Apteronotus rostratus (Meek & Hildebrand, 1913)

Stenarchus rostratus Meek & Hildebrand, 1913: 85. Type locality: Río Grande near Cana, Panama. Holotype: FMNH 7592.

Maximum length: 27.2 cm TL
Distribution: Central America: Grande River basin.
Countries: Panama

Apteronotus spurrellii (Regan, 1914)

Sternarchus spurrellii Regan, 1914: 32. Type locality: Río Condo-to, Colombia. Syntypes: BMNH 1914.5.18.90-93.

Maximum length: 27 cm TL
Distribution: South America: San Juan River basin.
Countries: Colombia

COMPSARAIA

Compsaraia Albert, 2001: 78. Type species: *Porotergus compsus* Mago-Leccia, 1994. Gender: feminine.

Compsaraia compsus (Mago-Leccia, 1994)

Porotergus compsus Mago-Leccia, 1994: 82, figs. 90, 91. Type locality: Río Orinoco, at Isla Iguana, between km 152 and 153, Delta Amacuro, Venezuela. Holotype: MBUCV-V-11010.

Maximum length: 33.8 cm TL
Distribution: South America: Orinoco, Meta, Apuré and Negro River basins.
Countries: Brazil, Venezuela

MAGOSTERNARCHUS

Magosternarchus Lundberg, Cox Fernandes & Albert in Lundberg et al., 1996: 658. Type species: *Magosternarchus raptor* Lundberg, Cox Fernandes & Albert, 1996. Type by original designation Gender: masculine.

Magosternarchus ducis Lundberg, Cox Fernandes & Albert, 1996

Magosternarchus ducis Lundberg, Cox Fernandes & Albert in Lundberg et al., 1996: 664, fig. 2. Type locality: Rio Branco, 3-11 km upriver from confluence with Rio Negro, 1°17'S, 61°51'W, Roraima State, Brazil, 6-7 m. Holotype: MZUSP 48439.

Maximum length: 22.6 cm TL
Distribution: South America: Amazon basin.
Countries: Brazil

Magosternarchus raptor Lundberg, Cox Fernandes & Albert, 1996

Magosternarchus raptor Lundberg, Cox Fernandes & Albert in Lundberg et al., 1996: 661, fig. 1. Type locality: Rio Solimões, 17 km downriver from confluence or Rio Purus, 3°36'S, 61°21'W, Amazonas State, Brazil. Holotype: MZUSP 48436.

Maximum length: 19.9 cm TL
Distribution: South America: Amazon River basin.
Countries: Brazil

MEGADONTOGNATHUS

Megadontognathus Mago-Leccia, 1994: 38. Type species: *Megadontognathus cuyuniense* Mago-Leccia, 1994. Type by original designation. Gender: masculine.

Megadontognathus cuyuniense Mago-Leccia, 1994

Megadontognathus cuyuniense Mago-Leccia, 1994: 81, figs. 58, 89a, 89b. Type locality: Río Cuyuni at Paruruvaca rapids, Bolívar, Venezuela. Holotype: MBUCV-V-9499.

Maximum length: 23.8 cm TL
Distribution: South America: Cuyuni and Caroní River basins.
Countries: Venezuela

Megadontognathus kaitukaensis Campos-da-Paz, 1999

Megadontognathus kaitukaensis Campos-da-Paz, 1999:1043, fig. 1. Type locality: Cachoeiras de Kaituká, 5°15'S, 52°50'W, Rio Xingú, Pará. Holotype: INPA 14074.

Maximum length: 16 cm TL
Distribution: South America: Xingu River basin.
Countries: Brazil

ORTHOSTERNARCHUS

Orthosternarchus Ellis, 1913: 144. Type species: *Sternarchus tamandua* Boulenger, 1898. Type by original designation. Gender: masculine.

Orthosternarchus tamandua (Boulenger, 1898)

Sternarchus tamandua Boulenger, 1898: 427, pl. 42. Type locality: Rio Juruá, Brazil. Holotype: BMNH 1897.12.1.208.

Maximum length: 44 cm TL
Distribution: South America: Amazon River basin.
Countries: Brazil

PARAPTERONOTUS

Parapteronotus Albert, 2001: 73. Type species: *Sternarchus hasemani* Ellis, 1913. Gender: masculine.

Parapteronotus hasemani (Ellis, 1913)

Sternarchus hasemani Ellis, 1913: 147, pl. 23 (fig. 1). Type locality: Santarém, Pará, Brazil. Holotype: FMNH 54562.

Apteronotus anas Eigenmann & Allen, 1942: 321, pl. 15 (fig. 1). Type locality: Iquitos. Holotype: CAS 56510.

Maximum length: 38.1 cm TL
Distribution: South America: Amazon River basin.
Countries: Brazil, Peru

PLATYUROSTERNARCHUS

Platyurosternarchus Mago-Leccia, 1994: 37. Type species: *Sternarchus macrostoma* Günther, 1870. Type by original designation. Gender: masculine.

***Platyurosternarchus macrostomus* (Günther, 1870)**

Sternarchus macrostoma Günther, 1870: 4. Type locality: Xeberos [Peru]. Holotype: BMNH 1867.6.13.76.

Maximum length: 40 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru, Venezuela

POROTERGUS

Porotergus Ellis in Eigenmann, 1912: 423, 440. Type species: *Porotergus gymnotus* Ellis, 1912. Type by original designation. Gender: masculine.

***Porotergus gimbeli* Ellis, 1912**

Porotergus gimbeli Ellis in Eigenmann, 1912: 441. Type locality: Pará [Brazil]. Holotype: FMNH 54566.

Maximum length: 24 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Porotergus gymnotus* Ellis, 1912**

Porotergus gymnotus Ellis in Eigenmann, 1912: 441. Type locality: Amatuk [Guyana]. Holotype: FMNH 53575.

Maximum length: 85 cm TL

Distribution: South America: Guianas; Amazon River basin.

Countries: Brazil, French Guiana, Guyana

Common names: Bloblo (French Guiana), Itoui (Brazil)

STERNARCHELLA

Sternarchella Eigenmann in Eigenmann & Ward, 1905: 163. Type species: *Sternarchus schotti* Steindachner, 1868. Type by original designation. Gender: feminine.

***Sternarchella curvioperculata* Godoy, 1968**

Sternarchella curvioperculata Godoy, 1968: 352, figs. 3-5. Type locality: num riacho, afluente do Rio Mogi Guassu, que fica uns 12 km a montante de Cachoeira de Emas margem esquerda (km 243 do mencionado rio) [São Paulo State, Brazil]. Holotype: EEBP 336.

Maximum length: 25.3 cm TL

Distribution: South America: Paraná River River.

Countries: Brazil

***Sternarchella orthos* Mago-Leccia, 1994**

Sternarchella orthos Mago-Leccia, 1994: 84, fig. 93. Type locality: Río Apure near Río Boquerones mouth, east of San Fernando de Apure, Apure, Venezuela. Holotype: MBUCV-V-14173.

Maximum length: 30 cm TL

Distribution: South America: Orinoco River basin, mostly in the channel of main rivers.

Countries: Venezuela

***Sternarchella schotti* (Steindachner, 1868)**

Sternarchus schotti Steindachner, 1868b: 252, pl. 1 (figs. 1-2). Type locality: Manaus, Brazil. Holotype: NMW 65335.

Maximum length: 40 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Sternarchella sima* Starks, 1913**

Sternarchella sima Starks, 1913: 22, pl. 4. Type locality: Pará [Brazil]. Holotype: SU 22220.

Sternarchella orinoco Mago-Leccia, 1994: 97, figs. 94a-b, 95. Type locality: Río Orinoco, at Isla Iguana, between km 152 and 153, Delta Amacuro, Venezuela. Holotype: MBUCV-V-10514.

Maximum length: 40 cm TL

Distribution: South America: Amazon and Orinoco River basins (living in the main channel of large rivers).

Countries: Brazil, Venezuela

***Sternarchella terminalis* (Eigenmann & Allen, 1942)**

Porotergus terminalis Eigenmann & Allen, 1942: 324. Type locality: Iquitos [Peru]. Holotype: CAS 54912.

Maximum length: 22.4 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

STERNARCHOGITON

Sternarchogiton Eigenmann in Eigenmann & Ward, 1905: 164.

Type species: *Sternarchus nattereri* Steindachner, 1868. Type by original designation. Gender: masculine.

***Sternarchogiton nattereri* (Steindachner, 1868)**

Sternarchus nattereri Steindachner, 1868a: 176. Type locality: Manaus, Brazil. Holotype: NMW 65014.

Oedemognathus exodon Myers, 1936: 115. Type locality: Río Ampiyacu, Amazon system, e. Peru. Holotype: USNM 102040.

Maximum length: 25 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru, Venezuela

***Sternarchogiton porcinum* Eigenmann & Allen, 1942**

Sternarchogiton porcinum Eigenmann & Allen, 1942: 325, pl. 16 (fig. 1). Type locality: Río Huallaga, Yurimaguas [Peru]. Holotype: CAS 28810.

Maximum length: 30 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

STERNARCHORHAMPHUS

Sternarchorhamphus Eigenmann in Eigenmann & Ward, 1905:

165. Type species: *Sternarchus (Rhamphosternarchus) muelleri* Steindachner, 1881. Type by original designation. Gender: masculine.

***Sternarchorhamphus muelleri* (Steindachner, 1881)**

Sternarchus (Rhamphosternarchus) muelleri Steindachner, 1881a: 99. Type locality: Amazon River near Pará, Brazil. Syntypes: NMW 65328.

Maximum length: 45.5 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru, Venezuela

Common names: Macana (Peru)

STERNARCHORHYNCHUS

Sternarchorhynchus Castelnau, 1855: 95. Type species: *Sternarchus muelleri* Castelnau, 1855. Type by monotypy. Gender: masculine.

Rhamphosternarchus Günther, 1870: 4. Type species: *Sternarchus oxyrhynchus* Müller & Troschel, 1849. Type by subsequent designation. Gender: masculine.

Sternarchorhynchus britskii Campos-da-Paz, 2000
Sternarchorhynchus britskii Campos-da-Paz, 2000: 528, fig. Type locality: Ilha Solteira, Rio Paraná, Mato Grosso do Sul, Brazil. Holotype: MZUSP 52923.

Maximum length: 26.1 cm TL

Distribution: South America: Paraná River basin.

Countries: Brazil

***Sternarchorhynchus curvirostris* (Boulenger, 1887)**

Sternarchus (Rhamphosternarchus) curvirostris Boulenger, 1887: 282, pl. 24. Type locality: Canelos [Ecuador]. Syntypes: BMNH

1880.12.8.90-91.

Maximum length: 40.6 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Brazil, Ecuador, Peru

Sternarchorhynchus mesensis Campos-da-Paz, 2000

Sternarchorhynchus mesensis Campos-da-Paz, 2000: 531, fig.

Type locality: Serra da Mesa, Rio Tocantins, Goiás, Brazil. Holotype: MNRJ 17591.

Maximum length: 24.9 cm TL

Distribution: South America: Tocantins River basin.

Countries: Brazil

Sternarchorhynchus mormyrus (Steindachner, 1868)

Sternarchus mormyrus Steindachner, 1868a: 176. Type locality:

Maribitanos [Brazil]. Syntypes: NMW 65336, 65345.

Maximum length: 54 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

Sternarchorhynchus oxyrhynchus (Müller & Troschel, 1849)

Sternarchus oxyrhynchus Müller & Troschel, 1849: 16, pl. 2 (figs. 1-2). Type locality: Essequibo River, Guyana. Holotype: ZMB 4086.

Sternarchorhynchus mulleri Castelnau, 1855: 95. Type locality: Essequibo R., Guyana. No types known.

Maximum length: 47 cm TL

Distribution: South America: Venezuela and the Guianas, Brazilian Amazon.

Countries: Brazil, French Guiana, Guyana, Venezuela

Sternarchorhynchus roseni Mago-Leccia, 1994

Sternarchorhynchus roseni Mago-Leccia, 1994: 99, fig. 92. Type

locality: Río Apure at Jarina, near San Fernando de Apure, Río Orinoco basin, Apure, Venezuela. Holotype: MBUCV-V-20037.

Maximum length: 41 cm TL

Distribution: South America: Orinoco and Amazon River basins.

Countries: Brazil, Venezuela

Common names: Rosen knifefish (Venezuela)

Family Galaxiidae (Galaxiids)

Tim M. Berra

The phylogenetic classification of osmeriform fishes was reviewed by Waters et al. (2002) and Johnson and Patterson (1996). The galaxiids are freshwater fishes, some of which are diadromous, that occur in cool temperate waters of the Southern Hemisphere in Australia, Lord Howe Island, New Zealand, the Chatham Islands, Auckland and Campbell Islands, New Caledonia, southern South America, the Falkland Islands/Malvinas, and the southern tip of South Africa (Berra, 2001). There are seven genera (*Aplochiton*, *Brachygalaxias*, *Galaxias* (including *Nesogalaxias* from New Caledonia), *Galaxiella*, *Lovettia*, *Neocharanna*, and *Paragalaxias*) and about 51 species, six of which occur in southern South America. Six species names of *Haplochiton* listed by Philippi in Delfin (1899) for South America are nomina nuda and therefore not available. Five new species of *Galaxias* were described in the last few years when it was discovered that *G. vulgaris* from the South Island of New Zealand was actually a species complex (Wallis et al., 2001), and more sibling species remain to be described.

Galaxiids are elongate, scaleless fishes and all lack an adipose fin except *Aplochiton* and *Lovettia*. Some species are rather stocky and tubular. Most species have seven pelvic and 16 caudal fin rays (McDowall, 1990), however there is wide variation of other elements of the caudal skeleton within and among species (McDowall, 1999). A lateral line is present. Some species may have an accessory lateral line composed of small, widely spaced neuromasts along the dorsolateral trunk from the occiput to the dorsal fin (McDowall, 1997). This accessory lateral line may function in sensing food or predators at the water's surface. The dorsal fin is situated posteriorly and more or less above the anal fin.

Nelson (1994) listed three subfamilies of the Galaxiidae: Lovettiinae, Aplochitoninae, and Galaxiinae. The Lovettiinae is found only in Tasmania. The subfamily Aplochitoninae (previously considered a separate family) is composed of two species of *Aplochiton* from southern South America (McDowall, 1971a).

The dorsal fin of *Aplochiton* is anteriorly positioned over the pelvic fins. An adipose fin is present, and the caudal fin is forked. *Aplochiton* is probably amphidromous with the larvae being carried to sea after hatching in freshwater streams. McDowall (1984b) reported a post-larval *Aplochiton* taken at sea in southern Chile.

The Galaxiinae includes five genera and about 48 species. This subfamily is most diverse in Australia, especially Tasmania, and in New Zealand. However, representatives also occur in South America, and one species inhabits Cape coastal streams at the southern tip of South Africa (Berra, 2001). No members of the family or subfamily occur in the Northern Hemisphere in spite of Day's description of *G. indicus*, which McDowall (1973) regarded as a nomen dubium.

Galaxias maculatus has one of the most widely disjunct distributions of any freshwater fish (Berra et al., 1996). *Galaxias maculatus* occurs in eastern and western Australia, Tasmania, Lord Howe Island, New Zealand, Chatham Island, southern Chile, Argentina, and the Falkland Islands/Malvinas (McDowall, 1970, Berra, 2001). Two hypotheses have been advanced to explain this disjunct distribution: dispersal (movement through the sea) and vicariance (continental drift).

A summary of this debate involving McDowall (1970), Rosen (1974, 1978) and others is given by Berra et al. (1996), who used allozyme electrophoresis of muscle extracts of *G. maculatus* from eastern and western Australia, New Zealand, and Chile to test the hypothesis that populations from the western Pacific and the eastern Pacific do not differ genetically. They found only minor differentiation in allele frequency at some loci and no fixation of alternative alleles. The populations appeared to be part of the same gene pool indicating that gene flow via dispersal through the sea occurs today. Only a small amount of gene flow is necessary to prevent accumulation of genetic differences by random drift. The marine larval stage of *G. maculatus* has a six-month period to traverse the distance between the southern continents (McDowall et al., 1994) and could provide enough gene flow to deter fixation for alternative alleles. A study of mitochondrial DNA sequence divergence by Waters and Burrige (1999) also supported the dispersal argument, but reported greater population differentiation than detected by Berra et al. (1996) with allozymes. Waters et al. (2000a) demonstrated that inter-continental marine dispersal between New Zealand and Tasmania occurs but is insufficient to prevent mitochondrial DNA differentiation among continents.

Other South American galaxiids include two additional species of *Galaxias* and the small, colorful *Brachygalaxias bullocki* (McDowall, 1971b). *Galaxias platei* occurs in Chile, Argentina, and the Falkland Islands/Malvinas, and the very rare, if not extinct, *G. globiceps* is known from only a few specimens taken near Puerto Montt, Chile (Berra and Ruiz, 1994, Berra and Barbour, 1998). *Brachygalaxias bullocki* resembles *Galaxiella* of Australia, but whether this similarity is due to conver-

gence or phylogeny is not yet clear. Waters and Cambray (1997), and Waters et al. (2000b) provided mtDNA data useful for phylogenetic analysis of galaxiids.

APLOCHITON

Aplochiton Jenyns, 1842: 130. Type species: *Aplochiton zebra* Jenyns, 1842. Type by subsequent designation by Eigenmann (1910: 462). Gender: masculine.

Haplochiton Agassiz, 1846:29. Unjustified emendation of *Aplochiton* Jenyns. Gender: masculine.

Farionella Valenciennes, in Cuvier & Valenciennes, 1849: 507. Type species: *Farionella gayi* Valenciennes, 1849. Type by monotypy. Gender: feminine.

Aplochiton taeniatus Jenyns, 1842

Aplochiton taeniatus Jenyns, 1842: 132, pl. 24 (fig. 2). Type locality: Goree Sound, Tierra del Fuego, at stream mouth.

Aplochiton marinus Eigenmann, 1927: 46, pl. 11 (figs. 2, 5). Type locality: Estero Cutipai, near Valdivia, Chile. Holotype: CAS 51274.

Maximum length: 33.4 cm SL

Distribution: South America: On both sides of the Andes, in Chile from Lake Villarrica south and in Argentina from Lake Lacar south; into Tierra del Fuego at the southern tip of South America (McDowall 1971a).

Countries: Argentina, Chile

Remarks and references: Earlier work included *Aplochiton* in the family Aplochitonidae. *Aplochiton taeniatus* is a specialized piscivore with a very large mouth and greatly enlarged teeth (McDowall and Nakaya 1987,1988). *Aplochiton marinus* is considered a synonym of *A. taeniatus*. See McDowall (1971a) for a detailed description.

Common names: Aplochiton (English), Peladilla (Chile)

Aplochiton zebra Jenyns, 1842

Aplochiton zebra Jenyns, 1842: 131, pl. 24 (figs. 1, 1a). Type locality: Falkland Is., in freshwater lake.

Farionella gayi Valenciennes in Cuvier & Valenciennes, 1850: 508, pl. 649. Type locality: Chile.

Farionella fasciata Philippi, 1858: 310. Type locality: Valdivia, Chile. No types known.

Maximum length: 27.8 cm SL

Distribution: South America: Along the Chilean side of the Andes from Callecalle River system south to Tierra del Fuego and the Falkland Islands/Malvinas.

Countries: Chile, Falkland Is. (Malvinas)

Remarks and references: Previously included in Aplochitonidae. See McDowall (1971a) for a detailed description. It is generalized invertebrate predator (McDowall and Nakaya 1987,1988).

Common names: Aplochiton (English), Farionella listada (Chile)

BRACHYGALAXIAS

Brachygalaxias Eigenmann, 1927: 49. Type species: *Galaxias bullocki* Regan, 1908. Type by monotypy. Gender: masculine.

Brachygalaxias bullocki (Regan, 1908)

Galaxias bullocki Regan, 1908: 372. Type locality: Maquehue, Temuco, s. Chile.

Brachygalaxias gothei Busse, 1982: 72, fig. 1. Type locality: Near Talca, Chile. Holotype: ZFMK 11110.

Maximum length: 5.5 cm SL

Distribution: South America: Central Chile from about Talca (35°S) south to Chiloé Island (42°S).

Countries: Chile

Remarks and references: Includes *B. gothei* Busse (1982) which was considered a junior synonym of *G. bullocki* by Berra et al. (1995). See McDowall (1971b) for detailed description. Occasionally kept as an aquarium species.

Common names: Brachygalaxias (English), Puye (Chile)

GALAXIAS

Galaxias Cuvier, 1816: 183. Type species: *Esox truttaceus* Cuvier, 1816. Type by monotypy. Gender: masculine.

Mesites Jenyns, 1842: 118. Type species: *Mesites attenuatus* Jenyns, 1842. Type by subsequent designation by Jordan (1919: 212). Gender: masculine. Preoccupied by *Mesites* Schoenherr, 1838, in Coleoptera; replaced by *Austrocobitis* Ogilby, 1899.

Austrocobitis Ogilby, 1899: 158. Type species: *Mesites attenuatus* Jenyns, 1842. Type by being a replacement name. Gender: feminine. Replacement for *Mesites* Jenyns, 1842.

Lyragalaxias Whitley, 1935: pl. 3, legend. Type species: *Galaxias oconnori* Ogilby, 1912. Gender: masculine.

Agalaxis Scott, 1936: 105. Type species: *Cobitis zebrata* Castelnau, 1861. Type by original designation. Gender: masculine.

Saxilaga Scott, 1936: 105. Type species: *Galaxias cleaveri* Scott, 1934. Type by original designation. Gender: feminine.

Galaxias globiceps Eigenmann, 1927

Galaxias globiceps Eigenmann, 1927: 51, pls. 10 (fig. 2), 13 (fig. 7). Type locality: Abtao, north of Puerto Montt, Chile. Holotype: CAS 49903 (119 mm).

Maximum length: 10.7 cm SL

Distribution: South America: Known only from the type locality at Los Alerces near Puerto Montt, Chile.

Countries: Chile

Remarks and references: There are eight specimens in Eigenmann's type series. Berra and Ruiz (1994) collected 12 juveniles (22-29 mm SL) that matched the diagnostic measurements specified by McDowall (1971b), but when subjected to principal components analysis, the juveniles resemble *Galaxias platei* (Berra and Barbour, 1998). Further collecting is needed to determine if *G. globiceps* is still extant.

Common names: Galaxias (English), Puye (Chile)

Galaxias maculatus (Jenyns, 1842)

Mesites attenuatus Jenyns, 1842: 121, pl. 22 (fig. 5). Type locality: Bay of Islands, New Zealand, in fresh water. Holotype: BMNH 1917.7.14.11.

Mesites alpinus Jenyns, 1842: 121. Type locality: Hardy Peninsula, Tierra del Fuego.

Mesites maculatus Jenyns, 1842: 119, pl. 22 (figs. 4, 4a). Type locality: Fresh water brook on Hardy Peninsula, Tierra del Fuego and Río Santa Cruz, Patagonia.

Galaxias scriba Valenciennes, in Cuvier & Valenciennes, 1846: 347. Type locality: Port Jackson, N. S. W., Australia. Holotype: MNHN A.5217.

Galaxias punctulatus Philippi, 1858: 310. Type locality: Valdivia, Chile.

Galaxias minutus Philippi, 1858: 309. Type locality: Valdivia, Chile.

Mesites gracillimus Canestrini, 1864: 100, pl. 4 (fig. 2). Type locality: Chile.

Galaxias punctatus Günther, 1866: 212. Type locality: Eastern Creek, N. S. W., Australia. Holotype: BMNH 1864.7.22.49.

Galaxias krefftii Günther, 1866: 211. Type locality: Sydney and Murray R., N. S.W., Australia.

Galaxias forsteri Kner, 1867: 320. Type locality: Auckland, New Zealand. Types: whereabouts unknown.

Galaxias pseudoscriba McCoy, 1867: 320. Type locality: Yarra R., Victoria, Australia. Holotype: ?NMV A9853 (old coll., no locality).

Galaxias waterhousi Krefft, 1868: 943. Type locality: Creeks in South Australia. Syntypes: MAS I.11384-88 (5).

Galaxias obtusus Klunzinger, 1872: 41. Type locality: Yarra la-

goon, Victoria, Australia. Lectotype: AMS I.309960-001, designated by McDowall & Frankenberg (1981: 532).

Galaxias versicolor Castelnau, 1872: 176. Type locality: Marsh near St. Kilda, Victoria, Australia. Holotype: No types known.

Galaxias delicatulus Castelnau, 1872: 178. Type locality: Yarra R., Victoria, Australia. No types known.

Galaxias cylindricus Castelnau, 1872: 177. Type locality: Lower Yarra R., Victoria, Australia. No types known.

Galaxias amaenus Castelnau, 1872: 178. Type locality: Yarra R., Victoria, Australia. No types known.

Galaxias nebulosa Macleay, 1881: 234. Type locality: Long Bay near Sydney, N. S. W., Australia.

Galaxias coppingeri Günther, 1881: 21. Type locality: Alert Bay, Patagonia. Holotype: BMNH 1880.7.28.25.

Galaxias variegatus Lahille, 1923: 173. Type locality: Not known.

Galaxias parrishi Stokell, 1964: 47, figured. Type locality: Lake Bullen Merri, Victoria, Australia. Holotype: NMV A242.

Galaxias maculatus ignotus Stokell, 1966: 78. Type locality: Lower Tamar R., Tasmania, Australia. Holotype: whereabouts unknown.

Galaxias usitatus McDowall, 1967: 7, fig. 6. Type locality: Lake Waiparera, North Auckland, New Zealand. Holotype: NMNZ P.5625.

Maximum length: 15.5 cm SL

Distribution: Oceania: Australia (including Tasmania), Lord Howe Island, New Zealand and the Chatham Islands. South America: Ranges from along the Chilean side of the Andes near Valparaíso to the southern extremity of the island chain southeast of Tierra del Fuego. Also on the eastern side of the Andes in Argentina in isolated lakes (Meliquina, Traful, Nahuel Huapi, Gutierrez, and Pellegrini) which drain into the Atlantic Ocean via the Negro River. It occurs on both main islands of the Falkland Islands/Malvinas.

Countries: Argentina, Australia, Chile, Falkland Is. (Malvinas), New Zealand

Remarks and references: *Galaxias maculatus* has the most disjunct distribution of any freshwater species. This distribution is best explained by dispersal of whitebait larval stage throughout the sea (Berra et al., 1996). See McDowall (1971b) for a detailed description.

Common names: Galaxias (English), Puye (Chile)

Galaxias platei Steindachner, 1898

Galaxias delfini Philippi, 1895: 19. Type locality: Lake north of Punta Arenas, Chile. No types known. A forgotten name, the same as *Galaxias platei* Steindachner, 1898 (McDowall 1971: 38).

Galaxias grandis Philippi, 1895: 19. Type locality: Lake north of Punta Arenas, Chile. No types known. Permanently invalid, preoccupied by *Galaxias grandis* Haast, 1873.

Galaxias platei Steindachner, 1898: 329, pl. 20 (fig. 13). Type locality: Río Pescado at Punta Arenas, Strait of Magellan, Chile.

Galaxias titcombi Evermann & Kendall, 1906: 92, fig. 2. Type locality: Río Traful near Lake Trufal, Argentina. Holotype: USNM 55571.

Galaxias smithii Regan, 1906: 372. Type locality: Falkland Is. Holotype: BMNH 1965.7.20.1.

Maximum length: 30.9 cm SL

Distribution: South America: Central and southern Chile from about Valdivia through the Patagonian Andes in Argentina, Tierra del Fuego and the Falkland Islands/Malvinas.

Countries: Argentina, Chile, Falkland Is. (Malvinas)

Remarks and references: This is the second largest member of the Galaxiidae. The only larger species is *G. argenteus* from New Zealand which reaches about 58 cm. See McDowall (1971b) for a detailed description.

Common names: Galaxias (English), Tollo (Chile)

SPECIES INQUIRENDA

Galaxias elongatus Lahille, 1915: 10. Type locality: Near R. Santa Cruz mouth, above El Quemado, Chile.

Family Bythitidae (Viviparous brotulas)

Jørgen G. Nielsen

The Bythitidae comprises 32 genera and 96 species (Nielsen et al., 1999). They are mostly elongate fishes characterized by the long dorsal and anal fins which are joined to the caudal fin in the subfamily Bythitinae and free from the caudal fin in the subfamily Brommophycinae. Rays in ventral fin 0-2 with 1 the most common. Rarely more than 6 long rakers on anterior gill arch. Anterior nostril placed much closer to upper lip than to posterior nostril, except for *Dinematichthys* where it is placed midway between upper lip and posterior nostril.

Almost all are marine with the majority occurring on reefs but with species down to 5500 m. The few freshwater species occur on Cuba in caves with fresh or slightly saline water, in caves in Yucatán and in brackish and freshwater caves and crevices in the Galapagos Archipelago. Except for 5-6 species from northern Atlantic and southern New Zealand members of the Bythitidae are restricted to tropical and subtropical areas.

LUCIFUGA

Lucifuga Poey, 1858: 95. Type species: *Lucifuga subterraneus* Poey, 1858. Type by monotypy. Gender feminine.

Stygicola Gill, 1863: 252. Type species: *Lucifuga dentatus* Poey, 1858. Type by original designation. Gender: masculine.

***Lucifuga dentatus* Poey, 1858**

Lucifuga dentatus Poey, 1858: pl. 9 (fig. 1). Type locality: Cave of Cajío, Cuba. Possible syntypes: MCZ 12415 (1), 32329 (1); ZMB 5961 (1).

Maximum length: 15.2 cm SL.

Distribution: Caribbean Islands: North and south slopes of west-central Cuba, in caves.

Countries: Cuba

Remarks and references: Name available from figure in Poey (1858); text of description in Poey (1860: 102).

***Lucifuga simile* Nalbant, 1981**

Lucifuga simile Nalbant, 1981: 189, fig. 3. Type locality: Grieta Punta de Guana, ca. 100 m from shore line of Atlantic Ocean, Matanzas Province, Cuba. Holotype: ISER.

Maximum length: 8.5 cm SL.

Distribution: Caribbean Islands: Matanzas Province, Cuba, in caves.

Countries: Cuba

***Lucifuga subterranea* Poey, 1858**

Lucifuga subterraneus Poey, 1858: 96. Type locality: Caves of San Antonio, South Cuba. Possible type: ZMB 6341 (1).

Maximum length: 9.4 cm SL.

Distribution: Caribbean Islands: Southwestern Cuba, in caves, sinkholes and crevices.

Countries: Cuba

***Lucifuga teresinarum* Diaz Pérez, 1988**

Lucifuga teresinarum Diaz Pérez, 1988: 38, fig. 5. Type locality: Cueva de la Lechuza [Havana Province, Cuba]. Holotype: DZUH 2015.

Maximum length: 8.3 cm SL.

Distribution: Caribbean Islands: Western Cuba, in caves.

Countries: Cuba

OGILBIA

Ogilbia Jordan & Evermann, in Evermann & Kendall, 1898: 132.

Type species: *Ogilbia cayorum* Evermann & Kendall, 1898. Type by original designation. Gender feminine.

Typhlias Hubbs, 1938: 287. Type species: *Typhlias pearsei* Hubbs, 1938. Type by original designation. Preoccupied by *Typhlias* Bryce, 1910, in Vermes; replaced by *Typhliasina* Whitley, 1951. Gender: masculine.

Typhliasina Whitley, 1951: 67. Type species: *Typhlias pearsei* Hubbs, 1938. Type by being a replacement name. Replacement for *Typhlias* Hubbs, 1938. Gender feminine.

Caecogilbia Poll & Leleup, 1965: 467. Type species: *Caecogilbia galapagosensis* Poll & Leleup, 1965. Type by monotypy. Gender feminine.

***Ogilbia galapagosensis* (Poll & Leleup, 1965)**

Caecogilbia galapagosensis Poll & Leleup, 1965: 467, fig. 1. Type locality: Santa Cruz I., Galápagos Is. Holotype: MRAC uncat.

Maximum length: 5.8 cm SL.

Distribution: Galapagos Islands: Santa Cruz Island, in fresh and brackish water caves and crevices.

Countries: Ecuador

***Ogilbia pearsei* (Hubbs, 1938)**

Typhlias pearsei Hubbs, 1938: 291, pl. 3. Type locality: Balaam Canche Cave near Chichen Itza, Yucatán, Mexico. Holotype: UMMZ 116094.

Maximum length: 9.7 cm SL

Distribution: North America: Yucatán peninsula, in freshwater caves.

Countries: Mexico

Family Batrachoididae (Toadfishes)

Bruce B. Collette

Small to medium-sized fishes (to 57 cm) easily recognized by their characteristic shape. Head broad and flattened, often with barbels and/or fleshy flaps; eyes on top of head, dorsally-directed; mouth wide. Gill openings restricted to sides, just in front of pectoral fin base. Two dorsal fins, the first consisting of 2 or 3 strong, sharp spines; the second consisting of a large number of soft rays; pelvic fins jugular, inserted well in advance of pectoral fins, with 1 spine and 2 or 3 soft rays. One to several lateral lines on head and body. Body naked or covered with small, cycloid scales. Color mostly drab brown with spots or saddles of black, although at least one coral reef species, *Sanopus splendidus*, brightly coloured. One subfamily, the Porichthyinae, characterized by having photophores (light-emitting organs) in rows along lateral lines on head and body.

Toadfishes are bottom-dwellers ranging from shallow inshore areas to deep waters; several species enter rivers, and some migrate regularly between shallow and deep waters. They are rather sluggish in their movements and are ambush predators, feeding mainly on molluscs and crustaceans. They may bite when handled. The subfamily Thalassophryinae, or “venomous toadfishes”, includes species with hollow spines in the first dorsal fin and on the opercles; the spines are connected to venom glands that can force a poison into a wound. Although no catch statistics are reported, larger species of toadfishes are commonly found in local markets. Some species are eaten and may fetch fairly high prices in Venezuela and French Guiana.

The family is divided into three subfamilies (Collette, 1966): Batrachoidinae (about 18 genera, 47 species), Porichthyinae (2 genera, 15 species), and Thalassophryinae (2 genera, 11 species). The more generalized Batrachoidinae is world wide in distribution and contains a few freshwater species, one in Central America and one in South America. The more specialized midshipmen (Porichthyinae) and venomous toadfishes (Thalassophryinae) are restricted to the New World. All Porichthyinae are marine but there are three freshwater species of Thalassophryinae in South America.

BATRACHOIDES

Batrachoides La Cepède, 1800: 451. Type species: *Batrachoides tau* La Cepède, 1800. Type by subsequent designation. Gender: masculine.

Batrachoides goldmani Evermann & Goldsborough, 1902

Batrachoides goldmani Evermann & Goldsborough, 1902: 159, fig. 8. Type locality: Río Usumacinta at Montecristo, ca. 17°45'N, 91°45'W, Tabasco, Mexico. Holotype: USNM 50006.

Maximum length: 21.6 cm SL

Distribution: North and Central America: Usumacinta River drainage in the states of Chiapas and Tabasco, Mexico; El Petén and Alta Verapaz, Guatemala. Recently discovered in a tributary (Mescalpa River) to the next river to the west of the Usumacinta, the Grijalva River.

Countries: Guatemala, Mexico

Remarks and references: Redescribed by Collette & Russo (1981).

DAECTOR

Daector Jordan & Evermann, 1898: 2313, 2325. Type species: *Thalassophryne dowi* Jordan & Gilbert, 1887. Type by original designation. Gender: masculine.

Daector gerringi (Rendahl, 1941)

Thalassophryne gerringi Rendahl, 1941: 1, fig. 1. Type locality: Río San Juan at Cabeceras, Chocó Dist., Colombia. Holotype: NRM 10651.

Maximum length: about 25 cm SL

Distribution: South America: San Juan River and Baudo River

basins.

Countries: Colombia

Common names: Peje sapo (Colombia)

Remarks and references: Redescribed by Silfvergrip (1990).

Daector quadrizonatus (Eigenmann, 1922)

Thalassophryne quadrizonatus Eigenmann, 1922: 217, pl. 29 (fig. 5). Type locality: Río Truandó, Atrato basin, Colombia. Holotype: FMNH (missing).

Maximum length: 18 cm SL

Distribution: South America: Truandó River basin.

Countries: Colombia

Remarks and references: Redescribed by Collette (1973).

POTAMOBATRACHUS

Potamobatrachus Collette, 1995: 334. Type species: *Potamobatrachus trispinosus* Collette, 1995. Type by original designation. Gender: masculine.

Potamobatrachus trispinosus Collette, 1995

Potamobatrachus trispinosus Collette, 1995: 334, figs. 2-3. Type locality: Small rocky pool near town of Jatobal, Rio Tocantins, Pará, Brazil. Holotype: MZUSP 4335.

Maximum length: 5 cm SL

Distribution: South America: Araguaia/Tocantins River basin.

Countries: Brazil

THALASSOPHYRNE

Thalassophryne Günther, 1861: 174. Type species: *Thalassophryne maculosa* Günther, 1861. Type by monotypy. Gender: fe-

minine.

Thalassothia Berg, 1895:66. Type species: *Thalassophryne montevidensis* Berg, 1893. Type by monotypy. Gender: feminine.

***Thalassophryne amazonica* Steindachner, 1876**

Thalassophryne amazonica Steindachner, 1876: 161. Type locality: Mouth of Rio Negro and at Tabatinga and Xingu, Brazil. Syn-types: (at least 3) NMW (not found in 1995).

Maximum length: 9.3 cm SL.

Distribution: South America: Amazon River basin.

Countries: Brazil, Ecuador, Peru

Remarks and references: Redescribed by Collette (1966).

Family Gobiesocidae (Clingfishes and singleslits)

Carl J. Ferraris, Jr.

Species of the Gobiesocidae are small to medium sized fishes that are usually readily distinguished by the presence of a thoracic sucking disk, with which the fish attaches itself to the substratum (a few species of *Alabes* do not have a disk, and in one or more species the disk is rudimentary). In addition to the disk, gobiesocids can be recognized by the following combination of characters: head depressed, at least anteriorly; body without scales, but covered with dense coat of mucous; single dorsal fin lacking spines, fin often restricted to the posterior half of the body; pelvic fin rays contribute to the structure of the thoracic disk. Gobiesocids are usually less than 7 cm in standard length, but at least two species are known to achieve lengths of 30 cm or more (Nelson, 1984).

Gobiesocids are primarily near-shore marine fishes, ranging throughout the tropical and warm temperate regions of the world. A few species of one genus (*Gobiesox*) are found in freshwater rivers in the Americas, from Mexico to Ecuador, as well as some islands in the Caribbean region. Freshwater clingfishes are found in small, fast water streams and rivers at or near the coasts (Briggs, 1955).

Clingfishes are of minimal economical importance and little is known about the biology of most species of this family.

GOBIESOX

Gobiesox La Cepède, 1800: 595. Type species: *Gobiesox cephalus* La Cepède, 1800. Type by monotypy. Gender: masculine.

Megaphalus Rafinesque, 1815: 86. Type species: *Gobiesox cephalus* La Cepède, 1800. Type by being a replacement name. Gender: masculine. Originally proposes as “*Megaphalus* R. [= Rafinesque] *Gobiesox* Lac. [= La Cepède]”.

Cotylys Müller & Troschel in Müller, 1843: 297. Type species: *Cyclopterus nudus* of Bloch & Schneider, 1801. Type by monotypy. Gender: feminine.

Sicyogaster Brisout de Barneville, 1846: 144. Type species: *Gobiesox marmoratus* Jenyns, 1842. Type by monotypy. Gender: feminine.

Caularchus Gill, 1862: 330. Type species: *Lepadogaster reticulatus* Girard, 1854. Type by monotypy. Gender: masculine.

Bryssetaeres Jordan & Evermann in Jordan, 1896: 230. Type species: *Gobiesox pinniger* Gilbert, 1890. Type by original designation. Gender: masculine.

Caulistius Jordan & Evermann, 1896: 491. Type species: *Gobiesox papillifer* Gilbert, 1890. Type by original designation. Gender: masculine. Originally proposed as a subgenus of *Gobiesox*.

Bryssophilus Jordan & Evermann, 1898: 2329. Type species: *Gobiesox papillifer* Gilbert, 1890. Type by original designation. Gender: masculine. Originally proposed as a subgenus of *Gobiesox*.

Cotylichthys Jordan, 1919: 341. Type species: *Cotylys fimbriata* Müller & Troschel, 1849. Type by original designation. Gender: masculine.

Infratridens Schultz, 1944: 57. Type species: *Gobiesox rhessodon* Smith, 1881. Type by original designation. Gender: masculine.

Genus last reviewed in its entirety by Briggs (1955).

Gobiesox fluviatilis Briggs & Miller, 1960

Gobiesox fluviatilis Briggs & Miller, 1960: 2, pl. 1. Type locality: Barranca de Barranquitas below Barranquitas, Jalisco, 69 mi. by highway 15 southeast of Tepic, Nayarit (Mexico). Holotype: UMMZ 177314.

Maximum length: 5.9 cm SL

Distribution: North America: Pacific versant, Rio Grande de Santiago.

Countries: Mexico

Gobiesox fulvus Meek, 1907

Gobiesox fulvus Meek, 1907: 149. Type locality: Cocos I., e. Pacific. Holotype: FMNH 6035.

Maximum length: 9.1 cm SL

Distribution: Central America: Cocos Island, Costa Rica.

Countries: Costa Rica

Remarks and references: Redescribed in Briggs (1955).

Gobiesox juradoensis Fowler, 1944

Gobiesox juradoensis Fowler, 1944: 247, figs. 24-25. Type locality: Río Juradó, Chocó Prov., Colombia, elev. 600 ft. Holotype: ANSP 71451.

Gobiesox rhyacophilus Briggs, 1951: 72, figs. 7-8. Type locality: Stream entering Watering Bay, Gorgona I., (Pacific) Colombia. Holotype: LACM 21696 (ex AHF 1191).

Maximum length: 11.5 cm SL

Distribution: South America: Pacific versant rivers of Colombia.

Countries: Colombia

Remarks and references: Redescribed in Briggs (1955).

Gobiesox mexicanus Briggs & Miller, 1960

Gobiesox mexicanus Briggs & Miller, 1960: 7, pl. 3. Type locality: Río Coyuquilla, 60 mi. by road southeast of Zihuatenejo, Guerrero (Mexico). Holotype: UMMZ 177318.

Maximum length: 6.9 cm SL

Distribution: North America: Pacific versant rivers north of Gulf of Tehuantepec.

Countries: Mexico

Gobiesox multitentaculus (Briggs, 1951)

Cotylys multitentaculum Briggs, 1951: 80. Type locality: Off coast just north of Paita, Peru. Holotype: USNM 107142.

Maximum length: 6.3 cm SL

Distribution: South America: Pacific versant rivers.

Countries: Ecuador, Peru

Check List of the Freshwater Fishes of South and Central America

Remarks and references: Redescribed in Briggs (1955).

Common names: Fordero (Ecuador)

***Gobiesox nudus* (Linnaeus, 1758)**

Cyclopterus nudus Linnaeus, 1758: 260. Type locality: "India".
Holotype: NRM 92.

Gobiesox cephalus La Cèpède, 1800: 595, 596, pl. 19 (fig. 1).
Type locality: South America. No types known.

Lepadogaster testar Bloch & Schneider, 1801: 4, pl. 1. Type locality: Not stated [West Indies]. No types known.

Cyclopterus bispinosus Shaw, 1804: 396. Type locality: India (in error). No types known.

Gobiesox tudes Richardson, 1845: pl. 46 (figs. 1-3). Type locality: Not stated. Holotype: whereabouts unknown. Plate published earlier than text (although both published in same year), making the illustrated specimen the holotype. Description in Richardson (1845: 103), with indication that specimens were from China.

Cotylis Stannii Müller & Troschel, 1849: 18, pl. 3 (fig. 3). Type locality: Brazil [probably in error]. No types known.

Gobiesox costaricensis Meek, 1912: 74. Type locality: Zent R., Atlantic drainage, Costa Rica. Holotype: FMNH 7677.

Gobiesox ramsdeni Howell-Rivero, 1936: 73. Type locality: Río Toa, 'El Palenque', Yateras, Guantanamo, Oriente Prov., Cuba. Holotype: MCZ 34152.

Maximum length: 15 cm SL

Distribution: Central and South America: Coastal Caribbean drainage rivers.

Countries: Colombia, Costa Rica, Cuba, Dominica, Honduras, Jamaica, Panama, Trinidad and Tobago, Venezuela

Remarks and references: Synonymy from Briggs (1955), taxonomic comments and ecological notes in Bussing (1998).

Common names: Chupador (Colombia), Chupapiedra (Costa Rica), Ventosa (Colombia)

***Gobiesox potamius* Briggs, 1955**

Gobiesox potamius Briggs, 1955: 93, fig. 99. Type locality: Río Turrubares, Pacific drainage, Costa Rica. Holotype: FMNH 7815.

Maximum length: 8 cm SL

Distribution: Central America: Pacific versant rivers.

Countries: Costa Rica, Panama (?)

Remarks and references: Redescription with ecological notes in Bussing (1998).

Common names: Chupapiedra (Costa Rica)

Family Atherinidae (Silversides)

Brian S. Dyer

Silversides are distributed from tropical to temperate waters in the western Pacific, Indian, and North Atlantic oceans, and Mediterranean Sea, except for the freshwater species of *Craterocephalus* and *Alepidomus*. The New World representatives of Atherinidae occur in the Caribbean and Gulf of Mexico. All three species are members of the subfamily Atherinomorinae (Dyer & Chernoff, 1996). Two widely separated dorsal fins, the first with flexible spines and the second with one spine followed by soft rays; anal fin with one spine followed by soft rays; pectoral fins high on body; mouth small and terminal, upper without protrusion; presence of a dashed lateral line; broad silvery lateral band (black in preserved specimens); pelvic fins usually abdominal; scales relatively large (usually 31-50 in lateral series); vertebrae 32-60. Reported maximum length 10 cm TL. All species of atherinomorines are marine except for *Alepidomus evermanni*. Feed on zooplankton.

ALEPIDOMUS

Alepidomus Hubbs, 1944: 7. Type species: *Atherina evermanni* Eigenmann, 1903. Type by original designation. Gender: masculine.

Alepidomus evermanni (Eigenmann, 1903)

Atherina evermanni Eigenmann, 1903: 228, fig. 9. Type locality: San Cristobal, Cuba. Holotype: CAS 78949. Maximum length: 3.3 cm SL. Distribution: Caribbean Islands: Western Cuba. Countries: Cuba

ATHERINOMORUS

Atherinomorus Fowler, 1903: 730. Type species: *Atherina laticeps* Poey, 1861. Type by original designation. Gender: masculine.
Pranesus Whitley, 1930: 9. Type species: *Pranesus ogilbyi* Whitley, 1930. Type by original designation. Gender: masculine.
Thoracatherina Fowler, 1941: 249. Type species: *Atherina insularum* Jordan & Evermann, 1903. Type by original designation. Gender: feminine.

Atherinomorus stipes (Müller & Troschel, 1848)

Atherina stipes Müller & Troschel, 1848: 671. Type locality: Barbados, West Indies. Syntypes: ZMB 1889.
Atherina laticeps Poey, 1860: 265. Type locality: Havana, Cuba. Syntypes: MCZ 18227-30; LZM [ex USNM 4764], USNM 4764.
Atherina velieana Goode & Bean, 1880: 342. Type locality: Clearwater Harbor, Florida, U.S.A. Holotype: USNM 23629. Maximum length: 10 cm TL. Distribution: Western Atlantic: Southern Florida (USA), Bahamas, and Yucatan, Mexico to Brazil. Southeast Pacific: known only from Tumaco, Colombia. Countries: Aruba, Bahamas, Brazil, Colombia, Costa Rica, Cuba, Curaçao Island, French Guiana, Guyana, Haiti, Jamaica, Mexico, Saint Lucia, Suriname, Trinidad and Tobago, US Virgin Islands, USA, Venezuela. Common names: Bristle herring (Cuba), Broadheaded silverside (Haiti), Cabezote (Cuba), Catacucho (Cuba), Hardhead silversides (Saint Lucia)

HYPOATHERINA

Hypoatherina Schultz, 1948: 23. Type species: *Atherina uisila* Jordan & Seale, 1905. Type by original designation. Gender: feminine.

Hypoatherina harringtonensis (Goode, 1877)

Atherina harringtonensis Goode, 1877: 297. Type locality: Bermuda. Syntypes: USNM 21945. Maximum length: 10 cm TL. Distribution: Western Atlantic: Bermuda, southern Florida (USA), and Yucatan, Mexico to northern South America. Antilles, western Caribbean. Southeast Pacific: known only from Tumaco, Colombia. Countries: Anguilla, Antigua and Barbuda, Aruba, Bahamas, Barbados, Bermuda, Cayman Islands, Colombia, Cuba, Curaçao Island, Dominica, Dominican Republic, Grenada, Guadeloupe, Haiti, Jamaica, Martinique, Mexico, Montserrat, Puerto Rico, Saint Kitts and Nevis, Saint Lucia, Saint Vincent & the Grenadines, Trinidad and Tobago, Turks and Caicos Is., US Virgin Islands, USA, Venezuela, Virgin Islands (UK). Common names: Bullhead fry (US Virgin Islands), Catacucho (Cuba), Slender silverside (Haiti)

Family Atherinopsidae (Neotropical Silversides)

Brian S. Dyer

Neotropical silversides are distributed in freshwater and marine temperate waters of North America (Barbour, 1973; Chernoff, 1986a), in freshwater and marine tropical and subtropical waters of Central America (Chernoff, 1986b; Bussing, 1987), and in South America present only in temperate freshwaters yet in all marine (tropical, subtropical, and temperate) waters (White, 1985; Dyer, 1997, 1998).

Most all phylogenetically diagnostic characters are internal and separate as a clade the subfamilies Menidiinae and Atherinopsinae, traditionally considered as atherinids (Saeed et al., 1994; Dyer & Chernoff, 1996). Atherinopsidae is composed of 13 genera and 104 species recognized herein. Neotropical silversides are distinguished by a combination of the following external characters. Two widely separated dorsal fins, the first with flexible spines and the second with one spine followed by soft rays; anal fin with one spine followed by soft rays; pectoral fins high on body; mouth small to medium and terminal or subterminal; upper jaw with or without protrusion, premaxilla expanded distally; two dashed lateral lines, the upper one dorsal to the lateral band ending before the anal-fin origin and the lower one along ventral part of abdominal region and laterally from mid-anal fin to end of caudal peduncle; broad silvery lateral band (black in preserved specimens); pelvic fins abdominal; scales relatively large (usually 31-50 in lateral series) or small (over 100), cycloid (some species crenate); vertebrae 35-60.

Reported maximum length 520 mm SL for *Odontesthes bonariensis* and smallest species is *Menidia colei* (42 mm SL). Most species are marine, however, there are about 50 species confined to freshwater and others that enter estuaries to spawn or as young. All species that either spawn or have a juvenile phase in estuarine waters were included in this checklist. Feed on zooplankton, insects, small fishes and sometimes snails. Some species of *Chirostoma* and *Odontesthes* are of economic importance, either for sport fishing, artisanal fisheries or aquaculture.

ATHERINELLA

Atherinella Steindachner, 1875: 477. Type species: *Atherinella panamensis* Steindachner, 1875. Type by monotypy. Gender: feminine.

Eurystole Jordan & Evermann, in Jordan, 1895: 418. Type species: *Atherinella eriarcha* Jordan & Gilbert, 1882. Type by original designation. Gender: feminine.

Thyrina Jordan & Culver, in Jordan, 1895: 419. Type species: *Thyrina evermanni* Jordan & Culver, 1895. Type by original designation. Gender: feminine.

Melaniris Meek, 1902: 117. Type species: *Melaniris balsana* Meek, 1902. Type by original designation. Gender: feminine.

Xenatherina Regan, 1907: 64. Type species: *Menidia lisa* Meek, 1904. Type by original designation. Gender: feminine.

Thyrinops Hubbs, 1918: 306. Type species: *Atherinichthys pachylepis* Günther, 1864. Type by original designation. Gender: masculine.

Archomenidia Jordan & Hubbs, 1919: 54. Type species: *Atherinichthys sallei* Regan, 1903. Type by original designation. Gender: feminine.

Coleotropis Myers & Wade, 1942: 136. Type species: *Menidia starksi* Meek & Hildebrand, 1923. Type by original designation. Gender: feminine.

Euryarges Myers & Wade, 1942: 128. Type species: *Nectarges nesioties* Myers & Wade, 1942. Gender: masculine.

Nectarges Myers & Wade, 1942: 126. Type species: *Nectarges nepenthe* Myers & Wade, 1942. Type by original designation. Gender: masculine.

Xenomelaniris Schultz, 1948: 13, 33. Type species: *Atherina brasiliensis* Quoy & Gaimard, 1825. Type by original designa-

tion. Gender: feminine.

Atherthyryna Fowler, 1958: 16. Type species: *Thyrina evermanni* Jordan & Culver, 1895. Type by being a replacement name. Gender: feminine.

Allomastax Chernoff, 1986a: 243. Type species: *Melaniris sardina* Meek, 1907. Type by original designation. Gender: feminine. Proposed as a subgenus of *Atherinella*.

Atherinella alvarezii (Diaz-Pardo 1972)

Thyrinops alvarezii Diaz-Pardo, 1972: 146. Type locality: Río Tacotalpa, trib. of Río Grijalva, 40 km south of Villahermosa, Tabasco, Mexico. Holotype: not researched.

Distribution: North America: Mexico.

Countries: Mexico

Atherinella ammophila Chernoff & Miller 1984

Atherinella ammophila Chernoff & Miller, 1984: 4, figs. 2-4. Type locality: Río de la Palma at La Palma, 8 km north-northwest of Sontecomapan, Veracruz, Mexico. Holotype: UMMZ 210808.

Distribution: North America: Mexico.

Countries: Mexico

Atherinella argentea Chernoff, 1986

Atherinella argentea Chernoff, 1986a: 100, figs. 9, 10, 34. Type locality: Lagoon behind hotel Vinar del Mar, Quepos, Puntarenas, Costa Rica. Holotype: FMNH 85223.

Maximum length: 11.1 cm SL

Distribution: Eastern Central Pacific: Madre Vieja River, Guatemala to Chiriquí Gulf, Panama.

Countries: Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama

***Atherinella balsana* (Meek 1902)**

Melaniris balsanus Meek, 1902: 117, pl. 28 lower. Type locality: Río Balsas at Balsas, Guerrero, Mexico. Holotype: FMNH 3706. Distribution: North America: Balsas River basin. Countries: Mexico

***Atherinella beani* (Meek & Hildebrand 1923)**

Kirtlandia beani Meek & Hildebrand, 1923: 270, pl. 21. Type locality: Fox Bay, Colón (Atlantic) Panama. Holotype: USNM 79741. Distribution: Western Central Atlantic: Panama. Countries: Panama

***Atherinella blackburni* (Schultz, 1949)**

Coleotropis blackburni Schultz, 1949: 108, fig. 15. Type locality: Jacuque Point, Gulf of Venezuela, Venezuela. Holotype: USNM 123205. Maximum length: 13 cm TL. Distribution: Western Central Atlantic: Southern part of the Caribbean. Coasts of Central and South America. Countries: Aruba, Brazil, Colombia, Costa Rica, Curaçao Island, Venezuela. Common names: Tinícalo playón (Colombia)

***Atherinella brasiliensis* (Quoy & Gaimard, 1825)**

Atherina brasiliensis Quoy & Gaimard, 1825: 332. Type locality: Rio de Janeiro, Brazil. Syntypes: MNHN A.4374. Maximum length: 16 cm TL. Distribution: Western Central Atlantic: Northern to southeastern coast of South America. Countries: Aruba, Brazil, Colombia, Curaçao Island, French Guiana, Guyana, Suriname, Trinidad and Tobago, Uruguay, Venezuela. Common names: Tinícalo comun (Colombia), Mama-rei (Brazil)

***Atherinella callida* Chernoff 1986**

Atherinella callida Chernoff, 1986a: 155, figs. 39-41. Type locality: Refugio, Veracruz, Mexico. Holotype: LACM 9626-1. Distribution: North America: Veracruz. Countries: Mexico

***Atherinella chagresi* (Meek & Hildebrand 1914)**

Menidia chagresi Meek & Hildebrand, in Meek, 1914: 119. Type locality: Río Chagres at Gorgona I., Panama Canal Zone, Panama. Lectotype: USNM 81761. Distribution: Western Central Atlantic: Panama and Costa Rica. Countries: Costa Rica, Panama

***Atherinella colombiensis* (Hubbs, 1920)**

Thyrina colombiensis Hubbs, 1920: 4. Type locality: Río Telembi, a trib. of Río Patia, Pacific slope of s. Colombia. Holotype: IU 13871. Distribution: South America: Colombia. Countries: Colombia

***Atherinella crystallina* (Jordan & Culver 1895)**

Thyrina crystallina Jordan & Culver, in Jordan, 1895: 420. Type locality: Río Presidio, Sinaloa, w. Mexico. Syntypes: BMNH 1895.5.27.160-165, SU 2685, USNM 47440, ZMB 14066, CAS 102685. *Thyrina evermanni* Jordan & Culver in Jordan, 1895: 419, pl. 33. Type locality: Estuary at Mazatlán, Sinaloa, w. Mexico. Lectotype: SU 2688. Distribution: North America: Mexico, from Sinaloa River to Verde River, Jalisco. Countries: Mexico

***Atherinella elegans* Chernoff, 1986**

Atherinella crystallina elegans Chernoff, 1986a: 182, figs. 46, 53-

57. Type locality: Río del Fuerte ca. 1.6 km below San Blas, Sinaloa, Mexico. Holotype: UMMZ 172286. Distribution: North America: Del Fuerte River, Sinaloa. Countries: Mexico

***Atherinella eriarcha* Jordan & Gilbert, 1882**

Atherinella eriarcha Jordan & Gilbert, 1882: 348. Type locality: Mazatlán, Sinaloa, w. Mexico. Holotype: USNM 29243. Maximum length: 8 cm TL. Distribution: Eastern Central Pacific: Baja California, Mexico and the Revillagigedo Is. to Puerto Utria, Colombia, including the Gulf of California. Countries: Colombia, Costa Rica, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama, Revillagigedo. Common names: Pejerrey plateado (Mexico)

***Atherinella guatemalensis* (Günther, 1864)**

Atherinichthys guatemalensis Günther, 1864c: 151. Type locality: Lakes of Huamuchal, Retalhuleu, Guatemala. Syntypes: BMNH 1864.1.26.367. Maximum length: 7.5 cm SL. Distribution: Eastern Central Pacific: From Zacatula, Mexico to Salina de Acapán, Guatemala. Countries: Guatemala, Mexico. Common names: Pejerrey guatemalteco (Mexico)

***Atherinella guija* (Hildebrand, 1925)**

Thyrina guija Hildebrand, 1925: 264, fig. 18. Type locality: Lake Guija, Santa Ana, El Salvador. Holotype: USNM 87273. Distribution: North America: Pacific slope of Guatemala, El Salvador and Honduras. Countries: El Salvador, Guatemala, Honduras

***Atherinella hubbsi* (Bussing, 1979)**

Melaniris hubbsi Bussing, 1979: 400, fig. 1D. Type locality: Río Zapote, trib. of Lake Nicaragua, 0.4 km south of Upala, Alajuela Prov., Costa Rica, elev. 50 m. Holotype: LACM 37506-1. Maximum length: 7 cm TL. Distribution: North America: Lake Nicaragua basin. Countries: Nicaragua

***Atherinella jiloensis* (Bussing, 1979)**

Melaniris jiloensis Bussing, 1979: 406, fig. 1F. Type locality: Lake Jiloá on Chiltepe Peninsula, Dept. of Managua, Nicaragua. Holotype: LACM 37350-1. Distribution: North America: Lake Jiloá on Chiltepe Peninsula, Dept. of Managua. Countries: Nicaragua

***Atherinella lisa* (Meek 1904)**

Menidia lisa Meek, 1904: 182, fig. 63. Type locality: Refugio, Veracruz, Río Papaloapan basin, Mexico. Holotype: FMNH 4633. Distribution: North America: Mexico. Countries: Mexico

***Atherinella marvelae* (Chernoff & Miller 1982)**

Archomenidia marvelae Chernoff & Miller, 1982: 430, fig. 2. Type locality: Río Bravo just below barrier falls, Salto de Eyi-pantla, Veracruz, Mexico. Holotype: UMMZ 209012. Distribution: North America: Mexico. Countries: Mexico

***Atherinella meeki* (Miller, 1907)**

Thyrina meeki Miller, 1907: 110, fig. 2. Type locality: Río Motagua, at Gualan e. coast of Guatemala. Holotype: CAS 47404. Distribution: North America: Motagua River, east coast of Guatemala. Countries: Guatemala

***Atherinella milleri* (Bussing, 1979)**

Melaniris milleri Bussing, 1979: 395, fig. 1C. Type locality: Coastal lagoon near mouth of Río Colorado, Barra Colorado, Limón Prov., Costa Rica. Holotype: LACM 37508-1.

Distribution: Western Central Atlantic: Honduras, Costa Rica and Colombia.

Countries: Colombia, Costa Rica, Honduras

***Atherinella nepenthe* (Myers & Wade, 1942)**

Nectarges nepenthe Myers & Wade, 1942: 130, pl. 19. Type locality: Off Arroyo de San Luis, Baja California, 23°10'30"N, 109°27'45"W, at surface over bottom at 5 fms. Holotype: SU 37060.

Maximum length: 10 cm TL

Distribution: Eastern Central Pacific: Baja California to Peru.

Countries: Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama, Peru

Common names: Pejerrey nepente (Mexico)

***Atherinella nesiototes* (Myers & Wade, 1942)**

Nectarges nesiototes Myers & Wade, 1942: 128, pl. 18. Type locality: Academy Bay, Indefatigable I. [Santa Cruz], Galápagos Is. Holotype: LACM 21558.

Maximum length: 10 cm SL

Distribution: Eastern Pacific: Mazatlan, Mexico and the Galapagos Islands.

Countries: Ecuador, Mexico

***Atherinella nocturna* (Myers & Wade, 1942)**

Nectarges nocturnus Myers & Wade, 1942: 133. Type locality: Guayaquil, Ecuador. Holotype: USNM 88712.

Distribution: Southeast Pacific: Ecuador, Peru and northern Chile.

Countries: Chile, Ecuador, Peru

***Atherinella pachylepis* (Günther, 1864)**

Atherinichthys pachylepis Günther, 1864b: 25. Type locality: Pacific coast of Panama Bay. Syntypes: BMNH 1863.12.16.39-40 (2).

Maximum length: 16 cm TL

Distribution: Eastern Pacific: Cutuco, El Salvador to Peru. Not recorded from Costa Rica.

Countries: Colombia, Ecuador, El Salvador, Honduras, Nicaragua, Panama, Peru

***Atherinella pallida* (Fowler, 1944)**

Melaniris pallida Fowler, 1944: 242, fig. 130. Type locality: Santelmo Bay, Rey I., Perlas Is. (Pacific) Panama. Holotype: ANSP 70033.

Distribution: Eastern Central Pacific: Santelmo Bay, Rey Island, Perlas Island.

Countries: Panama

***Atherinella panamensis* Steindachner, 1875**

Atherinella panamensis Steindachner, 1875: 477. Type locality: (Pacific) Panama. Holotype: NMW 76439.

Maximum length: 11 cm TL

Distribution: Eastern Pacific: Panama Bay to Colombia.

Countries: Colombia, Panama

***Atherinella pellosemeion* Chernoff, 1986**

Atherinella crystallina pellosemeion Chernoff, 1986a: 180, figs. 45, 53-57. Type locality: Río las Mancuernas 2 km north-northwest of Mecatán on road to San Blas-Tepic hwy, Nayarit, Mexico. Holotype: UMMZ 172020.

Distribution: North America: Nayarit, Mexico.

Countries: Mexico

***Atherinella robbersi* (Fowler, 1950)**

Adenops robbersi Fowler, 1950: 5, figs. 5-9. Type locality: Totu-

mo Lake, Bolívar state, Colombia. Holotype: ANSP 71941.

Distribution: South America: Totumo Lake, Bolívar State.

Countries: Colombia

***Atherinella sallei* (Regan, 1903)**

Atherinichthys sallei Regan, 1903: 60. Type locality: Mexico. Holotype: BMNH 1860.6.17.47.

Archomenidia bolivari Álvarez & Carranza, 1952: 287. Type locality: Near Matías Romero, Río Grande or Río Almoloya, Oaxaca, se. Mexico.

Distribution: North America: Mexico.

Countries: Mexico

***Atherinella sardina* (Meek, 1907)**

Melaniris sardina Meek, 1907: 114. Type locality: Lake Managua at Managua, Nicaragua. Holotype: FMNH 5937.

Maximum length: 5.5 cm TL

Distribution: North America: Nicaragua and Costa Rica.

Countries: Costa Rica, Nicaragua

***Atherinella schultzi* (Álvarez & Carranza, 1952)**

Xenatherina schultzi Álvarez & Carranza, 1952: 286, fig. 3. Type locality: Santa María Chimalapa, Arroyo El Zacatal, Oaxaca, se. Mexico. Holotype: not researched.

Distribution: North America: Oaxaca, southeast Mexico.

Countries: Mexico

***Atherinella serrivomer* Chernoff, 1986**

Atherinella serrivomer Chernoff, 1986a: 120, fig. 20. Type locality: Estero de Puerto Pizarro, opposite Estero Jeli, Tumbes, Peru. Holotype: ANSP 158695.

Distribution: Eastern Pacific: Mouth of Parita Bay, Panama to Tumbes, Peru.

Countries: Colombia, Ecuador, Panama, Peru

***Atherinella venezuelae* (Eigenmann, 1920)**

Menidia venezuelae Eigenmann, 1920: 12. Type locality: Río Tapa Tapa, Venezuela. Syntypes: CAS 78952.

Distribution: South America: Tapa Tapa River basin.

Countries: Trinidad and Tobago, Venezuela

BASILICHTHYS

Basilichthys Girard, 1855: 198. Type species: *Atherina microlepidota* Jenyns, 1841. Type by subsequent designation. Gender: masculine.

Protistius Cope, 1874: 66. Type species: *Protistius semotilus* Cope, 1874. Type by monotypy. Gender: masculine.

Gastropterus Cope, 1878: 700. Type species: *Gastropterus archaeus* Cope, 1878. Type by monotypy. Gender: masculine.

Pisciregia Abbott, 1899: 342. Type species: *Pisciregia beardsleei* Abbott, 1899. Type by monotypy. Gender: feminine.

***Basilichthys archaeus* (Cope, 1878)**

Gastropterus archaeus Cope, 1878: 700. Type locality: At Arequipa, Pacific slope, Peru, elev. 7500 ft. Lectotype: ANSP 22002, designated by Fowler (1903: 738).

Distribution: South America: Pacific versant of Peruvian Andes.

Countries: Peru

***Basilichthys australis* Eigenmann, 1927**

Basilichthys australis Eigenmann, 1927: 59, pls. 12 (fig. 3), 14 (fig. 5). Type locality: Santiago and southward to Osorno [Maipo River to Rahue River], Chile. Syntypes: CAS 11678, 44699, 44703, 45179-80, 45182-84, 45188-90, 45192.

Distribution: South America: Maipo River south to Chiloé Island.

Countries: Chile

***Basilichthys microlepidotus* (Jenyns, 1841)**

Atherina microlepidota Jenyns, 1841: 78, pl. 16 (figs. 1, 1a, 1b).

Type locality: Valparaíso, Chile, in fresh water. Syntypes: BMIII 403.

Distribution: South America: From Huasco River to Valparaíso, Chile. Not present in freshwater east of the Andes.

Countries: Chile

***Basilichthys semotilus* (Cope, 1874)**

Protistius semotilus Cope, 1874: 66. Type locality: Andes, Peru, elev. 12000 ft. Holotype: ANSP 14404.

Pisciregia beardsleei Abbott, 1899: 342. Type locality: Callao, Peru. Holotype: CAS 111961.

Distribution: South America: Rivers on Pacific versant of Peruvian Andes, from Reque River, Lambayeque to Sama River, Tacna, Peru.

Countries: Peru

CHIROSTOMA

Chirostoma Swainson, 1839: 243. Type species: *Atherina humboldtiana* Valenciennes, 1835. Type by monotypy. Gender: neuter.

Atherinichthys Bleeker, 1853: 40. Type species: *Atherina humboldtiana* Valenciennes, 1835. Type by subsequent designation. Gender: masculine.

Atherinoides Bleeker, 1853: 40. Type species: *Atherina vomerina* Valenciennes, 1835. Type by monotypy. Gender: masculine.

Heterognathus Girard, 1855: 198. Type species: *Atherina humboldtiana* Valenciennes, 1835. Type by subsequent designation. Gender: masculine.

Eslopsarum Jordan & Evermann, 1896: 330. Type species: *Chirostoma jordani* Woolman, 1895. Type by original designation. Gender: neuter.

Lethostole Jordan & Evermann, 1896: 789, 792. Type species: *Chirostoma estor* Jordan, 1880. Type by original designation. Gender: feminine.

Charalia de Buen, 1945: 505. Type species: *Chirostoma bartoni* Jordan & Evermann, 1896. Type by original designation. Gender: feminine.

Ocotlanichthys de Buen, 1945: 526. Type species: *Chirostoma sphyraena* Boulenger, 1900. Type by original designation. Gender: masculine.

Otalia de Buen, 1945: 528. Type species: *Chirostoma promelas* Jordan & Snyder, 1899. Type by original designation. Gender: feminine.

Palmichthys de Buen, 1945: 527. Type species: *Chirostoma diazi* Jordan & Snyder, 1899. Type by original designation. Gender: masculine.

***Chirostoma aculeatum* Barbour, 1973**

Chirostoma aculeatum Barbour, 1973: 130, fig. 18a. Type locality: South shore of Lake Yuriria, ca. 1.5 mi. east of Yuriria, Guanajuato, Mexico. Holotype: TU 40889.

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

***Chirostoma arge* (Jordan & Snyder, 1899)**

Eslopsarum arge Jordan & Snyder, 1899: 133, fig. 12. Type locality: Río Verde near Aguascalientes, Mexico. Holotype: SU 6154.

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

***Chirostoma attenuatum* Meek, 1902**

Chirostoma attenuatum Meek, 1902: 112, pl. 27 upper. Type locality: Patzcuaro Lake at Patzcuaro, Michoacan, Mexico. Holotype: FMNH 3631.

Chirostoma samani Cuesta-Terron, 1931: 241, figs. 2-4. Type locality: Mexico. Holotype: MNHNM (not researched).

Chirostoma bartoni janitzio de Buen, 1940: 22, fig. 4. Type locality: Lake Pátzcuaro, Mexico.

Distribution: Central America: Lerma River basin in Mexico.

Countries: Mexico

Common names: Charal (Mexico)

***Chirostoma bartoni* Jordan & Evermann, 1896**

Chirostoma bartoni Jordan & Evermann, 1896: 793. Type locality: Trib. of Río Lerma near Guanajuato, Mexico. 'La Alberca', volcanic caldera w. Valle de Santiago, Guanajuato. Holotype: USNM 23136.

Maximum length: 7.1 cm SL

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

Common names: Charal de la Caldera (Mexico)

***Chirostoma chapalae* Jordan & Snyder, 1899**

Chirostoma chapalae Jordan & Snyder, 1899: 135, fig. 13. Type locality: Lake Chapala, near Ocotlan, Jalisco, Mexico. Holotype: CAS 106155.

Maximum length: 14 cm TL

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

Common names: Charal (Mexico), Silverside (Mexico)

***Chirostoma charari* (de Buen, 1945)**

Eslopsarum bartoni charari de Buen, 1945: 509. Type locality: Río Grande de Morelia and Lake Cuitzeo valley, Mexico. No types known.

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

***Chirostoma compressum* de Buen, 1940**

Chirostoma grandocule compressum de Buen, 1940b: 306. Type locality: Lake Cuitzeo, Michoacán, Mexico. Holotype: UMMZ 143300 [ex Estación Limnol. Pátzcuaro].

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

Common names: Pescado blanco (Mexico)

***Chirostoma consocium* Jordan & Hubbs, 1919**

Chirostoma consocium Jordan & Hubbs, 1919: 76. Type locality: Lake Chapala at La Palma, Michoacán, Mexico. Holotype: FMNH 3672.

Distribution: North America: Mexico.

Countries: Mexico

***Chirostoma copandaro* de Buen, 1945**

Chirostoma estor copandaro de Buen, 1945: 524. Type locality: Zirahuén Lake, Michoacán, Mexico. No types known.

Distribution: North America: Mexico.

Countries: Mexico

Common names: Blanco de Zirahuén (Mexico), Pescado blanco (Mexico)

***Chirostoma estor* Jordan, 1880**

Chirostoma estor Jordan, 1880: 298. Type locality: Lake Chapala, Mexico. Holotype: USNM 23124.

Atherinichthys albus Steindachner, 1894: 148. Type locality: Lake Patzcuaro, Michoacan, Mexico. Syntypes: (5) NMW.

Chirostoma michoacanae de Buen, 1940a: 14, fig. 2. Type locality: Lake Pátzcuaro, Mexico. Holotype: Estación Limnológica Pátzcuaro.

Chirostoma estor tecuena de Buen, 1940a: 13. Type locality: Lake Pátzcuaro, Mexico. Holotype: whereabouts unknown.

Chirostoma estor pacanda de Buen, 1940a: 12. Type locality: Lake Pátzcuaro, Mexico. Holotype: not researched.

Maximum length: 42 cm TL

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

Common names: Pescado blanco (Mexico), Silverside (Mexico),

Whitefish (Mexico)

Chirostoma grandocule (Steindachner, 1894)

Atherinichthys grandoculis Steindachner, 1894: 149. Type locality: Lake Pátzcuaro, Michoacán, Mexico. Holotype: NMW.

Maximum length: 12.3 cm SL

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

Common names: Charal (Mexico)

Chirostoma humboldtianum (Valenciennes, 1835)

Atherina humboldtiana Valenciennes, in Cuvier & Valenciennes, 1835: 479, pl. 306. Type locality: Mexico. Holotype: ZMB 1885.

Atherina vomerina Valenciennes, in Cuvier & Valenciennes, 1835: 481. Type locality: Lake near Mexico City, Mexico. Holotype: ZMB 1888.

Chirostoma regani Jordan & Hubbs, 1919: 74. Type locality: Xochimilco, Valley of Mexico, Mexico. Holotype: FMNH 3687.

Chirostoma ocampoi Álvarez, 1963a: 197, fig. 1. Type locality: Lake Zacapu, Zacapu, Michoacán, Mexico. Holotype: not researched.

Distribution: North America: Mexico.

Countries: Mexico

Common names: Pescado blanco (Mexico)

Chirostoma jordani Woolman, 1895

?*Atherinichthys brevis* Steindachner, 1894: 149. Type locality: Lake Cuitzco, Mexico. Syntypes: (2) NMW ?.

Chirostoma jordani Woolman, 1895: 62, pl. 2. Type locality: Canals and Río Lerma at Salamanca, Guanajuato, and City of Mexico. Lectotype: USNM 125441, designated by Barbour (1973: 103).

Chirostoma mezquital Meek, 1904: 170, fig. 53. Type locality: Río Mezquital at Durango, Mexico. Holotype: FMNH 4389.

Poblana hidalgoi Álvarez, 1953: 25. Type locality: Endó Dam, near Tula, Hidalgo, Mexico. Holotype: Álvarez coll.

Distribution: North America: Central Mexico.

Countries: Mexico

Common names: Charal (Mexico)

Chirostoma labarcae Meek, 1902

Chirostoma labarcae Meek, 1902: 112, pl. 27 middle. Type locality: Río Lerma at La Barca, Jalisco, Mexico. Holotype: FMNH 3640.

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

Common names: Charal (Mexico)

Chirostoma lucius Boulenger, 1900

?*Chirostoma crystallinum* Jordan & Snyder, 1899: 139, fig. 16. Type locality: Laguna de Chapala, near Ocotlán, Jalisco, Mexico. Holotype: CAS 106158.

?*Chirostoma ocotlanae* Jordan & Snyder, 1899: 140, fig. 18. Type locality: Lake Chapala near Ocotlán, Jalisco, Mexico. Holotype: CAS 106160.

Chirostoma lucius Boulenger, 1900: 54. Type locality: Lake Chapala, Mexico. Holotype: BMNH 1892.2.8.75.

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

Common names: Pescado blanco (Mexico)

Chirostoma melanococcus Álvarez, 1963

Chirostoma melanococcus Álvarez, 1963b: 127. Type locality: San Juanico Dam, near Cotija, Michoacán, Mexico. Holotype: P731.

Distribution: North America: Mexico.

Countries: Mexico

Chirostoma patzcuaro Meek, 1902

Chirostoma patzcuaro Meek, 1902: 112, pl. 27 lower. Type locality:

ty: Pátzcuaro Lake at Pátzcuaro, Michoacán, Mexico. Holotype: FMNH 3628.

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

Chirostoma promelas Jordan & Snyder, 1899

Chirostoma promelas Jordan & Snyder, 1899: 136, fig. 14. Type locality: Market at Guadalajara, Jalisco, Mexico (said to come from Laguna de Chapala). Holotype: CAS 106156.

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

Chirostoma reseratum Álvarez, 1963

Chirostoma reseratum Álvarez, 1963b: 130. Type locality: San Juanico dam, near Cotija, Michoacán, Mexico. Syntypes: P 732 (10).

Distribution: Central America: Mexico.

Countries: Mexico

Chirostoma riojai Solórzano & López, 1966

Chirostoma riojai Solórzano & López, 1966: 145, fig. 1. Type locality: Laguna de Santiago Tilapa, Mexico. Holotype: LB 1820.

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

Chirostoma sphyraena Boulenger, 1900

?*Chirostoma diazi* Jordan & Snyder, 1899: 137, fig. 15. Type locality: Market at Guadalajara, Jalisco, Mexico (said to come from Laguna de Chapala). Holotype: CAS 106157.

?*Chirostoma lermiae* Jordan & Snyder, 1899: 142, fig. 19. Type locality: Said to have come from Laguna de Chapala, obtained in market at Guadalajara, Jalisco, Mexico. Holotype: SU 6159.

Chirostoma sphyraena Boulenger, 1900: 54. Type locality: Lake Chapala, Mexico. Holotype: BMNH 1892.2.8.77.

Distribution: North America: Lerma River basin in Mexico.

Countries: Mexico

Common names: Pescado blanco (Mexico), Silverside (Mexico), Whitefish (Mexico)

Chirostoma zirahuen Meek, 1902

Chirostoma zirahuen Meek, 1902: 114, pl. 28 top. Type locality: Zirahuén Lake at Zirahuén, Michoacán, Mexico. Holotype: FMNH 3609.

Distribution: North America: Mexico.

Countries: Mexico

COLPICHTHYS

Colpichthys Hubbs, 1918: 305. Type species: *Atherinops regis* Jenkins & Evermann, 1888. Type by original designation. Gender: masculine.

Colpichthys hubbsi Crabtree, 1989

Colpichthys hubbsi Crabtree, 1989: 560, figs. 6, 7, 8A, 10, 11B. Type locality: Gulf of Santa Clara, Sonora, Mexico, 31°42'N, 114°30'W. Holotype: LACM 44221-1.

Maximum length: 15 cm SL

Distribution: Eastern Central Pacific: endemic to the Gulf of California, from the delta of the Colorado River to 31°N.

Countries: Mexico

Common names: Pejerrey delta (Mexico)

Colpichthys regis (Jenkins & Evermann, 1889)

Atherinops regis Jenkins & Evermann, 1889: 138. Type locality: Guaymas Bay, Sonora, w. Mexico. Syntypes USNM 39632.

Distribution: Eastern Central Pacific: endemic to the northern Gulf of California, north of 28° N.

Countries: Mexico

Common names: Charal del Valle de Mexico (Mexico), Pejerrey

charal (Mexico)

MELANORHINUS

Melanorhinus Metzelaar, 1919: 38. Type species: *Melanorhinus boekei* Metzelaar, 1919. Type by monotypy. Gender: masculine.
Mugilops Meek & Hildebrand, 1923: 271. Type species: *Mugilops cyanellus* Meek & Hildebrand, 1923. Type by original designation. Gender: masculine.

Melanorhinus boekei Metzelaar, 1919

Melanorhinus boekei Metzelaar, 1919: 38, fig. 14. Type locality: Oyster pond on St. Martin, West Indies. Syntypes: (12) SU 23304 (1), ZMA 100179 (6).

Mugilops marinus Meek & Hildebrand, 1923: 272, pl. 22 (fig. 2). Type locality: Porto Bello (Atlantic) Panama. Holotype: USNM 81742.

Distribution: Western Central Atlantic: Oyster pond on St. Martin, West Indies.

Countries: Panama, West Indies

Melanorhinus cyanellus (Meek & Hildebrand, 1923)

Mugilops cyanellus Meek & Hildebrand, 1923: 271, pl. 22 (fig. 1). Type locality: Balboa and Taboga Is., Panama Bay, Panama (Pacific). Holotype: USNM 81748.

Maximum length: 10 cm TL

Distribution: Eastern Central Pacific: Costa Rica and Panama.

Countries: Costa Rica, Panama

Melanorhinus microps (Poey, 1860)

Atherina microps Poey, 1860: 266. Type locality: presumed Havana, Cuba. No types known.

Maximum length: 7.5 cm TL

Distribution: Western Atlantic: Bahamas, Cuba, St. Martin, and Panama. Antilles.

Countries: Anguilla, Antigua and Barbuda, Aruba, Bahamas, Barbados, Cayman Islands, Cuba, Curaçao Island, Dominica, Dominican Republic, Grenada, Guadeloupe, Haiti, Jamaica, Martinique, Montserrat, Panama, Puerto Rico, Saint Kitts and Nevis, Saint Lucia, Saint Vincent & the Grenadines, Trinidad and Tobago, Turks and Caicos Is., US Virgin Islands, Virgin Islands (UK)

Common names: Cabezote rey (Cuba)

MEMBRAS

Membras Bonaparte, 1836: puntata 91. Type species: *Atherina martinica* Valenciennes, 1835. Type by subsequent designation. Gender: feminine.

Kirtlandia Jordan & Evermann, 1896: 789, 794. Type species: *Chiostoma vagrans* Goode & Bean, 1879. Type by original designation. Gender: feminine.

Hubbesia Jordan, 1919: 310. Type species: *Menidia gilberti* Jordan & Bollman, 1890. Type by monotypy. Gender: feminine.

Adenops Schultz, 1948: (14) 34. Type species: *Adenops analis* Schultz, 1948. Type by original designation. Gender: masculine.

Membras analis (Schultz, 1948)

Adenops analis Schultz, 1948: 34, fig. 6. Type locality: Lake Maracaibo, 1 km off Pueblo Viejo, Venezuela. Holotype: USNM 121824.

Maximum length: 12 cm TL

Distribution: Western Central Atlantic: Colombia and Venezuela.

Countries: Aruba, Colombia, Curaçao Island, Venezuela

Common names: Tinícalo lagunar (Colombia)

Membras argentea (Schultz, 1948)

Adenops argenteus Schultz, 1948: 36, fig. 7. Type locality: Sabanilla, Bolivar, Colombia. Holotype: USNM 121848.

Distribution: South America: Colombia.

Countries: Colombia

Membras gilberti (Jordan & Bollman, 1890)

Menidia gilberti Jordan & Bollman, 1890: 155. Type locality: Panama, Panama Bay? Syntypes: SU 111 (13); USNM 41165 (2), 41210 (2), 41240 (9), 41480 (6); ZMB 15883 (1), 16262 (1).

Maximum length: 14 cm TL

Distribution: Eastern Central Pacific: El Salvador to Colombia.

Countries: Colombia, Costa Rica, Ecuador, El Salvador, Honduras, Nicaragua, Panama

Membras martinica (Valenciennes, 1835)

Atherina martinica Valenciennes, in Cuvier & Valenciennes, 1835: 459. Type locality: Martinique I., West Indies. Syntypes: MNHN A.4378 (3).

Maximum length: 12.5 cm TL

Distribution: Western Atlantic: New York and northern Gulf of Mexico to Florida in USA and northern Mexico.

Countries: Martinique, Mexico, USA

MENIDIA

Menidia Bonaparte, 1836: puntata 91. Type species: *Atherina menidia* Linnaeus, 1766. Gender: feminine.

Argyrea DeKay, 1842: 141. Type species: *Atherina notata* Mitchell, 1815. Type apparently by subsequent designation. Gender: feminine.

Ischnomembras Fowler, 1903: 730. Type species: *Ischnomembras gabunensis* Fowler, 1903. Type by original designation. Gender: feminine.

Phoxargyrea Fowler, 1903: 732. Type species: *Phoxargyrea dayi* Fowler, 1903. Type by original designation. Gender: feminine.

Menidiella Schultz, 1948: (13) 33. Type species: *Menidia colei* Hubbs, 1936. Type by original designation. Gender: feminine.

Menidia colei Hubbs, 1936

Menidia colei Hubbs, 1936: 248, pl. 10 (fig. 1). Type locality: Southwest of Progreso, Yucatán, Mexico. Holotype: UMMZ 102173.

Distribution: North America: Southwest of Progreso, Yucatán.

Countries: Mexico

ODONTESTHES

Odontesthes Evermann & Kendall, 1906: 94. Type species: *Odontesthes perugiae* Evermann & Kendall, 1906. Type by original designation. Gender: feminine.

Kronia Miranda Ribeiro, 1915: Trematolepides: 9. Type species: *Kronia iguapensis* Miranda Ribeiro, 1915. Type by monotypy. Gender: feminine.

Pseudothyryna Miranda Ribeiro, 1915: Trematolepides 11. Type species: *Pseudothyryna iheringi* Miranda Ribeiro, 1915. Type by monotypy. Gender: feminine.

Austromenidia Hubbs, 1918: 307. Type species: *Basilichthys regillus* Abbott, 1899. Type by original designation. Gender: feminine.

Cauque Eigenmann, 1927: 56. Type species: *Chiostoma mauleanum* Steindachner, 1896. Type by original designation. Gender: neuter.

Patagonina Eigenmann, 1927: 56. Type species: *Menidia hatcheri* Eigenmann, 1909. Type by monotypy. Gender: feminine.

Austroatherina Marrero, 1950: 113. Type species: *Atherina incisa* Jenyns, 1841. Type by subsequent designation. Gender: feminine.

Bachmannia Nani, in Szidat & Nani, 1951: 336. Type species: *Basilichthys smitti* Lahille, 1929. Type by original designation. Gender: feminine.

Sorgentinia Pianta de Risso & Risso, 1953: 13. Type species: *Atherina incisa* Jenyns, 1841. Type by original designation and monotypy. Gender: feminine.

Tupa de Buen, 1953: 48. Type species: *Atherinichthys platensis*

- Berg, 1895. Type by monotypy. Gender: feminine.
Yaci de Buen, 1953: 51. Type species: *Yaci retropinnis* de Buen, 1953. Type by monotypy. Gender: feminine.
- Odontesthes argentinensis* (Valenciennes, 1835)**
Atherina argentinensis Valenciennes, 1835: 472. Type locality: Montevideo, Uruguay. Syntypes: MNHN A.4362, A.4363.
?Atherina lessonii Valenciennes in Cuvier & Valenciennes, 1835: 471. Type locality: Santa Catarina, Brazil. No types known. Originally spelled as *Atherina lessoni*.
Pseudothyridina iheringi Miranda Ribeiro, 1915: Trematolepides p. 11. Type locality: Rio Grande do Sul, Brazil. Lectotype: MNRJ 2369A.
Kronia iguapensis Miranda Ribeiro, 1915: Trematolepides p. 10. Type locality: Iguape, São Paulo, Brazil. Holotype: MNRJ 1351.
Basilichthys bonariensis charruanus Lahille, 1929: 319, fig. 11. Type locality: Coast of Patagonia, Mar del Plata, Buenos Aires Prov., Argentina. Holotype: MACN 5178 ?
Basilichthys bonariensis propinquus Lahille, 1929: 320, fig. 12. Type locality: Mar del Plata, Buenos Aires, Argentina. No types known.
Menidia thomasii Meinken, 1931: 377, fig. 1. Type locality: Uruguay. Syntypes: (2) ?KHMM.
Kronia rex de Buen, 1953: 64, figs. 38-41. Type locality: La Paloma, Depto. de Rocha, Uruguay. Holotype: MHNM CI 1803 [ex VT 1050].
Kronia alba de Buen, 1953: 59, figs. 34-37. Type locality: Laguna de Rocha, Depto. de Rocha, Uruguay. Holotype: MHNM CI 1801 [ex VT 1068].
 Distribution: South America: Southwestern Atlantic, in southern Brazil, Argentina and Uruguay.
 Countries: Argentina, Brazil, Uruguay
 Common names: Baboso (Argentina), Pejerrey de mar (Argentina)
- Odontesthes bicudo* Malabarba & Dyer, 2002**
Odontesthes bicudo Malabarba & Dyer, 2002: 264, fig. 3. Type locality: Brazil: Rio Grande do Sul: lagoa Emboaba, Osório (29°57'57"S 50°13'45"W). Holotype: MCP 26153.
 Maximum length: 20.5 cm SL
 Distribution: South America: Isolated lagoons Emboaba, Caconde, Horácio and Lessa in Tramandaí River basin.
 Countries: Brazil
 Common names: Peixe-rei (Brazil)
- Odontesthes bonariensis* (Valenciennes, 1835)**
Atherina lichtensteini Valenciennes, in Cuvier & Valenciennes, 1835: 476. Type locality: Montevideo, Uruguay. Holotype: ZMB 1883.
Atherina bonariensis Valenciennes, in Cuvier & Valenciennes, 1835: 469. Type locality: Río de la Plata, Buenos Aires, Argentina. Holotype: MNHN A.4407.
Basilichthys bonariensis chascomunensis Lahille, 1929: 305, fig. 3. Type locality: Prov. de Buenos Aires (Chascomús Lake), Argentina. No types known.
Basilichthys bonariensis puntanus Lahille, 1929: 305, fig. 2. Type locality: Zallape, San Luis, Argentina. No types known.
 Maximum length: 23.4 cm SL
 Distribution: South America: Southern Argentina and La Plata River. Introduced into Europe and Asia.
 Countries: Argentina, Bolivia (introduced), Brazil, Chile (introduced), Peru (introduced), Uruguay.
 Common names: Baboso (Argentina), Peixe-rei (Brazil), Pejerrey (Argentina)
- Odontesthes brevianalis* (Günther, 1880)**
Atherinichthys brevianalis Günther, 1880: 25. Type locality: Valparaíso, Chile. Holotype: MNHN 1890-119 [ex BMNH].
Odontesthes (Cauque) debueni Fischer, 1962: 199, fig. 1. Type locality: Estero Lengua, Concepción, VIII Región, Chile, 37°S, 73°W. Holotype: ZMH H1698.
 Distribution: South America: Estuaries from La Serena to Chiloé, Chile.
 Countries: Chile
- Odontesthes gracilis* (Steindachner, 1898)**
Chirostoma gracile Steindachner, 1898: 314. Type locality: Cumberland Bay, Más a Tierra [Robinson Crusoe I.], Juan Fernández Is. Syntypes: ZMB 15675.
 Distribution: South America: Southeastern Pacific, Juan Fernandez Islands, Chile.
 Countries: Chile, Juan Fernández Islands
- Odontesthes hatcheri* (Eigenmann, 1909)**
?Basilichthys cuyanus Burmeister, 1861: . Type locality: Lag. Huanacache? Mendoza?, Argentina. No types known.
Menidia hatcheri Eigenmann, 1909: 281. p. 37 (fig. 4). Type locality: Lake Pueyrredón, Santa Cruz, Argentina. Holotype: whereabouts unknown.
Basilichthys hatcheri andinus Lahille, 1929: 324, fig. 18. Type locality: Lago Traful, Argentina. No types known.
Basilichthys patagonicus Marrero, 1950: 67. Type locality: freshwaters of Patagonia south of Chile and Cuyo Region, Argentina. No types known.
 Distribution: South America: Patagonian lakes and rivers of Argentina and Chile.
 Countries: Argentina, Chile
- Odontesthes humensis* de Buen, 1953**
Odontesthes guazu de Buen, 1953: 40, figs. 27-28. Type locality: Río Uruguay, 200 m downstream Arroyo Espinillar, Depto. Salto, Uruguay. Holotype: MHNM CI 1805 [ex VT 1049].
Odontesthes humensis de Buen, 1953: 34, figs. 24-26. Type locality: Río Negro, Uruguay. Holotype: MHNM CI 1806 [ex VT 1053].
 Distribution: South America: Negro, Uruguay and La Plata River basins; Lagoa Mirim and Laguna dos Patos basins.
 Countries: Argentina, Brazil, Uruguay
- Odontesthes incisa* (Jenyns, 1841)**
Atherina incisa Jenyns, 1841: 79, pl. 16 (figs. 2, 2a, 2b). Type locality: "39°S, 61°W, several mi. from land" [= opposite Punta Sauce, Buenos Aires], Argentina. Syntypes: BMIII 405.
Menidia uruguayensis Devincenzi, 1924: 205, pl. 14 (lowest fig.). Type locality: Río de la Plata, Montevideo, Uruguay. Holotype: MHNM CI 1804.
 Distribution: Southwestern Atlantic: Argentina, Uruguay and southern Brazil.
 Countries: Argentina, Brazil, Uruguay
 Common names: Cornal (Argentina), Cornalito (Argentina), Late-rino de ojos negros (Argentina), Pejerrey de ojos negros (Argentina)
- Odontesthes ledae* Malabarba & Dyer, 2002**
Odontesthes ledae Malabarba & Dyer, 2002: 266, fig. 4. Type locality: Brazil: Rio Grande do Sul: lagoa Fortaleza, Cidreira (30°09'33"S 50°13'44"W). Holotype: MCP 26151.
 Maximum length: 19 cm SL
 Distribution: South America: Small coastal lagoons in northeastern Rio Grande do Sul State, south of the Tramandaí Lagoon.
 Countries: Brazil
 Common names: Peixe-rei (Brazil)
- Odontesthes mauleanum* (Steindachner, 1896)**
Chirostoma mauleanum Steindachner, 1896: 231. Type locality: Maule R., Chile. Syntypes: NMW 16979 (1), 62506-07 (2, 1).
Chirostoma itatanum Steindachner, 1896: 232. Type locality: Río Itata, VIII Región, Chile. Syntypes: NMW 62608 (4).
Cauque molinae Fowler, 1940: 183, fig. 16. Type locality: Angol,

Malleco River, Chile. Holotype: ANSP 69147.
Distribution: South America: Rivers and lakes of central and south Chile.
Countries: Chile

***Odontesthes mirinensis* Bemvenuti, 1996**

Odontesthes mirinensis Bemvenuti, 1996: 885, figs. 2-10. Type locality: Lagoa Mirim, junto a sede da Estação Ecológica do Taím, lagoon system of Rio Grande do Sul, Brazil. Holotype: MCP 17696.
Distribution: South America: Lagoa Mirim and Laguna dos Patos basins, Rio Grande do Sul State.
Countries: Brazil

***Odontesthes nigricans* (Richardson, 1848)**

Atherina nigricans Richardson, 1848: 77, pl. 42 (figs. 13-18). Type locality: Falkland Is. Holotype: BMNH 1848.3.10.29.
Atherinichthys alburnus Günther, 1861: 404. Type locality: Straits of Magellan, Chile. Syntypes: BMNH 1859.10.12.30-33.
?*Basilichthys nigricans macropterus* Lahille, 1929: 346, fig. 19. Type locality: Malvinas, Río Gallegos, Magellan Straits, Argentina.
Basilichthys malvinensis Marrero, 1950: 124. Type locality: Southwestern Atlantic, from Peninsula Valdés to Isla de los Estados and Islas Malvinas or Falklands.
Distribution: Southwestern Atlantic: Falkland Islands, straits of Magellan and Tierra del Fuego.
Countries: Chile, Falkland Is. (Malvinas)

***Odontesthes orientalis* de Buen, 1950**

Odontesthes orientalis de Buen, 1950: 149, fig. 1. Type locality: Río Negro, Uruguay. Holotype: MHNM CI 1808 [ex VT 1054].
Distribution: South America: La Plata and Uruguay River basins.
Countries: Argentina, Brazil, Uruguay

***Odontesthes perugiae* Evermann & Kendall, 1906**

Odontesthes perugiae Evermann & Kendall, 1906: 94, fig. 3. Type locality: Probably from freshwater, Argentina. Holotype: USNM 55572.
Basilichthys microather Marrero, 1950: 75. Type locality: Río de La Plata and Paraná River delta. No types known.
Distribution: South America: Freshwater drainages of La Plata River.
Countries: Argentina, Brazil, Uruguay

***Odontesthes piquava* Malabarba & Dyer, 2002**

Odontesthes piquava Malabarba & Dyer, 2002: 261, fig. 2. Type locality: Brazil: Rio Grande do Sul: lagoa da Pinguela, Tramandaí (29°49'0"S 50°10'14"W). Holotype: MCP 26152.
Maximum length: 18.7 cm SL
Distribution: South America: Coastal lagoons in northeastern Rio Grande do Sul State, north of the Tramandaí Lagoon.
Countries: Brazil
Common names: Peixe-rei (Brazil)

***Odontesthes platensis* (Berg, 1895)**

Atherinichthys platensis Berg, 1895: 27. Type locality: Mar del Plata, Buenos Aires Prov., Argentina. Syntypes: MACN 5162 (1), 5195 (1).
Distribution: Southwestern Atlantic: From La Plata River mouth to Golfo Nuevo, 32°S.
Countries: Argentina

***Odontesthes regia* (Humboldt, 1821)**

Atherina regia Humboldt, in Humboldt & Valenciennes, 1821: 187. Type locality: Near Lima, Peru. Types missing.
Atherina laticlavia Valenciennes, in Cuvier & Valenciennes, 1835: 473. Type locality: Valparaíso, Chile. Syntypes: MNHN 2980 (4, poor condition).

Chirostoma affine Steindachner, 1898: 313. Type locality: Iquique, Chile. Holotype: ZMB 15674.
Basilichthys jordani Abbott, 1899: 341. Type locality: Callao, Peru. Holotype: SU 6070.
Basilichthys octavius Abbott, 1899: 340. Type locality: Callao, Peru. Holotype: SU 6069.
Basilichthys regillus Abbott, 1899: 339. Type locality: Callao, Peru. Holotype: SU 6071.
Distribution: South America: Southeastern Pacific, from Paíta, Peru to Aysén, Chile.
Countries: Chile, Peru
Common names: Pejerrey (Peru, Chile)

***Odontesthes retropinnis* (de Buen, 1953)**

Yaci retropinnis de Buen, 1953: 52, figs. 31-33. Type locality: Río Negro, Uruguay. Holotype: MHNM CI 1809 [ex VT 1048].
Distribution: South America: La Plata and Uruguay River basins and Lagoa Mirim basin.
Countries: Argentina, Brazil, Uruguay

***Odontesthes smitti* (Lahille, 1929)**

Atherina jacksoniana Quoy & Gaimard, 1825: 333. Type locality: Sydney Harbor, N. S. W., Australia. Syntypes: MNHN 3096 (1), A.2895 (4).
Basilichthys smitti australis Lahille, 1929: 84. Type locality: Última Esperanza, Chile, Río Gallegos, Argentina. No types known.
Basilichthys madrynensis Lahille, 1929: 326, fig. 16. Type locality: Port Madryn, Argentina. No types known.
Basilichthys smitti Lahille, 1929: 84. Type locality: "Fin de Barrancas", Gulf of San Matías, Argentina. No types known.
Distribution: South America: Southwestern Atlantic from Mar del Plata (38°S, 57°33'W) to Beagle Channel and Falkland/Malvinas Islands, and Seno Última Esperanza, southeastern Pacific, Chile.
Countries: Argentina, Chile

***Odontesthes wiebrichi* (Eigenmann, 1927)**

Cauque wiebrichi Eigenmann, 1927: 58, pl. 14 (fig. 3). Type locality: Valdivia market, X Región, Chile. Holotype: CAS 49902 [ex IU 15198, not 15202].
Distribution: South America: Valdivia.
Countries: Chile
Remarks and references: Possible hybrid between *O. brevianalis* and *O. regia*.

POBLANA

Poblana de Buen, 1945: 495. Type species: *Poblana alchichica* de Buen, 1945. Type by original designation. Gender: feminine.

***Poblana alchichica* de Buen, 1945**

Poblana alchichica de Buen, 1945: 495. Type locality: Lake Alchichica, Mexico. Holotype: UMMZ 143301.
Distribution: North America: Mexico.
Countries: Mexico
Common names: Charal de Alchichica (Mexico)

***Poblana ferdebueni* Solórzano & López, 1965**

Poblana ferdebueni Solórzano & López, 1965: 209, fig. 1. Type locality: Laguna de Almoloya, Chignahuapan Lake, Puebla State, Mexico. Holotype: ENCB.
Distribution: North America: Mexico.
Countries: Mexico

***Poblana letholepis* Álvarez, 1950**

Poblana letholepis Álvarez, 1950: 98. Type locality: Crater-lake of La Preciosa, 4 km southeast of Alchichica, Puebla, Mexico, elev. 2365 m. Holotype: not researched.
Distribution: North America: Mexico.
Countries: Mexico
Common names: Charal de la Preciosa (Mexico)

***Poblana squamata* Álvarez, 1950**

Poblana alchichica squamata Álvarez, 1950: 96. Type locality: Crater-lake of Quechulac, about 6.5 km southeast of Alchichica, Puebla, Mexico, elev. 2365 m. Holotype: not researched.

Distribution: North America: Mexico.

Countries: Mexico

Common names: Charal de Quechulac (Mexico)

Family Rivulidae (South American Annual Fishes)

Wilson J. E. M. Costa

Rivulids are easily recognized among other cyprinodontiforms by the continuous branchiostegal and opercular membranes, the reduced laterosensory system of head, and a number of synapomorphies related to the bony structures of head and fins (Costa, 1998a). However, the gaudy and diversified color patterns exhibited by males are the most conspicuous features to identify rivulids among members of the Neotropical ichthyofauna, although beautiful male color patterns also occurring in African and Asian cyprinodontiform aplocheilids. As a consequence, species of rivulids are popular aquarium fishes throughout the world.

Species of Rivulidae occur in approximately all river basins in Cis-Andean South America north of Mar del Plata (Argentina), in Trans-Andean region of Venezuela and Colombia, and both in Caribbean and Pacific slopes of Central America. A few species are endemic to Caribbean islands and eastern river drainages of Mexico, and one species is widespread along Caribbean and Florida coastal plains. Although primarily freshwater fishes, some rivulids of the genus *Rivulus* are restricted to estuarine areas. However, many rivulids are annual fishes, uniquely living in seasonal freshwater pools formed during the rainy season. During dry periods, all adults die, but eggs survive in diapause, hatching in the next rainy season. Rivulids may be found in all continental habitats, since rain forests to semi-arid regions, and since coastal plains at the sea level to altitudes about 1,000 m above sea level. Species diversity may be high both in tropical forests and in subtropical opened areas.

Rivulids are small fishes, usually between 50-80 mm of total length, but some species of *Megalebias* and *Cynolebias* may reach 150-200 mm, and some species of *Leptolebias*, *Plesiolebias*, and *Simpsonichthys* do not surpass 30 mm of total length. In basal lineages the body is slender, subcylindrical, but in some species of *Simpsonichthys* and *Austrolebias* the body may be rather compressed and deep. Members of the Rivulidae are typically oviparous fishes with external fertilization. However, species of the genera *Cynopoeilus* and *Campellolebias* are internal inseminating fishes with complex modifications of anal-fin and urogenital structures (Costa, 1995c, e). Among species of the non-annual genus *Rivulus*, at least two species are the only hermaphroditic vertebrates with self-fertilization (Harrington, 1961). Elaborate reproductive behavior patterns have been recently documented in most rivulids lineages (Belote and Costa, in press a, b).

At present, the Rivulidae comprises 27 genera and 235 valid species as presented below. However, the great majority of rivulid taxa were described in recent years, and about 35 species are known to be still undescribed. This quick advance is reflected by a series of papers on systematics in the last 15 years (see references below). Most recent general revisionary studies include a new classification proposal for the Rivulidae based on phylogenetic relationships (Costa, 1998a), and phylogenetic hypotheses at the species level of some cynolebiatine clades (Costa, 2001a, 2002d).

APHYOLEBIAS

Aphyolebias Costa, 1998a: 78. Type species: *Pterolebias peruensis* Myers, 1954. Type by original designation. Gender: masculine.

***Aphyolebias obliquus* (Costa, Sarmiento & Barrera, 1996)**

Pterolebias obliquus Costa, Sarmiento & Barrera, 1996: 92, fig. 1. Type locality: Bolivia: Departamento del Bení, Río Mamoré basin, temporary swamp associated with Arroyo Curiraba, in Estación Biológica Beni. Holotype: CBF 2328.

Maximum length: 6 cm TL.

Distribution: South America: Mamore River basin.

Countries: Bolivia

***Aphyolebias peruensis* (Myers, 1954)**

Pterolebias peruensis Myers, 1954: 176, fig. 1. Type locality: Eastern part of Ilo Province, Peru. Holotype: SU 47658.

Maximum length: 10 cm TL

Distribution: South America: Amazon River basin.

Countries: Peru

***Aphyolebias rubrocaudatus* (Seegers, 1984)**

Pterolebias rubrocaudatus Seegers, 1984: 243, fig. 1. Type locality: Río Tambopata-Gebiet, etwa 7 km von Puerto Maldonado, einzug des Río Madre de Dios, Südost-Peru. Holotype: ZFMK 13413.

Maximum length: 6 cm TL

Distribution: South America: Amazon River basin.

Countries: Peru

***Aphyolebias wischmanni* (Seegers, 1983)**

Pterolebias wischmanni Seegers, 1983: 68, fig. 3. Type locality: Ucayali-Einzug, Peru, ca. 120 km südlich von Pucallpa, in einem kleinen Bach zwischen den Flüssen Rio Chipira und Amaquiria. Holotype: ZFMK 11534.

Maximum length: 13 cm TL

Distribution: South America: Amazon River basin.

Countries: Peru

AUSTROFUNDULUS

Austrofundulus Myers, 1932: 159. Type species: *Austrofundulus transilis* Myers, 1932. Type by original designation. Gender: masculine.

Austrofundulus limnaeus Schultz, 1949

Austrofundulus transilis limnaeus Schultz, 1949: 85, fig. 10. Type locality: 15 km west of San Félix, which is at western border of Estado de Falcón, Venezuela. Holotype: UMMZ 141916.

Austrofundulus stagnalis Schultz, 1949: 88, fig. 11. Type locality: About 6 km north of the Río Misoa and 20 km south of Lagunillas, Maracaibo basin (Venezuela). Holotype: UMMZ 141918.

Austrofundulus myersi Dahl, 1958: 42. Type locality: Small semi-permanent pond at Sincelajo, within the boundary or the town (Colombia). Holotype: unknown.

Maximum length: 8 cm TL

Distribution: South America: Maracaibo Lake and Amazon River basin.

Countries: Colombia, Venezuela, Guyana

Remarks and references: Redescribed by Taphorn and Thomerson (1978: 413).

Austrofundulus transilis Myers, 1932

Austrofundulus transilis Myers, 1932: 160. Type locality: Pond in the State of Guarico, in the Orinoco drainage of Venezuela. Holotype: USNM 92191.

Maximum length: 10 cm TL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Remarks and references: Redescribed by Taphorn and Thomerson (1978: 410).

AUSTROLEBIAS

Austrolebias Costa, 1998a: 75. Type species: *Cynolebias bellottii* Steindachner, 1881. Type by original designation. Gender: masculine.

Austrolebias adloffii (Ahl, 1922)

Cynolebias adloffii Ahl, 1922: 224, fig. 5. Type locality: Porto Alegre. Lectotype: ZMB 20651.

Maximum length: 4.6 cm SL.

Distribution: South America: Jacuí River basin.

Countries: Brazil

Remarks and references: Redescribed by Costa and Cheffe (2001: 190).

Austrolebias affinis (Amato, 1986)

Cynolebias affinis Amato, 1986: 6, pl. 3. Type locality: Uruguay, Tacuarembó, bañados del Arroyo Tres cruces, ruta 5 km 399.5. Holotype: MHNM 2468.

Cynolebias duraznensis García, Scvortzoff & Hernández, 1995: 106, fig. 3b. Type locality: Durazno, Uruguay. No type.

Maximum length: 5 cm TL

Distribution: South America: Uruguay River basin.

Countries: Brazil, Uruguay

Austrolebias alexandri (Castello & Lopez, 1974)

Cynolebias alexandri Castello & Lopez, 1974: 35, fig. 1. Type locality: Parque Unzue, Gualaguaychu, Provincia de Entre Rios (Argentina). Holotype: MACN 6438.

Maximum length: 9 cm TL

Distribution: South America: Uruguay River basin.

Countries: Argentina, Brazil, Uruguay

Austrolebias bellottii (Steindachner, 1881)

Cynolebias bellottii Steindachner, 1881: 98. Type locality: La Plata (Argentina). Holotype: NMW 75105.

Cynolebias maculatus Steindachner, 1881: 98. Type locality: La

Plata (Argentina). Holotype: NMW 59613.

Cynolebias gibberosus Berg, 1897: 294. Type locality: Cacharí, Partido de Azul, Provincia de Buenos Aires (Argentina). Holotype: MACN 5172.

Cynolebias irregularis Ahl, 1938: 57. Type locality: Probably Argentina. Holotype: ZMB 21145.

Maximum length: 7 cm TL

Distribution: South America: Lower Paraná and Uruguay River basins.

Countries: Argentina, Uruguay

Common names: Pavito (Argentina)

Austrolebias carvalhoi (Myers, 1947)

Cynolebias carvalhoi Myers, 1947: 19. Type locality: Rio Iguassú (in a temporary pool) near Porto União, Santa Catarina, Brazil.

Lectotype: MNRJ 5759, designated by Costa (1998e: 308).

Maximum length: 5 cm TL

Distribution: South America: Paraná River basin.

Countries: Brazil

Remarks and references: Redescribed by Costa (1998e: 308).

Austrolebias charrua Costa & Cheffe, 2001

Austrolebias charrua Costa and Cheffe, 2001: 182. Type locality: Brazil. Rio Grande do Sul. Temporary pool close to arroio Chuí, road to Barra do Chuí. Holotype: MZUSP 60070.

Maximum length: 6 cm TL.

Distribution: South America: Laguna dos Patos basin.

Countries: Brazil

Austrolebias cinereus (Amato, 1986)

Cynolebias cinereus Amato, 1986: 9, pl. 6. Type locality: Uruguay, Colonia, bañado en ruta 21 a 2 km al NW del Arroyo de las Víboras. Holotype: MHNM 2542.

Maximum length: 6 cm TL.

Distribution: South America: La Plata River basin.

Countries: Uruguay

Austrolebias cyaneus (Amato, 1987)

Cynolebias cyaneus Amato, 1987: 2, pl. 1. Type locality: Brasil, Rio Grande do Sul, Município de Rio Pardo, bañados del Arroyo Dom Marcos, al costado de la carretera BR 290. Holotype: MCP 10441.

Maximum length: 5 cm TL.

Distribution: South America: Jacuí River basin.

Countries: Brazil

Austrolebias gymnoventris (Amato, 1986)

Cynolebias gymnoventris Amato, 1986: 2, pl. 1. Type locality: Uruguay, Rocha, bañados del Arroyo India Muerta, a 150 m del puente sobre la ruta 13 y a 50 m de ésta en dirección sureste, en las cercanías de Velázquez. Holotype: MHNM 2460.

Maximum length: 5 cm TL.

Distribution: South America: Laguna dos Patos basin.

Countries: Uruguay

Austrolebias ibicuiensis (Costa, 1999)

Cynolebias ibicuiensis Costa, 1999a: 93, fig. 1. Type locality: Brazil: Estado do Rio Grande do Sul, rio Ibicuí-Mirim, rio Ibicuí drainage, rio Uruguai basin, road BR-287 between São Pedro do Sul and Santa Maria. Holotype: MCP 10201.

Maximum length: 5 cm TL.

Distribution: South America: Uruguay River basin.

Countries: Brazil

Austrolebias jaegeri Costa & Cheffe, 2002

Cynolebias jaegeri Costa & Cheffe, 2002: 84, fig. 1. Type locality: Brazil: Rio Grande do Sul: Pelotas: swamp at Banhado do Timba, Corredor das Tropas, approximately 31°30'S 52°20'W. Holotype: MCP 28574.

Maximum length: 3.04 cm SL.

Distribution: South America: Do Timba Swamp (banhado do Timba), Pelotas, Rio Grande do Sul State.

Countries: Brazil

***Austrolebias luteoflammulatus* (Vaz-Ferreira, Sierra & Scaglia, 1964)**

Cynolebias luteoflammulatus Vaz-Ferreira, Sierra & Scaglia, 1964: 25, pl. 5. Type locality: Depto. de Rocha, Uruguay, en un charco temporal próximo al Arroyo Valizas (Lat. 34°26'S, Long. 53°46' O). Holotype: ZVC P.527.

Maximum length: 4.5 cm TL.

Distribution: South America: Laguna dos Patos basin and adjacent southern coastal plains.

Countries: Uruguay, Brazil

***Austrolebias melanoorus* (Amato, 1986)**

Cynolebias melanoorus Amato, 1986: 4, pl. 2. Type locality: Uruguay, Tacuarembó, bañados del Arroyo Tres Cruces, ruta 5 km 399,5. Holotype: MHNM 2545.

Maximum length: 6 cm TL

Distribution: South America: Uruguay River basin.

Countries: Uruguay

***Austrolebias minuano* Costa & Cheffe, 2001**

Austrolebias minuano Costa and Cheffe, 2001: 185. Type locality: Brazil. Rio Grande do Sul. Temporary lagoon about 4.5 km N of Quinta. Holotype: MCP 28028.

Maximum length: 6 cm TL

Distribution: South America: Laguna dos Patos basin.

Countries: Brazil

***Austrolebias nigripinnis* (Regan, 1912)**

Cynolebias nigripinnis Regan, 1912a: 508. Type locality: La Plata (Argentina). Holotype: BMNH 1909.4.2.29.

Maximum length: 6 cm TL

Distribution: South America: Lower Paraná and Uruguay River basins.

Countries: Argentina, Paraguay, Uruguay

***Austrolebias nigrofasciatus* Costa & Cheffe, 2001**

Austrolebias charrua Costa and Cheffe, 2001: 187. Type locality: Brazil. Rio Grande do Sul. Temporary pool in Pontal da Barra, praia de Laranjal, Pelotas. Holotype: MCP 21172.

Maximum length: 6 cm TL

Distribution: South America: Laguna dos Patos basin.

Countries: Brazil

***Austrolebias nioni* (Berkenkamp, Reichert & Prieto, 1997)**

Cynolebias nioni Berkenkamp, Reichert & Prieto, 1997: 31, fig. 3. Type locality: Departamento Tacuarembó in Nordost-Uruguay, an der Ruta (= Autobahn/Landstrasse) 26, km 331, in temporären Überschwemmungsgebieten des Cañada (= Baches) "Los Cinco Sauces", die zum Rio-Negro-System gehören, 32°10'S, 55°15' Ost. Holotype: SMF 18457.

Maximum length: 8 cm TL.

Distribution: South America: Uruguay River basin.

Countries: Uruguay

***Austrolebias nonoiuliensis* (Taberner, Fernandez-Santos & Castelli, 1974)**

Cynolebias nonoiuliensis Taberner, Fernandez-Santos and Castelli, 1974: 187, fig. 1. Type locality: Nueve de Julio, Provincia de Buenos Aires (Argentina). Holotype: MACN 6754-5.

Maximum length: 8 cm TL.

Distribution: South America: La Plata River basin.

Countries: Argentina

***Austrolebias patriciae* (Huber, 1995)**

Cynolebias patriciae Huber, 1995: 104, fig. 2. Type locality: Paraguay, Province du Presidente Hayes, fossé le long de la route, à environ 500 m au Sud du Rio Negro, 25.25S, 57.67W. Holotype: ANSP 170424.

Maximum length: 4 cm TL.

Distribution: South America: Paraguay River basin.

Countries: Paraguay.

***Austrolebias periodicus* (Costa, 1999)**

Cynolebias periodicus Costa, 1999b: 299, fig. 1. Type locality: Brazil: Estado do Rio Grande do Sul: temporary floodplains of the rio Santa Maria, rio Ibicuí drainage, rio Uruguai basin, road BR-293, 4 km west from Dom Pedrito. Holotype: MCP 20819.

Maximum length: 5 cm TL.

Distribution: South America: Uruguay River basin.

Countries: Brazil

***Austrolebias robustus* (Günther, 1883)**

Cynolebias robustus Günther, 1883: 140. Type locality: ten miles of San Antonio, Buenos Ayres (Argentina). Holotype: BMNH 1879.6.28.12.

Maximum length: 9.5 cm TL.

Distribution: South America: La Plata River basin.

Countries: Argentina

***Austrolebias vandenbergi* (Huber, 1995)**

Cynolebias vandenbergi Huber, 1995: 7, fig. 3. Type locality: Paraguay, Province du Presidente Hayes, près de fortin Toledo, 22.27S, 60.54W. Holotype: ZMA 121270.

Maximum length: 9 cm TL

Distribution: South America: Paraguay River basin.

Countries: Paraguay, Argentina

***Austrolebias vazferreirai* (Berkenkamp, Etzel, Reichert & Salvia, 1994)**

Cynolebias vazferreirai Berkenkamp, Etzel, Reichert & Salvia, 1994: 11, fig. 1. Type locality: Departamento Cerro-Largo in osturuguay and der Stasse (Ruta) 44 bei Kilometer 44, Verbindungsstrasse von melo (= km 0) nach Riveira, 32°15'S, 54°30'E. Holotype: SMF 18453.

Maximum length: 10 cm TL

Distribution: South America: Uruguay River basin.

Countries: Uruguay

***Austrolebias viarius* (Vaz-Ferreira, Sierra & Scaglia, 1964)**

Cynolebias viarius Vaz-Ferreira, Sierra & Scaglia, 1964: 1, pl. 1. Type locality: Departamento de Rocha, Uruguay, en un charco temporal al borde de la Ruta 15, entre el Arroyo Valizas y el Balneario Aguas Dulces (Lat. 34°22'S, Long. 53°43' O). Holotype: ZVC P.798.

Maximum length: 8 cm TL.

Distribution: South America: Atlantic coastal river basins of Uruguay.

Countries: Uruguay

CAMPELLOLEBIAS

Campellolebias Vaz-Ferreira & Sierra, 1974: 1. Type species: *Campellolebias brucei* Vaz-Ferreira & Sierra, 1974. Type by original designation. Gender: masculine.

***Campellolebias brucei* Vaz-Ferreira & Sierra, 1974**

Campellolebias brucei Vaz-Ferreira & Sierra, 1974: 1, pl. 1. Type locality: Charco temporal, entre las localidades de Crisciuma y Tubarão, Estado de Santa Catarina, Brasil. Holotype: ZVC P.2116.

Maximum length: 4.5 cm TL

Distribution: South America: Atlantic coastal river basins.
 Countries: Brazil
 Remarks and references: Redescribed by Costa (1995c: 357).

***Campellolebias chrysolineatus* Costa, Lacerda & Brasil, 1989**

Campellolebias chrysolineatus Costa, Lacerda & Brasil, 1989: 69, fig. 5. Type locality: Brésil, Etat de Santa Catarina, Município d'Araquari, dans une mare en lisière de forêt, 26°25'S, 48°38'W. Holotype: MZUSP 38817.

Maximum length: 5 cm TL.
 Distribution: South America: Atlantic coastal basins.
 Countries: Brazil
 Remarks and references: Redescribed by Costa (1995c: 360).

***Campellolebias dorsimaculatus* Costa, Lacerda & Brasil, 1989**

Campellolebias dorsimaculatus Costa, Lacerda & Brasil, 1989: 66, fig. 2. Type locality: Brésil, Etat de São Paulo, Município d'Iguape, dans une mare en lisière de forêt, 24°37'S, 47°30'W. Holotype: MZUSP 38813.

Maximum length: 4 cm TL.
 Distribution: South America: Ribeira de Iguape River basin.
 Countries: Brazil
 Remarks and references: Redescribed by Costa (1995c: 363).

CYNOLEBIAS

Cynolebias Steindachner, 1876: 124. Type species: *Cynolebias porosus* Steindachner, 1876. Type by monotypy. Gender: masculine.

***Cynolebias albipunctatus* Costa & Brasil, 1991**

Cynolebias albipunctatus Costa & Brasil, 1991b: 58, fig. 3. Type locality: Brazil, Bahia, County of Juazeiro, 70 km S (correctly, 70 km NW) from the City of Uauá Holotype: MZUSP 41378.

Maximum length: 12 cm TL
 Distribution: South America: Middle São Francisco River basin.
 Countries: Brazil
 Remarks and references: Redescribed by Costa (2001a: 355).

***Cynolebias altus* Costa, 2001**

Cynolebias altus Costa, 2001: 370, fig. 25. Type locality: Brazil: Bahia: 25 km S of Ibotirama, rio São Francisco basin, about 12°30'S 43°10'W. Holotype: MZUSP 62564.

Maximum length: 15 cm TL.
 Distribution: South America: Middle São Francisco River basin.
 Countries: Brazil

***Cynolebias attenuatus* Costa, 2001**

Cynolebias attenuatus Costa, 2001: 375, fig. 28. Type locality: Brazil: Bahia: temporary pool 12 km W of Bom Jesus da Lapa, about 13°15'S 43°40'W. Holotype: MZUSP 62566.

Maximum length: 12 cm TL.
 Distribution: South America: Middle São Francisco River basin.
 Countries: Brazil

***Cynolebias gibbus* Costa, 2001**

Cynolebias gibbus Costa, 2001: 378, fig. 31. Type locality: Brazil: Bahia: temporary pool 9.5 km N of Sítio do Mato, about 13°00'S 43°25'W. Holotype: MZUSP 62568.

Maximum length: 12 cm TL.
 Distribution: South America: Middle São Francisco River basin.
 Countries: Brazil

***Cynolebias gilbertoi* Costa, 1998**

Cynolebias gilbertoi Costa, 1998c: 238, fig. 1. Type locality: Brazil: Estado da Bahia, temporary pond about 30 km South of Bom Jesus da Lapa, near rio São Francisco. Holotype: MZUSP 52304.

Maximum length: 7 cm TL
 Distribution: South America: Middle São Francisco River basin.
 Countries: Brazil
 Remarks and references: Redescribed by Costa (2001a: 364).

***Cynolebias griseus* Costa, Lacerda & Brasil, 1990**

Cynolebias griseus Costa, Lacerda & Brasil, 1990: 11, fig. 9. Type locality: Brésil, etat de Goiás, Município de Nova Roma, pris dans une lagune temporaire, 14°03'S, 44°57'W. Holotype: MZUSP 40119.

Maximum length: 10 cm TL.
 Distribution: South America: Upper Tocantins River basin.
 Countries: Brazil
 Remarks and references: Redescribed by Costa (2001a: 351).

***Cynolebias itapicuruiensis* Costa, 2001**

Cynolebias itapicuruiensis Costa, 2001: 362, fig. 20. Type locality: Brazil: Bahia: temporary pool in Capim Grosso, rio Itapicurú basin, about 11°20'S 40°00'W. Holotype: MZUSP 62562.

Maximum length: 10 cm TL.
 Distribution: South America: Itapicurú River basin.
 Countries: Brazil
 Common names: Peixe-sabão.

***Cynolebias leptocephalus* Costa & Brasil, 1993**

Cynolebias leptocephalus Costa & Brasil, 1993: 196, fig. 4. Type locality: Brazil: Estado da Bahia: Swamp near Guanambi, 14°20'S, 42°51'W. Holotype: MZUSP 43676.

Maximum length: 15 cm TL.
 Distribution: South America: Middle São Francisco River basin.
 Countries: Brazil
 Remarks and references: Redescribed by Costa (2001a: 372).

***Cynolebias microphthalmus* Costa & Brasil, 1995**

Cynolebias regani Myers, 1952: 139. Type locality: temporary ponds near Russas, rio Jaguaribe basin, state of Ceará, Brazil. Nomen nudum.

Cynolebias microphthalmus Costa & Brasil in Costa, 1995a: 81. Type locality: Brazil: Rio Grande do Norte: Mossoró—Holotype: MZUSP 42312.

Maximum length: 12 cm TL
 Distribution: South America: Jaguaribe and Mossoró River basins.
 Countries: Brazil
 Common names: Peixe-de-nuvem.
 Remarks and references: Redescribed by Costa (2001a: 354).

***Cynolebias perforatus* Costa & Brasil, 1991**

Cynolebias perforatus Costa & Brasil, 1991b: 56, fig. 1. Type locality: Brazil, Minas Gerais, County of Januária, near the City of Januária. Holotype: MZUSP 41376.

Maximum length: 12 cm TL
 Distribution: South America: Middle São Francisco River basin.
 Countries: Brazil
 Remarks and references: Redescribed by Costa (2001a: 367).

***Cynolebias porosus* Steindachner, 1876**

Cynolebias porosus Steindachner, 1876: 125. pl. 10 (fig. 3). Type locality: Pernambuco (Recife). Holotype: NMW 15096.

Maximum length: 8 cm TL.
 Distribution: South America: Atlantic coastal plains.
 Countries: Brazil
 Remarks and references: Redescribed by Costa (2001a: 358).

***Cynolebias vazabarrisensis* Costa, 2001**

Cynolebias vazabarrisensis Costa, 2001: 359, fig. 19. Type locality: Brazil: Bahia: temporary pool 33 km S of Bendegó, road BR-116, rio Vaza-Barris basin, about 10°15'S 39°05'W. Holotype: MZUSP 62560.

Maximum length: 9 cm TL.

Distribution: South America: Vaza-Barris River basin.
Countries: Brazil
Common names: Peixe-sabão.

CYNOPOECILUS

Cynopoecilus Regan, 1912b: 545. Type species: *Cynolebias melanotaenia* Regan, 1912a. Type by original designation. Gender: masculine.

***Cynopoecilus fulgens* Costa, 2002**

Cynopoecilus fulgens Costa, 2002a: 16, fig. 3. Type locality: Brazil: Rio Grande do Sul: temporary pool, road BR-101, 5 km N of São José do Norte (about 32°00'S 52°00'W). Holotype: MCP 26929.

Maximum length: 5 cm TL.

Distribution: South America: Atlantic coastal plains adjacent to the eastern margin of Laguna dos Patos.

Countries: Brazil

***Cynopoecilus intimus* Costa, 2002**

Cynopoecilus intimus Costa, 2002a: 18, fig. 4. Type locality: Brazil: Rio Grande do Sul: temporary swamp close to a stream tributary to rio Vacacaí, rio Jacuí basin, road BR-392, 6 km NW of Vila Block (about 29°55'S 53°50'W). Holotype: MCP 20816.

Maximum length: 4 cm TL.

Distribution: South America: Atlantic coastal plains adjacent to the eastern margin of Laguna dos Patos.

Countries: Brazil

***Cynopoecilus melanotaenia* (Regan, 1912)**

Cynolebias melanotaenia Regan, 1912a: 506. Type locality: Paranaíba, southeastern Brazil [correctly, Quinta, Estado do Rio Grande do Sul, Brazil]. Syntypes: BMNH 1909.9.5.15-22

Maximum length: 5 cm TL

Distribution: South America: Atlantic coast of Brazil and Uruguay, in floodplain streams along western margin of Laguna dos Patos and coastal floodplains on the eastern margin of Lagoa Mirim.

Countries: Brazil, Uruguay

Remarks and references: Redescribed by Costa (2002a: 13).

***Cynopoecilus multipapillatus* Costa, 2002**

Cynopoecilus multipapillatus Costa, 2002a: 22, fig. 6. Type locality: Brazil: Rio Grande do Sul: temporary pool between road RS-787 and lagoa da Fortaleza (about 30°10'S 50°15'W). Holotype: MCP 26933.

Maximum length: 5 cm TL.

Distribution: South America: Atlantic coastal plains of northern Rio Grande do Sul and southern Santa Catarina States.

Countries: Brazil

***Cynopoecilus nigrovittatus* Costa, 2002**

Cynopoecilus nigrovittatus Costa, 2002a: 20, fig. 5. Type locality: Brazil: Rio Grande do Sul: Montenegro, rio Caí floodplains (about 29°45'S 51°30'W). Holotype: MCP 26931.

Maximum length: 6 cm TL.

Distribution: South America: Lower Jacuí River basin.

Countries: Brazil

GNATHOLEBIAS

Gnatholebias Costa, 1998a: 77. Type species: *Pterolebias zonatus* Myers, 1935. Type by original designation. Gender: masculine.

***Gnatholebias hoignei* (Thomerson, 1974)**

Pterolebias hoignei Thomerson, 1974: 31, fig. 1. Type locality: Temporary pond about 1 km N of Caño Benito (9°16'N, 68°09'W) along the road between Es Pao and El Baul, Estado Cojedes, Venezuela. Holotype: USNM 207402.

Maximum length: 10 cm TL

Distribution: South America: Orinoco River basin.
Countries: Venezuela

***Gnatholebias zonatus* (Myers, 1935)**

Pterolebias zonatus Myers 1935: 7. Type locality: Orinoco basin, Venezuela. Holotype: USNM 92190.

Maximum length: 10 cm TL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

LEPTOLEBIAS

Leptolebias Myers, 1952: 140. Type species: *Cynopoecilus marmoratus* Ladiges, 1934. Type by original designation. Gender: masculine.

***Leptolebias aureoguttatus* (Cruz, 1974)**

Cynolebias paranaguensis Myers, 1952: 131. Type locality: Paranaíba, Paraná, Brazil. Nomen nudum.

Cynolebias aureoguttatus Myers, 1952: 131. unnum, fig. on p. 134. Type locality: Paranaíba, Paraná, Brazil. Nomen nudum

Cynolebias aureoguttatus Cruz, 1974: 20, fig. 1. Type locality: Paranaíba, Paraná, Brazil. Syntypes: CAGC 105.3, CAGC 105.2.

Maximum length: 4 cm TL

Distribution: South America: Atlantic coastal plain basins.

Countries: Brazil

***Leptolebias citrinipinnis* (Costa, Lacerda & Tanizaki, 1988)**

Cynolebias citrinipinnis Costa, Lacerda & Tanizaki, 1988b: 22, fig. 1. Type locality: Brésil, Etat de Rio de Janeiro, Município de Maricá, pris dans un marais d'une restinga, 22°S, 43°W. Holotype: MZUSP 37199.

Maximum length: 5 cm TL.

Distribution: South America: Atlantic coastal river basins.

Countries: Brazil

***Leptolebias cruzi* (Costa, 1988)**

Cynolebias cruzi Costa, 1988b: 563, fig. 3. Type locality: Brejo próximo a Barra de São João, Município de Casimiro de Abreu, RJ. Holotype: MZUSP 36297.

Maximum length: 3 cm TL.

Distribution: South America: Atlantic coastal river basins.

Countries: Brazil

***Leptolebias fractifasciatus* (Costa, 1988)**

Cynolebias fractifasciatus Costa, 1988b: 562, fig. 2. Type locality: Brejo próximo a Inoã, Município de Maricá, RJ. Holotype: MZUSP 36423.

Maximum length: 4 cm TL.

Distribution: South America: Atlantic coastal river basins.

Countries: Brazil

***Leptolebias leitaoi* (Cruz & Peixoto, 1992)**

Cynolebias leitaoi Cruz & Peixoto, 1992: 638. Type locality: Mucuri, Estado da Bahia. Holotype: MNRJ 11646.

Maximum length: 3 cm TL

Distribution: South America: Mucuri River basin.

Countries: Brazil

***Leptolebias marmoratus* (Ladiges, 1934)**

Cynopoecilus marmoratus Ladiges, 1934: 74. Type locality: Rio de Janeiro, Brazil. Neotype: MCP 28604, designated by Costa (2002c).

Cynopoecilus sicheleri Miranda Ribeiro, 1939: 363. Type locality: Rios de água pouco rápida, dos contrafortes da Serra de Petrópolis, E. do Rio. Syntypes: MNRJ 4739

Cynolebias zingiberinus Myers, 1942: 108. Type locality: Isolated depression filled with water only during the rainy season, along

the base of the Serra do Petrópolis, State of Rio de Janeiro, Brazil. Holotype: SU 36523.

Maximum length: 3 cm TL

Distribution: South America: Atlantic coastal river basins.

Countries: Brazil

***Leptolebias minimus* (Myers, 1942)**

Cynolebias minimus Myers, 1942: 109. Type locality: Standing water in a cane-brake along the road to Rio, one mile east of Itaquahy [Itaguaí] (apparently a little west of the boundary of the District Federal), State of Rio de Janeiro, Brazil. Holotype: SU 36525.

Cynolebias ladigesi Foersch, 1958: 257. Type locality: Pools, 80 km northwest from Rio de Janeiro, Brazil. Types not designated.

Maximum length: 4 cm TL

Distribution: South America: Atlantic coastal river basins.

Countries: Brazil

Remarks and references: Redescribed by Costa (1988b: 558).

***Leptolebias opalescens* (Myers, 1942)**

Cynopoecilus fluminensis Faria & Muller, 1937: 99. Type locality: Rio de Janeiro [Brazil]. No type. Suppressed for purposes of priority and placed on Official Index, Opinion 1762.

Cynolebias opalescens Myers, 1942: 107. Type locality: water holes or ponds along base of the Serra do Petrópolis, State of Rio de Janeiro, Brazil. Holotype: SU 36521.

Cynolebias nanus Cruz & Peixoto, 1983: 90, fig. 1. Type locality: Margem direita da estrada que liga os vilarejos de Cava e Tinguá, 22°38'S 43°25'W, a aproximadamente 8 km do primeiro, no município de Nova Iguaçu, Estado do rio de Janeiro [Brazil]. Holotype: MNRJ 10621.

Maximum length: 4 cm TL

Distribution: South America: Atlantic coastal river basins.

Countries: Brazil

Remarks and references: Redescribed by Costa and Lacerda (1988b: 132).

***Leptolebias splendens* (Myers, 1942)**

Cynopoecilus sandrii Faria & Muller, 1937: 98, fig. 1. Type locality: Estado do Rio de Janeiro, em pequenas poças que se encontram em logares sombrios, nas visinhanças de pequenos rios. No types. Suppressed for purposes of priority and placed on Official Index, Opinion 1762.

Cynolebias splendens Myers, 1942: 110. Type locality: Water holes or ponds along base of Serra do Petrópolis, State of Rio de Janeiro, Brazil. Holotype: SU 36527.

Maximum length: 3 cm TL

Distribution: South America: Atlantic coastal river basins.

Countries: Brazil

Remarks and references: Redescribed by Costa and Lacerda (1988b: 129).

MARATECOARA

Maratecoara Costa, 1995d: 68. Type species: *Cynolebias lacortei* Lazara, 1991. Type by original designation. Gender: feminine.

***Maratecoara formosa* Costa & Brasil, 1995**

Maratecoara formosa Costa & Brasil, in Costa, 1995d: 69, fig. 5. Type locality: Brazil: Estado do Tocantins, temporary pool in Brejinho de Nazaré, 10°59'S, 48°38' O. Holotype: MNRJ 12621.

Maximum length: 5 cm TL

Distribution: South America: Middle Tocantins River basin.

Countries: Brazil

***Maratecoara lacortei* (Lazara, 1991)**

Cynolebias lacortei Lazara, 1991: 141, fig. 2. Type locality: Brazil, Goiás, Aruana, temporary pool. Holotype: MZUSP 38805.

Maximum length: 5 cm TL

Distribution: South America: Araguaia River basin.

Countries: Brazil

MEGALEBIAS

Megalebias Costa, 1998a: 76. Type species: *Cynolebias wolterstorffi* Ahl, 1924. Type by original designation. Gender: masculine.

***Megalebias cheradophilus* (Vaz-Ferreira, Sierra & Scaglia, 1964)**

Cynolebias cheradophilus Vaz-Ferreira, Sierra & Scaglia, 1964: 14. pl. 3. Type locality: Depto. de Rocha, Uruguay, en un charco estacional próximo al Arroyo Valizas (Lat. 34°26'S., Long. 53°46' O.). Holotype: ZVC P.522.

Maximum length: 6.5 cm TL 5.3 cm SL.

Distribution: South America: Atlantic coastal river basins.

Countries: Uruguay

***Megalebias elongatus* (Steindachner, 1881)**

Cynolebias elongatus Steindachner, 1881: 98. Type locality: La Plata, Argentina. Holotype: NMW 76518.

Cynolebias holmbergi Berg, 1897: 296. Type locality: Provincia de Buenos Aires (Argentina). Lectotype: MACN 5169.

Cynolebias spinifer Ahl, 1934: 310. Type locality: La Plata, Buenos Aires, Argentina. Lectotype: ZMH H64.

Maximum length: 18 cm TL

Distribution: South America: Lower Paraná-La Plata River basin.

Countries: Argentina

***Megalebias monstrosus* (Huber, 1995)**

Cynolebias monstrosus Huber, 1995: 9, fig. 4. Type locality: Paraguay, Province de Boqueron, près de la Serena, bassin du haut Chaco, 21.94S 56.97W. Holotype: MNHN 1994-1110.

Maximum length: 15 cm TL

Distribution: South America: Paraguay River basin.

Countries: Paraguay, Argentina

***Megalebias prognathus* (Amato, 1986)**

Cynolebias prognathus Amato, 1986: 7. pl. 4. Type locality: Uruguay, Rocha, bañados de las Maravillas, a 13 km de la ruta 9, La Coronilla. Holotype: MHNM 2609.

Maximum length: 12 cm TL

Distribution: South America: Lagoa Mirim basin.

Countries: Uruguay

***Megalebias wolterstorffi* (Ahl, 1924)**

Cynolebias wolterstorffi Ahl, 1924: 359. Type locality: Porto Alegre [Brazil]. Lectotype: ZMH H65.

Maximum length: 10 cm TL

Distribution: South America: Laguna dos Patos basin.

Countries: Brazil, Uruguay

MICROMOEMA

Micromoema Costa, 1998a: 78. Type species: *Pterolebias xiphophorus* Thomerson & Taphorn, 1992. Type by original designation. Gender: feminine.

***Micromoema xiphophora* (Thomerson & Taphorn, 1992)**

Pterolebias xiphophorus Thomerson & Taphorn, 1992: 378, fig. 1.

Type locality: Small forest pools about 500 m from right bank of Río Ventuari, about 5.5 km upstream of Río Yureba, 4°16'N, 66°23'W, Orinoco drainage, Amazonas Federal Territory, Venezuela. Holotype: MCNG 23888.

Maximum length: 6 cm TL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

MILLERICHTHYS

Millerichthys Costa, 1995a: 18. Type species: *Rivulus robustus* Miller & Hubbs, 1974. Type by original designation. Gender: masculine.

***Millerichthys robustus* (Miller & Hubbs, 1974)**

Rivulus robustus Miller and Hubbs, 1974: 865, fig. 2. Type locality: Pool (formerly part of a lagoon) N of Arroyo Zacatispán, about 5 km S of Papaloapan (now called El Hule), Oaxaca, in the basin of the Río Papaloapan (México). Holotype: UMMZ 124278.

Maximum length: 4 cm TL

Distribution: North America: Papaloapan and Coatzacoalcos river basins.

Countries: Mexico

MOEMA

Moema Costa, 1989c: 223. Type species: *Moema piriana* Costa, 1989. Type by original designation. Gender: feminine.

***Moema pepotei* Costa, 1992**

Moema pepotei Costa, 1992b: 621, fig. 6. Type locality: Brasil, Rondônia, Forte Príncipe da Beira, bacia do rio Guaporé. Holotype: SU 63604.

Maximum length: 12 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru, Bolivia

***Moema piriana* Costa, 1989**

Moema piriana Costa, 1989c: 223, fig. 1. Type locality: Primavera, Pará, Brasil. Holotype: MZUSP 38517.

Maximum length: 12 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Moema portugali* Costa, 1989**

Moema portugali Costa, 1989: 224, fig. 2. Type locality: Furo do Firmino, Ilha de Maracá, Roraima, Brasil. Holotype: INPA 1334.

Maximum length: 12 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Moema staecki* (Seegers, 1987)**

Pterolebias staecki Seegers, 1987: 202, fig. 1. Type locality: Einer sumpfigen Lagune des Lago Janauacá, etwa 3°25'S, 60°16'W, südlich des Amazonas, kurz oberhalb der Einmündung des Rio Negro, südsüdwestlich von Manaus, Brasilien. Holotype: ZFMK 14597.

Maximum length: 8 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

NEMATOLEBIAS

Nematolebias Costa, 1998a: 75. Type species: *Cynolebias whitei* Myers, 1942. Type by original designation. Gender: masculine.

***Nematolebias papilliferus* Costa, 2002**

Nematolebias papilliferus Costa, 2002b: 47, fig. 5. Type locality: Brazil: Estado do Rio de Janeiro: Inoã, temporary pool close to a small stream of laguna de Maricá system, road RJ-106, 22°55'14.5"S 42°55'41.4"W. Holotype: MZUSP 52964.

Maximum length: 7 cm SL

Distribution: South America: Laguna de Maricá and Laguna de Saquarema basins.

Countries: Brazil

***Nematolebias whitei* (Myers, 1942)**

Cynolebias whitei Myers, 1942: 106. Type locality: drying swamp

10 or 12 mi. north of Cabo Frio, State of Rio de Janeiro, Brazil. Holotype: SU 36516.

Pterolebias elegans Ladiges, 1958: 76, fig. 1. Type locality: Cabo Frio near Rio de Janeiro, Brazil. Holotype: ZMH H324.

Maximum length: 8 cm TL.

Distribution: South America: Laguna de Araruama basin, Das Ostras River basin, coastal plains adjacent to the mouth of São João River.

Countries: Brazil

Remarks and references: Redescribed by Costa (2002b: 45)

NEOFUNDULUS

Neofundulus Myers, 1924: 9. Type species: *Fundulus paraguayensis* Eigenmann & Kennedy, 1903. Type by original designation. Gender: masculine.

***Neofundulus acutirostratus* Costa, 1992**

Neofundulus acutirostratus Costa, 1992a: 616, fig. 1. Type locality: Brasil: Minas Gerais: Lagoa Santa. Holotype: SU 68326.

Maximum length: 6 cm TL.

Distribution: South America: Das Velhas River basin.

Countries: Brazil

***Neofundulus guaporensis* Costa, 1988**

Neofundulus guaporensis Costa 1988c: 110, fig. 6. Type locality: Forte Príncipe da Beira, Rondônia, Brasil.

Holotype: MZUSP 36621.

Maximum length: 3 cm TL

Distribution: South America: Guaporé River basin.

Countries: Brazil

***Neofundulus ornatipinnis* Myers, 1935**

Neofundulus ornatipinnis Myers, 1935: 8. Type locality: Swamp at Makhlawaiya, Paraguayan Chaco, 23°25'S, 58°19'W, about 60 miles West of the Rio Paraguay. Holotype: USNM 94401.

Maximum length: 7 cm TL.

Distribution: South America: Paraguay River basin.

Countries: Paraguay, Argentina, Bolivia.

Remarks and references: Redescribed by Costa (1988c: 107).

***Neofundulus paraguayensis* (Eigenmann & Kennedy, 1903)**

Fundulus paraguayensis Eigenmann & Kennedy, 1903: 530. Type locality: Laguna near Arroyo Trementina (Paraguay). Holotype: CAS 42533.

Maximum length: 7 cm TL

Distribution: South America: Paraguay River basin.

Countries: Brazil, Paraguay

Remarks and references: Redescribed by Costa (1988c: 106).

***Neofundulus parvipinnis* Costa, 1988**

Neofundulus parvipinnis Costa, 1988c: 109, fig. 4. Type locality: Lagoa na margem direita da BR 364, 36 km leste de Cuiabá, Mato Grosso, Brasil. Holotype: MZUSP 36618.

Maximum length: 6 cm TL

Distribution: South America: Paraguay River basin.

Countries: Brazil

PAPILIOLEBIAS

Papiliolebias Costa 1998b: 319. Type species: *Plesiolebias bitteri* Costa, 1989. Type by original designation. Gender: masculine.

***Papiliolebias bitteri* (Costa, 1989)**

Plesiolebias bitteri Costa, 1989b: 195, fig. 1. Type locality: Paraguai. Holotype: MNRJ 11554.

Maximum length: 5 cm TL.

Distribution: South America: Paraguay River basin.

Countries: Paraguay, Argentina, Bolivia

Remarks and references: Redescribed by Costa (1998b: 320).

PITUNA

Pituna Costa, 1989: 225. Type species: *Pituna poranga* Costa, 1989. Type by original designation. Gender: feminine.

***Pituna compacta* (Myers, 1927)**

Rivulus compactus Myers, 1927: 120. Type locality: Porto Nacional, Rio Tocantins, Goyas (now Estado do Tocantins), Brazil, Dona Francisquinha, shallow lake. Lectotype: CAS 40707, designated by Huber (1992: 157).

Pituna poranga Costa, 1989: 226, fig. 3. Type locality: Aruanã, Goiás, Brasil. Holotype: MZUSP 38511.

Maximum length: 5 cm TL

Distribution: South America: Araguaia-Tocantins, Xingu, and Parnaíba River basins.

Countries: Brazil

Remarks and references: Redescribed by Costa (1998d: 141)

PLESIOLEBIAS

Plesiolebias Costa 1989b: 193. Type species: *Cynolebias xavantei* Costa, Lacerda & Tanizaki, 1988. Type by original designation. Gender: masculine.

***Plesiolebias aruana* (Lazara, 1991)**

Cynolebias aruana Lazara, 1991: 147, fig. 4. Type locality: Brazil, State of Goiás, temporary pool. Holotype: MZUSP 38794.

Maximum length: 3 cm TL

Distribution: South America: Araguaia-Tocantins River basin.

Countries: Brazil

Remarks and references: Redescribed by Costa (1998b: 325).

***Plesiolebias glaucopterus* (Costa & Lacerda, 1988)**

Cynolebias glaucopterus Costa & Lacerda, 1988a: 16, fig.1. Type locality: Brasil, Estado de Mato Grosso, município de Cáceres, lagoa próxima ao rio Paraguai. Holotype: MZUSP 38533.

Cynolebias pantanalensis Seegers, 1988a: 31, fig. 1. Type locality: Restgewässer an der Transpantaneira zwischen Poconé und Corumbá (Mato Grosso), rund 45 Kilometer südlich von Poconé (etwa 56°50'W, 16°43'S) im Einzugsbereich des Rio Sararé bzw. Rio Paraguai. Holotype: ZFMK 15534.

Maximum length: 3 cm TL

Distribution: South America: Paraguay River basin.

Countries: Brazil

Remarks and references: Redescribed by Costa (1998b: 322).

***Plesiolebias lacerdai* Costa, 1989**

Plesiolebias lacerdai Costa, 1989b: 196, fig. 2. Type locality: proximidades do rio das Mortes, na altura da estrada para Cocalinhos, MT, Brasil. Holotype: MNRJ 11556.

Maximum length: 2.5 cm TL

Distribution: South America: Araguaia River basin.

Countries: Brazil

Remarks and references: Redescribed by Costa (1998b: 328).

***Plesiolebias xavantei* (Costa, Lacerda & Tanizaki, 1988)**

Cynolebias xavantei Costa, Lacerda & Tanizaki, 1988a: 123, fig. 1. Type locality: Brésil, Etat de Goiás (now Tocantins), Mun. Porto Nacional, dans un marais près de Porto Nacional, 10°43'S, 48°24'W. Holotype: MZUSP 35418.

Maximum length: 5 cm TL.

Distribution: South America: Middle Tocantins River basin.

Countries: Brazil

Remarks and references: Redescribed by Costa (1998b: 330).

PTEROLEBIAS

Pterolebias Garman, 1895: 141. Type species: *Pterolebias longipinnis* Garman, 1895. Type by monotypy. Gender: masculine.

***Pterolebias bokermanni* Travassos, 1955**

Pterolebias bokermanni Travassos, 1955: 35, fig. 1. Type locality: Rio Guajará-Mirim, Território de Guaporé, Brasil. Holotype: MNRJ 8672.

Rivulichthys luelingi Meinken, 1969: 423, fig. 4. Type locality: Nähe des Rio Chapare, ungefähr 4 km unterhalb der Ortschaft Todos Santos in Ost-bolivien. Holotype: Uncat. in original description.

Maximum length: 10 cm TL.

Distribution: South America: Amazon and Paraguay River basins.

Countries: Brazil, Bolivia, Paraguay, Argentina

***Pterolebias longipinnis* Garman, 1895**

Pterolebias longipinnis Garman, 1895: 142. Type locality: Santarém, rio Amazonas, Pará, Brazil. Lectotype: USNM 120429, designated by Thomerson (1984:528).

Maximum length: 12 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Pterolebias phasianus* Costa, 1988**

Pterolebias phasianus Costa, 1988a: 658, fig. 1. Type locality: Lagoon at Cáceres, Rio Cuiabá, State of Mato Grosso, Brazil. Holotype: MZUSP 38109.

Maximum length: 7 cm TL.

Distribution: South America: Paraguay River basin.

Countries: Brazil, Bolivia

RACHOVIA

Rachovia Myers, 1927: 119. Type species: *Rivulus brevis* Regan, 1912. Type by original designation. Gender: feminine.

***Rachovia brevis* (Regan, 1912)**

Rivulus brevis Regan, 1912a: 504. Type locality: Colombia. Holotype: BMNH 1908.5.14.8.

Rachovia splendens Dahl, 1958: 43. Type locality: Small semi-permanent pond at Sincelejo, within the boundary or the town (Colombia). Holotype: unknown.

Maximum length: 6 cm TL

Distribution: South America: Magdalena River and Maracaibo Lake basins.

Countries: Colombia, Venezuela

Remarks and references: Redescribed by Taphorn and Thomerson (1978: 389).

***Rachovia hummelincki* Beaufort, 1940**

Rachovia hummelincki Beaufort, 1940: 4. pl. 10b. Type locality: Poza de San Antonio, east of Carirubana, Paraguaná, Venezuela. Lectotype: ZMA 100401, designated by Taphorn & Thomerson (1978:399).

Maximum length: 5 cm TL

Distribution: South America: Magdalena River and Maracaibo Lake basins.

Countries: Colombia, Venezuela

Remarks and references: Redescribed by Taphorn and Thomerson (1978: 399).

***Rachovia maculipinnis* (Radda, 1964)**

Pterolebias maculipinnis Radda, 1964: 41, fig. 3. Type locality: Cojedes, Río Pao drainage, Venezuela. Neotype: FMNH 85267, designated by Taphorn & Thomerson (1978: 395).

Maximum length: 6 cm TL

Distribution: South America: Orinoco River basin.

Countries: Colombia, Venezuela

Remarks and references: Redescribed by Taphorn and Thomerson (1978: 394).

Rachovia pyropunctata Taphorn & Thomerson, 1978
Rachovia pyropunctata Taphorn & Thomerson, 1978: 403, fig. 9c.
 Type locality: Roadside pool (préstamo) west of Lake Maracaibo, between the towns of San Felipe and Jaguasito, near the Hacienda Berlin, on the road To Guamo (a small town on the western shore of Lake Maracaibo), Zulia. Holotype: FMNH 85713.
 Maximum length: 5 cm TL
 Distribution: South America: Maracaibo Lake basin.
 Countries: Venezuela

Rachovia stellifer (Thomerson & Turner, 1973)
Rivulus stellifer Thomerson & Turner, 1973: 783, fig. 1. Type locality: Temporary pond about 1 km north of Caño Benito, (9°16'N, 68°09'W) on road between El Pao and El baul, Estado Cojedes, Venezuela. Holotype: USNM 209254.
 Maximum length: 7.5 cm TL
 Distribution: South America: Orinoco River basin.
 Countries: Venezuela

RENOVA

Renova Thomerson & Taphorn, 1995: 186. Type species: *Renova oscari* Thomerson & Taphorn, 1995. Type by original designation. Gender: feminine.

Renova oscari Thomerson & Taphorn, 1995
Renova oscari Thomerson & Taphorn, 1995: 187, fig. 1. Type locality: Southwest edge of Isla Raton near the village of Sabanita, downstream from the mouth of a small stream emerging from the island, upper Río Orinoco, 5°05'N, 67°48'W, Amazonas, Venezuela. Holotype: MCNG 27070.
 Maximum length: 4.7 cm SL
 Distribution: South America: Orinoco River basin.
 Countries: Venezuela

RIVULUS

Rivulus Poey, 1860: 299. Type species: *Rivulus cylindraceus* Poey, 1860. Type by monotypy. Gender: masculine.
Cynodonichthys Meek 1904: 510. Type species: *Cynodonichthys tenuis* Meek, 1904. Type by original designation. Gender: masculine.
Vomerivulus Fowler, 1944: 244. Type species: *Rivulus leucurus* Fowler, 1944. Type by original designation. Gender: masculine.
Anablepsoides Huber, 1992: 43. Type species: *Rivulus atratus* Garman, 1895. Type by monotypy. Gender: masculine.
Oditichthys Huber, 1999: 49. Type species: *Rivulus igneus* Huber, 1991. Type by original designation. Gender: masculine.
Laimosemion Huber, 1999: 49. Type species: *Rivulus geayi* Vailant, 1899. Type by original designation. Gender: masculine.

Rivulus agilae Hoedeman, 1954
Rivulus agilae Hoedeman, 1954: 203, fig. 1. Type locality: Agila, rivulet between Agila and Berlijn at Para River (Suriname). Holotype: ZMA 100448a.
Rivulus manaensis Hoedeman, 1961: 61. Type locality: Mana River, Creek to saut Patawa, interior of French Guiana, about 85 km from coast. Holotype: ZMA 102252a.
 Maximum length: 5 cm TL
 Distribution: South America: Atlantic coastal river basins.
 Countries: French Guiana, Guyana, Suriname
 Common names: Toumblouc (French Guiana)

Rivulus altivelis Huber, 1992
Rivulus altivelis Huber, 1992: 93, fig. 29a. Type locality: Raudal Alto, approximately 90 km NE mouth of Río Papunava, Río Inirida basin, Guainia Departament, Colombia. Holotype: NRM 16548.
 Maximum length: 8.5 cm TL
 Distribution: South America: Orinoco River basin.

Countries: Colombia

Rivulus amphoreus Huber, 1979
Rivulus amphoreus Huber, 1979: 68, fig. 4. Type locality: À proximité du Tafelberg, zone de hautes collines culminant à plus de 1000 mètres d'altitude à 120 km au Sud-Sud-Ouest de Paramaribo. Holotype: MNHN 1979-286.
 Maximum length: 6 cm TL
 Distribution: South America: Atlantic river basins.
 Countries: Suriname

Rivulus apiamici Costa, 1989
Rivulus apiamici Costa, 1989a: 527, fig. 3. Type locality: Bata-guaçu, próximo a ponte de divisa do estado, Mato grosso do Sul, Brasil. Holotype: MZUSP 39976.
Rivulus vittatus Costa, 1989: 530, fig. 5. Type locality: Estrada São Simão-Jataí, 192 km ao S de Jataí, Goiás, Brasil. Holotype: MZUSP 39980.
 Maximum length: 3 cm SL
 Distribution: South America: Paraná River basin.
 Countries: Brazil

Rivulus atratus Garman, 1895
Rivulus atratus Garman, 1895: 140. Type locality: Rio Jutahy, Amazonas, Brazil. Lectotype: MCZ 6318, designated by Huber (1992:102).
 Maximum length: 4 cm TL
 Distribution: South America: Amazon River basin.
 Countries: Brazil, Colombia, Peru

Rivulus auratus Schreitmüller, 1928
Rivulus urophthalmus aurata Schreitmüller, 1928: 88. Type locality: Maharankao [Maranhão] (Brasilien). No types known.
 Maximum length: 5 cm TL
 Distribution: South America: Atlantic coastal river basins.
 Countries: Brazil

Rivulus bahianus Huber, 1990
Rivulus bahianus Huber, 1990: 14, fig. 1. Type locality: Près d'Itapoa (Itapoã), à quelques de mètres de l'entrée de l'aéroport international de Salvador do Bahia. Holotype: MNHN 1988-1172.
 Maximum length: 5.5 cm TL
 Distribution: South America: Atlantic coastal river basins.
 Countries: Brazil

Rivulus beniensis Myers, 1927
Rivulus beniensis beniensis Myers, 1927: 133. Type locality: Ivon, Río Beni, Bolivia. Lectotype: USNM 120432, designated by Fels & Huber (1985:35).
Rivulus beniensis lacustris Myers, 1927: 133. Type locality: Lagoons along shores of Lake Rogoagua. Bolivia. Lectotype: UMMZ 66396, designated in Fels & Huber (1985).
Rivulus bolivianus Seegers, 1988: 172, fig. 1. Type locality: Lagune Suarez, ca. 4 km SO Trinidad, Einzug des Río Mamore, 14°55'S, 64°55'W, Bolivien. Holotype: ZFMK 14602.
 Maximum length: 4 cm TL
 Distribution: South America: Mamoré-Guaporé River basin.
 Countries: Bolivia, Brazil

Rivulus birkhahni Berkenkamp & Etzel, 1992
Rivulus birkhahni Berkenkamp & Etzel, 1992: 102, fig. 1. Type locality: Bei Chiriqui Grande in der Provinz Bocas del Toro an der Karibikseite Panamas, 8°90'N, 82°10'W. Holotype: SMF 18436.
 Maximum length: 6 cm TL
 Distribution: South America: Caribbean river basins.
 Countries: Panama

Rivulus boehlkei Huber & Fels, 1985

- Rivulus boehlkei* Huber & Fels, 1985: 316, fig. 1. Type locality: Ruisseau temporaire affluent de la rivière La Miel du bassin de la Magdalena dans la Province de Caldas, Colombie centrale. Holotype: ANSP 139467.
Maximum length: 4.5 cm TL
Distribution: South America: Magdalena River basin.
Countries: Colombia
- Rivulus brasiliensis* (Valenciennes, 1821)**
Fundulus brasiliensis Valenciennes, in Humboldt & Valenciennes, 1821: 163. pl. 52 (fig. 3). Type locality: Brazil. Neotype: MNHN 2726, designated by Huber (1992:131).
Rivulus dorni Myers, 1924: 588. Type locality: Rio de Janeiro (Brazil). Holotype: BMNH 1924.4.28.1.
Maximum length: 6 cm TL
Distribution: South America: Atlantic coastal river basins.
Countries: Brazil
- Rivulus breviceps* Eigenmann, 1909**
Rivulus breviceps Eigenmann, 1909: 49. Type locality: Shrimp Creek (Guyana). Holotype: FMNH 52710.
Maximum length: 3.5 cm TL
Distribution: South America: Amazon River basin.
Countries: Guyana
- Rivulus brunneus* Meek & Hildebrand, 1913**
Rivulus brunneus Meek & Hildebrand, 1913: 86. Type locality: Toro Point, Canal Zone, Panama. Holotype: FMNH 7593.
Maximum length: 6 cm TL
Distribution: Central America: Atlantic river basins.
Countries: Panama
- Rivulus campelloi* Costa, 1990**
Rivulus campelloi Costa, 1990a: 42, fig. 1. Type locality: Brésil, Para, marais près de Primavera. Holotype: ZVC uncat.
Maximum length: 4.8 cm SL.
Distribution: South America: Lower Amazonas floodplains.
Countries: Brazil
- Rivulus caudomarginatus* Seegers, 1984**
Rivulus caudomarginatus Seegers, 1984: 307, fig. 10. Type locality: Greta [Grotta] Funda, in der Nähe eines technischen Zentrums der Armee, südlich von Rio de Janeiro [Brazil]. Holotype: ZFMK 12848.
Maximum length: 6 cm TL
Distribution: South America: Atlantic coastal river basins.
Countries: Brazil
- Rivulus christinae* Huber, 1992**
Rivulus christinae Huber, 1992: 147, fig. 36, pl. 39c. Type locality: tributary to Lago Tupac Amaru, near Puerto Maldonado, Río Madre de Dios basin, Madre de Dios department, southern Peru. Holotype: NRM 16547.
Maximum length: 6.5 cm TL
Distribution: South America: Amazon River basin.
Countries: Peru
- Rivulus chucunaque* Breder, 1925**
Rivulus chucunaque Breder, 1925: 7, fig. 6. Type locality: Río Chucunaque, in a small side stream near Yavisa, Provincia Darien, Panama. Holotype: AMNH 8406.
Rivulus chucunaque sucubti Breder, 1925: 8, fig. 7. Type locality: Río Sucubti, in a small side stream, Provincia Darien, Panama. Holotype: AMNH 8407.
Maximum length: 6 cm TL
Distribution: Central America: Pacific river basins of Panama.
Countries: Panama
- Rivulus cladophorus* Huber, 1991**
Rivulus cladophorus Huber, 1991: 71, fig. 6. Type locality: Station de la piste de Saint Elie, en bordure de la parcelle dite "Mosaïque" en Guyane intérieure, 4°85'N, 53°30'W. Holotype: MNHN 1991-364.
Maximum length: 5 cm TL
Distribution: South America: Atlantic coastal river basins.
Countries: French Guiana
- Rivulus compressus* Henn, 1916**
Rivulus compressus Henn, 1916: 111. pl. 18 (fig. 1). Type locality: Manáos (Manaus, Brazil). Holotype: FMNH 57003.
Maximum length: 7 cm TL
Distribution: South America: Middle Amazon River basin.
Countries: Brazil
- Rivulus corpulentus* Thomerson & Taphorn, 1993**
Rivulus corpulentus Thomerson & Taphorn, 1993: 58, fig. 1. Type locality: Small stream on Cordillera de La Macarena flowing west, Departamento de Meta, Colombia, 2°25'N, 73°52'W. Holotype: SU 69692.
Maximum length: 5.5 cm TL
Distribution: South America: Orinoco River basin.
Countries: Colombia
- Rivulus cryptocallus* Seegers & Huber, 1981**
Rivulus cryptocallus Seegers and Huber, 1981: 170. Type locality: Ravine Vilaine, Insel Martinique, Antillen. Holotype: MNHN 1979-666.
Distribution: Caribbean Islands: River basins of Martinique.
Countries: Martinique
- Rivulus cylindraceus* Poey, 1860**
Rivulus cylindraceus Poey, 1860: 308, 383. Type locality: Près de La Havane, dans un ruisseau qui se rend à Mordazo (Cuba). Lectotype: MCZ 6423.
Maximum length: 5.5 cm TL.
Distribution: Caribbean Islands: Coastal river basins of Cuba.
Countries: Cuba.
- Rivulus decoratus* Costa, 1989**
Rivulus decoratus Costa, 1989a: 530, fig. 6. Type locality: Proximidades da foz do rio Icatú, Ibiraba, Bahia, Brasil. Holotype: MZUSP 39982.
Maximum length: 5 cm TL
Distribution: South America: São Francisco River basin.
Countries: Brazil
- Rivulus deltaphilus* Seegers, 1983**
Rivulus deltaphilus Seegers, 1983: 39, fig. 1. Type locality: Orinoco-Delta, Ostvenezuela, zwischen den Städten Tucupita (9°05'N, 62°03'W) und Barancas (8°42'N, 62°11'W). Holotype: SMF 16394.
Maximum length: 6 cm TL
Distribution: South America: Orinoco River basin.
Countries: Venezuela
- Rivulus depressus* Costa, 1991**
Rivulus depressus Costa, 1991a: 585, fig. 2. Type locality: Brazil: Bahia, stream into Estação Ecológica Pau-Brasil, Rio João de Tiba basin, near Porto Seguro. Holotype: UFPB 2213.
Maximum length: 3.3 cm SL.
Distribution: South America: Atlantic coastal river basins.
Countries: Brazil
- Rivulus derhami* Fels & Huber, 1985**
Rivulus derhami Fels & Huber, 1985: 33, fig. 1. Type locality: L'enceinte de l'Université d'Agronomie (Universidad Agraria) à Tingo Maria dans le Pérou central, environ 9°S, 75°55'W. Holotype: MNHN 1985-577.
Maximum length: 5 cm TL
Distribution: South America: Amazon River basin.

Check List of the Freshwater Fishes of South and Central America

Countries: Peru

***Rivulus dibaphus* Myers, 1927**

Rivulus dibaphus Myers, 1927: 121. Type locality: Igarapé do Ajamuri, Lower Amazon (Brazil). Lectotype: CAS 44214, designated in Huber (1992:184).

Maximum length: 4 cm TL.

Distribution: South America: Amazon River basin.

Countries: Brazil

***Rivulus elegans* Steindachner, 1880**

Rivulus elegans Steindachner, 1880: 33, pl. 6 (fig. 6). Type locality: Río Cauca, Colombia. Lectotype: NMW 60544:1, designated by Huber (1992:190).

Maximum length: 6.5 cm TL

Distribution: South America: Pacific coastal river basins.

Countries: Colombia

***Rivulus elongatus* Fels & de Rham, 1981**

Rivulus elongatus Fels & de Rham, 1981: 66, fig. 5. Type locality: "Bosque Nacional Alexander von Humboldt", 8°42'S, 75°12'W, 86 km de Pucallpa sur la route Pucallpa-Tingo Maria (Peru). Holotype: MHNG 207963.

Maximum length: 5 cm TL

Distribution: South America: Amazon River basin.

Countries: Peru

***Rivulus erberi* Berkenkamp, 1989**

Rivulus erberi Berkenkamp, 1989: 211, fig. 9. Type locality: Sieben Kilometer östlich von Coca (= Puerto Francisco de Orellana), nahe dem Rio Napo, Ost-Ecuador (Oriente), 4°30'S, 76°54'W. Holotype: SMF 18432.

Maximum length: 6 cm TL

Distribution: South America: Amazon River basin.

Countries: Ecuador

***Rivulus frenatus* Eigenmann, 1912**

Rivulus frenatus Eigenmann, 1912: 453. Type locality: Gluck Island (Guyana). Holotype: FMNH 53538.

Maximum length: 5 cm TL

Distribution: South America: Essequibo River basin.

Countries: Guyana, Suriname

***Rivulus frommi* Berkenkamp & Etzel, 1993**

Rivulus frommi Berkenkamp & Etzel, 1993: 81, fig. 1. Type locality: Provinz Coclé nördlich von El Valle, Zentral-Panama, 8°58'N, 80°22'W. Holotype: SMF 18441.

Maximum length: 6 cm TL

Distribution: Central America: Pacific river basins.

Countries: Panama

***Rivulus fuscolineatus* Bussing, 1980**

Rivulus fuscolineatus Bussing, 1980: 336, fig. 1a. Type locality: Costa Rica, Guanacaste Province, Atlantic versant, Quebrada Santa Fe, 6.1 km north of Tilaran on road to Aguacate, 640 m elevation. Holotype: LACM 38276-1.

Maximum length: 7.5 cm TL

Distribution: Central America: Atlantic river basins of Costa Rica.

Countries: Costa Rica

***Rivulus garciai* Cruz & Dubitsky, 1976**

Rivulus garciai Cruz & Dubitsky, 1976: 4. Type locality: Charcos en el diente de perro, Varadero, Matanzas (Cuba). Lectotype: IZAC uncat.

Maximum length: 2.7 cm SL

Distribution: Caribbean Islands: Coastal drainages of Isla de Cuba.

Countries: Cuba

***Rivulus geayi* Vaillant, 1899**

Rivulus geayi Vaillant, 1899: 156. Type locality: Au delà des

sources de la Rivière Carnot, passant la ligne de faite qui sépare le bassin du Carsevenne de celui du Cachipour, aux origines de ce dernier. Lectotype: MNHN 1899-101, designated by Huber (1992:211).

Maximum length: 5 cm TL

Distribution: South America: Atlantic coastal rivers and Amazon River basin.

Countries: Brazil, French Guiana

Common names: Toumblouc (French Guiana)

***Rivulus glaucus* Bussing, 1980**

Rivulus glaucus Bussing, 1980: 342, fig. 2D. Type locality: Costa Rica, San José Province, tributary of Río Pedregoso at south edge of San Isidro de El General, 680 m elevation. Holotype: LACM 38277-1.

Maximum length: 5.5 cm TL

Distribution: Central America: Pacific coastal river basins.

Countries: Costa Rica

***Rivulus gransabanae* Lasso, Taphorn & Thomerson, 1992**

Rivulus gransabanae Lasso, Taphorn & Thomerson, 1992: 298, fig. 2. Type locality: Quebrada Pacheco, a small creek between Tuperere River II and San Ignacio Yuruaní, on the road from Kamá to San Ignacio Yuruaní, Gran Sabana, Bolivar State. Holotype: SCN 3883.

Maximum length: 5 cm TL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Rivulus haraldsiolii* Berkenkamp, 1984**

Rivulus haraldsiolii Berkenkamp, 1984: 430, fig. 1. Type locality: Unteren Itapocú in Staat Santa. Catarina, Südost-Brasilien, 27°16'30"S, 48°43'00"W. Holotype: ZMH 6530.

Maximum length: 5 cm TL

Distribution: South America: Atlantic coastal river basins.

Countries: Brazil

***Rivulus hartii* (Boulenger, 1890)**

Haplochilus hartii Boulenger, 1890: 170. Type locality: Trinidad. Lectotype: BMNH 1890.4.28.11, designated by Huber (1992:227).

Rivulus bondi Schultz, 1949: 92, fig. 12. Type locality: Tributary to Río Guaire, La Florida, Caracas, Venezuela. Holotype: UMMZ 141914.

Maximum length: 10 cm TL

Distribution: South America: Caribbean coastal river basins.

Countries: Netherlands Antilles, Trinidad and Tobago, Venezuela

Common names: Jumping guabine (Trinidad and Tobago), Leaping guabine (Trinidad and Tobago)

***Rivulus hildebrandi* Myers, 1927**

Rivulus hildebrandi Myers, 1927: 123. Type locality: Boquete, Chiriquí, Panama. Holotype: UMMZ 56876.

Rivulus volcanus Hildebrand, 1938: 316, fig. 8. Type locality: Laguna Grande (Davis) near Volcán, Chiriquí [Río Chiriquí Viejo basin], Panama. Holotype: USNM 106509.

Maximum length: 9 cm TL

Distribution: Central America: Pacific river basins.

Countries: Costa Rica, Panama

***Rivulus holmiae* Eigenmann, 1909**

Rivulus holmiae Eigenmann, 1909: 50. Type locality: Creeks about Holmia (Guyana). Holotype: FMNH 53535.

Maximum length: 8 cm TL

Distribution: South America: Amazon River basin.

Countries: Guyana

***Rivulus igneus* Huber, 1991**

Rivulus igneus Huber, 1991: 68, fig. 3a. Type locality: Montagne des Singes, 5°10'N, 52°70'W. Holotype: MNHN 1989-1643.
Maximum length: 15 cm TL
Distribution: South America: Oyapock River basin and adjacent coastal basins.
Countries: Brazil, French Guiana
Common names: Toumblouc (French Guiana)

***Rivulus immaculatus* Thomerson, Nico & Taphorn, 1991**

Rivulus immaculatus Thomerson, Nico & Taphorn, 1991: 323. Type locality: La Mejicana, km 105, road between El Dorado and Sta. Elena de Uairen, Bolivar State, Venezuela, 06°03'N, 61°23'W. Holotype: MBUCV 19092.
Maximum length: 9.5 cm TL
Distribution: South America: Amazon River basin.
Countries: Venezuela

***Rivulus insulaepinorum* Cruz & Dubitsky, 1976**

Rivulus insulaepinorum Cruz & Dubitsky, 1976: 2. Type locality: Canales y charcos de una arrocera, 3 km al Norte de Cayo Piedras, La Fe, Isla de Pinos (Cuba). Holotype: IZAC uncat.
Maximum length: 3.8 cm TL.
Distribution: Caribbean Islands: Coastal drainages of Isle of Pines.
Countries: Cuba

***Rivulus intermittens* Fels & de Rham, 1981**

Rivulus intermittens Fels & de Rham, 1981: 66, fig. 1. Type locality: Type locality: "Vivero Forestal El Varillal", 4°04'S, 73°27'W, 34 km d'Iquitos sur la route Iquitos-Nauta (Peru). Holotype: MHNG 207933.
Maximum length: 7.5 cm TL
Distribution: South America: Amazon River basin.
Countries: Peru

***Rivulus iridescens* Fels & de Rham, 1981**

Rivulus iridescens Fels & de Rham, 1981: 66, fig. 4. Type locality: "Arboretum", 3 km de Jenaro Herrera, sur la route en construction, vers Colonia Angamos, 4°53'S, 73°47'W (Peru). Holotype: MHNG 207957.
Maximum length: 7.5 cm TL
Distribution: South America: Amazon River basin.
Countries: Peru

***Rivulus isthmensis* Garman, 1895**

Rivulus isthmensis Garman, 1895: 140. Type locality: Río San José, Costa Rica. Holotype: MCZ 27475.
Rivulus flabellicauda Regan, 1907: 64. Type locality: Juan Veñas, Costa Rica, elev. 1100 m. Holotype: BMNH 1907.6.28.37.
Maximum length: 7 cm TL
Distribution: Central America: Costa Rica and Nicaragua.
Countries: Costa Rica, Nicaragua

***Rivulus janeiroensis* Costa, 1991**

Rivulus janeiroensis Costa, 1991a: 583, fig. 1. Type locality: Brazil: Estado do Rio de Janeiro: stream into forest, Rio São João basin, near Silva jardim. Holotype: MZUSP 41383.
Maximum length: 3.7 cm SL.
Distribution: South America: Atlantic coastal river basins.
Countries: Brazil

***Rivulus jucundus* Huber, 1992**

Rivulus jucundus Huber, 1992: 273. pl. 37 (fig. b). Type locality: Near Puyo (on Rio Pastaza), alt. 900-1000 m, Pastaza department, Ecuador Marañon-Amazon basin. Holotype: MHNG 2532.90.
Maximum length: 5 cm TL
Distribution: South America: Amazon River basin.
Countries: Ecuador

***Rivulus kuelpmanni* Berkenkamp & Etzel, 1993**

Rivulus kuelpmanni Berkenkamp & Etzel, 1993: 17. Type locality: Provinz Bocas del Toro, in 200 m Höhe am Fusse der Cordillera Central 20 km von Punta Peña entfernt, 8°70'N, 88°15'W (Panama). Holotype: SMF 18439.
Maximum length: 6 cm TL
Distribution: Central America: Caribbean river drainages.
Countries: Panama

***Rivulus lanceolatus* Eigenmann, 1909**

Rivulus lanceolatus Eigenmann, 1909: 51. Type locality: Rockstone (Guyana). Holotype: FMNH 53537.
Maximum length: 5.5 cm TL
Distribution: South America: Atlantic coastal river basins.
Countries: Guyana

***Rivulus leucurus* Fowler, 1944**

Rivulus leucurus Fowler, 1944: 244, fig. 21. Type locality: Río Juradó (Colombia), at 600 ft elevation. Holotype: ANSP 71436.
Maximum length: 7 cm TL
Distribution: South America: Pacific coastal basins.
Countries: Colombia

***Rivulus limoncochae* Hoedeman, 1962**

Rivulus limoncochae Hoedeman 1962: 146, fig. 2. Type locality: Ecuador, Limoncocha, Río Napo trib., rivulet emptying into lagoon. Holotype: ZMA 100339a.
Maximum length: 7.5 cm TL
Distribution: South America: Amazon River basin.
Countries: Ecuador

***Rivulus luelingi* Seegers, 1984**

Rivulus luelingi Seegers, 1984: 273, fig. 1. Type locality: Nahe beim Rio Pirai bei Joinville, Südost-Brasilien. Holotype: ZFMK 11671.
Maximum length: 5 cm TL
Distribution: South America: Atlantic coastal river basins.
Countries: Brazil

***Rivulus lungi* Berkenkamp, 1984**

Rivulus lungi Berkenkamp, 1984: 14, fig. 1. Type locality: Südwestl. von Matoury, 4°54'N, 52°19'W. Holotype: SMF 18426.
Maximum length: 6.5 cm TL
Distribution: South America: Atlantic coastal drainages.
Countries: French Guiana
Common names: Toumblouc (French Guiana)

***Rivulus lyricauda* Thomerson, Berkenkamp & Taphorn, 1991**

Rivulus lyricauda Thomerson, Berkenkamp & Taphorn, 1991: 290, figs. 1-3. Type locality: Small stream draining morichal swamp below guest houses at Campamiento Canaima, tributary to Río Carrao, Río Caroni basin, Bolivar State, Venezuela, 6°15'N, 62°48'W. Holotype: MCNG 21715.
Maximum length: 5.5 cm TL
Distribution: South America: Amazon River basin.
Countries: Venezuela

***Rivulus magdalenae* Eigenmann & Henn, 1916**

Rivulus magdalenae Eigenmann & Henn in Henn, 1916: 109. Type locality: Ibagué (Colombia), elev. 4250 ft. Holotype: FMNH 56997.
Rivulus milesi Fowler, 1941: 9, fig. 10. Type locality: Honda, Colombia. Holotype: ANSP 69337.
Maximum length: 7 cm TL
Distribution: South America: Magdalena and Cauca River basins.
Countries: Colombia

***Rivulus marmoratus* Poey, 1880**

Rivulus marmoratus Poey, 1880: 248. Type locality: Cuba, si nin existen en los Estados Unidos. Lectotype: USNM 37429 8346.

Rivulus marmoratus bonairensis Hoedeman, 1958: 117, fig. 19. Type locality: Pos di Pepe, Bonaire. Holotype: ZMA 100436.

Rivulus heyei Nichols, 1914: 143. Type locality: Saona Island at the eastern extremity of Haiti. Holotype: AMNH 5069.

Maximum length: 7.5 cm TL

Distribution: North, Central, and South America and Caribbean Islands: Estuarine areas at the Caribbean coast.

Countries: Cuba, USA, Mexico, Caribbean Islands, Caribbean coast of South and Central America

***Rivulus mazaruni* Myers, 1924**

Rivulus mazaruni Myers, 1924: 1. Type locality: Mutusi hole, about 30 miles up the Mazaruni River from Kartabo, after high water had subsided (Guyana). Holotype: AMNH 8346.

Maximum length: 6 cm TL

Distribution: South America: Essequibo River basin.

Countries: Guyana

***Rivulus micropus* (Steindachner, 1863)**

Fundulus micropus Steindachner, 1863: 184. Type locality: Rio Negro in Brazilien. Holotype: NMW 77672.

Maximum length: 6 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Rivulus modestus* Costa, 1991**

Rivulus modestus Costa, 1991b: 329, fig. 1. Type locality: Rio Mutum, bacia do Rio Tapajós, Mun. (Município) Comodoro, MT, Brasil. Holotype: MNRJ 11670.

Maximum length: 2.4 cm SL.

Distribution: South America: Tapajós River basin.

Countries: Brazil

Remarks and references: Redescribed by Costa (1995b: 209).

***Rivulus monikae* Berkenkamp & Etzel, 1995**

Rivulus monikae Berkenkamp & Etzel, 1995: 1, fig. 1. Type locality: Provinz Coclé, 15 km nördlich von La Pintada, Zentral-Panama, 8°40'N, 80°40'W. Holotype: SMF 18451.

Maximum length: 8 cm TL

Distribution: Central America: Caribbean river drainages.

Countries: Panama

***Rivulus monticola* Staeck & Schindler, 1997**

Rivulus monticola Staeck & Schindler, 1997: 372, figs. 1-3. Type locality: Small brook beside road from Tayuza to Chinimpini, eastern slopes of the Cordillera de Allcuquiro, 2°39'N, 78°13'W, Upano-Santiago drainage, provincia de Moreno-Santiago, Ecuador. Holotype: ZMB 32681.

Maximum length: 5 cm TL.

Distribution: South America: Amazon River basin.

Countries: Ecuador

***Rivulus montium* Hildebrand, 1938**

Rivulus montium Hildebrand, 1938: 319, fig. 9. Type locality: Hillside trickle between Río Boquerón and Río Pequeni, Chagres basin, Panama. Holotype: MCZ 34880.

Maximum length: 8 cm TL

Distribution: Central America: Atlantic river basins.

Countries: Panama

***Rivulus nicoi* Thomerson & Taphorn, 1992**

Rivulus nicoi Thomerson & Taphorn, 1992: 380, fig. 4. Type locality: Small forest pools ca 500 m from right bank of Río Ventuari, 4°16'N, about 5.5 km upstream of confluence with Río Yureba, 66°23'W, Orinoco drainage, Amazonas Federal Territory, Venezuela. Holotype: MCNG 23891.

Maximum length: 3 cm TL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

***Rivulus nudiventris* Costa & Brasil, 1991**

Rivulus nudiventris Costa & Brasil, 1991a: 380, fig. 3. Type locality: Brazil, Espírito Santo, County of Itapemerim, swamp on right bank of Rio Itapemerim, ca. 2 km from the sea. Holotype: MZUSP 40283.

Maximum length: 3.6 cm SL.

Distribution: South America: Itapemerim River floodplains.

Countries: Brazil

***Rivulus ocellatus* Hensel, 1868**

Rivulus ocellatus Hensel, 1868: 365. Type locality: Rio de Janeiro (Brazil). Holotype: ZMB 7448.

Maximum length: 6 cm TL.

Distribution: South America: Estuarine areas of Atlantic coast.

Countries: Brazil

***Rivulus ophiomimus* Huber, 1992**

Rivulus ophiomimus Huber, 1992: 344. pl. 3 (fig. d). Type locality: Río Putumayo basin, El Estrecho,

Fundo Alvarez, Quebradita, northern Peru. Holotype: NRM 16550.

Maximum length: 8.5 cm TL

Distribution: South America: Amazon River basin.

Countries: Peru

***Rivulus ornatus* Garman, 1895**

Rivulus ornatus Garman, 1895: 139. Type locality: Lago Saracá at Silves, Amazonas, Brazil. Lectotype: MCZ 6266, designated by Huber (1992: 347).

Rivulus obscurus Garman, 1895: 140. Type locality: Lago Hyanuary, Amazonas, Brazil. Lectotype: MCZ 6853, designated by Huber (1992: 336).

Maximum length: 3.5 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

***Rivulus pacificus* Huber, 1992**

Rivulus pacificus Huber 1992: 351, fig. 67. Type locality: Condoto, quebrada in forest along road Condoto-Soledad, 5 minutes from Airport road, western Pacific Colombia, Río San Juan basin. Holotype: NRM 16551.

Maximum length: 7.5 cm TL

Distribution: South America: Pacific coastal river basins.

Countries: Colombia

***Rivulus peruanus* (Regan, 1903)**

Haplochilus peruanus Regan, 1903: 626. Type locality: Perim, Peru, 800 metres. Lectotype: BMNH 1903.11.5.2, designated by Huber (1992: 355).

Maximum length: 5.5 cm TL

Distribution: South America: Amazon River basin.

Countries: Peru

***Rivulus pictus* Costa, 1989**

Rivulus pictus Costa, 1989a: 525, fig. 2. Type locality: Córrego Fumal no cruzamento com a rodovia Brasília-Distrito Federal, Brasil. Holotype: MNRJ 11550.

Maximum length: 2.6 cm SL.

Distribution: South America: Paraná River basin.

Countries: Brazil

***Rivulus pinima* Costa, 1989**

Rivulus pinima Costa, 1989a: 528, fig. 4. Type locality: Município de Rio Verde, 37 km a leste de Jataí, BR 364, Goiás, Brail. Holotype: MZUSP 39978.

Maximum length: 3 cm SL

Distribution: South America: Paraná River basin.

Countries: Brazil

Rivulus punctatus Boulenger, 1895

Rivulus punctatus Boulenger, 1895: 3. Type locality: Colonia Riso (Paraguay). Holotype: BMNH 1895.1.30.

Maximum length: 3.5 cm TL

Distribution: South America: Paraguay, lower Paraná and Uruguay River basins.

Countries: Argentina, Bolivia, Brazil, Paraguay

Remarks and references: Redescribed by Costa (1995b: 210).

Rivulus rectocaudatus Fels & de Rham, 1981

Rivulus rectocaudatus Fels & de Rham, 1981: 66, fig. 1. Type locality: "Vivero Forestal El Varillal", 4°04'S, 73°27'W, 34 km d'Iquitos sur la route Iquitos-Nauta (Peru). Holotype: MHNG 207910.

Maximum length: 6 cm TL

Distribution: South America: Amazon River basin.

Countries: Peru

Rivulus roloffi Roloff, 1938

Rivulus roloffi Roloff, 1938: 597, fig. 2. Type locality: Ciudad Trujillo and Puerto Plata, San Domingo.

Lectotype: BMNH 1947.11.27:1-3.

Maximum length: 5.5 cm TL

Distribution: Caribbean Islands: River basins of Hispanola Island.

Countries: Dominican Republic

Rivulus rubripunctatus Bussing, 1980

Rivulus isthmensis rubripunctatus Bussing, 1980: 334, fig. 1. Type locality: Limón Province, pond 1/2 km southwest of Puerto Vargas, Punta Cahuita (Costa Rica), 2 m elevation. Holotype: LACM 38278-1.

Maximum length: 7 cm TL

Distribution: Central America: Atlantic river basins.

Countries: Costa Rica

Rivulus rubrolineatus Fels & de Rham, 1981

Rivulus rubrolineatus Fels & de Rham, 1981: 66, fig. 3. Type locality: 14 km de Jenaro Herrera, sur la route en construction, vers Colonia Angamos 4°53'S, 73°41'W (Peru). Holotype: MHNG 207946.

Maximum length: 6.5 cm TL

Distribution: South America: Amazon River basin.

Countries: Peru

Rivulus santensis Köhler, 1906

Rivulus elegans santensis Köhler, 1906: 408, fig. 1. Type locality: West of Santos, near Pedro Taques, Brazil. Neotype: MNHN 1991-6856.

Rivulus rachovii Ahl, 1923: 109. Type locality: Pará [incorrect, probably Santos]. Lectotype: ZMB 31316.

Maximum length: 6.5 cm TL

Distribution: South America: Atlantic coastal river basins.

Countries: Brazil

Rivulus siegfriedi Bussing, 1980

Rivulus uroflammeus siegfriedi Bussing, 1980: 340, fig. 2C. Type locality: Costa Rica, Puntarenas Province, stream tributary to Río Térraba, 3.6 km south of Palmar Norte, 20 m elevation. Holotype: LACM 38274-1.

Maximum length: 4.5 cm TL

Distribution: Central America: Pacific river basins.

Countries: Costa Rica

Rivulus speciosus Fels & de Rham, 1981

Rivulus speciosus Fels & de Rham, 1981: 66, fig. 6. Type locality: Quisto Cocha, 3°56'S, 72°24'W, 18 km d'Iquitos sur la route Iquitos-Nauta (Peru). Holotype: MHNG 207968.

Maximum length: 3.5 cm TL

Distribution: South America: Amazon River basin.

Countries: Peru

Rivulus stagnatus Eigenmann, 1909

Rivulus stagnatus Eigenmann, 1909: 50. Type locality: Christianburg (Guyana). Holotype: FMNH 52715.

Maximum length: 6 cm TL

Distribution: South America: Atlantic coastal river basins.

Countries: Guyana, Suriname

Rivulus strigatus Regan, 1912

Rivulus strigatus Regan, 1912a: 502. Type locality: Amazon. Holotype: BMNH 1912.8.30.5.

Maximum length: 6 cm TL

Distribution: South America: Lower Amazon River basin.

Countries: Brazil

Rivulus taeniatus Fowler, 1945

Rivulus taeniatus Fowler, 1945: 129, fig. 44. Type locality: Morelia, Río Caquetá drainage, Colombia. Holotype: ANSP 71720.

Maximum length: 6 cm TL

Distribution: South America: Amazon River basin.

Countries: Colombia

Rivulus tecminae Thomerson, Nico & Taphorn, 1992

Rivulus tecminae Thomerson, Nico & Taphorn, 1992: 290, fig. 1. Type locality: About 500 m from the left bank, Rio Guayapo, about 83 km above confluence with Rio Sipapo, Orinoco basin, Amazonas Federal Territory, Venezuela, 4°16'N, 67°20'W. Holotype: MCNB 23886.

Maximum length: 5.5 cm TL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

Rivulus tenuis (Meek, 1904)

Cynodonichthys tenuis Meek, 1904: 101, fig. 27. Type locality: El Hule, Oaxaca (Mexico). Holotype: FMNH 4643.

Rivulus godmani Regan, 1907: 65. Type locality: Guatemala. Lectotype: BMNH 1885.5.24.39, designated by Huber (1992: 218).

Rivulus myersi Hubbs, 1936: 210, pl. 2 (fig. 1). Type locality: Slightly brackish pool 3 km south of Progreso, Yucatán (Mexico). Holotype: UMMZ 102140.

Rivulus hendrichsi Alvarez & Carranza, 1952: 281, fig. 1. Type locality: Salto de Agua, Chiapas, Manantial a 2 km al suroeste de la Ciudad (Mexico). Holotype: unknown.

Maximum length: 6.5 cm TL

Distribution: North and Central America: Atlantic river basins.

Countries: Belize, Guatemala, Honduras, Mexico

Common names: Dogtooth rivulus (Belize)

Rivulus tessellatus Huber, 1992

Rivulus tessellatus Huber, 1992: 433, fig. 82a. Type locality: Hacienda Mozambique, western tip of Lake Mozambique, east side Hacienda Humacita, Meta department, Colombia. Holotype: ANSP 139468.

Maximum length: 4.5 cm TL

Distribution: South America: Orinoco River basin.

Countries: Colombia

Rivulus torrenticola Vermeulen & Isbrücker, 2000

Rivulus torrenticola Vermeulen and Isbrücker, 2000: 186, fig. 1. Type locality: Guyana, upper Mazaruni Reserve, near Kamarang village, little creek at right bank of the Kamarang River, half a mile up from the landing of the general store of Paul James, 05°50'20"N 60°30'58"W. Holotype: ZMA 123.467.

Maximum length: 3.2 cm TL

Distribution: South America: Kamarang River basin in Guyana.

Countries: Guyana

***Rivulus uroflammeus* Bussing, 1980**

Rivulus uroflammeus uroflammeus Bussing, 1980: 338, fig. 2B.
Type locality: Pond at San Vito landing field, tributary to Río Coto Brus, 990 m elevation, Puntarenas Province, Costa Rica.
Holotype: LACM 38275-1.
Maximum length: 4.5 cm TL
Distribution: Central America: Pacific river basins.
Countries: Costa Rica, Panama

***Rivulus urophthalmus* Günther, 1866**

Rivulus urophthalmus Günther, 1866: 327. Type locality: Para [Belém, Pará, Brazil]. Lectotype: BMNH 1851.12.26.16, designated by Huber (1991: 67).
Rivulus poeyi Steindachner, 1876: 165. Type locality: Kanälen der Stadt Para. Type unknown.
Maximum length: 7 cm TL
Distribution: South America: Amazon River basin.
Countries: Brazil

***Rivulus violaceus* Costa, 1991**

Rivulus violaceus Costa, 1991b: 331, fig. 2C. Type locality: Rio das Mortes, bacia do rio Araguaia-Tocantins, MT, Brasil. Holotype: MNRJ 11672.
Maximum length: 3 cm SL.
Distribution: South America: Araguaia River basin.
Countries: Brazil
Remarks and references: Redescribed by Costa (1995b: 219).

***Rivulus waimacui* Eigenmann, 1909**

Rivulus waimacui Eigenmann, 1909: 50. Type locality: Shrimp Creek (Guyana). Holotype: FMNH 53536.
Maximum length: 8.5 cm TL
Distribution: South America: Amazon River basin.
Countries: Guyana

***Rivulus wassmanni* Berkenkamp & Etzel, 1999**

Rivulus wassmanni Berkenkamp and Etzel, 1999: 62. fig. 1. Type locality: Panamá; Provinz Bocas del Toro, vier Kilometer westlich Changuinola an der Karibik- bzw. Atlantikseite von Panamá, 09°28' Nord und 82°34' West. Holotype: SMF 18462.
Maximum length: 5.8 cm TL
Distribution: South America: Atlantic coastal drainages.
Countries: Panama

***Rivulus weberi* Huber, 1992**

Rivulus weberi Huber, 1992: 455. pl. 16 (fig. a). Type locality: Culvert on El Llano-Carti road, about 12 km from IAH crossing, Pacific Panama, Lago Bayano basin. Holotype: ANSP 151287.
Maximum length: 9 cm TL
Distribution: Central America: Pacific river basins.
Countries: Panama

***Rivulus xanthonotus* Ahl, 1926**

Rivulus xanthonotus Ahl, 1926: 315. Type locality: Amazon Strom. Amazonas. Lectotype: ZMB 21168, designated by Seegers in Paepke & Seegers (1986: 169).
Maximum length: 7.5 cm TL
Distribution: South America: Amazon River basin.
Countries: Brazil

***Rivulus xiphidius* Huber, 1979**

Rivulus xiphidius Huber, 1979: 66, fig. 3. Type locality: En amont de Saint-Georges, en retrait du Saut Maripa à quelques centaines de mètres de l'Oyapock, Guyane Française. Holotype: MNHN 1979-284.
Maximum length: 4.5 cm TL
Distribution: South America: Oyapock River basin and adjacent coastal drainages.
Countries: French Guiana, Brazil

Common names: Toumblouc (French Guiana)

***Rivulus zygonectes* Myers, 1927**

Rivulus zygonectes Myers, 1927: 127. Type locality: Vereda Extrema into Cannabrava, Goyas, Brazil. Lectotype: CAS 76314, designated by Huber (1992: 464).
Maximum length: 4 cm TL
Distribution: South America: Araguaia, Tocantins, Xingu and Tapajós River basins.
Countries: Brazil
Remarks and references: Redescribed by Costa (1995b: 216).

SIMPSONICHTHYS

Simpsonichthys Carvalho, 1959: 2. Type species: *Simpsonichthys boitonei* Carvalho, 1959. Type by original designation. Gender: masculine.

***Simpsonichthys adornatus* Costa, 2000**

Simpsonichthys adornatus Costa, 2000: 9, fig. 1. Type locality: Brasil: Estado da Bahia, poça temporária perto de Sítio do Mato, bacia do rio São Francisco. Holotype: MZUSP 54563.
Maximum length: 6 cm TL.
Distribution: South America: São Francisco River basin.
Countries: Brazil

***Simpsonichthys alternatus* (Costa & Brasil, 1994)**

Cynolebias alternatus Costa & Brasil, 1994a: 7, fig. 4. Type locality: Brésil: Estado de Minas Gerais, João Pinheiro, près du rio Paracatú, bassin du rio São Francisco. Holotype: MNRJ 12523.
Maximum length: 2.8 cm SL.
Distribution: South America: São Francisco River basin.
Countries: Brazil

***Simpsonichthys antenori* (Tulipano, 1973)**

Cynolebias antenori Tulipano, 1973: 23, fig. 1. Type locality: Ceará Brazil. Neotype: MZUSP 56256. Appeared first in Myers 1952:139 (nomen nudum). Type locality: temporary ponds near Russas, rio Jaguaribe basin, state of Ceará, Brazil.
Cynolebias heloplites Huber, 1981: 1, fig. 1. Type locality: Lagoa du km 76 de la route Fortaleza-Russas, (Ceará, Sertão, Brésil). Holotype: MNHN 1981-1211.
Maximum length: 7 cm TL
Distribution: South America: Jaguaribe and Mossoró River basins, and adjacent coastal plains.
Countries: Brazil

***Simpsonichthys auratus* Costa & Nielsen, 2000**

Simpsonichthys auratus Costa & Nielsen, 2000: 8, fig. 1. Type locality: Lagoa Grande, temporary pool close to rio Taboca, a tributary of rio Paracatú, rio São Francisco basin, Minas Gerais, Brazil. Holotype: MZUSP 52912.
Maximum length: 5 cm TL.
Distribution: South America: São Francisco River basin.
Countries: Brazil

***Simpsonichthys boitonei* Carvalho, 1959**

Simpsonichthys boitonei Carvalho, 1959: 5, fig. 1. Type locality: Poça d'água temporária, na área reservada ao Jardim Zoológico de Brasília, futura Capital, situada no planalto central do Estado de Goiás, a 1000 metros de altitude. Holotype: MNRJ 9012.
Maximum length: 5.5 cm TL
Distribution: South America: Upper Paraná River basin.
Countries: Brazil
Common names: Pira (Brazil)

***Simpsonichthys bokermanni* (Carvalho & Cruz, 1987)**

Cynolebias bokermanni Carvalho & Cruz, 1987: 12, fig. 1. Type locality: Área da CEPLAC, município de Ilhéus, Estado da Ba-

hia. Holotype: MNRJ 11167.
Maximum length: 6.5 cm TL
Distribution: South America: Cachoeira River basin in Bahia State.
Countries: Brazil

***Simpsonichthys chacoensis* (Amato, 1986)**

Cynolebias chacoensis Amato, 1986: 10. pl. 5. Type locality: Paraguay, Nueva Asunción, Charca Topógrafo Acevedo, a 14 km del comando de transmisiones "Tte. 2° Américo Pico", a 624 km de Asunción hacia el NW, por la ruta que une Mariscal Estigarribia con Lagerenza. Holotype: MHNM 2577.
Maximum length: 6 cm TL
Distribution: South America: Paraguay River basin.
Countries: Paraguay

***Simpsonichthys constanciae* (Myers, 1942)**

Cynolebias constanciae Myers, 1942: 105. Type locality: Water hole for cattle, 10 miles north of Cabo frio, State of Rio de Janeiro, Brazil. Holotype: SU 36514.
Maximum length: 6 cm TL
Distribution: South America: Atlantic coastal river basins.
Countries: Brazil

***Simpsonichthys costai* (Lazara, 1991)**

Cynolebias costai Lazara, 1991: 144, fig. 3. Type locality: Brazil, State of Goias, Aruana, temporary pool. Holotype: MZUSP 38790.
Maximum length: 3 cm TL.
Distribution: South America: Araguaia-Tocantins River basin.
Countries: Brazil

***Simpsonichthys filamentosus* Costa, Barrera & Sarmiento, 1997**

Simpsonichthys filamentosus Costa, Barrera & Sarmiento, 1997: 84, fig. 1. Type locality: Bolivia: Departamento de Santa Cruz, route Santa Cruz-Trinidad, environ 60 km au N d'Ascencion de Guarayos, dans un marécage proche du rio San Pablo, bassin du rio Mamoré, ca. 15°37'S, 63°35'W. Holotype: CBF 3002.
Maximum length: 5 cm TL.
Distribution: South America: Mamoré River basin.
Countries: Bolivia

***Simpsonichthys flammeus* (Costa, 1989)**

Cynolebias flammeus Costa, 1989d: 185. Type locality: Brejo na confluência dos rios Bezerra e Paraná (Paraná), Município de Arraias, TO (Estado do Tocantins), Brasil. Holotype: MNRJ 11552.
Maximum length: 6 cm TL.
Distribution: South America: Tocantins River basin.
Countries: Brazil

***Simpsonichthys flavicaudatus* (Costa & Brasil, 1990)**

Cynolebias flavicaudatus Costa & Brasil, 1990: 18, fig. 4. Type locality: Brazil, Pernambuco, Vicinities of Lagoa Grande, county of Santa Maria da Boa Vista. Holotype: MZUSP 40129.
Maximum length: 8 cm TL.
Distribution: South America: São Francisco River basin.
Countries: Brazil

***Simpsonichthys fulminantis* (Costa & Brasil, 1993)**

Cynolebias fulminantis Costa & Brasil, 1993: 194, fig. 1. Type locality: Brazil: Estado da Bahia: Swamp near Guanambi, 14°20'S, 42°51'W. Holotype: MZUSP 43674.
Maximum length: 6 cm TL.
Distribution: South America: Middle São Francisco River basin.
Countries: Brazil

***Simpsonichthys ghisolfii* Costa, Cyrino & Nielsen, 1996**

Simpsonichthys ghisolfii Costa, Cyrino & Nielsen, 1996: 18, fig. 1.
Type locality: Brésil: Estado da Bahia, Guanambi. Holotype: MZUSP 49403.
Maximum length: 9 cm TL.
Distribution: South America: São Francisco River basin.
Countries: Brazil

***Simpsonichthys hellneri* (Berkenkamp, 1993)**

Cynolebias hellneri Berkenkamp, 1993: 8, fig. 3. Type locality: Teich an der Strasse Manga nach Itacarambi in Richtung Januária, ca. 10,5 km vor itacarambi im Municipio (Bezirk) Manga, Estado (Bundesstaat) Minas Gerais, Brasilien. Holotype: MZUSP uncat.
Maximum length: 6 cm TL
Distribution: South America: São Francisco River basin.
Countries: Brazil

***Simpsonichthys igneus* Costa, 2000**

Simpsonichthys igneus Costa, 2000: 10, fig. 3. Type locality: Brasil: Estado da Bahia, poça temporária perto de Igarité, bacia do rio São Francisco. Holotype: MZUSP 56254.
Maximum length: 7 cm TL.
Distribution: South America: São Francisco River basin.
Countries: Brazil

***Simpsonichthys izecksohni* (Cruz, 1983)**

Cynolebias izecksohni Cruz, 1983: 74, fig. 1. Type locality: Reserva Florestal da Companhia Vale do Rio Doce, Município de Linhares, Estado do Espírito Santo [Brazil]. Holotype: MNRJ 10613.
Maximum length: 6 cm TL
Distribution: South America: Atlantic coastal river basins.
Countries: Brazil

***Simpsonichthys magnificus* (Costa & Brasil, 1991)**

Cynolebias magnificus Costa & Brasil, 1991b: 59, fig. 5. Type locality: Brazil, Minas Gerais, County of Manga, Right bank plain of the Rio São Francisco, about 1 km from the river channel. Holotype: MZUSP 41374.
Maximum length: 5 cm TL
Distribution: South America: Middle São Francisco River basin.
Countries: Brazil

***Simpsonichthys marginatus* Costa & Brasil, 1996**

Simpsonichthys marginatus Costa & Brasil, 1996: 94, fig. 1. Type locality: Brésil: Estado de Goiás, Barro Alto, mare temporaire près du rio dos Patos, un affluent du rio Maranhão, bassin du rio Tocantins. Holotype: MNRJ 12440.
Maximum length: 6 cm TL.
Distribution: South America: São Francisco River basin.
Countries: Brazil

***Simpsonichthys multiradiatus* (Costa & Brasil, 1994)**

Cynolebias multiradiatus Costa & Brasil, 1994b: 1, fig. 1. Type locality: Brésil: Estado do Tocantins, mare temporaire à Brejinho de Nazare, 10°59'S, 48°38' O. Holotype: MNRJ 12519.
Maximum length: 6 cm TL.
Distribution: South America: Middle Tocantins River basin.
Countries: Brazil

***Simpsonichthys myersi* (Carvalho, 1971)**

Cynolebias myersi Carvalho, 1971: 401, fig. 1. Type locality: Poça d'água temporária às margens da rodovia que liga Conceição da Barra à Itaunas, a 18 km daquela cidade, E. do Espírito Santo [Brazil]. Holotype: MNRJ 9849.
Maximum length: 6 cm TL
Distribution: South America: Atlantic coastal river basins.
Countries: Brazil

***Simpsonichthys notatus* (Costa, Lacerda & Brasil,**

1990)

Cynolebias notatus Costa, Lacerda & Brasil, 1990: 10, fig. 1. Type locality: Brésil, Etat de Goiás, Municipio de Alvorada do Norte, lagune temporaire, 14°30'S, 46°42' O. Holotype: MZUSP 39985.

Maximum length: 5 cm TL

Distribution: South America: Upper Tocantins River basin.

Countries: Brazil

Simpsonichthys ocellatus Costa, Nielsen & de Luca, 2001

Simpsonichthys ocellatus Costa, Nielsen and de Luca, 2001: 25, fig. 1. Type locality: Brasil: Estado de Minas Gerais, poça temporária próxima ao rio Jequitinhonha, perto de Itaobim, estrada BR-367. Holotype: MZUSP 61232.

Maximum length: 5 cm TL.

Distribution: South America: Jequitinhonha River basin.

Countries: Brazil

Simpsonichthys parallelus Costa, 2000

Simpsonichthys parallelus Costa, 2000: 13, fig. 7. Type locality: Brasil: Estado de Goiás, alagado sazonal na várzea do rio Formoso, um tributário do rio Correntes, drenagem do rio Paranaíba, bacia do rio Paraná, Parque Nacional das Emas. Holotype: MZUSP 57537.

Maximum length: 3 cm TL.

Distribution: South America: Paraná River basin.

Countries: Brazil

Simpsonichthys perpendicularis Costa, Nielsen & de Luca, 2001

Simpsonichthys perpendicularis Costa, Nielsen and de Luca, 2001: 26, fig. 3. Type locality: Brasil: Estado da Bahia, poça temporária perto do ribeirão do Salto, estrada entre Itarantim e Jordânia, cerca de 6 km de Jordânia, bacia do rio Jequitinhonha. Holotype: MZUSP 62570.

Maximum length: 6 cm TL.

Distribution: South America: Jequitinhonha River basin.

Countries: Brazil

Simpsonichthys picturatus Costa, 2000

Simpsonichthys picturatus Costa, 2000: 12, fig. 5. Type locality: Brasil: Estado da Bahia, poça temporária perto de Volta das Pedras, bacia do rio São Francisco. Holotype: MZUSP 56254.

Maximum length: 6 cm TL.

Distribution: South America: São Francisco River basin.

Countries: Brazil

Simpsonichthys rosaceus Costa, Nielsen & de Luca, 2001

Simpsonichthys rosaceus Costa, Nielsen and de Luca, 2001: 28, fig. 5. Type locality: Brasil: Estado da Bahia, poça temporária perto do rio Pardo, estrada entre Potiguará e Itapetinga. Holotype: MZUSP 62572.

Maximum length: 5 cm TL.

Distribution: South America: Pardo River basin in Bahia State.

Countries: Brazil

Simpsonichthys rufus Costa, Nielsen & de Luca, 2001

Simpsonichthys rufus Costa, Nielsen and de Luca, 2001: 29, fig. 7. Type locality: Brasil: Estado de Minas Gerais, poça temporária perto do riacho do Barro, Ibiaí, perto do rio São Francisco. Holotype: MZUSP 61234.

Maximum length: 5 cm TL.

Distribution: South America: São Francisco River basin.

Countries: Brazil

Simpsonichthys santanae (Shibatta & Garavello,

1992)

Cynolebias santanae Shibatta & Garavello, 1992: 182, fig. 5. Type locality: Margem direita do ribeirão Sant'ana, a 750 m da divisa do Distrito Federal com Goiás, DF (Brazil). Holotype: MZUSP 43777.

Maximum length: 3 cm TL

Distribution: South America: Paraná River basin.

Countries: Brazil

Simpsonichthys similis Costa & Hellner, 1999

Simpsonichthys similis Costa and Hellner, 1999: 90, fig. 1. Type locality: Brésil: Estado de Minas Gerais, mare temporaire près de Urucuia, route vers São Romano (Romão), bassin du rio Urucuia. Holotype: MZUSP 51834.

Maximum length: 6 cm TL.

Distribution: South America: São Francisco River basin.

Countries: Brazil

Simpsonichthys stellatus (Costa & Brasil, 1994)

Cynolebias stellatus Costa & Brasil, 1994a: 5, fig. 1. Type locality: Brésil: Estado de Minas Gerais, mare temporaire, 1 km N de la ville de São Francisco. Holotype: MNRJ 12446.

Maximum length: 6 cm TL

Distribution: South America: Middle São Francisco River basin.

Countries: Brazil

Simpsonichthys trilineatus (Costa & Brasil, 1994)

Cynolebias trilineatus Costa & Brasil, 1994a: 8, fig. 5. Type locality: Brésil: Estado de Minas Gerais, João Pinheiro, près du rio Paracatú, bassin du rio São Francisco. Holotype: MNRJ 12525.

Maximum length: 6 cm TL.

Distribution: South America: São Francisco River basin.

Countries: Brazil

Simpsonichthys zonatus (Costa & Brasil, 1990)

Cynolebias zonatus Costa & Brasil, 1990: 16, fig. 1. Type locality: Brazil, Minas Gerais, Garapuava district, County of Unaí. Holotype: MZUSP 40131.

Maximum length: 5 cm TL.

Distribution: South America: São Francisco River basin.

Countries: Brazil

SPECTROLEBIAS

Spectrolebias Costa & Nielsen, 1997: 258. Type species: *Spectrolebias semiocellatus* Costa & Nielsen, 1997. Type by original designation. Gender: masculine.

Spectrolebias semiocellatus Costa & Nielsen, 1997

Spectrolebias semiocellatus Costa & Nielsen, 1997: 259, fig. 1. Type locality: Brazil: Estado do Tocantins, Formoso do Araguaia, temporary pool close to rio Formoso, rio Araguaia basin.

Holotype: MZUSP 50654.

Maximum length: 4 cm TL.

Distribution: South America: Araguaia River basin.

Countries: Brazil

STENOLEBIAS

Stenolebias Costa, 1995d: 70. Type species: *Plesiolebias damascenoi* Costa, 1991. Type by original designation. Gender: masculine.

Stenolebias bellus Costa, 1995

Stenolebias bellus Costa, 1995d: 71, fig. 11. Type locality: Brazil: Estado de Mato Grosso do Sul, temporary floodplains of rio Miranda, about 5 km S of Miranda, 20°17'S, 56°17'W. Holotype: MZUSP 42310.

Maximum length: 3 cm TL

Distribution: South America: Paraguay River basin.

Countries: Brazil

***Stenolebias damascenoi* (Costa, 1991)**

Plesiolebias damascenoi Costa, 1991c: 375, fig. 14. Type locality: Brazil: Mato Grosso: Temporary pool, Poconé-Porto Cercado road. Holotype: MZUSP 41391.

Maximum length: 4 cm TL.

Distribution: South America: Paraguay River basin.

Countries: Brazil

TERRANATOS

Terranatos Taphorn & Thomerson, 1978: 384. Type species: *Austrofundulus dolichopterus* Weitzman & Wourms, 1967. Type by original designation. Gender: masculine.

***Terranatos dolichopterus* (Weitzman & Wourms, 1967)**

Austrofundulus dolichopterus Weitzman & Wourms 1967: 95, fig. 1. Type locality: 40 km directly south of El Pao, state of Cojedes, Venezuela, temporary pond immediately south of Caño Benito, long 68°9' W, lat 9°19' N. Holotype: USNM 200784.

Maximum length: 4 cm TL

Distribution: South America: Orinoco River basin.

Countries: Venezuela

TRIGONECTES

Trigonectes Myers, 1925: 371. Type species: *Trigonectes strigabundus* Myers, 1925. Type by monotypy. Gender: masculine.

Rivulichthys Myers, 1927: 118. Type species: *Rivulus rondoni* Miranda Ribeiro, 1920. Type by original designation. Gender: masculine.

***Trigonectes aplocheiloides* Huber, 1995**

Trigonectes aplocheiloides Huber, 1995: 17, fig. 8. Type locality: Paraguay, Province de Boqueron, à 74 km de Mariscal vers Americo Picco, 21.30S 60.51W. Holotype: MNHN 1994-1104.

Maximum length: 10 cm TL

Distribution: South America: Paraguay River basin.

Countries: Paraguay, Argentina

***Trigonectes balzanii* (Perugia, 1891)**

Haplochilus balzanii Perugia, 1891: 653. Type locality: Villa Maria (Matto Grosso), Rio Paraguay [Brazil]. Syntypes: MCSNG 9242

Rivulus rondoni Miranda Ribeiro 1920: 7, pl. 1. Type locality: Cáceres, antiga Villa-Maria, Matto-Grosso, Lagoa da Imbaúva [Brazil]. Holotype: MNRJ uncat., now lost.

Maximum length: 12 cm TL.

Distribution: South America: Paraguay River basin.

Countries: Brazil, Paraguay, Argentina.

Remarks and references: Redescribed by Costa (1990b: 140).

***Trigonectes macrophthalmus* Costa, 1990**

Trigonectes macrophthalmus Costa, 1990b: 141, fig. 11. Type locality: Brazil: Rondônia: Forte Príncipe da Beira. Holotype: MNRJ 11308.

Maximum length: 8 cm TL.

Distribution: South America: Guaporé River basin.

Countries: Brazil

***Trigonectes rogoaguae* (Pearson & Myers, 1924)**

Rivulus rogoaguae Pearson & Myers in Pearson, 1924: 51. Type locality: Lake Rogoagua (Bolivia). Holotype: CAS 42531.

Maximum length: 10 cm TL

Distribution: South America: Mamoré River basin.

Countries: Bolivia

Remarks and references: Redescribed by Costa (1990b: 144).

***Trigonectes rubromarginatus* Costa, 1990**

Trigonectes rubromarginatus Costa, 1990b: 145, fig. 13. Type locality: Brazil, Goiás, Aruana (Aruaná). Holotype: MZUSP 37194.

Maximum length: 12 cm TL

Distribution: South America: Araguaia River basin.

Countries: Brazil

***Trigonectes strigabundus* Myers, 1925**

Trigonectes strigabundus Myers, 1925: 371. Type locality: Tocantins [correctly, Porto Nacional, Tocantins, Brazil]. Holotype: CAS 40701.

Maximum length: 12 cm TL.

Distribution: South America: Tocantins River basin.

Countries: Brazil

Remarks and references: Redescribed by Costa (1990b: 148).

Family Cyprinodontidae (Pupfishes)

Wilson J. E. M. Costa

The Cyprinodontidae are currently defined by a series of morphological features of the maxilla, neurocranium, fins support and vertebrae (Parenti, 1981; Costa, 1997, 1998). It comprises four main lineages, which exhibit distinct distribution patterns: the Cubanichthyinae, with a single genus and two species endemic to Caribbean islands; the Orestiini, with a single genus and 42 species endemic to the Andes; the Lebiatina, with a single genus and about 15 species from Old World areas around Mediterranean and Black seas and Persian Gulf; and the Cyprinodontina, with six genera and about 40 species from southern North America, Central America and northern South America (Costa, 1997). The present checklist includes all species of the Cubanichthyinae and Orestiini, which are completely inserted in the study area, and species of the Cyprinodontina occurring in Central America, Caribbean islands and South America.

The cubanichthyine genus *Cubanichthys* comprises two small species living in freshwater biotopes of the islands of Cuba, Pinos, and Jamaica. Both species are known as aquarium fishes, with beautiful color patterns. They may also be recognized among other cyprinodontids by the conical jaw teeth arranged in multiple rows.

The orestiin genus *Orestias* constitutes a diversified assemblage of fishes endemic to rivers and lakes of Andean Altiplanos. The greater diversity is concentrated in the Lake Titicaca basin, where distinct lineages developed a variety of diet preferences. In Lake Titicaca, *Orestias* represents an important food source for local people, usually found in street markets. Among other features, *Orestias* may be diagnosed by the absence of pelvic fin and reduced body squamation.

Three cyprinodontin genera occur in the study area: *Cyprinodon*, *Floridichthys*, and *Garmanella*. Species of this lineage may be found both in typical freshwater biotopes, but also in coastal habitats, both in brackish and salt waters. The Cyprinodontina differs from other New World cyprinodontids by possessing tricuspidate teeth.

CUBANICHTHYS

Cubanichthys Hubbs, 1926: 222. Type species: *Fundulus cubensis* Eigenmann, 1903. Type by original designation. Gender: masculine.

Chriopeoides Fowler, 1939: 4. Type species: *Chriopeoides pengelleyi* Fowler, 1939. Type by original designation. Gender: masculine.

Cubanichthys cubensis (Eigenmann, 1903)

Fundulus cubensis Eigenmann, 1903: 222. Fig. 1 Type locality: Pinar del Rio, Cuba. Holotype: CAS [ex IU 9667] missing.

Maximum length: 4 cm TL

Distribution: Caribbean Islands: River basins of western Island of Cuba, and Island of Pines.

Countries: Cuba

Cubanichthys pengelleyi (Fowler, 1939)

Chriopeoides pengelleyi Fowler, 1939: 5, figs. 3-4 Type locality: Jamaica. Holotype: ANSP 68632.

Maximum length: 6 cm TL

Distribution: Caribbean Islands: River basins of western Island of Jamaica.

Countries: Jamaica

CYPRINODON

Cyprinodon La Cèpède, 1803: 68. Type species: *Cyprinodon variegatus* La Cèpède, 1803. Type by monotypy. Gender: masculine.

Prinodon Rafinesque, 1815: 90. Type species: *Cyprinodon variegatus* La Cèpède, 1803. Type by being a replacement name. Gender: masculine.

Lebia Oken, 1817: 1183. Type species: *Lebia ellipsoidea* Lesueur, 1821. Type by subsequent monotypy. Gender: feminine. Preoccupied by *Lebia* Latreille, 1802, in Coleoptera.

Encrates Gistel, 1848: 236. Type species: *Cyprinodon variegatus* La Cèpède, 1803. Type by being a replacement name for *Lebia* Oken. Gender: feminine.

Trifarcus Poey, 1860: 299. Type species: *Trifarcus riverendi* Poey, 1860. Type by monotypy. Gender: masculine.

Cyprinodon artifrons Hubbs, 1936

Cyprinodon variegatus artifrons Hubbs, 1936: 223. Pl. 6 (figs. 1-5) Type locality: Small streams surrounding Progreso, Yucatán, Mexico. Holotype: UMMZ 102082.

Maximum length: 6 cm TL

Distribution: North and Central America: Coastal habitats in Yucatan Peninsula.

Countries: Mexico, Belize

Cyprinodon beltrani Alvarez, 1949

Cyprinodon beltrani Alvarez, 1949: 236, fig. 1. Type locality: Laguna Chichankanab, Quintana Roo, Mexico. Holotype: not located.

Distribution: North America: Atlantic slope, Laguna Chichankanab.

Countries: Mexico

Cyprinodon bondi Myers, 1935

Cyprinodon bondi Myers, 1935: 303. Type locality: Étang Saumâtre, Haiti, West Indies. Holotype: USNM 100960 [ex NYZS].

Maximum length: 7 cm TL

Distribution: Caribbean Islands: River basins of the Hispaniola

Island.

Countries: Haiti, Dominican Republic

***Cyprinodon dearborni* Meek, 1909**

Cyprinodon dearborni Meek, 1909: 208. Type locality: Willemstad, Curaçao, Dutch West Indies. Holotype: FMNH 6484.

Cyprinodon cyaneostriaga Ahl, 1938: 58. Type locality: Curaçao, Netherlands Antilles. Holotype: ZMB 21152.

Maximum length: 4 cm TL

Distribution: South America: Coastal habitats of northern South America.

Countries: Colombia, Netherlands Antilles, Venezuela

***Cyprinodon esconditus* Strecker, 2002**

Cyprinodon esconditus Strecker, 2002: 302, fig. 3. Type locality: Yucatan Peninsula, Quintana Roo, Mexico; southern end of Laguna Chichancanab at its broadest part, 19°51'10"N 88°45'58"W. Holotype: IBUNAM 9488.

Maximum length: 3.9 cm SL

Distribution: North America: Atlantic slope, Laguna Chichancanab.

Countries: Mexico

***Cyprinodon higuey* Rodriguez & Smith, 1990**

Cyprinodon higuey Rodriguez & Smith, in Smith, Rodriguez & Lydeard, 1990: 3, f igs. 2-4 Type locality: Laguna de Bávaro at village of Cabeza de Toro, Altagracia Prov., Dominican Republic. Holotype: AMNH 58623.

Maximum length: 3.5 cm TL

Distribution: Caribbean Islands: Coastal habitats in eastern Hispaniola Island.

Countries: Dominican Republic

***Cyprinodon labiosus* Humphries & Miller, 1981**

Cyprinodon labiosus Humphries & Miller, 1981: 55, fig. 3C. Type locality: Laguna Chichancanab, in lagoon at s. end on n. side of hwy 184, Yucatán, Mexico. Holotype: UMMZ 203907.

Distribution: North America: Atlantic slope, Laguna Chichancanab.

Countries: Mexico

***Cyprinodon maya* Humphries & Miller, 1981**

Cyprinodon maya Humphries & Miller, 1981: 55, fig. 2B. Type locality: Laguna Chichancanab, in lagoon at s. end on n. side of hwy 184, Yucatán, Mexico. Holotype: UMMZ 203903.

Distribution: North America: Atlantic slope, Laguna Chichancanab.

Countries: Mexico

***Cyprinodon nichollsi* Smith, 1989**

Cyprinodon nichollsi Smith, 1989: 3, fig. 1 Type locality: Sandy beach at Laguna de Oviedo, 4 km east of Oviedo on hwy 44, Jaragua Natl. Park, Dominican Republic. Holotype: AMNH 58278.

Maximum length: 8.5 cm TL

Distribution: Caribbean Islands: Coastal habitats in southern Hispaniola Island.

Countries: Dominican Republic

***Cyprinodon artifrons* Hubbs, 1936**

Cyprinodon variegatus artifrons Hubbs, 1936: 223, pl. 6 (figs. 1-5) Type locality: Small streams surrounding Progreso, Yucatán, Mexico. Holotype: UMMZ 102082.

Maximum length: 6 cm TL

Distribution: North and Central America: Coastal habitats in Yucatan Peninsula.

Countries: Mexico, Belize

***Cyprinodon riverendi* (Poey, 1860)**

Trifarcus riverendi Poey, 1860: 306. Type locality: Havana,

Cuba. No types known.

Trifarcus felicianus Poey, 1868: 412. Type locality: Havana, Cuba.

Cyprinodon jamaicensis Fowler, 1939: 1, figs. 1-2. Type locality: Jamaica. Holotype: ANSP 68630.

Maximum length: 7 cm TL

Distribution: Caribbean Islands: Coastal habitats of the islands of Cuba and Hispaniola and adjacent smaller islands, Great Cayman and Florida Keys.

Countries: Cuba, Cayman Is., Jamaica, USA.

***Cyprinodon simus* Humphries & Miller, 1981**

Cyprinodon simus Humphries & Miller, 1981: 60, fig. 3D. Type locality: Chichancanab Lagoon, in lagoon at s. end on n. side of hwy 184, Yucatán, Mexico. Holotype: UMMZ 203905.

Distribution: North America: Atlantic slope, Laguna Chichancanab.

Countries: Mexico

***Cyprinodon verecundus* Humphries, 1984**

Cyprinodon verecundus Humphries, 1984: 62, fig. 2. Type locality: Chichancanab Lagoon, main body of water, ca. 3.6 km from n. end of basin, Yucatán, Mexico. Holotype: UMMZ 207694.

Distribution: North America: Atlantic slope, Laguna Chichancanab.

Countries: Mexico

FLORIDICHTHYS

Floridichthys Hubbs, 1926: 16. Type species: *Cyprinodon carpio* Günther, 1866. Type by original designation. Gender: masculine.

***Floridichthys polyommus* Hubbs, 1936**

Floridichthys carpio barbouri Hubbs, 1936: 216, pl. 4 (fig. 1). Type locality: Cienaga, 2 km southwest of Progreso, Yucatán, Mexico. Holotype: UMMZ 102167.

Floridichthys carpio polyommus Hubbs, 1936: 214, pl. 3 (fig. 1). Type locality: Ocean beach near Champoton, Campeche, Yucatán, Mexico. Holotype: UMMZ 102186.

Maximum length: 11 cm TL

Distribution: North and Central America: Coastal habitats of Yucatan Peninsula.

Countries: Belize, Mexico

Common names: Ocellated killifish (Belize)

GARMANELLA

Garmanella Hubbs, 1936: 218. Type species: *Garmanella pulchra* Hubbs, 1936. Type by original designation. Gender: feminine.

***Garmanella pulchra* Hubbs, 1936**

Garmanella pulchra Hubbs, 1936: 219, pl. 5 (fig. 1). Type locality: 5 km east of Progreso, Yucatán, Mexico. Holotype: UMMZ 102148.

Maximum length: 4 cm TL

Distribution: North and Central America: Coastal habitats of Yucatan Peninsula.

Countries: Belize, Mexico

Common names: Orange flagfish (Belize)

ORESTIAS

Orestias Valenciennes, 1839: 228. Type species: *Orestias cuvieri* Valenciennes, 1846. Type by subsequent designation. Gender: masculine.

***Orestias agassizii* Valenciennes, 1846**

Orestias agassizii Valenciennes, in Cuvier & Valenciennes, 1846: 238. Type locality: Río Corocoro, Peru; San Antonio, Peru. Spelled *agassizii* (p. xv, list of plates); *agassizii*, (pl. 536); *agas-*

- sii*, (p. 238). *O. agassizii* selected by first reviser, Eschmeyer (1998: 54), but possibly *O. agassii* in prevailing usage. Syntypes: MNHN A.9601.
- Orestias ortonii* Cope, 1876: 186. Type locality: Lake Titicaca, Bolivia. Holotype: ANSP 21557.
- Orestias agassizii affinis* Garman, 1895: 152. Type locality: Lake Umayo, Peru. Syntypes: MCZ 27698.
- Orestias tirapatae* Boulenger, 1902: 153. Type locality: Tirapata, e. Peru, elev. 13000 ft. Syntypes: BMNH 1902.7.29.129-133.
- Orestias agassizii typica* Pellegrin, 1904: 93. Type locality: South America. Syntypes: MNHN 05.171-173.
- Orestias agassizii senechali* Pellegrin, 1904: 94. Type locality: Lake Titicaca. Syntypes: MNHN 05.179-180.
- Orestias agassizii crequii* Pellegrin, 1904: 94. Type locality: Lake Titicaca. Syntypes: MNHN 05.181-183.
- Orestias agassizii inornata* Pellegrin, 1904: 93. Type locality: South America. Syntypes: MNHN 05.166-168.
- Orestias uyunius* Fowler, 1940: 63, fig. 18. Type locality: Llica, Potosi Dept., Bolivia, elev. 12000 ft. Holotype: ANSP 68866.
- Orestias rospigliosii* Eigenmann & Allen, 1942: 381. Type locality: Río Langui, Peru, above elev. of 12000 ft. Holotype: CAS 12290.
- Orestias langui* Tchernavin, 1944: 192, figs. 13a-c. Type locality: Vila de Langui, Río Urubamba streams, Peru. Holotype: BMNH 1944.6.6.152.
- Maximum length: 7 cm TL
Distribution: South America: Andean lakes of southeastern Peru, eastern Bolivia and northern Chile, including Lake Titicaca and upper Amazon River basins.
Countries: Bolivia, Chile, Peru
- Orestias albus* Valenciennes, 1846**
Orestias albus Valenciennes, in Cuvier & Valenciennes, 1846: 242. Type locality: Tributaries of Lake Titicaca. Syntypes: MNHN A.9607. Appeared first in Valenciennes (1839: 118; nomen nudum).
- Orestias neveui* Pellegrin, 1904: 95. Type locality: Lake Titicaca. Holotype: MNHN 1905-189.
- Maximum length: 18 cm TL
Distribution: South America: Lake Titicaca.
Countries: Bolivia, Peru
- Orestias ascotanensis* Parenti, 1984**
Orestias ascotanensis Parenti, 1984: 196, fig. 58. Type locality: Lago Ascotán, Chile. Holotype: USNM 236790.
- Maximum length: 7.5 cm TL
Distribution: South America: Ascotán lake.
Countries: Chile
- Orestias chungarensis* Vila & Pinto, 1987**
Orestias chungarensis Vila & Pinto, 1987: 234, fig. 3. Type locality: Western littoral region of Lake Chungará, Chile. Holotype: MNHNC 11210.
- Maximum length: 7 cm TL
Distribution: South America: Chungará lake.
Countries: Chile
- Orestias crawfordi* Tchernavin, 1944**
Orestias crawfordi Tchernavin, 1944: 226, fig. 25. Type locality: Taman Bay, ne. side of Capachica Peninsula, Lake Titicaca, 36-38 m. Syntypes: BMNH 1944.6.6.154-158.
- Maximum length: 8 cm TL
Distribution: South America: Lake Titicaca.
Countries: Peru
Common names: Carache
- Orestias ctenolepis* Parenti, 1984**
Orestias ctenolepis Parenti, 1984: 194, fig. 57. Type locality: Headwaters of the Río Zapatilla, Río Camellaque, Provincia Chucuito, Peru. Holotype: AMNH 52179.
- Maximum length: 8 cm TL
Distribution: South America: Lake Titicaca basin.
Countries: Peru
- Orestias cuvieri* Valenciennes, 1846**
Orestias Cuvieri Valenciennes, in Cuvier & Valenciennes, 1846: 225, pl. 532 (as *Orestias Cuvierii*). Type locality: Lake Titicaca, Peru. Holotype: MNHN A.9593. Appeared first in Valenciennes (1839: 118, nomen nudum).
- Orestias Humboldti* Valenciennes, in Cuvier & Valenciennes, 1846: 233, pl. 534. Type locality: Lake Titicaca. Syntypes: MNHN 2670. Appeared first as *humboldtii* in Valenciennes (1839: 118, nomen nudum).
- Maximum length: 27 cm TL
Distribution: South America: Lake Titicaca.
Countries: Bolivia, Peru
Common names: Boga (Peru)
- Orestias elegans* Garman, 1895**
Orestias elegans Garman, 1895: 149. Type locality: Small lakes among headwaters of Río Rimac, Peru. Syntypes: MCZ 27694.
- Maximum length: 10 cm TL
Distribution: South America: Santa Eulalia River, Pacific slope of Peru.
Countries: Peru
- Orestias empyraeus* Allen, 1942**
Orestias empyraeus Allen, in Eigenmann & Allen, 1942: 367, pl. 20 (fig. 2). Type locality: Lago Junin, Peru. Holotype: CAS 44195.
- Maximum length: 10 cm TL
Distribution: South America: Junin Lake and upper Amazon River basin.
Countries: Peru
- Orestias forgeti* Lauzanne, 1981**
Orestias forgeti Lauzanne, 1981: 79, fig. 5. Type locality: Tiquina, Lake Titicaca, Bolivia. Holotype: MNHN 1981-603.
- Maximum length: 12 cm TL
Distribution: South America: Lake Titicaca.
Countries: Bolivia, Peru
Common names: Carache
- Orestias frontosus* Cope, 1876**
Orestias frontosus Cope, 1876: 187. Type locality: Lake Titicaca, Bolivia. Syntypes: ANSP 21555-6.
- Orestias agassii pequei* Tchernavin, 1944: 185, fig. 8. Type locality: Lago Pequeño, e. part of Lake Titicaca, Bolivia. Syntypes: BMNH 1944.6.6.79-83.
- Maximum length: 15 cm TL
Distribution: South America: Lake Titicaca.
Countries: Bolivia, Peru
Common names: Carache
- Orestias gilsoni* Tchernavin, 1944**
Orestias gilsoni Tchernavin, 1944: 217, fig. 20. Type locality: Isla Taquiri, Lago Pequeño, SE Lake Titicaca, Bolivia, 2.7-2.8 m. Lectotype: BMNH 1944.6.6.524.
- Maximum length: 4.5 cm TL
Distribution: South America: Lake Titicaca basin.
Countries: Bolivia
Common names: Carache
- Orestias gracilis* Parenti, 1984**
Orestias gracilis Parenti, 1984: 172, fig. 37. Type locality: NE side of Lago Pequeño, village of Huatajata, Lake Titicaca, Bolivia. Holotype: AMNH 52120.
- Maximum length: 5 cm TL

Distribution: South America: Lake Titicaca.
Countries: Bolivia, Peru

***Orestias gymnotus* Parenti, 1984**

Orestias gymnotus Parenti, 1984: 192, fig. 55. Type locality: Near Quishuarcancha, northwest of Cerro de Pasco, Pasco Province, N Peru, elev. ca. 4062 m. Holotype: CAS 40700.

Maximum length: 8 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

***Orestias hardini* Parenti, 1984**

Orestias hardini Parenti, 1984: 193, fig. 56. Type locality: Lago Yanacocha, ca. 10°S, 77°15'W, Peru. Holotype: AMNH 52178.

Maximum length: 4.5 cm TL

Distribution: South America: Yanacocha and Llacsha Lakes.

Countries: Peru

***Orestias imarpe* Parenti, 1984**

Orestias imarpe Parenti, 1984: 205, fig. 70. Type locality: Near village of Ojjerani, between Puno and Chucuito, Bahía de Puno, Lake Titicaca, Peru. Holotype: AMNH 52184.

Maximum length: 7.5 cm TL

Distribution: South America: Lake Titicaca.

Countries: Peru, Bolivia

***Orestias incae* Garman, 1895**

Orestias incae Garman, 1895: 155, pl. 3 (fig. 9). Type locality: Bahía de Moho, Lake Titicaca, Peru. Syntypes: BMNH 1939.7.17.2 [ex MCZ 3948].

Maximum length: 6.5 cm TL

Distribution: South America: Lake Titicaca.

Countries: Peru, Bolivia

***Orestias ispi* Lauzanne, 1981**

Orestias ispi Lauzanne, 1981: 73, fig. 3. Type locality: Tiquina, Lake Titicaca, Bolivia. Holotype: MNHN 1981-605.

Maximum length: 9 cm TL

Distribution: South America: Lake Titicaca.

Countries: Bolivia, Peru

Common names: Ispi (Bolivia)

***Orestias jussiei* Valenciennes, 1846**

Orestias owenii Valenciennes, in Cuvier & Valenciennes, 1846: 241. Type locality: Lake Urcos, south of Cusco, Peru. Syntypes: MNHN A.9606.

Orestias jussiei Valenciennes, in Cuvier & Valenciennes, 1846: 235. pl. 535. Type locality: Lake Titicaca; Río Guaracóna; Lake Chinchoro, near Cuzco, Peru. Syntypes: MNHN A.9599.

Maximum length: 8.5 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

***Orestias laucaensis* Arratia, 1983**

Orestias laucaensis Arratia, 1982: 103, fig. 5b. Type locality: Río Lauca, Parinacota, Chile, elev. ca. 4300 m. Holotype: DBCUCH 160879.

Maximum length: 11 cm TL

Distribution: South America: Lauca River basin.

Countries: Chile

***Orestias luteus* Valenciennes, 1846**

Orestias luteus Valenciennes, in Cuvier & Valenciennes, 1846: 243. Type locality: Lake Titicaca. Holotype: MNHN A.9608. Appeared first in Valenciennes (1839: 118, nomen nudum).

Orestias cypho Fowler, 1916: 427, fig. 3. Type locality: La Paz, Bolivia (from a snake). Holotype: ANSP 21920.

Orestias farfani Parenti, 1984: 178, fig. 42. Type locality: Near the village of Vilurcuni, Lake Pequeño, Lake Titicaca, Peru, 1-2 m. Holotype: AMNH 52143.

Orestias rotundipinnis Parenti, 1984: 176, fig. 41. Type locality: Northeast of Isla Esteves, Bahía de Puno, Lake Titicaca, Peru. Holotype: AMNH 52138.

Maximum length: 17 cm TL

Distribution: South America: Lake Titicaca basin.

Countries: Bolivia, Peru

Common names: Carache

***Orestias minimus* Tchernavin, 1944**

Orestias minimus Tchernavin, 1944: 216, fig. 19. Type locality: Molinopampa, east of Juli, se. coast of Lake Titicaca, Bolivia. Holotype: BMNH 1944.6.6.532.

Maximum length: 3.5 cm TL

Distribution: South America: Lake Titicaca.

Countries: Peru, Bolivia

***Orestias minutus* Tchernavin, 1944**

Orestias minutus Tchernavin, 1944: 215, fig. 18. Type locality: Uruni Bay, north side of Capachica Peninsula, Lake Titicaca. Syntypes: BMNH 1944.6.6.159-160.

Maximum length: 3.5 cm TL

Distribution: South America: Lake Titicaca.

Countries: Peru

***Orestias mooni* Tchernavin, 1944**

Orestias mooni Tchernavin, 1944: 228, fig. 26. Type locality: Cota Bay in Puno Bay, Lake Titicaca, Peru, 23 m. Holotype: BMNH 1944.6.6.503.

Maximum length: 4.5 cm TL

Distribution: South America: Lake Titicaca.

Countries: Peru

***Orestias mulleri* Valenciennes, 1846**

Orestias mulleri Valenciennes, in Cuvier & Valenciennes, 1846: 240. Type locality: Lake Titicaca near Guachu, Peru, 15°32'S, 71°37'W. Syntypes: MNHN A.9605.

Maximum length: 4.5 cm TL

Distribution: South America: Lake Titicaca.

Countries: Peru

Common names: Carache

***Orestias multiporis* Parenti, 1984**

Orestias multiporis Parenti, 1984: 198, fig. 60. Type locality: Maravillas, near Río de Lampa, trib. to Lake Titicaca, Peru. Holotype: CAS 46166.

Maximum length: 10 cm TL

Distribution: South America: Lake Titicaca basin.

Countries: Peru

***Orestias mundus* Parenti, 1984**

Orestias mundus Parenti, 1984: 199, fig. 61. Type locality: Cuzco, Peru. Holotype: FMNH 41135.

Maximum length: 6 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

***Orestias olivaceus* Garman, 1895**

Orestias olivaceus Garman, 1895: 152. Type locality: Lake Umayo, 9 mi. northwest of and 400 ft. higher than Lake Titicaca, Peru. Syntypes: MCZ 3946.

Maximum length: 7.5 cm TL

Distribution: South America: Lake Titicaca basin.

Countries: Peru, Bolivia

***Orestias parinacotensis* Arratia, 1982**

Orestias parinacotensis Arratia, 1982: 100, fig. 5a. Type locality: Bofedales de Parinacota, Chile, ca. elev. 4300 m. Holotype: DBCUCH 190579.

Maximum length: 8.5 cm TL

Distribution: South America: Parinacota River, Andean basin of

Pacific slope of northern Chile.
Countries: Chile

***Orestias pentlandii* Valenciennes, 1846**

Orestias pentlandii Valenciennes, in Cuvier & Valenciennes, 1846: 230. pl. 533. Type locality: Lake Titicaca. Syntypes: MNHN A.9594. Appeared first in Valenciennes (1839: 118, nomen nudum).

Orestias bairdii Cope, 1876: 185. Type locality: Lake Titicaca, Bolivia. Holotype: ANSP 21554.

Orestias pentlandii fuscus Garman, 1895: 148. Type locality: Cuzco Valley, Peru. No types found.

Maximum length: 23.5 cm TL

Distribution: South America: Lake Titicaca and upper Amazon River basin.

Countries: Peru

***Orestias polonorum* Tchernavin, 1944**

Orestias polonorum Tchernavin, 1944: 195, fig. 12. Type locality: Lake Junin, Peru. Lectotype: BMNH 1944.6.6.223.

Maximum length: 14.5 cm TL

Distribution: South America: Junin Lake.

Countries: Peru

***Orestias puni* Tchernavin, 1944**

Orestias jussiei puni Tchernavin, 1944: 194, fig. 11. Type locality: Bahía de Puno, Lake Titicaca, Peru. Syntypes: BMNH 1944.6.6.179-180.

Maximum length: 15 cm TL

Distribution: South America: Lake Titicaca basin.

Countries: Peru

Common names: Carache

***Orestias richersoni* Parenti, 1984**

Orestias richersoni Parenti, 1984: 197, fig. 59. Type locality: Río Coata upstream from Coata, Lake Titicaca drainage, Peru. Holotype: AMNH 52181.

Maximum length: 10 cm TL

Distribution: South America: Lake Titicaca basin.

Countries: Peru

***Orestias robustus* Parenti, 1984**

Orestias robustus Parenti, 1984: 207, fig. 72. Type locality: Near village of Ojjerani, between Puno and Chucuito, Bahía de Puno, Lake Titicaca, Peru. Holotype: AMNH 52191.

Maximum length: 7 cm TL

Distribution: South America: Lake Titicaca basin.

Countries: Peru

***Orestias silustani* Allen, 1942**

Orestias silustani Allen, in Eigenmann & Allen, 1942: 366, pl. 19 (fig. 1). Type locality: Lago Umayo, Peru. Holotype: CAS 44205.

Maximum length: 10 cm TL

Distribution: South America: Lake Titicaca basin.

Countries: Peru

***Orestias taquiri* Tchernavin, 1944**

Orestias taquiri Tchernavin, 1944: 221, fig. 22. Type locality: Taquiri I., Lago Pequeño, se. Lake Titicaca, Bolivia, 2.7-2.8 m. Holotype: BMNH 1944.6.6.534.

Maximum length: 3.5 cm TL

Distribution: South America: Lake Titicaca.

Countries: Bolivia

***Orestias tchernavini* Lauzanne, 1981**

Orestias tchernavini Lauzanne, 1981: 84, fig. 6. Type locality: Tiquina, Lake Titicaca, Bolivia. Holotype: MNHN 1981-770.

Maximum length: 6 cm TL

Distribution: South America: Lake Titicaca.

Countries: Bolivia

***Orestias tomcooni* Parenti, 1984**

Orestias tomcooni Parenti, 1984: 206, fig. 71. Type locality: Near the village of Huatayata, N side of Lago Pequeño of Lake Titicaca, Bolivia. Holotype: AMNH 52188.

Maximum length: 6.5 cm TL

Distribution: South America: Lake Titicaca.

Countries: Bolivia, Peru

***Orestias tschudii* Castelnau, 1855**

Orestias tschudii Castelnau, 1855: 51. pl. 27 (fig. 1). Type locality: Lake Titicaca. Syntypes: MNHN A.9604.

Maximum length: 20 cm TL

Distribution: South America: Lake Titicaca.

Countries: Peru, Bolivia

***Orestias tutini* Tchernavin, 1944**

Orestias tutini Tchernavin, 1944: 219, fig. 21. Type locality: Taquiri I., Lago Pequeño, se. Lake Titicaca, Bolivia, 2.7-2.8 m. Holotype: BMNH 1944.6.6.544.

Maximum length: 4.5 cm TL

Distribution: South America: Lake Titicaca.

Countries: Bolivia

***Orestias uruni* Tchernavin, 1944**

Orestias uruni Tchernavin, 1944: 213, fig. 17. Type locality: Uruni Bay, north side of Capachica Peninsula, Lake Titicaca. BMNH 1944.6.6.173.

Maximum length: 6 cm TL

Distribution: South America: Lake Titicaca.

Countries: Peru

***Orestias ututo* Parenti, 1984**

Orestias ututo Parenti, 1984: 200, fig. 62. Type locality: Lago Ututo, Peru, ca. 9°50'S, 77°30'W. Holotype: AMNH 52183.

Maximum length: 5.5 cm TL

Distribution: South America: Upper Amazon River basin.

Countries: Peru

SPECIES INQUIRENDA

Oriastes lastarriae Philippi, 1876: 261. Type locality: Peru, 4500 m. Apparently an available, overlooked species description.

Family Poeciliidae (Livebearers)

Paulo H. F. Lucinda

Poeciliids can be characterized by: (1) a highly-inserted pectoral fin, (2) pelvic fins that migrate anteriorly during growth, (3) recessed supraorbital pores 2b through 4a, and (4) pleural ribs on the first several haemal arches as well as a series of other internal synapomorphies (see details in Parenti, 1981; Costa, 1998; Ghedotti, 2000).

Poeciliids are small and laterally compressed cyprinodontiform fishes. Body form ranges from extremely elongate (e.g. *Tomeurus*) to deep-bodied (e.g. *Phallichthys*, *Carlhubbsia*). Size is extremely variable ranging from the tiny *Fluviophylax palikur* (maximum adult recorded size: 13.9 mm) to the giant of the group, *Belonesox belizanus*, which reaches 200 mm. Poeciliids comprise 299 valid species inhabiting the fresh and brackish waters of American and African continents (but are reported to occur in salt waters in coastal areas).

Species of Poeciliidae occur in North and Middle America, Caribbean, South America to Northern Argentina, Congo basin and the African rift lakes, Dar es Salaam and Madagascar (Parenti, 1981). Following Ghedotti (2000), fishes of the family Poeciliidae are included in three subfamilies: Poeciliinae (220 valid species), Procatopodinae (78 valid species) Aplocheilichthyinae (one species).

The subfamily Poeciliinae is broadly distributed throughout the Americas. Poeciliines are characterized by: (1) the uniquely derived possession of a gonopodium formed by the modified male anal-fin rays 3, 4, and 5 (Parenti, 1981), (2) internal fertilization, (3) viviparity (*Tomeurus gracilis* possess facultative viviparity). Some species with all-female individuals, their eggs capable of developing when stimulated by the sperm of another species without fertilization. Poeciliinae is the sister group of the Procatopodinae, a group composed of the South-American *Fluviophylax* and the African procatopodines. The clade Poeciliinae plus Procatopodinae is the sister group of the Aplocheilichthyinae (Costa, 1996; Ghedotti, 2000). These three subfamilies compose the family Poeciliidae.

The Poeciliinae includes well-known aquarium fishes such as the guppies, mosquito fishes, swordtails, platys and the mollies, being very familiar to the non-scientific public. On the other hand, poeciliines are well known from several biological standpoints, being object of study for ecologists, anatomists, embryologists and many others biologist researchers. Notwithstanding, this fish assemblage is disappointingly ill-studied from the perspective of systematics. Intrageneric diversity and intergeneric relationships of the Poeciliinae are poorly known, regardless of its huge distribution range and notoriety. Similarly, phylogenetic hypotheses for most of genera are still wanting. Taxonomic revisions and phylogeny hypotheses have provided insights into the relationships of smaller groups of the Poeciliinae (e.g., Rosen, 1967, 1979; Rauchenberger, 1989; Rosa & Costa, 1993; Meyer et al., 1994; Mojica et al., 1997; Rodriguez, 1997; Ghedotti, 2000) or have dealt with higher taxa (Costa, 1996 and 1998; Parenti, 1981). The only comprehensive study is the classic revision of "Poeciliidae" by Rosen & Bailey (1963), which did not deal with cladistic methodology. Nonetheless, Rosen & Bailey (1963) is the basis for current inner classification of Poeciliinae. Later, Parenti & Rauchenberger (1989) modified the classification of Rosen & Bailey (1963) in order to accommodate it into the taxonomic rank of subfamily proposed by Parenti. Following Rosen & Bailey (1963) and Parenti & Rauchenberger (1989), *Tomeurus* alone is the supertribe Tomeurini. The remaining genera form the supertribe Poeciliini, which is subdivided in the tribes Poeciliini, Cnesterodontini, Gambusini, Scolichthyini, Girardini, Heterandrini and Xenodexini. Later, Ghedotti (2000) proposed another Poeciliinae classification based in his phylogenetic study of the Poecilioidea despite the fact that only 12 genera have been used in his cladistic analysis.

ALFARO

Petalosoma Regan, 1908: 458. Type species: *Petalosoma cultratum* Regan, 1908. Preoccupied in Coleoptera. Type by monotypy.

Gender: neuter.

Alfaro Meek, 1912: 72. Type species: *Alfaro acutiventralis* Meek, 1912. Type by monotypy. Gender: masculine.

Petalurichthys Regan, 1912: 494 (footnote). Type species: *Petalosoma cultratum* Regan, 1908. Type by being a replacement name for *Petalosoma* preoccupied in Coleoptera. Gender: masculine.

Furcipenis Hubbs, 1931: 1. Type species: *Priapichthys huberi* Fowler, 1923. Type by original designation. Gender: masculine.

***Alfaro cultratus* (Regan, 1908)**

Petalosoma cultratum Regan, 1908: 458. Type locality: Rio Iroquois [Costa Rica]. Holotype: BMNH 1909.3.13.58.

Petalosoma amazonum Regan, 1911: 659, fig. (p. 660). Type locality: Obidos. Syntypes: BMNH 1911.10.28.1-2 (2).

Alfaro acutiventralis Meek, 1912: 72. Type locality: Guapilis, Costa Rica. Holotype: FMNH 7679 [not FMNH 7579].

Maximum length: 7.5 cm TL

Distribution: Central America: Costa Rica, Panama and Nicaragua. Countries: Costa Rica, Nicaragua, Panama

Alfaro huberi (Fowler, 1923)

Priapichthys huberi Fowler, 1923: 27. Type locality: Marceligo Creek, tributary of the Tunky River, at Miranda, Nicaragua. Holotype: ANSP 51220.

Maximum length: 5 cm TL

Distribution: Central America: Southern Guatemala through Honduras to Nicaragua.

Countries: Guatemala, Honduras, Nicaragua

BELONESOX

Belonesox Kner, 1860: 419, 422. Type species: *Belonesox belizanus* Kner, 1860. Type by monotypy. Gender: masculine.

Belonesox belizanus Kner, 1860

Belonesox belizanus Kner, 1860: 419, pl. Type locality: Belize. Possible types: USNM 117504 (2).

Belonesox belizanus maxillosus Hubbs, 1936: 228, pl. 7 (fig. 5). Type locality: roadside pool 3 km. south of Progreso, Yucatan. Holotype: UMMZ 102137.

Maximum length: 20 cm TL

Distribution: North and Central America: From Laguna San Julian, northeast of Ciudad Veracruz in Mexico to Costa Rica. Southern Gulf of Mexico, southern Yucatán and along Central American coast south to Nicaragua. Introduced in freshwater in Florida.

Countries: Belize, Costa Rica, Mexico, Nicaragua

BRACHYRHAPHIS

Brachyrhaphis Regan, 1913a: 997. Type species: *Gambusia rhabdophora* Regan, 1908. Type by monotypy. Gender: feminine. See Mojica et al. (1997) for phylogenetic relationships inferred from DNA sequences.

Trigonophallus Hubbs, 1926: 48. Type species: *Trigonophallus punctifer* Hubbs, 1926. Type by original designation. Gender: masculine.

Plectrophallus Fowler, 1932: 384. Proposed as new subgenus of *Panamichthys* Hubbs. Type species: *Panamichthys tristani* Fowler, 1932. Type by original designation. Gender: masculine.

Brachyrhaphis cascajalensis (Meek & Hildebrand, 1913)

Gambusia cascajalensis Meek & Hildebrand, 1913: 86. Type locality: Rio Cascajal, Porto Bello, Panama. Holotype: FMNH 7594.

Maximum length: 6 cm TL

Distribution: Central America: Southern Costa Rica to Panama.

Countries: Costa Rica, Panama

Brachyrhaphis episcopi (Steindachner, 1878)

Gambusia episcopi Steindachner, 1878: 387, pl. 2 (fig. 3). Type locality: Streams near Obispo Station, Canal Zone, Panama. Syn-types: NMW 14705 (5).

Gambusia latipunctata Meek & Hildebrand, 1913: 87. Type locality: Arrijan, Panama. Holotype: FMNH 7595.

Maximum length: 3.5 cm TL

Distribution: Central America: Panama.

Countries: Panama

Brachyrhaphis hartwegi Rosen & Bailey, 1963

Brachyrhaphis hartwegi Rosen & Bailey, 1963: 87, fig. 41. Type locality: stream tributary to Río Jalapa, which in turn flows into an independent Pacific drainage, the Río Zintalapa, at Finca Esperanza, 450 feet in elevation, longitude 92°36' W., latitude 15°20' N., about 6 km north-northeastern of Escuintla, Soconusco District, Chiapas, Mexico. Holotype: UMMZ 179539.

Maximum length: 3.5 cm TL

Distribution: North and Central America: Mexico to Guatemala.

Countries: Guatemala, Mexico

Brachyrhaphis hessfeldi Meyer & Etzel, 2001

Brachyrhaphis hessfeldi Meyer & Etzel, 2001a: 34, fig. 1. Type locality: ditch near Palenque, 40 km NE from Portobelo (79°23' W. 9°35' N), Colon, Panama. Holotype: MTD F 22534.

Maximum length: 5.5 cm TL

Distribution: Waters west of Canal Zone, Coclé.

Countries: Panama.

Brachyrhaphis holdridgei Bussing, 1967

Brachyrhaphis holdridgei Bussing, 1967: 223, fig. 4. Type locality: Río Madre de Dios, Río Sarapiquí, and Río Arenal drainages on the Atlantic slope of Costa Rica between 50 and about 600 meters elevation [100 miles E of Quebrada los Murcielagos near Arenal, Guanacaste, Costa Rica]. Holotype: LACM 9240-1.

Maximum length: 4 cm TL

Distribution: Central America: Costa Rica.

Countries: Costa Rica

Brachyrhaphis parismina (Meek, 1912)

Gambusia parismina Meek, 1912: 71. Type locality: Parismina, Costa Rica. Holotype: FMNH 7678 [not 7578].

Maximum length: 7 cm TL

Distribution: Central America: Costa Rica.

Countries: Costa Rica

Brachyrhaphis punctifer (Hubbs, 1926)

Trigonophallus punctifer Hubbs, 1926: 49. Type locality: Guibari Creek, a tributary of the Rio Cricamola below Conquantu, on the Caribbean slope of western Panama. Holotype: UMMZ 72573.

Maximum length: 3 cm TL

Distribution: Central America: Panama.

Countries: Panama

Brachyrhaphis rhabdophora (Regan, 1908)

Gambusia rhabdophora Regan, 1908: 457. Type locality: Volcano of Tenorio and Rio Grande de Terraba [Costa Rica]. Syntypes: BMNH 1909.3.13.48-53 (6), 1909.3.13.54-56.

Priapichthys olomina Meek, 1914: 114. Type locality: Orotina, Costa Rica. Holotype: FMNH 7827.

Panamichthys tristani Fowler, 1932: 384. Type locality: Escobal, at 400 meters, Costa Rica. Holotype: ANSP 53935.

Maximum length: 4 cm TL

Distribution: Central America: Costa Rica.

Countries: Costa Rica

Remarks and references: Reznick et al (1993): life history.

Brachyrhaphis roseni Bussing, 1988

Brachyrhaphis roseni Bussing, 1988: 81, fig. 1. Type locality: Quebrada la Palma (elevation 90 m), 3 km W of Paso Canoas. [Costa Rica]. Holotype: LACM 44220-1 [ex UCR 103-4].

Maximum length: 4.42 cm SL

Distribution: Central America: Costa Rica and Panama.

Countries: Costa Rica, Panama

Brachyrhaphis roswithae Meyer & Etzel, 1998

Brachyrhaphis roswithae Meyer & Etzel, 1998: 157, fig. 1. Type locality: brook near El Valle (80°22' W, 08°58' N), Coclé, Panama. Holotype: MTD F 17046.

Maximum length: 5 cm TL.

Distribution: Waters west of Canal Zone, Coclé. Only known from type locality.

Countries: Panama

Brachyrhaphis terrabensis (Regan, 1907)

Gambusia terrabensis Regan, 1907a: 260. Type locality: Rio Grande de Terraba, Pacific Slope. Syntypes: BMNH 1907.2.11.31-32 (2), 1907.2.11.33-36 (4).

Maximum length: 5 cm TL

Distribution: Central America: Costa Rica and Panama.

Countries: Costa Rica, Panama

CARLHUBBSIA

Allophallus Hubbs, 1936: 232. Name preoccupied in Diptera. Type species: *Allophallus kidderi* Hubbs, 1936. Type by original designation. Gender: masculine.

Carlhubbsia Whitley, 1951: 67. Type species: *Allophallus kidderi* Hubbs, 1936. Type by being a replacement name. Gender: feminine.

***Carlhubbsia kidderi* (Hubbs, 1936)**

Allophallus kidderi Hubbs, 1936: 236, pl. 8 (fig. 2). Type locality: Rio Champoton, near a savanna about 18 km. from mouth at Champoton, Campeche. Holotype: UMMZ 102199.

Maximum length: 5 cm TL

Distribution: North and Central America: Champotón River, Campeche, Mexico, and the drainages of San Pedro de Mártir River, El Petén, and de la Pasión River and Alta Vera Paz, Guatemala.

Countries: Guatemala, Mexico

***Carlhubbsia stuarti* Rosen & Bailey, 1959**

Carlhubbsia stuarti Rosen & Bailey, 1959: 5, pl. 1; fig. 1. Type locality: Río Polochic at the "playa," about 0.5 km. east of Panzós, Alta Vera Cruz, Guatemala. Holotype: UMMZ 146084.

Maximum length: 5.5 cm SL

Distribution: Central America: Polochic River and Lake Izabal basins.

Countries: Belize, Guatemala, Panama

CNESTERODON

Cnesterodon Garman, 1895: 43. Type species: *Poecilia decemmaculata* Jenyns, 1842. Type by original designation. Gender: masculine. See Rosa & Costa (1993) for taxonomic revision.

Gulapinnus Langer, 1913: 207. Type species: *Poecilia decemmaculata* Jenyns, 1842. Type by original designation. Gender: masculine.

***Cnesterodon brevirostratus* Rosa & Costa, 1993**

Cnesterodon brevirostratus Rosa & Costa, 1993: 704, fig. 17. Type locality: Brazil, Rio Grande do Sul, Cambará do Sul, Parque Nacional dos Aparados da Serra, Arroio Camisa, tributary to Rio das Antas. Holotype: MZUSP 41399.

Maximum length: 4.39 cm SL

Distribution: South America: Upper Pelotas and Canoas River basins in Uruguay River drainage; Jacuí River as well as the headwaters of the Maquiné River in the Tramandaí River basins and the headwaters of Itajaí-Açu River basin.

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Cnesterodon carnegiei* Haseman, 1911**

Cnesterodon carnegiei Haseman, 1911: 385, pl. 83. Type locality: Serrinha, Paraná. Holotype: FMNH [ex CM 2868] (missing).

Maximum length: 2.97 cm SL

Distribution: South America: Upper Iguazu River and its upper tributaries.

Countries: Brazil.

Remarks and references: See Lucinda & Garavello (2001) for discussion on types and type locality.

Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Cnesterodon decemmaculatus* (Jenyns, 1842)**

Poecilia decem-maculata Jenyns, 1842: 115, pl. 22 (figs. 1, 1a). Type locality: Maldonado [Uruguay]. Syntypes: (2) BMNH 1917.7.14.25-26.

Poecilia gracilis Valenciennes in Cuvier & Valenciennes, 1846: 133. Type locality: environs de Montevideo. Syntypes: MNHN B-0939 (3)

Maximum length: 3.55 cm SL

Distribution: South America: Lower Uruguay, Laguna dos Patos, Negro, and Salado River basins; western drainages of Argentina and small coastal drainages of Uruguay and Argentina.

Countries: Argentina, Brazil, Uruguay, Chile (introduced)

Remarks and references: Jenyns (1842) stated that the types of *Poecilia decemmaculata* were collected by Charles Darwin in a lake in Maldonado. In the same paper, Jenyns also described *Lebias lineata* (= *Jenynsia lineata*) and cited its type-locality as the same as for *Poecilia decemmaculata*. Based on the color pattern of recent samples of *J. lineata* and based on localities from which Darwin made collections, Ghedotti & Weitzman (1996) concluded that Darwin did not actually collect the types in Maldonado, but in the Cebollati River drainage, a tributary of the Mirim Lagoon. Darwin did make a ten-day incursion to the arroyo Polanco, a tributary of Cebollati River: "I stayed ten weeks at Maldonado, in which a nearly perfect collection of the animals, birds, and reptiles, was procured. Before making any observations respecting them, I will give of a little excursion I made as far as the river Polanco, which is about seventy miles distant, in a northerly direction (...)" (Darwin, 1839). As *Poecilia decemmaculata* and *Lebias lineata* have the same type-localities, the same remarks should be applied to the type-locality of *Poecilia decemmaculata*. Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Cnesterodon hypselurus* Lucinda & Garavello, 2001**

Cnesterodon hypselurus Lucinda & Garavello, 2001: 129, fig. 5.

Type locality: Brasil, Paraná, rio Cilada, bridge of road BR 151, rio Paranapanema drainage, Jaguariáva. Holotype: MCP 22741.

Maximum length: 3.05 cm SL

Distribution: South America: Paranapanema River basin.

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Cnesterodon omorgmatos* Lucinda & Garavello, 2001**

Cnesterodon omorgmatos Lucinda & Garavello, 2001: 126, fig. 3.

Type locality: Brasil, Paraná, rio das Torres, rio Iguazu basin, Pinhão. Holotype: MCP 22741.

Maximum length: 3.05 cm SL

Distribution: South America: Iguazu River basin.

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Cnesterodon raddai* Meyer & Etzel, 2001**

Cnesterodon raddai Meyer & Etzel, 2001b: 248, fig. 1. Type

locality: swamp near Resistencia, Rio Paraná basin, Argentina.

Holotype: MTD F 25416.

Maximum length: 2.32 cm SL

Distribution: South America: Paraguay and lower Paraná River basins.

Countries: Argentina, Paraguay

***Cnesterodon septentrionalis* Rosa & Costa, 1993**

Cnesterodon septentrionalis Rosa & Costa, 1993: 706, fig. 18.

Type locality: Brazil, Mato Grosso, Município de Alto Araguaia, swamp near the Córrego do Rancho fountainhead. Holotype: MZUSP 41380.

Maximum length: 3 cm SL

Distribution: South America: Upper Araguaia River basin.

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

FLUVIPHYLAX

Potamophylax Myers & Carvalho in Myers, 1955: 7. Type species:

Potamophylax pygmaeus Myers & Carvalho, 1955. Type by monotypy. Preoccupied in Insecta. Gender: masculine.

Fluviphylax Whitley, 1965: 25. Type species: *Potamophylax pygmaeus* Myers & Carvalho, 1955. Type by being a replacement

name. Gender: masculine.

***Fluviophylax obscurus* Costa, 1996**

Fluviophylax obscurus Costa, 1996: 122, fig. 13. Type locality: Brazil: Estado do Amazonas: Barcelos, rio Negro. Holotype: MZUSP 49208; erroneously published as MZUSP 49207. Maximum length: 1.73 cm SL
Distribution: South America: Upper Negro River basin.
Countries: Brazil
Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Fluviophylax palikur* Costa & Le Bail, 1999**

Fluviophylax palikur Costa & Le Bail 1999: 1029, fig. 1. Type locality: Brazil: Estado do Amapá: rio Taparabu, a right tributary of rio Oiapoque, Juminán, 03°58'35"N, 51°41'06"W. Holotype: MZUSP 52941
Maximum length: 1.2 cm SL.
Distribution: South America: Lower Oyapock River basin.
Countries: Brazil
Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Fluviophylax pygmaeus* (Myers & Carvalho, 1955)**

Potamophylax pygmaeus Myers & Carvalho in Myers, 1955: 7. Type locality: Middle Amazon [Borba, lower Madeira River], 4°24'S, 59°35'W, Amazonas, Brazil.
Maximum length: 2 cm SL
Distribution: South America: Amazon River basin.
Countries: Brazil, Colombia, Venezuela
Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Fluviophylax simplex* Costa, 1996**

Fluviophylax simplex Costa, 1996: 126, fig. 15. Type locality: Brazil: Estado do Amazonas: igarapé de lago José-Açu, Parintins. Holotype: MZUSP 49209.
Maximum length: 1.45 cm SL
Distribution: South America: Solimões-Amazonas River, between Miuá Lake (Codajás) and mouth of the Tapajós River, and lower Trombetas and Tapajós Rivers.
Countries: Brazil
Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Fluviophylax zonatus* Costa, 1996**

Fluviophylax zonatus Costa, 1996: 124, fig. 14. Type locality: Brazil: Estado do Amazonas: Anavilhanas, Rio Negro. Holotype: MZUSP 49207.
Maximum length: 1.53 cm SL
Distribution: South America: Lower Negro River, between Anavilhanas Archipelago and Manaus.
Countries: Brazil
Common names: Barrigudinho (Brazil), Guaru (Brazil)

GAMBUSIA

Gambusia Poey, 1854: 382. Type species: *Gambusia punctata* Poey, 1854. Type by subsequent designation. Gender: feminine. See Greenfield et al. (1982) for taxonomy and distribution of the species in Belize, Rauchenberger (1989) and Rauchenberger et al. (1990) for systematics and biogeography.

Paragambusia Meek, 1904: 133. Type species: *Gambusia nicaraguensis* Günther, 1866. Type by original designation. Gender: feminine.

Heterophallus Regan, 1914b: 65. Type species: *Heterophallus rachovii* Regan, 1914. Type by monotypy. Gender: masculine.

Arthropallus Hubbs, 1926: 38. Proposed as subgenus of *Gambusia*. Type species: *Heterandria patruelis* Baird & Girard, 1853. Type by original designation. Gender: masculine.

Heterophallina Hubbs, 1926: 26. Proposed as subgenus of *Gambusia*. Type species: *Gambusia regani* Hubbs, 1926. Type by original designation. Gender: feminine.

Schizophallus Hubbs, 1926: 40. Proposed as subgenus of *Gambu-*

sia. Type species: *Gambusia holbrookii* Girard, 1859. Type by original designation. Gender: masculine.

Dicerophallus Alvarez, 1952: 95. Type species: *Dicerophallus echeagarayi* Alvarez, 1952. Type by original designation. Gender: masculine.

Flexipennis Hubbs in Rivas, 1963: 334. Type species: *Gambusia vittata* Hubbs, 1926. Type by original designation. Gender: masculine.

Orthophallus Rivas, 1963: 339. Type species: *Gambusia lemaitrei* Fowler, 1950. Type by original designation. Gender: masculine.

***Gambusia affinis* (Baird & Girard, 1853)**

Heterandria affinis Baird & Girard, 1853: 390. Type locality: Rio Medina and Rio Salado [Texas, USA]. Syntypes: ANSP 6974-75 (2); MCZ 41141 (1), 41150 (1).

Heterandria patruelis Baird & Girard, 1853: 390. Type locality: Rio Sabinal; Rio Leona and Rio Neuces, and Elm Creek [Texas, USA]. Syntypes: MCZ 1300 (6).

Gambusia holbrookii Girard 1859a: 62. Type locality: Palatka, e. Florida; Charleston, South Carolina, U.S.A. Syntypes: ANSP 6976-77 (2) Palatka, MCZ 35999 [ex USNM 8301] (5) Charleston, USNM 8301 (45). Name taken from Agassiz manuscript (as *Heterandria holbrookii*), but author of description is Girard.

Gambusia gracilis Girard, 1859a: 121. Type locality: Matamoras [Mexico]. Syntypes: ANSP 6973 (1), MCZ 1309 (1), MNHN [ex USNM 3506] (1), ?USNM 3506 (7, not found).

Gambusia humilis Günther, 1866: 335. Type locality: Matamoras [Mexico]. Syntypes: ANSP 6973 (1), MCZ 1309 (1), MNHN [ex USNM 3506] (1).

Haplochilus melanops Cope, 1870: 457. Type locality: in still waters of the Neuse basin, Wake Co., N. Ca. Syntypes: ANSP 7143-59 (17).

Zygonectes atrilatus Jordan & Brayton, 1878: 84 [footnote]. Type locality: Neuse River, near Goldsboro [sic] [North Carolina, USA]. Syntypes: BMNH 1880.1.21.48 (1), USNM 23464 (1).

Zygonectes brachypterus Cope, 1880: 34. Type locality: Trinity River at Fort Worth [Texas, USA]. Holotype: ANSP 20446.

Zygonectes inurus Jordan & Gilbert, 1882: 143. Type locality: Cache River [Southern Illinois, USA]. Holotype: USNM 29666. Maximum length: 4 cm TL

Distribution: North and Central America: Mississippi River basin from central Indiana and Illinois in USA south to Gulf of Mexico and Gulf slope drainages west to Mexico. One of the species with the widest range of introductions which acquired for itself a near pan-global distribution.

Countries: Bolivia (introduced), Chile (introduced), Mexico, Peru (introduced), USA

***Gambusia alvarezi* Hubbs & Springer, 1957**

Gambusia alvarezi Hubbs & Springer, 1957: 310, fig. 14. Type locality: El Ojo de San Gregorio, Chihuahua, Mexico. Holotype: UMMZ 168979.

Maximum length: 3 cm TL.

Distribution: North America: Only known from El Ojo de San Gregorio, Chihuahua, Mexico, and the adjacent creek.

Countries: Mexico

***Gambusia atrora* Rosen & Bailey, 1963**

Gambusia atrora Rosen & Bailey, 1963: 102, fig. 43. Type locality: ferry across Río Axtla to a shallow area 150 yards upstream, Xilitla, San Luis Potosí, Mexico. Holotype: UMMZ 179999.

Maximum length: 3 cm TL

Distribution: North America: Mexico.

Countries: Mexico

***Gambusia aurata* Miller & Minckley, 1970**

Gambusia aurata Miller & Minckley, 1970: 249, fig. 1. Type locality: lateral canal flowing north off the main canal from Río Mante, about 4 km west of Highway 85 on road at south end of

park on south side of Ciudad Mante, Tamaulipas. Holotype: UMMZ 188736.
Maximum length: 3.02 cm SL
Distribution: North America: Mexico.
Countries: Mexico

***Gambusia beebei* Myers, 1935**

Gambusia beebei Myers, 1935: 305, fig. 274. Type locality: Étang de Miragoâne, Haiti, S. W. end of lake, from Aux Cayes road. Neotype: USNM 203161.
Maximum length: 3.3 cm SL
Distribution: Caribbean Islands: Étang de Miragoane in Tiburon Peninsula, southwestern Haiti.
Countries: Haiti

***Gambusia bucheri* Rivas, 1944**

Gambusia bucheri Rivas, 1944b: 42. Type locality: Rio Jicotea, of the Moa system, at the bridge of the road between Aserrio de Moa and Punta Gorda, Province of Oriente [Cuba]. Holotype: USNM 203149 [ex Rivas coll. 132].
Distribution: Caribbean Islands: Oriente Province, Cuba.
Countries: Cuba

***Gambusia dominicensis* Regan, 1913**

Gambusia dominicensis Regan, 1913a: 989, pl. 99 (fig. 7); Fig. 169c. Type locality: Haiti. Syntypes: BMNH 1913.1.22.10-11 (3 or 4).
Maximum length: 2.5 cm TL
Distribution: Caribbean Islands: Hispaniola Island.
Countries: Dominican Republic, Haiti

***Gambusia echeagarayi* (Alvarez, 1952)**

Dicerophallus echeagarayi Alvarez, 1952: 95, fig. 1. Type locality: Palenque, Chis., Río Michol, en el cruce com la carretera que va de la población a las ruinas. Cuenca del Usumacinta. [Chiapas, Mexico]. Holotype: ENCB-IPN-P 279
Maximum length: 2.94 cm TL
Distribution: North America: Michol River in Chiapas, Mexico.
Countries: Mexico

***Gambusia eurystoma* Miller, 1975**

Gambusia eurystoma Miller, 1975: 19, fig. 5. Type locality: Arroyo del Azufre at Baños de Azufre, 10 km W of Teapa, Tabasco [Mexico] 93° 01' W Long., 17° 34' N Lat., elevation about 150 meters. Holotype: UMMZ 197600.
Maximum length: 3.5 cm TL
Distribution: North America: Mexico.
Countries: Mexico

***Gambusia hispaniolae* Fink, 1971**

Gambusia hispaniolae Fink, 1971a: 57, fig. 4. Type locality: Haiti, Source Trou-Caiman, Cul-de-Sac Plain, Dept. de l'Quest. Holotype: USNM 204865.
Maximum length: 5.18 cm SL
Distribution: Caribbean Islands: Hispaniola Island.
Countries: Dominican Republic, Haiti

***Gambusia hurtadoi* Hubbs & Springer, 1957**

Gambusia hurtadoi Hubbs & Springer, 1957: 307, fig. 13. Type locality: El Ojo de la Hacienda Dolores, seven miles south of Jiminez, Chihuahua, Mexico. Holotype: UMMZ 168975.
Maximum length: 3.1 cm TL
Distribution: North America: Chihuahua (only known from type locality and proximities).
Countries: Mexico

***Gambusia krumholzi* Minckley, 1963**

Gambusia krumholzi Minckley, 1963: 154, fig. 2. Type locality: a small stream (called the Río de Nava by local residents) 5.6 miles SSW of Nava, Coahuila, Mexico, along Mexican Highway 57.

Holotype: UMMZ 180320.
Maximum length: 4 cm TL
Distribution: North America: Mexico.
Countries: Mexico

***Gambusia lemaitrei* Fowler, 1950**

Gambusia lemaitrei Fowler, 1950: 2, fig. 2. Type locality: Totumo Lake, Colombia. Holotype: ANSP 71938.
Maximum length: 3.6 cm SL
Distribution: South America: Colombia.
Countries: Colombia

***Gambusia longispinis* Minckley, 1962**

Gambusia longispinis Minckley, 1962: 391, fig. 1. Type locality: a small marsh adjacent to La Angostura Canal, ca. 4 miles S, 6 miles W of Cuatro Ciénegas, Coahuila [Mexico]. Holotype: UMMZ 179620.
Maximum length: 5 cm TL
Distribution: North America: Cuatro Ciénegas basin in northern Mexico.
Countries: Mexico

***Gambusia luma* Rosen & Bailey, 1963**

Gambusia luma Rosen & Bailey, 1963: 99, fig. 42. Type locality: Puerto Barrios, Izabal, Guatemala. Holotype: UMMZ 143565.
Maximum length: 4.2 cm SL
Distribution: Central America: Guatemala and Honduras.
Countries: Belize, Guatemala, Honduras

***Gambusia manni* Hubbs, 1927**

Gambusia manni Hubbs, 1927: 61. Type locality: fresh-water lake on New Providence, one of the Bahamas. Holotype: UMMZ 72183.
Maximum length: 6.5 cm TL
Distribution: Caribbean Islands: Known only from the Bahamas.
Countries: Bahamas

***Gambusia marshi* Minckley & Craddock, 1962**

Gambusia marshi Minckley & Craddock in Minckley, 1962: 393, fig. 6. Type locality: Río Salado de los Nadadores, near its junction with Río Salado de Monclova, 1 mile S of Hermanas, Coahuila [Mexico]. Holotype: UMMZ 179167.
Maximum length: 2.4 cm SL
Distribution: North America: Northeastern Mexico.
Countries: Mexico
Remarks and references: Meffe (1985): life history.

***Gambusia melapleura* (Gosse, 1851)**

Poecilia melapleura Gosse, 1851: 84, pl. 1 (fig. 3). Type locality: Bluefields, Jamaica. Syntypes: BMNH 1849.12.27.90-95 (7).
Maximum length: 3.4 cm SL
Distribution: Caribbean Islands: Jamaica Island.
Countries: Jamaica

***Gambusia monticola* Rivas, 1971**

Gambusia punctulata monticola Rivas, 1971: 7, fig. 1. Type locality: Rio Yao, a left tributary of Rio Cauto, 15 km upstream from Bueycito, Municipality of Bayamo, Province of Oriente, Cuba. Holotype: USNM 203913.
Distribution: Caribbean Islands: Southeastern Cuba.
Countries: Cuba

***Gambusia myersi* Ahl, 1925**

Gambusia modesta Ahl, 1923: 220. Type locality: Mexico. Synonyms: ZMB 21004 (8). Permanently invalid, preoccupied by *Gambusia modesta* Troschel 1865, replaced by *Gambusia myersi* Ahl 1925.
Gambusia myersi Ahl, 1925: 36, fig.. Type locality: Mexico. Synonyms: ZMB 21004 (8).
Distribution: North America: Mexico.

Countries: Mexico

***Gambusia nicaraguensis* Günther, 1866**

Gambusia nicaraguensis Günther, 1866: 336. Type locality: Lake of Nicaragua. Syntypes: BMNH 1952.12.31.1-5 (5), USNM 151451 (1), ZMB 6069 (1).

Gambusia dovii Regan, 1913a: 986. Type locality: Lake Nicaragua. Holotype: BMNH 1952.12.31.7.

Gambusia mcnieli Fowler, 1916a: 433, fig. 5. Type locality: Panama. Holotype: ANSP 6818.

Gambusia aestiputeus Fowler, 1950b: 87, fig. 42. Type locality: Freshwater well 1/2 mile from San Andres. Holotype: ANSP 71772.

Maximum length: 3 cm SL

Distribution: Central America: Guatemala to Panama.

Countries: Belize, Guatemala, Panama

***Gambusia panuco* Hubbs, 1926**

Gambusia panuco Hubbs, 1926: 30. Type locality: Valles, San Luis Potosí, Mexico; in the Rio Valles, a tributary to the Rio Panuco. Holotype: FMNH 14060.

Maximum length: 3.5 cm TL

Distribution: North America: Panuco River basin.

Countries: Mexico

***Gambusia pseudopunctata* Rivas, 1969**

Gambusia pseudopunctata Rivas, 1969: 784, fig. 1D. Type locality: spring at Roseaux, off the road from Les Cayes to Jérémie, 15 km E of Jérémie, Département du Sud, Haiti. Holotype: USNM 203163.

Maximum length: 3.2 cm SL

Distribution: Caribbean Islands: Hispaniola Island.

Countries: Haiti

***Gambusia punctata* Poey, 1854**

Gambusia punctata Poey, 1854: 384, pl. 32 (fig. 5). Type locality: not mentioned. Syntypes or Poey specimens: ANSP 6978 (1); MCZ 6424 (3), 6393-94 (5, 53); USNM 4867 (9), 120411 [ex MCZ 6394] (1), plus other USNM lots.

Gambusia finlayi Santa Maria, 1956: 96. Type locality: Camagüey, Cuba. No types known. Apparently not available, name assigned to figures only (one male and one female), and based on an unpublished manuscript by Torre; no text or distinguishing features included (see also Rosen & Bailey 1963:101).

Maximum length: 4.8 cm SL

Distribution: Caribbean Islands: Cuba Island.

Countries: Cuba

***Gambusia puncticulata* Poey, 1854**

Gambusia puncticulata Poey, 1854: 386, pl. 31 (fig. 6). Type locality: en el foso de las murallas de la Habana [Cuba]. Lectotype: MCZ 46568 [ex MCZ 6401], designated by Fink 1971b:18.

Gambusia picturada Poey, 1868: 410. Type locality: San Diego de las Banos, Cuba. No types known.

Gambusia melanosticta Regan, 1913: 987. Type locality: Cuba. Syntypes: BMNH 1884.7.7.158-160 (3).

Gambusia nigropunctata Regan, 1913a: 987, fig. 168f. Type locality: Fermina, Bemba, Cuba. Syntypes: BMNH 1879.10.20.2-4 (3).

Gambusia caymanensis Regan, 1913a: 990. Type locality: Grand Cayman. Syntypes: BMNH 1911.3.2.3-4 (2).

Gambusia oligosticta Regan, 1913a: 988, pl. 99 (fig. 1-2); Fig. 169b. Type locality: Jamaica. Syntypes: BMNH 1897.7.1.17-19 (3), 1905.8.16.3-12 (10, now 8); USNM 151460 [ex BMNH 1905.8.16.3-12] (2).

Gambusia hubbsi Breder, 1934: 1, fig. 1. Type locality: Southern part of Andros Island, Bahamas. Holotype: AMNH 12454.

Gambusia howelli Rivas, 1944b: 44. Type locality: brackish-water lagoon near Punta del Este, Isle of Pines [Cuba]. Holotype:

UHMP 454.

Maximum length: 3.58 cm SL

Distribution: Caribbean Islands: Throughout Cuba, Jamaica, Cayman Islands and Bahamas.

Countries: Bahamas, Cayman Islands, Cuba, Jamaica

***Gambusia rachovii* (Regan, 1914)**

Heterophallus rachovii Regan, 1914: 66, fig. A. Type locality: Vera Cruz [Mexico]. Syntypes: BMNH 1914.3.23.16-21 (6).

Gambusia atzi Rosen & Gordon, 1951: 267, fig. 2. Type locality: "Laguna de la Sapote", about one kilometer northwest of Jesus Carranza, Veracruz. Holotype: UMMZ 167098.

Maximum length: 3.5 cm TL

Distribution: North America: Arroyo Santiago Vasques near Jesus Carranza and Laguna de la Sapote in Veracruz, Mexico.

Countries: Mexico

***Gambusia regani* Hubbs, 1926**

Gambusia regani Hubbs, 1926: 28. Type locality: Forlon, Tamaulipas, Mexico; in the Rio Forlon, tributary to the Panuco. Holotype: FMNH 14033.

Maximum length: 3.5 cm TL

Distribution: North America: Tamaulipas, Mexico.

Countries: Mexico

***Gambusia rhizophorae* Rivas, 1969**

Gambusia rhizophorae Rivas, 1969: 791, fig. 2D. Type locality: mangrove swamp at Matheson Hammock, Miami, Dade Co., Florida. Holotype: USNM 203223.

Maximum length: 5 cm TL

Distribution: North America and Caribbean Islands: Southeastern Florida and Cuba Island.

Countries: Cuba, USA

***Gambusia senilis* Girard, 1859**

Gambusia senilis Girard, 1859a: 122. Type locality: Chihuahua River [Grande River drainage, Mexico]. Syntypes: ?MNHN 0418 [ex USNM 3503] (1).

Maximum length: 5.5 cm TL

Distribution: North America: Devils River basin in Grande River drainage, in Texas and Mexico.

Countries: Mexico, USA

***Gambusia sexradiata* Hubbs, 1936**

Gambusia nicaraguensis sexradiatus Hubbs, 1936: 225. Type locality: main Rio Papaloapan at Papaloapan, Oaxaca, Mexico. Holotype: UMMZ 102989.

Maximum length: 2.6 cm SL

Distribution: North and Central America: Nautla River, northern Veracruz, along the Atlantic slope of Campeche, Atlantic drainage of inland Mexico in the states of Oaxaca and Chiapas, presumably across the base of the Yucatan Peninsula to Quintana Roo, south to southern Belize (Moho River drainage). Also found in the Usumacinta River drainage in Guatemala, and in isolated islands in the Petén region.

Countries: Belize, Guatemala, Mexico

***Gambusia speciosa* Girard, 1859**

Gambusia speciosa Girard, 1859a: 121. Type locality: Rio San Diego, one of its affluents, near Cadereita, New León [Mexico]. Syntypes: whereabouts unknown.

Maximum length: 3 cm TL

Distribution: North America: Mexico and USA.

Countries: Mexico, USA

***Gambusia vittata* Hubbs, 1926**

Gambusia vittata Hubbs, 1926: 26. Type locality: Forlon, Tamaulipas, Mexico; in the Rio Forlon, tributary to the Panuco. Holotype: FMNH 14046.

Maximum length: 4.5 cm TL

Distribution: North America: Mexico.

Countries: Mexico

***Gambusia wrayi* Regan, 1913**

Gambusia wrayi Regan, 1913a: 988, pl. 99 (fig. 3-4); fig. 168b.

Type locality: Jamaica. Lectotype: BMNH 1912.12.20.7, designated by Fink (1971a: 61).

Gambusia gracilior Regan, 1913a: 989, pl. 99 (fig. 5-6); Fig. 168c.

Type locality: Jamaica. Syntypes: (13) BMNH 1969.9.8.1-14 (14 now 6).

Maximum length: 3.22 cm SL

Distribution: Caribbean Islands: Jamaica Island.

Countries: Jamaica

***Gambusia xanthosoma* Greenfield, 1983**

Gambusia xanthosoma Greenfield, 1983: 459, fig. 1. Type locality: a mosquito control ditch (Herringbone system 25) constructed through mangroves along a road opposite the Taraqin Manor at West Bay, Grand Cayman, BWI. Holotype: FMNH 94188.

Maximum length: 3.44 cm SL

Distribution: Caribbean Islands: Grand Cayman Island.

Countries: Cayman Islands

***Gambusia yucatanana* Regan, 1914**

Gambusia yucatanana Regan, 1914b: 67, fig. B. Type locality: Progreso, Yucatán [Mexico]. Lectotype: BMNH 1914.3.23.12, designated by Fink, 1971:23.

Gambusia yucatanana australis Greenfield, 1985: 375. Type locality: Belize, Saint George's Cay, Barrier Reef. Holotype: FMNH 94901.

Maximum length: 5.5 cm TL

Distribution: North and Central America: Mexico, Guatemala and Belize.

Countries: Belize, Guatemala, Mexico

Species inquirenda

Heterophallus milleri Radda, 1987a: 127, Fig. 2. Type locality: Río Teapa at Teapa, W side of river, under bridge; Tabasco state [Mexico]. Holotype: UMMZ 184705.

GIRARDINUS

Girardinus Poey, 1854: 383. Type species: *Girardinus metallicus* Poey, 1854. Type by monotypy. Gender: masculine.

Glaridodon Garman, 1895: 40. Type species: *Girardinus uninotatus* Poey, 1861. Type by original designation. Not available name preoccupied in fossil Reptilia. Gender: masculine.

Glaridichthys Garman, 1896: 232. Type species: *Girardinus uninotatus* Poey, 1861. Type by being a replacement name for *Glaridodon* Garman, 1895 preoccupied in fossil Reptilia. Gender: masculine.

Toxus Eigenmann, 1903: 226. Type species: *Toxus riddlei* Eigenmann, 1903. Type by original designation. Gender: masculine.

Allodontium Howell Rivero & Rivas, 1944: 17. Type species: *Heterandria cubensis* Eigenmann, 1904. Type by original designation. Gender: neuter.

Dactylophallus Howell Rivero & Rivas, 1944: 15. Type species: *Girardinus denticulatus* Garman, 1895. Type by original designation. Gender: masculine.

***Girardinus creolus* Garman, 1895**

Girardinus creolus Garman, 1895: 47, pl. 5 (fig. 9). Type locality: Cuba. Syntypes: MCZ 6399 (2), 100254 [ex MCZ 6399a] (8).

Toxus riddlei Eigenmann, 1903: 226, fig. 6. Type locality: San Cristobal [Cuba]. Holotype: CAS 78944 [ex IU 9656] (1 of 2).

Toxus serripennis Rivas, 1958: 283, figs. 1 (5-6). Type locality: Río Taco Taco at Rangel, Province of Pinar del Río [Cuba]. Holotype: USNM 203151 [ex Rivas coll. 69].

Maximum length: 4.4 cm SL

Distribution: Caribbean Islands: Cuba Island.

Countries: Cuba

Remarks and references: Rodriguez et al (1992): phylogenetic position.

***Girardinus cubensis* (Eigenmann, 1903)**

Heterandria cubensis Eigenmann, 1903: 227, fig. 8. Type locality: Los Palacios [Cuba]. Holotype: MCZ 32958 [ex IU 7663].

Maximum length: 2.6 cm SL

Distribution: Caribbean Islands: Cuba Island.

Countries: Cuba

***Girardinus denticulatus* Garman, 1895**

Girardinus denticulatus Garman, 1895: 47. Type locality: Remedios, Cuba. Syntypes: MCZ 1412 (now 4), 36037 (2), 100255 [ex MCZ 1412a] (11); ?USNM 120265 [ex MCZ 1412a] (3), 206325 [ex MCZ 1412a] (1).

Dactylophallus ramsdeni Rivas, 1944b: 48. Type locality: Río Guaso, at the city of Guantánamo, Province of Oriente [Cuba]. Holotype: USNM 203152 [ex Rivas coll. 73].

Maximum length: 5 cm SL

Distribution: Caribbean Islands: Cuba Island.

Countries: Cuba

***Girardinus falcatus* (Eigenmann, 1903)**

Glaridichthys falcatus Eigenmann, 1903: 224, fig. 3. Type locality: San Cristobal [Pinar del Río, Cuba]. Holotype: CAS 22548 [ex IU 9664].

Glaridichthys atherinoides Rivas, 1944a: 3, fig. 2. Type locality: Arroyo Banco de Mabuya, provincia de Camagüey [Cuba]. Holotype: USNM 203155 [ex Rivas coll. 130].

Maximum length: 3.7 cm SL

Distribution: Caribbean Islands: Cuba Island.

Countries: Cuba

***Girardinus metallicus* Poey, 1854**

Girardinus metallicus Poey, 1854: 387, pl. 31 (fig. 8). Type locality: jardín botánico de la Habana y en la zanja de Güines [Cuba]. Possible syntypes: ANSP 6971 (1); MCZ 6407 (11); USNM 652 (7, not found). 120263 [ex MCZ 6407] (4), 37422 (4), 37481 (2), 130031 (3).

Girardinus garmani Eigenmann, 1903: 226, fig. 5. Type locality: Pinar del Río [Cuba]. Holotype: MCZ 32780 [ex IU 9661, ex CAS].

Girardinus pygmaeus Rivas, 1944b: 49. Type locality: Río Negro, of the Hatiguanico system (Ciénaga de Zapata), at Los Cristales, Province of Matanzas [Cuba]. Holotype: USNM 203153 [ex Rivas coll. 128].

Maximum length: 5 cm TL

Distribution: Caribbean Islands: Cuba Island.

Countries: Cuba

***Girardinus microdactylus* Rivas, 1944**

Girardinus microdactylus Rivas, 1944b: 51. Type locality: spring-fed creek, tributary to Río Taco Taco, of the San Cristobal system, at Jardin de Blain, north-west of Santa Cruz de los Pinos, Province of Pinar del Río [Cuba]. Holotype: USNM 203154 [ex Rivas coll. 110].

Maximum length: 3.3 cm SL

Distribution: Caribbean Islands: Cuba Island.

Countries: Cuba

***Girardinus uninotatus* Poey, 1860**

Girardinus uninotatus Poey, 1860: 309. Type locality: dans la rivière de Tacotaco, près de Santa-Cruz, plus de vingt lieues de la Havane. Syntypes and or Poey specimens: MCZ 6243 (6); USNM 120264 [ex MCZ 6406] (6), 37432 (2), 37465 (24).

Glaridichthys torralbasi Eigenmann, 1903: 225, fig. 4. Type locality: Pinar del Río [Cuba]. Holotype: Apparently MCZ 32957, not

CAS [ex CM 9662].
Maximum length: 4.7 cm SL
Distribution: Caribbean Islands: Cuba Island.
Countries: Cuba

HETERANDRIA

Heterandria Agassiz, 1853: 135. Type species: *Heterandria formosa* Girard, 1859. Gender: feminine. Type by subsequent designation by Bailey (1952).

Pseudoxiphophorus Bleeker, 1860: 440. Type species: *Xiphophorus bimaculatus* Heckel, 1848. Gender: masculine.

Poeciliodes Steindachner, 1863: 176. Type species: *Poeciliodes bimaculatus* Steindachner, 1863. Type by monotypy. Gender: masculine.

***Heterandria anzueto* Rosen & Bailey, 1979**

Heterandria anzueto Rosen & Bailey in Rosen, 1979: 324, fig. 11. Type locality: Río Achuelo, south side of Gualán, Río Motagua drainage, Zacapa, Guatemala. Holotype: AMNH 36319.

Maximum length: 6 cm TL

Distribution: Central America: Basin of Motagua River in Departments of El Progreso, Zacapa, Chiquimula, and Izabal, Guatemala, and Copán, Honduras, and basin of Lempa River in the Departments of Chiquimula and Jutiapa, Guatemala.

Countries: Guatemala, Honduras

***Heterandria attenuata* Rosen & Bailey, 1979**

Heterandria attenuata Rosen & Bailey in Rosen, 1979: 315, fig. 8. Type locality: Río Candelaria Yalicar about halfway between source and mouth, Río Usumacinta system via an unknown subterranean connection, Alta Verapaz, Guatemala. Holotype: AMNH 36332.

Maximum length: 6.2 cm SL

Distribution: Central America: Candelaria Yalicar River in Alta Verapaz, Guatemala.

Countries: Guatemala

***Heterandria bimaculata* (Heckel, 1848)**

Xiphophorus bimaculatus Heckel, 1848: 297, pl. 9 (figs. 1-2). Type locality: Veracruz, Mexico.

Poeciliodes bimaculatus Steindachner, 1863: 176 [15], pl. 4 (figs. 2-2a). Type locality: Kleine, kalte Gebirgsbäche bei Tepeaca (Tepeyaca) [corrected to Teapa, boundary between Chiapas and Tabasco, Mexico]. Syntypes: NMW

Pseudoxiphophorus reticulatus Troschel in Müller, 1865: 633. Type locality: Mexico. Holotype: ZMB (lost).

Pseudoxiphophorus pauciradiatus Regan, 1904: 256. Type locality: Orizaba, Mexico. Syntypes: BMNH 1894.1.27.19-26 (8).

Pseudoxiphophorus bimaculatus taeniatus Regan, 1905: 363. Type locality: San Domingo de Guzman. Syntypes: (5) BMNH.

Pseudoxiphophorus bimaculatus peninsulae Hubbs, 1936: 230, pl. 8 (fig. 1). Type locality: somewhere near Progreso. Holotype: UMMZ 102078.

Maximum length: 7 cm TL

Distribution: North and Central America: Mexico to Belize, Honduras and Guatemala.

Countries: Belize, Guatemala, Honduras, Mexico

***Heterandria cataractae* Rosen, 1979**

Heterandria cataractae Rosen, 1979: 328, fig. 12. Type locality: large jungle stream, the Arroyo Sachicha (tributary to, but isolated above a fall from, the Río Senizo), about 20 km. northwest of Cobán, 6-8 km north of Cancal, Río Salinas drainage, Río Usumacinta system, Alta Verapaz, Guatemala. Holotype: AMNH 36381.

Maximum length: 6 cm SL

Distribution: Central America: Arroyo Sachicha, one of two tributaries to the Senizo River, which flows to the upper Chixoy River

(Salinas River) at Chamá, Alta Verapaz, and isolated from all other flowing water by a downstream ribbon fall.

Countries: Guatemala

***Heterandria dirempta* Rosen, 1979**

Heterandria dirempta Rosen, 1979: 329, fig. 13. Type locality: clear meandering tributary to Río Chajmaic, 15 km. (by road) south of Sebol, Río de la Pasión drainage, Río Usumacinta system, Alta Verapaz, Guatemala. Holotype: AMNH 36380.

Maximum length: 6.4 cm TL

Distribution: Central America: Chajamaic River in Alta Verapaz, Guatemala.

Countries: Guatemala

***Heterandria jonesii* (Günther, 1874)**

Mollienesis jonesii Günther, 1874: 371. Type locality: in a volcanic lake, Alcohuaca, near Huamantla, in Mexico, 8000 feet above the level of the sea. Syntypes: (several) BMNH 1873.1.13.1.

Maximum length: 4.5 cm TL

Distribution: North America: Guayalejo River in southern Tamaulipas to Tehuacan River in Puebla.

Countries: Mexico

***Heterandria litoperas* Rosen & Bailey, 1979**

Heterandria litoperas Rosen & Bailey in Rosen, 1979: 320, fig. 9.

Type locality: tributary to Río Cahabón, 1 km. north-northwest of Lanquín, Río Polochic system, Alta Verapaz, Guatemala. Holotype: AMNH 36328.

Maximum length: 5.8 cm SL

Distribution: Central America: Polochic River basin, including both Polochic River and Cahabón River as far as streams flowing into Izabal Lake, Departments of Alta Verapaz and Izabal.

Countries: Guatemala

***Heterandria obliqua* Rosen, 1979**

Heterandria obliqua Rosen, 1979: 321, fig. 10. Type locality: Upper Río San Ramón basin, 2-3 km. (by air) above subterranean channel, Río Lacantún drainage, Río Usumacinta system, Huehuetenango, Guatemala. Holotype: AMNH 36311.

Maximum length: 6.2 cm SL

Distribution: Central America: Usumacinta River basin: Dolores River System (with a subterranean connection to Salinas River, in Department Alta Vera Paz; and Ramón River System (with a subterranean connection to Ixcán River – Lacantún River).

Countries: Guatemala

LIMIA

Limia Poey, 1854: 383. Type species: *Limia cubensis* Poey, 1854.

Type by subsequent designation. Gender: feminine. The genus *Limia* originally proposed by Poey (1854), was later listed as a subgenus of *Poecilia* by Rosen and Bailey (1963) and Parenti and Rauchenberger (1989). Rivas (1978; 1980) resurrected the genus. splitting in subgenera and species-groups. Farr (1984) survey of courtship display behavior. Chambers (1987) studied the structural variation of gonopodium. Hamilton (2001) studied the intrageneric relationships based on molecular data. Rodriguez (1997) discussed the phylogenetic position.

Acropoecilia Hilgendorf, 1889: 52. Type species: *Poecilia tridens* Hilgendorf, 1889. Type by monotypy. Gender: feminine.

Odontolimia Rivas, 1980: 29. Type species: *Limia grossidens* Rivas, 1980. Type by original designation. Gender: feminine.

***Limia caymanensis* Rivas & Fink, 1970**

Limia caymanensis Rivas & Fink, 1970: 271, fig. 1. Type locality: Coastal lagoon 2 miles west of Old Man Bay, Grand Cayman. Holotype: USNM 203511.

Maximum length: 3.18 cm SL

Distribution: Caribbean Islands: Grand Cayman Island.

Countries: Cayman Islands

***Limia dominicensis* (Valenciennes, 1846)**

Poecilia dominicensis Valenciennes in Cuvier & Valenciennes, 1846: 131, pl. 525-526, top. Type locality: Saint-Domingue]. Syntypes: BMNH 1913.1.25.1-2 [ex MNHN] (2); MNHN 1893 (13), 4390 (20), B-2882 [ex 4390] (1); USNM 94584 [ex MNHN] (2).

Platypoecilus dominicensis Evermann & Clark, 1906: 852, fig. 2. Type locality: small stream in San Francisco Moutains in the interior of Santo Domingo, some 40 miles from Santo Domingo city [Dominican Republic]. Holotype: USNM 53277. Secondarily preoccupied in *Poecilia* by *Poecilia dominicensis* Valenciennes, 1846, replaced by *Poecilia montana* Rosen & Bailey, 1963.

Poecilia montana Rosen & Bailey, 1963: 48. Type locality: Small stream in San Francisco Mts., Santo Domingo [Dominican Republic]. Holotype: USNM 53277. Replacement name for *Platypoecilus dominicensis* Evermann & Clark 1906, secondarily preoccupied in *Poecilia* by *Poecilia dominicensis* Valenciennes 1846.

Maximum length: 2.6 cm SL

Distribution: Caribbean Islands: Hispaniola Island.

Countries: Dominican Republic, Haiti

***Limia fuscomaculata* Rivas, 1980**

Limia fuscomaculata Rivas, 1980: 31. Fig 1c. Type locality: Southwest bight of Lake Miragoane, Dept. de l'Ouest, Haiti. Holotype: USNM 220525.

Distribution: Caribbean Islands: Lake Miragoâne, southwestern Haiti.

Countries: Haiti.

***Limia garnieri* Rivas, 1980**

Limia garnieri Rivas, 1980: 31, fig. 2b. Type locality: North end of Lake Miragoane, Dept. de l'Ouest, Haiti. Holotype: USNM 220527.

Maximum length: 2.6 cm SL

Distribution: Caribbean Islands: Lake Miragoâne, southwestern Haiti.

Countries: Haiti

***Limia grossidens* Rivas, 1980**

Limia grossidens Rivas, 1980: 29, fig. 1b. Type locality: North end of Lake Miragoane, Dept. de l'Ouest, Haiti. Holotype: USNM 220523.

Maximum length: 3.92 cm SL

Distribution: Caribbean Islands: Lake Miragoâne, southwestern Haiti.

Countries: Haiti

***Limia heterandria* (Regan, 1913)**

Limia heterandria Regan, 1913a: 1017, pl. 101 (figs. 3-4). Type locality: La Guayra [Guaíra], Venezuela. Syntypes: BMNH 1909.4.2.30-32 (3).

Maximum length: 1.95 cm TL

Distribution: South America: Venezuela.

Countries: Venezuela

***Limia immaculata* Rivas, 1980**

Limia immaculata Rivas, 1980: 32, fig. 2d. Type locality: North end of Lake Miragoane, Dept. de l'Ouest, Haiti. Holotype: USNM 220529.

Maximum length: 2.13 cm SL

Distribution: Caribbean Islands: Lake Miragoâne, southwestern Haiti.

Countries: Haiti

***Limia melanogaster* (Günther, 1866)**

Poecilia melanogaster Günther, 1866: 345. Type locality: _____? North America ? Jamaica ? [sic] Syntypes: BMNH 1848.1.12.1546-1550 (5).

Maximum length: 4 cm SL

Distribution: Caribbean Islands: Jamaica Island.

Countries: Haiti, Jamaica

***Limia melanotata* Nichols & Myers, 1923**

Limia melanotata Nichols & Myers, 1923: 1. Type locality: Las Lagas [Lajas], on Étang Saumâtre, San Domingo [Haiti, West Indies]. Holotype: AMNH 8220.

Maximum length: 5 cm SL

Distribution: Caribbean Islands: Hispaniola Island.

Countries: Dominican Republic, Haiti

***Limia miragoanensis* Rivas, 1980**

Limia miragoanensis Rivas, 1980: 33, fig. 3b. Type locality: North. end of Lake Miragoane, Dept. de l'Ouest, Haiti. Holotype: USNM 220531.

Maximum length: 3.02 cm SL

Distribution: Caribbean Islands: Lake Miragoâne, southwestern Haiti.

Countries: Haiti

***Limia nigrofasciata* Regan, 1913**

Limia arnoldi Regan, 1913a: 1016, pl. 101 (fig. 5). Type locality: Miragoâne, Haiti. Syntypes: BMNH 1912.8.30.2-3 (3), 1912.9.4.15-21 (9); USNM 151462 [ex BMNH 1912.9.4.21] (1).

Limia nigrofasciata Regan, 1913: 1015, pl. 101 (figs. 1-2). Type locality: Miragoâne, Haiti. Syntypes: BMNH 1913.3.6.21 (1), 1913.3.6.30-31 (2), 1912.7.25.15 (1).

Maximum length: 5.2 cm SL

Distribution: Caribbean Islands: Hispaniola Island.

Countries: Haiti

***Limia ornata* Regan, 1913**

Limia ornata Regan, 1913a: 1016, pl. 101 (fig. 7). Type locality: Haiti. Syntypes: (5) BMNH 1912.9.4.12-14 plus BMNH 1913.3.6.34 (6, in 1 jar).

Maximum length: 4 cm SL

Distribution: Caribbean Islands: Lake Miragoane, southwestern Haiti.

Countries: Haiti

***Limia pauciradiata* Rivas, 1980**

Limia pauciradiata Rivas, 1980: 34, fig. 3d. Type locality: Grand Riviere du Nord at town of Grand Riviere, Dept. du Nord, Haiti. Holotype: USNM 220533.

Maximum length: 3.5 cm SL

Distribution: Caribbean Islands: Grand Rivière du Nord, northeastern Haiti.

Countries: Haiti

***Limia perugiae* (Evermann & Clark, 1906)**

Platypoecilus perugiae Evermann & Clark, 1906: 851, fig. 1. Type locality: small stream in San Francisco Moutains, Santo Domingo [Dominican Republic]. Holotype: USNM 53278 (poor condition).

Maximum length: 10 cm TL

Distribution: Caribbean Islands: Eastern Hispaniola Island.

Countries: Dominican Republic

***Limia rivasi* Franz & Burgess, 1983**

Limia (Limia) rivasi Franz & Burgess, 1983: 51, figs. 1-3. Type locality: 1 km southeast of Anse à Galet, Ile de la Gonave, Dépt. de l'Ouest, Haiti, West Indies. Holotype: UF 31434.

Maximum length: 3.1 cm SL

Distribution: Caribbean Islands: Western Hispaniola Island.

Countries: Haiti

***Limia sulphurophila* Rivas, 1980**

Limia sulphurophila Rivas, 1980: 36, fig. 4d. Type locality: Balneario (spa) La Zurza, a sulfur spring 5 km WNW of Duverge, Prov. of Independencia, Dominican Republic. Holotype: MCZ 54401.

Maximum length: 3.92 cm SL

Distribution: Caribbean Islands: Eastern Hispaniola Island.

Countries: Dominican Republic

***Limia tridens* (Hilgendorf, 1889)**

Poecilia (Acropoecilia) tridens Hilgendorf, 1889: 52. Type locality: Port-au-Prince. Lectotype: ZMB 30958 [ex ZMB 12758], designated in Paepke & Seegers 1986:175.

Maximum length: 3 cm TL

Distribution: Caribbean Islands: Hispaniola Island.

Countries: Dominican Republic, Haiti

***Limia versicolor* (Günther, 1866)**

Girardinus versicolor Günther, 1866: 352. Type locality: San Domingo. Syntypes: (at least 2) BMNH 1857.10.28.64 (?).

Maximum length: 3.3 cm SL

Distribution: Caribbean Islands: Eastern Hispaniola Island.

Countries: Dominican Republic

***Limia vittata* (Guichenot, 1853)**

Poecilia vittata Guichenot, 1853: 146, pl. 5 (fig. 1). Type locality: Cuba. Syntypes: MNHN 4398 (now 4), B-2883 [ex MNHN 4398] (1).

Limia cubensis Poey, 1854: 388, pl. 31 (fig. 12). Type locality: not mentioned. Syntypes: (apparently 2 of following were basis of description) ANSP 6814 (1), MCZ 6403 (now 55), plus some to L. Rivas; USNM 649 (6, missing)

Limia pavonina Poey, 1876: 184 [142]. Type locality: Havana, Cuba. Holotype: MCZ 6400.

Maximum length: 8 cm TL

Distribution: Caribbean Islands: Cuba Island.

Countries: Cuba

***Limia yaguajali* Rivas, 1980**

Limia yaguajali Rivas, 1980: 35, fig. 4b. Type locality: Rio Yaguajal at Santiago Rodriguez (Sabaneta), Prov. of Rodriguez, Dominican Republic. Holotype: USNM 220535.

Maximum length: 3.75 cm SL

Distribution: Caribbean Islands: Yaguajal River, Dominican Republic. A series from Riviere du Limbe at Limbe, Departement du Nord, northeastern Haiti may also be referred to this species.

Countries: Dominican Republic, Haiti (?)

***Limia zonata* (Nichols, 1915)**

Heterandria zonata Nichols, 1915: 603, fig. 3. Type locality: San Juan River (freshwater) at Samana, Santo Domingo [Dominican Republic]. Holotype: AMNH 5232.

Maximum length: 3 cm SL

Distribution: Caribbean Islands: San Juan River in eastern Hispaniola Island.

Countries: Dominican Republic

MICROPOECILIA

Micropoecilia Hubbs, 1926: 73. Type species: *Poecilia vivipara parae* Eigenmann, 1894. Type by original designation. Gender: feminine.

***Micropoecilia branneri* (Eigenmann, 1894)**

Poecilia branneri Eigenmann, 1894: 629. Type locality: Santarem. Syntypes: (23) SU 2158 (2), 22550 [ex IU 5082] (2), 22551 [ex IU 5084] (2).

Poecilia heteristia Regan, 1909: 235. Type locality: Para [Pará, Brazil]. Syntypes: BMNH 1908.12.5.23-24 (2).

Maximum length: 3 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Micropoecilia bifurca* (Eigenmann, 1909)**

Acanthophaecelus bifurcus Eigenmann, 1909: 52. Type locality: Christianburg. Holotype: FMNH 53539 [ex CM 1088].

Maximum length: 3 cm TL

Distribution: South America: Amazon River basin.

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Micropoecilia parae* (Eigenmann, 1894)**

Poecilia vivipera parae [sic] Eigenmann, 1894: 628. Type locality: in the ditches of the Rua das Mongubas of Para. Syntypes: (about 150) CAS 22552 [ex IU 5079] (25).

Acanthophaecelus melanzonus Eigenmann, 1909: 51. Type locality: Georgetown trenches. Holotype: FMNH 52717 [ex CM 1086].

Maximum length: 3 cm TL

Distribution: South America: Guyana to the Amazon River delta.

Countries: Brazil, French Guiana, Guyana, Suriname

Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Micropoecilia picta* (Regan, 1913)**

Poecilia picta Regan, 1913a: 1007, pl. 100 (fig. 1-2); Fig.173a.

Type locality: Demerara. Syntypes: (many) BMNH 1872.6.11.11 (?), MNHN 1913-0226 [ex BMNH] (2), USNM 151459 (4).

Maximum length: 3 cm TL

Distribution: South America: From Trinidad to the Amazon River delta.

Countries: Brazil, French Guiana, Guyana, Trinidad and Tobago

Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Micropoecilia minima* (Costa & Sarraf, 1997)**

Poecilia minima Costa & Sarraf, 1997: 186, fig. 1. Type locality: Brazil: Estado do Pará: stream (igarapé) in Ourém, rio Guamá basin. Holotype: MPEG 3393.

Maximum length: 2.36 cm SL

Distribution: South America: Guamá River basin (only known from type locality).

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

NEOHETERANDRIA

Neoheterandria Henn, 1916: 117. Type species: *Neoheterandria*

elegans Henn, 1916. Type by monotypy. Gender: feminine.

Allogambusia Hubbs, 1924: 8 [footnote]. Type species: *Gambusia tridentiger* Garman, 1895. Type by original designation. Gender: feminine.

***Neoheterandria cana* (Meek & Hildebrand, 1913)**

Gambusia cana Meek & Hildebrand, 1913: 87. Type locality: Rio Satiganti, Cana [Darién], Panama. Holotype: FMNH 7596.

Maximum length: 2.5 cm TL

Distribution: Central America: Panama.

Countries: Panama

***Neoheterandria elegans* Henn, 1916**

Neoheterandria elegans Henn, 1916: 118, pl. 19 (fig. 4). Type locality: Rio Truando, a tributary of the Lower Atrato, in Colombia. Holotype: FMNH 57007 [ex CM 5823].

Maximum length: 2 cm TL

Distribution: South America: Truando River, a tributary of the Atrato River basin.

Countries: Colombia

***Neoheterandria tridentiger* (Garman, 1895)**

Gambusia tridentiger Garman, 1895: 89, pl. 4 (fig. 10). Type locality: Isthmus of Panama, fresh waters. Syntypes: MCZ 6389

(orig. 10, now 7), 100253 [ex MCZ 6389a] (11); USNM 120260 [ex MCZ 6389a] (3).

Maximum length: 2.5 cm TL

Distribution: Central America: Toro Point, Fort Sherman, Canal Zone, and Chame and Arrijan Rivers.

Countries: Panama

PAMPHORICHTHYS

Pamphoria Regan, 1913a: 1003. Type species: *Cnesterodon scalpridens* Garman, 1895. Type by monotypy. Gender: feminine.

Pamphorichthys Regan, 1913a: 1003. Type species: *Heterandria minor* Garman, 1895. Type by original designation. Gender: masculine.

Parapoecilia Hubbs, 1924: 11 [footnote]. Type species: *Limia hollandi* Henn, 1916. Type by original designation. Gender: feminine.

***Pamphorichthys araguaiensis* Costa, 1991**

Pamphorichthys araguaiensis Costa, 1991: 40, fig. 1. Type locality: Brésil: Goiás: lagune près d'Aruana, bassin de l'Araguaia. Holotype: MZUSP 42313.

Maximum length: 2.45 cm SL

Distribution: South America: Araguaia-Tocantins and Xingu River basins.

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Pamphorichthys hasemani* (Henn, 1916)**

Heterandria hasemani Henn, 1916: 116, pl. 20 (fig. 1). Type locality: Puerto Suarez, Bolivia (Paraguay Basin). Holotype: FMNH 55874 [ex CM 4663].

Maximum length: 1.38 cm SL

Distribution: South America: Paraguay River drainage.

Countries: Bolivia (probably), Brazil

Remarks and references: *Pamphorichthys hasemani* occurs in the Pantanal Brasileiro (upper portions of drainage of the Paraguay River in Mato Grosso. Although its type-locality is Puerto Suárez (Bolivia), no record from the west side of Paraguay River basin is available. The absence of records is probably related to the lack of collecting efforts (Figueiredo, 1997).

Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Pamphorichthys hollandi* (Henn, 1916)**

Limia hollandi Henn, 1916: 138. Pl. 19 (fig. 3). Type locality: Penedo, Rio San Francisco. Holotype: FMNH 55861 [ex CM 4643a].

Maximum length: 2.1 cm SL

Distribution: South America: São Francisco River basin and one record from the Parnaíba River basin (Figueiredo, 1997).

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Pamphorichthys minor* (Garman, 1895)**

Heterandria minor Garman, 1895: 92, pl. 4 (fig. 8). Type locality: Villa Bella [Parintins], Brazil. Syntypes: AMNH 22647 [ex MCZ 6254] (5, c&s); MCZ 6254 [not 6294] (orig. 33, now 20); USNM 120268 [ex MCZ 6254] (6).

Maximum length: 1.7 cm SL

Distribution: South America: Amazon River basin, between Santarém and Manaus.

Countries: Brazil

Remarks and references: Rosen & Bailey (1963) have misinterpreted the type locality as Vila Bela at Mato Grosso. Actually, Villa Bella or Villa Bella da Imperatriz corresponds to the city of Parintins, Amazonas. Syntypes were labelled from Villa Bella da Imperatriz (Agassiz, 1855). See Figueiredo (1997)

Common names: Barrigudinho (Brazil), Guaru (Brazil)

***Pamphorichthys scalpridens* (Garman, 1895)**

Cnesterodon scalpridens Garman, 1895: 45, pl 8 (fig. 17). Type locality: Amazon basin: Santarém; Obidos; Tapajós; Villa Bella; Trombetas. Syntypes: MCZ 6261 (1), 6355 (1), 6830 (1), 6839 (6).

Maximum length: 2.48 cm SL

Distribution: South America: Amazon River channel and Tapajós River basin.

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

PHALLICHTHYS

Phallichthys Hubbs, 1924: 10 [footnote]. Type species: *Poeciliopsis isthmensis* Regan, 1913. Type by original designation. Gender: masculine.

***Phallichthys amates* (Miller, 1907)**

Poecilia amates Miller, 1907: 108, fig. 1. Type locality: Pond and its outlet at Los Amates. Holotype: CAS 22554 [ex IU 11375].

Poecilia pittieri Meek, 1912: 71. Type locality: La Junta, Costa Rica. Holotype: FMNH 7680 [not 7580].

Poeciliopsis isthmensis Regan, 1913a: 997, pl. 100 (fig. 3-4); Fig. 171b. Type locality: Colon, Panama. Syntypes: (12) BMNH 1913.1.22.14-16.

Maximum length: 3 cm TL

Distribution: Central America: Atlantic drainages, from southern Guatemala to Costa Rica and Panama.

Countries: Costa Rica, Guatemala, Panama

***Phallichthys fairweatheri* Rosen & Bailey, 1959**

Dextripennis evides Turner, 1940: 89 (nomen nudum).

Phallichthys fairweatheri Rosen & Bailey, 1959: 24. Type locality: Río San Pedro de Mártir, or a branch, about ¼ mile below Laguna de Yalác, some 6 leagues (by river) from El Passo de los Caballos, in the Usumacinta River basin, El Petén, Guatemala. Holotype: UMMZ 172456.

Maximum length: 3.75 cm SL

Distribution: North and Central America: Mexico to Guatemala and Honduras.

Countries: Belize, Guatemala, Honduras, Mexico

***Phallichthys quadripunctatus* Bussing, 1979**

Phallichthys quadripunctatus Bussing, 1979: 3, fig. 2. Type locality: small tributary of the Rio Sixaola, 0.5 km NE of Chase on road between Puerto Viejo and Bratsi, Limón Province, Costa Rica. Holotype: LACM 36018-1.

Maximum length: 1.5 cm SL

Distribution: Central America: Sixaola River basin.

Countries: Costa Rica

***Phallichthys tico* Bussing, 1963**

Phallichthys tico Bussing, 1963: 3, fig. 1. Type locality: Río Puerto Viejo 5.5 kilometers downstream from junction with the Río Sarapiquí and 6.5 kilometers SE of the Pueblo of Puerto Viejo, Sarapiquí drainage, Provincia de Heredia, Costa Rica. Holotype: LACM 2780.

Maximum length: 2.5 cm SL

Distribution: Central America: Upper San Juan River in Costa Rica.

Countries: Costa Rica

PHALLOCEROS

Phalloceros Eigenmann, 1907: 431. Type species: *Girardinus caudimaculatus* Hensel, 1868. Type by original designation. Gender: masculine.

***Phalloceros caudimaculatus* (Hensel, 1868)**

Girardinus caudimaculatus Hensel, 1868: 362. Type locality: Costa da Serra bei S. Leopoldo in Brunnen und Gräben gesammelt. Syntypes: (41) ZMB 7425-26 (2, 5), 31496 (25).

Phalloceros caudomaculatus var. *reticulata* Stoye 1935: 61, pl. 10 (top fig.). No locality. Nomen nudum.

Maximum length: 6.5 cm SL

Distribution: South America: Upper Tocantins drainage, Atlantic coastal river drainages from Bahia State, southward to Uruguay Argentina and Paraguay.

Countries: Argentina, Brazil, Paraguay, Uruguay

Common names: Barrigudinho (Brazil), Guaru (Brazil)

Remarks and references: *Phalloceros caudimaculatus* probably is a species complex of several similar species.

PHALLOPTYCHUS

Phalloptychus Eigenmann, 1907: 430. Type species: *Girardinus januarius* Hensel, 1868. Type by original designation. Gender: masculine.

Phalloptychus eigenmanni Henn, 1916

Phalloptychus eigenmanni Henn, 1916: 121, pl. 20 (fig. 2). Type locality: Alagoinhas, Rio Catu, Bahia. Holotype: FMNH 55876 [ex CM 4665].

Maximum length: 2.5 cm SL

Distribution: South America: Catu River in Alagoinhas, Bahia State.

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

Phalloptychus januarius (Hensel, 1868)

Girardinus januarius Hensel, 1868: 360. Type locality: Rio de Janeiro. Syntypes: (41) ZMB 7422-24 (2, 4, 1), 31479 (20).

Maximum length: 2.5 cm SL

Distribution: South America: Coastal drainages from Rio de Janeiro to Paraná States.

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

Phalloptychus iheringii (Boulenger, 1889)

Girardinus iheringii Boulenger, 1889: 266. Type locality: Rio Grande do Sul. Restricted by Ihering (1893: 29) to "an der Mündung des Rio Camaquã" [= in the mouth of Camaquã River]. Syntypes: BMNH 1886.1.21.73-82; SU 1132 (1).

Maximum length: 3.41 cm SL

Distribution: South America: Coastal drainages in Santa Catarina and Rio Grande do Sul States.

Countries: Brazil.

Remarks and references: Boulenger (1889) described *Girardinus iheringii* in honour of Hermann von Ihering who collected and sent him the specimens on which the description was based (Ihering, 1893). This name has subsequently been used by Eigenmann & Eigenmann (1891) referring to Rio Grande do Sul specimens. Boulenger originally cited the type-locality as "Rio Grande do Sul", probably because it was the only collection information he had. Ihering (1893) states that type-specimens has been collected "an der Mündung des Rio Camaquã" [=in the mouth of the Camaquã River], thus restricting the type-locality. In the same paper, however, Ihering claimed that *G. iheringii* should be regarded as a junior synonym of *G. januarius*, based on information provided in letter by Hingeldorf. Presumably, for this reason, subsequent authors have considered both names synonyms.

Common names: Barrigudinho (Brazil), Guaru (Brazil)

PHALLOTORYNUS

Phallotorynus Henn, 1916: 126. Type species: *Phallotorynus fasciolatus* Henn, 1916. Type by monotypy. Gender: masculine.

Phallotorynus fasciolatus Henn, 1916

Phallotorynus fasciolatus Henn, 1916: 129. Pl. 21 (fig. 1). Type locality: One mile north of Jacarehy, São Paulo, Brazil, from the basin of the Rio Parahyba. Holotype: FMNH 55061 [ex CM 3752].

Maximum length: 2.5 cm SL

Distribution: South America: Rio Paraíba do Sul basin in São Paulo State.

Countries: Brazil

Common names: Barrigudinho (Brazil), Guaru (Brazil)

Phallotorynus jucundus Ihering, 1930

Phallotorynus jucundus Ihering, 1930: 98, fig. 9. Type locality: Corrego de Rincão, Est. de São Paulo, affluente do rio Mogyguassú. Holotype. Instituto Biológico de São Paulo, probably lost.

Maximum length: 3 cm SL

Distribution: South America: Upper Pardo River basin in Grande River drainage.

Countries: Brazil.

Remarks and references: Ihering (1930) original description does not explicitly designate the type-material of *P. jucundus*. Ihering probably described *P. jucundus* based on material housed in the Instituto Biológico de São Paulo. Although, Ihering did not expressly designate the type specimens, the material from which he made the description, should be regarded as the type series on the basis of the Article 72.4.1.1 of the fourth edition of the International Code of Zoological Nomenclature (ICZN, 1999). However, our effort to locate the type-material was unfruitful. The Instituto Biológico de São Paulo had a small collection of fishes, now belonging to MZUSP. This collection has been transferred to the MZUSP a long time ago (Oyakawa, in litt., 1999). However, we were not able to locate the types in MZUSP. The type catalogues of Britski (1969) and Oyakawa (1996) do not mention this type-material. Similar situation occurs with the three other Siluriformes species described by Ihering in the same paper: *Pseudotegophilus scarificator*, *Glanidium neivai* and *Bunocephalus larai*. Mees (1989) states based in a letter from Britski that the types of *B. larai* are probably lost. So, it let us to conclude that the types of *P. jucundus* are probably lost as well.

Common names: Barrigudinho (Brazil), Guaru (Brazil)

Phallotorynus victoriae Oliveros, 1983

Phallotorynus victoriae Oliveros, 1983: 19, fig 2. Type locality: madrejón El Negro, isla Los Mellados (Santa Fe). Holotype: Inst. Nac. Limnología 10.

Maximum length: 2.3 cm SL.

Distribution: South America: Lower and middle Paraná River drainage in Caaguazú, Misiones and Alto Paraná Departments (Paraguay), in Santa Fé and Corrientes Provinces (Argentina), and Mato Grosso do Sul State (Brazil).

Countries: Argentina, Brazil, Paraguay

Common names: Madrecita (Argentina), Barrigudinho (Brazil), Guaru (Brazil), Piky (Paraguay).

POECILIA

Poecilia Bloch & Schneider, 1801: 452. Type species: *Poecilia vivipara* Bloch & Schneider, 1801. Type by subsequent designation. Gender: feminine.

Mollienesia Lesueur, 1821: 3. Type species: *Mollienesia latipinna* Lesueur, 1821. Type by monotypy. Gender: feminine. Originally spelt *Mollinesia* but emendation is justified (Bailey & Miller, 1950). Taxonomy and phylogenetic hypotheses of subgenus *Mollienesia*: Hubbs (1933); Schultz & Miller (1971); Miller (1975, 1983); Rauchenberger (1989).

Alazon Gistel, 1848: X. Type species: *Poecilia vivipara* Bloch & Schneider, 1801. Type by being a replacement name. Gender: masculine.

Lebistes De Filippi, 1861: 69. Type species: *Lebistes poecilioides*

- De Filippi, 1861. Type by monotypy. Gender: masculine.
- Acanthophaelus* Eigenmann, 1907: 426 [footnote]. Type species: *Poecilia reticulata* Peters, 1859. Type by original designation. Gender: masculine.
- Allopoecilia* Hubbs, 1924: 11 [footnote]. Type species: *Girardinus caucanus* Steindachner, 1880. Type by original designation. Gender: feminine.
- Neopoecilia* Hubbs, 1924: 11 [footnote]. Type species: *Neopoecilia holacanthus* Hubbs, 1924. Type by original designation. Gender: feminine.
- Psychropoecilia* Myers, 1935: 311. Proposed as subgenus of *Poecilia*. Type species: *Platypoecilus dominicensis* Evermann & Clark, 1906. Type by original designation. Gender: feminine.
- Lembesseia* Fowler, 1949: 267. Type species: *Lembesseia parvianalis* Fowler, 1949. Type by original designation. Gender: feminine.
- Curtipenis* Rivas & Myers, 1950: 289. Type species: *Mollienesia elegans* Trewavas, 1948. Type by original designation. Gender: masculine.
- Receptopocilia* Whitley, 1951: 68. Type species: *Poecilia vivipara parae* Eigenmann, 1894. Type by being a replacement name. Gender: feminine.
- Poecilia amazonica* Garman, 1895**
Poecilia amazonica Garman, 1895: 64, pl. 4 (fig. 9). Type locality: Santa Cruz; Para. Syntypes: MCZ 27573 (128), 69635 (97); UMMZ 146750 [ex MCZ 27573] (6 or 5); USNM 120286 [ex MCZ 27573a] (6).
 Maximum length: 2 cm TL
 Distribution: South America: Santa Cruz, Pará State.
 Countries: Brazil
 Common names: Barrigudinho (Brazil), Guaru (Brazil)
- Poecilia butleri* Jordan, 1889**
Poecilia butleri Jordan, 1889: 330. Type locality: Rio Presidio, near Mazatlan [Sinaloa, Mexico]. Syntypes: USNM 37158 (orig. 6, now 4).
 Maximum length: 7 cm TL
 Distribution: North and Central America: Mexico to Panama.
 Countries: Guatemala, Mexico, Panama
- Poecilia catemacensis* Miller, 1975**
Poecilia catemacensis Miller, 1975: 13, fig. 4. Type locality: Laguna Catemaco at Playa Azul, about 3.2 km E of Catemaco, Veracruz [Mexico] 95° 05' W. Long., 18° 25' N Lat., elevation about 340 m. Holotype: UMMZ 195953.
 Maximum length: 8 cm TL
 Distribution: North America: Laguna Catemaco basin.
 Countries: Mexico
- Poecilia caucana* (Steindachner, 1880)**
Girardinus caucanus Steindachner, 1880: 87 [35], pl. 6 (fig. 4). Type locality: des Cauca und der Flüsse bei Guayaquil. Syntypes: NMW 81128 (3).
 Maximum length: 3 cm TL
 Distribution: Central to South America: Pacific drainage basins from Darién, Panama to the Cauca River, Colombia, and Lake Maracaibo basin.
 Countries: Colombia, Panama, Venezuela
- Poecilia caudofasciata* (Regan, 1913)**
Limia caudofasciata Regan, 1913a: 1017, pl. 101 (fig. 6). Type locality: Jamaica. Syntypes: (several) BMNH 1905.8.16.13-21 (?21), MNHN 1913-0227 (2), USNM 151463 [ex BMNH 1905.8.16.22] (1).
Limia caudofasciata tricolor Stoye, 1933: 12-14. Type locality: ?
 Distribution: Caribbean Islands. Jamaica Island.
 Countries: Jamaica
- Poecilia chica* Miller, 1975**
Poecilia chica Miller, 1975: 2, fig. 1. Type locality: tributary of Río Purificación about 2.5 km E of La Concepción (about 8.5 km E of La Herta), Jalisco [Mexico] 104° 34' W Long., 19° 30' N Lat., elevation about 305 m. Holotype: UMMZ 172134.
 Maximum length: 3 cm TL
 Distribution: North America: Jalisco.
 Countries: Mexico
- Poecilia dauli* Meyer & Radda, 2000**
Poecilia dauli Meyer & Radda, 2000: 77, fig. 1. Type locality: brook near Miranda, Venezuela. Holotype: NWM-94540.
 Maximum length: 3.9 cm TL
 Distribution: South America: Coastal drainages of Venezuela
 Countries: Venezuela
- Poecilia elegans* (Trewavas, 1948)**
Mollienesia elegans Trewavas, 1948: 409, pl. 1 (fig. 4); figs. 1-2. Type locality: Jarabocoa, San Domingo, Haiti, West Indies. Holotype: BMNH 1947.11.27.4-5 (1 of 2).
 Maximum length: 3.6 cm SL
 Distribution: Caribbean Islands: Eastern Hispaniola Island.
 Countries: Dominican Republic
- Poecilia gillii* (Kner, 1863)**
Xiphophorus gillii Kner, 1863: 224, fig. 9. Type locality: Aus dem Rio Chagres in Panama, Nordseite. Syntypes: (33) NMW 21609 (2).
 Maximum length: 6 cm TL
 Distribution: Central America: Panama.
 Countries: Panama
- Poecilia hispaniolana* Rivas, 1978**
Poecilia hispaniolana Rivas, 1978: 101, figs. 1a-b, 2a, 3. Type locality: Río Mijo at road from Azua to San Juan, Prov. of Benefactor, Dominican Republic. Holotype: USNM 218706.
 Maximum length: 3.6 cm SL
 Distribution: Caribbean Islands: Hispaniola Island.
 Countries: Dominican Republic, Haiti
- Poecilia kykensis* Poeser, 2002**
Mollienesia petenensis Günther, 1866: 348. Type locality: Lake Peten [Guatemala]. Syntypes: BMNH 1864.1.26.375 (3), ZMB 6082 (1). Secondarily preoccupied by *Poecilia petenensis* Günther, 1866; replaced by *Poecilia kykensis* Poeser, 2002.
Poecilia kykensis Poeser, 2002: 244. Type locality: Lake Peten. Syntypes: BMNH 1864.1.26.375 (3), ZMB 6082 (1). Replacement for *Mollienesia petenensis* Günther, 1866, preoccupied in *Poecilia* by *Poecilia petenensis* Günther, 1866.
 Distribution: Central America: Lake Peten.
 Countries: Guatemala
- Poecilia latipinna* (Lesueur, 1821)**
Mollienesia latipinna Lesueur, 1821: 3, pl. 3. Type locality: in the freshwater ponds in the vicinity of New Orleans [Louisiana, USA]. Lesueur specimens or syntypes: MNHN B-0929 (8).
Poecilia multilineata Lesueur, 1821: 4, pl. 1. Type locality: East Florida [USA].
Limia poeciloides Girard, 1858: 170. Type locality: Indianola, Texas [USA]. Syntypes: USNM 670 (2, missing).
Poecilia lineolata Girard, 1858: 170. Type locality: Brownsville, Texas, (...) and Fort Brown, Texas [USA]. Syntypes: MCZ 1296 [ex USNM 667] (1); USNM 667 (3) missing, 668 (4) missing.
Limia matamorenensis Girard, 1859a: 117. Type locality: Matamoros [Tamaulipas, Mexico]. Syntypes: AMNH 29833SW [ex USNM 3509] (3, c&s), USNM 3509 (now 67).
 Maximum length: 15 cm TL
 Distribution: North America: From Cape Fear drainage in North Carolina, USA to Veracruz, Mexico. Introduced to many coun-

tries. Several countries report adverse ecological impact after introduction. Gulf of Mexico.

Countries: Bahamas (introduced), Colombia (introduced), Mexico, USA

***Poecilia latipunctata* Meek, 1904**

Poecilia latipunctata Meek, 1904: 150, fig. 48. Type locality: Forlon, Tamaulipas, Basin of the Rio Panuco [Mexico]. Holotype: FMNH 4484.

Maximum length: 5 cm TL

Distribution: North America: Panuco River basin.

Countries: Mexico

***Poecilia marcellinoi* Poeser, 1995**

Poecilia marcellinoi Poeser, 1995: 241, fig. 2a. Type locality: Lago de Ilopango [El Salvador]. Holotype: RMNH 31771.

Maximum length: 6.3 cm SL

Distribution: Central America: Ilopango Lake basin.

Countries: El Salvador

***Poecilia maylandi* Meyer, 1983**

Poecilia maylandi Meyer, 1983: 56, fig. 2. Type locality: Mexique, Guerrero, Arroyo Chacambero près de Altamirano. Holotype: SMF 17855.

Maximum length: 9.5 cm TL

Distribution: North America: Balsas River basin.

Countries: Mexico

***Poecilia mexicana* Steindachner, 1863**

Poecilia mexicana Steindachner, 1863: 178, pl. 4 (figs. 1-1a). Type locality: Orizaba in Mexico. Syntypes: (16) NMW 61288 (14).

Poecilia cuneata Garman, 1895: 62, pl. 5 (fig. 3). Type locality: Turbo, Gulf of Darien [Panama]. Syntypes: MCZ 6458 (now 10), USNM 120285 [ex MCZ 6458] (3).

Poecilia limantouri Jordan & Snyder, 1899: 129, fig. 10. Type locality: Río Tamesoe near Tampico, Tamaulipas, Mexico. Holotype: SU 6165.

Maximum length: 11 cm SL

Distribution: North and Central America: From San Juan River, Mexico to Guatemala. At least one country reports adverse ecological impact after introduction.

Countries: Belize, Guatemala, Mexico, Panama (?)

***Poecilia nicholsi* (Myers, 1931)**

Limia nicholsi Myers, 1931: 1. Type locality: San Juan River (fresh water) at Samaná, Dominican Republic. Holotype: AMNH 5239a.

Maximum length: ?

Distribution: Caribbean Islands: San Juan River basin in eastern Hispaniola Island.

Countries: Dominican Republic

Remarks and references: Description and figures in Nichols (1915) referred to as *Heterandria versicolor* (Günther, 1874).

***Poecilia orri* Fowler, 1943**

Poecilia orri Fowler, 1943: 1, fig. 1. Type locality: Lagoon and salt water ditch on Bonacca Island, Bay Islands, Honduras. Holotype: ANSP 70158.

Maximum length: 5.6 cm SL

Distribution: North and Central America: Southern Mexico (Quintana Roo) to northern Honduras and Colombia (Islas de Providencia).

Countries: Belize, Colombia, Honduras, Mexico

***Poecilia petenensis* Günther, 1866**

Mollinesia petenensis Günther, 1866: 348. Type locality: Lake Peten [Guatemala]. Syntypes: BMNH 1864.1.26.375 (3), ZMB 6082 (1).

Poecilia petenensis Günther, 1866: 342. Type locality: Lake Peten [Guatemala]. Syntypes: (at least 5) BMNH 1864.1.26.375, 1864.1.26.376, 1864.1.26.379.

Maximum length: 8 cm TL

Distribution: North and Central America: Southeastern Mexico to Belize and Guatemala.

Countries: Belize, Guatemala, Mexico

***Poecilia reticulata* Peters, 1859**

Poecilia reticulata Peters, 1859: 412. Type locality: Caracas; in dem Guayre-Flusse von Gollmer gesammelt [Venezuela]. Syntypes: BMNH 1866.6.6.3 [ex ZMB] (1); ZMB 3468 (9), 3469 (8, lost).

Girardinus guppii Günther, 1866: 353. Type locality: Trinidad; Venezuela. Syntypes: BMNH 1847.7.18.9-11 (?3) Venezuela, 1865.11.30.8 (1) Trinidad; ZMB 6081 (2).

Maximum length: 3.5 cm TL

Distribution: South America and Caribbean Islands: Venezuela, Barbados, Trinidad, northern Brazil and the Guianas. Widely introduced and established elsewhere, mainly for mosquito control, but had rare to non-existing effects on mosquitos, and negative to perhaps neutral effects on native fishes. Africa: Feral populations reported from the coastal reaches of Natal rivers from Durban southwards, as well as in the Kuruman Eye and L. Otjikoto in Namibia. Several countries report adverse ecological impact after introduction.

Countries: Antigua and Barbuda, Barbados, Brazil (introduced), Colombia (introduced), Cuba (introduced), Jamaica (introduced), Mexico (introduced), Peru (introduced), Puerto Rico (introduced), Trinidad and Tobago, Venezuela

Common names: Barrigudinho (Brazil), Guaru (Brazil), Guppy (Brazil, USA)

***Poecilia salvatoris* Regan, 1907**

Poecilia salvatoris Regan, 1907: 65. Type locality: San Salvador, in warm springs. Syntypes: BMNH 1864.1.26.191 (6?), BMNH uncat. (5).

Distribution: Central America: El Salvador.

Countries: El Salvador

***Poecilia sphenops* Valenciennes, 1846**

Mollinesia surinamensis Müller & Troschel, 1844: 36. Type locality: Mexico [Misantla River at the town of the same name and the Tacoluta River 6 hours riding above the sea and 13 hours from Papanla, Central Vera Cruz, Mexico. Not Suriname, corrected by Paepke & Meyer (1995)]. Holotype: ZMB 3473. Preoccupied in *Poecilia* by *Poecilia surinamensis* Valenciennes, 1821.

Poecilia sphenops Valenciennes in Cuvier & Valenciennes, 1846: 130, pl. 525-526, bottom. Type locality: près de Veracruz [same type locality of *Mollinesia surinamensis* Müller & Troschel, 1844]. Syntypes: MNHN B-0930 (8).

Poecilia thermalis Steindachner, 1863: 181, pl. 4 (figs. 3-3a). Type locality: in mexikanischen Staate Chiapas in der Schwefelquelle *La Esperanza* [sic] gefunden, deren Wasser 23° Réamur warm ist. Syntypes: (40) NMW 15153 (5), 59834 (4), 60645 (5), 76504-07 (7, 7, 7, 4).

Gambusia modesta Troschel in Müller, 1865: 105. Type locality: Mexico. Holotype: ZMB (apparently lost).

Gambusia plumbea Troschel in Müller, 1865: 106. Type locality: Mexico. Holotype: ZMB (missing).

Poecilia spilurus Günther, 1866: 345. Type locality: Central America. Holotype: BMNH 1971.6.9.1.

Poecilia chisoyensis Günther, 1866: 342. Type locality: River Chisoy, Vera Paz [Alta Vera Paz, Guatemala]. Syntypes: BMNH 1864.1.26.190 (3).

Poecilia dovii Günther, 1866: 344. Type locality: Guatemala; Mexico. Syntypes: BMNH 1862.6.6.11-12 (2?) Mexico, 1863.12.16.77-92 (10) Lake Nicaragua, BMNH uncat. (?) Lake Amatitlan.

- Platypoecilus mentalis* Gill, 1877: 335. Type locality: a stream on the Atlantic side of the Isthmus [of Panama]. Holotype: USNM 16675.
- Poecilia boucardii* Steindachner, 1878: 386, pl. 3 (fig. 2). Type locality: Aspinwall (Colón), (Atlantic) Panama. Syntypes: (many) ?MCZ 32959 (10); NMW 14931-33 (1, 1, 1), 61266 (3), 77475-78 (2, 2, 2, 1), 22839-40 (1, 1), 10669-71 (1, 1, 1), 10672-73 (1).
- Poecilia vandepolli arubensis* van Lidth de Jeude, 1887: 138, pl. 2 (fig. 6). Type locality: Aruba. Syntypes: RMNH 5156 (6).
- Platypoecilus nelsoni* Meek, 1904: 147, fig. 46. Type locality: Papayo, Guerrero [Balsas River basin, Mexico]. Holotype: USNM 51484.
- Platypoecilus tropicus* Meek, 1907: 146. Type locality: Turrialba, Costa Rica. Holotype: FMNH 6027.
- Poecilia tenuis* Meek, 1907: 147. Type locality: Tiribi, Costa Rica. Holotype: FMNH 6028.
- Poecilia spilonota* Regan, 1908: 460 [footnote]. Type locality: San José [Costa Rica]. BMNH. Syntypes: BMNH 1907.2.11.44-50 (6 of 7).
- Poecilia caudata* Meek, 1909: 209. Type locality: Turrubares, Costa Rica. Holotype: FMNH 6360.
- Mollienisia gracilis* Regan, 1913a: 1012. Type locality: Lake Petén in Guatemala. Syntypes: BMNH 1864.1.26.377 (3), 1864.1.26.379 (2).
- Mollienisia sphenops ventynei* Hubbs, 1935: 11, pl. 2 (fig. 1, upper). Type locality: aguada at Uaxactun, Guatemala. Holotype: UMMZ 97874.
- Mollienisia sphenops macrura* Hubbs, 1935: 12, pl. 2 (fig. 2). Type locality: Río San Pedro de Mártir, at El Paso de Los Caballos, Guatemala, in the stream system of Río Usumancita. Holotype: UMMZ 95516.
- Mollienisia sphenops altissima* Hubbs, 1936: 242, pl. 9 (fig. 2). Type locality: Miramar Spring, near Talcha, Yucatan. Holotype: UMMZ 102127.
- Mollienisia sphenops pallida* de Buen, 1943a: 252, fig. 1. Type locality: em la Plaza La Bocana del río Marqués. Syntypes: (24).
- ?*Lembesseia parvianalis* Fowler, 1949: 267, fig. 70. Type locality: Oka, Congo system. [Lembesse River Basin; French Equatorial Africa; introduced]. Holotype: ANSP 71924.
- Poecilia veti-providentiae* Fowler, 1950b: 77, fig. 12. Type locality: One quarter of mile south of Ironwood Hill, in fresh-water stream called Huffington's Creek at the Watering Place and above, east side of the island. Holotype: ANSP 71750.
- Maximum length: 6 cm TL
Distribution: North, Central and South America: Mexico to Colombia. Often confused with *P. mexicana*.
Countries: Colombia, Cook Islands, Curaçao Island, Mexico, Trinidad and Tobago (introduced), Venezuela
- Poecilia sulphuraria* (Alvarez, 1948)**
Mollienisia sulphuraria Alvarez, 1948b: 276, fig. 1. Type locality: Baños del Azufre, a 12 Km de Teapa, Tab. Holotype: ENCB-IPN-P-186.
Maximum length: 5 cm TL
Distribution: North America: Mexico.
Countries: Mexico
- Poecilia teresae* Greenfield, 1990**
Poecilia teresae Greenfield, 1990: 449, fig. 1. Type locality: Macal River on the Mountain Pine Ridge (trib. eastern branch of Belize River), Belize, Central America, 89°01'W, 16°52'N. Holotype: FMNH 82918.
Maximum length: 5 cm SL
Distribution: Central America: Belize.
Countries: Belize
- Poecilia vandepolli* van Lidth de Jeude, 1887**
Poecilia vandepolli van Lidth de Jeude, 1887: 137, pl. 2 (fig. 4). Type locality: Curaçao. Syntypes: RMNH 5155 (6).
Maximum length: 4.5 cm TL
Distribution: Caribbean Islands: Curaçao Island.
Countries: Curaçao
Remarks and references: Recently redescribed by Poeser (1992).
- Poecilia velifera* (Regan, 1914)**
Mollienisia velifera Regan, 1914a: 338. Type locality: Progreso, Yucatán. Syntypes: BMNH 1914.2.18.6-8 (3).
Maximum length: 15 cm TL
Distribution: North America: Southeastern Mexico.
Countries: Colombia (introduced), Mexico,
- Poecilia vivipara* Bloch & Schneider, 1801**
Poecilia vivipara Bloch & Schneider, 1801: 452, pl. 86 (lower fig.). Type locality: aquis dulcibus Surinami bipollicaris. Holotype: ZMB 3465.
Poecilia surinamensis Valenciennes in Humboldt & Valenciennes, 1821: 158, pl. 51 (fig. 1). Type locality: in aquis dulcibus Surinami. Holotype: ?
Poecilia unimaculata Valenciennes in Humboldt & Valenciennes, 1821: 158, pl. 51 (fig. 2). Type locality: in aquis dulcibus Brasiliae [Rio Janeiro]. Holotype: ?
Poecilia schneideri Valenciennes in Humboldt & Valenciennes, 1821: 159. Unneeded replacement name for *Poecilia vivipara*.
Molnesia fasciata Müller & Troschel, 1844: 36. Type locality: Suriname [not Mexico]. Holotype: ZMB 3472. Type-locality corrected by Paepke & Meyer (1995).
Neopoecilia holacanthus Hubbs, 1924: 11 [footnote]. Type locality: not stated in original description but referred to material recorded as *Poecilia vivipara* by Evermann & Marsh 1900 [Ponce and Fajardo; Arroyo and Hucare; Puerto Rico - an introduced stock]. Syntypes: FMNH 3240 (6).
Maximum length: 4 cm TL
Distribution: South America: From Venezuela all along the coast to La Plata River in Argentina. Introduced in Puerto Rico.
Countries: Argentina, Brazil, French Guiana, Guyana, Puerto Rico (introduced), Suriname, Trinidad and Tobago, Uruguay, Venezuela
Common names: Barrigudinho (Brazil), Guaru (Brazil)
- POECILIOPSIS**
Hemixiphophorus Bleeker, 1860: 440. Type species: *Xiphophorus gracilis* Heckel, 1848. Type by subsequent monotypy. Gender: masculine. Appeared first in key, without included species. One species added by Bleeker (1860: 485). Senior synonym of *Poeciliopsis* Regan, 1913 but *Poeciliopsis* is placed in the official list of generic names in zoology (opinion 375) of the ICZN (see Rosen & Bailey, 1963:131 and Melville & Smith, 1987).
Poeciliopsis Regan, 1913a: 996. Type species: *Poecilia presidionis* Jordan & Culver, 1895. Type by subsequent designation. Gender: feminine.
Leptorhaphis Regan, 1913a: 998. Type species: *Gambusia infans* Woolman, 1895. Type by monotypy. Gender: feminine.
Aulophallus Hubbs, 1926: 69. Type species: *Poecilia elongata* Günther, 1866. Type by original designation. Gender: masculine.
Poecilistes Hubbs, 1926: 68. Type species: *Heterandria lutzi* Meek, 1904. Type by original designation. Gender: masculine.
- Poeciliopsis baenschi* Meyer, Radda, Riehl & Feichtinger, 1986**
Poeciliopsis baenschi Meyer, Radda, Riehl & Feichtinger, 1986: 80, fig. 1. Type locality: ruisseau près de El Tuito, Jalisco, Mexico. Holotype: SMF 19988.
Maximum length: 2.5 cm TL
Distribution: North America: Creek near El Tuito in Jalisco, as well as tributaries of the Purificación River near La Huerta.
Countries: Mexico

***Poeciliopsis balsas* Hubbs, 1926**

Poeciliopsis balsas Hubbs, 1926: 66. Type locality: Balsas, on the Rio Balsas, Guerrero, Mexico. Holotype: FMNH 3702.

Poeciliopsis anonas de Buen, 1943b: 263, fig. 1. Type locality: Arroyo de las Anonas de la cuenca del río Marqués, a 406 metros sobre el nivel del mar. Holotype: Estación Limnológica Pátzcuaro.

Maximum length: 3.5 cm TL

Distribution: North America: Balsas River basin, Arteaga and Aguililla Rivers in Michoacan.

Countries: Mexico

***Poeciliopsis catemaco* Miller, 1975**

Poeciliopsis catemaco Miller, 1975: 35, fig. 11. Type locality: a small beach on the west side of Laguna Catemaco, Veracruz [Mexico] 95° 07' W Long., 18° 25' N Lat., elevation about 340 m. Holotype: UMMZ 176977.

Maximum length: 4 cm TL

Distribution: North America: Laguna de Catemaco in Veracruz.

Countries: Mexico

***Poeciliopsis elongata* (Günther, 1866)**

Poecilia elongata Günther, 1866: 342. Type locality: Panama. Holotype: BMNH 1866.1.14.23.

Maximum length: 11 cm TL

Distribution: Central America: Costa Rica and Panama.

Countries: Costa Rica, Panama

***Poeciliopsis fasciata* (Meek, 1904)**

Gambusia fasciata Meek, 1904: 129, fig. 37. Type locality: San Geronimo, Oaxaca [Mexico]. Holotype: FMNH 4715.

Maximum length: 3 cm TL

Distribution: North America: Mexico in Laguna Coyuca near Acapulco, Guerrero as far as the Pijijiapan River in Chiapas and Coatzacoalcos River in Oaxaca.

Countries: Mexico

***Poeciliopsis gracilis* (Heckel, 1848)**

Xiphophorus gracilis Heckel, 1848: 300, pl. 9 (fig. 3). Type locality: Orizaba, Mexico. Syntypes: (13) NMW 59600 (3), 76512 (6), 76514 (2, dry), 81118 (4).

Gambusia Heckeli [sic] Bleeker, 1860: 485. Type locality: Amsept, Mexico. Unneeded substitute name for *Xiphophorus gracilis* Heckel 1848, not preoccupied by the later *Gambusia gracilis* Girard 1859.

Girardinus pleurospilus Günther, 1866: 353. Type locality: Lake of Dueñas, Guatemala. Syntypes: BMNH 1864.1.26.180 (1?), ZMB 6078 (3).

Priapichthys letonai Hildebrand, 1925: 258, fig. 12. Type locality: Río San Miguel, San Miguel, El Salvador. Holotype: USNM 87251.

Maximum length: 5.1 cm TL

Distribution: North and Central America: From southern Mexico to Honduras.

Countries: Guatemala, Honduras, Mexico, Venezuela (introduced)

***Poeciliopsis hnilickai* Meyer & Vogel, 1981**

Poeciliopsis hnilickai Meyer & Vogel, 1981: 358, fig. 1. Type locality: Mexico, Chiapas, Gebirgsbach 1 km W Ixtapa. Holotype: SMF 15526.

Maximum length: 3.5 cm TL

Distribution: North America: Salina River in Chiapas.

Countries: Mexico

***Poeciliopsis infans* (Woolman, 1895)**

Gambusia infans Woolman, 1895: 62, pl. 2. Type locality: Rio de Lerma at Salamanca, Mexico. Lectotype: USNM 45570, designated by Jordan & Evermann 1896: 680.

Poeciliopsis porosus de Buen, 1943b: 273, fig. 9. Type locality:

Lago de Camécuaro, Mich. Holotype: Estación Limnol. Pátzcuaro.

Maximum length: 3.5 cm TL

Distribution: North America: Mexican states of Jalisco and Michoacan in Grande de Santiago River basins, Lerma and Ameca River basins.

Countries: Mexico

***Poeciliopsis latidens* (Garman, 1895)**

Glaridodon latidens Garman, 1895: 42, pl. 5 (fig. 11). Type locality: Chihuahua, Mexico. Syntypes: MCZ 1307 (4).

Maximum length: 5 cm TL

Distribution: North America: Del Fuerte River to San Blas in Nayarit.

Countries: Mexico

***Poeciliopsis lucida* Miller, 1960**

Poeciliopsis lucida Miller, 1960: 2, pl. 1 (fig. A). Type locality: small tributary of the Río Mocerito, 0.9 mile N of San Benito, Sinaloa; 107°, 46'W Long., 25°, 32'N Lat. Holotype: UMMZ 177266.

Maximum length: 3 cm TL

Distribution: North America: Mocerito River basin and del Fuerte River on the Gulf of California in Sinaloa.

Countries: Mexico

***Poeciliopsis lutzi* (Meek, 1902)**

Heterandria lutzi Meek, 1902: 106, pl. 20, lower. Type locality: Río Quiotepec at Cuicatlan, Oaxaca, Mexico. Holotype: FMNH 3718.

Maximum length: 3.5 cm TL

Distribution: North America: Mexico.

Countries: Mexico

***Poeciliopsis monacha* Miller, 1960**

Poeciliopsis monacha Miller, 1960: 3, pl. 1 (fig. C). Type locality: Arroyo San Benito, about 1.5 miles ESE of Rancho Guirocoba, Sonora; 108° 40'W Long., 26° 56'N Lat. Holotype: UMMZ 177268.

Distribution: North America: Mexico.

Countries: Mexico

***Poeciliopsis occidentalis* (Baird & Girard, 1853)**

Heterandria occidentalis Baird & Girard, 1853: 390. Type locality: Río Santa Cruz of the Rio Gila [Mexico - not Santa Cruz River, Tucson, Arizona, USA.]. Syntypes: ANSP 6972 (1).

Girardinus sonoriensis Girard, 1859: 120. Type locality: san Bernardino creek, Mex. [tributary of Río Yaqui, Sonora, Mexico]. Syntypes: MCZ 1310 (1), 1461 (1).

Maximum length: 6 cm TL

Distribution: North America: Gila River system in New Mexico and Arizona and streams south to western Mexico. Occurs naturally in the Colorado and Yaqui River basins at altitudes ranging from sea level to 1500 m. High altitude occurrences are most commonly associated with outflows and springs.

Countries: Mexico, USA

***Poeciliopsis paucimaculata* Bussing, 1967**

Poeciliopsis paucimaculata Bussing, 1967: 227, fig. 5. Type locality: tributaries to the Río General, a confluent of the Río Grande de Térraba [General River, by 1st steel bridge, 15 km South of San Isidro del General on Pan. Am. Hiway, San Jose, Costa Rica] Holotype: LACM 9236-1.

Maximum length: 3.5 cm TL

Distribution: Central America: General River basin.

Countries: Costa Rica

***Poeciliopsis presidionis* (Jordan & Culver, 1895)**

Poecilia presidionis Jordan & Culver in Jordan, 1895: 413, pl. 29. Type locality: in the clear waters of the Rio Presidio, about Presidio [Sinaloa, Mexico]. Lectotype: SU 2687 (not separated from paralectotypes), established as figured specimen in caption to Pl. 114, p. 3257 by Jordan & Evermann (1900).

Maximum length: 3.5 cm TL

Distribution: North America: Sinaloa River in Sinaloa to San Blas in Nayarit.

Countries: Mexico

***Poeciliopsis prolifica* Miller, 1960**

Poeciliopsis prolifica Miller, 1960: 5, pl. 2 C. Type locality: Arroyo Sonolona [tributary to Culiacán River] 18.5 miles by road E of Culiacán, Sinaloa, 107° 08'W Long., 24°48'N Lat. Holotype: UMMZ 177272.

Maximum length: 3 cm TL

Distribution: North America: Lower courses of Yaqui River in Sonora and along the coast to San Blas in Nayarit. The species enters brackish water.

Countries: Mexico

***Poeciliopsis retropinna* (Regan, 1908)**

Poecilia retropinna Regan, 1908: 458. Type locality: Boruca [Costa Rica]. Holotype: BMNH 1909.3.13.69.

Maximum length: 5 cm TL

Distribution: Central America: Costa Rica and Panama.

Countries: Costa Rica, Panama

***Poeciliopsis scarlli* Meyer, Riehl, Dawes & Dibble, 1985**

Poeciliopsis scarlli Meyer, Riehl, Dawes, & Dibble, 1985: 26, fig. 1. Type locality: canal at El Bordqueral, 40 km N on HW 200 from state boundary Guerrero/Michoacán, Michoacán, Mexico. Holotype: SMF 19715.

Maximum length: 3 cm TL

Distribution: North America: Guerrero and Michoacan.

Countries: Mexico

***Poeciliopsis turneri* Miller, 1975**

Poeciliopsis turneri Miller, 1975: 27, fig. 8. Type locality: Río Apamila, 4.5 km WNW of La Huerta, Jalisco [Mexico] 104° 39' W Long., 19° 29' N Lat., elevation about 280 m. La Huerta is a small town on Hwy 80 SW of Autlán. Holotype: UMMZ 183942.

Maximum length: 3 cm TL

Distribution: North America: From the Purificacion River basin to the Resolana River and northeastern Cihuatlan.

Countries: Mexico

***Poeciliopsis turrubarensis* (Meek, 1912)**

Gambusia turrubarensis Meek, 1912 (18 Sep): 71. Type locality: Turrubares, Costa Rica [San José, Pacific slope]. Holotype: FMNH 7676 [not 7576].

Heterandria colombianus Eigenmann & Henn in Eigenmann, 1912 (23 Dec): 27. Type locality: Brackish water, mouth of Rio Dagua, Colombia. Holotype: FMNH 56047 [ex CM 4837].

Priapichthys fosteri Hildebrand, 1925: 260, figs. 14-15. Type locality: Río Lempa, San Marcos, El Salvador. Holotype: USNM 87263.

Maximum length: 4 cm TL

Distribution: North, Central and South America: Jalisco, Mexico to the Dagua River in Colombia.

Countries: Colombia, Costa Rica, El Salvador, Mexico

***Poeciliopsis viriosa* Miller, 1960**

Poeciliopsis viriosa Miller, 1960: 4, pl. 2 (fig. A). Type locality: Greenbank, from a spring-fed creek about 4.5 miles SW of Las Palmas, on the road Ixtapita, Jalisco; 105° 10'W Long., 20°48'N Lat. Holotype: UMMZ 177270.

Maximum length: 3.5 cm TL

Distribution: North America: Ameca River basin in Jalisco and south Nayarit to the Mocorito River in Sinaloa.

Countries: Mexico

PRIAPELLA

Priapella Regan, 1913a: 992. Type species: *Gambusia bonita* Meek, 1904. Type by monotypy. Gender: feminine.

***Priapella bonita* (Meek, 1904)**

Gambusia bonita Meek, 1904: 132, fig. 39. Type locality: Refugio, Vera Cruz. [Mexico]. Holotype: FMNH 4630.

Distribution: North America: Mexico.

Countries: Mexico

***Priapella compressa* Alvarez, 1948**

Priapella compressa Alvarez, 1948a: 335, fig. 2. Type locality: Ruinas de Palenque, Chis. Holotype: ENCB-IPN-P-188.

Maximum length: 4.5 cm TL

Distribution: North America: Grijalva River basin to the lower Usumacinta River basin in Chiapas.

Countries: Mexico

***Priapella intermedia* Alvarez & Carranza, 1951**

Priapella intermedia Alvarez & Carranza, 1951: 284. Type locality: Santa María Chimalapa, em el Arroyo El Zacatal. Holotype: ENCB-IPN-P-188.

Maximum length: 5 cm TL

Distribution: North America: Mexico.

Countries: Mexico

***Priapella olmecae* Meyer & Espinoza Pérez, 1990**

Priapella olmecae Meyer & Espinoza Pérez, 1990: 122, fig. 1. Type locality: Rio de la Palma, about 10 km NNW Sontecomapan, 25 km NNE Lake Catemaco, Veracruz, México. Holotype: SMF 21157.

Maximum length: 5 cm TL

Distribution: North America: La Palma and Agua Fria Rivers and a lagoon called Escondida, Los Tuxtlas, Veracruz.

Countries: Mexico

PRIAPICHTHYS

Priapichthys Regan, 1913a: 991. Type species: *Gambusia annectens* Regan, 1907. Gender: masculine.

Diphyacantha Henn, 1916: 113. Type species: *Diphyacantha chocoensis* Henn, 1916. Type by monotypy. Gender: feminine.

Darienichthys Hubbs, 1924: 8 [footnote]. Type species: *Gambusia darienensis* Meek & Hildebrand, 1913. Type by original designation. Gender: masculine.

Panamichthys Hubbs, 1924: 8 [footnote]. Type species: *Priapichthys panamensis* Meek & Hildebrand, 1916. Type by original designation. Gender: masculine.

Alloheterandria Hubbs, 1924: 9 [footnote]. Type species: *Gambusia nigroventralis* Eigenmann & Henn, 1912. Type by original designation. Gender: feminine.

***Priapichthys annectens* (Regan, 1907)**

Gambusia annectens Regan, 1907a: 259. Type locality: Costa Rica, Carullo and Juan Veñas; Irazu. Syntypes: (numerous) BMNH 1907.2.11.5-14 (10), 1907.2.11.15-23 (9), 1907.6.28.38-42 (5); MNHN 1913-0228 [ex BMNH] (2).

Priapichthys annectens hesperis Hubbs, 1924: 22. Type locality: Río María Aguilar, upper trib. to Río Grande de Tárcoles, San José, Costa Rica. Holotype: FMNH 14106.

Maximum length: 4 cm TL

Distribution: Central America: Costa Rica.

Countries: Costa Rica

***Priapichthys caliensis* (Eigenmann & Henn, 1916)**

Gambusia caliensis Eigenmann & Henn in Henn, 1916: 113. Type locality: Cali, Colombia. Holotype: FMNH 57721 [ex CM 6700a].
Maximum length: 2.8 cm SL.
Distribution: South America: Colombia.
Countries: Colombia

***Priapichthys chocoensis* Henn, 1916**

Diphyacantha chocoensis Henn, 1916: 114, pl. 19 (fig. 1). Type locality: small creek near mouth of Rio Calima, a tributary of the lower San Juan, Chocó, Colombia. Holotype: CAS 22547 [ex IU 13618].
Maximum length: 3.5 cm TL
Distribution: South America: Colombia.
Countries: Colombia

***Priapichthys darienensis* (Meek & Hildebrand, 1913)**

Gambusia darienensis Meek & Hildebrand, 1913: 88. Type locality: Rio Capeti [Tuira River basin, Panama]. Holotype: FMNH 7597.
Maximum length: 3 cm TL
Distribution: Central America: Tuira River basin.
Countries: Panama

***Priapichthys nigroventralis* (Eigenmann & Henn, 1912)**

Gambusia nigroventralis Eigenmann & Henn in Eigenmann, 1912: 26. Type locality: Rio San Juan at Itsmina, Colombia. Holotype: FMNH 56045 [ex CM 4835].
Gambusia caudovittata Regan, 1913b: 471. Type locality: Rio Condoto [Colombia]. Holotype: BMNH 1913.10.1.68.
Maximum length: 3 cm TL
Distribution: South America: San Juan River basin.
Countries: Colombia

***Priapichthys panamensis* Meek & Hildebrand, 1916**

Priapichthys panamensis Meek & Hildebrand, 1916: 322. Type locality: Chame Point, Panama. Holotype: FMNH 8950.
Maximum length: 2.5 cm TL
Distribution: Central America: Panama.
Countries: Panama.

***Priapichthys puetzi* Meyer & Etzel, 1996**

Priapichthys puetzi Meyer & Etzel, 1996: 4. Type locality: a small brook of the upper Rio Guarumo system, 20 km on the road from Punta Peña towards Gualaca, Bocas del Toro, Panama. Holotype: MTD F16250.
Maximum length: 6.72 cm TL
Distribution: Central America: Panama.
Countries: Panama

PSEUDOPOECILIA

Pseudopoecilia Regan, 1913a: 995. Type species: *Poecilia festae* Boulenger, 1898. Type by monotypy. Gender: feminine.

***Pseudopoecilia austrocolumbiana* Radda, 1987**

Pseudopoecilia austrocolumbiana Radda, 1987b: 173, fig. 10. Type locality: bei Sammelort Nr. 10, einem Bach im Regenwald, 25 km W El Diviso, an der Strasse von Tuquerres nach Tumaco, Seehöhe 475 m, in der Küstenebene der Provinz Nariño, Kolumbien. Holotype: NMW 85922.
Maximum length: 2 cm TL
Distribution: South America: Colombia.
Countries: Colombia

***Pseudopoecilia festae* (Boulenger, 1898)**

Poecilia festae Boulenger, 1898: 13. Type locality: Sources thermales de S. Vicenta, canton de Santa Elena. Syntypes: BMNH

1898.11.4.80-85 (6), MSNG [ex Mus. Torino] 36549 (19), MZUT 1496 (1).
Maximum length: 3.5 cm TL
Distribution: South America: Chico Chaune River in Ecuador to Peru.
Countries: Ecuador, Peru

***Pseudopoecilia fria* (Eigenmann & Henn, 1914)**

Poecilia fria Eigenmann & Henn in Eigenmann, Henn & Wilson, 1914: 13. Type locality: Vinces, Ecuador. Holotype: FMNH 56603 [ex CM 5420].
Distribution: South America: Ecuador.
Countries: Ecuador

QUINTANA

Quintana Hubbs, 1934: 2. Type species: *Quintana atrizona* Hubbs, 1934. Type by original designation. Gender: feminine.

***Quintana atrizona* Hubbs, 1934**

Quintana atrizona Hubbs, 1934: 4, pl. 1 (fig. 1). Type locality: uncertain [tentatively Baracoa, Cuba]. Holotype: UMMZ 106459 (descendant of aquarium stock. Label states Vic. of Baracoa - aquarium bred fish from female of Everglades Aquatic Nursery stock).
Maximum length: 2.5 cm SL
Distribution: Caribbean Islands: Cuba Island.
Countries: Cuba

SCOLICHTHYS

Scolichthys Rosen, 1967: 2. Type species: *Scolichthys greenwayi* Rosen, 1967. Type by original designation. Gender: masculine.

***Scolichthys greenwayi* Rosen, 1967**

Scolichthys greenwayi Rosen, 1967: 4, fig. 2. Type locality: clear, jungle headwater stream of the Río Salbá, a tributary to the Río Chixoy-Río Salinas (Río Usumacinta basin), 20 kilometers northwest of Cobán and 6 to 8 kilometers north of Cancal, Alta Verapaz, Guatemala. Holotype: AMNH 22713.
Maximum length: 3.5 cm TL
Distribution: Central America: Chixoy and Salinas River basins.
Countries: Guatemala

***Scolichthys iota* Rosen, 1967**

Scolichthys iota Rosen, 1967: 9, fig. 7. Type locality: tiny, clear creek emptying into the Río Chajmayic, the true headwater source of the Río de la Pasión (Río Usumacinta Basin) 15 kilometers by road south of Sebol, Alta Verapaz, Guatemala. Holotype: AMNH 22716.
Maximum length: 2.5 cm TL
Distribution: Central America: Chajmaic River basin.
Countries: Guatemala

TOMEURUS

Tomeurus Eigenmann, 1909: 53. Type species: *Tomeurus gracilis* Eigenmann, 1909. Type by monotypy. Gender: masculine.

***Tomeurus gracilis* Eigenmann, 1909**

Tomeurus gracilis Eigenmann, 1909: 53. Type locality: Mud Creek in Aruka River. Holotype: FMNH 53541 [ex CM 1093].
Maximum length: 3.3 cm TL
Distribution: South America: Small coastal drainages of the Venezuelan departments Delta Amacuro, Monagas, Territorio Federal and in Brazilian states of Amapá and Pará; Guamá and Tocantins River basins; Cuyuni, Mazaruni, Essequibo Corantijn River basins.
Countries: Brazil, Guyana, Suriname, Venezuela

XENODEXIA

Xenodexia Hubbs, 1950: 8. Type species: *Xenodexia ctenolepis* Hubbs, 1950. Type by original designation. Gender: feminine.

***Xenodexia ctenolepis* Hubbs, 1950**

Xenodexia ctenolepis Hubbs, 1950: 9, pl. I (fig. 1). Type locality: Río Seniso (Río Salba), at Finca Chamá, Guatemala, from the hacienda to the mouth of the stream. [Usumancita drainage, Quiche, Alta Vera Paz, Guatemala]. Holotype: UMMZ 105460. Maximum length: 4.1 cm TL
Distribution: Central America: Finca River basin, 30 km NW of Cobán, Alta Vera Paz, in the Salbá River, tributary to the Negro River (Chixoy River) which becomes the Salinas River of the Usumacinta basin.
Countries: Guatemala

XENOPHALLUS

Xenophallus Hubbs, 1924: 10 [footnote]. Type species: *Gambusia umbratilis* Meek, 1912. Type by original designation. Gender: masculine.

***Xenophallus umbratilis* (Meek, 1912)**

Gambusia umbratilis Meek, 1912: 70. Type locality: Guapilis [Limón], Costa Rica. Holotype: FMNH 7684 [not 7584].
Poeciliopsis maculifer Fowler, 1916a: 390, fig. 1. Type locality: Río Guapilis at Guapilis [Guapiles], Costa Rica. Holotype: ANSP 45391.
Maximum length: 4 cm TL
Distribution: Central America: Costa Rica.
Countries: Costa Rica

XIPHOPHORUS

Xiphophorus Heckel, 1848: 291. Type species: *Xiphophorus hellerii* Heckel, 1848. Type by subsequent designation. Gender: masculine.

Platypoecilus Günther, 1866: 350. Type species: *Platypoecilus maculatus* Günther, 1866. Type by monotypy. Gender: masculine.

***Xiphophorus alvarezii* Rosen, 1960**

Xiphophorus hellerii alvarezii Rosen, 1960: 126, fig. 23. Type locality: Mexico Chiapas Río Usumacinta system Río Santo Domingo, a tributary of Río Jatate, upper Río Usumacinta system, 90 km E Comitán. Holotype: UMMZ 177304.
Distribution: North and Central America: Chiapas in Mexico and Huehuetenango, El Quiché and Alta Veracruz in Guatemala.
Countries: Guatemala, Mexico

***Xiphophorus andersi* Meyer & Scharl, 1980**

Xiphophorus andersi Meyer & Scharl, 1980: 148, fig. 1. Type locality: Mexico, Veracruz, Río Atoyac bei Finca St. Anita, nahe Chico. Holotype: SMF 15118.
Maximum length: 4.5 cm TL
Distribution: North America: Atoyac River near Chico in Veracruz, Mexico.
Countries: Mexico

***Xiphophorus birchmanni* Lechner & Radda, 1987**

Xiphophorus montezumae birchmanni Lechner & Radda, 1987: 191, fig. 3. Type locality: Río Talol/Río Tempoal- subsystem des Río Panuco-Systems, Ortschaft Orizatlán (400 m ü. M.)/Hidalgo, Mexiko. Holotype: SMF 21154.
Maximum length: 7 cm TL
Distribution: North America: Panuco River basin in Hidalgo, Mexico.
Countries: Mexico

***Xiphophorus clemenciae* Alvarez, 1959**

Xiphophorus clemenciae Alvarez, 1959: 69. Type locality: em el arroyo de La Cascada, afluente del río Sarabia, muy proximo a la confluencia de éste com el Coatzacoalcos; en el Rancho San Carlos, 24 Km al E de Palomares (Oax.). Holotype: ENCB-IPN-P-403.

Maximum length: 4 cm TL
Distribution: North America: Oaxaca.
Countries: Mexico

***Xiphophorus continens* Rauchenberger, Kallman & Morizot, 1990**

Xiphophorus continens Rauchenberger, Kallman & Morizot, 1990: 9, fig. 5. Type locality: nacimiento of the Río Ojo Frío at El Quince, north of Rascón, Río Gallinas-Río Pánuco drainage, SLP, Mexico. Holotype: AMNH 88335.

Maximum length: 2.5 cm TL
Distribution: North America: Panuco River drainage in San Luis Potosí.
Countries: Mexico

***Xiphophorus cortezi* Rosen, 1960**

Xiphophorus montezumae cortezi Rosen, 1960: 96, fig. 13. Type locality: Mexico, San Luis Potosí Río Panuco system Río Moctezuma Arroyo Matlapa at Comoca, 2 mi. N of Axtla. Holotype: UMMZ 177302.

Maximum length: 5 cm TL
Distribution: North America: Panuco River basin.
Countries: Mexico

***Xiphophorus couchianus* (Girard, 1859)**

Limia couchiana Girard, 1859a: 116. Type locality: in the waters of the Río San Juan, at Caderecta and Monterey, in the Province of New Leon [Mexico]. No types known.

Poecilia couchii Günther, 1866: 347. Type locality: Río San Juan (Province of New Leon). Unjustified emendation of (and objective synonym of) *Limia couchiana* Girard 1859.

Maximum length: 4 cm TL
Distribution: North America: Mexico (now restricted to vicinity of Monterrey, formerly more widespread).
Countries: Mexico

***Xiphophorus evelynae* Rosen, 1960**

Xiphophorus variatus evelynae Rosen, 1960: 87, fig. 7. Type locality: Mexico, Puebla Río Tecolutla, side branch of the Río Xaltepuztla where it meets the Río Necaxa at Tepexic. Holotype: UMMZ 177306.

Maximum length: 4 cm TL
Distribution: North America: Tecolutla (Necaxa) River basin.
Countries: Mexico

***Xiphophorus gordonii* Miller & Minckley, 1963**

Xiphophorus gordonii Miller & Minckley, 1963: 538, fig. 1. Type locality: Laguna Santa Tecla, about 20 airline miles south-southeast of the town of Cuarto Ciénegas, Coahuila, Mexico. Holotype: UMMZ 179866.

Maximum length: 3.5 cm TL
Distribution: North America: Cuatrociénegas River basin.
Countries: Mexico

***Xiphophorus hellerii* Heckel, 1848**

Xiphophorus hellerii Heckel, 1848: 291, pl. 8 (figs. 1-3). Type locality: Orizaba, Mexico. Syntypes: NMW 60543 (8).

Xiphophorus guntheri Jordan & Evermann, 1896: 702. Type locality: Río Chisoy, basin of Río Usumacinta, Guatemala. Syntypes: BMNH 1864.1.26.185 (1), 1894.1.26.193 (1).

Xiphophorus jalapae Meek, 1902: 107, pl. 26. Type locality: Jalapa, Vera Cruz, Mexico. Holotype: FMNH 3724.

Xiphophorus strigatus Regan, 1907b: 65. Type locality: southern Mexico, Veracruz and Oaxaca. Syntypes: BMNH.

- Xiphophorus brevis* Regan, 1907b: 65. Type locality: British Honduras, Stann Creek. Syntypes: BMNH 1890.9.8.18-19 (2).
Xiphophorus rachovii Regan, 1911b: 373. Type locality: Porto Barrios, on the Atlantic coast of Guatemala, between Lake Yzabal and Río Motagua. Syntypes: BMNH 1911.8.14.4-8 (6).
 Maximum length: 14 cm TL
 Distribution: North and Central America: From Nantla River, Veracruz in Mexico to northwestern Honduras. Africa: Feral populations reported from Natal and eastern Transvaal as well as in Lake Otjikoto, Namibia.
 Countries: Belize, Brazil (introduced), Colombia (introduced), Guatemala, Honduras, Jamaica (introduced), Mexico, Puerto Rico (introduced)
- Xiphophorus kosszanderi* Meyer & Wischnath, 1981**
Xiphophorus kosszanderi Meyer & Wischnath, 1981: 130, figs. 1-3. Type locality: Arroyo Chapultepec, 7 km northeast of Monterrey, Nuevo León, Mexico. Holotype: SMF 16200.
 Distribution: North America: Mexico.
 Countries: Mexico
- Xiphophorus maculatus* (Günther, 1866)**
Platypoecilus maculatus Günther, 1866: 350. Type locality: Mexico. Syntypes: BMNH 1857.7.31.11-12 (2).
Platypoecilus nigra Brind, 1914: 22. Type locality: Mexico. No types known.
Platypoecilus pulchra Brind, 1914: 22, fig. Type locality: Mexico. No types known.
Platypoecilus rubra Brind, 1914: 22. Type locality: Mexico. No types known.
Platypoecilus maculatus cyanellus Meinken, 1935: 261, fig. unnumbered Type locality: in der Nähe der Stadt Tancasnequi, an einen Nebenflusse des Rio Panuco [Mexico]. Holotype: whereabouts unknown.
Platypoecilus maculatus sanguinea Stoye, 1935: 51. Type locality: No locality. No types known.
Platypoecilus maculatus aurata Stoye, 1935: 51. Type locality: No locality. No types known.
 Maximum length: 6 cm TL
 Distribution: North and Central America: Ciudad Veracruz, Mexico to northern Belize.
 Countries: Bahamas (introduced), Belize, Brazil (introduced), Colombia (introduced), Guatemala, Jamaica (introduced), Puerto Rico (introduced)
- Xiphophorus malinche* Rauchenberger, Kallman & Moziriot, 1990**
Xiphophorus malinche Rauchenberger, Kallman & Morizot, 1990: 10, fig. 7. Type locality: Río Claro at Tlatzintla, Río Pánuco drainage, HID, Mexico. Holotype: AMNH 88336.
 Maximum length: 5.5 cm TL
 Distribution: North America: Pánuco River drainage in Hidalgo, Mexico.
 Countries: Mexico
- Xiphophorus mayae* Meyer & Scharl, 2002**
Xiphophorus mayae Meyer & Scharl, 2002: 60, fig. 1. Type locality: Guatemala: Castillo de San Felipe, near hotel Marimonte, Lago de Izabal. Holotype: SMF 28885.
 Maximum length: 7.8 cm SL
 Distribution: Central America: Atlantic slope, in Lake Izabal, and the Polochic, Dulce, and Motagua River basins.
 Countries: Guatemala
- Xiphophorus meyeri* Scharl & Schröder, 1988**
Xiphophorus meyeri Scharl & Schröder, 1988: 312, fig. 1. Type locality: near Muzquiz, Coahuila, Mexico. Holotype: SMF 21192.
 Maximum length: 3 cm TL
 Distribution: North America: Mexico.
 Countries: Mexico
- Xiphophorus milleri* Rosen, 1960**
Xiphophorus milleri Rosen, 1960: 89, fig. 8. Type locality: Mexico, Veracruz Rio Papaloapan System. A small tributary of Laguna Catemaco about 2 mi. SE Catemaco. Holotype: UMMZ 177308.
 Maximum length: 3 cm TL
 Distribution: North America: Catemaco in Veracruz, Mexico.
 Countries: Mexico
- Xiphophorus montezumae* Jordan & Snyder, 1899**
Xiphophorus montezumae Jordan & Snyder, 1899: 131, fig. 11. Type locality: Río Verde near Rascon, San Luis Potosí, e. Mexico. Holotype: SU 6145.
 Maximum length: 5.5 cm TL
 Distribution: North America: Northeastern Mexico (Tamaulipas, northern Veracruz, San Luis Potosí).
 Countries: Mexico
- Xiphophorus multilineatus* Rauchenberger, Kallman & Morizot, 1990**
Xiphophorus multilineatus Rauchenberger, Kallman & Morizot, 1990: 15, fig. 13. Type locality: Río Coy near confluence with the Río Tampaón, Río Pánuco drainage, SLP, Mexico. Holotype: AMNH 88337.
 Maximum length: 4.5 cm TL
 Distribution: North America: Coy River of Panuco River basin in San Luis Potosí, Mexico.
 Countries: Mexico
- Xiphophorus nezahualcoyotl* Rauchenberger, Kallman & Morizot, 1990**
Xiphophorus nezahualcoyotl Rauchenberger, Kallman & Morizot, 1990: 6, fig. 4. Type locality: Arroyo Gallitos, 0.5 km west of Gallitos, an internal drainage, TAMPS, Mexico. Holotype: AMNH 88334.
 Maximum length: 5 cm TL
 Distribution: North America: Tamasi River drainage in San Luis Potosí, Mexico.
 Countries: Mexico
- Xiphophorus nigrensis* Rosen, 1960**
Xiphophorus pygmaeus nigrensis Rosen, 1960: 100, fig. 15. Type locality: Mexico San Luis Potosí Rio Panuco system Rio Choy Nacimiento del Rio Choy, 4 km. N Hotel Taninul, 3 km. N of road from Route 110 (Valles-Tampico Highway). Holotype: UMMZ 177301.
 Maximum length: 6 cm TL
 Distribution: North America: Choy River, in the Pánuco River drainage in San Luis Potosí, Mexico.
 Countries: Mexico
- Xiphophorus pygmaeus* Hubbs & Gordon, 1943**
Xiphophorus pygmaeus Hubbs & Gordon, 1943: 31, pl. 1 (fig. 1). Type locality: Río Axtla of the Río Panuco system, at Axtla, San Luis Potosí, México. Holotype: UMMZ 124365.
 Maximum length: 4 cm TL
 Distribution: North America: Pánuco River system, northeastern Mexico.
 Countries: Mexico
- Xiphophorus roseni* Meyer & Wischnath, 1981**
Xiphophorus roseni Meyer & Wischnath, 1981: 133, fig. 4. Type locality: Arroyo Cahpultepec, 7 km northeast of Monterrey, Nuevo León, Mexico. Holotype: SMF 16204.
 Distribution: North America: Mexico.
 Countries: Mexico

***Xiphophorus signum* Rosen & Kallman, 1969**

Xiphophorus helleri signum Rosen & Kallman, 1969: 5, fig. 1B.
Type locality: Río Semococh, tributary to the Río Chajmaic, a headwater source of the Río de la Pasión (Río Usumacinta Basin) 15 kilometers by road south of Sebol, Alta Verapaz, Guatemala. Holotype: AMNH 27675.
Maximum length: 7.5 cm TL
Distribution: Central America: Chajmaic and de la Pasión River drainages in Alta Verapaz, Guatemala.
Countries: Guatemala

***Xiphophorus variatus* (Meek, 1904)**

Platypoecilus variatus Meek, 1904: 146, pl. 10. Type locality: Valles, San Luis Potosí [Mexico]. Holotype: FMNH 4501.
Maximum length: 7 cm TL
Distribution: North America: From southern Tamaulipas to northern Veracruz.
Countries: Colombia (introduced), Mexico

***Xiphophorus xiphidium* (Gordon, 1932)**

Platypoecilus xiphidium Gordon, 1932: 287. Type locality: Río Corona at La Corona, 15 mi. north of Ciudad, Victoria, Río Soto la Marina system, Tamaulipas, Mexico. Lectotype: UMMZ 97573, designated by Rosen (1960: 83).
Maximum length: 4 cm TL
Distribution: North America: Soto La Marina River drainage in Tamaulipas, Mexico.
Countries: Mexico

GENERA INQUIRENDAE

Arizonichthys Nichols, 1940: 1. Type species: *Arizonichthys psammophilus* Nichols, 1940. Type by monotypy. Gender: masculine.
Gambusia (Toluichthys) Dahl in Dahl & Medem, 1964: 80. Type species: *Gambusia (Toluichthys) meadi* Dahl, 1964. Type by monotypy. Gender: masculine.
Hubbsichthys Schultz, 1949: 95. Type species: *Hubbsichthys laurae* Schultz, 1949. Type by original designation. Gender: masculine.

SPECIES INQUIRENDAE

Arizonichthys psammophilus Nichols 1940: 1. Type locality: 3 1/2 miles east of Tanque Verde, Pima County, Arizona, altitude 2750 ft. Holotype: AMNH 15373 (not found in 1996).
Fundulus capensis Garman 1895: 113, Pl. 3 (fig. 2). Type locality: False Bay, Cape of Good Hope, South Africa [apparently in error]. Holotype: MCZ 6454.
Gambusia (Toluichthys) meadi Dahl in Dahl & Medem, 1964: 80, fig. pg. 81. Type locality: vecindad de Tolú. Holotype: not located.
Gambusia baracoana Rivas, 1944b: 46. Type locality: small freshwater pond, near the mouth of Río Miel, in the vicinity of the city of Baracoa, Province of Oriente [Cuba]. Holotype: USNM 203150 [ex Rivas coll. 134].
Girardinus januaris var. *reticulatus* Hippisus 1910: 392, Figs. 31-32. Unknown type locality. No types known.
Girardinus microdactylus rivasi Baruš & Wohlgemuth, 1994: 250, fig. 1. Type locality: small man-made freshwater pool near Rancho Tesoro Hotel, Nueva Gerona, Isla de la Juventud, Cuba. Holotype: Inst. Landscape Ecol., Acad. Sci. Czech Republic ILE 11993.
Girardinus zonatus Schreiner & Miranda Ribeiro, 1903: 73. Type locality: Brazil ? Syntypes: MNRJ (10) uncatalogued and missing.
Hubbsichthys laurae Schultz, 1949: 96, fig. 13. Type locality: Near Pampán, Estado de Trujillo, Venezuela, and probably in

Río Motatán drainage. Holotype: USNM 120999.
Lebistes poecilioides De Filippi, 1861: 70, pl. 4 (figs. 6, 6a-d). Type locality: Barbados, West Indies. No types known. Probable synonym of some species of *Poecilia*, but not *P. reticulata*.
Lebistes reticulatus aurata Schreitmüller, 1934: 242. No type locality. Syntypes: ZMB 21084 (7). Name found in Eschmeyer (1998) without reference to a publication. Availability of name undetermined.
Mollienesia sphenops petersi Schindler, 1959: 1, fig. 1. Type locality: Yojoa-See (NW-Honduras, atlantisches Einzugsgebiet). Holotype: ZSM 15639.
Poecilia mexicana De Filippi in Tortonese, 1940: 142. type locality: Città di Messico. Not available: nomen nudum also preoccupied by *Poecilia mexicana* Steindachner, 1863.
Poecilia unipunctata Guérin-Méneville, 1829-38: 28, pl. 47 (fig. 3). Type locality: les eaux douce de l'Amérique Méridionale, a Rio-Janeiro. No types known.
Xiphophorus elegans Paepke & Seegers, 1986: 175. Type locality: ?. Syntypes: ZMB 31510 (2)?
Xiphophorus heckelii Weyenbergh, 1874: 292, pls. 1-2 (= figs. 1-31). Type locality: La Plata. Syntypes: MSNG 33704 (4)
Xiphophorus marmoratus Obregon-Barboza & Contreras-Balderas, 1988: 95, fig. 2. Type locality: Cascada La Alberca, sw of Múzquiz, road to airport, Coahuila, Mexico. Holotype: UANL 8077.
Xiphophorus minor Weyenbergh, 1877: 20, pl. 4 (fig. 19). Type locality: Catamarca, Argentina. Syntypes: (several) Mus. Nacional Argentina, Buenos Aires.
Xiphophorus obscurus Weyenbergh, 1877: 18, pl. 4 (figs. 17-18). Type locality: La Plata, Argentina. Syntypes: (several) Museo Nacional Argentina, Buenos Aires. Syntypes: (several) MSNG 33705 (3)
Xiphophorus pseudomontezumae Ahl, 1938: 53, figs. 1-2. Type locality: Mexico. Holotype: ZMB 21083.

Family Anablepidae (Four-eyed fishes, onesided livebearers and the white eye)

Michael J. Ghedotti

Four-eyed fishes, onesided livebearers & the white eye form a diverse and relatively recently recognized family of cyprinodontiform fishes. The family was most recently recognized with its current composition by Parenti (1981) in a phylogenetic study based using morphological data. The composition of the family was supported by subsequent phylogenetic studies by Meyer & Lydeard (1993) using DNA sequence data and by Costa (1998), and Ghedotti (1998, 2000) using morphological data. Phylogenetic relationships among members of the Anablepidae have been proposed by Ghedotti (1998), Ghedotti et al. (2001) and Lucinda et al. (2002) based upon morphological data. The family is uniquely diagnosed among cyprinodontiform fishes by the possession of laterality in the male urogenital papilla or gonopodium. Both dextral and sinistral individuals occur in all species. Most species exhibit teeth that are to some degree tricuspid. Two of the three species of otherwise distinctive four-eyed fishes have unicuspid teeth.

The family is composed of three morphologically distinct genera, monotypic *Oxyzygonectes*, *Jenynsia* with eleven species and *Anableps* with three species. The white eye, *Oxyzygonectes dovii*, is a relatively large (to 15 cm total length) externally fertilizing, oviparous species from Central America with a pointed snout, a particularly flat dorsal profile and reflective dorsal irises. The onesided livebearers and the four-eyed fishes, *Jenynsia* and *Anableps* respectively, are sister taxa (Parenti, 1981, Meyer & Lydeard, 1993, Costa, 1998, Ghedotti, 1998) and exhibit both internal fertilization and viviparity. Adult male *Jenynsia* and *Anableps* have the anal fin modified as a fleshy tubular gonopodium with the tip angled laterally. The onesided livebearers, genus *Jenynsia*, are widely distributed in southeastern South America and exhibit a more "typical" cyprinodontiform shape. Unlike members of the other two anablepids genera, *Jenynsia* when quickly examined can be confused with poeciliid fishes. The four-eyed fishes, genus *Anableps*, are distributed in Central America and northern South America. *Anableps* are the most distinctive members of the family and grow to the largest sizes of any cyprinodontiform fishes, reaching up to 32 cm in total length. *Anableps* are called four-eyed fishes because they have eyes that are prominently raised above the top of head and each eye is divided lengthwise forming two pupils, one dorsal and one ventral, in each eye. *Anableps* individuals often swim with the center of the eye at the water's surface and are capable of simultaneous aerial and aquatic vision. Female *Anableps* exhibit sexual laterality and have a flap of skin covering either the dextral or sinistral surface of the urogenital opening (Garman, 1896). Female laterality is absent in other anablepids (Ghedotti & Weitzman, 1996; Ghedotti, 1998).

The family is found in Pacific drainages of Central America from Oaxaca State Mexico to northern Panama, coastal and estuarine areas of northern South America from the Orinoco River delta to the Amazon River delta, and in southern South America in coastal estuaries from Rio de Janeiro to Buenos Aires province as well as in inland areas in northern Argentina, southern Bolivia, Uruguay, and southern Brazil. Anablepids are absent from the Caribbean drainages of Central America, the Pacific drainages of South America, the Amazon Basin (except for its delta), and Patagonia.

Anablepids inhabit a wide variety of environments. *Oxyzygonectes dovii* inhabit estuarine waters but breed in freshwater (Fromm, 1982). *Anableps anableps* is largely estuarine and is usually found on muddy tidal flats (Lowe-McConnell, 1975). However, this species can survive in freshwater for long periods (Zahl et al., 1977). *Anableps microlepis* has been noted in full sea water along the open coast as well as 100 km up the Orinoco River (Miller, 1979) and exhibits. *Anableps dowi* has been noted in full sea water along the open coast but is most commonly encountered in brackish and, especially, freshwaters up to an elevation of 670m (Miller, 1979). *Jenynsia multidentata* inhabit estuarine and near-shore environments varying in salinity from freshwater to fully marine. The other species of *Jenynsia* are largely restricted to freshwaters although the species from western and southern Argentina may be found in waters with a higher salinity due to evaporation. *Oxyzygonectes dowi* and *Anableps* species are known to consume terrestrial insects (Miller, 1979; Fromm, 1982) and *Anableps dowi* and *A. anableps* have been seen to occasionally capture insects in the air (Zahl et al., 1977; Miller, 1979). *Anableps anableps* has been observed consuming tidally exposed silt covered with diatoms (Zahl et al., 1977) and the gut contents of *A. anableps* and *A. microlepis* confirm that these species do consume silt (Ghedotti, 1998). *Jenynsia* usually consume aquatic insects and algae. *Jenynsia* species are not as commonly surface feeders as are *Anableps* and *Oxyzygonectes*. Escalante (1987) found that *Jenynsia multidentata* from Argentina consumed primarily diatoms, filamentous green algae and benthic insect larvae.

The details of viviparity in *Anableps* and *Jenynsia* differ and have been explored. Turner (1938, 1940b) reported on viviparity in *Anableps anableps* and noted that, as in poeciliids, *Anableps* has intrafollicular gestation during which nutrients

are transferred through a vascular follicular “placenta.” Knight et al. (1985) determined that *Anableps* embryos had post fertilization weight increases of 298,000% (for *Anableps anableps*) to 843,000% (for *Anableps dowi*) showing the greatest amount of viviparous maternal nutrient transfer in any teleost. Burns and Flores (1981) documented seasonal breeding and superfoetation (embryos in different stages in the ovary) in *Anableps dowi* and noted that the female genital opening closes during gestation. Turner (1940a) also reported on viviparity in *Jenynsia multidentata*. He noted ovarian lumen gestation with the development of flaps of the ovarian epithelium entering the pharyngeal cavity of embryos and forming a type of “branchial placenta” to meet the respiratory needs of the embryos. He also noted the presence of ovarian fluid and desquamated cells within the digestive tract of the embryos. Schindler and De Vries (1988) determined that the epithelium of the ovarian flaps is involved in trans-epithelial transport from the ovary into the pharyngeal cavity of the embryo. Downing Meisner et al. (2000) and Ghedotti et al. (2001) confirmed the presence of ovarian folds in *J. alternimaculata*, *J. eirmostigma*, *J. lineata* and *J. weitzmani* and suggested that the embryos are ingesting portions of the ovarian fold. Seasonality of breeding in *J. multidentata* was noted by Turner (1957). Grier et al. (1981) and Burns (1991) described the testis structure of *A. anableps*, *A. dowi*, and *J. multidentata* and noted that *A. dowi* forms partial sperm bundles while the other two species form free sperm.

It is unlikely that additional species of the large fishes in the genera *Anableps* or *Oxyzygonectes* will be discovered unless somewhat cryptic species are recognized through molecular studies within existing species. However, the number of species within the genus *Jenynsia* has doubled in the last decade with five species described and one subspecies elevated to species status (Ghedotti & Weitzman, 1995, 1996; Ghedotti et al., 2001; Lucinda et al., 2002). It is very likely that additional species of *Jenynsia* will be described in the near future because of the increasing attention being given to the ichthyofauna of southern Brazil and the currently recognized diversity of *Jenynsia* in this region.

No anablepid species are commercially important as food, but *Anableps anableps* and *A. microlepis* are locally consumed and marketed. *Anableps* and *Jenynsia* species appear occasionally as novelty aquarium fishes.

ANABLEPS

Anableps Scopoli, 1777: 450. Type species: *Cobitis anableps* Linnaeus, 1758. Gender: feminine.

Anableps Bloch, 1794: 7. Type species: *Anableps tetrophthalmus* Bloch, 1794. Type by monotypy. Gender: feminine.

Peltatetraops Fowler, 1931: 396. Type species: *Anableps microlepis* Müller & Troschel, 1844. Type by original designation. Gender: masculine.

Anableps anableps (Linnaeus, 1758)

Cobitis anableps Linnaeus, 1758: 303. Type locality: India.

Anableps tetrophthalmus Bloch, 1794: 7, pl. 361. Type locality: Surinam. Syntypes: ZMB 3498-3500.

Anableps surinamensis La Cepède, 1803: 25, 26. Type locality: Surinam.

Anableps gronovii Valenciennes in Cuvier & Valenciennes, 1846: 252, pl. 538. Type locality: Cayenne [French Guiana]. Holotype: MNHN B.936.

Anableps lineatus Gronow, in Gray, 1854: 192. Type locality: Not known. Holotype: ZMUC 417.

Maximum length: 30 cm TL

Distribution: South America: Trinidad Island and coastal drainages from Venezuela to the Amazon River delta.

Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela

Anableps dowi Gill, 1861

Anableps dowei Gill, 1861: 4. Type locality: Bay of La Unión [El Salvador]. Holotype: ANSP 6982 or USNM 6048.

Maximum length: 22 cm TL

Distribution: North and Central America: Pacific drainages, from southern Mexico to Nicaragua.

Countries: El Salvador, Guatemala, Honduras, Mexico, Nicaragua
Remarks and references: The specific epithet of *Anableps dowei* was justifiably corrected to *dowi* by Miller (1966).

Anableps microlepis Müller & Troschel, 1844

Anableps microlepis Müller & Troschel, 1844: 36. Type locality: British Guiana. No types known.

Anableps coarctatus Valenciennes, in Cuvier & Valenciennes, 1846: 266, pl. 540. Type locality: Cayenne [French Guiana]. MHNH B.938.

Anableps elongatus Valenciennes, in Cuvier & Valenciennes, 1846: 267, pl. 541. Type locality: Cayenne [French Guiana]. Holotype: MNHN B.937.

Maximum length: 32 cm TL

Distribution: South America: Trinidad Island and coastal drainages from Venezuela to the Amazon River delta.

Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela

JENYNSIA

Fitzroyia Günther, 1866: 307. Type species: *Lebias multidentata* Jenyns, 1842. Type by monotypy. Gender: feminine.

Jenynsia Günther, 1866: 331. Type species: *Lebias lineata* Jenyns, 1842. Type by monotypy. Gender: feminine.

Plesiojenynsia Ghedotti, 1998: 579. Type species: *Jenynsia unitaenia* Ghedotti & Weitzman, 1995. Type by original designation. Gender: feminine. Proposed as a subgenus of *Jenynsia*.

Jenynsia alternimaculata (Fowler, 1940)

Fitzroyia lineata alternimaculata Fowler, 1940: 57, figs. 12-13. Type locality: Monte Bello, Tarija, Bolivia. Holotype: ANSP 68833.

Maximum length: 5.5 cm SL

Distribution: South America: Upper reaches of Paraná River tributaries in northwestern Argentina and southern Bolivia.

Countries: Argentina, Bolivia

Jenynsia eigenmanni (Haseman, 1911)

Fitzroyia eigenmanni Haseman, 1911: 385, pl. 82. Type locality: near Serrinha Paraná, Brazil, three miles from Rio Iguassú. Holotype: FMNH 69527.

Maximum length: 6.5 cm SL

Distribution: South America: Upper Iguazu River basin.

Countries: Brazil

Jenynsia eirmostigma Ghedotti & Weitzman, 1995

Jenynsia eirmostigma Ghedotti & Weitzman, 1995: 940, fig. 1. Type locality: Rio Grande do Sul, rio Manoel Leao, Município de Cambará do Sul, near to Sao José dos Ausentes. Holotype: MZUSP 47625.

Maximum length: 7.1 cm SL

Distribution: South America: Upper Uruguay and Jacui River basins.

Countries: Brazil

Jenynsia lineata (Jenyns, 1842)

Lebias lineata Jenyns, 1842: 116, pl. 22 (fig. 2). Type locality: Maldonado [Uruguay]. Syntypes: BMNH 1843.2.8.43 and BMNH 1917.7.14.20-23.

Maximum length: 5.5 cm SL

Distribution: South America: Southern tributaries of the Mirim Lagoon.

Countries: Brazil, Uruguay

Jenynsia maculata Regan, 1906

Jenynsia maculata Regan, 1906: 154. Type locality: Cachi, Salta, Argentina, at an elevation of 2500 m. Syntypes: BMNH 1906.5.31.62-71.

Maximum length: 7.3 cm SL

Distribution: South America: Caichauqui River in upper Salado River drainage, Salta Province.

Countries: Argentina

Jenynsia multidentata (Jenyns, 1842)

Lebias multidentata Jenyns, 1842: 117, pl. 22 (fig. 3). Type locality: Uruguay, Montevideo. Holotype: BMNH 1917.7.14.24.

Poecilia punctata Valenciennes, in Cuvier & Valenciennes, 1846: 133. Type locality: Monte Video. Holotype: MNHN B.935.

Maximum length: 6.3 cm SL

Distribution: South America: Most of northern Argentina, from Colorado River to lower Paraná River drainage and costal rivers from Uruguay to Rio de Janeiro.

Countries: Argentina, Brazil, Uruguay

Jenynsia onca Lucinda, Reis & Quevedo, 2002

Jenynsia onca Lucinda, Reis & Quevedo, 2002: 35, fig. 2. Type locality: Brazil, Rio Grande do Sul, rio Inhacundá about 500 m upstream of pottery (29°32'27"S 55°07'45"W) São Francisco de Assis. Holotype: MCP 26478.

Maximum length: 3.9 cm SL

Distribution: South America: Ibicuí River basin in Brazil and the Negro River basin in Uruguay.

Countries: Brazil, Uruguay

Jenynsia pygogramma Boulenger, 1902

Jenynsia pygogramma Boulenger, 1902: 336. Type locality: Río Cruz del Eje, Prov. Cordova, 600 m [Argentina]. Syntypes: BMNH 1902.5.22.72-81

Maximum length: 6 cm TL

Distribution: South America: Dulce River basin in western Argentina.

Countries: Argentina

Jenynsia sanctaecatrinae Ghedotti & Weitzman, 1996

Jenynsia sanctaecatrinae Ghedotti & Weitzman, 1996: 3, fig. 1. Type locality: Rio Pique off road between Meleiro and Arangua, Morro Cortado, Santa Catarina, Brazil. Holotype: MZUSP 26511.

Maximum length: 4.2 cm SL

Distribution: South America: Araranguá River basin in southern Santa Catarina.

Countries: Brazil

Jenynsia unitaenia Ghedotti & Weitzman, 1995

Jenynsia unitaenia Ghedotti & Weitzman, 1995: 943, fig. 5. Type locality: Brazil, Santa Catarina, Município de Praia Grande, rio Faxinalzinho at Mae dos Homens near Praia Grande. Holotype: MZUSP 47615.

Maximum length: 7.6 cm SL

Distribution: South America: Coastal rivers in Santa Catarina and northeastern Rio Grande do Sul States.

Countries: Brazil

Jenynsia weitzmani Ghedotti, Downing Meisner & Lucinda, 2001

Jenynsia unitaenia Ghedotti, Downing Meisner & Lucinda, 2001: 728, fig. 1. Type locality: Brazil, Santa Catarina State, tributary of rio Pinheiros near Anitápolis, 7 kkm from road SC-407 (approximately 27°54'S 49°7'W). Holotype: MCP 25559.

Maximum length: 7.6 cm SL

Distribution: South America: Tubarão River basin in southern Santa Catarina State.

Countries: Brazil

OXYZYGONECTES

Oxyzygonectes Fowler, 1916: 425. Type species: *Haplochilus dovii* Günther, 1866. Type by original designation. Gender: masculine.

Oxyzygonectes dovii (Günther, 1866)

Haplochilus dovii Günther, 1866: 316. Type locality: Costa Rica, Punta Arena. Syntypes: BMNH 1865.7.20.29-30.

Maximum length: 15 cm TL

Distribution: Central America: Pacific drainages in western Panama to Nicaragua.

Countries: Costa Rica, Nicaragua, Panama

Family Belonidae (Needlefishes)

Nathan R. Lovejoy and Bruce B. Collette

Elongate fishes with both upper and lower jaws extended into long beaks filled with sharp teeth (except in neotenic *Belonion*); nostrils in a pit anterior to eyes. No spines in fins; dorsal and anal fins posterior in position; pectoral fins short. Lateral line running down from pectoral fin origin and then along ventral margin of body. Scales small, cycloid, easily detached. Color: These fishes live at the surface and are protectively colored for this mode of life by being green or blue on the back and silvery white on the lower sides and belly. Usually, a dusky or dark blue stripe along sides; fleshy tip of lower jaw frequently red or orange.

The Belonidae contains 10 genera and 33 species (Collette et al. 1984). Four genera are monotypic: the southern African *Petalichthys*, the worldwide *Ablennes* and *Platybelone*, and apparently the Asian freshwater *Xenetodon*. The eastern Atlantic *Belone* contains two species. *Tylosurus* contains six species of strictly marine species. Three genera are restricted to freshwaters of South America: *Belonion* (two species), *Potamorrhaphis* (three), and *Pseudotylosurus* (two). Biogeography and molecular systematics of the South American needlefishes are discussed by Lovejoy and de Araújo (2000) and Lovejoy and Collette (2001). The most speciose genus, *Strongylura*, contains 14 species, mostly marine, some estuarine, and three strictly freshwater, two of which are found in Central and South America, *S. fluviatilis* from Ecuador and Colombia and *S. hubbsi* from Mexico and Guatemala.

Most species are marine, but some occur in freshwaters. Carnivorous, feeding largely on small fishes which they catch sideways in their beaks. Information on the ecology of the three endemic South American genera was presented by Goulding and Carvalho (1984). Needlefishes tend to leap and skitter at the surface and some people have been injured when accidentally struck by them, particularly at night when the fishes are attracted by lights.

Needlefishes are caught by casting or trolling surface or near-surface lures and in floating gill nets. Flesh excellent in flavor although some people have misgivings about eating it due to the green color of the bones. Some fresh water needlefishes reach only 6 or 7 cm in total length while some marine species may attain 2 m.

BELONION

Belonion Collette, 1966: 7. Type species: *Belonion apodion* Collette, 1966. Type by original designation. Gender: neuter.

***Belonion apodion* Collette, 1966**

Belonion apodion Collette, 1966: 12, fig. 1 (b, c). Type locality: Bolivia, laguna 3 km southwest of Costa Marques, Brazil, Rio Guaporé. Holotype: AMNH 20805.

Maximum length: 5 cm SL

Distribution: South America: Guaporé and Madeira River basins.

Countries: Bolivia, Brazil

***Belonion dibranchodon* Collette, 1966**

Belonion dibranchodon Collette, 1966: 9, fig. 1a. Type locality: Venezuela, Río Atabapo, a tributary of the Orinoco River on the border between the state of Amazonas, Venezuela and Vaupes, Colombia. Holotype: MNHN 87-836.

Maximum length: 4.8 cm SL

Distribution: South America: Atabapo and Negro River basins.

Countries: Brazil, Venezuela.

POTAMORRHAPHIS

Potamorrhaphis Günther, 1866: 256. Type species: *Belone (Potamorrhaphis) taeniata* Günther, 1866. Type by subsequent designation of Jordan & Fordice (1887 = *B. guianensis* Schomburgk). Gender: feminine. Originally proposed as a subgenus of *Belone*.

***Potamorrhaphis eigenmanni* Miranda Ribeiro, 1915**

Potamorrhaphis eigenmanni Miranda Ribeiro, 1915: Belonidae p. 13. Type locality: Cáceres-Rio Jaurú at Pôrto Esperidião, Mato Grosso, Brazil. Lectotype: MNRJ 1343A.

Maximum length: 22.8 cm SL

Distribution: South America: Upper Madeira River and its tributaries (Beni, Mamoré, and Guaporé); also from the Paraguay-Paraná River basin.

Countries: Argentina, Bolivia, Brazil, Paraguay

Remarks and references: Redescribed by Collette (1982)

***Potamorrhaphis guianensis* (Jardine, 1843)**

Belone Guianensis Jardine, in Schomburgk, 1843: 131, pl. 1. Type locality: Patauiri River, Guiana. Holotype: whereabouts unknown.

Belone scolopacina Valenciennes, in Cuvier & Valenciennes, 1846: 428. Type locality: La Mana, Cayenne [French Guiana]. Holotype: MNHN 833.

Belone (Potamorrhaphis) taeniata Günther, 1866: 256. Type locality: River Capin, Brazil, Pará. Lectotype: BMNH 1849.11.9.59, designated by Collette (1982: 728).

Maximum length: 29.1 cm TL

Distribution: South America: Amazon and Orinoco River basins, and the Guianas.

Countries: Brazil, Colombia, Ecuador, French Guiana, Guyana, Peru, Suriname, Venezuela

Common names: Aiguillette (French Guiana), Peixe agulha (Brazil), Pirapucu (Brazil), Poisson aiguille (French Guiana), Zophi noué (French Guiana)

Remarks and references: Redescribed by Collette (1982).

***Potamorrhaphis petersi* Collette, 1974**

Potamorrhaphis petersi Collette, 1974a: 34, fig. 1a. Type locality: Colombia, Laguna Coco northeast of Puerto Inírida, pool near junction of Río Guaviare and Río Inírida. Holotype: USNM 210546.

Maximum length: 24.6 cm SL

Distribution: South America: Upper Orinoco and Negro River basins.

Countries: Brazil, Colombia, Venezuela

PSEUDOTYLOSURUS

Pseudotylorus Fernández-Yépez, 1948: 72. Type species: *Pseudotylorus brasiliensis* Fernández-Yépez, 1948. Type by monotypy. Gender: masculine.

Deltatylorus Martin, 1954: 4. Type species: *Deltatylorus guayoensis* Martin, 1954. Type by monotypy. Gender: masculine.

***Pseudotylorus angusticeps* (Günther, 1866)**

Belone angusticeps Günther, 1866: 238. Type locality: Coast of Ecuador. Holotype: BMNH 1860.6.16.181.

Pseudotylorus brasiliensis Fernández-Yépez, 1948: 72. Type locality: Junction of Río Xingu with Amazon R. at Pôrto do Moz, Pará, Brazil. Holotype: MCZ 8797.

Maximum length: 29.8 cm SL

Distribution: South America: Upper Amazon and Paraguay-Paraná basins.

Countries: Argentina, Bolivia, Brazil, Ecuador, Peru

Common names: Pez aguja (Peru)

Remarks and references: Redescribed by Collette (1974c).

***Pseudotylorus microps* (Günther, 1866)**

Belone microps Günther, 1866: 237. Type locality: Suriname. Lectotype: BMNH 1845.6.22.104, designated by Collette (1974c: 178).

Belone amazonica Steindachner, 1876: 94. Type locality: Tajapurú, Amazon R., Brazil. Lectotype: NMW 12926, designated by Collette (1974c: 178).

Deltatylorus guayoensis Martin, 1954: 5. Type locality: Channel of the Orinoco R., near Misión de Guayo, Estado Delta Amacuro, Venezuela. Holotype: MHNLS 9923.

Maximum length: 40.7 cm SL

Distribution: South America: Orinoco and lower Amazon River basins; Guianas.

Countries: Brazil, Guyana, Peru, Suriname, Venezuela

Common names: Pez aguja (Peru)

Remarks and references: Redescribed by Collette (1974c).

STRONGYLURA

Strongylura van Hasselt, 1824: 374. Type species: *Strongylura caudimaculata* van Hasselt, 1823. Type by monotypy. Gender: feminine.

Stenocaulus Ogilby, 1908: 91. Type species: *Belone krefftii* Günther, 1866. Type by original designation. Gender: masculine.

Lewinichthys Whitley, 1933: 67. Type species: *Belone ferox* Günther, 1866. Type by original designation. Gender: masculine.

Rhaphiobelone Fowler, 1934: 322. Type species: *Rhaphiobelone dammermani* Fowler, 1934. Type by original designation. Gender: feminine.

Dorybelone Fowler, 1944: 215. Type species: *Belone stoltzmanni* Steindachner, 1878. Type by original designation. Gender: feminine.

***Strongylura fluviatilis* (Regan, 1903)**

Belone fluviatilis Regan, 1903: 626. Type locality: Rivers of N.W. Ecuador. Holotype: BMNH 1901.8.3.26.

Maximum length: 51.7 cm SL

Distribution: South America: rivers of the western slope of the Andes.

Countries: Colombia, Ecuador

***Strongylura hubbsi* Collette, 1974**

Strongylura hubbsi Collette, 1974b: 612, fig. 1. Type locality: Río de la Pasión immediately above mouth of Arroyo de Petexbatúm at Sayaxché, El Petén, Guatemala. Holotype: UMMZ 194998.

Maximum length: 49.8 cm SL

Distribution: North and Central America: Guatemala and Mexico.

Countries: Guatemala, Mexico

Family Hemiramphidae (Halfbeaks)

Bruce B. Collette

The Hemiramphidae, the halfbeaks, are one of five families of the order Beloniformes. They are the sister-group of the Exocoetidae, the flying fishes, forming the superfamily Exocoetoidea (Collette et al., 1984). Most halfbeaks have an elongate lower jaw that distinguishes them from flying fishes which have lost the elongate lower jaw and from needlefishes (Belonidae) and sauries (Scomberesocidae) which have both jaws elongate. The family is defined by one derived character, third pair of upper pharyngeal bones anklylosed into a plate. Other diagnostic characters include: pectoral fins short or moderately long; premaxillae pointed anteriorly, forming a triangular upper jaw (except in *Oxyporhamphus*); lower jaw elongate in juveniles of all genera, adults of most genera; parapophyses forked; swimbladder not extending into haemal canal; nostrils in a pit anterior to the eyes; no spines in fins; dorsal and anal fins posterior in position; pelvic fins in abdominal position, with 6 soft rays; lateral line running down from pectoral fin origin and then backward along ventral margin of body. Scales moderately large, cycloid, easily detached. Halfbeaks live at the surface and are protectively colored for this mode of life being green or blue on the back and silvery white on the sides and ventrally. The tip of the lower jaw is bright red or orange in life in most species.

Most species are marine, but some inhabit freshwaters; omnivorous, feeding on floating sea grasses, crustaceans and small fishes. They are prone to leap and skitter at the surface and one offshore species, *Euleptorhamphus velox* can leap out of the water and glide like a flying fish. The flesh is excellent and larger species of halfbeaks are utilized as food in many parts of the world. In the Gulf of Mexico and Caribbean Sea, they are more important as baitfish for billfishes, dolphins, kingfish, wahoo, and kingmackerel than as food fish. They are caught with seines or dipnetted under lights at night.

The Hemiramphidae contains 12 genera and over 100 species (Collette, in press.) Four genera, the first three monotypic (*Arrhamphus*, *Chriodorus*, *Melapedalion*, and *Oxyporhamphus*) have very short or no beaks. *Euleptorhamphus* and *Oxyporhamphus* contain two offshore species each. The subfamily Zenarchopterinae contains five genera and about 50 sexually dimorphic internally-fertilizing Indo-West Pacific estuarine or freshwater species (Meisner and Collette, 1999). Three of these genera (*Dermogenys*, *Hemiramphodon*, and *Nomorhamphus*) are viviparous and have the anal fin of the male modified into an andropodium. *Hemiramphus* (with 10 species) is a world wide marine genus. *Rhynchorhamphus* (with 4 species) has fimbriate nasal papillae and is confined to Indo-West Pacific marine waters. *Hyporhamphus*, the most speciose genus, includes two subgenera, *Hyporhamphus* with 23 species and *Reporhamphus* with 11 species, all confined to the Indo-West Pacific. Some species are marine, some estuarine, and some freshwater. All genera are characterized by particular lateral line characters (Parin and Astakhov, 1982). The halfbeak fauna of the western Atlantic includes nine marine species in five genera (Collette, in press), *Chriodorus* (1 species), *Euleptorhamphus* (1), *Oxyporhamphus* (1), *Hemiramphus* (3), and *Hyporhamphus* (3), plus two freshwater species of *Hyporhamphus* in rivers draining into the western Atlantic.

HYPORHAMPHUS

Hyporhamphus Gill, 1859: 131. Type species: *Hyporhamphus tricuspidatus* Gill, 1859. Type by monotypy. Gender: masculine.
Ichthyacus Fernández-Yépez, 1948: [1]. Type species: *Ichthyacus brederi* Fernández-Yépez, 1948. Type by original designation. Gender: masculine.

Hyporhamphus brederi (Fernández-Yépez, 1948)

Ichthyacus brederi Fernández-Yépez, 1948: [2]. Type locality: Río Orinoco, Boca del Caño Orupe, between mouths of Río Meta and Río Apure, Venezuela. Holotype: AFY 48051.

Maximum length: 10 cm SL

Distribution: South America: Orinoco River and Amazon River at Santarem.

Countries: Brazil, Venezuela

Hyporhamphus mexicanus (Alvarez, 1959)

Hyporhamphus mexicanus Alvarez, 1959: 71. Type locality: Rancho San Carlos, Río Coatzacoalcos, Palomares, Oaxaca, Mexico. Holotype: PNCB 403.

Maximum length: 16.1 cm SL

Distribution: North and Central America: Freshwater streams and lagoons of the Usumacinta River drainage in Petén, Guatemala, westward to the Coatzacoalcos River, Mexico.

Countries: Guatemala, Mexico

Remarks and references: See Miller (1966) for distribution.

Family Syngnathidae (Pipefishes and seahorses)

Carl J. Ferraris, Jr.

The Syngnathidae consists of about 150 species, most of which are near shore marine inhabitants. Some species are euryhaline and others seem to be restricted to freshwaters. The family includes the elongate pipefishes and the curiously shaped seahorses. All species are encased in bony plates that form rings around the body. Male syngnathids brood eggs in specialized pouches on the ventral surface of either the abdomen or tail.

Syngnathids are distributed throughout the tropical and warm temperate regions of the world. Most species have no commercial value, but seahorses and some of the more colorful pipefishes are kept as aquarium fishes and dried specimens of some species, especially seahorses, are sold for their alleged medicinal value in Asia and in Asian communities worldwide.

The taxonomy presented here is based on Dawson (1982, 1984), with some minor alterations to the nomenclature presented therein.

MICROPHIS

Microphis Kaup 1853: 234. Type species: *Syngnathus deocata* Hamilton 1822. Type by subsequent designation by Jordan 1919:254.

Coelonotus Peters 1855: 465. Type species: *Syngnathus argulus* Peters 1855. Type by monotypy. Gender: masculine.

Hemithylacus Kaup 1856: 61. Type species: *Syngnathus leiaspis* Bleeker 1853. Type by monotypy. Gender: masculine. Name spelled *Hemithylacum* on p. 27, first reviser not determined.

Belonichthys Peters 1868: 147. Type species: *Syngnathus zambezensis* Peters 1855. Type by monotypy. Gender: masculine.

Oostethus Hubbs, 1929: 3. Type species: *Doryichthys lineatus* Kaup, 1856. Type by original designation. Gender: masculine.

Parabelonichthys Fowler 1943: 57. Type species: *Parabelonichthys kellersi* Fowler 1943. Type by original designation. Gender: masculine.

Paramicrophis Klausewitz 1955: 325. Type species: *Paramicrophis schmidti* Klausewitz 1955. Gender: masculine.

Lophocampus Dawson 1984: 166. Type species: *Syngnathus retzii* Bleeker 1856. Type by original designation. Gender: masculine. Originally proposed as a subgenus of *Microphis*.

***Microphis lineatus* (Kaup, 1856)**

Doryichthys lineatus Kaup, 1856: 59. Type locality: Bahia, Mexico, and Guadeloupe [restricted by lectotype designation to Veracruz, Mexico]. Lectotype: MNHN 6213, designated by Dawson (1979: 478).

Syngnathus cayennensis Sauvage, 1882: 176. Type locality: Cayenne. Holotype: MNHN A.4247.

Siphostoma brevicaudum Meek, 1904: 163, fig. 51. Type locality: Boca del Río, Veracruz, Mexico. Holotype: FMNH 4586.

Siphostoma torrei Nichols, 1912: 183, fig. 1. Type locality: Matanzas, Río San Juan, Matanzas, Cuba. Holotype: AMNH 3359.

Doryrhamphus sierra Nichols, 1915: 142, fig. 1. Type locality: Mouth of the Loiza River, east of San Juan [Puerto Rico]. Holotype: AMNH 4840.

Siphostoma eigenmanni Wilson, 1916: 60. Type locality: Rio Vermelho, Bahia [Brazil]. Holotype: FMNH 56857 [ex CM 5672a].

Maximum length: 19 cm SL.

Distribution: North, Central, and South America and Caribbean Islands: Coastal rivers of Caribbean and Atlantic basins.

Countries: Bahamas, Barbados, Belize, Brazil, Colombia, Costa Rica, Cuba, Dominica, Dominican Republic, French Guiana, Grenada, Guatemala, Guyana, Haiti, Honduras, Jamaica, Martinique, Mexico, Nicaragua, Panama, Suriname, Trinidad and Tobago, Venezuela.

Remarks and references: This species is still referred to in recent literature as *Oostethus lineatus* and *Microphis brachyurus lineatus*.

PSEUDOPHALLUS

Pseudophallus Herald, 1940:51. Type species: *Siphostoma starksii* Jordan & Culver, 1895. Type by original designation. Gender: masculine.

***Pseudophallus elcapitanensis* (Meek & Hildebrand, 1914)**

Siphostoma elcapitanense Meek & Hildebrand, in Meek, 1914: 119. Type locality: El Capitan, Panama; Jesus Maria and Turruabales [Rivers], Costa Rica. Lectotype: USNM 81735, designated by Meek & Hildebrand (1923: 260).

Maximum length: 18.5 cm SL

Distribution: Central America: Pacific coastal drainages

Countries: Costa Rica, Panama

***Pseudophallus mindii* (Meek & Hildebrand, 1923)**

Syngnathus mindii Meek & Hildebrand, 1923: 261, pl. 18 (fig. 2). Type locality: creek near Mindi, Canal Zone [Panama]. Holotype: USNM 81770.

Pseudophallus brasiliensis Dawson, 1974: 406, figs. 1-3. Type locality: Brazil, Pará, Rio Tocantins, Igarapé Inó, Faroda Panaguera, 01°52'S, 49°10'W. Holotype: MZUSP 10278.

Maximum length: 16 cm SL

Distribution: South and Central America and Caribbean Islands: Atlantic and Caribbean coastal rivers.

Countries: Brazil, Costa Rica, Cuba, Guatemala, Jamaica, Nicaragua, Panama, Puerto Rico, Venezuela, Virgin Is.

***Pseudophallus starksii* (Jordan & Culver, 1895)**

Siphostoma starksii Jordan & Culver, in Jordan, 1895: 416, pl. 30. Río Presidio ... about a mile below the village of Presidio Sinaloa, Mexico]. Lectotype: SU 67185 [ex SU 2686], designated by Jordan & Evermann (1900: 3259) in caption to pl. 120.

Maximum length: 17.6 cm SL

Distribution: North, Central, and South America: Pacific coastal rivers.

Countries: Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama.

SYNGNATHUS

Syngnathus Linnaeus, 1758: 336. Type species: *Syngnathus acus* Linnaeus, 1758. Type by subsequent designation. Jordan (1912:103) cited on Official List (Opinion 77, Direction 56) of the International Commission on Zoological Nomenclature as responsible for type designation, but Eschmeyer and Bailey (in Eschmeyer, 1990) note an earlier type designation by Fowler (1906: 93). Gender: masculine.

Tiphle Rafinesque, 1810: 18. Type species: *Tiphle hexagonus* Rafinesque, 1810 (= *Syngnathus tiphle* Linnaeus, 1758). Type by subsequent designation by Jordan (1917:78). Gender: feminine.

Siphostoma Rafinesque, 1810: 18. Type species: *Syngnathus pelagicus* Linnaeus, 1758. Type by subsequent designation by Jordan & Evermann (1896: 761). Gender: feminine.

Typhlinus Rafinesque, 1815: 90. Type species: *Syngnathus tiphle* Linnaeus, 1758. Type by being a replacement for *Tiphle* Rafinesque, 1810.

Siphonostoma Agassiz, 1846: 342. Type species: *Syngnathus pelagicus* Linnaeus, 1758. Unjustified emendation for *Siphostoma* Rafinesque, 1810, therefore taking the same type species.

Dermatostethus Gill, 1862: 283. Type species: *Dermatostethus punctipinnis* Gill, 1862. Type by monotypy. Gender: masculine.

Syrictes Jordan & Evermann, 1927: 504. Type species: *Syngnathus fuscus* Storer, 1839. Type by original designation. Gender: masculine.

Syngnathus scovelli (Evermann & Kendall, 1896)

Siphostoma scovelli Evermann & Kendall, 1896: 113. Type locality: Shamrock Point, Corpus Christi, Texas. Lectotype: USNM 47300, designated by Dawson (1982: 83).

Maximum length: 18 cm SL

Distribution: North, Central, and South America: Atlantic, Gulf, and Caribbean coastal drainages.

Countries: Belize, Brazil, Guatemala, Honduras, Mexico, Panama, Venezuela.

Remarks and references: found primarily in nearshore marine habitats, but reported from several freshwater collections.

Family Synbranchidae (Swamp-eels)

Sven O. Kullander

Swamp-eels are eel-like fishes distributed in fresh water, occasionally in brackish water; throughout tropical and subtropical regions, including southern and eastern mainland Asia, the Indo-Australian Archipelago, West Africa (Liberia), Mexico, Central and South America. Pectoral and pelvic fins are absent; dorsal and anal fins are rudimentary; the caudal fin is short, rudimentary or absent. The eyes are minute. The gill membranes fused, leaving a single ventral gill opening appearing as a short transverse slit or pore. No swimbladder and no ribs. Vertebral numbers range between 98-188. Most species are air breathers, and found in swamps or similar conditions with low oxygen levels. Most species are burrowers, some cave dwellers. The largest species is *Synbranchus marmoratus*, reaching 150 cm TL. The family includes 16 species, most of them in Asia (10 species). Only four species are recognized from South and Central America. Because of their secluded life style and paucity of strongly expressed external diagnostic characters, species identification and detection is difficult and requires examination of internal characters. The number of species will increase with forthcoming revisions.

Although large-sized, none of the species constitutes more than very local food fishes.

OPHISTERNON

Ophisternon McClelland, 1844: 175. Type species: *Ophisternon bengalensis* McClelland, 1844. Type by subsequent designation. Gender: neuter.

Tetrabanchus Bleeker, 1851: 69. Type species: *Tetrabanchus microphthalmus* Bleeker, 1851. Type by monotypy. Gender: masculine.

Pluto Hubbs, 1938: 291. Type species: *Pluto infernalis* Hubbs, 1938. Type by original designation. Gender: masculine.

Furmastix Whitley, 1951: 67. Type species: *Pluto infernalis* Hubbs, 1938. Type by being a replacement name. Gender: feminine.

Anommatophasma Mees, 1962: 27. Type species: *Anommatophasma candidum* Mees, 1962. Type by original designation. Gender: neuter.

Ophisternon aenigmaticum Rosen & Greenwood, 1976

Ophisternon aenigmaticum Rosen & Greenwood, 1976: 52, fig. 23. Type locality: About 13 km southwest of Sebol, Alta Verapaz, Río Chajmaic, Guatemala. Holotype: AMNH 32410.

Maximum length: 80 cm TL

Distribution: North and Central America and Caribbean Islands: Throughout the Atlantic Slope of Guatemala and Mexico to Cuba.

Countries: Belize, Cuba, Guatemala, Honduras, Mexico, Saint Lucia (introduced), Trinidad and Tobago

Ophisternon infernale (Hubbs, 1938)

Pluto infernalis Hubbs, 1938: 292, pl. 4. Type locality: Hoctun Cave at Hoctun, between Merida and Chichen Itza, Yucatán, Mexico. Holotype: UMMZ 116093.

Distribution: North America: Yucatán.

Countries: Mexico

SYNBRANCHUS

Synbranchus Bloch, 1795: 86. Type species: *Synbranchus marmoratus* Bloch, 1795. Type by subsequent designation. Gender: masculine.

Typhlobranchus Schneider, 1801: 537. Type species: *Typhlobran-*

chus spurius Schneider, 1801. Type by monotypy. Gender: masculine.

Unibranchapertura La Cepède, 1803: 656. Type species: *Synbranchus marmoratus* Bloch, 1795. Type by subsequent designation. Gender: feminine.

Unipertura Duméril, 1856: 201. Type species: *Synbranchus marmoratus* Bloch, 1795. Type by being a replacement name. Gender: feminine.

Falconeria Larrañaga, 1923: 381. Type species: not fixed. Gender: feminine.

Synbranchus madeirae Rosen & Rumney, 1972

Synbranchus madeirae Rosen & Rumney, 1972: 11, figs. 15-16, 17B, 18B. Type locality: Río Beni, Beni, Bolivia, 14°18'S, 67°23'W. Holotype: CAS 13704 [ex IU 17250].

Maximum length: 100 cm TL

Distribution: South America: Madeira River basin.

Countries: Bolivia

Synbranchus marmoratus Bloch, 1795

Synbranchus immaculatus Bloch, 1795: 87, pl. 419 (fig. 1). Type locality: Suriname; Tranquebar, India [erroneous].

Synbranchus marmoratus Bloch, 1795: 87, pl. 418. Type locality: Suriname.

Typhlobranchus spurius Schneider 1801: 537. American rivers.

Unibranchapertura lineata La Cepède, 1803: 656, 658. Type locality: Cayenne, French Guiana. No types known.

Synbranchus fuliginosus Ranzani, 1840: 75, pl. 11 (figs. 1a-b). Type locality: Brazil. Holotype: MZUB 991.

Synbranchus pardalis Valenciennes, 1842: pl. 13 (fig. 1). Type locality: Buenos Aires, Argentina.

Synbranchus vittatus Castelnau, 1855: 84, pl. 44 (fig. 3). Type locality: Rio de Janeiro, Brazil.

Synbranchus mercedarius Weyenbergh, 1877: 22, pl. 4. Type locality: Lakes along Río Primero, near Cordoba and Chacra de la Merced, Argentina.

Synbranchus tigrinus Weyenbergh, 1877: 16, pl. 1. Type locality: Lakes near Santa Fe, Argentina.

Synbranchus doringii Weyenbergh, 1877: 15, pl. 2. Type locality: Lakes near Santa Fe, Argentina.

Synbranchus hieronymi Weyenbergh, 1877: 14, pl. 2. Type locali-

ty: Oran, Salta Prov., Argentina.
Falconeria aptera Larrañaga 1923: 381 Type locality: Uruguay.
 No types known.
Falconeria pinnata Larrañaga 1923: 381. Type locality: Uruguay.
 No types known.
 Maximum length: 150 cm TL
 Distribution: North, Central, and South America: Mexico to northern Argentina.
 Countries: Argentina, Bolivia, Brazil, Colombia, Costa Rica, Ecuador, French Guiana, Guatemala, Guyana, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, Suriname, Trinidad and Tobago, Uruguay, Venezuela

Family Percichthyidae (Temperate basses)

Gloria Arratia

Percichthyids, as many other basal percoids, are characterized by a combination of features such as the presence of a body more or less compressed covered with scales bearing needle-like or slightly amputated ctenii on their posterior fields; the articular surface the of ctenii is almost straight; there are five or more large depressions in the skin covering the dentary, the last one is positioned between the dentary and angulo-articular where the mandibular sensory pores open. Slit-like pores of the mandibular canal and of the infraorbital canal are present on the skin covering the lower jaw and infraorbital 1. (Unpublished data by G. Arratia in which South American percichthyids appear in the clade containing the marine and estuarine Australian percichthyids). Larger South American percichthyids may reach approximately 400 mm total length (e.g., *Percichthys colhuapensis*); commonly, the size ranges between 200 to 350 mm total length (e.g., *Percichthys malanops*, *P. trucha*). Data on the morphology, taxonomy, and systematics of the South American percichthyids can be found in Arratia et al. (1981) and Arratia (1982).

Percichthyids are typical inhabitants of the Austral Region of South America. They live in freshwater rivers and lakes of central and southern Chile and of Argentinean Patagonia. The reproductive mechanism of percichthyids is unknown for most species. Although, MacDonagh (1955) mentioned that *Percichthys colhuapensis* and *P. trucha* (from Argentina) were protandrous hermaphrodites, no studies support such an assumption. This condition has not been described for the Chilean percichthyids. The eggs of *P. colhuapensis* have been described as demersal and adhesive (Fuster and Plaza, 1955); information on other percichthyids is missing.

The meat of percichthyids is considered as a 'delicatessen' by those who have tasted it. However, percichthyids have never been used economically and at present time this seems unlikely, at least in Chile. The number of individuals of species of *Percichthys* in Chile is considerable less than in the first half of the 20th century where percichthyids were described as forming large schools. The reduction in number is due in part to the illegal use of explosives in freshwaters of Chile and the high contamination affecting rivers and lakes.

PERCICHTHYS

Percichthys Girard, 1855: 197. Type species: *Perca chilensis* Girard, 1855. Type by subsequent designation. Gender: masculine.

Percosoma Gill, 1861: 51. Type species: *Percichthys melanops* Girard, 1854. Type by original designation. Gender: neuter.

Percichthys altispinis Regan, 1905

Percichthys altispinis Regan, 1905: 390, pl. 5 (fig. 1). Type locality: Río Colorado, Buenos Aires [Argentina]. Syntypes: BMNH 1905.3.18.1; MHNG 677.100.

Maximum length: 13.4 cm TL

Distribution: South America: Lower Colorado River in Argentina.

Countries: Argentina

Percichthys colhuapiensis MacDonagh, 1955

Percichthys colhuapiensis MacDonagh, 1955: 305, fig. 1. Type locality: Lago Colhué Huapí, Gobernación Militar de Comodoro Rivadavia en la cuenca del río Senguerr. Altura aproximada sobre el nivel del mar: 260 m [Argentina]. Holotype: MACN 1.XII.49.1.

Maximum length: 40 cm TL

Distribution: South America: Colhué Huapí Lake (Chubut); Upper Negro River at Cipolletti; General Fernández Oro, Pellegrini Lake; and Limay River at Plottier Río Negro.

Countries: Argentina

Common names: Largemouth perch (Argentina), Percas boconas (Argentina)

Percichthys melanops Girard, 1855

Percichthys melanops Girard, 1855: 197. Type locality: a tributary of the Río de Maypu, Chili. Syntype: ANSP 22892.

Maximum length: 20 cm TL

Distribution: South America: Pre-Andean streams of central Chile.

Countries: Chile

Percichthys trucha (Valenciennes, 1833)

Perca trucha Valenciennes, in Cuvier & Valenciennes, 1833: 429.

Type locality: Río Negro; Patagonia; Chile. Syntypes: MNHN 6528 [Chile], A.7699, MNHN (1, lost) [R. Negro].

Percichthys chilensis Girard, 1855: 197. Type locality: fresh waters of Chili. No types known.

Maximum length: 40 cm TL

Distribution: South America: Pre-Andean streams of central and southern Chile and Argentina.

Countries: Argentina, Chile

Common names: Percas de boca chica (Argentina), Smallmouth perch (Argentina)

Percichthys vinciguerrae Perugia, 1891

Percichthys vinciguerrae Perugia, 1891: 610. Type locality: Río Santa Cruz [Patagonia, Argentina]. Syntypes: MSNG 13443.

Distribution: South America: Santa Cruz and Negro River basins.

Countries: Argentina

Family Perciliidae (Southern Basses)

Gloria Arratia

Perciliids, as many other basal percoids, are characterized by a combination of features such the presence of an oblong, more or less compressed body which is covered with large scales bearing needle-like ctenii on their posterior fields (Chilean perciliids) or with few ctenii or only cycloid scales (in their Australian sister group). The frontoparietal, or parietal, or parieto-supraoccipital crest on the cranial roof is missing. The anterior epaxial muscles are not attached onto the frontal bones. The infraorbital bones, opercular bones (without preopercle), posttemporal and supracleithrum commonly lack serrae. The preopercle has few or no serrae. Only few round or oval pores of the mandibular canal open in the skin of the dentary. Caudal skeleton with only one uroneural (Unpublished data by G. Arratia in which the South American *Percilia* appears as part of a clade including Australian genera such as *Bostockia*, *Edelia*, and *Nannoperca*). South American perciliids are small fishes of about 90 mm as maximum length. Data on the morphology, taxonomy, and systematics of South American perciliids can be found in Arratia et al. (1981) and Arratia (1982).

Perciliids are freshwater fishes endemic of central and southern Chile; thus, they are typical inhabitants of the Austral Region of South America. Information on their reproductive mechanism are scarce; however, the only work on the subject, based on month-to-month histological observations, shows that *Percilia gillissi* is a protandrous hermaphrodite (Riffo and Bustos-Obregón, pers. commun.). Despite their nice colors, perciliids have not attracted the attention of aquarists. Due to their small size and strong bones, they are not used as food by the human population.

PERCILIA

Percilia Girard, 1855: 197. Type species: *Percilia gillissi* Girard, 1855. Type by monotypy. Gender: feminine.

***Percilia gillissi* Girard, 1855**

Percilia gillissi Girard, 1855: 197. Type locality: Rio de Maypu, Chile. Syntypes: MCZ 36246 (1); USNM 5692 (5).

Maximum length: 9 cm TL

Distribution: South America: Central and southern Chile.

Countries: Chile

***Percilia irwini* Eigenmann, 1927**

Percilia irwini Eigenmann, 1927: 63, pl. 16 (fig. 1). Type locality: Rio Nonguen, in the grounds of the Agricultural School, Concepcion [Chile]. Holotype: CAS 49919.

Maximum length: 9.6 cm TL

Distribution: South America: Streams and rivers of Malleco and Bio-Bio River basins.

Countries: Chile

SPECIES INQUIRENDA

Percilia gracilis Philippi, 1866: 710. Type locality: Aus den

Gewässern von Paine bei Santiago, Chile. Holotype: ZMB 6011.

Family Sciaenidae (Drums or croakers)

Lilian Casatti

The croakers or drums, family Sciaenidae, include about 78 genera and 287 species, inhabiting coastal, estuarine and freshwaters in tropical and temperate regions (Chao, 1986). Six genera are restricted to freshwaters, but may also occur in estuaries. Among those, the monotypic *Boesemania* Trewavas occurs in South East Asian rivers (Kottelat et al., 1993). The monotypic *Aplodinotus* Rafinesque ranges from Canada south to the Usumacinta River system in Guatemala. The other four genera, *Pachyurus* La Cepède, *Pachypops* Gill, *Plagioscion* Gill, and *Petilipinnis* Casatti are endemic to South American freshwaters, and recognized locally as corvinas (Spanish), pescadillos (Peru), pescadas (Brazil), or akoupas (French Guiana). These genera are widely distributed in South America, occurring throughout the Magdalena, Orinoco, Amazonas, São Francisco, and Paraná River basins and Guianan rivers. *Plagioscion* species are large piscivores mainly found in big rivers and supporting locally important commercial or sport fishing (Goulding, 1980: 179). *Pachyurus* and *Pachypops* are smaller bentivore species characteristic of lakes. The genus *Petilipinnis* was proposed for *Corvina grunniens* Jardine (Casatti, 2002b) due to the presence of conspicuous features not shared with other sciaenids. Many more species of the family are important in the coastal fishery and may be landed in coastal ports, but are not covered here. Keith et al. (2000), Greenfield & Thomerson (1997) are important recent references for coastal species.

A recent baseline revision of the family was done by Trewavas (1977) based on Indo-Pacific species and characters traditionally used in the family systematic, like barbel morphology, mental and chin pores, position of the mouth, and swimbladder morphology. Chao (1978) presented a taxonomic synopsis with some phylogenetic considerations about the western Atlantic Sciaenidae, also focusing on the external, otolith, and swimbladder morphology. The first cladistic contribution to the relationships of the family by Sazaki (1989) focused on nominal genera and few species from South American freshwaters were analyzed by him. Sazaki found that *Pachypops*, *Pachyurus*, and *Plagioscion* are polyphyletic, as corroborated by unpublished personal analysis of almost all valid South American species.

The first species level revision including the South American freshwater Sciaenidae was done by Jordan and Eigenmann (1889), who recognized ten valid species. Subsequently, Campos (1942) recognized the same species. Fowler (1954) listed 20 valid Brazilian species of *Pachypops*, *Pachyurus* and *Plagioscion* and described *Pachypops camposi* from the Rupununi River in Guyana. *Pachyurus* and *Pachypops* were recently revised by Casatti (2001, 2002a) and together with the addition of a new species described by Casatti & Chao (2002), both genera includes 13 species. The genus *Petilipinnis* includes *P. grunniens* (see Casatti, 2002b). The taxonomy of *Plagioscion* is being studied and the four species listed by Campos (1942) are valid with the addition of *P. montei* recently described by Soares & Casatti (2000), and *Plagioscion casattii* Aguilera & Aguilera (2001), totaling six species for the genus. Thus, 20 species of freshwater Sciaenidae are currently recognized in South America. Considering the occurrence of *Aplodinotus grunniens* in Central America, 21 species of freshwater Sciaenidae are registered for Neotropical freshwaters.

APLODINOTUS

Aplodinotus Rafinesque, 1819: 418. Type species: *Aplodinotus grunniens* Rafinesque, 1819. Type by original designation. Gender: masculine.

Eutychelithus Jordan, 1876: 242. Type species: *Corvina richardsonii* Cuvier, 1830. Type by monotypy. Gender: masculine.

***Aplodinotus grunniens* Rafinesque, 1819**

Aplodinotus grunniens Rafinesque, 1819: 419. Type locality: Ohio R. No types known.

Sciaena grisea Lesueur, 1821: 254. Type locality: Ohio River. Syntypes: (2) whereabouts unknown.

Sciaena oscula Lesueur, 1821: 252, unnumbered plate (apparently 13). Type locality: Lake Erie or Lake Ontario. Syntypes: MNHN A.5695 (1).

Corvina richardsonii Cuvier, in Cuvier & Valenciennes, 1830: 100. Type locality: Lake Huron. Holotype: not found at MNHN. Maximum length: 89 cm TL

Distribution: North and Central America: East of Rocky Mountains in St. Lawrence-Great Lakes, Hudson Bay and Mississippi River basins from Quebec to Manitoba and Saskatchewan in Canada and south to the Gulf of Mexico in USA; and Gulf Coast drainages from Mobile Bay in Georgia and Alabama through east Mexico to Usumacinta River basin in Guatemala.

Countries: Canada, Guatemala, Mexico, USA

PACHYPOPS

Pachypops Gill, 1861: 87. Type species: *Micropogon trifilis* Müller & Troschel, 1848. Type by original designation. Gender: masculine.

***Pachypops fourcroi* (La Cepède, 1802)**

Perca fourcroi La Cepède, 1802: 398, 424. Type locality: Unknown. Holotype: MNHN 7539.

Corvina biloba Cuvier, in Cuvier & Valenciennes, 1830: 112. Type locality: Locality unknown. Holotype: MNHN 7683.

Pachyurus nattereri Steindachner, 1863: 171, pl. 3. Type locality: Rio Branco and Rio Negro, Brazil. Syntypes: NMW 15178 (3 specimens). Spelled *natteri* on heading, but *nattereri* elsewhere. Maximum length: 18.7 cm SL
Distribution: South America: Amazon and Orinoco River basins, and rivers of the Guianas.
Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela
Remarks and references: Redescribed by Casatti (2002a).
Common names: Curbinata (Venezuela, Peru), Corvina (Brazil) Pescada (Brazil)

***Pachypops pigmaeus* Casatti, 2002**

Pachypops pigmaeus Casatti, 2002a: 14, fig. 7. Type locality: Brazil, Rondônia, Rio Machado, Jamarizinho. Holotype: MZUSP 34108.
Maximum length: 5.6 cm SL
Distribution: South America: Amazon River basin, in the Branco and Madeira River drainages.
Countries: Brazil

***Pachypops trifilis* (Müller & Troschel, 1849)**

Micropogon trifilis Müller & Troschel, 1849: 622. Type locality: Guiana. Holotype: ZMB 936.
Pachypops camposi Fowler, 1954: 252, fig. 843. Type locality: Rupununi River, Guyana. Holotype: ANSP 39773.
Maximum length: 18.9 cm SL
Distribution: South America: Amazon River basins and rivers of the Guianas.
Countries: Brazil, Guyana
Remarks and references: Redescribed by Casatti (2002a).
Common names: Curbinata (Venezuela, Peru), Corvina (Brazil), Pescada (Brazil)

PACHYURUS

Pachyurus Agassiz in Spix & Agassiz, 1831: 125, 127. Type species: *Pachyurus squamipinnis* Agassiz, 1831. Type by monotypy. Gender: masculine.

***Pachyurus adpersus* Steindachner, 1879**

Pachyurus (Lepipterus) adpersus Steindachner, 1879: 123. Type locality: Rio Parahyba; Rio doce; Rio San Antonio; Rio Mucuri, Brazil. Lectotype: NMW 31450, designated by Casatti (2001).
Maximum length: 26.4 cm SL
Distribution: South America: Atlantic versant rivers of Brazil, including Mucuri, Doce, and Parafba do Sul River basins.
Countries: Brazil
Remarks and references: Redescribed by Casatti (2001).
Common names: Corvina (Brazil), Pescada (Brazil)

***Pachyurus bonariensis* Steindachner, 1879**

Pachyurus (Lepipterus) bonariensis Steindachner, 1879: 126. Type locality: Río de La Plata, Argentina. Lectotype: NMW 15181, designated by Casatti (2001).
Pachyurus paranensis Daneri, 1956: 6. Type locality: Argentina, Río Paraná frente a Estación Hidrobiológica de Rosario. Holotype: MACN 4234.
Maximum length: 20.4 cm SL
Distribution: South America: Uruguay and Paraguay River basin and lower parts of Paraná River.
Countries: Argentina, Brazil, and Uruguay
Remarks and references: Redescribed by Casatti (2001).
Common names: Corvina del rio (Argentina), Corvina (Brazil), Pescada (Brazil)

***Pachyurus calhamazon* Casatti, 2001**

Pachyurus calhamazon Casatti, 2001: 133, fig. 8c. Type locality: Rio Branco, Estado de Roraima, Brazil. Holotype: MZUSP 66684.
Maximum length: 8.1 cm SL

Distribution: South America: Branco River in Brazil.
Countries: Brazil
Common names: Corvina (Brazil), Pescada (Brazil)

***Pachyurus francisci* (Cuvier, 1830)**

Lepipterus francisci Cuvier, in Cuvier & Valenciennes, 1830: 152, pl. 113. Type locality: rivière de Sainte-Françoise, Brazil. Holotype: MNHN A.5600 (dry).
Lepipterus corvina Reinhardt, 1851: 30. Type locality: Rio das Velhas, Brazil. Syntypes: ZMUC 3[1], 4[1], 5[1] (3 specimens).
Maximum length: 29.7 cm SL
Distribution: South America: São Francisco River basin.
Countries: Brazil
Remarks and references: Redescribed by Casatti (2001).
Common names: Corvina (Brazil), Pescada (Brazil)

***Pachyurus gabrielensis* Casatti, 2001**

Pachyurus gabrielensis Casatti, 2001: 133, fig. 8b. Type locality: Rio Negro, Cachoeira de São Gabriel, Estado do Amazonas, Brazil. Holotype: MZUSP 34093.
Maximum length: 14.6 cm SL
Distribution: South America: Amazon and Orinoco River basins
Countries: Brazil, Peru, and Venezuela
Common names: Corvina (Brazil), Curbinata (Peru and Venezuela), Pescada (Brazil)

***Pachyurus junki* Soares & Casatti, 2000**

Pachyurus junki Soares & Casatti, 2000: 500, fig. 1. Type locality: Rio Solimões, Coari, AM, Brazil. Holotype: INPA 619.
Maximum length: 29.3 cm SL
Distribution: South America: Amazon River basin
Countries: Brazil
Remarks and references: Redescribed by Casatti (2001).
Common names: Corvina (Brazil), Pescada (Brazil)

***Pachyurus paucirastrus* Aguilera, 1983**

Pachyurus paucirastrus Aguilera, 1983: 121, fig. 1. Type locality: Rio Tocantins, Capuerana, Brazil. Holotype: MNRJ 11176.
Maximum length: 14.8 cm SL
Distribution: South America: Tocantins River basin.
Countries: Brazil
Remarks and references: Redescribed by Casatti (2001).
Common names: Corvina (Brazil), Pescada (Brazil)

***Pachyurus schomburgkii* Günther, 1860**

Pachyurus schomburgkii Günther, 1860: 282. Type locality: Rio Capin [Pará] and Caripe Pará, Brazil. Holotype: BMNH 49.11.8-22.
Distribution: South America: Amazon and Orinoco River basins.
Countries: Bolivia, Brazil, Peru, Venezuela
Remarks and references: Redescribed by Casatti (2001).
Common names: Curbinata (Venezuela), Corvina (Brazil), Pescada (Brazil)

***Pachyurus squamipennis* Agassiz, 1831**

Pachyurus squamipennis Agassiz in Spix & Agassiz, 1831: 128, pl. 71. Type locality: Oceano Atlantico. No types known.
Pachyurus lundii Reinhardt, 1855: 111. Type locality: Rio das Velhas, Brazil. Syntypes: ZUMC 1[1], 2[1] (2 specimens).
Maximum length: 29.1 cm SL
Distribution: South America: São Francisco River basin in Brazil.
Countries: Brazil
Remarks and references: Redescribed by Casatti (2001).
Common names: Corvina (Brazil), Pescada (Brazil)

***Pachyurus stewarti* Casatti & Chao, 2002**

Pachyurus stewarti Casatti & Chao, 2002: 1, fig. 1. Río Aguarico, in the confluence with Río Pushino, 0°2.6'N 76°54.4' W, Ecuador, Sucumbios. Holotype: FMNH 101957.

Maximum length: 19.2 cm SL
 Distribution: South America: Napo River drainage in Ecuador.
 Countries: Ecuador

PETILIPINNIS

Petilipinnis Casatti, 2002b: 169, figs. 1-2. Type species: *Corvina grunniens* Jardine, 1843. Gender: feminine.

***Petilipinnis grunniens* (Jardine, 1843)**

Corvina grunniens Jardine, 1843: 136, pl. 2. Type locality: Essequibo River, British Guiana. Type unknown.
 Maximum length: 279 cm SL
 Distribution: South America: Amazon, Cuyuni, and Essequibo River basins.
 Countries: Brazil, Guyana, and Venezuela
 Remarks and references: Redescribed by Casatti (2002b).
 Common names: Corvina (Brazil), Pescada (Brazil)

PLAGIOSCION

Plagioscion Gill, 1861: 82. Type species: *Sciaena squamosissima* Heckel, 1840. Type by subsequent designation by Jordan and Eigenmann (1889: 380). Gender: masculine. Described by Gill (1861) without included species.

Diplolepis Steindachner, 1863: 164. *Sciaena squamosissima* Heckel, 1840. Type by monotypy. Gender: feminine.

***Plagioscion auratus* (Castelnau, 1855)**

Johnius auratus Castelnau, 1855: 12, pl. 4 (fig. 2). Type locality: Río Ucayali, Amazon basin, Peru. Holotype: MNHN 7622.

Corvina monacantha Cope, 1867: 402. Type locality: Near Paramaribo, Suriname. Holotype: ANSP 11519.

Plagioscion auratus iquitensis Nakashima, 1941: 67, unnumbered fig. Type locality: Iquitos, Amazon system, ne. Peru.

Maximum length: 34.6 cm SL
 Distribution: South America: Amazon, Orinoco, and rivers of Guianas.

Countries: Brazil, French Guiana, Guyana, Peru, Suriname, Venezuela

Common names: Acoupa eau douce (French Guiana), Acoupa grosse tête (French Guiana), Acoupa rivière (French Guiana), Akoupa dilo-dous (French Guiana), Akoupa gro-têt (French Guiana), Pescada preta (Brazil), Rockhead basher (Guyana), Curbinata (Venezuela, Peru), Corvina (Colombia, Brazil), Pescada (Brazil)

***Plagioscion casattii* Aguilera & Aguilera, 2001**

Plagioscion casattii Aguilera & Aguilera, 2001: 63, fig. 1. Type locality: Río Orinoco, Venezuela. Holotype: MBUCV-V-29490.

Maximum length: 33 cm SL

Distribution: South America: Orinoco River basin

Countries: Venezuela

Common names: Curvinata (Venezuela)

***Plagioscion montei* Soares & Casatti, 2000**

Plagioscion montei Soares & Casatti, 2000: 504, fig. 5. Type locality: Rio Solimões, Lago Janauacá, AM, Brazil. Holotype: INPA 15959.

Maximum length: 28.4 cm SL

Distribution: South America: Amazon River basin.

Countries: Brazil, Peru

Common names: Corvina (Brazil), Pescada (Brazil), Pescada-branca (Brazil)

***Plagioscion squamosissimus* (Heckel, 1840)**

Sciaena squamosissima Heckel, 1840: 438, pl. 30 (fig. 26-28). Type locality: Rio-negro and Rio-branco. Holotype: NMW 92.124 (dry).

Johnius crouvina Castelnau, 1855: 11, pl. 5 (fig. 1). Type locality:

Rio Crixas, and affluent of Rio Araguay, Brazil. Holotype: MNHN 7503.

Johnius amazonicus Castelnau, 1855: 12, pl. 4 (fig. 1). Type locality: Amazon River. Syntypes: MNHN 7504 (1), B.2772 [ex MNHN 7504] (1).

Plagioscion francisci Steindachner, 1917b: 669, pl. 2 (fig. 2). Type locality: Barra, at confluence of Rio Grande and Rio São Francisco, Brazil. Holotype: NMW 57217.

Plagioscion squamosissimus iquitensis Nakashima, 1941: 68, unnumbered fig. Type locality: Iquitos, Amazon system, ne. Peru.

Maximum length: 80 cm TL

Distribution: South America: Amazon, Orinoco, Paraná, Paraguay, and São Francisco River basins and rivers of Guianas.

Countries: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Peru, Suriname, Venezuela

Common names: Acoupa eau douce (French Guiana), Acoupa grosse tête (French Guiana), Acoupa rivière (French Guiana), Akoupa dilo-dous (French Guiana), Pescada branca (Brazil), Curbinata (Venezuela, Peru), Corvina (Colombia, Brazil), Pescada (Brazil), Pacora (US English)

***Plagioscion surinamensis* (Bleeker, 1873)**

Pseudosciaena surinamensis Bleeker, 1873: 458, pl. 21. Type locality: Suriname. Holotype: RMNH 5995.

Sciaena magdalenae Steindachner, 1878: 22, pl. 1, fig. 1. Type locality: Río Magdalena, Colombia. Type not found.

Maximum length: 32 cm SL

Distribution: South America: Amazon and Magdalena River basins and coastal rivers of Suriname.

Countries: Brazil, Colombia, Suriname

***Plagioscion ternetzi* Boulenger, 1895**

Plagioscion ternetzi Boulenger, 1895: 523. Type locality: Remanso, Rio Grande, Paraguay. Syntypes: BMNH 1895.5.17.1-2.

Plagioscion macdonaghi Daneri, 1954: 181, fig. 1. Type locality: Río de la Plata, Buenos Aires Prov., Argentina. Holotype: MACN 4197.

Maximum length: 39 cm SL

Distribution: South America: Paraguay and lower Paraná River basins.

Countries: Argentina, Brazil, Paraguay, and Uruguay

Common names: Corvina (Argentina, Brazil, Paraguay, Uruguay), Pescada (Brazil).

SPECIES INQUIRENDAE

Sciaena rubella Jardine, 1843: 133. Type locality: Guiana rivers. No types known.

Plagioscion pauciradiatus Steindachner, 1917a: 228. Type locality: Salt and brackish water near Paramaribo, Suriname. Type not found at NMW. [Probably this is not a *Plagioscion*].

Family Polycentridae (Leaffishes)

Ralf Britz and Sven O. Kullander

Species of Polycentridae have long been placed in the family Nandidae along with a few African and Asian percoids that share a cryptic, leaf-mimicking color pattern and lurking behavior. The South American species are grouped here with the West African monotypic genera *Afronandus* and *Polycentropsis*, also traditionally included in the Nandidae. Kullander & Britz (2002) presented osteological evidence that the Asian genera *Badis* (Badidae) and *Nandus* (Nandidae) are sister groups, and Britz (1997) found that the Polycentridae (except *Afronandus*) share a unique egg surface pattern with narrow ridges running radially from the micropyle, larvae with a multicellular cement gland on top of the head, and a unique adult spawning procedure. There is no evidence of a close relationship between the Polycentridae and the Nandidae + Badidae.

South American polycentrids are small fishes, reaching about 6-8 cm SL. The dorsal fin has 16-18 spines and 7-13 rays, the anal fin 12-13 spines and 7-14 rays. There is no lateral line on the side. The two species have a characteristically large mouth and head, with extremely protractile upper jaws in *Monocirrhus*. *Monocirrhus polyacanthus* is strongly compressed laterally and resembles a dead leaf both in color pattern and shape, including a short skin flap projecting from the lower jaw that resembles the stalk of the leaf. It can move slowly towards small prey fish, being mistaken by them for a drifting leaf. In both polycentrid species, the pectorals and soft parts of the dorsal and anal fins are highly transparent and are the only fins that move when approaching prey. Both South American species exhibit male parental care of eggs and larvae. The egg clutch is deposited under leaves of aquatic plants (*Monocirrhus*) or at the roof of small crevices (*Polycentrus*) (Barlow, 1967). The group has never been thoroughly revised, and it is possible that there are more than one species in each genus.

MONOCIRRHUS

Monocirrhus Heckel, 1840: 439. Type species: *Monocirrhus polyacanthus* Heckel, 1840. Type by monotypy. Gender: masculine.

Monocirrhus polyacanthus Heckel, 1840

Monocirrhus polyacanthus Heckel, 1840: 439. Type locality: Waldlachen am Rio-negro [forest ponds at the Negro River, Brazil] Holotype: NMW 76725.

Monocirrhus mimophyllus Eigenmann & Allen, 1921, fig. 1. Type locality: Brooks near the Rio Itaya, Iquitos. Syntypes: (3) CAS 59826 [ex IU 15715] (2).

Maximum length: 8 cm SL.

Distribution: South America: Amazon River basin in Peru, Brazil, Bolivia, Colombia and Venezuela.

Countries: Bolivia, Brazil, Colombia, Peru, Venezuela

Common names: Peixe folha, Pirá-caá, Pirá-cará (Brazil), Pez hoja (Peru)

POLYCENTRUS

Polycentrus Müller & Troschel, 1849: 622. Type species: *Polycentrus schomburgkii* Müller & Troschel, 1849. Type by monotypy. Gender: masculine.

Polycentrus schomburgkii Müller & Troschel, 1849

Labrus punctatus Linnaeus, 1758: 285. Type locality: Surinami. Lectotype: NRM 4, designated by Kullander (1983: 84).

Polycentrus Schomburgkii Müller & Troschel, 1849: 622. Type locality: Essequibo. Syntypes: ZMB 1024 (2), 20604 (ca. 30).

Polycentrus tricolor Gill, 1858: 373. Type locality: Tranquil river; Arouco River. [Trinidad, W.I.]. Syntypes: (2), whereabouts unknown.

Mesonauta surinamensis Sauvage, 1882: 173. Type locality: Surinam. Holotype: MNHN A.2912.

Maximum length: 5.5 cm SL

Distribution: South America: Trinidad (W.I.), and Atlantic coastal rivers of Venezuela, Guyana, Suriname, French Guiana and Brazil (state of Amapá).

Countries: Brazil, French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela

Remarks and references: Opinion 1954 (International Commission of Zoological Nomenclature, 2000) gives priority to *Polycentrus schomburgkii* over *Labrus punctatus* whenever these two species are considered synonyms.

Common names: Kala, Poisson feuille (French Guiana), King coscarob (Trinidad and Tobago)

Family Cichlidae (Cichlids)

Sven O. Kullander

The cichlids are the most species-rich non-Ostariophysan fish family in freshwaters world-wide, and one of the major vertebrate families, with at least 1300 species and with estimates approaching 1900 species (Kullander, 1998).

The geographical distribution includes freshwaters of Africa (900 valid species, estimated more than 1300 species), the Jordan Valley in the Middle East (four species), Iran (one species), southern India and Sri Lanka (three species, also in brackish water), Madagascar (17 valid species, some also in brackish water), Cuba and Hispaniola (four valid species, some in brackish water), North America and isthmian Central America (111 valid species), and South America (291 valid species) (Kullander, 1998, updated).

Cichlids are known by family or genus-level local names, commonly with an adjective to distinguish well-marked species. Higher level names include bujurqui (Peru, most cichlids), acará (Brazil, most cichlids), mochoroca (Venezuela), mojarra (Ecuador, Colombia, throughout Central America), krobria (Surinam), prapra (French Guiana).

Cichla species are known locally as pavón (Venezuela, Colombia) or tucunaré (Brazil, Peru), the latter name expressed as lukanani (Guyana), toekoenali (Surinam), toukounaré (French Guiana) or similar names in the Guianas. *Crenicichla* species are known as jacundá in Brazil, añashúa in Peru, angoumot (French Guiana), mataguaro (Colombia, Venezuela), datra fisi (Surinam), cabeza amarga (Argentina and Uruguay).

Cichlids are recognized by several unambiguous anatomical synapomorphies.

1. The loss of a major structural association between parts A2 and Aw of the adductor mandibulae muscle and the muscular insertion of a large ventral section of A2 onto the posterior border of the ascending process of the anguloarticular (Stiassny, 1981)
2. The presence of an extensive cartilaginous cap on the anterior margin of each second epibranchial bone (Stiassny, 1981)
3. The presence of an expanded head of each fourth epibranchial bone (Stiassny, 1981)
4. The presence of characteristically shaped and distributed micro-branchiospines on the gill arches (Stiassny, 1981)
5. The transversus dorsalis anterior muscle is subdivided into four distinct parts (Liem & Greenwood, 1981)
6. The stomach has an extendible blind pouch (Zihler, 1982)
7. The stomach has a left hand exit to the anterior intestine and the first intestinal loop is on the left side (Zihler, 1982)
8. The sagitta features an anterocaudal pseudocolliculum having a long and thick ventral part which is separated from the crista inferior by a long, deep and sharp furrow (Gaemers, 1985)
9. The presence of short paired hypapophyses on the third and/or fourth vertebral centra (Kullander, 1998).

Cichlid diversity has been explained both by their advanced brood care and by the versatile design of the pharyngeal jaw complex used for food mastication. The unpaired lower pharyngeal toothplate and the opposed upper pharyngeal tooth plates are contained in a muscular sling characterizing labroid fishes. There is considerable variation in the shape of the toothplates and associated dentition, reflecting diet specializations. The oral jaws are generally highly movable and protrusible, and tooth shape varies greatly, although most Neotropical cichlids have simple, subconical, unicuspid teeth, whereas African cichlids commonly have laterally bicuspid or tricuspid oral teeth.

Among Neotropical fishes they can be recognized externally by the possession of 7-24 (usually 13-16) spines in the dorsal fin, 2-12 (usually 3, rarely more than 5) anal-fin spines; and a single nostril on each side of the head. The lateral line is usually divided into one anterior upper portion ending below the end of the dorsal-fin base, and a posterior lower portion running along the middle of the caudal peduncle.

Among Neotropical taxa, lengths range from about 25-30 mm adult size in *Apistogramma* and *Taeniacara*, to about 1 meter in *Cichla temensis*. Most taxa are in the interval 10-20 cm, however.

Most Neotropical cichlids occupy lentic habitats within rivers and streams; but there is also a number of moderately to strongly adapted rheophilic species. The latter include many *Crenicichla* species and the genera *Teleocichla* and *Retroculus*, which are distributed mainly in the Brazilian and Guianan highlands.

The majority of the Neotropical cichlids feed on a variety of invertebrates and some plant matter, and specializations

among those species remain little investigated. *Cichla*, large *Crenicichla* species, *Petenia*, *Parachromis*, *Caquetaia*, *Astronotus*, and *Acaronia*, feed on fishes and large invertebrates. *Chaetobranchopsis*, *Chaetobranchus* and *Satanoperca acuticeps* are plankton feeders.

Most Neotropical Cichlidae are moderately to strongly sex dimorphic, and breed pairwise. Eggs are typically deposited on a substrate and both parents guard offspring over several weeks, even for some time after the young are free-swimming. Smaller species, particularly in the genus *Apistogramma*, may be strongly sexually dimorphic. Sexes differ in color and the female is smaller than the male and assumes all or most of the care for the eggs and young. Oral incubation, or mouthbrooding, has been recorded for many *Geophagus*, *Gymnogeophagus*, and *Satanoperca* species, but also for one species of *Aequidens* and one species of *Heros*. Mouthbrooding species are usually biparental, and eggs are guarded on a substrate prior to oral incubation which starts with advanced eggs or newly hatched larvae. A few mouthbrooding species practice exclusive maternal brood care, with a minimum delay between egg-laying and oral incubation (*Gymnogeophagus balzanii*, NE Colombian *Geophagus* species).

Geographical ranges are commonly limited to a single river or even one or a few streams, reflecting both ecological constraints and drainage basin histories. A few Neotropical cichlids are recorded from brackish water conditions. The northernmost species are *Herichthys cyanoguttatus* from the lower Grande River drainage in Texas, USA, on the Atlantic coast, and '*Cichlasoma*' *beani*, which reaches north to the Yaquí River on the Pacific coast of Mexico. In South America cichlids are recorded from virtually all river drainages, but rarely occupy elevations over 500 m ASL, and generally remain below 200 m ASL. Cichlids are absent from the Marañón River above the Pongo de Manseriche and from the Ucayali River drainage upstream of Atalaya (the mouth of the Urubamba River [Vilcanota River] and Tombo River [Apurimac River]). There are four permanent cichlid species occurring on the island of Trinidad, but no cichlids are found on any other islands close to the Venezuelan coast. Most Atlantic coastal rivers of Brazil have 1-3 species of cichlids. The southern limit of the family in South America is not well documented, but may be in the lower Negro River in Argentina, which river marks the northern limit of Patagonia. On the Pacific slope, cichlids are found in a succession of permanent rivers south to the Jequetepeque River or perhaps even to slightly south of Lima, Peru.

Because of the varied behavior and often attractive colors and moderate size, cichlids are commonly kept as ornamental fish. Practically all genera and more than half of the species have been kept in aquaria at some time. The traditionally most important aquarium species are *Pterophyllum* and *Symphysodon* species, the former often representing the aquarium hobby in logotypes.

Sportfishing is concentrated on the *Cichla* species for which there is a strong North American and Brazilian market including sport fishing safaris and Tucunaré fishing contests predominantly in Brazil (Kelber, 1999).

All the larger species are used as food fish, within a traditional artisanal and subsistence fishery, and all local markets in the lowland Amazon and Orinoco drainages offer *Cichla*, *Astronotus*, and other available species of sizes over 10 cm (Ferreira et al., 1998, for a market survey at Santarém). *Astronotus* species, and to some extent *Cichla* species are subject to aquaculture in Brazil.

The family Cichlidae was first monographed by Heckel (1840), based on the Natterer collection from Brazil (illustrations in Riedl-Dorn, 2000). Another early major treatise is by Jardine (1843), based on the Schomburgk collection from Guyana, Brazil and Venezuela (Kullander & Stawikowski, 1997a-b, for identifications). Steindachner (1875) worked on the Thayer expedition collection of Amazonian cichlids, but did not add much beyond the work of Heckel. Günther (1868, based on several shorter papers) described and illustrated a large part of the Central American cichlid fauna, followed by Regan (1906-1908).

Pellegrin (1904) revised the family with diagnoses of all genera and species known to him. Much of Pellegrin's efforts with the Neotropical taxa were improved upon by Regan's series of generic revisions in the next two years (Regan, 1905-1906), which remained the platform for all Neotropical cichlid systematics until the 1980s. The first modern phylogenetic revision of the Neotropical cichlids was presented by Cichocki (1976), and most recently Kullander (1998) and Farias et al. (1999) have provided phylogenetic hypotheses based on morphology and molecular data respectively. A formal classification down to tribe is provided by Kullander (1998).

Scientific general reviews of the family are provided by Keenleyside (1991) and Barlow (2000). There is no scientific monograph covering all Neotropical cichlid species, but numerous aquarium books of variable quality, of which Stawikowski & Werner (1998) may be consulted for the most updated compilation of cichlasomatine cichlids.

Country monographs of cichlids are available for Peru (Kullander, 1986) and Surinam (Kullander & Nijssen, 1989). Bussing (1998: 293-384) summarizes data on 24 Costa Rican cichlid species; Keith et al. (2000: 146-229) summarize data for 38 cichlid species from French Guiana and adjacent countries; Greenfield & Thomerson (1997: 184-206) cover 19 species from Belize

Recent generic revisions cover *Crenicichla* (Ploeg, 1991; many errors and inconsistencies), *Gymnogeophagus* (Reis & Malabarba, 1988), *Apistogramma* (Kullander, 1980a, somewhat outdated), *Cichlasoma* (Kullander, 1983a), *Teleocichla* (Kullander, 1988), *Retroculus* (Gosse, 1971), *Geophagus* s. lato (Gosse, 1976, somewhat outdated), *Biotoecus* (Kullander,

1989a), and *Mesonauta* (Kullander & Silfvergrip, 1991).

The checklist herein recognizes 406 valid Neotropical cichlid species out of 635 nominal taxa. Kullander (1998) estimated that there are about ten undescribed North-Central American cichlid taxa and about 160 undescribed South American taxa. Numerous problems of species discrimination remain. Some of the most enigmatic cases include '*Cichlasoma*' *urophthalmus*, of which Hubbs (1936) described numerous subspecies. Some of these taxa are certainly distinct species, but the status of highly localized subspecies from the Yucatán peninsula, which are based on one or very few specimens, remains a subject for revision. All these taxa are herein treated as valid for want of any better option.

Another source of frustration concerns the generic assignment of Central American taxa, and a few South American taxa, which were excluded from the catch-all genus *Cichlasoma* by Kullander (1983a). Most of these are now recognized in well-diagnosed genera (Kullander, 1986, 1996b, Kullander & Hartel, 1997), but several are kept with the generic denomination '*Cichlasoma*' which is judged better than to include them in genera to which they certainly do not belong.

On the whole it is not satisfactory to have one-third of the Neotropical cichlid fauna without a scientific name, illustrating a real problem with the more formalized procedure of naming species, but it could also signify a safeguarding against doubtful species. The current estimate of 450 South American taxa is based on species already represented in museum collections; it can be assumed that new collections will bring in many more new taxa.

ACARICHTHYS

Acarichthys Eigenmann, 1912: 500. Type species: *Acara heckelii* Müller & Troschel, 1849. Type by original designation. Gender: masculine.

Acarichthys heckelii (Müller & Troschel, 1849)

Acara heckelii Müller & Troschel in Schomburgk, 1849: 624. Type locality: Sümpfen der Savanne. No types known. Originally spelled as *Acara Heckelii*

Geophagus Thayeri Steindachner, 1875: 108 [48], pl. 3 (fig. 2, 2a-2b). Type locality: Amazonstrom bei Teffé, Villa bella, Obidos, Cudajas, Tonantins, Jatuarana, Ueranduba, Serpa, Rio Tapajos, R. Trombetas, R. negro, R. Xingu, see Hyanuary, José Assù, Saraca, Alexo und Lago maximo etc. Syntypes: (many) NMW 74135 (1), 9249-9254 (5), NMW 17046-17048 (3), NMW 17050-17051 (2), NMW 17052-17054 (3), NMW 17055-17057 (3), NMW 17058-17060 (2), NMW 17061-17064 (3), NMW 17066 (1), NMW 17067-17070 (4), NMW 17101-17102 (1), NMW 17103-17110 (several), NMW 17119-17125 (several), NMW 23819-23821 (3), NMW 24012 (1), NMW 24094-24095 (2), 24096 (7), NMW 24105-24106 (2), NMW 24107-24108 (2), NMW 24109-24110 (2), NMW 24111-24114 (3), NMW 24115-24116 (2), NMW 24133-24138 (6), ZSM 27335 (1).

Acara subocularis Cope, 1878: 696. Type locality: [Peruvian Amazon]. Holotype: ANSP 21233 (missing).

Maximum length: 13.4 cm SL

Distribution: South America: Along mainstream Amazon River in Peru, Colombia, and Brazil, including lower parts of the Putumayo, Trombetas, Negro, and Xingu Rivers; lower Tocantins River, and Capim River; Branco River (Amazon basin) in Brazil and Guyana, and the Essequibo River in Guyana.

Countries: Brazil, Colombia, Guyana, Peru

Remarks and references: Redescription based on Peruvian material by Kullander (1986: 134).

ACARONIA

Acara (Acaropsis) Steindachner, 1875: 80. Type species: *Acara nassa* Heckel, 1840. Type by monotypy. Gender: feminine. Preoccupied by *Acaropsis* Moquin-Tandon 1859 in Arachnida.

Acaronia Myers, 1940: 170. Type species: *Acara nassa* Heckel, 1840. Type by being a replacement name. Gender: feminine. Replacement for *Acaropsis* Steindachner 1875, preoccupied by *Acaropsis* Moquin-Tandon 1859 in Arachnida.

Acaronia nassa (Heckel, 1840)

Acara nassa Heckel, 1840: 353. Type locality: Rio-Guaporé. Syntypes: NMW 10538-40 (3), NMW 16185 (1), NMW uncat. (1).

Acara unicolor Heckel, 1840: 357, pl. 30 (fig. 25). Type locality: Barra do Rio-negro. Syntypes: NMW 33347-33348 (2).

Acara cognatus Heckel, 1840: 356. Type locality: Barra do Rio-negro. Holotype: NMW 33619.

Centrarchus ? rostratus Jardine, 1843: 163, pl. 15. Type locality: Rio Negro. No types known.

Apistogramma ambloplitoides Fowler, 1940: 281, fig. 63. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68681.

Maximum length: 15.4 cm SL

Distribution: South America: Amazonas lowlands in Peru, Brazil, and Colombia, Bolivian Amazon basin, middle and lower Negro River, Branco River, also Amapá State, the Oyapock drainage in French Guiana, and the Essequibo drainage in Guyana.

Countries: Bolivia, Brazil, Colombia, French Guiana, Guyana, Peru

Remarks and references: Redescription based on Peruvian material in Kullander (1986: 79), distinguishing characters and synonymy discussed in Kullander (1989b).

Common names: Krobié (French Guiana), Paya (French Guiana)

Acaronia vultuosa Kullander, 1989

Acaronia vultuosa Kullander, 1989b: 447, fig. 1. Type locality: Venezuela, Terr. Federal Amazonas, Departamento Ature, small drying backwater pool off road from El Burro to Puerto Ayacucho, approximately 05°47'N, 67°29'W. Holotype: MBUCV-V 17714.

Maximum length: 12.2 cm SL

Distribution: South America: Orinoco River basin in Colombia and Venezuela, including the Casiquiare, Inírida, Caura, Vichada Rivers; upper Negro River in Brazil and Venezuela (San Carlos, Ererê River and Tamaquaré Island).

Countries: Brazil, Colombia, Venezuela

AEQUIDENS

Aequidens Eigenmann & Bray, 1894: 616. Type species: *Acara tetramerus* Heckel, 1840. Type by original designation. Gender: masculine. Originally *Astronotus (Aequidens)*.

Aequidens biseriatus (Regan, 1913)

Cichlosoma (Aequidens) biseriatum Regan, 1913b: 471. Type locality: Rio Condoto. Syntypes: BMNH 1913.10.1.80-88 (7 of 8).

Maximum length: 8 cm TL

Distribution: South America: Atrato, San Juan and Baudó River basins.

Countries: Colombia

Aequidens chimantanus Inger, 1956

- Aequidens chimantanus* Inger, 1956: 437, fig. 94. Type locality: Río Abácapa on the west side of Chimantá-tepui; 1,300 feet altitude. Holotype: FMNH 45702.
Maximum length: 10.2 cm SL
Distribution: South America: Caroní River basin in Orinoco River drainage.
Countries: Venezuela
- Aequidens coeruleopunctatus* (Kner & Steindachner, 1863)**
Acara coeruleopunctata Kner & Steindachner in Kner, 1863: 222, fig. 3. Type locality: Río Chagres im Staate Panama, Nordseite. Syntypes: NMW 33635-33636 (2), 22168 (1).
Maximum length: 14.5 cm SL
Distribution: Central America: Atlantic slope of Panama, and Pacific slope of Costa Rica (Coto River).
Countries: Costa Rica, Panama
Remarks and references: Reviewed by Bussing (1998: 310), with key, diagnosis, geographical distribution, and figures.
Common names: Chogorro (Panama), Mojarra (Costa Rica)
- Aequidens diadema* (Heckel, 1840)**
Acara diadema Heckel, 1840: 344. Type locality: einem Ygarapé oder Waldbache bei Marabitanos. Syntypes: NMW 33791 (1), 33797 (1).
Maximum length: 11.8 cm SL
Distribution: South America: Amazon River basin, in the upper Negro River; Orinoco River basin, in tributaries of the Orinoco River in Colombia and Venezuela.
Countries: Brazil, Colombia, Venezuela
Remarks and references: *Aequidens diadema* reported from Peru by Kullander (1986: 348) is a different species.
- Aequidens epae* Kullander, 1995**
Aequidens epae Kullander, 1995: 158, fig. 10. Type locality: Brazil, State of Pará, Río Tapajós drainage, igarapé in Barreirinha. Holotype: MZUSP 21979.
Maximum length: 11.3 cm SL
Distribution: South America: Amazon River basin, in the lower Tapajós River drainage near Jacareacanga and São Luis.
Countries: Brazil
- Aequidens gerciliae* Kullander, 1995**
Aequidens gerciliae Kullander, 1995: 150, fig. 1. Type locality: Brazil, State of Mato Grosso, Núcleo Aripuanã, Igarapé do Aeroporto, above the cachoeira (approximately 10°10'S 59°25'W). Holotype: INPA 974.
Maximum length: 12.8 cm SL
Distribution: South America: Amazon River basin, known only from the upper Aripuanã River, near Cachoeira de Dardanelos and in a headwater stream on the Juína-Vilhena road.
Countries: Brazil
- Aequidens hoehnei* (Miranda Ribeiro, 1918)**
Nannacara hoehnei Miranda Ribeiro, 1918b: 14, pl. 7 (top figs.). Type locality: rio Branco, affluente do Araguaia, e n'uma lagoa do Coxipo da Ponte, em Mato Grosso. Holotype: MNRJ 1245.
Maximum length: 5.6 cm SL
Distribution: South America: Amazon River basin, in the Araguaia River drainage.
Countries: Brazil
- Aequidens latifrons* (Steindachner, 1878)**
Acara latifrons Steindachner, 1878: 89. Type locality: Cienaga, Río Magdalena, Colombia; Panama. Syntypes: (several) NMW.
Maximum length: 17 cm TL
Distribution: South America: Magdalena, Atrato, Sinú, and San Juan River basins.
Countries: Colombia
- Common names: Azulejo (Colombia), Casasola (Colombia), Mojarra azul (Colombia)
- Aequidens mauesanus* Kullander, 1997**
Aequidens mauesanus Kullander, 1997a: 378, fig. 1. Type locality: Brazil, Estado do Amazonas, rio Maués drainage, município do Maués, igarapé do rio Maraú. Holotype: MZUSP 7306.
Maximum length: 13.4 cm SL
Distribution: South America: Amazon River basin, in the Maués and Arapiuns Rivers.
Countries: Brazil
- Aequidens metae* Eigenmann, 1922**
Aequidens metae Eigenmann, 1922a: 241, pl. 30 (fig. 2). Type locality: Barrigón.; Eigenmann, 1922b: 198. Type locality: Barrigona Río Meta. Holotype: CAS 66884 [ex IU 13967].
Maximum length: 12.5 cm SL
Distribution: South America: Orinoco River basin, in the Meta River.
Countries: Colombia
Remarks and references: Eigenmann (1922a) and (1922b) appeared both in October 1922 and it cannot be decided with available evidence which publication should have priority.
- Aequidens michaeli* Kullander, 1995**
Aequidens michaeli Kullander, 1995: 163, fig. 14. Type locality: Brazil, State of Pará, Rio Xingu drainage, Belo Monte, rocky pool near cachoeira. Holotype: MZUSP 32674.
Maximum length: 20 cm TL
Distribution: South America: Amazon River basin, in the lower Xingu River at Altamira and Belo Monte.
Countries: Brazil
- Aequidens pallidus* (Heckel, 1840)**
Acara pallidus Heckel, 1840: 347. Type locality: Rio-negro. Holotype: NMW 33678.
Centrarchus ? vittatus Jardine, 1843: 161, pl. 14. Type locality: [not stated]. Types not known.
Aequidens duopunctata Haseman, 1911: 338, pl. 56. Type locality: Manaos. Holotype: FMNH 54033 [ex CM 2573]. Apparently the number 2574 in the caption to pl. 56 should have been 2573.
Maximum length: 14.3 cm SL
Distribution: South America: Amazon River basin, in the middle and lower Negro River, Uatumã, Preto da Eva, and Puraquequara Rivers.
Countries: Brazil
Remarks and references: Redescribed by Kullander & Ferreira (1991).
- Aequidens paloemeuensis* Kullander & Nijssen, 1989**
Aequidens paloemeuensis Kullander & Nijssen, 1989: 141, fig. 77.
Type locality: Suriname, Dist. Marowijne, R. Marowijne system, small brook tributary to the right bank of R. Paloemeu, on road between Trombaka Noord and Trombaka Zuid. Holotype: IRSNB 755.
Maximum length: 9.5 cm SL
Distribution: South America: Known only from the Paloemeu River, Marowijne River drainage.
Countries: Suriname
- Aequidens patricki* Kullander, 1984**
Aequidens patricki Kullander, 1984b: 2, fig. 1. Type locality: Pérou, depto. Ucayali, prov. Coronel Portillo, bassin du R. Aguaytia, petit ruisseau drainant un marais desséché, affluent du R. Aguaytia, le long de la route de Pucallpa à Tingo Maria, 15 km à l'Ouest du village d'Aguaytia (9°02'S, 75°31'W). Holotype: MHNG 2163.93.
Maximum length: 11.6 cm SL
Distribution: South America: Amazon River basin, restricted to the

Aguaytía and Pachitea Rivers.

Countries: Peru

Remarks and references: Redescribed by Kullander (1986: 347).

***Aequidens plagiozonatus* Kullander, 1984**

Aequidens plagiozonatus Kullander, 1984a: 155, fig. 1. Type locality: Brazil, State of Mato Grosso, R. Paraguay system ... Mun. Itiquira, internal lakes of the Piquiri-Itiquira system, Fazenda Santo Antonio do Paraíso. Holotype: MZUSP 28232.

Maximum length: 10.3 cm SL

Distribution: South America: Amazon River basin (upper Guaporé River drainage), and Paraná River basin (upper Paraguay River drainage).

Countries: Brazil

***Aequidens potaroensis* Eigenmann, 1912**

Aequidens potaroensis Eigenmann, 1912: 490, pl. 66 (fig. 2). Type locality: Amatuk. Holotype: FMNH 53892 [ex CM 2407].

Maximum length: 10 cm SL

Distribution: South America: Essequibo River basin.

Countries: Guyana

***Aequidens pulcher* (Gill, 1858)**

Cychlasoma pulchrum Gill, 1858: 382. Type locality: [western portion of Trinidad]. Syntypes: USNM 1110 (orig. 1, now 2).

Maximum length: 16 cm TL

Distribution: Central and South America: Trinidad, W.I., and adjacent Venezuela.

Countries: Trinidad and Tobago, Venezuela

Common names: Blue coscarob (Trinidad and Tobago), Cocoroba (Venezuela)

***Aequidens rivulatus* (Günther, 1860)**

Chromis rivulata Günther, 1860b: 418. Type locality: Andes of Western Ecuador. Syntypes: BMNH 1860.6.16.153 (1).

Acara aequinoctialis Regan, 1905b: 337. Type locality: W. Ecuador. Syntypes: BMNH 1860.6.15.13-16 (4).

Aequidens azurifer Fowler, 1911: 515, fig. 7. Type locality: Affluent of the Chimbo River, near Bucay, Province of Guayas, Ecuador. Holotype: ANSP 39118.

Maximum length: 20 cm TL

Distribution: South America: Pacific slope from Ecuador (Esmeraldas River) to Peru (Tumbes River).

Countries: Ecuador, Peru

***Aequidens rondoni* (Miranda Ribeiro, 1918)**

Acaropsis rondoni Miranda Ribeiro, 1918b: 11, pl. 4 (fig.1). Type locality: Rio do Sangue, acima do Salto Bello. Holotype: MNRJ 1616.

Maximum length: 9.7 cm SL

Distribution: South America: Amazon River basin, in the upper Tapajós River basin.

Countries: Brazil

***Aequidens sapayensis* (Regan, 1903)**

Acara sapayensis Regan, 1903b: 628. Type locality: Rio Sapayo, N.W. Ecuador. Holotype: BMNH 1902.7.29.56.

Maximum length: 10 cm TL

Distribution: South America: Pacific slope, in the Cayapas River drainage in northwestern Ecuador.

Countries: Ecuador

***Aequidens tetramerus* (Heckel, 1840)**

Acara tetramerus Heckel, 1840: 341, pl. 29 (fig. 1-4). Type locality: Rio-branco. Syntypes: NMW 33757-58 (2).

Chromys uniocellata Castelnau, 1855: 15, pl. 6 (fig. 1). Type locality: rio Ucayale, mission de Sarayacu. Syntypes: MNHN A.9481 (2). Spelled *uniocellatus* in list of figures.

Aequidens stollei Miranda Ribeiro, 1918b: 13, pl. 5 (fig. 3). Type

locality: Rio Jamary. Lectotype: MNRJ 1592A, designated by Miranda Ribeiro (1953: 397) [but perhaps specimen not isolated]. *Acaronia trimaculata* Allen in Eigenmann & Allen, 1942: 389, pl. 22 (fig. 8). Type locality: Iquitos. Holotype: CAS 67009 [ex IU 17794].

Maximum length: 16.2 cm SL

Distribution: South America: Widely distributed in the Amazon River basin in Peru, Colombia, Ecuador, Brazil and Bolivia, also in the Tocantins and Parnaíba Rivers, French Guiana, Suriname, Guyana, and in the Orinoco River basin of Venezuela and Colombia.

Countries: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Peru, Suriname, Venezuela

Common names: Acará-cuaima (Brazil), Acará-pixuna (Brazil), Kokko (Suriname), Manja koko (Suriname), Prapra (French Guiana)

***Aequidens tubicen* Kullander & Ferreira, 1991**

Aequidens tubicen Kullander & Ferreira, 1991: 427, fig. 4. Type locality: Brazil, Estado do Pará, Reserva Biológica de Trombetas, Igarapé at km 4 on the road to Perimetral Norte. Holotype: MZUSP 15887.

Maximum length: 11.6 cm SL

Distribution: South America: Amazon River basin, restricted to the Trombetas River close to Cachoeira Porteira.

Countries: Brazil

***Aequidens viridis* (Heckel, 1840)**

Acara viridis Heckel, 1840: 343. Type locality: in den durch das Anschwellen der Flüsse gebildeten Walddachen ..., ... in einer derselben bei der Stadt Matogrosso liegenden und Juquiã ... genannten. Syntypes: NMW 16247 (1), 33833 (1), ?91433 (1); SMF 2925 [ex NMW in 1844] (1).

Aequidens awani Haseman, 1911: 335, pl. 55. Type locality: São Antonio de Guaporé, Rio Guaporé, Brazil. Holotype: FMNH 54036 [ex CM 2576].

Aequidens guaporensis Haseman, 1911: 335, pl. 54. Type locality: São Antonio de Guaporé. Holotype: FMNH 54035 [ex CM 2575].

Maximum length: 16.5 cm SL

Distribution: South America: Amazon River basin, in the Guaporé River basin.

Countries: Bolivia, Brazil

AMPHILOPHUS

Amphilophus Agassiz, 1859: 408. Type species: *Amphilophus froebelii* Agassiz, 1859. Type by monotypy. Gender: masculine.

Astatheros Pellegrin, 1904: 203. Type species: *Heros (Cichlasoma) heterodontus* Vaillant & Pellegrin, 1902. Type by monotypy. Gender: masculine.

Erythrichthys Meek, 1907b: 118. Type species: *Heros citrinellus* Günther, 1864. Type by original designation. Gender: masculine. Originally *Cichlasoma (Erythrichthys)*.

Curraichthys Fernández-Yépez, 1969: [3]. Type species: *Heros lobocheilus* Günther, 1868. Type species by original designation. Gender: masculine.

***Amphilophus alfari* (Meek, 1907)**

Cichlasoma alfari Meek, 1907a: 148. Type locality: Turrialba, Costa Rica. Holotype: FMNH 6032.

Cichlosoma lethrinus Regan, 1908a: 462. Type locality: Rio Iroquois. Syntypes: BMNH 1909.3.13.92-97 (5 of 6) and 1909.3.13.98 (1, skeleton).

Cichlasoma bouchellei Fowler, 1923: 29. Type locality: Tunky Bin River above Eden, Nicaragua. Holotype: ANSP 51222.

Maximum length: 15 cm SL

Distribution: Central America: Atlantic slope from Honduras (Patuca River) to Costa Rica; Atlantic slope of Costa Rica.

Countries: Costa Rica, Honduras, Nicaragua

Remarks and references: Villa and Miller, 1975 identified *C. bouchellei* as a junior synonym of *A. alfari*. Reviewed by Bussing (1998: 318), with key, diagnosis, geographical distribution, and figures.

Common names: Mojarra (Costa Rica)

***Amphilophus amarillo* Stauffer & McKaye, 2002**

Amphilophus amarillo Stauffer & McKaye, 2002: 8, fig. 4. Type locality: Agua caliente, Lake Xiloá (N 12° 13,848' W 86° 19,387'). Holotype: PSU 3448.1).

Maximum length: 15.5 cm SL

Distribution: Central America: Atlantic slope of Nicaragua, endemic to Lake Xiloá.

Countries: Nicaragua

***Amphilophus altifrons* (Kner, 1863)**

Heros altifrons Kner, 1863: 223. Type locality: Panama. Syntype: NMW 21204 (1).

Maximum length: 13 cm SL

Distribution: Central America: Pacific slope of Costa Rica (Térraba River) to Panama (Chiriqui River).

Countries: Costa Rica, Panama

Remarks and references: Also appeared as new in Kner & Steindachner (1864: 11, pl. 2, fig. 1) from Colombia and Panama. Reviewed by Bussing (1998: 322), with key, diagnosis, geographical distribution, and figures.

Common names: Mojarra (Costa Rica)

***Amphilophus bussingi* Loisel, 1997**

Amphilophus bussingi Loisel, 1997: 2, fig. p. 2. Type locality: Río Cocolis, a tributary of the Río Sixaola, 3.5 km SE of Shiroles on the Bratsí-Shiroles road, Limon Province, Costa Rica. Holotype: AMNH 59077.

Maximum length: 15 cm SL

Distribution: Central America: Atlantic slope of Costa Rica (Sixaola River drainage) to Panama (Guarumo River).

Countries: Costa Rica, Panama

Remarks and references: Reviewed by Bussing (1998: 325), with key, diagnosis, geographical distribution, and figures.

Common names: Mojarra (Costa Rica)

***Amphilophus calobrensis* (Meek & Hildebrand, 1913)**

Cichlasoma calobrense Meek & Hildebrand, 1913: 90. Type locality: Río Calobre, Panama. Holotype: FMNH 7600.

Maximum length: 25 cm TL

Distribution: Central America: Pacific slope of Panama (Tuíra, Chucunaque and Bayano River basins).

Countries: Panama

***Amphilophus citrinellus* (Günther, 1864)**

Heros citrinellus Günther, 1864c: 153. Type locality: Lake of Nicaragua. Syntypes: BMNH 1864.1.26.201-203 (3).

Heros basilaris Gill in Gill & Bransford, 1877: 182. Type locality: Lake Nicaragua. Types not located, but may be present in the Bransford collection deposited in the USNM.

Cichlasoma granadense Meek, 1907b: 121. Type locality: Lago Nicaragua, Granada, Nicaragua. Holotype: FMNH 5951.

Maximum length: 24.4 cm SL

Distribution: Central America: Atlantic slope of Nicaragua and Costa Rica (San Juan River drainage, including Lakes Nicaragua, Managua, Masaya, and Apoyo).

Countries: Costa Rica, Nicaragua

Remarks and references: *Cichlasoma granadense* was synonymised with *A. citrinellus* by Villa (1976: 381). Systematics and biology covered by Barlow & Munsey (1976). Reviewed by Bussing (1998: 312), with key, diagnosis, geographical distribution, and figures.

Common names: Mojarra (Costa Rica), Mojarra rayada (Costa

Rica, Nicaragua)

***Amphilophus diquis* (Bussing, 1974)**

Cichlasoma diquis Bussing, 1974: 37, fig. 2. Type locality: Costa Rica, Puntarenas Province, tributary (20 m) of Río Sierpe 2 km S of Palmar Sur at IH. Holotype: LACM 33911-1.

Maximum length: 13.5 cm SL

Distribution: Central America: Pacific slope of SE Costa Rica.

Countries: Costa Rica

***Amphilophus hogaboomorum* (Carr & Giovannoli, 1950)**

Cichlasoma hogaboomorum Carr & Giovannoli, 1950: 27, pl. 2 (fig. 1). Type locality: Río Choluteca, 5 kilometers below Choluteca, elevation 50 meters. Holotype: UMMZ 144664.

Maximum length: 15 cm SL

Distribution: Central America: Pacific slope of Honduras, in the Choluteca River basin.

Countries: Honduras

Common names: Guapotillo (Honduras)

***Amphilophus labiatus* (Günther, 1864)**

Amphilophus froebelii Agassiz, 1859: 408. Type locality: Lake Nicaragua. Types in MCZ, missing.

Heros labiatus Günther, 1864a: 27, pl. 4 (fig. 1). Type locality: Lake of Managua, Nicaragua. Syntypes: BMNH 1867.9.23.7-8 (2) or 1863.12.15.74-76 (3).

Heros erythraeus Günther, 1867: 602. Type locality: Lake of Managua. Holotype: BMNH 1865.7.20.33. Described in more detail in Günther (1868: 457, pl. 75, fig. 2).

Heros loboichilus Günther, 1867: 602. Type locality: Lake of Managua. Syntypes: BMNH 1865.7.20.36 (2). Described in more detail in Günther 1868: 457, pl. 75 (fig. 1).

Cichlasoma dorsatum Meek, 1907b: 123. Type locality: Lago Managua, Managua, Nicaragua. Holotype: FMNH 5971.

Maximum length: 24 cm SL

Distribution: Central America: Atlantic slope of Nicaragua, in Lakes Nicaragua and Managua.

Countries: Nicaragua

Remarks and references: Systematics and biology covered by Barlow & Munsey (1976). Kullander & Hartel (1997: 199) examined Agassiz' description of *Amphilophus froebelii* and searched in vain for type material. Villa (1976: 381) added *Cichlasoma dorsatum* to the synonymy of *A. labiatus*. The name *froebelii* has never been used as a senior synonym of *A. labiatus* subsequent to its description. Original description copied in Günther (1864b: 231).

Common names: Mojarra picuda (Nicaragua)

***Amphilophus longimanus* (Günther, 1867)**

Heros longimanus Günther, 1867: 601. Type locality: Lake of Nicaragua. Holotype: BMNH 1864.1.26.204.

Cichlasoma popenoei Carr & Giovannoli, 1950: 31, pl. 2 (fig. 2). Type locality: Río Yeguaré, about 1 kilometer below bridge on road between Tegucigalpa and Danlí, Department of Morazan, Honduras; elevation 735 meters. Holotype: UMMZ 147178.

Maximum length: 13.5 cm SL

Distribution: Central America: Atlantic slope from Honduras (Aguan River) to Nicaragua and Costa Rica (Prinzapolka, San Juan River drainage including Lake Nicaragua), Pacific slope from Guatemala to Costa Rica (Nahualate River to Bebedero River).

Countries: Costa Rica, Guatemala, Honduras, Nicaragua

Remarks and references: Reviewed by Bussing (1998: 329), with key, diagnosis, geographical distribution, and figures.

Common names: Carataca (Honduras), Carate (Nicaragua), Machaca (Honduras), Pecho rojo (Nicaragua), Viejito (Guatemala)

***Amphilophus lyonsi* (Gosse, 1966)**

- Cichlasoma lyonsi* Gosse, 1966: 16, fig. 1. Type locality: Costa Rica (prov. Puntarenas), affluent du Rio Coto, Plantation United Fruit Company, Golfito. Holotype: IRSNB 464.
Maximum length: 15 cm SL
Distribution: Central America: Pacific slope of Costa Rica (Coto River) and Panama (Dupí River).
Countries: Costa Rica, Panama
Remarks and references: Reviewed by Bussing (1998: 316), with key, diagnosis, geographical distribution, and figures.
Common names: Mojarra (Costa Rica)
- Amphilophus macracanthus* (Günther, 1864)**
Heros macracanthus Günther, 1864c: 153. Type locality: Chiapas and Huamuchal. Syntypes: (about 12) BMNH 1864.1.26.197-200 (4), 1864.1.26.252-254 (3) Chiapas, 1864.1.26.368 (1) Huamuchal, 1864.1.26.255 (1, skeleton).
Heros (*Cichlasoma*) *heterodontus* Vaillant & Pellegrin, 1902: 86 [2]. Type locality: Isthme de Tehuantepec (Mexique). Syntypes: MNHN A.9528 (3).
Cichlasoma evermanni Meek, 1904: 214, fig. 70. Type locality: Tehuantepec, Oaxaca. Holotype: FMNH 4727 [not 4227].
Cichlasoma meeki Hildebrand, 1925: 275, fig. 20. Type locality: Lake Guija, El Salvador. Holotype: USNM 87301. Secondarily preoccupied by *Thorichthys helleri meeki* Brind, 1918, replaced by *Cichlasoma guija* Hildebrand, 1934.
Cichlasoma guija Hildebrand, 1934: 192. Type locality: [Lake Guija, El Salvador.] Holotype: USNM 87301. Replacement name for *Cichlasoma meeki* Hildebrand, 1925, preoccupied in *Cichlasoma* by *Thorichthys helleri meeki* Brind, 1918.
Maximum length: 25 cm SL
Distribution: North and Central America: Pacific slope from southern Mexico to El Salvador.
Countries: El Salvador, Guatemala, Mexico
- Amphilophus margaritifer* (Günther, 1862)**
Heros margaritifer Günther, 1862: 287. Type locality: Lake Peten, Guatemala. Holotype: BMNH 1864.1.26.62.
Maximum length: 12.7 cm SL
Distribution: Central America: Atlantic slope of Guatemala (Lake Petén).
Countries: Guatemala
Remarks and references: Type locality doubtful, species not reported with certainty since original description.
- Amphilophus nourissati* (Allgayer, 1989)**
Theraps nourissati Allgayer, 1989: 12, fig. p. 13. Type locality: petite riviére à 1 km avant le village "La Pera" sur la route de Palenque vers Ojo de Agua, Chiapas (Mexique). Holotype: MNHN 1989-583.
Maximum length: 22 cm TL
Distribution: North and Central America: Atlantic slope of Mexico and Guatemala (Usumacinta River basin).
Countries: Guatemala, Mexico
Common names: Panza negra (Mexico)
- Amphilophus rhytisma* (López S., 1983)**
Cichlasoma rhytisma López S., 1983: 133, fig. 1. Type locality: Costa Rica, Limón Province, Río Cocolis, a tributary of Río Sixaola, 3.5 km SE of Shiroles on road between Bratsí and Shiroles. Holotype: LACM 42998-1.
Maximum length: 13.5 cm SL
Distribution: Central America: Atlantic slope of Costa Rica (Sixaola River).
Countries: Costa Rica
Remarks and references: Reviewed by Bussing (1998: 332), with key, diagnosis, geographical distribution, and figures.
Common names: Mojarra (Costa Rica)
- Amphilophus robertsoni* (Regan, 1905)**
Cichlosoma robertsoni Regan, 1905a: 239. Type locality: Stann Creek, British Honduras [=Belize]. Holotype: BMNH 1890.9.8.11.
Cichlasoma acutum Miller, 1907: 117, fig. 6. Type locality: Río Tenedores, Tenedores. Holotype: IU 11186.
Maximum length: 19 cm SL
Distribution: North and Central America: Atlantic slope from Mexico (Coatzacoalcos River) to Honduras.
Countries: Belize, Guatemala, Honduras, Mexico
Common names: False firemouth cichlid (Belize), Klanki (Honduras), Machaca (Honduras), Mojarra (Honduras), Tepemehine (Mexico)
- Amphilophus rostratus* (Gill, 1877)**
Heros rostratus Gill in Gill & Bransford, 1877: 181. Type locality: Lake Nicaragua. Syntypes: USNM 16872(9).
Maximum length: 18.5 cm SL
Distribution: Central America: Atlantic slope of Nicaragua and Costa Rica (San Juan River drainage including Lakes Managua, Nicaragua and Masaya, to Matinaon River).
Countries: Costa Rica, Nicaragua
Remarks and references: Reviewed by Bussing (1998: 334), with key, diagnosis, geographical distribution, and figures.
Common names: Carate (Nicaragua), Masamiche (Costa Rica, Nicaragua)
- Amphilophus sagittae* Stauffer & McKaye, 2002**
Amphilophus sagittae Stauffer & McKaye, 2002: 12, fig. 11. Type locality: Agua caliente Lake Xiloá (N 12° 13,848' W 86° 19,387'). Holotype: PSU 3386.1.
Maximum length: 16 cm SL
Distribution: Central America: Atlantic slope of Nicaragua, endemic to Lake Xiloá.
Countries: Nicaragua
- Amphilophus xiloaensis* Stauffer & McKaye, 2002**
Amphilophus xiloaensis Stauffer & McKaye, 2002: 9, fig. 7. Type locality: Southeastern shore of Lake Xiloá (N 12° 12,793' W 86° 19,028'). Holotype PSU 3381.1
Maximum length: 16 cm SL
Distribution: Central America: Atlantic slope of Nicaragua, endemic to Lake Xiloá.
Countries: Nicaragua
- Amphilophus zaliosus* (Barlow, 1976)**
Cichlasoma zaliosum Barlow in Barlow & Munsey, 1976: 363, fig. 5. Type locality: Lake Apoyo, Nicaragua. Holotype: CAS 29104.
Maximum length: 20 cm TL
Distribution: Central America: Atlantic slope of Nicaragua, endemic to Lake Apoyo.
Countries: Nicaragua
Common names: Mojarra flecha (Nicaragua)
- APISTOGRAMMA**
Heterogramma Regan, 1906b: 60. Type species: *Mesops taeniatus* Günther, 1862. Type by subsequent designation by Eigenmann (1910: 478). Gender: feminine. Preoccupied by *Heterogramma* Guenée, 1854.
Apistogramma Regan, 1913c: 282. Type species: *Mesops taeniatus* Günther, 1862. Type by being a replacement name. Gender: feminine.
Pintoichthys Fowler, 1954: 316. Type species: *Biotodoma trifasciatus* Eigenmann & Kennedy, 1903. Type by original designation. Gender: masculine.
- Apistogramma agassizii* (Steindachner, 1875)**
Geophagus (*Mesops*) *agassizii* Steindachner, 1875: 111, pl. 8 (fig. 2). Type locality: Syntypes from Curupira..., Cudajas..., Río Puty..., Lago Maximo...See Manacapuru; lectotype from Manacapuru

- ru (Amazonas State, Brazil; 3°16'S 60°37'N). Lectotype: NMW 23484, designated by Kullander (1980a: 89).
- Apistogramma parva* Ahl, 1931: 210. Type locality: Rio Capim. Holotype: ZMB 23410.
Maximum length: 4.2 cm SL
Distribution: South America: Amazon River basin, along Amazon-Solimões River from Peru through Brazil to Capim River basin.
Countries: Brazil, Colombia, Peru
Remarks and references: Redescribed by Kullander (1980a: 89), with bibliography, description, distribution, lectotype designation; brief redescription of Peruvian material in Kullander (1986: 189). Holotype of *A. parva* briefly redescribed by Kullander (1980a: 145). Synonym status of *A. parva* is still tentative.
- Apistogramma arua* Römer & Warzel, 1998**
Apistogramma arua Römer & Warzel, 1998: 46, fig. 1. Type locality: some 2.5 km upstream of the village of Arua in a small right-bank affluent of the Rio Arua, a tributary of the Rio Arapiuns, Para State, Brazil (approx. 2°39'27"S, 55°43'24"W). Holotype: MZUSP uncat.
Maximum length: 4.4 cm SL
Distribution: South America: Amazon River basin, in the Arapiuns River basin.
Countries: Brazil
Remarks and references: Original description repeated in German in Römer (1998: 266-283) but with additional photos.
- Apistogramma atahualpa* Römer, 1997**
Apistogramma atahualpa Römer, 1997: 9, 2 figs. Type locality: Peru (Loreto). Imported...from Iquitos. Holotype: SMF 28212.
Maximum length: 4.2 cm SL
Distribution: South America: Amazon River basin, in the Nanay River basin.
Countries: Peru
- Apistogramma bitaeniata* Pellegrin, 1936**
Apistogramma pertense var. *bitaeniata* Pellegrin, 1936: 56. Type locality: Rio Madeira (Brésil) [apparently incorrect: Kullander, 1980a: 97], emended to: Colombia (Amazonas), environments of Leticia. Lectotype: MNHN 1935-34, designated by Kullander (1980a).
Apistogramma sweglesi Meinken, 1961: 136, fig. p. 137. Type locality: Wasserläufen bei Letitia in Peru. Holotype: lost.
Apistogramma klausewitzii Meinken, 1962: 138, fig. 1. Type locality: Brasilien, oberer Rio Solimões, Igarapé Preto. Holotype: SMF 5526.
Apistogramma kleei Meinken, 1964: 293, fig. p. 295. Type locality: unbekannt [unknown]. Holotype: USNM 199593.
Maximum length: 4.6 cm SL
Distribution: South America: Amazon River basin, restricted to Peruvian and adjacent Brazilian black-water river systems (collected in the lower Nanay, Mazán and Tigre in Peru, near Leticia in Colombia, and in Igarapé Preto and Lago Tefé in Brazil).
Countries: Brazil, Colombia, Peru
Remarks and references: Redescribed by Kullander (1980a: 97), with bibliography, description, distribution, lectotype designation; brief redescription of Peruvian material by Kullander (1986: 191).
- Apistogramma borellii* (Regan, 1906)**
Heterogramma borellii Regan, 1906b: 63. Type locality: Carandasiñho, Matto Grosso. Syntypes: BMNH 1900.4.14.12-15 (3; one lost).
Heterogramma ritense Haseman, 1911: 362, pl. 70. Type locality: Santa Rita, Rio Santa Rita of the Paraguay basin. Holotype: FMNH 54187 [ex CM 2765a].
Heterogramma rondoni Miranda Ribeiro, 1918b: 16, pl. 11. Type locality: Caceres, na Caiçara (Campina). Lectotype: MNRJ 1247A, designated by Miranda Ribeiro (1953: 397).
- Apistogramma aequipinnis* Ahl, 1938: 246. Type locality: vermutlich Argentinien. Holotype: ZMB 23409.
Apistogramma reitzigi Mitsch, 1938: 181. Type locality: Wahrscheinlich mittleres Südamerika. No type specimens.
Maximum length: 3.9 cm SL
Distribution: South America: Paraguay River basin and along the lower Paraná River in Argentina.
Countries: Argentina, Brazil, Paraguay
Remarks and references: *Apistogramma reitzigi* was named twice (Mitsch, 1938, Ahl, 1938) with the same name. The earlier description by Mitsch (1938) clearly makes the name available. Although attributed in that paper to E. Ahl, there is no indication that Ahl would have been involved in writing the paper and Ahl cannot be author. Brief review, with key and distribution map, in Kullander (1983b: 311).
- Apistogramma brevis* Kullander, 1980**
Apistogramma brevis Kullander, 1980a 107, fig. 13. Type locality: Petit igarapé du Lago Penera, rive droite du Uaupés, État d'Amazonas, Brésil. (0°01'N 67°21'W.). Holotype: IRSNB 570.
Maximum length: 3.9 cm SL
Distribution: South America: Amazon River basin, in the Uaupés River basin.
Countries: Brazil
- Apistogramma cacatuoides* Hoedeman, 1951**
Apistogramma cacatuoides Hoedeman, 1951: 1, fig. p. 3. Type locality: near Paramaribo, Dutch Guiana [incorrect, restricted and emended by Kullander, 1980a: R. Amazonas basin between 69° and 71° W]. Holotype: ZMA 100033.
Maximum length: 5 cm SL
Distribution: South America: Amazon River basin, in tributaries of the Ucayali, Amazon and Solimões Rivers from the Pachitea River to Tabatinga.
Countries: Brazil, Colombia, Peru
Remarks and references: Redescription in Kullander (1980a 86). Brief review with bibliography, diagnostic characters, and distribution map in Kullander (1986: 181).
- Apistogramma caetei* Kullander, 1980**
Apistogramma caetei Kullander, 1980a: 76. Type locality: Igarapé in Bragança (Estado do Pará, Brazil; 1°45'S 46°47'W). Holotype: FMNH 54164 [ex CM 2732].
Maximum length: 3.6 cm SL
Distribution: South America: Apeú and Caeté Rivers in the Bragança region, Pará State.
Countries: Brazil
- Apistogramma commbrae* (Regan, 1906)**
Heterogramma commbrae Regan, 1906b: 64. Type locality: Carandasiñho, Matto Grosso; Colonia Risso. Lectotype: BMNH 1900.4.14.16, designated by Kullander (1982a: 36).
Heterogramma corumbae Eigenmann & Ward in Eigenmann, McAtee & Ward, 1907: 146, pl. 45 (fig. 3). Type locality: Corumba. Holotype: CAS 33719 [ex IU 10166].
Maximum length: 3.3 cm SL
Distribution: South America: Paraguay River basin, middle Paraná River basin in Argentina, and Uruguay River basin.
Countries: Argentina, Brazil, Paraguay
Remarks and references: Species monographed by Kullander (1982a).
- Apistogramma cruzi* Kullander, 1986**
Apistogramma cruzi Kullander, 1986: 159, pl. 16, fig. 1. Type locality: Peru, departamento Loreto, Río Napo drainage system, lower course of a quebrada right bank tributary to the Río Mazán nearly 2 hours upstream from Puerto Alegre on the mouth of the Río Mazán, Peru. Holotype: NRM 16664.
Maximum length: 5.1 cm SL

Distribution: South America: Amazon River basin, in the Napo River drainage of Peru and Ecuador, and the Putumayo and Caquetá River drainages of Colombia.

Countries: Colombia, Ecuador, Peru

***Apistogramma diplotaenia* Kullander, 1987**

Apistogramma diplotaenia Kullander, 1987a: 259, fig. 1. Type locality: Brasil, est. Amazonas, R. Negro drainage system, downstream of the R. Daraã. Holotype: MZUSP 28213.

Maximum length: 2.9 cm SL

Distribution: South America: Amazon River basin, in the middle Negro River from San Carlos to Arirará River.

Countries: Brazil, Venezuela

***Apistogramma elizabethae* Kullander, 1980**

Apistogramma elizabethae Kullander, 1980a: 103, fig. 12. Type locality: Igarapé affluent de la rive droite du Uaupés à Trovao (environ 20 km en amont de l'embouchure de Uaupés), État d'Amazonas. Brésil. (0°02'N 67°26'W). Holotype: IRSNB 596.

Maximum length: 4 cm SL

Distribution: South America: Amazon River basin, in the Uaupés River basin.

Countries: Brazil

***Apistogramma eunotus* Kullander, 1981**

Apistogramma eunotus Kullander, 1981a: 184, fig. 1. Type locality: Peru, Depto. Loreto, R. Ucayali system, near Pucallpa, on road to Aguaytia, "Dunkelwasser bei 'Campo Verde'". Holotype: ZFMK 10772.

Maximum length: 5.3 cm SL

Distribution: South America: Amazon River basin, in tributaries to the Ucayali and Amazonas Rivers, and in the Yavarí River in Peru, and the Japurá River in Brazil.

Countries: Brazil, Peru

***Apistogramma geisleri* Meinken, 1971**

Apistogramma geisleri Meinken, 1971: 35, fig. 1. Type locality: Amazonas-Gebiet, Rio Curuçamba bei Obidos. Holotype: SMF 10617.

Maximum length: 2.8 cm SL

Distribution: South America: Amazon River basin, in the region of the lower Trombetas River basin.

Countries: Brazil

Remarks and references: Redescribed by Kullander (1980a: 72).

***Apistogramma gephyra* Kullander, 1980**

Apistogramma gephyra Kullander, 1980a: 131, fig. 17. Type locality: Igarapé affluent de la rive gauche du Rio Negro, dans l'Archipel des Anavilhanas, État d'Amazonas, Brésil. (3°00'S 60°45'W). Holotype: IRSNB 581.

Maximum length: 3.3 cm SL

Distribution: South America: Amazon River basin, in the lower Negro River basin.

Countries: Brazil

***Apistogramma gibbiceps* Meinken, 1969**

Apistogramma gibbiceps Meinken, 1969: 91, fig. 1. Type locality: Brasilien, wahrscheinlich Gebiet des Rio Negro. Holotype: SMF 9441.

Apistogramma roraimae Kullander, 1980a: 138, fig 19. Type locality: Igarapé Uazinho à environ 20 km de Boa Vista sur la route Boa Vista-Caracarai, Territoire du Rio Branco, Brésil. (2°49'N 60°40'W). Holotype: IRSNB 565.

Maximum length: 4.5 cm SL

Distribution: South America: Amazon River basin, in the Branco and middle Negro River basins.

Countries: Brazil

Remarks and references: Redescribed by Kullander (1980a: 115) with diagnosis, bibliography, description and distribution; syn-

onymy of *A. roraimae* herein is based on Kullander (unpublished).

***Apistogramma gossei* Kullander, 1982**

Apistogramma gossei Kullander, 1982d: 65, fig. 1. Type locality: Brasil, terr. Amapá, R. Oyapock system, Martinique. Holotype: MNHN 1981-231.

Maximum length: 4.4 cm SL

Distribution: South America: Oyapock River drainage in French Guiana and Brazil; Approuague River drainage in French Guiana.

Countries: Brazil, French Guiana

Common names: Prapra (French Guiana)

***Apistogramma guttata* Antonio C., Kullander & Lasso A., 1989**

Apistogramma guttata Antonio C., Kullander & Lasso A., 1989: 132, fig. 1. Type locality: Venezuela, Estado Anzoátegui, Río Morichal Largo, close to village San Miguel (63°22'W 8°38'N). Holotype: MHNLS 3587.

Maximum length: 3.6 cm SL

Distribution: South America: Morichal Largo River in northeastern Venezuela.

Countries: Venezuela

***Apistogramma hippolytae* Kullander, 1982**

Apistogramma hippolytae Kullander, 1982b: 182, fig. 1. Type locality: Brasil, est. Amazonas, Rio Solimoes System, Igarapé des Lago Manacapuru. Holotype: MZUSP 6657.

Maximum length: 3.4 cm SL

Distribution: South America: Amazon River basin, middle Negro River drainage (near mouths of Urubaxi and Daraã Rivers), and Lake Manacapuru.

Countries: Brazil

***Apistogramma hoignei* Meinken, 1965**

Apistogramma hoignei Meinken, 1965a: 258, fig. 1. Type locality: Zuflüsse der Sümpfe am Unterlauf des Rio Portuguesa westlich der Orte Sta. Rosa und Camaguan, an der Autostraße von Calabozo am Südende der seenartigen Erweiterung 'Embalse del Guárico' des Rio Guárico nach San Fernando am Mittellauf des Rio Apuré, im Staat Guárico, Venezuela. Holotype: SMF 7891.

Maximum length: 6 cm SL

Distribution: South America: Orinoco River basin, in the Portuguesa, Aracua, and lower Caura River drainages, and along the mainstream of the lower Orinoco River to Barrancas.

Countries: Venezuela

Remarks and references: Brief redescription in Kullander (1979: 75).

Common names: Mochoroca (Venezuela)

***Apistogramma hongsloui* Kullander, 1979**

Apistogramma hongsloui Kullander, 1979b: 74, fig. 5. Type locality: Finca Boca de Guarrojo (small laguna closest to the houses of the finca), R. Guarrojo, Vichada, Colombia (4°07'N 70°45'W). Holotype: NRM 11234.

Maximum length: 3.4 cm SL

Distribution: South America: Orinoco River basin, in the Vichada River drainage and the middle Meta River drainage in Colombia, and along the middle Orinoco River basin.

Countries: Colombia, Venezuela

Common names: Viejita (Colombia)

***Apistogramma inconspicua* Kullander, 1983**

Apistogramma inconspicua Kullander, 1983b: 307, fig. 1. Type locality: Bolivia, depto. Santa Cruz, R. Paraguay system [sic!], small pool of the R. Candelaria, above bridge on road Carmen-Santa Rosa (16°00'S 61°40'W). Holotype: IRSNB 637.

Maximum length: 3.7 cm SL

Distribution: South America: Amazon River basin, in the Guaporé River drainage in Bolivia; Paraná River basin, in the upper Paraguayan River basin.

Countries: Bolivia, Brazil

***Apistogramma iniridae* Kullander, 1979**

Apistogramma iniridae Kullander, 1979b: 76, fig. 7. Type locality: Pueblo Bretania (Yuri Bajo), Caño (Río) Bocón, depto. Guainía, Colombia (3°39'N 68°05'W). Holotype: NRM 11224.

Maximum length: 3.6 cm SL

Distribution: South America: Orinoco River basin, in the Inírida River basin.

Countries: Colombia

***Apistogramma juruensis* Kullander, 1986**

Apistogramma juruensis Kullander, 1986: 177, pl. 19 (fig. 1). Type locality: Brazil, estado Acre, Rio Juruá drainage system, município do Cruzeiro do Sul, riachos near Igarapé Formoso. Holotype: ZUEC 1374.

Maximum length: 2.4 cm SL

Distribution: South America: Amazon River basin, in the upper Juruá River basin.

Countries: Brazil

***Apistogramma linkei* Koslowski, 1985**

Apistogramma linkei Koslowski, 1985: 151, fig. 5. Type locality: Bolivia, northwest of the town Santa Cruz, Lagunen entlang der Strasse zwischen den Orten Portachuelo und Bella Vista, 76 km nordwestlich von Santa Cruz, Wasseransammlungen entlang der Strasse und kleiner flacher Wasserlauf der die Strasse kreuzt und Lagune an der Strasse ca. 2 km östlich vor dem Ort Japacani am Rio Japacani", sta. B1 und B2, about 68°25'W--16°20'S and 68°50'W--16°15'S. Holotype: ZFMK 13323.

Maximum length: 3.9 cm SL

Distribution: South America: Amazon River basin, in the Mamoré and Beni River basins.

Countries: Bolivia

***Apistogramma luelingi* Kullander, 1976**

Apistogramma luelingi Kullander, 1976: 259, fig. 1. Type locality: Kleine Quebrada unterhalb Todos Santos (Bolivien) [incorrect: corrected to Quebrada mit Altwasser unterhalb San Francisco seitlich des Rio Chiripiri by Kullander, 1986: 177]. Holotype: ZFMK (I) 66/2283.

Maximum length: 3.3 cm SL

Distribution: South America: Amazon River basin, in the Madre de Dios and Mamoré River basins.

Countries: Bolivia, Peru

***Apistogramma macmasteri* Kullander, 1979**

Apistogramma macmasteri Kullander, 1979b: 70, fig. 1. Type locality: Finca La Ponderosa (on the road to Restrepo), Villaviciencia, depto Meta, Colombia. Stream... at the foot of the Cordillera (4°15'N 73°35'W). Holotype: NRM 11240.

Maximum length: 5.5 cm SL

Distribution: South America: Orinoco River basin, in the upper Meta River drainage (Guaytiquía River, Metica River).

Countries: Colombia

***Apistogramma meinkeni* Kullander, 1980**

Apistogramma meinkeni Kullander, 1980a: 118, fig. 15. Type locality: Igarapé affluent de la rive droite des Uaupés (environ 20 km en amont de l'embouchure des Uaupés), Trovao, État d'Amazonas, Brésil. (0°02'N 67°26'W). Holotype: IRSNB 567.

Maximum length: 3.5 cm SL

Distribution: South America: Amazon River basin, in the Uaupés River basin.

Countries: Brazil

***Apistogramma mendezi* Römer, 1994**

Apistogramma mendezi Römer, 1994: 1, fig. 1. Type locality: Small igarapé (forest stream) near airfield of Barcelos do Rio Negro, Dept. Amazonas, Brazil (aprox. 63.04'W/0.01'S), sometimes called "Rio Salgado" by local people. Holotype: ZFMK 17458.

Distribution: South America: Amazon River basin, in the Negro River basin.

Countries: Brazil

Remarks and references: The species name is a misspelling for mendesi, after Francisco Mendes, but cannot be corrected (International Code of Zoological Nomenclature, 4th edition, article 32.5).

***Apistogramma moae* Kullander, 1980**

Apistogramma moae Kullander, 1980a: 61, fig. 9. Type locality: Igarapé São Salvador, affluent rive gauche du Rio Moa, Cruzeiro-do-Sul. État de Acre. Brésil. (7°38'S 72°36'W). Holotype: IRSNB 586.

Maximum length: 5 cm SL

Distribution: South America: Amazon River basin, in the upper Juruá River basin.

Countries: Brazil

Remarks and references: Brief redescription with illustration in Kullander (1986: 169).

***Apistogramma nijsseni* Kullander, 1979**

Apistogramma nijsseni Kullander, 1979a: 938, fig. 1. Type locality: Perú (Loreto), R. Ucayali system, Jenaro Herrera, R. Copal, "marigots des Tupacs". Holotype: MHNG 1595.82.

Maximum length: 3.9 cm SL

Distribution: South America: Amazon River basin, in the Carahuayte River drainage, a tributary to the Ucayali River.

Countries: Peru

***Apistogramma norberti* Staeck, 1991**

Apistogramma norberti Staeck, 1991: 140, fig. 1. Type locality: Peru, Dept. Loreto, in die Quebrada Nuevo Horizonte mündender Urwaldbach im Einzugsgebiet des Rio Tahuayo (etwa 73°05'W, 4°05'S). Holotype: ZMB 32002.

Maximum length: 3.9 cm SL

Distribution: South America: Amazon River basin, in the Tahuayo River basin.

Countries: Peru

***Apistogramma ortmanni* (Eigenmann, 1912)**

Heterogramma ortmanni Eigenmann, 1912: 506, pl. 68 (fig. 1). Type locality: Erukin, Guyana. Holotype: FMNH 53801 [ex CM 2306].

Maximum length: 4.1 cm SL

Distribution: South America: Essequibo River drainage, including the Potaro and Rupununi rivers, Corantijn and Cuyuni River basins.

Countries: Guyana, Suriname, Venezuela

***Apistogramma panduro* Römer, 1997**

Apistogramma panduro Römer, 1997: 12, 4 figs. Type locality: Per (Loreto), Rio Ucayali drainage... Small forest brooks east of Jenaro Herrera at kilometer markers 26 and 27 on the road to the Brazilian border. Holotype: ZFMK 18610.

Maximum length: 4.9 cm SL

Distribution: South America: Amazon River basin, Peru, not precisely known.

Countries: Peru

***Apistogramma paucisquamis* Kullander & Staeck, 1988**

Apistogramma paucisquamis Kullander & Staeck, 1988: 190, fig. 1. Type locality: Brazil, Estado do Amazonas, Rio Negro drain-

nage... Arquipélago das Anavilhanas, small shallow bay on the right bank of Rio Negro. Holotype: MZUSP 36952.

Maximum length: 3.4 cm SL

Distribution: South America: Amazon River basin, in the middle and lower Negro River from Daraá River to Anavilhanas Archipelago.

Countries: Brazil

***Apistogramma payaminonis* Kullander, 1986**

Apistogramma payaminonis Kullander, 1986: 184, fig. 64, pl. 20 (fig. 2). Type locality: Ecuador, provincia del Napo, Río Napo drainage system, Río Payamino drainage, Quebrada Ahuano, just above Ahuanopaccha (a 42 m vertical waterfall); in headwaters of the Río Tutapishcu, few km southwest of San José de Payamino (a village at confluence of Río Tutapishcu and Río Payamino (approx. 0°31.2'S, 77°20.7'W). Holotype: FMNH 96564.

Maximum length: 4 cm SL

Distribution: South America: Amazon River basin, in the Payamino River basin in Napo River drainage.

Countries: Ecuador

***Apistogramma personata* Kullander, 1980**

Apistogramma personata Kullander, 1980a: 111, fig. 14. Type locality: Rio Uaupés á Assai, État d'Amazonas, Brésil (0°02'N 67°27'W). Holotype: IRSNB 575.

Maximum length: 4.9 cm SL

Distribution: South America: Amazon River basin, in the Uaupés River basin.

Countries: Brazil

***Apistogramma pertensis* (Haseman, 1911)**

Heterogramma taeniatum pertense Haseman, 1911: 359, pl. 66. Type locality: Manaus. Holotype: FMNH 54171 [ex CM 2741].

Maximum length: 3.9 cm SL

Distribution: South America: Amazon River basin, in the lower Negro River and from Manacapuru to Monte Alegre along the Amazon-Solimões River.

Countries: Brazil

Remarks and references: Redescription in Kullander (1980a: 126), with bibliography, diagnosis, description, distribution.

***Apistogramma piauiensis* Kullander, 1980**

Apistogramma piauiensis Kullander, 1980a: 79, fig. 11. Type locality: Brazil: Piauí, Lagoa Seca, about 1 km from camp on Rio Parnaíba at Barra do Longa (near Buriti dos Lopes). (3°08'S 41°54'W). Holotype: MCZ 46831.

Maximum length: 2.3 cm SL

Distribution: South America: Parnaíba River basin.

Countries: Brazil

***Apistogramma pleurotaenia* (Regan, 1909)**

Heterogramma pleurotaenia Regan, 1909a: 270. Type locality: La Plata. Holotype: BMNH 1909.2.25.61.

Maximum length: 2.8 cm SL

Distribution: South America: Possibly Argentina, only holotype known.

Countries: Argentina (?)

***Apistogramma pulchra* Kullander, 1980**

Apistogramma pulchra Kullander, 1980a: 135, fig. 18. Type locality: Rio Preto, affluent de la rive gauche du Rio Candeias à 25 km de Porto-Velho, Territoire du Rondonia, Brésil. (8°46'S 63°45'W). Holotype: IRSNB 584.

Maximum length: 3.2 cm SL

Distribution: South America: Amazon River basin, in the Madeira River basin.

Countries: Brazil

***Apistogramma regani* Kullander, 1980**

Apistogramma regani Kullander, 1980a: 65, fig. 10. Type locality: Igarapé affluent de la rive gauche du Rio Negro, dans l'Archipel das Anavilhanas, État d'Amazonas, Brésil. (3°00'S 60°45'W). Holotype: IRSNB 577.

Maximum length: 4.9 cm SL

Distribution: South America: Amazon River basin, in the lower Negro River basin.

Countries: Brazil

***Apistogramma resticulosa* Kullander, 1980**

Apistogramma resticulosa Kullander, 1980b: 158, fig. 1. Type locality: Brasil, Estado do Amazonas, R. Madeira drainage system, Igarapé Xicanga, about 5 km W of Humaitá (07°31'S 63°04'W). Holotype: ZMA 116177.

Maximum length: 2.7 cm SL

Distribution: South America: Amazon River basin, in the Madeira River drainage near Huamitá.

Countries: Brazil

***Apistogramma rubrolineata* Hein, Zarske & Zapata, 2002.**

Apistogramma rubrolineata Hein, Zarske & Zapata, 2002: 16, fig. 3. Type locality: Bolivien, Departamento Pando, Rio Manuripi, nahe der Ortschaft Puerto Cardenas (11°20'083" S, 67°44'576" W). Holotype: MTD F 26477.

Maximum length: 4 cm SL

Distribution: South America: Manuripi River basin, Pando Department.

Countries: Bolivia

***Apistogramma rupununi* Fowler, 1914**

Apistogramma ortmanni rupununi Fowler, 1914: 277, fig 19. Type locality: Rupununi River, British Guiana. Holotype: ANSP 39347.

Maximum length: 3.8 cm SL

Distribution: South America: Amazon River basin, in the Branco River; Rupununi River basin.

Countries: Brazil, Guyana

***Apistogramma staecki* Koslowski, 1985**

Apistogramma staecki Koslowski, 1985: 146, fig. 1. Type locality: Bolivia, south of the town Trinidad, "Lagunen beiderseits der Strasse von Trinidad ca. 10 km südlich in Richtung El Colegio und Loreto", sta. B11, about 64°51'W--14°57'S. Holotype: ZFMK 13400.

Maximum length: 2.1 cm SL

Distribution: South America: Amazon River basin, in the Mamoré and Guaporé River basins.

Countries: Bolivia, Brazil

***Apistogramma steindachneri* (Regan, 1908)**

Heterogramma steindachneri Regan, 1908b: 370, fig. on p. 371. Type locality: Georgetown, Demerara. Syntypes: BMNH 1909.4.30: 31-32 (2).

Apistogramma ornatipinnis Ahl, 1936a: 141. Type locality: Britisch-Guiana. Holotype: ZMB 21147.

Apistogramma wickleri Meinken, 1960b: 655, fig. 1. Type locality: Anzunehmen ist, daß die Tiere aus den Guayana-Ländern eingeführt wurden. Holotype: ZMH H5682.

Maximum length: 6.5 cm SL

Distribution: South America: Essequibo, Demerara and Mahaica River drainages, and from the Marowijne River to the Corantijn River basin.

Countries: Guyana, Suriname

Remarks and references: Redescription, based in Surinamese material, in Kullander & Nijssen (1989: 74), with bibliography, diagnosis, description, distribution.

***Apistogramma taeniata* (Günther, 1862)**

Mesops taeniatus Günther, 1862: 312. Type locality: River Cupai (800 miles from the sea). Holotype: BMNH 1853.3.19.71.
Maximum length: 4.2 cm SL
Distribution: South America: Amazon River basin, in the lower Tapajós River basin.

Countries: Brazil

Remarks and references: Redescription of the holotype in Kullander (1980a: 142).

***Apistogramma trifasciata* (Eigenmann & Kennedy, 1903)**

Biotodoma trifasciatus Eigenmann & Kennedy, 1903: 536. Type locality: Arroyo Chagalalina [Paraguay]. Holotype: CAS 33721.

Heterogramma trifasciatum maciliense Haseman, 1911: 360, pl. 62 (fig. 2). Type locality: São Antonio de Guaporé. Syntypes: CAS 33722 (1), FMNH 54177 (2), one missing. Spelled *maciense* on p. 360.

Apistogramma trifasciatum haraldschultzi Meinken, 1960a: 291, fig. 1. Type locality: Oberer Guaporé, auch Itenes genannt, im Norden des Staates Matto Grosso. Holotype: ZMH H1209. Originally as *harald schultzi* as a subspecies of *trifasciatum*; here regarded as one name to be combined.

Maximum length: 3.8 cm SL

Distribution: South America: Amazon River basin, in the Guaporé drainage in Brazil; Paraná River basin, in the Paraguay River drainage in Brazil and Paraguay, and in the middle Paraná River drainage in Argentina.

Countries: Argentina, Brazil, Paraguay

***Apistogramma uaupesi* Kullander, 1980**

Apistogramma uaupesi Kullander, 1980a: 122, fig. 16. Type locality: Igarapé affluent de la rive droite des Uaupés (environ 20 km en amont de l'embouchure des Uaupés), Trovao, État d'Amazonas, Brésil. (0°02'N 67°26'W.) Holotype: IRSNB 594.

Maximum length: 2.8 cm SL

Distribution: South America: Amazon River basin, in the Rio Uaupés and nearby Negro River basin.

Countries: Brazil

***Apistogramma urteagai* Kullander, 1986**

Apistogramma urteagai Kullander, 1986: 163, pl. 17 fig. 1. Type locality: Peru, departamento Madre de Dios, Río Madre de Dios drainage system, Lago Túpac Amaru, near Puerto Maldonado. Holotype: NRM 16659.

Maximum length: 4.1 cm SL

Distribution: South America: Amazon River basin, in the Rio Madre de Dios basin.

Countries: Peru

***Apistogramma viejita* Kullander, 1979**

Apistogramma viejita Kullander, 1979b: 73, fig. 3. Type locality: Caño, affluent of Rio Yucao, depto Meta, Colombia. About 500 m westwards along the road Puerto Gaitán-Puerto López from a laguna midway between Rio Yucao and Rio Manacacías, 300 m from the road (4°20'N 72°09'W). Holotype: NRM 11231.

Maximum length: 3 cm SL

Distribution: South America: Orinoco River basin, in the upper Rio Meta basin.

Countries: Colombia

Common names: Viejita (Colombia)

Species inquirenda

Geophagus amoenus Cope, 1872: 250. Type locality: River Ambyiacu [=Ampiyacu River, Peru]. Holotype: ANSP (not found). Species not recognized since original description, usually interpreted as an *Apistogramma* species. See Kullander (1980a: 142) for review.

APISTOGRAMMOIDES

Apistogrammoides Meinken, 1965b: 48. Type species: *Apistogrammoides pucallpaensis* Meinken, 1965. Type by original designation. Gender: masculine.

***Apistogrammoides pucallpaensis* Meinken, 1965**

Apistogrammoides pucallpaensis Meinken, 1965b: 48, fig. 1. Type locality: Bach kurz außerhalb der Vorstadt von Pucallpa, Peru, der in den Ucayali mündet. Holotype: SMF 7565.

Maximum length: 2.7 cm SL

Distribution: South America: Amazon River basin, from Pucallpa on the Ucayali River in Peru, to Santa Sofía Island in the Amazon River in Colombia.

Countries: Colombia, Peru

Remarks and references: Kullander (1986: 194), with diagnosis, bibliography, and redescription, distribution map, and illustrations.

ARCHOCENTRUS

Archocentrus Gill in Gill & Bransford, 1877: 186. Type species: *Heros centrarchus* Gill in Gill & Bransford, 1877. Type by monotypy. Gender: masculine. First described as subgenus of *Heros* (*Archocentrus*).

Cryptoheros Allgayer, 2001: 14. Type species: *Heros spilurus* Günther, 1862. Type species by original designation. Gender: masculine.

***Archocentrus altoflavus* (Allgayer, 2001)**

Cryptoheros altoflavus Allgayer, 2001: 16, fig. p. 16. Type locality: Panama, Province de Bocas del Toro, Rio Cañaveral (Rio Caña). Holotype: MNHN 2001/1163.

Maximum length: 9 cm SL

Distribution: Central America: Atlantic slope, in the Cañaveral River basin.

Countries: Panama

***Archocentrus centrarchus* (Gill, 1877)**

Heros centrarchus Gill in Gill & Bransford, 1877: 185. Type locality: Lake Nicaragua. Holotype: USNM 16878.

Maximum length: 11 cm SL

Distribution: Central America: Pacific slope, in tributaries of Fonseca Gulf in Honduras and Nicaragua; Atlantic slope in the San Juan River basin, including Lakes Managua, Nicaragua, Jiloá and Apoyo.

Countries: Costa Rica, Honduras, Nicaragua

Remarks and references: Reviewed by Bussing (1998: 336), with key, diagnosis, geographical distribution, and figures.

Common names: Mojarra (Costa Rica), Mojarra rayada (Nicaragua), Mojarrita (Nicaragua), Viejita (Nicaragua)

***Archocentrus myrnae* Loiselle, 1997**

Archocentrus myrnae Loiselle, 1997: 3, fig. p. 3. Type locality: Río Cocolis, a tributary of the Río Sixaola, 3.5 km SE of Shiroles, on the Bratsí-Shiroles road, Limon Province, Costa Rica. Holotype: AMNH 59079.

Maximum length: 8 cm SL

Distribution: Central America: Atlantic slope, in Costa Rica and Panama, from Estrella River to Guarumo River.

Countries: Costa Rica, Panama

Remarks and references: Reviewed by Bussing (1998: 340), with key, diagnosis, geographical distribution, and figures.

Common names: Mojarra (Costa Rica)

***Archocentrus nanoluteus* Allgayer, 1994**

Archocentrus nanoluteus Allgayer, 1994: 9. Type locality: Panama, Province de Bocas del Toro, District de Chiriqui Grande, rio Guarumo. 82°13' Ouest; 9°55' à 9°52' Nord. Holotype: MNHN 1993-260.

Maximum length: 6.4 cm SL

Distribution: Central America: Atlantic slope, in the Guarumo River basin.

Countries: Panama

***Archocentrus nigrofasciatus* (Günther, 1867)**

Heros nigrofasciatus Günther, 1867: 601. Type locality: Lakes of Amatitlan and Atitlan. Syntypes: BMNH

1865.4.19.76-77 (2) and .78 (1, skeleton); ZMB 6882 (1).

Maximum length: 10 cm SL

Distribution: Central America: Pacific slope, from Guatemala to Costa Rica (Tárcoles River); Atlantic slope from Aguan River (Honduras) to Guarumo River (Panama).

Countries: Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama

Remarks and references: *Heros nigrofasciatus* described in more detail in Günther (1868: 452, pl. 74, fig. 3). Reviewed by Bussing (1998: 342), with key, diagnosis, geographical distribution, and figures.

Common names: Achiba (El Salvador), Burra (Costa Rica), Burro (El Salvador), Carate (Costa Rica, Nicaragua), Chamarra (El Salvador), Chincoyo (El Salvador), Conga (El Salvador), Congo (Costa Rica, Honduras), Mojarra (El Salvador), Punto naranja (Costa Rica), Punto rojo (Nicaragua), Serica (Guatemala)

***Archocentrus panamensis* (Meek & Hildebrand, 1913)**

Neetroplus panamensis Meek & Hildebrand, 1913: 90. Type locality: Rio Mandingo, Bas Obispo, Canal Zone, Panama. Holotype: FMNH 7601.

Maximum length: 13 cm TL

Distribution: Central America: Atlantic slope of Panama (Canal Zone, including Chagres River).

Countries: Panama

Common names: Chogorro (Panama), Peje motete (Panama)

***Archocentrus sajica* (Bussing, 1974)**

Cichlasoma sajica Bussing, 1974: 30, fig. 1. Type locality: Costa Rica, Puntarenas Province, tributary (20 m) of Río Sierpe 2 km S of Palmar Sur at Interamerican Highway (IH). Holotype: LACM 33902-1.

Maximum length: 9 cm SL

Distribution: Central America: Pacific slope of Costa Rica.

Countries: Costa Rica

Remarks and references: Reviewed by Bussing (1998: 346), with key, diagnosis, geographical distribution, and figures.

Common names: Mojarra (Costa Rica), T-Bar Cichlid (USA)

***Archocentrus septemfasciatus* (Regan, 1908)**

Cichlosoma septemfasciatum Regan, 1908a: 461. Type locality: Rio Iroquois. Syntypes: (14) BMNH 1909.3.13.82-90 (9), 1909.3.13.91 (1, skeleton).

Maximum length: 10 cm SL

Distribution: Central America: Atlantic slope of Costa Rica, from the San Juan River drainage to the Banano River.

Countries: Costa Rica

Remarks and references: Reviewed by Bussing (1998: 348), with key, diagnosis, geographical distribution, and figures.

***Archocentrus spilurus* (Günther, 1862)**

Heros spilurus Günther, 1862: 289. Type locality: Guatemala. Syntypes: (at least 2) BMNH 1864.1.26.52-55 (4?).

Cichlasoma cutteri Fowler, 1932: 380, fig. p. 381. Type locality: Lancetilla, Honduras. Holotype: ANSP 53930.

Maximum length: 12 cm TL

Distribution: Central America: Atlantic slope from Belize to Nicaragua.

Countries: Belize, Guatemala, Honduras, Nicaragua

Common names: Blue-eye cichlid (Belize), Congo (Nicaragua)

***Archocentrus spinosissimus* (Vaillant & Pellegrin, 1902)**

Heros (Cichlasoma) spinosissimus Vaillant & Pellegrin, 1902: 87 [3]. Type locality: Rio Polochic (Guatemala). Syntypes: MNHN A.352 (4).

Cichlasoma spinosissimum var. *immaculata* Pellegrin, 1904: 225. Type locality: Rio Polochic [Guatemala]. Syntypes: MNHN 9846 (2).

Maximum length: 11 cm SL

Distribution: Central America: Atlantic slope, in the Lake Izabal basin.

Countries: Guatemala

ASTRONOTUS

Astronotus Swainson, 1839: 173. Type species: *Lobotes ocellatus* Agassiz, 1831. Type by monotypy. Gender: masculine.

Acara Heckel, 1840: 338. Type species: *Acara crassipinnis* Heckel, 1840. Type by subsequent designation by Eigenmann & Bray (1894: 616). Gender: masculine.

Hyrogonus Günther, 1862: 303. Type species: *Lobotes ocellatus* Agassiz, 1829. Type by monotypy. Gender: masculine.

***Astronotus crassipinnis* (Heckel, 1840)**

Acara crassipinnis Heckel, 1840: 357, pl. 29 (fig. 5). Type locality: ..Rio-Paraguay... in Buchten... bei Villa Maria und Caiçara...Rio-Guaporè bei Matogrosso, im Rio-negro und im Rio-branco. Syntypes: (at least 5) NMW 58776 (1); NMW 24261 (1), 92455 (1); SMF 2926 [ex NMW in 1844] (1).

Maximum length: 24 cm SL

Distribution: South America: Amazon River basin, in the Bolivian Amazon and Madre de Dios River drainage in Peru; Paraná River basin in the Paraguay drainage in Paraguay and Brazil.

Countries: Bolivia, Brazil, Paraguay, Peru

Common names: Apaiari (Brazil)

***Astronotus ocellatus* (Agassiz, 1831)**

Lobotes ocellatus Agassiz in Spix & Agassiz, 1831: 129, pl. 66. Type locality: Oceano Atlantico. Types in ZSM, lost.

Cychla rubro-ocellata Jardine, 1843: 153, pl. 10. Type locality: Rio Negro and tributaries. No types known.

Acara compressus Cope, 1872: 256. Type locality: the Ambyiacu [=Ampiyacu River, Peru]. Lectotype: ANSP 9180.

Acara hyposticta Cope, 1878: 697. Type locality: [Amazonian Peru]. Holotype: ANSP 21286.

Astronotus ocellatus zebra Pellegrin, 1904: 183. Type locality: Santarem. Holotype: MNHN 1902-46.

Astronotus orbiculatus Haseman, 1911: 331, pl. 53. Type locality: Santarem. Holotype: FMNH 53992 [ex CM 2515].

Maximum length: 21 cm SL

Distribution: South America: Amazon River basin in Peru, Colombia, Brazil; French Guiana

Countries: Brazil, Colombia, Côte d'Ivoire (introduced), French Guiana, Peru, Puerto Rico (introduced)

Remarks and references: Redescription of Peruvian material in Kullander (1986: 61), with diagnosis, description, distribution, and illustrations. The species is reported from the Orinoco River drainage and numerous localities in the Amazon River basin, but apparently several species are confused under the name, and names in the synonymy may represent valid species.

Common names: Acará-açu (Brazil), Acarahuzú (Peru), Apaiari (Brazil), Carahuzú (Peru), Corró-baiano (Brazil), Corró-chinês (Brazil), Crombier (French Guiana), Dorminhoco (Brazil), Krobíé rouj (French Guiana), Paya (French Guiana)

BIOTODOMA

Mesops Günther, 1862: 311. Type species: *Geophagus cupido* Heckel, 1840. Type by subsequent designation by Eigenmann &

Bray (1894: 621). Gender: masculine. Preoccupied by *Mesops* Audinet-Serville 1831 in Orthoptera; replaced by *Biotoma* Eigenmann & Kennedy 1903.

Biotodoma Eigenmann & Kennedy, 1903: 533. Type species: *Geophagus cupido* Heckel, 1840. Type by being a replacement name. Gender: neuter. Replacement for *Mesops* Günther 1862, preoccupied by *Mesops* Audinet-Serville 1831.

***Biotodoma cupido* (Heckel, 1840)**

Geophagus Cupido Heckel, 1840: 399. Type locality: Rio-negro...Rio-Guaporè und dessen Morästen in der Umgegend von Matogrosso. Syntypes: NMW 23094 (1), 23122 (1), 23414 (1).

Maximum length: 9.7 cm SL

Distribution: South America: Amazon River basin in Peru, Bolivia and Brazil; Essequibo River in Guyana.

Countries: Bolivia, Brazil, Guyana, Peru

Remarks and references: Redescription of Peruvian material in Kullander (1986: 239), with diagnosis, description, distribution, and illustrations. Kullander (1986) considered that the widespread *B. cupido* of authors may consist of several similar species.

Common names: Bujurqui (Peru)

***Biotodoma wavrini* (Gosse, 1963)**

Geophagus wavrini Gosse, 1963: 2, pl. 1 (fig. 1). Type locality: Haut Orénoque, entre San Fernando de Atabapo et le Casiquiare. Holotype: IRSNB 457.

Maximum length: 10 cm SL

Distribution: South America: Amazon River basin, in the middle and upper Negro River drainage in Brazil and Venezuela; Orinoco River basin in Colombia and Venezuela.

Countries: Brazil, Venezuela

BIOTOECUS

Saraca Steindachner, 1875: 125. Type species: *Saraca opercularis* Steindachner, 1875. Type by monotypy. Gender: feminine. Preoccupied by *Saraca* Walker 1865 in Lepidoptera, replaced by *Biotoeus* Eigenmann & Kennedy 1903.

Biotoeus Eigenmann & Kennedy, 1903: 533. Type species: *Saraca opercularis* Steindachner, 1875. Type by being a replacement name. Gender: masculine. Replacement for *Saraca* Steindachner 1875, preoccupied by *Saraca* Walker 1865 in Lepidoptera.

***Biotoeus dicentrarchus* Kullander, 1989**

Biotoeus dicentrarchus Kullander, 1989: 227, fig. 1. Type locality: Colombia, Comisaría Vichada, Caño Alisal, tributary to Rio Bitá a few km S Puerto Carreño. Holotype: ICNMHN 1400.

Maximum length: 3.8 cm SL

Distribution: South America: Orinoco River basin, from the Inírida River (Colombia) to Maripa (Venezuela).

Countries: Colombia, Venezuela

Common names: Rebeca (Venezuela)

***Biotoeus opercularis* (Steindachner, 1875)**

Saraca opercularis Steindachner, 1875: 125. Type locality: See *Saraca* und Ausstände des Amazonenstromes bei Villa bella. Syntypes: NMW 38419 (1), 77814 (8).

Maximum length: 3.8 cm SL

Distribution: South America: Amazon River basin, in the Branco River, the middle and lower Negro River, Urubu River, Lake Saracá, Parintins, Lake Carauaçú, lower Trombetas River.

Countries: Brazil

Remarks and references: Discussed by Kullander (1989), with distribution map.

BUJURQUINA

Bujurquina Kullander, 1986: 244. Type species: *Bujurquina moriorum* Kullander, 1986. Type by original designation. Gender:

feminine.

***Bujurquina apoparuana* Kullander, 1986**

Bujurquina apoparuana Kullander, 1986: 280, pl. 29 (fig. 3). Type locality: Perú, departamento Ucayali, Río Ucayali drainage system, 3.4 km from Pucallpa on road to Lima, first bridge over stream. Holotype: FMNH 84269 (1 of 14).

Maximum length: 7.7 cm SL

Distribution: South America: Amazon River basin, in Ucayali River tributaries between Pucallpa and Shahuaya.

Countries: Peru

***Bujurquina cordemadi* Kullander, 1986**

Bujurquina cordemadi Kullander, 1986: 261, pl. 28 (fig. 1). Type locality: Perú, departamento de Madre de Dios, R. Madre de Dios drainage system, quebrada 8 km from airport road on sideroad to Lago Túpac Amaru. Holotype: NRM 17581.

Maximum length: 6.2 cm SL

Distribution: South America: Amazon River basin, in the Madre de Dios drainage at Puerto Maldonado.

Countries: Peru

***Bujurquina eurhinus* Kullander, 1986**

Bujurquina eurhinus Kullander, 1986: 269, pl. 28 (fig. 3). Type locality: Perú, departamento de Cuzco, R. Madre de Dios drainage system, R. Hospital at 71°27'W, 12°53'S. Holotype: ANSP 158173.

Maximum length: 8.9 cm SL

Distribution: South America: Amazon River basin, in the Madre de Dios drainage in Peru (Pilcopata, upper Madre de Dios, Manú, Colorado, Marcapata Rivers).

Countries: Peru

***Bujurquina hophrys* Kullander, 1986**

Bujurquina hophrys Kullander, 1986: 283, pl. 30 (fig. 2). Type locality: Perú, departamento Huánuco, Río Pachitea drainage system, 2-3 km downstream of Tournavista, right bank quebrada near its mouth into the Río Pachitea. Holotype: NRM 17585.

Maximum length: 8.5 cm SL

Distribution: South America: Amazon River basin, in the Pachitea and Aguaytía River basins.

Countries: Peru

***Bujurquina huallagae* Kullander, 1986**

Bujurquina huallagae Kullander, 1986: 290, pl. 31 (fig. 2). Type locality: Peru, departamento Huánuco, Río Huallaga drainage system, vicinity of Tingo María, c. 1/4 mi above Río Huallaga. Holotype: ANSP 158171.

Maximum length: 8.3 cm SL

Distribution: South America: Amazon River basin, in the Huallaga River basin at Tarapoto and Tingo María.

Countries: Peru

***Bujurquina labiosa* Kullander, 1986**

Bujurquina labiosa Kullander, 1986: 277, pl. 29 (fig. 2). Type locality: Perú, departamento Ucayali, Río Ucayali drainage system, Río Chinipo drainage within farm Bella Vista c. 10 km south of Chicosa. Holotype: NRM 17589.

Maximum length: 5.5 cm SL

Distribution: South America: Amazon River basin, in the upper Ucayali River basin (near Chinipo River).

Countries: Peru

***Bujurquina mariae* (Eigenmann, 1922)**

Aequidens mariae Eigenmann, 1922a: 240, pl. 30 (fig. 1). Type locality: Barrigón; Eigenmann, 1922b: 197: Type locality: Barigona; Cmaral, Llanos; Caño Caricería; Río Negro, Villcio; Oriente de Bogotá; Q. Gramalote Villcia. Holotype: CAS 34711 [ex IU 15011].

Maximum length: 15 cm TL

Distribution: South America: Orinoco River basin, in the Meta River basin.

Countries: Colombia

Remarks and references: Eigenmann (1922a) and (1922b) appeared both in October 1922 and it cannot be decided with available evidence which publication should have priority.

***Bujurquina megalospilus* Kullander, 1986**

Bujurquina megalospilus Kullander, 1986: 287, fig. 125, pl. 31 (fig. 1). Type locality: Perú, departamento Huánuco, Río Pachitea drainage system, drying pool c. 100 m from the left margin of the Río Pachitea and c. 1 km upstream from Tournavista. Holotype: NRM 17591.

Maximum length: 7.1 cm SL

Distribution: South America: Amazon River basin, in the Pachitea and Aguaytía River basins.

Countries: Peru

***Bujurquina moriorum* Kullander, 1986**

Bujurquina moriorum Kullander, 1986: 304, pl. 33 (fig. 3). Type locality: Perú, departamento Loreto, Río Ucayali drainage system, Quebrada Carahuayte at first bend downstream of km 20 on road Jenaro Herrera-Colonia Angamos. Holotype: NRM 17572.

Maximum length: 9.7 cm SL

Distribution: South America: Amazon River basin, in the Carahuayte, Mazán and lower Napo River basins.

Countries: Peru

***Bujurquina oenolaemus* Kullander, 1987**

Bujurquina oenolaemus Kullander, 1987b: 196, fig. 1. Type locality: Bolivie, dép. Santa Cruz. Rio Aguas Calientes à Aguas Calientes, à 25 km à l'est de Roboré, sur le rail. (Bassin du Paraguay.). Holotype: IRSNB 666.

Maximum length: 6.7 cm SL

Distribution: South America: Paraná River basin, in the Aguas Calientes River basin (Paraguay River drainage).

Countries: Bolivia

***Bujurquina ortegai* Kullander, 1986**

Bujurquina ortegai Kullander, 1986: 294, pl. 32 (fig. 1). Type locality: Perú, departamento San Martín, Río Huallaga drainage system, Moyobamba, Puerto Juan Antonio, Río Mayo. Holotype: MHNG 2205.27.

Maximum length: 11 cm SL

Distribution: South America: Amazon River basin, in the Mayo River basin (Huallaga River drainage).

Countries: Peru

***Bujurquina peregrinabunda* Kullander, 1986**

Bujurquina peregrinabunda Kullander, 1986: 301, pl. 33 (fig. 1). Type locality: Perú, departamento Loreto, Río Ampiyacu system, quebrada tributary to Río Yaguasyacu, just below the village Esperanza. Holotype: NRM 17596.

Maximum length: 10.7 cm SL

Distribution: South America: Amazon River basin, in the lower Ampiyacu River basin and at Codajás (Brazil).

Countries: Brazil, Peru

***Bujurquina robusta* Kullander, 1986**

Bujurquina robusta Kullander, 1986: 273, pl. 29 (fig. 1). Type locality: Perú, departamento Ucayali, R. Ucayali drainage system, R. Chinipo drainage within farm Bella Vista c. 10 km south of Chicosa. Holotype: NRM 17583.

Maximum length: 8.8 cm SL

Distribution: South America: Amazon River basin, in the Chinipo River basin (upper Ucayali River drainage).

Countries: Peru

***Bujurquina sypilus* (Cope, 1872)**

Acara sypilus Cope, 1872: 255, pl. 11 (fig. 3). Type locality: Ambyiacu River [Ampiyacu River, Peru]. Syntypes: ANSP 21430-21433 (4).

Maximum length: 10.3 cm SL

Distribution: South America: Amazon River basin, from the Pacaya River basin (Ucayali River drainage) to the lower Yavarí River.

Countries: Peru

***Bujurquina tambopatae* Kullander, 1986**

Bujurquina tambopatae Kullander, 1986: 266, pl. 28 (fig. 2). Type locality: Perú, departamento de Madre de Dios, R. Tambopata drainage system, Quebrada San Roque at Km 11 on Puerto Maldonado-Cuzco road. Holotype: NRM 17580.

Maximum length: 8.2 cm SL

Distribution: South America: Amazon River basin, in the Tambopata River basin (Madre de Dios River drainage).

Countries: Peru

***Bujurquina vittata* (Heckel, 1840)**

Acara vittatus Heckel, 1840: 346. Type locality: Sümpfen um Cujabá, der Hauptstadt in der Provinz Matagrosso. Holotype: NMW 33879.

Aequidens paraguayensis Eigenmann & Kennedy, 1903: 534.

Type locality: Asuncion. Holotype: CAS 34716 [ex IU 10066].

Maximum length: 7 cm SL

Distribution: South America: Paraná River basin, in the Paraguay River drainage, and in the middle Paraná River basin.

Countries: Argentina, Brazil, Paraguay

Common names: Acará-pirambocaia (Brazil)

***Bujurquina zamorensis* (Regan, 1905)**

Acara zamorensis Regan, 1905b: 339. Type locality: Rio Zamora. Holotype: BMNH 1898.12.31.35.

Maximum length: 7.4 cm SL

Distribution: South America: Amazon River basin, in the Zamora River basin.

Countries: Ecuador

CAQUETAIA

Caquetaia Fowler, 1945: 133. Type species: *Caquetaia amploris* Fowler, 1945. Type by original designation. Gender: feminine.

***Caquetaia kraussii* (Steindachner, 1879)**

Petenia Kraussii Steindachner, 1879b: 28, pl. 2. Type locality: grossen, seeartig ausgebreiteten Cienega, welche der Magdalena-Strom mit einem seiner östlich gelegenen Hauptarme kurz vor seiner Mündung in das Meer bildet. Syntypes: NMW 75391(4), NMW 24552(1), NMW 24553 (1), NMW 24545-24551 (8), NMW 24544 (1), NMW uncat.

Maximum length: 26 cm SL

Distribution: South America: Atrato, Cauca, and Magdalena River basins; Lake Maracaibo basin. Introduced in the Orinoco River drainage in Venezuela.

Countries: Colombia, Venezuela (introduced)

Common names: Mojarra (Venezuela), Mojarra, Mojarra amarilla (Colombia)

***Caquetaia myersi* (Schultz, 1944)**

Petenia myersi Schultz, 1944: 410, fig. 1. Type locality: Río Dedo, tributary of the Río Ortegua, near Florencia (Amazon system, Colombia). Holotype: USNM 120533.

Caquetaia amploris Fowler, 1945: 133, fig. 47. Type locality: Morelia, Río Caquetá drainage, Colombia. Holotype: ANSP 71722.

Maximum length: 19 cm SL

Distribution: South America: Amazon River basin, in the Putu-

mayo and Napo River basins.
Countries: Colombia, Ecuador

***Caquetaia spectabilis* (Steindachner, 1875)**

Acara (Petenia) spectabilis Steindachner, 1875: 96, pl. 4. Type locality: Amazonenstrom bei Gurupa und Obidos. Syntypes: 76430 (2).

Maximum length: 16.5 cm SL

Distribution: South America: Amazon River basin, along the Amazon River in Brazil from the Madeira and Uatumã River drainages to Gurupá, also in the Araguari River in Amapá, Brazil; in the Branco River drainage in Brazil and Guyana.

Countries: Brazil, Guyana

***Caquetaia umbrifera* (Meek & Hildebrand, 1913)**

Cichlasoma umbriferum Meek & Hildebrand, 1913: 88. Type locality: Rio Cupe, Cituro, Panama. Holotype: FMNH 7598.

Maximum length: 47.5 cm SL

Distribution: South America: Atrato and Magdalena River drainages in Colombia, Tuíra and Chucunaque River drainages in Panama.

Countries: Colombia, Panama

CHAETOBANCHOPSIS

Chaetobranchopsis Steindachner, 1875: 133. Type species: *Chaetobranchus orbicularis* Steindachner, 1875. Type by monotypy. Gender: feminine. Originally as *Chaetobranchus* (*Chaetobranchopsis*).

***Chaetobranchopsis australis* Eigenmann & Ward, 1907**

Chaetobranchopsis australe Eigenmann & Ward in Eigenmann, McAtee & Ward, 1907: 144, pl. 44 (fig. 1). Type locality: Bahía Negra [Paraguay]. Holotype: CAS 66954 [ex IU 10157].

Maximum length: 12 cm SL

Distribution: South America: Paraná River basin, in the Paraguay River in Brazil and Paraguay, and the Paraná River close to the mouth of the Paraguay River in Argentina; probably in the Amazon River basin in Bolivia and Brazil.

Countries: Argentina, Bolivia (?), Brazil, Paraguay

***Chaetobranchopsis orbicularis* (Steindachner, 1875)**

Chaetobranchus orbicularis Steindachner, 1875: 133, pl. 8 (fig. 1). Type locality: Amazonenstrom bei Para, Santarem, Gurupa, Rio Xingu bei Porto do Moz, Rio negro und R. Hyavary. Syntypes: NMW 32942-32948 (7), 32956-32960 (5), 32961-32964 (4), 58202 (2), 74045 (1).

Chaetobranchopsis bitaeniatus Ahl, 1936a: 139. Type locality: Amazonas. Syntypes: ZMB 32381 (2).

Maximum length: 12 cm SL

Distribution: South America: Amazon River basin, along the Amazon River from the mouth of the Negro River to Marajó Island, and in Amapá, Brazil.

Countries: Brazil

Common names: Acará cascudo (Brazil), Acará tucuma (Brazil)

CHAETOBANCHUS

Chaetobranchus Heckel, 1840: 401. Type species: *Chaetobranchus flavescens* Heckel, 1840. Type by subsequent designation by Eigenmann. Gender: masculine.

***Chaetobranchus flavescens* Heckel, 1840**

Chaetobranchus flavescens Heckel, 1840: 402. Type locality: Fluss Guaporè und die in der Nähe seiner Ufer gelegenen Moräste, auch am Ausflusse des Rio-negro. Syntypes: NMW 16172 (1), 16428 (1), 32922 (1), 32931 (1), 32932 (1), 32933 (1), 58856 (1), 76431 (1); SMF 5410 [ex NMW] (1).

Chaetobranchus bruneus Heckel, 1840: 405, pl. 29 (fig. 17-20).

Type locality: Rio-negro, unweit von seiner Mündung. Holotype: NMW 32941.

Centrarchus cyanopterus Jardine, 1843: 165, pl. 16. Type locality: Essequibo.

Chromys ucayalensis Castelnau, 1855: 15, pl. 6 (fig. 2). Type locality: Sarayacu (Pérou). Holotype: MNHN A.9487.

Chaetobranchus robustus Günther, 1862: 310. Type locality: Guiana. Holotype: BMNH 1961.12.18: 1.

Geophagus badiipinnis Cope, 1872: 251, pl. 11 (fig. 1). Type locality: Ambyiacu River [=Ampiyacu River, Peru]. Holotype: ANSP 9038.

Maximum length: 21 cm SL

Distribution: South America: Amazon River basin, in Peru and Brazil; Orinoco River basin in Venezuela (Rio Apure); rivers of Guyana, Suriname, French Guiana, and Amapá State. Widespread.

Countries: Brazil, French Guiana, Guyana, Peru, Suriname, Venezuela

Common names: Acará prata (Brazil), Bujurqui vaso (Peru), Camarapaca (Guyana), Kamara paru (Suriname), Koemapari (Suriname), Kroblié jonn (French Guiana), Kunapari (Suriname), Owroe wefi (Suriname), Paya (French Guiana), River patwa (Guyana)

***Chaetobranchus semifasciatus* Steindachner, 1875**

Chaetobranchus semifasciatus Steindachner, 1875: 130, pl. 7. Type locality: Amazonenstrom bei Obidos, Cudajas, Teffé; Rio Iça; Lago Hyanuary und Saraca bei Silva. Syntypes: NMW 10722 (1), 32966(1), 32967-32968 (2), 32969 (1), 32970 (1), 32971-32973 (3), 32974 (1), 79737 (1), RMNH 15478 (1).

Maximum length: 23 cm SL

Distribution: South America: Amazon River basin, along the Amazon-Solimões River from Tabatinga to Obidos.

Countries: Brazil

CICHLA

Cichla Bloch & Schneider, 1801: 336. Type species: *Cichla ocellularis* Bloch & Schneider, 1801. Type by subsequent designation by Eigenmann & Bray (1894, p. 611). Gender: feminine.

Acharnes Müller & Troschel, 1849: 622. Type species: *Acharnes speciosus* Müller & Troschel, 1849. Type by monotypy. Gender: masculine.

***Cichla intermedia* Machado-Allison, 1971**

Cichla intermedia Machado-Allison, 1971: 473, fig. 7-9, 10a, 11b. Type locality: río Casiquiare, Territorio Federal Amazonas. Holotype: MBUCV V-6489.

Maximum length: 37.5 cm SL

Distribution: South America: Orinoco River basin, tributaries of the Orinoco River, and the Casiquiare River in Venezuela.

Countries: Venezuela

Common names: Pavón (Venezuela)

***Cichla monoculus* Spix & Agassiz, 1831**

Cichla monoculus Spix & Agassiz, 1831: 100, pl. 63. Type locality: mari Brasiliae. Syntype or possible holotype: MHNN 2188 (1).

Cichla nigro-maculata Jardine & Schomburgk, 1843: 147, pl. 7. Type locality: [Negro and Padauri Rivers]. No types known.

Cycla toucouarai Castelnau, 1855: 17, pl. 10 (fig. 1). Type locality: le lac des Perles de la province de Goyaz; le Tocantins; l'Amazone. Syntypes: MNHN A.9490 (2).

Cichla bilineatus Nakashima, 1941: 73, fig. [3]. Type locality: los lagos y rios de Sudamérica tropical [cercañas del Puerto de Iquitos]. No types known.

Maximum length: 33 cm SL

Distribution: South America: Amazon River basin in Peru, Colombia and Brazil; Oyapock River basin.

Countries: Brazil, Colombia, Peru,
 Remarks and references: Redescription based on Peruvian material in Kullander (1986: 51), with diagnosis, description, distribution and illustrations.
 Common names: Kounanni (French Guiana), Toukounaré (French Guiana), Tucunare (Peru), Tucunaré-açu (Brazil), Tucunari (Peru)

***Cichla ocellaris* Bloch & Schneider, 1801**

Cichla ocellaris Bloch & Schneider, 1801: 340, pl. 66. Type locality: India orientali. Holotype: ZMB 2839.

Acharnes speciosus Müller & Troschel, 1849: 622. Type locality: Küste; Mündung des Essequibo.

Maximum length: 41 cm SL

Distribution: South America: Guianan rivers from the Marowijne drainage in Suriname and French Guiana to the Essequibo drainage in Guyana.

Countries: French Guiana, Guyana, Suriname

Common names: Kounanni (French Guiana), Lukanani (Guyana), Pavón (Venezuela), Toukounaré (French Guiana), Tucunaré açu (Brazil)

***Cichla orinocensis* Humboldt, 1821**

Cichla orinocensis Humboldt in Humboldt & Valenciennes, 1821: 167, pl. 45 (fig. 3). Type locality: les rives de l'Orénoque et du Guainia ou Rio Negro. No types preserved.

Cichla argus Valenciennes in Humboldt & Valenciennes, 1821: 169. Type locality: [Not stated]. Holotype: MNHN A.1042.

Maximum length: 61.7 cm SL

Distribution: South America: Orinoco River basin, in tributaries of the Orinoco River in Colombia and Venezuela; Amazon River basin, in the Negro River basin.

Countries: Brazil, Colombia, Venezuela

Remarks and references: Redescription based on Venezuelan material in Machado-Allison (1971), as *C. ocellaris*.

***Cichla temensis* Humboldt, 1821**

Cichla temensis Humboldt in Humboldt & Valenciennes, 1821: 169. Type locality: Temi. No types known.

Cichla atabapensis Humboldt in Humboldt & Valenciennes, 1821: 168. Type locality: l'Orénoque; Rio Atabapo. No types known.

Cichla tucunare Heckel, 1840: 409. Type locality: Rio-branco. Types in NMW, not found.

Cichla flavo-maculata Jardine, 1843: 145, pl. 6. Type locality: Rio Negro and Padauri. No types known.

Cichla trifasciata Jardine, 1843: 151, pl. 9. Type locality: Rio Negro; Padauri. No types known.

Cichla unitaeniatus Magalhães, 1931: 225. Type locality: Rio Negro e do Purus. No types preserved.

Maximum length: 75 cm TL

Distribution: South America: Amazon River basin in the Negro and Uatumã River drainages; Orinoco River basin in tributaries of the Orinoco River in Venezuela and Colombia.

Countries: Brazil, Colombia, Venezuela

Remarks and references: Redescription based on Venezuelan material in Machado-Allison (1971).

Common names: Pavón (Venezuela), Tucunaré (Brazil)

CICHLASOMA

Cichlasoma Swainson, 1839: 230. Type species: *Labrus bimaculatus* Linnaeus, 1758. Under the plenary power of the International Commission on Zoological Nomenclature (2000: 131). Gender: neuter. As *Cichlaurus* on p. 173; Swain (1882: 284) acts as first reviser selecting *Cichlasoma* (see Bailey 1957: 303). Originally as *Plesiops* (*Cichlasoma*).

Cichlaurus Swainson, 1839: 173. Type species: *Labrus bimaculatus* Linnaeus, 1758. Type by being a replacement name. Gender: masculine. Without species but clear from text that this was

another name for *Cichlasoma* Swainson (1839: 230); Swain (1882: 284), acts as first reviser selecting *Cichlasoma*.

Cichlosoma Regan, 1905a: 61. Type species: *Labrus bimaculatus* Linnaeus, 1758. Type by being a replacement name. Gender: neuter.

'*Cichlasoma*' *aguadae* Hubbs, 1936

Cichlasoma urophthalmus aguadae Hubbs, 1936: 270, pl. 14 (fig. 7). Type locality: Aguada at Tuxpeña, interior Campeche, about 90 km. south, and 40 km. east of Champoton. Holotype: UMMZ 64477.

Maximum length: 9.5 cm SL

Distribution: North America: Atlantic slope, Tuxpeña, Mexico.

Countries: Mexico

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

'*Cichlasoma*' *alborum* Hubbs, 1936

Cichlasoma urophthalmus alborum Hubbs, 1936: 268, pl. 13 (fig. 3). Type locality: Rio Usumacinta at Montecristo, Tobasco, Mexico. Holotype: USNM 50501.

Maximum length: 18.6 cm SL

Distribution: North America: Atlantic slope, in the Usumacinta River, Mexico.

Countries: Mexico

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

'*Cichlasoma*' *amarum* Hubbs, 1936

Cichlasoma urophthalmus amarum Hubbs, 1936: 272, fig. 1. Type locality: A salt or brackish water lagoon on Mujeres Island, off the east coast of Yucatan, near the tip of the peninsula. Holotype: USNM 50504.

Maximum length: 15.8 cm SL

Distribution: North America: Caribbean coast, Isla Mujeres, off the eastern coast of Yucatán Peninsula.

Countries: Mexico

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

***Cichlasoma amazonarum* Kullander, 1983**

Cichlasoma amazonarum Kullander, 1983a: 115, pl. 5 (fig. 2). Type locality: Peru, depto Loreto, R. Ampiyacu system, little upstreams of Pebas, Sacarita del Tuyé, right bank tributary of the R. Ampiyacu, floating meadow near mouth. Holotype: NRM 39271.

Maximum length: 11.4 cm SL

Distribution: South America: Amazon River basin, from the Ucayali, Huallaga, Amazon and Yavarí River drainages in Peru, along the mainstream Amazon-Solimões River in Colombia and Brazil to the mouth; also in French Guyana and Amapá State.

Countries: Brazil, Colombia, French Guiana, Peru

Common names: Acará (Brazil), Bujurqui (Peru), Prapra (French Guiana)

***Cichlasoma araguaense* Kullander, 1983**

Cichlasoma araguaense Kullander, 1983a: 252, pl. 14 (fig. 1). Type locality: Brasil, est. Mato Grosso, R. Araguaia system, small igarapé tributary to Igarapé Sangadina, tributary to the R. das Mortes, 1 km from Xavantina. Holotype: BMNH 1980.1.9.1.

Maximum length: 9.2 cm SL
 Distribution: South America: Amazon River basin, in the Tocantins and upper Xingu River basins.
 Countries: Brazil

'Cichlasoma' atromaculatum Regan, 1912

Cichlasoma (Parapetenia) atromaculatum Regan, 1912: 507. Type locality: Tado, Rio San Juan, Choco, S.W. Colombia. Syntypes: BMNH 1910.7.11.83-88 (4 of 6).

Maximum length: 17 cm SL
 Distribution: South America: Atrato, San Juan, and Baudó River basins.
 Countries: Colombia

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

'Cichlasoma' beani (Jordan, 1889)

Heros beani Jordan, 1889: 332. Type locality: Rio Presidio, Mazatlan. Syntypes: USNM 37145 (5), 37165 (2).

Maximum length: 30 cm TL
 Distribution: North America: Pacific slope of Mexico.
 Countries: Mexico

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Common names: Mojarra verde (Mexico)

Cichlasoma bimaculatum (Linnaeus, 1758)

Labrus bimaculatus Linnaeus, 1758: 285. Type locality: M. Mediterraneo [erroneous, probably from Surinam]. Holotype: NRM 7. *Acara gronovii* Heckel, 1840: 361. Type locality: Flüsse in Surinam. Syntypes: NMW 33651-52 (2).

Sparus filamentosus Gronow in Gray, 1854: 60. Type locality: Surinami. No types known.
 Maximum length: 12.3 cm SL

Distribution: South America: Orinoco River basin, in the Caroni River in Venezuela; Guianas, from the Essequibo River to the Sinnamary River; Amazon River basin, in the upper Branco River basin.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela
 Remarks and references: Redescribed by Kullander (1983a: 65), with bibliography, diagnosis, description, distribution and illustrations.

Common names: Acará (Brazil), Common patwa (Guyana), Congo patwa (Guyana), Krobia (Suriname), Owroe fisi (Suriname), Prapra (French Guiana)

'Cichlasoma' bocourti (Vaillant & Pellegrin, 1902)

Neotroplus bocourti Vaillant & Pellegrin, 1902: 85. Type locality: Lac d'Isabal (Guatemala). Holotype: MNHN 1894-241.

Maximum length: 20 cm SL
 Distribution: Central America: Atlantic slope of Guatemala and Belize.

Countries: Belize, Guatemala
 Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Common names: Chisel-tooth cichlid (Belize)

Cichlasoma boliviense Kullander, 1983

Cichlasoma boliviense Kullander, 1983a: 165, pl. 8 (fig. 2). Type locality: Bolivia, depto Santa Cruz, R. Guaporé system, R. Uru-

guaito, tributary of the R. Quizer, 13 km S San Xavier. Holotype: IRSNB 677.

Maximum length: 10.7 cm SL
 Distribution: South America: Amazon River basin, in the Madre de Dios drainage in Peru, and the Mamoré and Guaporé River basins.

Countries: Bolivia, Peru

'Cichlasoma' cienagae Hubbs, 1936

Cichlasoma urophthalmus cienagae Hubbs, 1936: 271, pl. 12 (fig.4). Type locality: Slightly brackish pool, 3 km. south of Progreso. Holotype: UMMZ 102135.

Maximum length: 11.3 cm SL
 Distribution: North America: Atlantic slope, Progreso, Yucatán, Mexico.

Countries: Mexico

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

'Cichlasoma' conchitae Hubbs, 1936

Cichlasoma urophthalmus conchitae Hubbs, 1936: 274, pl. 12 (fig. 3). Type locality: Conchita Cenote, Merida. Holotype: UMMZ 102109.

Maximum length: 6.4 cm SL
 Distribution: North America: Atlantic slope, Conchita Cenote, Merida, Yucatán, Mexico.

Countries: Mexico

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Cichlasoma dimerus (Heckel, 1840)

Acara dimerus Heckel, 1840: 351. Type locality: Cujabà-Fluss. Holotype: NMW 33620.

Acara marginatus Heckel, 1840: 350. Type locality: der Nähe von Cujabà. Holotype: NMW 33673.

?*Heros centralis* Holmberg, 1891: 183. Type locality: República Argentina, Provincia de Santiago del Estero. Type lost.

Maximum length: 11.7 cm SL
 Distribution: South America: Paraná River basin, in the Paraguay River drainage in Brazil, Bolivia and Paraguay, and the Paraná River drainage of Argentina.

Countries: Argentina, Bolivia, Brazil, Paraguay

Common names: Acará (Brazil)

Remarks and references: Redescribed by Kullander (1983a:193), with bibliography, diagnosis, description, distribution and illustrations.

'Cichlasoma' ericymba Hubbs, 1938

Cichlasoma urophthalmus ericymba Hubbs, 1938: 284, pl. 2 (fig. 1). Type locality: San Bulha Cenote (or Cave) at Merida, Yucatán. Holotype: UMMZ 116091.

Maximum length: 12.2 cm SL
 Distribution: North America: Atlantic slope, San Bulha cenote, Mexico.

Countries: Mexico

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Common names: Mojarra de Bulha (Mexico)

'Cichlasoma' facetum (Jenyns, 1842)

Chromis facetus Jenyns, 1842: 104. Type locality: Maldonado, Rio Plata. Types in Cambridge University Museum.

Heros autochthon Günther, 1862: 299. Type locality: Brazil. Syntypes: (4) ?BMNH uncat. (1).

Heros jenynsii Steindachner, 1869: 149. Type locality: Montevideo. Syntypes: NMW 17324-27 (4), 58722 (1).

Heros acaroides Hensel, 1870: 54. Type locality: Bei Porto Alegre in stagnirenden Gewässern. Syntypes: ZMB 7455 (2).

Maximum length: 18 cm TL

Distribution: South America: Coastal drainages of Uruguay and Rio Grande do Sul State; Paraná River basin, lower part of Paraná River in Argentina.

Countries: Argentina, Brazil, Chile (introduced), Uruguay

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Common names: Castañeta (Argentina), Chanchita (Argentina), Chanchito (Argentina), Palometa (Argentina), Palometa Negra (Argentina), Peine (Argentina)

'*Cichlasoma*' festae (Boulenger, 1899)

Heros festae Boulenger, 1899: 6. Type locality: Rio Guayas, Guayaquil. Syntypes: BMNH 1898.12.31.36 (1), MZUT 1504 (1).

Maximum length: 25 cm TL

Distribution: South America: Pacific drainages from Esmeraldas River in Ecuador to Tumbes River in Peru.

Countries: Ecuador, Peru

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

'*Cichlasoma*' geddesi (Regan, 1905)

Herichthys geddesi Regan, 1905a: 436. Type locality: Southern Mexico. Syntypes: BMNH 1880.4.7.40-45 (6).

Maximum length: 6.5 cm TL

Distribution: North America: Southern Mexico.

Countries: Mexico

Remarks and references: The validity of this taxon needs further research. The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

'*Cichlasoma*' gephyrum Eigenmann, 1922

Cichlasoma ornatum gephyrum Eigenmann, 1922: 205, pl. 31 (fig. 4). Type locality: Cordova, Rio Dagua.

Holotype: FMNH 58614 [ex CM 7639].

Maximum length: 12 cm SL

Distribution: South America: Dagua and San Juan Rivers on the Pacific slope of Colombia.

Countries: Colombia

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

'*Cichlasoma*' grammodes Taylor & Miller, 1980

Cichlasoma grammodes Taylor & Miller, 1980: 2, fig. 1. Type locality: Río Grande de Chiapa, about 1 km above bridge between Tuxtla Gutiérrez and Chiapa de Corzo, lat.16°44'N, long. 93°02'W, elevation ca. 500 m, Chiapas, Mexico. Holotype: UMMZ 204200.

Maximum length: 20.3 cm SL

Distribution: North and Central America: Atlantic slope, in the Grijalva River basin from the Grande de Chiapa River drainage in Mexico to Lagartero River in Guatemala.

Countries: Guatemala, Mexico

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

'*Cichlasoma*' istlanum (Jordan & Snyder, 1899)

Heros istlanus Jordan & Snyder, 1899: 144, fig. 21. Type locality: Rio Ixtla at Puente de Ixtla, Río Balsa basin, Morelos, Mexico. Holotype: SU 6150.

Heros mento Vaillant & Pellegrin, 1902: 88. Type locality: Rio Négro (Mexique sud). Syntypes: MNHN 94-283-286 (3), UMMZ 203326.

Cichlasoma (Parapetenia) leonhard-schultzei Ahl, 1935: 109. Type locality: Tlapa, Guerrero, Mexico. Holotype: ZMB (not found).

Cichlasoma istlana fusca de Buen, 1946: 121. Type locality: Río Huámito en La Huacana. Syntypes: not located.

Maximum length: 30 cm TL

Distribution: North America: Pacific slope of Mexico.

Countries: Mexico

Remarks and references: Taylor & Miller (1980: 7) suggested that the type series of *Heros mento* may not have been from the Usamacinta River, and that it may be a synonym of *Cichlasoma istlanum*. The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Common names: Mojarra (Mexico), Mojarra criolla (Mexico)

'*Cichlasoma*' mayorum Hubbs, 1936

Cichlasoma urophthalmus mayorum Hubbs, 1936: 277, pl. 13 (fig. 1). Type locality: Xtolok Cenote, Chichen Itza. Holotype: UMMZ 92098.

Maximum length: 9.6 cm SL

Distribution: North America: Atlantic slope, Xtolok Cenote, Chichen Itza, Yucatán, Mexico.

Countries: Mexico

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

'*Cichlasoma*' microlepis Dahl, 1960

Cichlasoma microlepis Dahl, 1960: 480, fig. on p. 481. Type locality: Pavarandó, Baudó. Holotype: ICNMHN 95.

Maximum length: 18.7 cm SL

Distribution: South America: Baudó River basin, Pacific slope of Colombia.

Countries: Colombia

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Common names: Mojarra rosada (Colombia)

'*Cichlasoma*' octofasciatum (Regan, 1903)

Heros octofasciatus Regan, 1903a: 417, pl. 13 (fig. 1). Type locality: Mexique. Holotype: MHNG 665.55 (1 of 9, 50 mm TL).

Cichlasoma hedricki Meek, 1904: 208, fig. 66. Type locality: Obispo, Vera Cruz. Holotype: FMNH 4673.

Cichlosoma biocellatum Regan, 1909b: 234. Type locality:

Mañaos, Rio Negro [obviously incorrect]. Holotype: BMNH 1908.12.5.30.

Maximum length: 25 cm TL

Distribution: North and Central America: Atlantic slope from Papaloapán River (southern Mexico) to Uluá River (Honduras).

Countries: Belize, Guatemala, Honduras, Mexico

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an *Incertae Sedis* species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Common names: Jack dempsey (Belize), Riquiraqui (Mexico)

***Cichlasoma orientale* Kullander, 1983**

Cichlasoma orientale Kullander, 1983a: 177, pl. 9 (fig. 1). Type locality: Brasil, est. Ceará, R. Curu system, Pentecoste, reservoir. Holotype: USNM 258642.

Maximum length: 13.6 cm SL

Distribution: South America: Atlantic coast rivers of Ceará, Pernambuco, Rio Grande do Norte and Paraíba States.

Countries: Brazil

Common names: Acará (Brazil), Acará comum (Brazil)

***Cichlasoma orinocense* Kullander, 1983**

Cichlasoma orinocense Kullander, 1983a: 106, pl. 4 (fig. 2-3), 5 (fig. 1). Type locality: Colombia, depto Meta, R. Meta system, Laguna Mozambique, at shoreline on N side of lake. Holotype: ANSP 127364.

Maximum length: 10.9 cm SL

Distribution: South America: Orinoco River basin, in left bank tributaries of the Orinoco River from the Meta River in Colombia to about Ciudad Bolívar in Venezuela.

Countries: Colombia, Venezuela

Common names: Mochoroça (Venezuela)

'*Cichlasoma*' *ornatum* Regan, 1905

Cichlosoma ornatum Regan, 1905a: 330. Type locality: Rio Durango. Syntypes: (3) BMNH.

Maximum length: 26 cm SL

Distribution: South America: Patía River basin in Colombia, Durango and St. Javier Rivers in Ecuador, all draining to the Pacific Ocean.

Countries: Colombia, Ecuador

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an *Incertae Sedis* species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

***Cichlasoma paranaense* Kullander, 1983**

Cichlasoma paranaense Kullander, 1983a: 241, pl. 13 fig. 1. Type locality: Brasil, Est. Mato Grosso do Sul, R. Paraná superior system, mun. Tres Lagoas, varzea on the left bank of the R. Sucuriú, at Fazenda Santa Luzia, near Urubupungá dam. Holotype: MZUSP 13927.

Maximum length: 7.4 cm SL

Distribution: South America: Paraná River basin, upper Paraná River drainage above Guaíra.

Countries: Brazil

'*Cichlasoma*' *pearsei* (Hubbs, 1936)

Herichthys pearsei Hubbs, 1936: 279, pl. 10 (fig. 2). Type locality: Río Champoton, Campeche, 7 leagues (34 km.) east of Champoton. Holotype: UMMZ 102212.

Maximum length: 20 cm SL

Distribution: North and Central America: Atlantic slope of southeastern Mexico and northern Guatemala.

Countries: Guatemala, Mexico

Remarks and references: The generic allocation of this species is

still uncertain. It belongs to the tribe Heroini, but is maintained as an *Incertae Sedis* species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Common names: Zacatera (Mexico)

***Cichlasoma portalegrense* (Hensel, 1870)**

Acara portalegrensis Hensel, 1870: 52. Type locality: bei Porto Alegre in stagnirenden Gewässern. Lectotype: ZMB 25107, designated by Kullander (1983a: 211).

Maximum length: 10.3 cm SL

Distribution: South America: Laguna dos Patos basin and Tramadá River basin in Rio Grande do Sul State.

Countries: Brazil

Remarks and references: Redescribed by Kullander (1983a: 209), with bibliography, diagnosis, description, distribution and illustrations.

Common names: Cará (Brazil)

***Cichlasoma pusillum* Kullander, 1983**

Cichlasoma pusillum Kullander, 1983a: 221, pl. 12 (fig. 1). Type locality: Paraguay, depto Alto Paraná, R. Alto Paraná system, Puerto Palma. Holotype: MHNG 2131.94.

Maximum length: 6.6 cm SL

Distribution: South America: Paraná River basin, Acaray River, Paraguay.

Countries: Paraguay

Remarks and references: Specimens identified by Kullander (1983a) from Uruguay, do not belong to this species.

'*Cichlasoma*' *ramsdeni* Fowler, 1938

Cichlasoma ramsdeni Fowler, 1938: 145. Type locality: Arroyo Hondo, Jamaica, Yateras, Guantánamo, Cuba. Holotype: ANSP 68454.

Maximum length: 24 cm SL

Distribution: Caribbean Islands: Eastern Cuba Island.

Countries: Cuba

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an *Incertae Sedis* species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Common names: Joturo (Cuba)

'*Cichlasoma*' *salvini* (Günther, 1862)

Heros salvini Günther, 1862: 294. Type locality: River de Santa Isabel; Lake Peten. Syntypes: (at least 5) BMNH 1864.1.26.67-69 (3), 1864.1.26.70-73 (4?).

Heros triagramma Steindachner, 1864: 70, pl. 3 (fig. 2). Type locality: Central-Amerika. Holotype: NMW 76584.

Cichlasoma tenue Meek, 1906: 94. Type locality: Achotal, Vera Cruz, Mexico. Holotype: FMNH 3781.

Maximum length: 22 cm SL

Distribution: North and Central America: Atlantic slope, from southern Mexico to Guatemala and Belize.

Countries: Belize, Guatemala, Mexico

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an *Incertae Sedis* species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Common names: Mango pinto (Mexico), Peine (Mexico), Yellow-belly cichlid (Belize)

***Cichlasoma sanctifranciscense* Kullander, 1983**

Cichlasoma sanctifranciscense Kullander, 1983a: 227, pl. 12 (fig. 2). Type locality: Brasil, Est. Bahia, R. São Francisco system, Lagoa Viana. Holotype: NMW 32714.

Maximum length: 7.9 cm SL

Distribution: South America: São Francisco River basin, also Parnaíba and Capivara River basins.

Countries: Brazil

'Cichlasoma' stenozonum Hubbs, 1936

Cichlasoma urophthalmus stenozonum Hubbs, 1936: 263. Type locality: Central America. Type based on description of *Heros urophthalmus*, Steindachner 1864: 66, p. 5 fig. 3.

Maximum length: 11 cm TL

Distribution: North America: Probably Atlantic slope of southern Mexico.

Countries: Mexico?

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Cichlasoma taenia (Bennett, 1831)

Chromis taenia Bennett, 1831: 112. Type locality: apud Trinidad. Holotype: BMNH 1852.9.13.123 [ex Zool. Soc.].

Maximum length: 12.8 cm SL

Distribution: South America: Trinidad Island, and adjacent northeastern Venezuela.

Countries: Trinidad and Tobago, Venezuela

Remarks and references: Redescribed by Kullander (1983a: 90) with bibliography, diagnosis, description, distribution, and illustrations.

Common names: Brown coscarob (Trinidad and Tobago), Large coscarob (Trinidad and Tobago)

'Cichlasoma' tembe Casciotta, Gómez & Toresani, 1995

Cichlasoma tembe Casciotta, Gómez & Toresani, 1995: 194, fig. 1. Type locality: Argentina, arroyo Uruguay-í, above Salto del Uruguay-í, at 'Alto Paraná' company fields. Holotype: MLP 9059.

Maximum length: 13.4 cm SL

Distribution: South America: Paraná River basin, known only from the Arroyo Uruguay-í, above Salto del Uruguay-í, Misiones Province.

Countries: Argentina

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

'Cichlasoma' trimaculatum (Günther, 1867)

Heros trimaculatus Günther, 1867: 602. Type locality: Chiapas and Huamuchal. Syntypes: BMNH 1864.1.26.256 (?).

Cichlasoma mojarra Meek, 1904: 217, fig. 71. Type locality: San Geronimo, Oaxaca. Holotype: FMNH 4719 [not 4718].

Cichlasoma centrale Meek, 1906: 94. Type locality: Caballo Blanco, Guatemala. Holotype: FMNH 5510.

Cichlasoma gordon-smithi Fowler, 1936: 529, fig. 44. Type locality: Small lake at Moco, 3050 feet elevation at foot of volcano of Atitlan. Holotype: ANSP 64153.

Cichlasoma cajali Alvarez & Gutierrez, 1953: 232, fig. 1. Type locality: Laguna de Coyuca, próxima al Puerto de Acapulco, Gro. Holotype: Originally in personal collection of J. Alvarez, searched in IPN, not found.

Maximum length: 36.5 cm SL

Distribution: North and Central America: Pacific slope rivers of the Pacific slope from Mexico to El Salvador.

Countries: El Salvador, Guatemala, Mexico

Remarks and references: *Heros trimaculatus* is described in more detail in Günther (1868: 461, pl. 76). The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a

revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

'Cichlasoma' troschelii (Steindachner, 1867)

Heros Troschelii Steindachner, 1867a: 64. Type locality: Mexico.

Syntypes: (2) not found at NMW.

Maximum length: 16 cm SL

Distribution: North America: Probably Atlantic slope of southern Mexico.

Countries: Mexico

Remarks and references: Species also appeared in more detail in Steindachner (1867b: 528, pl. 4). The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Common names: Guapote (El Salvador), Mojarra (El Salvador)

'Cichlasoma' ufermanni (Allgayer, 2002)

Vieja ufermanni Allgayer, 2002a: 14, fig. p. 17. Type locality: Guatemala, Rio Pucté, bassin du Rio de La Pasión, sur la route de Florès à Sayache. Holotype: MNHN 2002-1090.

Maximum length: 25 cm SL

Distribution: North and Central America: Atlantic slope, in the Usumacinta River basin.

Countries: Guatemala, Mexico

'Cichlasoma' urophthalmus (Günther, 1862)

Heros urophthalmus Günther, 1862: 291. Type locality: Peten. Syntypes: (3) BMNH 1864.1.26.74-77.

Cichlasoma urophthalmus trispilum Hubbs, 1935: 18, pl. 4 (fig. 2). Type locality: Río San Pedro de Mártir, tributary of Río Usumacinta, at El Paso de los Caballos, Department of Petén, Guatemala. Holotype: UMMZ 95520.

Maximum length: 30 cm TL

Distribution: North and Central America: Atlantic drainages from Mexico to Nicaragua.

Countries: Belize, Guatemala, Honduras, Mexico, Nicaragua

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Common names: Castarrica (Mexico), Mayan cichlid (Belize)

'Cichlasoma' zebra Hubbs, 1936

Cichlasoma urophthalmus zebra Hubbs, 1936: 275, pl. 13 (fig.2).

Type locality: Xlaka Cenote, about 13 km. north of Merida. Holotype: UMMZ 102123.

Maximum length: 10.4 cm SL

Distribution: North America: Atlantic slope, Xlaka Cenote, Merida, Yucatán, Mexico.

Countries: Mexico

Remarks and references: The generic allocation of this species is still uncertain. It belongs to the tribe Heroini, but is maintained as an Incertae Sedis species of *Cichlasoma* pending a revision of heroin cichlids traditionally assigned to the cichlasomatin genus *Cichlasoma*.

Species inquirenda

Chromys oblonga Castelnau, 1855: 14. Type locality: le Tocantins (Province de Goyaz). Holotype: MNHN A.9485. [Species similar to *Cichlasoma facetum*, not found since in the Tocantins River drainage].

CLEITHRACARA

Cleithracara Kullander & Nijssen, 1989: 173. Type species: *Acara maronii* Steindachner, 1882. Type by original designation. Gender: feminine.

***Cleithracara maronii* (Steindachner, 1881)**

Acara Maronii Steindachner, 1881a: 141, pl. 2 (fig. 4). Type locality: Maroni-Fluss in Guiana. Holotype: NMW 33683.

Maximum length: 7.1 cm SL

Distribution: South America: Trinidad Island (impersistent); Orinoco River basin (delta), Guianan rivers from Barima River (Guyana) to Ouanary River (French Guyana).

Countries: French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela

Remarks and references: Redescription in Kullander & Nijssen (1989: 175) with bibliography, diagnosis, description, distribution, and illustration.

CRENICARA

Crenicara Steindachner, 1875: 99. Type species: *Crenicara elegans* Steindachner, 1875. Type by monotypy. Gender: neuter.

Crenacara Regan, 1905c: 152. Type species: *Crenicara elegans* Steindachner, 1875. Type by being a replacement name (unjustified emendation of *Crenicara*). Gender: feminine.

***Crenicara latruncularium* Kullander & Staeck, 1990**

Crenicara latruncularium Kullander & Staeck, 1990: 163, figs. 1-3. Type locality: Brazil, state of Rondônia, Rio Mamoré drainage, Igarapé do 13 on road Palheta-Guajarã-Mirim. Holotype: MZUSP 40290.

Maximum length: 8.9 cm SL

Distribution: South America: Amazon River basin, in the Guaporé and Mamoré (near Guajarã-Mirim) drainages.

Countries: Bolivia, Brazil

***Crenicara punctulatum* (Günther, 1863)**

Acara punctulata Günther, 1863: 441. Type locality: Essequibo. Lectotype: BMNH 1864.1.21.26.

Crenicara elegans Steindachner, 1875: 99, pl. 1 (fig. 1). Type locality: Amazonenstrome bei Gurupa, Cudajas und Curupira. Syntypes: (several) NMW 33026 (1), 33031-35 (?), 76428 (3), 33027-33028 (?), 33029-30 (2).

Aequidens madeirae Fowler, 1913: 576, fig. 25. Type locality: Igarapé de Candelaria, tributary of the Madeira River, approximately two miles distant in Lat. S. 8°45', W. Long., 63°54', Brazil. Holotype: ANSP 39315.

Aequidens hercules Allen in Eigenmann & Allen, 1942: 394, pl. 22 (fig. 7). Type locality: creek, Rio Morona. Holotype: CAS 66926 [ex IU 17736].

Maximum length: 10 cm SL

Distribution: South America: Amazon River basin in Ecuador Peru, Colombia and Brazil, in tributaries of the rivers Ucayali, Maraón, Solimões and Amazon from about the Pachitea River on the Ucayali River to about Gurupá; upper Mamoré River in Bolivia, and Madre de Dios River drainage in Peru; Essequibo River drainage in Guyana; Amapá Grande River in Amapá State.

Countries: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru

Remarks and references: Redescription based on Peruvian material in Kullander (1986: 140), with bibliography, diagnosis, description, distribution, and illustrations. Compared with *C. latruncularium* in Kullander & Staeck (1990).

CRENICICHLA

Crenicichla Heckel, 1840: 416. Type species: *Crenicichla macrophthalmia* Heckel, 1840. Type by subsequent designation (Eigenmann & Bray 1894: 620). Gender: feminine.

Batrachops Heckel, 1840: 432. Type species: *Batrachops reticulatus* Heckel, 1840. Type by subsequent designation (Eigenmann & Bray 1894: 620). Gender: masculine.

Boggiana Perugia, 1897: 148. Type species: *Boggiana ocellata* Perugia, 1897. Type by original designation. Gender: feminine.

***Crenicichla acutirostris* Günther, 1862**

Crenicichla acutirostris Günther, 1862: 307. Type locality: River Cupai (800 miles from the sea) [Brazil, Cupari River]. Holotype: BMNH 1853.3.19.46.

Maximum length: 23 cm TL

Distribution: South America: Amazon River basin, in the Tapajós and Aripuanã River basins.

Countries: Brazil

***Crenicichla adspersa* Heckel, 1840**

Crenicichla adspersa Heckel, 1840: 421. Type locality: Rio-Guaporé. Types in NMW, not found.

Crenicichla funebris Heckel, 1840: 424. Type locality: Matogrosso am Rio-Guaporé. Syntypes: NMW 16406, 16451.

Maximum length: 29 cm SL

Distribution: South America: Amazon River basin, in the Guaporé River basin.

Countries: Brazil

Remarks and references: Ploeg 1991: 64 acted as first reviser in placing *C. funebris* in the synonymy of *C. adspersa*.

***Crenicichla albopunctata* Pellegrin, 1904**

Crenicichla saxatilis var. *albopunctata* Pellegrin, 1904: 374. Type locality: Guyane française (originally also Surinam, Guyane anglaise). Lectotype: MNHN 1898-59, designated by Ploeg (1986c: 224).

Maximum length: 14 cm SL

Distribution: South America: From the Approuague River in French Guiana to the Demerara River in Guyana.

Countries: French Guiana, Guyana, Suriname

Common names: Angoumot (French Guiana), Marane (French Guiana), Matalé (French Guiana), Mataouri (French Guiana), Ngoumote (French Guiana), Poisson-madame (French Guiana)

***Crenicichla alta* Eigenmann, 1912**

Crenicichla alta Eigenmann, 1912: 516, pl. 68 (fig. 3). Type locality: Gluck island. Holotype: FMNH 53777.

Crenicichla pterogramma Fowler, 1914: 281, fig. 20. Type locality: Rupununi River, British Guiana. Holotype: ANSP 39349.

Crenicichla cardiostigma Ploeg, 1991: 26, fig. 18. Type locality: Brazil, State of Roraima, Rio Negro system, Rio Branco, Igarapé Traíra Montante, at Cachoeira Peudas. Holotype: INPA 2916.

Maximum length: 16 cm SL

Distribution: South America: Amazon River basin, in the Branco River basin; Essequibo River basin.

Countries: Brazil, Guyana

***Crenicichla anthurus* Cope, 1872**

Crenicichla anthurus Cope, 1872: 252, pl. 10 (fig. 1). Type locality: the Ambyiacu [=Ampiyacu River, Peru]. Syntypes: ANSP 9074-76 (3).

Maximum length: 22.4 cm SL

Distribution: South America: Amazon River basin, in the Ucayali, Huallaga, Putumayo, Napo and Amazon River basins.

Countries: Ecuador, Peru

Remarks and references: Redescription in Kullander (1986: 117) with bibliography, diagnosis, description, distribution, and illustrations.

***Crenicichla brasiliensis* (Bloch, 1792)**

Perca brasiliensis Bloch, 1792: 84, pl. 110 (fig. 2). Type locality: Flüssen Brasiliens. No types known.

Sparus Nhoquunda La Cepède, 1802: 156. Type locality: [Flüssen Brasiliens]. No types known. Substitute name for *Perca brasiliensis* Bloch 1792.

Maximum length: 7.8 cm SL

Distribution: South America: Northeastern Brazil, states of Ceará, Paraíba, Rio Grande do Norte, and Pernambuco.

Countries: Brazil

Remarks and references: Species included in *Crenicichla menezesi* by Ploeg (1991: 46); additional research needed to clarify its diagnosis.

***Crenicichla britskii* Kullander, 1982**

Crenicichla britskii Kullander, 1982c: 642, fig. 7. Type locality: Brasil, Estado de São Paulo, mun. Promissão, R. Tietê system, km 143 on BR-153, above road in small brook. Holotype: MZUSP 16004.

Maximum length: 11.8 cm SL

Distribution: South America: Paraná River basin, in the Paraná River drainage upstream from Guaíra.

Countries: Brazil

***Crenicichla cametana* Steindachner, 1911**

Crenicichla cametana Steindachner, 1911: 369. Type locality: Tocantins bei Cameté. Lectotype: NMW 32816, designated by Ploeg (1986b: 63).

Crenicichla astroblepa Ploeg, 1986b: 58, pl. 3 (upper & middle). Type locality: Tucuruí, residual pools downstream of stowage, after closing of the stowage. Holotype: INPA 856.

Maximum length: 18.3 cm SL

Distribution: South America: Amazon River basin, in the Tocantins River basin.

Countries: Brazil

***Crenicichla celidochilus* Casciotta, 1987**

Crenicichla celidochilus Casciotta, 1987: 883, fig. 1. Type locality: Arroyo de la Invernada, Picada de la Negra Muerta, Dpto. Artigas, Uruguay. Holotype: ZVC P94.

Maximum length: 18.1 cm SL

Distribution: South America: Uruguay River drainage, in tributaries of the middle and upper Uruguay River basin.

Countries: Argentina (?), Brazil, Uruguay

Remarks and references: Redescription in Lucena & Kullander (1992: 107), with bibliography, diagnosis, description, distribution and illustrations.

***Crenicichla cincta* Regan, 1905**

Crenicichla brasiliensis fasciata Pellegrin, 1904: 383, fig. 42 (3). Type locality: Marajó (Brésil). Holotype: MNHN 1902-95.

Crenicichla cincta Regan, 1905c: 166. Type locality: [Marajó (Brésil)]. Holotype: MNHN 1902-95. Type by being a replacement name. Replacement name for *Crenicichla brasiliensis fasciata* Pellegrin, preoccupied in *Crenicichla* by *Cychna fasciata* Jardine, 1843.

Maximum length: 19.5 cm SL

Distribution: South America: Amazon River basin in Brazil, Peru, and Ecuador, from the Napo River to Marajó Island.

Countries: Brazil, Ecuador, Peru

Common names: Añashua (Peru)

Remarks and references: Redescription based on Peruvian material in Kullander (1986: 94).

***Crenicichla compressiceps* Ploeg, 1986**

Crenicichla compressiceps Ploeg, 1986b: 63, pl. 4 (upper). Type locality: rapids downstream of Jatobal. Holotype: INPA 855.

Maximum length: 5.5 cm SL

Distribution: South America: Amazon River basin, in the lower Tocantins River basin.

Countries: Brazil

***Crenicichla coppenamensis* Ploeg, 1987**

Crenicichla coppenamensis Ploeg, 1987: 77, pl. 1 (second & middle). Type locality: Surinam, left bank tributary to Linker Coppenname River. Holotype: ZMA 107841.

Maximum length: 17.9 cm SL

Distribution: South America: Coppename and Saramacca River basins.

Countries: Suriname

***Crenicichla cyanonotus* Cope, 1870**

Crenicichla cyanonotus Cope, 1870: 569. Type locality: Upper Marañon, near Pebas. Holotype: ANSP 9078.

Maximum length: 14.8 cm SL

Distribution: South America: Amazon River basin, in Peru and western Brazil.

Countries: Brazil, Peru

Remarks and references: Redescription in Kullander (1986: 89) with bibliography, diagnosis, description, distribution, and illustrations.

***Crenicichla cyclostoma* Ploeg, 1986**

Crenicichla cyclostoma Ploeg, 1986b: 65, pl. 4 (middle & lower). Type locality: Tucuruí, residual pools downstream of stowage, after closing the stowage. Holotype: INPA 854.

Maximum length: 9.6 cm SL

Distribution: South America: Amazon River basin, in the lower Tocantins River basin.

Countries: Brazil

***Crenicichla frenata* Gill, 1858**

Crenicichla frenata Gill, 1858: 386. Type locality: [western portion of the Island of Trinidad]. Holotype: USNM 1111.

Maximum length: 11.6 cm SL

Distribution: South America: Trinidad Islands and northeastern Venezuela.

Countries: Trinidad and Tobago, Venezuela

***Crenicichla gaucho* Lucena & Kullander, 1992**

Crenicichla gaucho Lucena & Kullander, 1992: 137, fig. 29. Type locality: Brazil, State of Rio Grande do Sul, arroio Passo do Alto, near Mineral, município of São Nicolau. Holotype: MCP 14328.

Maximum length: 12.7 cm SL

Distribution: South America: Uruguay River drainage, in the tributaries of the middle Uruguay River (Comandáí, Ijuí, and Piratinim Rivers).

Countries: Brazil

***Crenicichla geayi* Pellegrin, 1903**

Crenicichla geayi Pellegrin, 1903: 123. Type locality: Vénézuéla. Holotype: MNHN 1898-47.

Maximum length: 13 cm SL

Distribution: South America: Orinoco River basin, in the Portuguesa River basin.

Countries: Venezuela

***Crenicichla haroldoi* Luengo & Britski, 1974**

Crenicichla haroldoi Luengo & Britski, 1974: 554, fig. 1. Type locality: río Paraná frente a Jupia, Mato Grosso. Holotype: MZUSP 4022b.

Maximum length: 9.8 cm SL

Distribution: South America: Paraná River basin, in the upper Paraná River basin.

Countries: Brazil

***Crenicichla heckeli* Ploeg, 1989**

Crenicichla heckeli Ploeg, 1989: 163, fig. 1. Type locality: Brasilien, Staat Pará, Trombetas-System, Cachoeira Porteira. Holotype: IRSNB 768.

Maximum length: 5.2 cm SL

Distribution: South America: Amazon River basin, in the Trombetas River close to Cachoeira Porteira.

Countries: Brazil

***Crenicichla hemera* Kullander, 1990**

Crenicichla hemera Kullander, 1990a: 214, fig. 1. Type locality: Brazil, State of Mato Grosso, Rio Aripuanã drainage, headwater

stream tributary to the Rio Cinta Larga where crossed by the road BR-174, 41 km from Juína. Holotype: MZUSP 40292.

Crenicichla guentheri Ploeg, 1991: 33, fig. 30. Type locality: Brazil, State of Mato Grosso, Madeira River system, Rio Aripuanã, Igarapé do Aeroporto, Humboldt. Holotype: INPA 2884.

Maximum length: 9.7 cm SL

Distribution: South America: Amazon River basin, in the upper Aripuanã River in the Madeira River drainage.

Countries: Brazil

***Crenicichla hummelincki* Ploeg, 1991**

Crenicichla hummelincki Ploeg, 1991: 35, fig. 33. Type locality: Brazil, State of Pará, Trombetas River system, Igarapé Jaramacuru, tributary to Rio Cuminá. Holotype: MZUSP 40135.

Maximum length: 10.8 cm SL

Distribution: South America: Amazon River basin, in the upper Trombetas River basin.

Countries: Brazil

***Crenicichla igara* Lucena & Kullander, 1992**

Crenicichla igara Lucena & Kullander, 1992: 125, fig. 23. Type locality: Brazil, State of Santa Catarina, município Campos Novos, rio Canoas at Passo do Canoas, (road SC-458), on the road Tupitinga-Celso Ramos. Holotype: MCP 12906.

Maximum length: 22.3 cm SL

Distribution: South America: Uruguay River drainage, in tributaries of the upper Uruguay River.

Countries: Brazil

***Crenicichla iguassuensis* Haseman, 1911**

Crenicichla iguassuensis Haseman, 1911: 352, pl. 61. Type locality: Porto União da Victoria, Rio Iguassú. Holotype: FMNH 54159.

Maximum length: 14 cm SL

Distribution: South America: Paraná River basin, in the Iguaçu River basin.

Countries: Brazil

***Crenicichla inpa* Ploeg, 1991**

Crenicichla inpa Ploeg, 1991: 37, fig. 35. Type locality: Brazil, State of Amazonas, Rio Amazonas system, Ilha do Careiro. Holotype: INPA 1427.

Maximum length: 16.8 cm SL

Distribution: South America: Amazon River basin, reported from a large area of the Amazon River basin in Brazil.

Countries: Brazil

***Crenicichla isbrueckeri* Ploeg, 1991**

Crenicichla isbrueckeri Ploeg, 1991: 39, fig. 37. Type locality: Brazil, State of Mato Grosso, Madeira River system, Rio Aripuanã, 3 km from Cachoeira de Dardanelos Humboldt (59°27'W, 10°10'S). Holotype: INPA 2883.

Maximum length: 9.5 cm SL

Distribution: South America: Amazon River basin, in the Aripuanã River basin.

Countries: Brazil

***Crenicichla jaguarensis* Haseman, 1911**

Crenicichla jaguarensis Haseman, 1911: 351, pl. 60. Type locality: Jaguará, Rio Grande of the Paraná, Minas. Holotype: FMNH 54157.

Maximum length: 14.8 cm SL

Distribution: South America: Paraná River basin, in the upper Paraná River basin.

Countries: Brazil

***Crenicichla jegui* Ploeg, 1986**

Crenicichla jegui Ploeg, 1986b: 67, pl. 5 (upper). Type locality: Itupiranga. Holotype: INPA 857.

Maximum length: 20 cm SL

Distribution: South America: Amazon River basin, in the lower Tocantins basin.

Countries: Brazil

***Crenicichla johanna* Heckel, 1840**

Crenicichla johanna Heckel, 1840: 425. Type locality: Rio-Guaporè. Holotype: NMW 16431.

Cychla fasciata Jardine, 1843: 141, pl. 4. Type locality: No locality given [probably Guyana]. No types known. Primary homonym of *Cychla fasciata* Swainson, 1839 = *Badis badis* Hamilton, 1822.

Crenicichla obtusirostris Günther, 1862: 305. Type locality: River Capin. Holotype: BMNH 1849.11.8.57.

Crenicichla johanna carsevennensis Pellegrin, 1905: 168. Type locality: Entre les rivières Carsevenne et Cachipour (contesté franco-brésilien). Holotype: MNHN 1899-113.

Maximum length: 28.3 cm SL

Distribution: South America: Amazon River basin, widespread in Peru, Brazil and Bolivia; in the Orinoco basin in Colombia and Venezuela; Essequibo drainage in Guyana; Oyapock and Approuague drainages in French Guiana; Amapá State.

Countries: Bolivia, Brazil, Colombia, French Guiana, Guyana, Peru, Venezuela

Remarks and references: Redescription based on Peruvian material in Kullander (1986: 98) with bibliography, diagnosis, description, distribution, and illustrations. Ploeg (1991: 68) claimed that *C. johanna* is based on more than one specimen, and designated the only specimen found at NMW as lectotype (NMW 16431).

Common names: Angoumot (French Guiana), Marane (French Guiana), Matalé (French Guiana), Mataouri (French Guiana), Ngoumote (French Guiana), Poisson-madame (French Guiana)

***Crenicichla jupiaensis* Britski & Luengo, 1968**

Crenicichla jupiaensis Britski & Luengo, 1968: 171, fig. 1. Type locality: Rio Paraná, no Salto de Urubupungá, entre os Estados de Mato Grosso e São Paulo. Holotype: MZUSP 4363.

Maximum length: 8.2 cm SL

Distribution: South America: Paraná River basin, in the upper Paraná River basin.

Countries: Brazil

***Crenicichla jurubi* Lucena & Kullander, 1992**

Crenicichla jurubi Lucena & Kullander, 1992: 128, fig. 25. Type locality: Brazil, State of Rio Grande do Sul, rio Marombas at bridge Irineu Bornhausen. Holotype: MCP 14326.

Maximum length: 17.8 cm SL

Distribution: South America: Uruguay River basin, in tributaries of the upper Uruguay River.

Countries: Brazil

***Crenicichla labrina* (Spix & Agassiz, 1831)**

Cychla labrina Spix & Agassiz, 1831: 99, pl. 62 (fig. 1, as *Cichla labrina*). Type locality: mare Brasiliae. Lectotype: MHNN 599, designated by Ploeg (1986b: 69).

Maximum length: 16 cm SL

Distribution: South America: Amazon River basin, in the lower Tocantins River basin.

Countries: Brazil

***Crenicichla lacustris* (Castelnau, 1855)**

Cyca lacustris Castelnau, 1855: 19, pl. 8 (fig. 3). Type locality: Dique, ou étang près de Bahia. Syntypes: MNHN A9501 (2).

Crenicichla dorsocellata Haseman, 1911: 355, pl. 63. Type locality: Campos, R. Parahyba. Holotype: FMNH 54155.

Crenicichla biocellata Ihering, 1914: 333. Type locality: Rio Doce, Est. do Espírito Santo. Holotype: MZUSP 1167.

Maximum length: 29 cm SL

Distribution: South America: Coastal drainages of southeastern

and eastern Brazil.

Countries: Brazil

***Crenicichla lenticulata* Heckel, 1840**

Crenicichla lenticulata Heckel, 1840: 419. Type locality: Rio-negro, bei Marabitanas. Holotype: NMW 59417.

Crenicichla ornata Regan, 1905c: 167, pl. 15 (fig. 2). Type locality: Rio Negro. Lectotype: BMNH 1893.4.24.6, designated by Ploeg (1991: 71).

Maximum length: 30 cm SL

Distribution: South America: Amazon River basin, in the Negro River basin.

Countries: Brazil

Remarks and references: Redescription in Ploeg (1991: 70). Ploeg places the type locality in Venezuela, Orinoco River system, although all known evidence suggests that it is the Negro River. The correct catalog number for the lectotype is BMNH 1893.4.24.6 (not 1893.2.24.6 as stated in Ploeg, 1970: 70, fig. 81) and the correct number for the paralectotypes is BMNH 1893.4.24: 7-8 (not 1893.4.34: 7-8, as stated in Ploeg, 1970: 72).

***Crenicichla lepidota* Heckel, 1840**

Crenicichla lepidota Heckel, 1840: 429, pl. 30 (fig. 13). Type locality: Rio-Guaporè. Lectotype: NMW 33101, designated by Ploeg (1991: 42).

Crenicichla edithae Ploeg, 1991: 29, fig. 24. Type locality: Paraguay, Río Paraguai system, Arroyo Itabu-Guazu. Holotype: MHNG 2028.45.

Maximum length: 18 cm SL

Distribution: South America: Paraná River basin, widespread in the Paraguay River drainage in Brazil and Paraguay and the lower Paraná (below Guaíra) in Paraguay and Argentina, and also along the coast of Rio Grande do Sul State. Also found in the middle and lower Uruguay River in Brazil and Uruguay. Amazon River basin in the Guaporé River drainage in Brazil and Bolivia.

Countries: Argentina, Bolivia, Brazil, Paraguay, Uruguay

Remarks and references: Species monograph in Kullander (1982c); description of material from Uruguay River in Lucena & Kullander (1992: 101).

Common names: Guensa-verde (Brazil)

***Crenicichla lucius* Cope, 1870**

Crenicichla lucius Cope, 1870: 570. Type locality: Perú, R. Ucayali drainage: Loreto, Quebrada Abrahancillo, left bank tributary of R. Aucayacu, 4 km S. Supay Cocha [originally tributaries of the Upper Marañon, in Ecuador]. Neotype: NRM 25662, designated by Kullander (1986: 116).

Maximum length: 16.8 cm SL

Distribution: South America: Amazon River basin, in Peru and western Brazil.

Countries: Brazil, Peru

Remarks and references: Redescription in Kullander (1986: 112), with bibliography, diagnosis, description, distribution, and illustrations.

***Crenicichla lugubris* Heckel, 1840**

Crenicichla lugubris Heckel, 1840: 422. Type locality: Rio-negro. Holotype: NMW 61148.

Cychla ? rutilans Jardine, 1843: 142, pl. 5. Type locality: Rio Branco. No types known.

Maximum length: 24 cm SL

Distribution: South America: Amazon River basin, in the Branco, Negro, and Uatumã Rivers in Brazil; Essequibo River and Branco River in Guyana; Corantijn River in Suriname.

Countries: Brazil, Guyana, Suriname

***Crenicichla macrophthalma* Heckel, 1840**

Crenicichla macrophthalma Heckel, 1840: 427, pl. 30 (fig. 9). Type locality: Rio-negro. Syntypes: NMW 33082 (1) and NMW

77820 (1)

Crenicichla santaremensis Haseman, 1911: 354, pl. 62 (fig. 1).

Type locality: lagoon along the margin of the Amazon, three miles above Santarém. Holotype: FMNH 54153.

Maximum length: 20 cm SL

Distribution: South America: Amazon River basin, in the Negro, Uatumã, Tapajós, Xingu, and Trombetas River basins.

Countries: Brazil

Common names: Jacundá (Brazil)

***Crenicichla marmorata* Pellegrin, 1904**

Crenicichla brasiliensis marmorata Pellegrin, 1904: 383, fig. 42 (4). Type locality: [No locality]. Holotype: MNHN A.9496.

Maximum length: 28 cm SL

Distribution: South America: Amazon River basin, in southern tributaries of the Amazon River in Brazil, from the Madeira River to Tocantins River.

Countries: Brazil

***Crenicichla menezesi* Ploeg, 1991**

Crenicichla menezesi Ploeg, 1991: 45, fig. 47. Type locality: Brazil, State of Maranhão, Caieira. Holotype: NMW 33292.

Maximum length: 14.6 cm SL

Distribution: South America: Rivers of the state of Maranhão State.

Countries: Brazil

***Crenicichla minuano* Lucena & Kullander, 1992**

Crenicichla minuano Lucena & Kullander, 1992: 116, fig. 12.

Type locality: Brazil, State of Rio Grande do Sul, rio Comandá, on the road Porto Xavier-Porto Lucena. Holotype: MCP 14321.

Maximum length: 17.2 cm SL

Distribution: South America: Uruguay River drainage, in tributaries of the middle and upper Uruguay River.

Countries: Brazil

***Crenicichla missioneira* Lucena & Kullander, 1992**

Crenicichla missioneira Lucena & Kullander, 1992: 113, fig. 9.

Type locality: Brazil, State of Rio Grande do Sul, rio Comandá, on the road Porto Xavier-Porto Lucena. Holotype: MCP 14324.

Maximum length: 20.9 cm SL

Distribution: South America: Uruguay River drainage, in tributaries of the upper and middle Uruguay River basin.

Countries: Brazil

***Crenicichla mucuryna* Ihering, 1914**

Crenicichla mucuryna Ihering, 1914: 335. Type locality: Theophilo Ottoni, rio Todos os Santos, afl. do Mucury, Est. de Minas Geraes. Lectotype: MZUSP 2526, designated by Britski (1969: 210).

Maximum length: 11.3 cm SL

Distribution: South America: Mucuri River basin in eastern coast of Brazil.

Countries: Brazil

***Crenicichla multispinosa* Pellegrin, 1903**

Crenicichla multispinosa Pellegrin, 1903: 124 [5]. Type locality: Guyane française. Lectotype: MNHN 9542, designated by Ploeg (1986c: 230).

Maximum length: 22.5 cm SL

Distribution: South America: Maroni and Mana River basins of Suriname and French Guiana.

Countries: French Guiana, Suriname

Common names: Angoumot (French Guiana), Marane (French Guiana), Matalé (French Guiana), Mataouri (French Guiana), Poson madanm (French Guiana)

***Crenicichla nickeriensis* Ploeg, 1987**

Crenicichla nickeriensis Ploeg, 1987: 81, pl. 1 (fourth & lower).

Type locality: Surinam, right bank tributary to Nickerie River, 12 km W.S.W. of Stondansie Fall. Holotype: ZMA 107843.
Maximum length: 19.1 cm SL
Distribution: South America: Nickerie and Corantijn River basins.
Countries: Suriname

***Crenicichla niederleinii* (Holmberg, 1891)**

Acharnes niederleinii Holmberg, 1891: 181. Type locality: Rio Pequirí, en Misiones, y en otros inmediatos. Holotype: Museo de la Escuela Normal de Profesoras de la Capital, lost.
Maximum length: 23.5 cm SL
Distribution: South America: Paraná River basin, in tributaries of the upper Paraná River in Argentina, Brazil and Paraguay.
Countries: Argentina, Brazil, Paraguay
Remarks and references: Brief review with illustration in Kullander (1981b: 684).

***Crenicichla notophthalmus* Regan, 1913**

Crenicichla notophthalmus Regan, 1913a: 502. Type locality: the Amazon at Manaus. Lectotype: BMNH 1913.4.15.4, designated by Ploeg (1989: 166).
Maximum length: 7.6 cm SL
Distribution: South America: Amazon River basin, in the lower Negro River basin.
Countries: Brazil

***Crenicichla pellegrini* Ploeg, 1991**

Crenicichla pellegrini Ploeg, 1991: 48, fig. 53. Type locality: Brazil, State of Mato Grosso, Madeira River system, Rio Aripuanã, Igarapé do Porto. Holotype: INPA 2885.
Maximum length: 15.7 cm SL
Distribution: South America: Amazon River basin, in the Aripuanã River basin.
Countries: Brazil

***Crenicichla percna* Kullander, 1991**

Crenicichla percna Kullander, 1991a: 356, fig. 4. Type locality: Brazil, State of Pará, Rio Xingu drainage, Cachoeira do Espelho. Holotype: MZUSP 36880.
Maximum length: 22 cm SL
Distribution: South America: Amazon River basin, in the Xingu River at Cachoeira do Espelho and Altamira, Brazil.
Countries: Brazil

***Crenicichla phaiospilus* Kullander, 1991**

Crenicichla phaiospilus Kullander, 1991a: 353, fig. 1. Type locality: Brazil, State of Pará, Rio Xingu drainage, município de São Felix do Xingu, Rio Fresco, Aldeia Gorotire. Holotype: MZUSP 35997.
Maximum length: 24 cm SL
Distribution: South America: Amazon River basin, in the Xingu River drainage at Cachoeira von Martius and Gorotire.
Countries: Brazil

***Crenicichla prenda* Lucena & Kullander, 1992**

Crenicichla prenda Lucena & Kullander, 1992: 140, fig. 32. Type locality: Brazil, State of Santa Catarina, rio Jacutinga, on the road BR 283 Seara-Concórdia. Holotype: MCP 13016.
Maximum length: 8.7 cm SL
Distribution: South America: Upper Uruguay River basin.
Countries: Brazil

***Crenicichla proteus* Cope, 1872**

Crenicichla proteus Cope, 1872: 252. Type locality: Ambyiacu River [=Ampiyacu River, Peru]. Lectotype: ANSP 9050, designated by Kullander (1986: 110).
Crenicichla proteus argynnis Cope, 1872: 253. Type locality: Ambyiacu River [=Ampiyacu River, Peru]. Syntypes: ANSP 9059 (1), 14375 (1).

Batrachops nemopterus Fowler, 1940: 283, fig. 64. Type locality: Ucayali River basin, Contamana, Peru. Holotype: ANSP 68684.
Crenicichla nijsseni Ploeg, 1991: 47, fig. 41. Type locality: Brazil, State of Acre, Río Japurá system, Río Branco, Açude Carlos Simão. Holotype: MZUSP 40163.
Maximum length: 15.5 cm SL
Distribution: South America: Amazon River basin, in the Napo and Putumayo drainages in Ecuador, in the Ucayali-Amazon drainage from Chicosa to Pebas in Peru, and upper Purus basin.
Countries: Brazil, Ecuador, Peru
Remarks and references: Redescription in Kullander (1986: 107), with bibliography, diagnosis, distribution, and illustrations. Synonymy of *Crenicichla nijsseni* based on unpublished observation (Kullander, MS).

***Crenicichla punctata* Hensel, 1870**

Crenicichla punctata Hensel, 1870: 57. Type locality: aus dem Guahyba bei Porto Alegre [originally also: Bächen des Urwaldes.. Waldbächen von der deutschen Colonie Sta. Cruz in Rio Grande do Sul]. Lectotype: ZMB 7459, designated by Lucena & Azevedo (1989: 90).
Crenicichla polysticta Hensel, 1870: 58. Type locality: Rio Cadea des Urwaldes von Rio Grande do Sul. Syntypes: ZMB 7461(1), uncat. (3) not found.
Maximum length: 22.3 cm SL
Distribution: South America: Laguna dos Patos and Lagoa Mirim basins in Rio Grande do Sul State and Uruguay.
Countries: Brazil, Uruguay
Remarks and references: Species revised by Lucena & Azevedo (1989).

***Crenicichla pydanielae* Ploeg, 1991**

Crenicichla pydanielae Ploeg, 1991: 52, fig. 57. Type locality: Brazil, State of Pará, Trombetas River system, Igarapé at km 10 of BR 163 at level of bridge. Holotype: INPA 3078.
Maximum length: 17.8 cm SL
Distribution: South America: Amazon River basin, in the Trombetas River drainage above Cachoeira Porteira.
Countries: Brazil

***Crenicichla regani* Ploeg, 1989**

Crenicichla regani Ploeg, 1989: 164, fig. 2. Type locality: Brasilien, Staat Pará, Trombetas-System, linksseitiger Zufluss bei Cachoeira Porteira. Holotype: IRSNB 766.
Maximum length: 7.9 cm SL
Distribution: South America: Amazon River basin, in the Trombetas River at Cachoeira Porteira.
Countries: Brazil

***Crenicichla reticulata* (Heckel, 1840)**

Batrachops reticulatus Heckel, 1840: 433, pl. 30 (fig. 17). Type locality: Rio-negro. Holotype: NMW 35783.
Crenicichla elegans Steindachner, 1881b: 15. Type locality: Hoch-Peru. Syntypes: NMW 32835 (2).
Batrachops punctulatus Regan, 1905c: 156, pl. 14 (fig. 1). Type locality: R. Essequibo. Holotype: BMNH 1864.1.21.24.
Maximum length: 21.6 cm SL
Distribution: South America: Amazon River basin in Colombia, Peru, and Brazil; Essequibo River in Guyana.
Countries: Brazil, Colombia, Guyana, Peru
Common names: Añashua (Peru), Jacundá (Brazil), Peixe sabão (Brazil)

***Crenicichla rosemariae* Kullander, 1997**

Crenicichla rosemariae Kullander, 1997b: 280, fig. 1. Type locality: Brazil, State of Pará, Rio Xingu drainage, Córrego do Gato. Holotype: MZUSP 40300.
Maximum length: 24.4 cm SL
Distribution: South America: Amazon River basin, upper Xingu

River drainage (Suiá-Missu River).
Countries: Brazil
Common names: Rubanana (Brazil)

***Crenicichla santosi* Ploeg, 1991**

Crenicichla santosi Ploeg, 1991: 53, fig. 59. Type locality: Brazil, State of Rondônia, Rio Madeira system, Rfo Machado, Jiparaná: Rfo Urupa. Holotype: INPA 2889.
Maximum length: 12 cm SL
Distribution: South America: Amazon River basin, in the Machado River of Rondônia State.
Countries: Brazil

***Crenicichla saxatilis* (Linnaeus, 1758)**

Sparus saxatilis Linnaeus, 1758: 278. Type locality: Surinam. Lectotype: NRM 5583, designated by Ploeg (1986a: 49).
Sparus biocellatus Walbaum, 1792: 298. Type locality: Surinam. Holotype: Based on Gronovius (1763, *Sparus rufescens*; 1754, *Sparus rostro plagiplateo*); represented by BMNH 1853.11.2.24.
Sparus Pavo La Cépède, 1802: 49, 151. Type locality: [Suriname]. Unnecessary replacement name for *Sparus saxatilis* Linnaeus.
Scarus pavoninus Gray, 1854: 63. Type locality: Surinam. Holotype: BMNH 1853.11.2.24.
Maximum length: 20 cm SL
Distribution: South America: Atlantic coast drainages of Suriname, French Guiana, Guyana, Venezuela and Trinidad Island.
Countries: French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela
Common names: Angoumot (French Guiana), Booto (Suriname), Marann (French Guiana), Matalé (French Guiana), Mataouri (French Guiana), Ngoumote (French Guiana), Poisson-madame (French Guiana)

***Crenicichla scottii* (Eigenmann, 1907)**

Batrachops scottii Eigenmann, 1907: 455, pl. 23 (fig. 8). Type locality: Buenos Aires. Holotype: in Princeton University, apparently lost.
Crenicichla (Batrachops) multidentis Steindachner, 1915: 347. Type locality: La Plata. Holotype: NMW, not found.
Labrus amarus Larrañaga, 1923: 383. Type locality: Uruguay. No types known.
Crenicichla lacustris semifasciata Devincenzi, 1939: 34, fig. 11 (no. 3). Type locality: Rio Uruguay (Paysandú). No types known. Maximum length: 16.9 cm SL
Distribution: South America: Uruguay River drainage, middle and lower parts, in Argentina, Uruguay and Brazil.
Countries: Argentina, Brazil, Uruguay
Remarks and references: Redescription in Lucena & Kullander (1992: 131), with bibliography, diagnosis, description, distribution and illustrations.

***Crenicichla sedentaria* Kullander, 1986**

Crenicichla sedentaria Kullander, 1986: 83, pl. 4-6 (fig. 3). Type locality: Peru, departamento Pasco, Rfo Pachitea drainage system, in Rfo Yamushimas, tributary to Rfo Palcazú, near San Pedro de Longin. Holotype: USNM 229057.
Maximum length: 22.1 cm SL
Distribution: South America: Amazon River basin, in the upper Ucayali River drainage, upper Huallaga River drainage (Tingo María) in Peru, and the Napo and Putumayo River drainages in Ecuador.
Countries: Ecuador, Peru

***Crenicichla semicineta* Steindachner, 1892**

Crenicichla saxatilis var. *semicineta* Steindachner, 1892: 376 [20]. Type locality: Bolivia, Provinz Yuracares, im oberen Chaparé bei Puerto de San Mateo. Syntypes: NMW 33482-84 (3).
Crenicichla clancularia Ploeg, 1991: 27, fig. 20. Type locality: Bolivia, State of Mato Grosso[sic], Rfo Mamore system, Sta.

Cruz, Buenavista. Holotype: BMNH 1927.10.4.49.
Maximum length: 17.1 cm SL
Distribution: South America: Amazon River basin, in the Madre de Dios River drainage in Peru, and in the Mamoré River basin.
Countries: Bolivia, Peru
Remarks and references: Redescription based on Peruvian material in Kullander (1986: 101), with bibliography, diagnosis, description, distribution, and illustrations. The synonymy of *C. clancularia* is based on unpublished observations (Kullander, MS).

***Crenicichla semifasciata* (Heckel, 1840)**

Batrachops semifasciatus Heckel, 1840: 436. Type locality: Flusse Paraguay bei Caiçara. Types in NMW, not found.
Acharnes chacoensis Holmberg, 1891: 182. Type locality: Formosa. No types known.
Boggiana ocellata Perugia, 1897: 148. Type locality: Puerto 14 de Mayo, departamento di Bahia Negra, nel Chaco boreale. Holotype: MSNG 33700.
Crenicichla simoni Haseman, 1911: 345, pl. 59. Type locality: Rio Paraguay at São Luiz de Caceres. Holotype: FMNH 54097.
Maximum length: 15 cm SL
Distribution: South America: Paraná River basin, in the Paraguay River in Paraguay and Brazil, and the Paraná drainage in Argentina.
Countries: Argentina, Brazil, Paraguay

***Crenicichla sipaliwini* Ploeg, 1987**

Crenicichla sipaliwini Ploeg, 1987: 90, pl. 2 (upper). Type locality: Corantijn River system, Sipaliwini River near Sipaliwini airstrip. Holotype: RMNH 30561.
Maximum length: 17.3 cm SL
Distribution: South America: Sipaliwini River, upper Corantijn basin.
Countries: Suriname

***Crenicichla stocki* Ploeg, 1991**

Crenicichla stocki Ploeg, 1991: 108, fig. 141. Type locality: Brazil, State of Pará, Rfo Tocantins system, Capuaraná. Holotype: INPA 2851.
Maximum length: 25 cm TL
Distribution: South America: Amazon River basin, in the Tocantins River basin.
Countries: Brazil

***Crenicichla strigata* Günther, 1862**

Crenicichla johanna strigata Günther, 1862: 306. Type locality: River Capin; River Cupai (800 miles from the sea). Lectotype: BMNH 1849.11.8.79-82 (1 of 4), designated by Ploeg (1991: 78).
Maximum length: 30 cm SL
Distribution: South America: Amazon River basin, in southern tributaries of the Amazon River basin.
Countries: Brazil, Guyana

***Crenicichla sveni* Ploeg, 1991**

Crenicichla sveni Ploeg, 1991: 58, fig. 68. Type locality: Colombia, Rfo Orinoco system, Rfo Meta, along road Villavicencio-Puerto López, Puerto Gaintán. Holotype: RMNH 31622.
Maximum length: 15 cm SL
Distribution: South America: Orinoco River basin, in the Llanos of Venezuela and Colombia.
Countries: Colombia, Venezuela

***Crenicichla tendybaguassu* Lucena & Kullander, 1992**

Crenicichla tendybaguassu Lucena & Kullander, 1992: 121, figs. 19-20. Type locality: Brazil, State of Rio Grande do Sul, município Santo Angelo, rio Piratinim, Fazenda dos Hinz, Coímbra. Holotype: MCP 10876.

Maximum length: 15.2 cm SL
 Distribution: South America: Uruguay River drainage, in tributaries of the middle and upper Uruguay River basin.
 Countries: Brazil

***Crenicichla ternetzi* Norman, 1926**

Crenicichla ternetzi Norman, 1926: 97. Type locality: Oyapock River at "Sant" Cafesoca, French Guiana. Lectotype: BMNH 1926.3.2.860, designated by Ploeg (1986c: 228).

Maximum length: 24.5 cm SL
 Distribution: South America: Oyapock River drainage in French Guiana and Brazil.
 Countries: French Guiana
 Common names: Angoumot (French Guiana), Marann (French Guiana), Matalé (French Guiana), Mataouri (French Guiana), Poson madanm (French Guiana)

***Crenicichla tigrina* Ploeg, Jégu & Ferreira, 1991**

Crenicichla tigrina Ploeg, Jégu & Ferreira, 1991: 3, fig. 2. Type locality: Brésil, Est. Pará, Rio Trombetas, au niveau de l'embouchure de l'Igarapé Caxipacoré. Holotype: INPA 1800.

Maximum length: 28 cm SL
 Distribution: South America: Amazon River basin, in the Trombetas River near Cachoeira Porteira.
 Countries: Brazil

***Crenicichla urosema* Kullander, 1990**

Crenicichla urosema Kullander, 1990c: 86, fig. 1. Type locality: Brazil, State of Pará, Rio Tapajós, rocky pool at São Luiz upstream of Itaituba. Holotype: MZUSP 40289.

Maximum length: 6.8 cm SL
 Distribution: South America: Amazon River basin, in the lower Tapajós River at São Luiz.
 Countries: Brazil

***Crenicichla vaillanti* Pellegrin, 1903**

Crenicichla vaillanti Pellegrin, 1903: 124. Type locality: La Mana (Guyane française); Essequibo (Guyane anglaise). Syntypes: MNHN 4050, 2993.

Maximum length: 12.6 cm SL
 Distribution: South America: Essequibo and Mana River basins.
 Countries: French Guiana, Guyana
 Remarks and references: The type series of *Crenicichla vaillanti* is a composite, and the species must be treated as valid until a lectotype is designated.

***Crenicichla virgatula* Ploeg, 1991**

Crenicichla virgatula Ploeg, 1991: 94, fig. 119. Type locality: Brazil, State of Roraima, Rio Negro, Rio Branco, Rio Uraricoera, Ilha de Maracá. Holotype: INPA 2909.

Maximum length: 6.6 cm SL
 Distribution: South America: Amazon River basin, in the upper Branco River basin.
 Countries: Brazil

***Crenicichla vittata* Heckel, 1840**

Crenicichla vittata, Heckel 1840: 417. Type locality: Flusse Cuyaba; Flusse Paraguay. Lectotype: NMW 77815, designated by Ploeg (1991: 81). Status as syntype is, however, not supported by collection data. NMW 77770 probable holotype.

Maximum length: 26 cm SL
 Distribution: South America: Paraná River basin, in the Paraguay River in Brazil and Paraguay, and in the Paraná River drainage in Argentina; also in the middle Uruguay River drainage in Brazil.
 Countries: Argentina, Brazil, Paraguay, Uruguay
 Remarks and references: Brief review by Lucena & Kullander (1992: 105), based on material from Uruguay River.

***Crenicichla wallacii* Regan, 1905**

Crenicichla wallacii Regan, 1905c: 163, pl. 14 (fig. 2). Type locality: Essequibo. Holotype: BMNH 1864.1.21.93.

Crenicichla nanus Regan, 1913a: 502. Type locality: British Guiana. Syntypes: BMNH 1911.10.31.125-126 (2).
 Maximum length: 8.5 cm TL
 Distribution: South America: Essequibo River basin.
 Countries: Guyana

Species inquirendae

Cycla conibos Castelnau, 1855: 18, pl. 10 (fig. 3). Type locality: l'Ucayale. No types known.

Cycla multifasciata Castelnau, 1855: 18, pl. 10 (fig. 2). Type locality: l'Ucayale. No types known.

DICROSSUS

Dicrossus Steindachner, 1875: 102. Type species: *Dicrossus maculatus* Steindachner, 1875. Type by monotypy. Gender: masculine.

***Dicrossus filamentosus* (Ladiges, 1958)**

Crenicara filamentosa Ladiges, 1958: 204, fig. p. 204. Type locality: möglicherweise vom Amazonas. Lectotype: ZMH 343, designated by (Wilkens 1977: 160); also by Kullander (1978: 268).

Maximum length: 3.8 cm SL
 Distribution: South America: Amazon River basin, in the Negro River drainage; Orinoco River basin from the Inírida River in Colombia to Maripa in Venezuela.

Countries: Brazil, Colombia, Venezuela
 Remarks and references: Species monograph in Kullander (1978); also described by Ladiges (1959).

***Dicrossus maculatus* Steindachner, 1875**

Dicrossus maculatus Steindachner, 1875: 102. Type locality: Lago maximo und José Assu sowie in Nebenarmen des Amazonenstromes bei Tocantins, im Rio Hyauary und im Rio Tajapurú. Syntypes: NMW 77916 (3).

Crenicara praetoriusi Weise in Praetorius, 1935: 179, fig. 4. Type locality: [No locality].

Crenicara praetoriusi Ahl, 1936b: 265. Type locality: Igarapé-Irurá-Mapiry. Syntypes: (3) ZMB 32383-84 (2).

Maximum length: 5.3 cm SL
 Distribution: South America: Amazon River basin, in the Tapajós River drainage, Maués River, and near Parintins.
 Countries: Brazil

GEOPHAGUS

Geophagus Heckel, 1840: 383. Type species: *Geophagus altifrons* Heckel, 1840. Type by subsequent designation by Eigenmann & Bray (1894: 621). Gender: masculine.

***Geophagus altifrons* Heckel, 1840**

Geophagus altifrons Heckel, 1840: 385, pl. 29 (fig. 21-25). Type locality: Manaus, Brazil. Syntypes: NMW 17007-08 (2).

Maximum length: 22.5 cm SL
 Distribution: South America: Amazon River basin, in tributaries of the Amazon River.
 Countries: Brazil

***Geophagus argyrostictus* Kullander, 1991**

Geophagus argyrostictus Kullander, 1991b: 130, fig. 1. Type locality: Brazil, State of Pará, Rio Xingu drainage, Belo Monte, rocky pool near cachoeira. Holotype: MZUSP 32906.

Maximum length: 18 cm SL
 Distribution: South America: Amazon River basin, in the Xingu River from Cachoeira von Martius to Belo Monte, and in the Curuá River basin.
 Countries: Brazil

- Geophagus brachybranchus*** Kullander & Nijssen, 1989
Geophagus brachybranchus Kullander & Nijssen, 1989: 48, fig. 26. Type locality: Suriname, Distr. Nickerie, Nickerie R. system, rocky pool just above Blanche Marie Vallen. Holotype: RMNH 30974.
 Maximum length: 13.8 cm SL
 Distribution: South America: Corantijn and Nickerie River drainages in Suriname; probably ranges westward to the Essequibo River basin.
 Countries: Guyana, Suriname
- Geophagus brasiliensis*** (Quoy & Gaimard, 1824)
Chromis brasiliensis Quoy & Gaimard, 1824: 286. Type locality: baie de Rio de Janeiro. Holotype: MNHN A.9503.
Chromys unimaculata Castelnau, 1855: 13, pl. 7 (fig. 2). Type locality: eaux douces des environs de Rio-de-Janeiro. Holotype: MNHN A.9506.
Acara gymnopoma Günther, 1862: 278. Type locality: [None stated]. Holotype: BMNH 1842.8.18.8.
Geophagus brasiliensis Kner, 1865: 266, pl. 10 (fig. 3). Type locality: Rio Janeiro. Syntypes: NMW 23044-45 (2).
Acara minuta Hensel, 1870: 53. Type locality: Kleinen Tümpeln bei Porto Alegre. Syntypes: (5) ZMB 7453.
 Maximum length: 28 cm TL
 Distribution: South America: Coastal drainages of eastern and southern Brazil and Uruguay.
 Countries: Brazil, Uruguay
 Common names: Acará-topete (Brazil)
- Geophagus brokopondo*** Kullander & Nijssen, 1989
Geophagus brokopondo Kullander & Nijssen, 1989: 41, figs. 23-25. Type locality: Suriname, Distr. Brokopondo, Suriname R. system, Brokopondomeer along N shore at Afobaka. Holotype: ZMA 119530.
 Maximum length: 12.3 cm SL
 Distribution: South America: Suriname River basin.
 Countries: Suriname
- Geophagus camopiensis*** Pellegrin, 1903
Geophagus camopiensis Pellegrin, 1903: 123. Type locality: Riv. Camopi (Guyane française). Lectotype: MNHN 1901-456.
 Maximum length: 12 cm SL
 Distribution: South America: Oyapock and Approuague River basins.
 Countries: Brazil, French Guiana
 Common names: Prapra soléy (French Guiana), Prapra-roche (French Guiana), Prapra-saut (French Guiana)
- Geophagus crassilabris*** Steindachner, 1876
Geophagus (Satanoperca) crassilabris Steindachner, 1876: 65, pl. 7. Type locality: einem Bache des Isthmus von Panama, wahrscheinlich in der Nähe von Candelaria. Holotype: NMW 58794.
 Maximum length: 24 cm SL
 Distribution: Central America: Pacific and Atlantic slopes of central and eastern Panama.
 Countries: Panama
- Geophagus grammepareius*** Kullander & Taphorn, 1992
Geophagus grammepareius Kullander & Taphorn in Kullander, Royero & Taphorn, 1992: 366, fig. 7. Type locality: Venezuela, Bolivar State, Río Caroní drainage, middle Río Claro in Vuelta El Susto, ca 5 km downstream from Quebrada Mojacasabe (7°40'40"N, 63°08'05"W). Holotype: MCNG 25480.
 Maximum length: 10.3 cm SL
 Distribution: South America: Orinoco River basin, in the upper Caura and lower Caroní River basins.
- Countries: Venezuela
- Geophagus harreri*** Gosse, 1976
Geophagus harreri Gosse, 1976: 88, fig. 21. Type locality: rivière Ouaiqui à Saut Bali (Affluent du Tampok, bassin du Maroni), Guyane française. Holotype: IRSNB 525.
 Maximum length: 18.3 cm SL
 Distribution: South America: Marowijne River basin.
 Countries: French Guiana, Suriname
 Common names: Prapra roche (French Guiana), Prapra so (French Guiana)
- Geophagus iporangensis*** Haseman, 1911
Geophagus brasiliensis iporangensis Haseman, 1911: 364, pl. 71.
 Type locality: Iporanga ... a mountain stream of the Rio Ribeira da Iguapé. Holotype: FMNH 54202 [ex CM 2792a].
 Maximum length: 10 cm SL
 Distribution: South America: Ribeira de Iguape River basin.
 Countries: Brazil
- Geophagus itapicuruensis*** Haseman, 1911
Geophagus brasiliensis itapicuruensis Haseman, 1911: 365, pl. 72.
 Type locality: Queimadas, Rio Itapicuru. Holotype: FMNH 54365 [ex CM 2793a].
 Distribution: South America: Itapicuru River, on the coast of Bahia State.
 Countries: Brazil
- Geophagus megasema*** Heckel, 1840
Geophagus megasema Heckel, 1840: 388. Type locality: einer grossen Lache Juquiã genannt, bei Mattogrosso am Fluss Guaporè. Syntypes: NMW 16246 (1), 90309 (1), 92453 (1); SMF 3125 [ex NMW in 1844] (1).
 Maximum length: 17.5 cm SL
 Distribution: South America: Amazon River basin, in the Guaporé River basin.
 Countries: Bolivia, Brazil
- Geophagus obscurus*** (Castelnau, 1855)
Chromys unipunctata Castelnau, 1855: 13, pl. 8 (fig. 2). Type locality: rio Paraguassu, dans la province de Bahia. Syntypes: MNHN A.9505 (3).
Chromys obscura Castelnau, 1855: 14, pl. 6 (fig. 3). Type locality: rio Paraguassu, province de Bahia. Syntypes: MNHN A.9511 (2).
 Maximum length: 10 cm SL
 Distribution: South America: Paraguaçu River, on the coast of Bahia State.
 Countries: Brazil
- Geophagus pellegrini*** Regan, 1912
Geophagus pellegrini Regan, 1912: 505. Type locality: Tado, Río San Juan, Chocó, S.W. Colombia. Lectotype: BMNH 1910.4.11.89.
 Maximum length: 15.2 cm SL
 Distribution: South America: Atrato, San Juan, and Baudó River basins.
 Countries: Colombia
- Geophagus proximus*** (Castelnau, 1855)
Chromys proxima Castelnau, 1855: 14, pl. 7 (fig. 1). Type locality: un lac près de l'Ucayale, dans la mission de Sarayacu, au Pérou. Syntypes: MNHN A.9510 (1), B.3001 [ex MNHN A.9510] (1).
 Maximum length: 22.5 cm SL
 Distribution: South America: Amazon River basin, in the Ucayali River drainage of Peru, and along the Solimões-Amazon River to the Trombetas River.
 Countries: Brazil, Peru
 Remarks and references: Redescription in Kullander (1986: 122), with bibliography, description, diagnosis, distribution, and illu-

stration.

Common names: Acará roi roi (Brazil), Acará tinga (Brazil)

***Geophagus steindachneri* Eigenmann & Hildebrand, 1910**

Geophagus steindachneri Eigenmann & Hildebrand in Eigenmann, 1910: 478. Type locality: Magdalena basin. Holotype: NMW 23289-90 (larger specimen) [from Cauca River, Colombia].

Geophagus honda Regan, 1912: 506. Type locality: Honda, Colombia. Lectotype: BMNH 1909.7.23.51.

Geophagus magdalena Brind, 1943: 42. Type locality: Lake at El Banco, Columbia. Syntypes: USNM 120207 (1), 120299 (1). Also spelt *G. Magdalena* in same paper.

Maximum length: 19.8 cm TL

Distribution: South America: Magdalena, Cauca, and Sinú River basins in Colombia, Limón River (Lake Maracaibo drainage) in Venezuela.

Countries: Colombia, Venezuela

Remarks and references: Gosse & Kullander (1981) clarified the nomenclature of the species.

Common names: Mojarra (Colombia), Mula (Colombia)

***Geophagus surinamensis* (Bloch, 1791)**

Sparus surinamensis Bloch, 1791: 112, pl. 277 (fig. 2). Type locality: Surinam. Holotype: ZMB 2825.

Sparus trimaculatus Shaw in Shaw & Nodder, 1809: pl. 867. Type locality: American Seas.

Maximum length: 14.8 cm SL

Distribution: South America: Saramacca and Suriname Rivers in Suriname; Marowijne River in Suriname and French Guiana.

Countries: French Guiana, Suriname

Remarks and references: Redescription in Kullander & Nijssen (1986: 31), with bibliography, diagnosis, description, distribution, and illustrations.

Common names: Prapra roche (French Guiana), Prapra soléy (French Guiana)

***Geophagus taeniopareius* Kullander & Royero, 1992**

Geophagus taeniopareius Kullander & Royero in Kullander, Royero & Taphorn, 1992: 360, fig. 1. Type locality: Venezuela, Territorio Federal Amazonas, Río Orinoco, Raudales de Ature, eastern shore (5°36'N, 67°37'W). Holotype: MBUCV-V 21744.

Maximum length: 14.3 cm SL

Distribution: South America: Orinoco River basin, in the lower Caura River and along the middle and upper Orinoco River basin.

Countries: Venezuela

GUIANACARA

Guianacara Kullander & Nijssen, 1989: 90. Type species: *Guianacara owroewefi* Kullander & Nijssen, 1989. Type by original designation. Gender: feminine.

Oelemaria Kullander & Nijssen, 1989: 92. Type species: *Guianacara oelemariensis* Kullander & Nijssen, 1989. Type by original designation. Gender: feminine. Originally as *Guianacara (Oelemaria)*.

***Guianacara (Guianacara) geayi* (Pellegrin, 1902)**

Acara geayi Pellegrin, 1902: 417. Type locality: Rivière Camopi (Guyane française).

Maximum length: 8.5 cm SL

Distribution: South America: Approuague River in French Guiana, Oyapock River drainage in French Guiana and Brazil.

Countries: Brazil, French Guiana

Common names: Prapra (French Guiana)

***Guianacara (Oelemaria) oelemariensis* Kullander & Nijssen, 1989**

Guianacara oelemariensis Kullander & Nijssen, 1989: 126, fig. 70. Type locality: Suriname, Distr. Marowijne, Marowijne R. drainage, small right bank tributary to the upper Oelemari R. Holotype: IRSNB 750.

Maximum length: 8.1 cm SL

Distribution: South America: Marowijne River drainage, in the Oelemari River in Suriname.

Countries: Suriname

***Guianacara (Guianacara) owroewefi* Kullander & Nijssen, 1989**

Guianacara owroewefi Kullander & Nijssen, 1989: 97, fig. 43. Type locality: Guyane française, R. Maroni system, R. Marouini below first rapids. Holotype: IRSNB 749.

Maximum length: 10.7 cm SL

Distribution: South America: Marowijne, Suriname, Saramacca, and Coppename River basins in Suriname, and Marowijne River basin in French Guiana.

Countries: French Guiana, Suriname

Common names: Krobia (Suriname), Krobia (Suriname), Ooroe wefi (Suriname), Ooru muje (Suriname), Ooru wefee (Suriname), Owroe wefi (Suriname), Owroe wiffi (Suriname), Prapra (French Guiana)

***Guianacara (Guianacara) sphenozona* Kullander & Nijssen, 1989**

Guianacara sphenozona Kullander & Nijssen, 1989: 120, fig. 66. Type locality: Suriname, Distr. Nickerie, Corantijn R. drainage, Sipaliwini. Holotype: RMNH 31047.

Maximum length: 8.5 cm SL

Distribution: South America: Sipaliwini and middle Corantijn River drainages, Suriname; probably the Essequibo River basin.

Countries: Guyana, Suriname

Common names: Ooru muje (Suriname), Ooruwefee (Suriname)

GYMNOGEOPHAGUS

Gymnogeophagus Miranda Ribeiro, 1918a: 790. Type species: *Gymnogeophagus cyanopterus* Miranda Ribeiro, 1918. Type by monotypy. Gender: masculine.

***Gymnogeophagus australis* (Eigenmann, 1907)**

Geophagus australe Eigenmann, 1907: 454, p. 23 (fig. 7). Type locality: Buenos Aires. Holotype: Princeton University (whereabouts unknown).

Maximum length: 15.5 cm TL

Distribution: South America: Lower Paraná River basin, in Argentina.

Countries: Argentina

Remarks and references: Redescription in Reis & Malabarba (1988).

***Gymnogeophagus balzanii* (Perugia, 1891)**

Geophagus balzanii Perugia, 1891: 623. Type locality: Villa Maria (Matto Grosso), Rio Paraguay a 15°. Holotype: MSNG 7683.

Geophagus duodecimspinosus Boulenger, 1895: 524. Type locality: Paraguay. Holotype: BMNH 1895.5.17.12.

Gymnogeophagus cyanopterus Miranda Ribeiro, 1918a: 790. Type locality: Itaquí, Rio Grande do Sul. Holotype: MZUSP 2549.

Maximum length: 12 cm SL

Distribution: South America: Paraná River basin, in the Paraguay drainage in Brazil and Paraguay, the Paraná drainage in Argentina; the lower Uruguay drainage in Uruguay and Brazil.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: Redescription in Reis & Malabarba (1988).

***Gymnogeophagus che* Casciotta, Gómez & Toresanni, 2000**

Gymnogeophagus che Casciotta, Gómez & Toresanni, 2001: 55, fig. 1. Type locality: Arroyo Urugua-í y ruta provincial 19 frente a la pasarela en parque provincial Islas Malvinas [Misiones, Argentina]. Holotype MLP.

Maximum length: 11.6 cm SL

Distribution: South America: Paraná River basin, in the Paraná River drainage in Argentina, known only from the Arroyo Urugua-í.

Countries: Argentina

***Gymnogeophagus gymnogenys* (Hensel, 1870)**

Geophagus pygmaeus Hensel, 1870: 68. Type locality: Rio Guayba bei Porto Alegre. Syntypes: ZMB 7469 (2).

Geophagus gymnogenys Hensel, 1870: 61. Type locality: Gebirgsbach des Urwaldes von Rio Grande do Sul. Lectotype: ZMB 7465.

Geophagus camurus Cope, 1894: 104, pl. 9 (fig. 17). Type locality: Jacuhy river. Syntypes: (7) ANSP 21749-50 (2), 21885-88 (4).

Maximum length: 15 cm SL

Distribution: South America: Laguna dos Patos and Lagoa Mirim drainages in Brazil and Uruguay.

Countries: Brazil, Uruguay

Remarks and references: Redescription in Reis & Malabarba (1988). Type locality of *Geophagus camurus* restricted to Laguna dos Patos system by Malabarba (1989).

***Gymnogeophagus labiatus* (Hensel, 1870)**

Geophagus bucephalus Hensel, 1870: 63. Type locality: Rio Cadea und seinen Zuflüssen. Lectotype: ZMB 31373 [ex ZMB 7466], designated by Reis & Malabarba (1988: 280).

Geophagus labiatus Hensel, 1870: 64. Type locality: Rio Santa Maria des Urwaldes von Rio Grande do Sul. Holotype: ZMB 7467.

Geophagus scymnophilus Hensel, 1870: 65. Type locality: [None stated]. Lectotype: ZMB 22293, designated by Reis & Malabarba (1988: 280).

Maximum length: 12 cm SL

Distribution: South America: Laguna dos Patos and Lagoa Mirim drainages in Brazil.

Countries: Brazil

Remarks and references: Redescription in Reis & Malabarba (1988). Type locality of *Geophagus scymnophilus* restricted to Laguna dos Patos system by Malabarba (1989).

***Gymnogeophagus lacustris* Reis & Malabarba, 1988**

Gymnogeophagus lacustris Reis & Malabarba, 1988: 282, fig. 24. Type locality: Lagoa da Cerquinha at Pinhal, Tramandai, RS, Brazil. Holotype: MZUSP 28462.

Maximum length: 14.6 cm SL

Distribution: South America: Coastal drainages in northern Rio Grande do Sul State.

Countries: Brazil

***Gymnogeophagus meridionalis* Reis & Malabarba, 1988**

Gymnogeophagus meridionalis Reis & Malabarba, 1988: 273, fig. 19. Type locality: Headwaters of Rio Negro at road at BR-153, (Uruguay River system), Bagé, Rio Grande do Sul, Brazil. Holotype: MZUSP 28461.

Maximum length: 8.8 cm SL

Distribution: South America: Uruguay River drainage in Uruguay and Brazil, and smaller drainages in nearby Argentina.

Countries: Argentina, Brazil, Uruguay

***Gymnogeophagus rhabdotus* (Hensel, 1870)**

Geophagus rhabdotus Hensel, 1870: 60. Type locality: Cadea. Lectotype: ZMB 7461.

Geophagus brachyurus Cope, 1894: 105, pl. 9 (fig. 18). Type

locality: Jacuhy River. Syntypes: ANSP 21751 (1), 21880-83 (4). Maximum length: 12 cm SL

Distribution: South America: Uruguay River drainage in Uruguay, and the Laguna dos Patos basin.

Countries: Brazil, Uruguay

Remarks and references: Redescription in Reis & Malabarba (1988). Type locality of *Geophagus brachyurus* restricted to Laguna dos Patos system by Malabarba (1989).

***Gymnogeophagus setequedas* Reis, Malabarba & Pavanelli, 1992**

Gymnogeophagus setequedas Reis, Malabarba & Pavanelli, 1992: 267, fig. 2. Type locality: Río Iguazú reservoir at Juan E. O'Leary, Rio Paraná drainage, Province of Alto Paraná, Paraguay (approximately 55°30'S 25°20'W). Holotype: MHNG 2518.19.

Maximum length: 9.8 cm SL

Distribution: South America: Paraná River basin, in tributaries of the Paraná River between the Monday River and Guairá, Paraguay and Brazil.

Countries: Brazil, Paraguay

HERICHTHYS

Herichthys Baird & Girard, 1854: 25. Type species: *Herichthys cyanoguttatus* Baird & Girard, 1854. Type by monotypy. Gender: masculine.

***Herichthys bartoni* (Bean, 1892)**

Acara bartoni Bean, 1892: 286, pl. 44 (fig. 3). Type locality: Hauzteca Potosina, a region situated north of the State of Guanajuato, in the State of San Luis Potosi, Mexico. Lectotype: USNM 43765, designated by Jordan & Evermann (1900, pl. 232, p. 3281).

Maximum length: 18 cm SL

Distribution: North America: Atlantic slope, endemic to the upper Verde River and the Laguna de la Media Luna systems of the Panuco River basin, San Luis Potosi, Mexico.

Countries: Mexico

Common names: Mojarra caracolera (Mexico)

***Herichthys carpintis* (Jordan & Snyder, 1899)**

Neetroplus carpintis Jordan & Snyder, 1899: 146, fig. 22. Type locality: Laguna del Carpinte, near Tampico, Tamaulipas, Mexico. Holotype: SU 6162.

Heros teporatus Fowler, 1903: 321. Type locality: Victoria, Victoria Río, trib. of the Río Soto la Marina, Tamaulipas, Mexico. Holotype: ANSP 24242.

Cichlosoma laurae Regan, 1908c: 223. Type locality: Tampico. Syntypes: BMNH 1908.7.6.20-21 (2).

Maximum length: 17 cm SL

Distribution: North America: Atlantic slope, Panuco River drainage, and Soto La Marina River.

Countries: Mexico

Remarks and references: Reviewed by Taylor & Miller (1983). The status of *Heros teporatus* needs further analysis.

***Herichthys cyanoguttatus* Baird & Girard, 1854**

Herichthys cyanoguttatus Baird & Girard, 1854: 25. Type locality: Brownsville, Texas (freshwater). Syntypes: ANSP 9097 (1); MCZ 15415 [ex USNM 852]; UMMZ 92113 (1); USNM 851 (?), 852 (now 4).

Heros pavonaceus Garman, 1881: 93. Type locality: Spring near Monclova, Coahuila, Mexico. Syntypes: MCZ 24877 (5), UMMZ 95837 (1).

Parapetenia cyanostigma Hernández-Rolón, 1990: 4, fig. p. 7. Type locality: Playa Bruja, Tequesquitengo [Mexico]. Holotype: MNHN 1990-465.

Maximum length: 30 cm TL

Distribution: North America: Originally restricted to the lower Rio Grande drainage in Texas, USA and south to northeastern Mexico. Introduced on Edwards Plateau of central Texas and central peninsular Florida, USA, and Verde River basin (La Media Luna region), Mexico

Countries: Mexico, USA

Remarks and references: Reviewed by Taylor & Miller (1983).

***Herichthys deppii* (Heckel, 1840)**

Heros Montezuma Heckel, 1840: 383. Type locality: Mexico. Holotype: NMW 17359.

Heros Deppii Heckel, 1840: 382. Type locality: Mexico. Holotype: NMW, lost.

Maximum length: 12 cm TL

Distribution: North America: Atlantic slope, in the Nautla and Misantla River basins.

Countries: Mexico

Remarks and references: Implied identification of material in ZMB collected with the holotype, suggests that *H. deppii* is valid, according to Stawikowski & Werner (1998: 333). The status of *Heros montezuma* is uncertain, pending examination of the holotype.

***Herichthys labridens* (Pellegrin, 1903)**

Heros (Cichlasoma) labridens Pellegrin, 1903: 122. Type locality: Huasteca Potosina (Mexico). [=Verde River drainage near Rioverde, San Luís Potosí]. Syntypes: MNHN 1889-19-20.

Maximum length: 25 cm SL

Distribution: North America: Atlantic slope, in the Panuco River basin.

Countries: Mexico

Remarks and references: See Miller (1956: 15) for information on type locality.

Common names: Mojarra (Mexico)

***Herichthys minckleyi* (Kornfield & Taylor, 1983)**

Cichlasoma minckleyi Kornfield & Taylor, 1983: 254, fig. 1. Type locality: Posos de la Becerra, 15.7 km by road SSW of Cuatro Ciénegas de Carranza, Coahuila, Mexico. Holotype: UMMZ 209434.

Maximum length: 17.5 cm SL

Distribution: North America: Atlantic slope, endemic to Cuatro Ciénegas.

Countries: Mexico

Common names: Mojarra caracolera de Cuatro Cienegas (Mexico)

***Herichthys pantostictus* (Taylor & Miller, 1983)**

Cichlasoma pantostictum Taylor & Miller, 1983: 15, fig. 5. Type locality: Laguna de Chairal at the mouth of the Río Tamesí, Tampico, lat. 22°15'N., long. 96°04'W., elevation ca. 2 m near Tampico, Tamaulipas, Mexico.

Holotype: UMMZ 207699.

Maximum length: 12.6 cm SL

Distribution: North America: Atlantic slope of northern Mexico, in the Panuco River drainage from the Sabinas River to the coastal Laguna Tamiahua.

Countries: Mexico

Common names: Mojarra (Mexico)

***Herichthys steindachneri* (Jordan & Snyder, 1899)**

Cichlasoma steindachneri Jordan & Snyder, 1899: 143, fig. 20. Type locality: Rio Verde, near Rascon, San Luis Potosi, Mexico. Holotype: SU 6164.

Maximum length: 40 cm SL

Distribution: North America: Atlantic slope of northern Mexico, endemic to the Tamasopo, Gallinas, and Ojo Frio Rivers in the Panuco River basin.

Countries: Mexico

Common names: Mojarra (Mexico)

***Herichthys tamasopoensis* Artigas Azas, 1993**

Herichthys tamasopoensis Artigas Azas, 1993: 66, fig. p. 67. Type locality: Type locality: "Las Cascadas" (99°23'47" W. Long., 21°56'47" N. Lat.) in the Río Tamasopo. Holotype: UMMZ 221577.

Maximum length: 18 cm TL

Distribution: North America: Atlantic slope, in the Tamasopo River of Panuco River basin.

Countries: Mexico

HEROINA

Heroina Kullander, 1996b: 151. Type species: *Heroina isonycterina* Kullander, 1996. Type by original designation. Gender: feminine.

***Heroina isonycterina* Kullander, 1996**

Heroina isonycterina Kullander, 1996b: 153, fig. 3. Type locality: Ecuador, Provincia Napo, Río Napo drainage, upper Río Tiputini upstream of bridge on road to Coca (0°44.5'S 76°53'W). Holotype: FMNH 105181.

Maximum length: 10.2 cm SL

Distribution: South America: Amazon River basin, in the Napo (Ecuador), Caquetá (Colombia), and Tigre, Corrientes, and Pastaza (Peru) River basins.

Countries: Colombia, Ecuador, Peru

HEROS

Heros Heckel, 1840: 362. Type species: *Heros severus* Heckel, 1840. Type by subsequent designation by Jordan & Gilbert 1883: 608. Gender: masculine.

***Heros efasciatus* Heckel, 1840**

Heros efasciatus Heckel, 1840: 372. Type locality: Rio-negro. Holotype: NMW 33341.

Chromys appendiculata Castelnau, 1855: 15, pl. 7 (fig. 3). Type locality: l'Ucayali, (Pérou). Holotype: MNHN A.9483.

Chromys fasciata Castelnau, 1855: 17, pl. 9 (fig. 2). Type locality: l'Araguay. No types known.

Uarus centrarchoides Cope, 1872: 253, pl. 11 (fig. 2). Type locality: Ambyiacu River [=Ampiyacu River, Peru]. Holotype: ANSP 9049.

Cichlasoma severum perpunctatum Miranda Ribeiro, 1918b: 18, pl. 16. Type locality: Manáos. Holotype: MNRJ 1263.

Maximum length: 14 cm SL

Distribution: South America: Amazon River basin, in tributaries of the Ucayali and Amazon Rivers in Peru, and Solimões-Amazon River in Brazil.

Countries: Brazil, Peru

Remarks and references: Redescription, as *Heros appendiculatus*, in Kullander (1986: 219), based on Peruvian material, with bibliography, diagnosis, description, distribution and illustration. Oldest available name now applied. Status of the included nominal species needs further analysis.

Common names: Acará-peba (Brazil), Acará-preto (Brazil), Burjurqui acha vieja (Peru)

***Heros notatus* Jardine, 1843**

Centrarchus notatus Jardine in Schomburgk, 1843: 160, pl. 13. Type locality: [Locality not stated]. No types known.

Maximum length: 15 cm SL

Distribution: South America: Amazon River basin, in the Negro River basin.

Countries: Brazil

***Heros severus* Heckel, 1840**

Heros severus Heckel, 1840: 362. Type locality: bei Marabitanas im Rio-negro. Syntypes: ?NMW 17354 (1), ?17638 (1), ?17656 (1).

Maximum length: 20 cm SL
 Distribution: South America: Orinoco River basin, in the upper Orinoco River drainage in Colombia and Venezuela; Amazon River basin, in the upper Negro River basin.
 Countries: Brazil, Colombia, Venezuela

***Heros spurius* Heckel, 1840**

Heros spurius Heckel, 1840: 368. Type locality: Rio Guaporè ... Sümpfen. Syntypes: ?NMW 17656 (1), 17939 (1).
Heros coryphaeus Heckel, 1840: 364. Type locality: Rio-Guaporè ... Morästen um Matogrosso. Holotype: NMW 17358.
Heros modestus Heckel, 1840: 366. Type locality: Rio Guaporé. Syntypes: NMW 17354 (1), ?92454 (1).
 Maximum length: 12 cm SL
 Distribution: South America: Amazon River basin, in the Guaporé River drainage, Brazil and Bolivia.
 Countries: Bolivia, Brazil

HEROTILAPIA

Herotilapia Pellegrin, 1904: 247. Type species: *Heros multispinosus* Günther, 1869. Type by monotypy. Gender: feminine.

***Herotilapia multispinosa* (Günther, 1867)**

Heros multispinosus Günther, 1867: 601. Type locality: Lake of Managua. Holotype: BMNH 1865.7.20.34.
 Maximum length: 9 cm SL
 Distribution: Central America: Atlantic slope, from the Patuca River (Honduras) to the Matina River (Costa Rica); Pacific slope, from the Guasaule River (Nicaragua) to the Tempisque and Bebedero Rivers (Costa Rica).
 Countries: Costa Rica, Honduras, Nicaragua
 Remarks and references: Described in more detail in Günther (1868: 453, pl. 74, fig. 2). Reviewed by Bussing (1998: 351), with key, diagnosis, geographical distribution, and figures.
 Common names: Cholesca (Costa Rica), Mojarrita (Costa Rica), Zarpapala (Costa Rica)

HOPLARCHUS

Hoplarchus Kaup, 1860: 128. Type species: *Hoplarchus pentacanthus* Kaup, 1860. Type by subsequent designation. Gender: masculine.

***Hoplarchus psittacus* (Heckel, 1840)**

Heros psittacus Heckel, 1840: 369. Type locality: Rio-negro, nördlich von Marabitanas am Fusse des Berges Cocui. Syntypes: ?NMW 17641-42 (1, 1).
Centrarchus cychla Jardine in Schomburgk, 1843: 157, pl. 11. Type locality: Rio Negro. No types known.
Hoplarchus pentacanthus Kaup, 1860: 129, pl. 6 (fig. 1). Type locality: ? Südamerika. Holotype in ZSM, lost.
 Maximum length: 23.5 cm SL
 Distribution: South America: Amazon River basin, in the Negro, Preto da Eva, Urubu, and Jamari Rivers in Brazil; Orinoco River basin, in tributaries of the upper Orinoco River basin.
 Countries: Brazil, Venezuela

HYPSELECARA

Hypselecara Kullander, 1986: 232. Type species: *Heros temporalis* Günther, 1862. Type by original designation. Gender: feminine.

***Hypselecara coryphaenoides* (Heckel, 1840)**

Heros coryphaenoides Heckel, 1840: 373, pl. 29 (fig. 9-12). Type locality: Rio-negro ... bei Maribitana. Holotype: NMW 17376.
Heros niger Heckel, 1840: 375. Type locality: Rio-negro. Holotype: NMW 17358.
Centrarchus niger Jardine in Schomburgk, 1843: 159, pl. 12. Type

locality: Rio Negro. No types known.
Cichlasoma arnoldi Ahl, 1936a: 138. Type locality: Amazonas. Holotype: ZMB 32382.
Chuco axelrodi Fernández-Yépez, 1972: 15, fig. 16. Type locality: Aguaro River, Venezuela. Holotype: USNM 206097.
 Maximum length: 16 cm SL
 Distribution: South America: Amazon River basin, in the Negro, Trombetas, Tapajós, Maués, and Uatumã Rivers; Orinoco River basin in tributaries of the upper Orinoco River, and in the Aguaro River basin.
 Countries: Brazil, Venezuela

***Hypselecara temporalis* (Günther, 1862)**

Heros temporalis Günther, 1862: 286. Type locality: No locality. Holotype: BMNH 1855.12.26.638 [ex Zool. Soc.].
Acara (Heros) crassa Steindachner, 1875: 88, pl. 5. Type locality: Amazonenstrom bei Teffé, Tonantins, Cudajas, Coary, Villa bella und Obidos, im See Hyuanary und Saraca, so wie im Rio Hyutay. Syntypes: (several) NMW 17373-17374 (2) Codajás, 33617 (1) Silves, 33618 (1) Villa Bella.
Heros goeldii Boulenger, 1897: 298. Type locality: Upper Cunani River, French Guiana, south of the Oyapok River. Syntypes: BMNH 1897.7.17.9 (1), NMB 2488 (1).
Cichlasoma Hellabrunni Ladiges, 1942: 199, fig. 1. Type locality: Gefangenschaftsnachzucht Hellabrunn (originally: entweder die Umgebung von Rockstone am Essequibo in Britisch-Guiana oder aber die Umgebung von Leticia. Lectotype: ZMH H70, designated by Ladiges et al. (1958: 164).
 Maximum length: 15 cm SL
 Distribution: South America: Amazon River basin, in the Ucayali and Amazon River drainages in Peru, the Amazon River drainage in Colombia, the Solimões-Amazon River in Brazil, east to Cametá, also rivers of Amapá State and the Oyapock River basin in Brazil.
 Countries: Brazil, Colombia, Peru
 Common names: Acará açai (Brazil), Bufurque (Peru), Bujurqui (Peru)

HYP SOPHRYS

Hypsophrys Agassiz, 1859: 408. Type species: *Hypsophrys unimaculatus* Agassiz, 1859. Type by monotypy. Gender: feminine.
Copora Fernández-Yépez, 1969: [4]. Type species: *Heros nicaraguensis* Günther, 1864. Type species by original designation. Gender: feminine.

***Hypsophrys nicaraguensis* (Günther, 1864)**

Hypsophrys unimaculatus Agassiz, 1859: 408. Type locality: Lake Nicaragua. Types in MCZ, not found.
Heros nicaraguensis Günther, 1864c: 153. Type locality: Lake of Nicaragua. Holotype: BMNH 1867.9.23.37.
Heros balteatus Gill in Gill & Bransford, 1877: 184. Type locality: Lake Nicaragua. Syntypes: BMNH 1905.3.27.3 [ex USNM] (1).
Cichlasoma spilotum Meek, 1912: 73. Type locality: Victoria, Costa Rica. Holotype: FMNH 7686.
 Maximum length: 16.5 cm SL
 Distribution: Central America: Atlantic slope, from the San Juan drainage, including Lake Nicaragua, in Costa Rica and Nicaragua, to the Matina River drainage in Costa Rica.
 Countries: Costa Rica, Nicaragua
 Remarks and references: Species monograph by López (1974), well illustrated. Kullander & Hartel (1997) discussed the nomenclature of *Hypsophrys unimaculatus*. Reviewed by Bussing (1998: 354), with key, diagnosis, geographical distribution, and figures.
 Common names: Moga amarilla (Costa Rica)

KROBIA

Krobia Kullander & Nijssen, 1989: 148. Type species: *Acara guianensis* Regan, 1905. Type by original designation. Gender: feminine.

***Krobia guianensis* (Regan, 1905)**

Acara guianensis Regan, 1905b: 340. Type locality: Guiana. Holotype: BMNH 1851.5.2.8 [ex ZMB].

Maximum length: 12.8 cm SL

Distribution: South America: Guianan coastal drainages, from the Demerara River in Guyana, eastward to the Cottica River in Suriname.

Countries: Guyana, Suriname

Remarks and references: Redescribed by Kullander & Nijssen (1989: 151), with bibliography, diagnosis, description, distribution, and illustrations.

Common names: Krobia (Suriname), Ooroe wefi (Suriname), Ouwe wefi (Suriname)

***Krobia itanyi* (Puyo, 1943)**

Aequidens itanyi Puyo, 1943: 146, fig. 4. Type locality: Suriname, Distr. Marowijne, Marowijne R. system, kreek on left bank of Marowijne R., W Manbari Val, 6 km N Stoelmanseiland (originally: crique du haut Itany). Neotype: ZMA 119531, designated by Kullander & Nijssen (1989: 166).

Maximum length: 12.5 cm SL

Distribution: South America: Marowijne River drainage in Suriname and French Guiana.

Countries: French Guiana, Suriname

Remarks and references: Redescribed by Kullander & Nijssen (1989: 166), with bibliography, diagnosis, description, distribution, and illustrations.

Common names: Prapra (French Guiana)

LAETACARA

Laetacara Kullander, 1986: 321. Type species: *Acara flavilabris* Cope, 1870. Type by original designation. Gender: feminine.

***Laetacara curviceps* (Ahl, 1923)**

Acara curviceps Ahl, 1923: 44, fig. 5. Type locality: Amazonenstrom. Holotype: ZMB 31324.

Maximum length: 4.6 cm SL

Distribution: South America: Amazon River basin, in lower portions of tributaries of the Amazon River in Brazil.

Countries: Brazil

***Laetacara dorsigera* (Heckel, 1840)**

Acara dorsiger Heckel, 1840: 348. Type locality: Sümpfe in der Nähe des Paraguay-Flusses bei Villa Maria. Holotype: NMW 33669.

Maximum length: 4.5 cm SL

Distribution: South America: Amazon River basin, in the Guaporé River drainage; Paraná River basin, in the Paraguay River drainage in Brazil and Paraguay, middle Paraná River drainage in Argentina.

Countries: Argentina, Bolivia, Brazil, Paraguay

***Laetacara flavilabris* (Cope, 1870)**

Acara flavilabris Cope, 1870: 570. Type locality: Near Pebas, Ecuador [currently Peru]. Holotype: ANSP 9156.

Acara freniferus Cope, 1872: 255. Type locality: the Ambyiacu [=Ampiyacu River, Peru]. Lectotype: ANSP 9157.

Maximum length: 8.2 cm SL

Distribution: South America: Amazon River basin, in the Napo and Putumayo river drainages in Ecuador, in the Huallaga, Ucayali, Amazon, Putumayo and Yavarí River basins in Peru, and in the upper Solimões and Juruá River basins in Brazil.

Countries: Brazil, Ecuador, Peru

Remarks and references: Redescription in Kullander (1986: 328), with bibliography, diagnosis, description, distribution, and illustrations.

Common names: Bujurqui (Peru)

***Laetacara thayeri* (Steindachner, 1875)**

Acara thayeri Steindachner, 1875: 68, pl. 1 (fig. 2). Type locality: Im Amazonenstrom und dessen Ausständen bei Cudajas, in den See Hyanuary bei Manaos und im Lago Maximo bei Alemquer. Syntypes: (many) NMW 33723 (3), 33726-38 (13), 33739-45 (15), 33746 (?), 33752 (1).

Maximum length: 6.5 cm TL

Distribution: South America: Amazon River basin, in the Tigre, Ucayali, Yavarí and Amazon River basins in Peru, and along the Solimões, Amazon (to lower Trombetas River), and lower Negro River basins.

Countries: Brazil, Peru

MAZARUNIA

Mazarunia Kullander, 1990b: 4. Type species: *Mazarunia mazarunii* Kullander, 1990. Type by original designation. Gender: feminine.

***Mazarunia mazarunii* Kullander, 1990**

Mazarunia mazarunii Kullander, 1990b: 5, fig. 1. Type locality: Guyana: Upper Mazaruni River near Kamarang. Holotype: MHNG 1553.96.

Maximum length: 5.3 cm SL

Distribution: South America: Essequibo River drainage, in the upper Mazaruni River near Kamarang.

Countries: Guyana

MESONAUTA

Mesonauta Günther, 1862: 300. Type species: *Heros insignis* Heckel, 1840. Type by monotypy. Gender: masculine.

***Mesonauta acora* (Castelnau, 1855)**

Chromys acora Castelnau, 1855: 17, pl. 9 (fig. 1). Type locality: lacs de l'Araguay. No types known.

Maximum length: 7.1 cm SL

Distribution: South America: Amazon River basin, in the Tocantins and Xingu River basins.

Countries: Brazil

Remarks and references: Redescription by Kullander & Silfvergrip (1991: 424), with bibliography, diagnosis, description, distribution, and illustrations.

***Mesonauta egregius* Kullander & Silfvergrip, 1991**

Mesonauta egregius Kullander & Silfvergrip, 1991: 429, fig. 21. Type locality: Colombia, Departamento Vichada, Rio Vichada drainage, laguna no. 1 on Finca Boca de Guarrojo at the mouth of the Rio Guarrojo. Holotype: ICN-MNH 1686.

Maximum length: 8.2 cm SL

Distribution: South America: Orinoco River basin, in the Meta and Vichada River basins.

Countries: Colombia

***Mesonauta festivus* (Heckel, 1840)**

Heros festivus Heckel, 1840: 376. Type locality: Fluss Guaporé und dessen nahe gelegenen Moräste. No types known.

Maximum length: 8.2 cm SL

Distribution: South America: Paraná River basin, in the Paraguay River drainage in Brazil and Paraguay; Amazon River basin, in the Guaporé (Brazil and Bolivia), Madre de Dios (Peru), Mamoré (Bolivia), Jamari and Tapajós (Brazil) River drainages.

Countries: Bolivia, Brazil, Paraguay, Peru

Remarks and references: Redescription by Kullander & Silfvergrip (1991: 420), with bibliography, diagnosis, description, distribu-

tion, and illustrations.

Mesonauta guyanae Schindler, 1998

Mesonauta guyanae Schindler, 1998: 5, fig. 2. Type locality: Rockstone, Essequibo River, Guyana. Holotype: ZMB 32779.

Maximum length: 10 cm SL

Distribution: South America: Amazon River basin, in the Negro River drainage, Brazil; Essequibo River drainage in Guyana.

Countries: Brazil, Guyana

Mesonauta insignis (Heckel, 1840)

Heros insignis Heckel, 1840: 379. Type locality: waldlache bei Marabitanas am Rio-negro. Lectotype: NMW 24415, designated by Kullander & Silfvergrip (1991: 420).

Maximum length: 9.4 cm SL

Distribution: South America: Amazon River basin, in the upper Negro River drainage in Brazil; Orinoco River basin, along the Orinoco River in Colombia and Venezuela.

Countries: Brazil, Colombia, Venezuela

Remarks and references: Redescription by Kullander & Silfvergrip (1991: 418), with bibliography, diagnosis, description, distribution, and illustrations.

Mesonauta mirificus Kullander & Silfvergrip, 1991

Mesonauta mirificus Kullander & Silfvergrip, 1991: 430, fig. 22.

Type locality: Peru, Departamento Loreto, Rio Napo, Cayapoza, small laguna on left bank island. Holotype: NRM 20001.

Maximum length: 9.7 cm SL

Distribution: South America: Amazon River basin in Peru and Colombia, in tributaries of the Ucayali and Amazon Rivers, from Yarina Cocha to Mocagua Island near Leticia.

Countries: Colombia, Peru

Common names: Bufurqui (Peru), Bujurqui (Peru)

MIKROGEOPHAGUS

Mikrogeophagus Meulengracht-Madsen in Schiötz & Christensen, 1968: 370. Type species: *Apistogramma ramirezi* Myers & Harry, 1948. Type by monotypy. Gender: masculine.

Papiliochromis Kullander, 1977: 253. Type species: *Apistogramma ramirezi* Myers & Harry, 1948. Type by original designation. Gender: feminine.

Mikrogeophagus altispinosus (Haseman, 1911)

Crenicara altispinosa Haseman, 1911: 344, pl. 58. Type locality: Along a sand-bank in the Río Mamoré, below the mouth of the Río Guaporé. Holotype: FMNH 54090.

Maximum length: 5.6 cm SL

Distribution: South America: Amazon River basin, in the Guaporé River drainage in Brazil and Bolivia, and in the Mamoré River drainage in Bolivia.

Countries: Bolivia, Brazil

Remarks and references: Species reviewed by Kullander (1981c).

Mikrogeophagus ramirezi (Myers & Harry, 1948)

Apistogramma ramirezi Myers & Harry, 1948a: 77. Type locality: evidently from one of the tributaries of the Rio Apuré or Rio Meta in the states of Guárico, Portuguesa, or Apuré. Syntypes: CAS-SU 14845(2), 14846(1), 14847(1).

Maximum length: 3.4 cm SL

Distribution: South America: Orinoco River basin, in the llanos of Venezuela and Colombia.

Countries: Colombia, Venezuela

Remarks and references: Species monographed by Kullander (1980c); also described by Myers & Harry (1948b).

NANDOPSIS

Nandopsis Gill, 1862: 238. Type species: *Chromis tetracanthus* Poey [= *Centrarchus tetracanthus* Valenciennes, 1831]. Type by

monotypy. Gender: feminine.

Parapetenia Regan, 1905a: 324. Type species: *Acara adspersa* Günther, 1862. Type by subsequent designation. Type designated by Eigenmann (1910: 476). Gender: feminine.

Nandopsis haitiensis (Tee-Van, 1935)

Cichlasoma haitiensis Tee-Van, 1935: 294, fig. 270. Type locality: Étang Saumâtre, near Maneville, Cul-de-Sac Plain, Haiti, West Indies. Holotype: USNM 170907 [ex NYZS 7302].

Maximum length: 21.5 cm SL

Distribution: Caribbean Islands: Hispaniola Island.

Countries: Dominican Republic, Haiti

Nandopsis tetracanthus (Valenciennes, 1831)

Centrarchus tetracanthus Valenciennes in Cuvier & Valenciennes, 1831: 460. Type locality: Havane [=Habana, Cuba]. No types known; based on a drawing.

Chromis fusco-maculatus Guichenot, 1853: 78, pl. 2 (fig. 3). Type locality: Cuba. Holotype: MNHN A.9482.

Acara adspersa Günther, 1862: 282. Type locality: Barbadoes. Holotype: BMNH 1961.7.7.1.

Heros tetracanthus cinctus Eigenmann, 1903: 234, fig. 16. Type locality: Paso Real. Holotype: CAS 78971 [ex IU 9671].

Heros tetracanthus latus Eigenmann, 1903: 234, fig. 15. Type locality: San Juan. Holotype: CAS 78972 [ex IU 9669].

Heros tetracanthus griseus Eigenmann, 1903: 233, fig. 14. Type locality: San Antonio. Holotype: CAS 78974 [ex IU 9670].

Heros tetracanthus torralbasi Eigenmann, 1903: 230, fig. 11. Type locality: Calabazar. Holotype: CAS 78975 [ex IU 9672] (1 of 2).

Heros nigricans Eigenmann, 1903: 235, fig. 17. Type locality: Pinar del Rio. Holotype: CAS 78973 [ex IU 9668].

Maximum length: 20 cm SL

Distribution: Caribbean Islands: Cuba Island.

Countries: Cuba

Remarks and references: Hubbs (1920) presented a nomenclatural revision establishing the present synonymy.

Nandopsis vombergi (Ladiges, 1938)

Cichlosoma Vombergi Ladiges, 1938: 18, fig. 1. Type locality: Unterlauf des Rio Yague del Sur. Holotype: ZMH H401.

Maximum length: 19.4 cm SL

Distribution: Caribbean Islands: Eastern Hispaniola, in the Yaqui River basin.

Countries: Dominican Republic

NANNACARA

Nannacara Regan, 1905b: 344. Type species: *Nannacara anomala* Regan, 1905. Type by monotypy. Gender: feminine.

Nannacara adoketa Kullander & Prada-Pedrerros, 1993

Nannacara adoketa Kullander & Prada-Pedrerros, 1993: 359, fig. 1. Type locality: Brazil, State of Amazonas, Igarapé do Cumaru, a tributary of Paran Atau, in the middle Rio Negro. Holotype: MZUSP 44685.

Maximum length: 4.9 cm SL

Distribution: South America: Amazon River basin, in the middle Negro River basin.

Countries: Brazil

Nannacara anomala Regan, 1905

Nannacara anomala Regan, 1905b: 344. Type locality: R. Essequibo [Guyana]. Syntypes: BMNH 1864.1.21.27-28 (2).

Maximum length: 5.6 cm SL

Distribution: South America: Guianan rivers from the Aruka River in Guyana east to the lower Marowijne River in Suriname.

Countries: Guyana, Suriname

Remarks and references: Redescribed in Kullander & Nijssen (1989: 199), based on Surinamese material, with bibliography, diagnosis, description, distribution, and illustrations.

***Nannacara aureocephalus* Allgayer, 1983**

Nannacara aureocephalus Allgayer, 1983: 13. Type locality: "Carière Chambaut" localité A. [French Guiana]. Holotype: MNHN 1983-523.

Maximum length: 6.7 cm SL

Distribution: South America: Approuague River basin.

Countries: French Guiana

Common names: Ti prapra (French Guiana)

***Nannacara bimaculata* Eigenmann, 1912**

Nannacara bimaculata Eigenmann, 1912: 488, pl. 66 (fig. 1). Type locality: Erukin [Guyana]. Holotype: FMNH 53799 [ex CM 2304].

Maximum length: 4.5 cm SL

Distribution: South America: Potaro River and nearby in the Essequibo River basin.

Countries: Guyana

***Nannacara taenia* Regan, 1912**

Nannacara taenia Regan, 1912: 505. Type locality: the Amazon at Manaos. Holotype: BMNH 1912.2.2.15.

Maximum length: 5 cm SL

Distribution: South America: Near Belém, Pará State.

Countries: Brazil

NEETROPLUS

Neetroplus Günther, 1867: 603. Type species: *Neetroplus nematopus* Günther, 1867. Type by monotypy. Gender: masculine.

***Neetroplus nematopus* Günther, 1867**

Neetroplus nematopus Günther, 1867: 603. Type locality: Lake Managua [Nicaragua]. Holotype: BMNH 1865.7.20.35.

Neetroplus nicaraguensis Gill in Gill & Bransford, 1877: 186. Type locality: Lake Nicaragua. Syntypes: (3).

Neetroplus fluviatilis Meek, 1912: 74. Type locality: Costa Rica River near Guapilis, Costa Rica. Holotype: FMNH 7685 [not 7585].

Maximum length: 14 cm SL

Distribution: Central America: Atlantic slope of Nicaragua and western Costa Rica, in the San Juan River drainage, including Lake Nicaragua and Lake Managua.

Countries: Costa Rica, Nicaragua

Remarks and references: *Neetroplus nematopus* described in more detail in Günther (1868: 470, pl. 74 (fig. 4)). Reviewed by Bussing (1998: 357), with key, diagnosis, geographical distribution, and figures.

Common names: Moga (Costa Rica)

PARACHROMIS

Parachromis Agassiz, 1859: 408. Type species: *Parachromis gulosus* [= *Heros managuensis* Günther, 1867]. Agassiz, 1859. Type by monotypy. Gender: masculine.

***Parachromis dovii* (Günther, 1864)**

Heros dovii Günther, 1864c: 154. Type locality: Lake of Nicaragua. Syntypes: BMNH 1864.1.26.195-196 (2).

Maximum length: 50 cm SL

Distribution: Central America: Atlantic slope, from the Aguan River (Honduras) to the Moín River (Costa Rica); Pacific slope from the Yeguaré River (Honduras) to the Bebedero River (Costa Rica).

Countries: Costa Rica, Honduras, Nicaragua

Remarks and references: Reviewed by Bussing (1998: 360), with key, diagnosis, geographical distribution, and figures.

Common names: Guapote (Costa Rica), Guapote blanco (Honduras), Lagunero (Nicaragua)

***Parachromis friedrichsthalii* (Heckel, 1840)**

Heros Friedrichsthalii Heckel, 1840: 381. Type locality: Central-Amerika. Holotype: NMW 35322.

Cichlosoma multifasciatum Regan, 1905a: 335. Type locality: Lake Peten. Syntypes: BMNH 1864.1.26.65-66 (2).

Maximum length: 28 cm SL

Distribution: North and Central America: Atlantic slope, in Mexico (Usumacinta River), Belize, Honduras and Guatemala.

Countries: Belize, Guatemala, Honduras, Mexico

Common names: Castarrica (Mexico), Guapote (Belize), Molula (Mexico), Mus mus (Belize), Yellowjacket cichlid (Belize)

***Parachromis loisellei* (Bussing, 1989)**

Cichlasoma loisellei Bussing, 1989: 153, fig. 1. Type locality: Río San Miguel, a tributary of Río Matina on road to Puerto Limón, Limón (elevation 12 m), Limón Province, Costa Rica. Holotype: LACM 44405-1 [ex UCR 1126-8].

Maximum length: 18.5 cm SL

Distribution: Central America: Atlantic slope from the Ulua River (Honduras) to the Cricamola River (Panama); Pacific slope, in the Tamarindo River (Nicaragua).

Countries: Costa Rica, Guatemala, Honduras, Nicaragua, Panama

Remarks and references: Reviewed by Bussing (1998: 364), with key, diagnosis, geographical distribution, and figures.

Common names: Guapote amarillo (Guatemala)

***Parachromis managuensis* (Günther, 1867)**

Parachromis gulosus Agassiz, 1859: 408. Type locality: Lake Nicaragua. Lectotype: MCZ 16086, designated by Kullander & Hartel (1997: 196).

Heros managuensis Günther, 1867: 602. Type locality: Lake of Managua. Holotype: BMNH 1865.7.20.32.

Maximum length: 22 cm SL

Distribution: Central America: Atlantic slope from the Ulua River (Honduras) to the Matina River (Costa Rica).

Countries: Costa Rica, Cuba (introduced), El Salvador (introduced), Guatemala (introduced), Honduras, Mexico (introduced), Nicaragua, Panama (introduced)

Remarks and references: Reviewed by Kullander & Hartel (1997), with redescription and photo, and lectotype designation of *P. gulosus*. *Heros managuensis* described in more detail in Günther (1868: 463, pl. 77 (fig. 3)). Reviewed by Bussing (1998: 367), with key, diagnosis, geographical distribution, and figures.

Common names: Guapote barcino (Costa Rica, Nicaragua), Guapote tigre (Costa Rica), Pinta (Mexico)

***Parachromis motaguensis* (Günther, 1867)**

Heros motaguensis Günther, 1867: 602. Type locality: Río Motagua. Syntypes: (5) BMNH 1865.4.29.68-70 (3 or 4), 1865.6.10.12 (1).

Maximum length: 30 cm TL

Distribution: Central America: Atlantic slope of Guatemala and Honduras in the Motagua River basin; Pacific slope from Naranjo River (Guatemala) to Choluteca River (Honduras).

Countries: El Salvador, Guatemala, Honduras

Remarks and references: Described in more detail in Günther (1868: 462, pl. 77 (fig. 2)).

Common names: False yellowjacket cichlid (Belize), Guapote (El Salvador), Moro (El Salvador), Pando (El Salvador)

PARANEETROPLUS

Paraneetroplus Regan, 1905a: 436. Type species: *Paraneetroplus bulleri* Regan, 1905. Type by monotypy. Gender: masculine.

***Paraneetroplus bulleri* Regan, 1905**

Paraneetroplus Bulleri Regan, 1905a: 436. Type locality: Rio de

Sarabia, Mexico. Holotype: BMNH 1890.10.10.94.
 Maximum length: 25.5 cm SL
 Distribution: North America: Atlantic slope, in the Coatzacoalcos River drainage.
 Countries: Mexico
 Common names: Corrientero (Mexico)

***Paraneetroplus gibbiceps* (Steindachner, 1864)**

Heros gibbiceps Steindachner, 1864: 66, pl. 5 (fig. 1-2). Type locality: Mejico, im Teapa-Flusse (Staat Tabasco). Syntypes: NMW 17360-61 (2), 17367 (1), 58799 (1).

Cichlasoma teapae Evermann & Goldsborough, 1902: 156, fig. 6. Type locality: Rio Teapa at Teapa, Tabasco, Mexico. Holotype: USNM 50005.

Paraneetroplus omonti Allgayer, 1988: 13, fig. p. 15. Type locality: près du pont, sur le Rio Tulija traversé par la route Palenqué-Ocotingo, Chiapas, Mexique. Holotype: MNHN 1987-1474.

Maximum length: 23 cm SL
 Distribution: North America: Atlantic slope, in the Usumacinta River basin.
 Countries: Mexico
 Common names: Corrientero verde (Mexico), Roquera (Mexico)

***Paraneetroplus nebuliferus* (Günther, 1860)**

Chromis nebulifera Günther, 1860a: 318. Type locality: Fresh waters of Mexico. Syntypes: BMNH 1860.6.17.31-33 (3).

Cichlasoma eigenmanni Meek, 1902: 119, pl. 30. Type locality: Rio Tehuacan, Venta Salada, Pueblo, Mexico. Holotype: FMNH 3712.

Maximum length: 20 cm TL
 Distribution: North America: Atlantic slope, in the Papaloapán River basin.
 Countries: Mexico
 Common names: Chonga (Mexico), Playero (Mexico)

PETENIA

Petenia Günther, 1862: 301. Type species: *Petenia splendida* Günther, 1862. Type by monotypy. Gender: feminine.

***Petenia splendida* Günther, 1862**

Petenia splendida Günther, 1862: 301. Type locality: Lake Peten. Syntypes: BMNH 1864.1.26.103-105 (3).

Maximum length: 50 cm SL
 Distribution: North and Central America: Atlantic slope of Grijalva River to Usumacinta River (Mexico), Usumacinta River (Guatemala), and Belize.
 Countries: Belize, Guatemala, Mexico
 Common names: Bay snook (Belize), Blanco (Belize), Tenguajagua (Mexico), Tenguayaca (Mexico)

PTEROPHYLLUM

Pterophyllum Heckel, 1840: 334. Type species: *Platax scalaris* Cuvier, 1831. Type by monotypy. Gender: neuter.

Plataxoides Castelnau, 1855: 21. Type species: *Plataxoides dumerilii* Castelnau, 1855. Type by monotypy. Gender: masculine.

***Pterophyllum altum* Pellegrin, 1903**

Pterophyllum altum Pellegrin, 1903: 125. Type locality: Atabapo (Orénoque). Syntypes: BMNH 1904.6.28.2-3 [ex MNHN] (2 spms.); MHNLR P.261 (1); MNHN 1887-571 to 574 (4), 1887-579 and 580 (14 spms.)

Maximum length: 6.5 cm SL
 Distribution: South America: Amazon River basin, in the upper Negro River drainage; Orinoco River basin, in tributaries of the upper Orinoco River (Infrida and Atabapo Rivers) to Puerto Ayacucho.
 Countries: Colombia, Venezuela

***Pterophyllum leopoldi* (Gosse, 1963)**

Plataxoides leopoldi Gosse, 1963: 4, pl. 1 (fig. 2). Type locality: Furo du village de Cuia (rive gauche du Solimões à environ 90 km en amont de Manacapuru). Holotype: IRSNB 459.

Maximum length: 5 cm SL
 Distribution: South America: Amazon River basin, along the Solimões-Amazon River between about Manacapuru and Santarém; Rupununi River in the Essequibo River drainage in Guyana.
 Countries: Brazil, Guyana

***Pterophyllum scalare* (Schultze, 1823)**

Zeus scalaris Schultze in Lichtenstein, 1823: 114. Type locality: Or. Brazil. Types: No types located with certainty, ZMB 1347 possibly part of type series; ZMB 2833 selected as lectotype by Paepke & Schindler (2002: 181).

Platax scalaris Cuvier in Cuvier & Valenciennes, 1831: 237. Type locality: None stated. Holotype: ZMB 1347.

Plataxoides dumerilii Castelnau, 1855: 21, pl. 11 (fig. 3). Type locality: Para. Holotype: MNHN A.254.

Pterophyllum eimekei Ahl, 1928: 31, fig. p. 31. Type locality: Mündung des Rio Negro in den Amazonenstrom. Syntypes: ZMB uncatalogued (4) and MNHN 29-12 (1).

Maximum length: 7.5 cm SL
 Distribution: South America: Amazon River basin, in Peru, Colombia, and Brazil, along the Ucayali, Solimões and Amazon rivers; rivers of Amapá State, Oyapock River in French Guiana; Essequibo River in Guyana.

Countries: Brazil, Colombia, French Guiana, Guyana, Peru, Suriname (introduced)
 Remarks and references: Redescription based on Peruvian material in Kullander (1986: 210), with bibliography, diagnosis, description, distribution, and illustrations. Paepke & Schindler (2002) discuss the authorship and putative types of *Z. scalaris* Schultze.
 Common names: Acará bandeira (Brazil), Cara bandeira (Brazil), Pez angel (Peru), Poson lavwèl (French Guiana)

RETROCULUS

Retroculus Eigenmann & Bray, 1894: 614. Type species: *Retroculus boulengeri* Eigenmann & Bray, 1894. Type by monotypy. Gender: masculine.

***Retroculus lapidifer* (Castelnau, 1855)**

Chromys lapidifera Castelnau, 1855: 16, pl. 12 (fig.1). Type locality: Rio das Mortes, Xaventina Island Matto Grosso Brazil (originally: la grande cascade de l'Araguay (Caxoeira grande)). Holotype: MNHN A.8321 (dry, lost). Name spelled *lapidifera* in text (pp. viii and 16) and index (p. 108); *lapidifer* in figure caption and list of figures (p. xi). Neotype BMNH 1970.10.28:58, designated by (Gosse 1971: 5).

Retroculus boulengeri Eigenmann & Bray, 1894: 614. Type locality: Brazil. Holotype: USNM 152111.

Maximum length: 20.3 cm SL
 Distribution: South America: Amazon River basin, in the Tocantins and Capim River basins.
 Countries: Brazil

Remarks and references: Redescription in Gosse (1971) with bibliography, diagnosis, description, and illustration.

***Retroculus septentrionalis* Gosse, 1971**

Retroculus septentrionalis Gosse, 1971: 11, p. 5. Type locality: Guyane française dans le fleuve Oyapock à Saut-Alikoto (en amont du village de Camopi). Holotype: IRSNB 515.

Maximum length: 19 cm SL
 Distribution: South America: Oyapock River drainage in Brazil and French Guiana, Araguari River drainage in Brazil.
 Countries: Brazil, French Guiana
 Common names: Prapra (French Guiana)

***Retroculus xinguensis* Gosse, 1971**

Retroculus xinguensis Gosse, 1971: 7, pl. 4. Type locality: Brésil dans le Rio Xingu aux Cachoeira von Martius (à la limite Nord de l'Etat du Mato Grosso). Holotype: IRSNB 512.

Maximum length: 14.4 cm SL

Distribution: South America: Amazon River basin, in the Xingu and Tapajós River basins.

Countries: Brazil

SATANOPERCA

Satanoperca Günther, 1862: 312. Type species: *Geophagus daemon* Heckel, 1840. Type by subsequent designation by Jordan & Evermann (1898, p. 1542). Gender: feminine.

***Satanoperca acuticeps* (Heckel, 1840)**

Geophagus acuticeps Heckel, 1840: 394. Type locality: Barra do Rio-negro [=Manaus]. Holotype: NMW 23429.

Maximum length: 17 cm SL

Distribution: South America: Amazon River basin, in the Branco River, lower Negro River, and along the Solimões-Amazon River in Brazil between Tonantins and the lower Trombetas River.

Countries: Brazil

Common names: Acará bicudo (Brazil), Acará papa terra (Brazil)

***Satanoperca daemon* (Heckel, 1840)**

Geophagus daemon Heckel, 1840: 389, pl. 29 (fig. 26-29). Type locality: Rio-Negro. Holotype: NMW 23123.

Maximum length: 17 cm SL

Distribution: South America: Amazon River basin, in the upper Negro River in Brazil and Venezuela; Orinoco River basin, in Colombia and Venezuela.

Countries: Brazil, Colombia, Venezuela

***Satanoperca jurupari* (Heckel, 1840)**

Geophagus jurupari Heckel, 1840: 392. Type locality: an der Mündung des Rio-negro in den Amazonenstrom. Syntypes: NMW 23580-81 (2).

Maximum length: 18.5 cm SL

Distribution: South America: Amazon River basin, from Peru, Ecuador and Colombia to the mouth of Amazon River in Brazil, in Amapá State and eastern French Guiana, also in the Bolivian Amazon drainage except Guaporé River.

Countries: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Peru

Remarks and references: Redescription, based on Peruvian material, in Kullander (1986: 147), with bibliography, diagnosis, description, distribution and illustration.

Common names: Acará-chibante (Brazil), Cara bicudo (Brazil), Prapra djab (French Guiana), Prapra roch (French Guiana), Prapra so (French Guiana)

***Satanoperca leucosticta* (Müller & Troschel, 1849)**

Geophagus leucostictus Müller & Troschel, 1849: 625. Type locality: See Amucu; Sümpfen der Savanne. Holotype: ZMB 2331.

Satanoperca macrolepis Günther, 1862: 314. Type locality: Demerara, British Guiana. Syntypes: (3) BMNH 1962.1.8.1 (1).

Maximum length: 15 cm SL

Distribution: South America: Essequibo River in Guyana and Nickerie River in Suriname.

Countries: Guyana, Suriname

Remarks and references: Redescription based on Surinamese material in Kullander & Nijssen (1989: 66), with bibliography, diagnosis, description, distribution, and illustration.

***Satanoperca lilith* Kullander & Ferreira, 1988**

Satanoperca lilith Kullander & Ferreira, 1988: 344, fig. 1. Type locality: Brazil, Estado do Amazonas, Rio Negro drainage, Uru-

mari, praia (0°03'S, 63°30'W). Holotype: MZUSP 33003.

Maximum length: 25.5 cm SL

Distribution: South America: Amazon River basin, along the Solimões-Amazon River from the Japurá River to the Trombetas River, also Negro River from the Curicuriari River to the mouth, and in the Branco River basin.

Countries: Brazil

***Satanoperca mapiritensis* (Fernández-Yépez, 1950)**

Geophagus mapiritensis Fernández-Yépez, 1950: 117, fig. p. 117.

Type locality: Río Mapirito al Sur de Maturín, Estado Monagas, Venezuela. Holotype: MHNLS 153 [ex AFY 49422].

Maximum length: 14 cm SL

Distribution: South America: Orinoco River basin, along the lower Orinoco River and in rivers north of the lower Orinoco River.

Countries: Venezuela

***Satanoperca pappaterra* (Heckel, 1840)**

Geophagus pappaterra Heckel, 1840: 396. Type locality: Rio-Guapore. Syntypes: 23684-23685 (2).

Maximum length: 17.4 cm SL

Distribution: South America: Amazon River basin, in the Guaporé River in Brazil and Bolivia; Paraná River basin, in the Paraguay River drainage in Brazil and northern Paraguay (to the Aquidabán River).

Countries: Bolivia, Brazil, Paraguay

SYMPHYSODON

Symphysodon Heckel, 1840: 332. Type species: *Symphysodon discus* Heckel, 1840. Type by monotypy. Gender: masculine.

***Symphysodon aequifasciatus* Pellegrin, 1904**

Symphysodon discus var. *aequifasciata* Pellegrin, 1904: 250. Type locality: Teffé (Brésil); Santarém (Bresil). Syntypes: MNHN 1902-130 (1) Santarém, 1902-134 (1) and 1902-135 (1) Teffé.

Symphysodon discus tarzoo Lyons, 1959: 6, fig. p. 7. Type locality: Leticia, Columbia. No types known.

Symphysodon aequifasciata axelrodi Schultz, 1960: 14, fig. (p. 9). Type locality: Belem, Brazil, Amazon River. Holotype: USNM 179831.

Symphysodon aequifasciata haraldi Schultz, 1960: 11, fig. (p. 8). Type locality: Benjamin Constant, Brazil in the Amazon. Holotype: USNM 179829.

Maximum length: 13.7 cm SL

Distribution: South America: Amazon River basin in tributaries along the Solimões-Amazon River from the Putumayo River in Colombia and Peru to the Tocantins River basin.

Countries: Brazil, Colombia, Peru

Remarks and references: Popular review in Kullander (1996a).

***Symphysodon discus* Heckel, 1840**

Symphysodon discus Heckel, 1840: 333, pl. 30 (fig. 21). Type locality: bei Barra do Rio Negro [=Manaus], im Flusse selbst. Holotype: NMW 35612.

Symphysodon discus willischwartzi Burgess, 1981: 37, fig. p. 37. Type locality: Rio Abacaxis (a tributary of the Rio Madeira), Brazil. Holotype: MZUSP 15375.

Maximum length: 12.3 cm SL

Distribution: South America: Amazon River basin in Brazil, near the mouth of the Negro River, in the lower Abacaxis River, and in the lower Trombetas River.

Countries: Brazil

Remarks and references: Popular review in Kullander (1996a).

Common names: Acará-moreré (Brazil)

TAENIACARA

Taeniacara Myers, 1935: 11. Type species: *Taeniacara candidi* Myers, 1935. Type by original designation. Gender: feminine.

***Taeniacara candidi* Myers, 1935**

Taeniacara candidi Myers, 1935: 11. Type locality: in the Amazon (middle). Holotype: USNM 93579.
Apistogramma weisei Ahl, 1936b: 268. Type locality: Santarem. Holotype: ZMB 32385.
 Maximum length: 3.3 cm SL
 Distribution: South America: Amazon River basin, in the lower Negro River, and along the Amazon River to the Tapajós River.
 Countries: Brazil

TAHUANTINSUYOA

Tahuantinsuyoa Kullander, 1986: 308. Type species: *Tahuantinsuyoa macantzatza* Kullander, 1986. Type by original designation. Gender: feminine.

***Tahuantinsuyoa chipi* Kullander, 1991**

Tahuantinsuyoa chipi Kullander, 1991c: 4, fig. 2. Type locality: Perú, departamento Huánuco, pools of unnamed creek close to lower Río Lullapichis, 1.8 km east of Panguana station (9°37'90"S, 74°55'90"W), 260 masl. Holotype: ROM 58275.
 Maximum length: 8.2 cm SL
 Distribution: South America: Amazon River basin, in the Pachitea River basin in Peru.
 Countries: Peru

***Tahuantinsuyoa macantzatza* Kullander, 1986**

Tahuantinsuyoa macantzatza Kullander, 1986: 309, pl. 34 (fig. 1). Type locality: Perú, departamento Ucayali, Río Aguaytía drainage system, Río Huacamayo. Holotype: MZUSP 16212.
 Maximum length: 7.4 cm SL
 Distribution: South America: Amazon River basin, in the Aguaytía River basin in Peru.
 Countries: Peru

TELEOCICHLA

Teleocichla Kullander, 1988: 196. Type species: *Teleocichla centrarchus* Kullander, 1988. Type by original designation. Gender: feminine.

***Teleocichla centisquama* Zuanon & Sazima, 2002**

Teleocichla centisquama Zuanon & Sazima, 2002: 374, fig. 1. Type locality: Brazil: Pará: rio Xingu: Furo do Zé Pinheiro (3°27'26"S 51°55'03"W). Holotype: INPA 14934.
 Maximum length: 4 cm SL
 Distribution: South America: Amazon River basin, in the Xingu River drainage around Altamira.
 Countries: Brazil

***Teleocichla centrarchus* Kullander, 1988**

Teleocichla centrarchus Kullander, 1988: 198, fig. 2. Type locality: Brésil, Rio Xingù, Cachoeira von Martius, Haut Xingù. État du Mato Grosso. Holotype: IRSNB 649.
 Maximum length: 6 cm SL
 Distribution: South America: Amazon River basin, in the Xingu River drainage at Cachoeira von Martius.
 Countries: Brazil

***Teleocichla cinderella* Kullander, 1988**

Teleocichla cinderella Kullander, 1988: 204, fig. 6. Type locality: Brazil, State of Pará: R. Tocantins, Tucurui, jusante de represa, poços. Holotype: INPA 802.
 Maximum length: 5.4 cm SL
 Distribution: South America: Amazon River basin, in the lower Tocantins River basin.
 Countries: Brazil

***Teleocichla gephyrogramma* Kullander, 1988**

Teleocichla gephyrogramma Kullander, 1988: 205, fig. 7. Type

locality: Brésil, Rio Xingù, Cachoeira von Martius, Haut Xingù. État du Mato Grosso. Holotype: IRSNB 647.
 Maximum length: 4.6 cm SL
 Distribution: South America: Amazon River basin, in the Xingu River drainage at Cachoeira von Martius.
 Countries: Brazil

***Teleocichla monogramma* Kullander, 1988**

Teleocichla monogramma Kullander, 1988: 207, figs. 1, 8. Type locality: Brésil, Rio Xingù, Cachoeira von Martius, Haut Xingù. État du Mato Grosso. Holotype: IRSNB 646.
 Maximum length: 6.3 cm SL
 Distribution: South America: Amazon River basin, in the Xingu River drainage at Cachoeira von Martius.
 Countries: Brazil

***Teleocichla prionogenys* Kullander, 1988**

Teleocichla prionogenys Kullander, 1988: 203, fig. 5. Type locality: Brazil, State of Pará: Rio Tapajós, São Luis, acima de Itaituba, pedral. Holotype: MZUSP 36951.
 Maximum length: 5.7 cm SL
 Distribution: South America: Amazon River basin, in the Tapajós River at São Luis.
 Countries: Brazil

***Teleocichla proselytus* Kullander, 1988**

Teleocichla proselytus Kullander, 1988: 201, fig. 4. Type locality: Brazil, State of Pará: Rio Tapajós, São Luis, acima de Itaituba, pedral. Holotype: MZUSP 33065.
 Maximum length: 5.7 cm SL
 Distribution: South America: Amazon River basin, in the Tapajós River at São Luis.
 Countries: Brazil

THERAPS

Theraps Günther, 1862: 284. Type species: *Theraps irregularis* Günther, 1862. Type by monotypy. Gender: masculine.

***Theraps coeruleus* Stawikowski & Werner, 1987**

Theraps coeruleus Stawikowski & Werner, 1987: 499, fig. p. 499. Type locality: einem kleinen Zufluss zum Rio Mizol Há bei Francesco Madero westlich der Strasse von Palenque nach Ocosingo, etwa 30 Kilometer südlich von Palenque. Holotype: ZFMK 15501.
 Maximum length: 12 cm SL
 Distribution: North America: Atlantic slope, upper Tulija River in the Usumacinta River drainage.
 Countries: Mexico

***Theraps irregularis* Günther, 1862**

Theraps irregularis Günther, 1862: 284. Type locality: Guatemala. Holotype: BMNH 1861.8.12.15.
Theraps belone Allgayer, 1989: 6, fig. p. 7. Type locality: "La Culebra" sur le Rio Chocolja, Chiapas (Mexique). Holotype: MNHN 1989-581.
 Maximum length: 19 cm SL
 Distribution: North and Central America: Atlantic slope of Mexico and Guatemala (Usumacinta, Sarstun, and Dulce River basins).
 Countries: Guatemala, Mexico

***Theraps lentiginosus* (Steindachner, 1864)**

Heros lentiginosus Steindachner, 1864: 62, pl. 3 (fig. 1). Type locality: Mejico. Syntypes: NMW 17381-82 (2).
Theraps rheophilus Seegers & Staeck, 1985: 500, fig. p. 500-504. Type locality: etwa sechs Kilometer südlich von Palenque im Rio Nututun unter der Brücke der Strasse nach Ocosingo in Chiapas, Mexico. Holotype: ZFMK 13928.
 Maximum length: 25 cm TL
 Distribution: North and Central America: Atlantic slope, in the

Grijalva and Usumacinta River drainages in Mexico and Guatemala.

Countries: Guatemala, Mexico

***Theraps wesseli* Miller, 1996**

Theraps wesseli Miller, 1996: 180, fig. 1. Type locality: Río Belaire at CA 13 bridge (near Entelina), 8 km south of the Río Jutiapa crossing, in the Río Papaloteca drainage, Departamento de Atlantida; 15° 41' 30" W. Lat., 86° 30' N. Long. Holotype: UMMZ 231103.

Maximum length: 8 cm SL

Distribution: Central America: Atlantic slope, in the Papaloteca River basin.

Countries: Honduras

THORICHTHYS

Thorichthys Meek, 1904: 222. Type species: *Thorichthys ellioti* Meek, 1904. Type by original designation. Gender: masculine.

***Thorichthys affinis* (Günther, 1862)**

Heros affinis Günther, 1862: 292. Type locality: Lake Peten. Syntypes: BMNH 1864.1.26.83-86 (4).

Maximum length: 14 cm SL

Distribution: Central America: Atlantic slope, in the upper Usumacinta River basin in Guatemala, and Belize.

Countries: Belize, Guatemala

***Thorichthys aureus* (Günther, 1862)**

Heros aureus Günther, 1862: 292. Type locality: Guatemala. Holotype: BMNH 1864.1.26.51.

Maximum length: 15 cm SL

Distribution: Central America: Atlantic slope from Golden Creek (Belize) to Motagua River basin (Honduras).

Countries: Belize, Guatemala, Honduras

Common names: Golden firemouth cichlid (Belize)

***Thorichthys callolepis* (Regan, 1904)**

Heros (Heros) callolepis Regan, 1904: 258. Type locality: Santo Domingo de Guzman, Mexico. Syntypes: BMNH 1890.10.10.112-113 (2).

Maximum length: 14 cm SL

Distribution: North America: Atlantic slope, in the Coatzacoalcos River drainage, Mexico.

Countries: Mexico

***Thorichthys ellioti* Meek, 1904**

Heros maculipinnis Steindachner, 1864: 69, pl. 4 (fig. 2). Type locality: Mejico im Xamapa-Flusse. Syntypes: NMW 17368-17370 (3).

Thorichthys ellioti Meek, 1904: 223, fig. 72. Type locality: Motzorong, Vera Cruz. Holotype: FMNH 4627 [not 4727].

Maximum length: 15 cm SL

Distribution: North America: Atlantic slope, in the Papaloapán River basin.

Countries: Mexico

Remarks and references: Identity of *Heros maculipinnis* and *T. ellioti* requires further analysis; whereas *T. maculipinnis* has priority, *T. ellioti* may be in prevailing usage.

***Thorichthys helleri* (Steindachner, 1864)**

Heros helleri Steindachner, 1864: 64, pl. 4 (fig. 1). Type locality: Mejico, im Teapa-Flusse (Staat Tabasco). Syntypes: NMW 17344-17349 (6).

Cichlasoma champotonis Hubbs, 1936: 257, pl. 11 (fig. 1). Type locality: Río Champoton, Janateya, Campeche, 7 leagues (34 km) east of the mouth, Yucatán, Mexico. Holotype: UMMZ 102203.

Maximum length: 14.5 cm SL

Distribution: North America: Atlantic slope, from the Coatzacoalcos River to the Usumacinta River drainage.

Countries: Mexico

***Thorichthys meeki* Brind, 1918**

Thorichthys helleri meeki Brind, 1918: 119. Type locality: Near Progreso, Yucutan, Mexico. Holotype: USNM 79243.

Cichlasoma hyorhynchum Hubbs, 1935: 15, pl. 3 (fig. 2). Type locality: Río San Pedro de Mártir, a tributary of Río Usumacinta, at El Paso de los Caballos, Department of Petén, Guatemala. Holotype: UMMZ 95519.

Maximum length: 17 cm TL

Distribution: North and Central America: Atlantic slope, in the Usumacinta River drainage, the Belize River drainage, and near Progreso, in Mexico, Guatemala and Belize.

Countries: Belize, Colombia (introduced), Guatemala, Mexico

Common names: Castarrica (Mexico), Firemouth cichlid (Belize), Panya gial (Belize), Rojita (Mexico)

***Thorichthys pasionis* (Rivas, 1962)**

Cichlasoma pasionis Rivas, 1962: 148, fig. 1. Type locality: Río de la Pasión, of the Río Usumacinta system, at Sayaxche, Department of El Petén, Guatemala. Holotype: USNM 203156 [ex UMMZ 4872].

Maximum length: 17 cm SL

Distribution: North and Central America: Atlantic slope, in the Usumacinta River drainage in Mexico and Guatemala.

Countries: Guatemala, Mexico

Common name: Mojarra amarilla (Mexico)

***Thorichthys socolofi* (Miller & Taylor, 1984)**

Cichlasoma socolofi Miller & Taylor, 1984: 933, fig. 1. Type locality: Río Misalá (tributary to R. Tulija of R. Grijalva basin) below bridge at Adolfo Ruiz Cortines (17°23' N lat., 92°01' W long.), on highway from Palenque to Agua Azul, 19.6 km S of the "Maya Head" turnoff to Palenque, Chiapas, Mexico. Holotype: UMMZ 210819.

Maximum length: 7.9 cm SL

Distribution: North America: Atlantic slope, in the Grijalva River basin.

Countries: Mexico

TOMOCICHLA

Tomocichla Regan, 1908a: 463. Type species: *Tomocichla underwoodi* Regan, 1908. Type by monotypy. Gender: feminine.

***Tomocichla asfraci* Allgayer, 2002**

Tomocichla asfraci Allgayer, 2002b: 32, fig. p. 33. Type locality: Panama, Boca-del-Toro, Rio Guarumo. Holotype MNHN 2002-1093).

Maximum length: 25 cm SL

Distribution: Central America: Atlantic slope, Laguna de Chiriqui basin in the Guarumo River.

Countries: Panama

***Tomocichla sieboldii* (Kner, 1863)**

Heros sieboldii Kner, 1863: 223. Type locality: Panama an der Südseeseite. Syntypes: (11) NMW 22012 (1).

Herichthys underwoodi Regan, 1906a: 30, pl. 3 (fig. 5). Type locality: Costa Rica. Holotype: BMNH 1907.6.28.48.

Cichlasoma punctatum Meek, 1909: 210. Type locality: Buenos Aires de Terraba, Costa Rica. Holotype: FMNH 6478.

Cichlasoma frontale Meek, 1909: 210. Type locality: Turrubales, Costa Rica. Holotype: FMNH 6358.

Theraps terrabae Jordan & Evermann, 1927: 507. Type locality: [Buenos Aires de Terraba.] Holotype: FMNH 6478. Replacement for *Cichlasoma punctatum* Meek, preoccupied in *Cichlasoma* by *Labrus punctatus* Bloch.

Maximum length: 25 cm SL

Distribution: Central America: Pacific slope, from Esparza (Costa Rica) to Río Sta María (Panama).

Countries: Costa Rica, Panama

Remarks and references: Redescription by Bussing (1975), as *Cichlasoma sieboldii*. Reviewed by Bussing (1998: 372), as *Theraps sieboldii*, with key, diagnosis, geographical distribution, and figures. Molecular analysis suggests that *T. sieboldii* is not closely related to *T. tuba* (Martin & Bermingham, 1998), but the species is maintained in *Tomocichla* pending a more general revision of heroin cichlids.

Common names: Mojarra (Costa Rica)

***Tomocichla tuba* (Meek, 1912)**

Tomocichla underwoodi Regan, 1908a: 463. Type locality: Rio Iroquois [Costa Rica]. Syntypes: (13) BMNH 1909.3.13.99-108 (10), UMMZ 167297 [ex BMNH] (1).

Cichlasoma tuba Meek, 1912: 73. Type locality: Victoria, Costa Rica. Holotype: FMNH 7681 (missing).

Maximum length: 30 cm TL

Distribution: Central America: Atlantic slope, from the Escondido River (Nicaragua) to the Cricamola River (Panama).

Countries: Costa Rica, Nicaragua, Panama

Remarks and references: Redescription by Bussing (1975), as *Cichlasoma tuba*. Reviewed by Bussing (1998: 376, as *Theraps underwoodi*), with key, diagnosis, geographical distribution, and figures.

UARU

Uaru Heckel, 1840: 330. Type species: *Uaru amphiacanthoides* Heckel, 1840. Type by monotypy. Gender: masculine.

Uarus Cope, 1872: 254. Type species: *Uaru amphiacanthoides* Heckel, 1840. Gender: masculine. Unjustified emendation of spelling of *Uaru* Heckel.

***Uaru amphiacanthoides* Heckel, 1840**

Uaru amphiacanthoides Heckel, 1840: 331, pl. 29 (fig. 13-16). Type locality: Rio-negro oberhalb Airao. Holotype: NMW 24808.

Pomotis ? fasciatus Jardine, 1843: 169, p. 17. Type locality: Rios Padauri and Negro. No types known.

Uaru obscurum Günther, 1862: 302. Type locality: River Cupai [=Cupari River, Brazil]. Holotype: BMNH 1853.3.19.39.

Acara (Heros) imperialis Steindachner, 1879a: 161. Type locality: Ausstände des Amazonenstromes zunächst der Mündung des Rio Negro. Syntypes: (several) NMW 79185-86 (7).

Maximum length: 25 cm SL

Distribution: South America: Amazon River basin, along the Amazon-Solimões River drainage from the Japurá River to the Tapajós River, and in the middle and lower Negro River basin.

Countries: Brazil

***Uaru fernandezyepezi* Stawikowski, 1989**

Uaru fernandezyepezi Stawikowski, 1989: 21, fig. 1. Type locality: Seitenarm des Río Atabapo, fünf Kilometer oberhalb dessen Mündung in den Rio Orinoco. Holotype: ZFMK 15757.

Maximum length: 19 cm SL

Distribution: South America: Orinoco River basin, in the Atabapo River basin.

Countries: Venezuela

Common names: Run Runá (Venezuela)

VIEJA

Vieja Fernández-Yépez, 1969: [4]. Type species: *Vieja panamensis* Fernández-Yépez, 1969. Type by original designation. Gender: feminine.

Chuco Fernández-Yépez, 1969: [4]. Type species: *Cichlasoma milleri* Meek, 1907. Type species by original designation. Gender: neuter.

Paratheraps Werner & Stawikowski, 1989: 10. Type species: *Paratheraps breidohri* Werner & Stawikowski, 1987. Type spe-

cies by original designation. Gender: masculine.

***Vieja argentea* (Allgayer, 1991)**

Cichlasoma (Theraps) argentea Allgayer, 1991: 3. Type locality: Rio San Roman à l'embouchure avec le Rio Salinas, Chiapas, Mexique. Holotype: MNHN 1991-6831.

Maximum length: 27 cm TL

Distribution: North America: Atlantic slope, in the Usumacinta River basin.

Countries: Mexico

***Vieja bifasciata* (Steindachner, 1864)**

Heros bifasciatus Steindachner, 1864: 60, pl. 2. Type locality: Mejico. Holotype: NMW 74138.

Maximum length: 30 cm SL

Distribution: North and Central America: Atlantic slope, in the Grijalva and Usumacinta River basins, Mexico and Guatemala.

Countries: Guatemala, Mexico

Common names: Colorada (Mexico)

***Vieja breidohri* (Werner & Stawikowski, 1987)**

Paratheraps breidohri Werner & Stawikowski, 1987: 20, fig. p. 20. Type locality: Presa von Angostura, unterhalb der Staumauer, in Chiapas/Südmexiko. Holotype: ZFMK 15524.

Maximum length: 16.8 cm SL,

Distribution: North America: Atlantic slope, in the Grijalva River basin.

Countries: Mexico

***Vieja fenestrata* (Günther, 1860)**

Chromis fenestrata Günther, 1860a: 318. Type locality: Rio de la Lana (Mexico). Syntypes: BMNH 1857 [or 1887].7.31.13-14 (2).

Heros parma Günther, 1862: 285. Type locality: Mexico, Guatemala. Syntypes: BMNH (7).

Cichlosoma sexfasciatum Regan, 1905a: 230. Type locality: Guapote, Mexico. Holotype: BMNH 1894.12.19.2.

Cichlosoma gadovii Regan, 1905a: 232. Type locality: Motozongongo. Syntypes: BMNH 1906.6.1.402-403 (2).

Maximum length: 25 cm SL

Distribution: North America: Atlantic slope, from the Papaloapán River to the Chachalacas River basin.

Countries: Mexico

Remarks and references: Regan (1905a) removed 4 syntypes of *Heros parma* to become syntypes of his *Cichlosoma maculicauda*; remaining 3 syntypes were referred to the synonymy of *Vieja fenestrata*; no lectotype has been selected.

Common names: Mojarra negra (Mexico), Testa colorada (Mexico)

***Vieja godmanni* (Günther, 1862)**

Heros godmanni Günther, 1862: 296. Type locality: River of Cahabon [=Cajabon River, Guatemala]. Syntypes: BMNH 1864.1.26 [or 2].49-50 (2).

Maximum length: 30 cm TL

Distribution: Central America: Atlantic slope, in the Polochic River basin.

Countries: Guatemala

***Vieja guttulata* (Günther, 1864)**

Heros guttulatus Günther, 1864c: 152. Type locality: Pacific coast of Guatemala. Syntypes: BMNH 1864.1.26.348 (1), MSNG 13009 [ex BMNH] (1, poor condition, not found in 1995).

Maximum length: 30 cm TL

Distribution: Central America: Pacific slope of Guatemala.

Countries: Guatemala

***Vieja hartwegi* (Taylor & Miller, 1980)**

Cichlasoma hartwegi Taylor & Miller, 1980: 8, fig. 2. Type locality: Río Grande de Chiapa, between Tuxtla Gutiérrez and Chiapa

de Corzo, lat. 16°44'N, long. 93°02'W, elevation ca. 500 m, Chiapas, Mexico. Holotype: UMMZ 207701.

Maximum length: 13.1 cm SL

Distribution: North America: Atlantic slope, in the Grijalva River basin.

Countries: Mexico

***Vieja heterospila* (Hubbs, 1936)**

Cichlasoma heterospilum Hubbs, 1936: 255, pl. 10, (fig. 3). Type locality: Rio Usumacinta at Montecristo, in southern Mexico. Holotype: USNM 52959.

Maximum length: 24 cm SL

Distribution: North and Central America: Atlantic slope, in the Candelaria and Usumacinta Rivers, Mexico and Guatemala.

Countries: Guatemala, Mexico

Common names: Colorado (Mexico), Pozolera (Mexico)

***Vieja intermedia* (Günther, 1862)**

Heros intermedius Günther, 1862: 298. Type locality: Guatemala. Syntypes: (orig. at least 3) BMNH 1864.1.26.87-91.

Heros angulifer Günther, 1862: 298. Type locality: River de Santa Isabel, Guatemala. Syntypes: BMNH 1864.1.26.60-61 (2).

Acara rectangularis Steindachner, 1864: 57, pl. 1 (fig. 1). Type locality: Mejico. Holotype: NMW 33346.

Maximum length: 20 cm SL

Distribution: North and Central America: Atlantic slope, in the Grijalva and Usumacinta drainages in Mexico, Guatemala and Belize.

Countries: Belize, Guatemala, Mexico

Remarks and references: Pellegrin (1904), as first reviser, gave priority to *Heros intermedius* over *H. angulifer*.

Common names: Northern checkmark cichlid (Belize)

***Vieja maculicauda* (Regan, 1905)**

Cichlosoma maculicauda Regan, 1905a: 227. Type locality: Lake Yzabal. Syntypes: BMNH 1864.1.26.56-69 (4).

Cichlasoma globosum Miller, 1907: 114, fig. 4. Type locality: brackish water, Puerto Barrios. Holotype: CAS [ex IU 11382] not present in 1995.

Cichlasoma nigratum Meek, 1907b: 128. Type locality: Lago Nicaragua, Granada, Nicaragua. Holotype: FMNH 5979.

Cichlasoma mañana Miller, 1907: 115, fig. 5. Type locality: Tenedores River, Tenedores. Holotype: CAS 78970 [ex IU 11385].

Vieja panamensis Fernández-Yépez, 1969: [5], fig. 9. Type locality: Panama. Holotype: MCZ 33281.

Maximum length: 25 cm SL

Distribution: Central America: Atlantic slope, from the Usumacinta River drainage in Guatemala to the Chagres River in Panama.

Countries: Belize, Costa Rica, Guatemala, Honduras, Nicaragua, Panama

Remarks and references: Reviewed by Bussing (1998: 380), with key, diagnosis, geographical distribution, and figures.

Common names: Blackbelt cichlid (Belize), Boca colorada (Honduras), Machaca (Honduras), Palometa (Nicaragua), Pis pis (Costa Rica), Vieja (Costa Rica)

***Vieja melanurus* (Günther, 1862)**

Heros melanurus Günther, 1862: 288. Type locality: Lake Peten. Syntypes: BMNH 1864.1.26.78-82 (5).

Heros melanopogon Steindachner, 1864: 72, pl. 1 (fig. 3). Type locality: Central-Amerika. Syntypes: NMW 17351 (1), 17353 (1).

Maximum length: 19 cm TL

Distribution: Central America: Atlantic slope, in the De la Pasión River and Lake Petén basins.

Countries: Guatemala

***Vieja microphthalmus* (Günther, 1862)**

Heros microphthalmus Günther, 1862: 295. Type locality: Río

Motagua, Guatemala. Syntypes: BMNH 1864.1.26.275 (1), 1865.6.10.8-9 (2); ZMB 6839 (1).

Heros oblongus Günther, 1867: 602. Type locality: Río Motagua. Syntypes: (2) ?BMNH 1865.6.10.11 (1), 1865.4.29.71-72 (2).

Cichlasoma Güntheri Pellegrin, 1904: 215. Type locality: As for *Heros oblongus* Günther, 1867. Syntypes: (2) ?BMNH 1865.6.10.11 (1), 1865.4.29.71-72 (2). Replacement name for *Heros oblongus* Günther 1869 [= *H. oblongus* Günther, 1867], secondarily preoccupied in *Heros* by *Chromys oblonga* Castelnau 1855.

Cichlasoma milleri Meek, 1907a: 142. Type locality: El Rancho, Guatemala. Holotype: FMNH 5529.

Cichlasoma caeruleogula Fowler, 1936: 525, fig. 43. Type locality: Tributary of Río Motagua about 20 miles west of El Rancho. Holotype: ANSP 64148.

Maximum length: 25 cm SL

Distribution: Central America: Atlantic slope, in the Motagua River basin in Guatemala and Honduras.

Countries: Guatemala, Honduras

***Vieja regani* (Miller, 1974)**

Cichlasoma regani Miller, 1974: 466, fig. 1. Type locality: Río Almoloya where crossed by the Trans-Isthmian Highway about 33 km north of southern terminus of that road, at 95°01' long., 16°45'N lat., Oaxaca, Mexico. Holotype: UMMZ 184756.

Maximum length: 23 cm SL

Distribution: North America: Atlantic slope, in the Coatzacoalcos River basin.

Countries: Mexico

Common names: Mojarra pinto (Mexico)

***Vieja synspila* (Hubbs, 1935)**

Cichlasoma synspilum Hubbs, 1935: 13, pl. 3 (fig. 1). Type locality: Río San Pedro de Mártir, a tributary of Río Usumacinta, at El Paso de Caballos, Department of Petén, Guatemala. Holotype: UMMZ 95518.

Cichlaurus hicklingi Fowler, 1956: 1, fig. 1. Type locality: Central Farm, Baking Pot, Belize River, British Honduras. Holotype: ANSP 73891.

Maximum length: 35 cm TL

Distribution: North and Central America: Atlantic slope, in the Usumacinta River drainage in Mexico, Guatemala and Belize.

Countries: Belize, Guatemala, Mexico

Common names: Redhead cichlid (Belize)

***Vieja tuyrensis* (Meek & Hildebrand, 1913)**

Cichlasoma tuyrense Meek & Hildebrand, 1913: 89. Type locality: Río Tuyra, Boca de Cupe, Panama. Holotype: FMNH 7599.

Maximum length: 23.5 cm SL

Distribution: Central America: Pacific slope of Panama (Tuíra and Bayano River basins).

Countries: Panama

Common names: Mojarra (Panama)

***Vieja zonata* (Meek, 1905)**

Cichlasoma zonatum Meek, 1905: 245. Type locality: Nilttepec, Oaxaca. Holotype: FMNH 3776.

Maximum length: 25 cm TL

Distribution: North America: Pacific slope, Tehuantepec River basin.

Countries: Mexico

Remarks and references: Listed as a synonym of *Vieja guttulata* (as *Cichlasoma guttulatum*) by Miller (1966). The validity of *V. zonata* rests uncertain.

Common names: Mojarra prieta (Mexico)

GENUS INQUIRENDUM

Baiodon Agassiz, 1859: 408. Type species by monotypy: *Baiodon fasciatus* Agassiz, 1859.

SPECIES INQUIRENDAE

Perca bimaculata Bloch, 1792: 82, pl. 310, fig. 1. Type locality: Flüßsen von Brasilien [rivers of Brazil]. Types: No types known, based on '*Acara brasiliensibus*' in Marcgravius (1648)

Sparus acara La Cèpède, 1802: 156. Substitute name for *Perca bimaculata* Bloch

Acara margarita Heckel, 1840: 338. Substitute name for *Perca bimaculata* Bloch

Pomotis ? bono Jardine, 1843: 171 [pl. 18; apparently not published]. Type locality: all the rivers of Guiana, and in pools and marshes. Types: No types known.

Baiodon fasciatus Agassiz, 1859: 408. Type locality: Lake Nicaragua. Types lost. Kullander & Hartel (1997) examined Agassiz' description and searched in vain for type material. The name is available but the species cannot be identified on the basis of the description.

Hoplarchus planifrons Kaup, 1860: 131. Type locality: [unknown]. Holotype: ZSM, probably lost.

Family Mugilidae (Mulletts)

Carl J. Ferraris, Jr.

The family Mugilidae consists of 62 species in 14 genera (Thomson, 1997). Mulletts are readily distinguished from nearly all other fishes by the presence of two widely separated, short-based, dorsal fins, the absence of a lateral stripe on the body, an anal fin with three spines, and no thread-like filaments associated with the pectoral fin.

Species of the family inhabit brackish water and coastal marine environments of all tropical and temperate seas. Some species stray into river mouths but are not generally considered to be freshwater inhabitants. A few species inhabit fresh waters for much or all of their life cycle.

In the Neotropical region, only two species, representing two different genera, are reported to be primarily freshwater species. In addition, several species of the genus *Mugil* occasionally enter into inland waters; however, these species are not treated here.

Mullet are often found in schools or small groups, feeding in shallow waters either from the surface of the water or just off the bottom. Through much of their distributional range, these fishes are highly prized food fishes.

Taxonomy presented here follows Thomson (1997).

AGONOSTOMUS

Agonostomus Bennett, 1832:166. Type species: *Agonostomus telfairii* Bennett, 1832. Type by monotypy. Gender: masculine.

Dajaus Valenciennes, in Cuvier & Valenciennes, 1836:164 [116 in Strasbourg deluxe ed.]. Type species: *Mugil monticola* Bancroft, 1834. Type by monotypy. Gender: masculine.

Nestis Valenciennes, in Cuvier & Valenciennes, 1836:164 [117 in Strasbourg deluxe ed.]. Type species: *Nestis cyprinoides* Valenciennes, 1836. Type by subsequent designation by Jordan & Evermann (1896:818). Gender: feminine.

Agonostoma by Günther, 1861:461. Type species: *Agonostomus telfairii* Bennett, 1832. Unjustified emendation of *Agonostomus* Bennett, 1832. Type by monotypy. Gender: feminine.

Neomugil Vaillant, 1894:72. Type species: *Neomugil digueti* Vaillant, 1894. Type by monotypy. Gender: masculine.

Agonostomus monticola (Bancroft, 1834)

Mugil monticola Bancroft, in Griffith & Smith, 1834: 367, Fish pl. 36. Type locality: Jamaica. No types known.

Mugil irretitus Gosse, 1851: 84. Type locality: Jamaica. Holotype: BMNH 1847.12.27.59.

Agonostoma microps Günther, 1861: 462. Type locality: Probably West Indies. Syntypes: BMNH 1855.12.26.639-640 (2).

Agonostoma nasutum Günther, 1861: 463. Type locality: River of San Geronimo [Guatemala]. Holotype: BMNH 1861.8.12.14.

Agonostoma percoides Günther, 1861: 464. Type locality: Freshwaters of San Domingo and probably Jamaica. Syntypes: (6) BMNH 1848.1.12.1083, 1850.6.7.16 (1), 1861.11.7.2 (1).

Dajaus elongatus Kner, 1863: 222, fig. 2. Type locality: Panama. Syntypes: probably NMW, but not located.

Neomugil digueti Vaillant, 1894: 73. Type locality: Streams in Santa Cruz Arroyo, Sierra de las Cacachilas, Baja California, Mexico. Syntypes: BMNH 1907.1.18.3-4; MNHN 1894-0044 to 0047 (4), 1894-0054 to 58 (5).

Agonostomus macracanthus Regan, 1907: 65. Type locality: Rio Guacalate, Guatemala. Syntypes: BMNH 1864.1.26.361-362 (2).

Agonostomus salvini Regan, 1907: 66. Type locality: Nacasil, Guatemala. Syntypes: BMNH 1875.6.9.3-4 (3).

Joturus daguae Eigenmann, 1918: 681. Type locality: Rio Dagua at Caldas, Colombia. Holotype: FMNH 58457 [ex CM 7458].

Agonostoma squamipinne Mohr, 1927: 178, fig. 1. Type locality: Ponce, Puerto Rico. Lectotype: ZMH H176, designated by Ladiges et al. (1958:162).

Agonostomus hancocki Seale, 1932: 467. Type locality: Ca. 1/2 mi. up freshwater stream emptying into freshwater bay on s. side of San Cristóbal I. [Chatham I.], Galápagos Is. Holotype: CAS 838.

Maximum length: 20 cm SL

Distribution: North, Central, and South America: Atlantic, Caribbean, and Pacific Ocean draining coastal rivers.

Countries: Jamaica, Barbados, Dominica, Dominican Republic, Puerto Rico, Trinidad and Tobago, Mexico, Guatemala, El Salvador, Nicaragua, Costa Rica, Panama, Colombia, Venezuela.

JOTURUS

Joturus Poey, 1860:263. Type species: *Joturus pichardi* Poey, 1860. Type by monotypy. Gender: masculine.

Xenorhynchichthys Regan, 1908:461. Type species: *Joturus stipes* Jordan & Gilbert, 1882. Type by original designation. Gender: masculine.

Joturus pichardi Poey, 1860

Joturus pichardi Poey, 1860: 263, pl. 18 (figs. 4-5). Type locality: Río Almendares, near Havana, Cuba. Holotype: MCZ 23886.

Agonostoma globiceps Günther, 1874: 370. Type locality: Myzantla, Veracruz, Mexico. Holotype: BMNH 1873.6.5.1.

Joturus stipes Jordan & Gilbert, 1882: 373. Type locality: Rio Bayano [Panama]. Holotype: USNM 31010.

Maximum length: 23 cm SL

Distribution: North and Central America: Caribbean and Pacific Ocean draining coastal rivers.

Countries: Mexico, Guatemala, El Salvador, Nicaragua, Costa Rica, Panama.

Family Gobiidae (Gobies)

Sven O. Kullander

Following the analytical revision of Hoese & Gill (1993), the gobies and related fishes comprising the suborder Gobioidae are distributed over eight families, viz., the Gobiidae with subfamilies Butidinae, Eleotridinae (sleepers), and Gobiinae, the Kraemeriidae, the Microdesmidae with subfamilies Microdesminae and Ptereleotridinae, the Odontobutididae, the Xenisthmidae, and the Rhyacichthyidae. Other authors recognize the Eleotrididae as a separate family, including the Butinae, and distinguish other subfamilies of the Gobiidae, viz. Oxudercinae (mudskippers), Amplyopinae, Sicydiinae, Gobiellinae, and Gobiinae (e.g. Nelson, 1994).

Neotropical genera of Eleotridinae are *Dormitator*, *Eleotris*, *Gobiomorus*, *Hemieleotris*, *Leptophilypnus*, and *Microphilypnus*; remaining taxa listed below belong to the Gobiinae.

Worldwide there are over 2000 species of gobiids, of which about 150 are sleepers (Nelson, 1994). Most of the gobioid species are shallow water coastal or marine species of relatively small size, but particularly in the tropical regions freshwater species are also common. Only eleotridin and some gobiin species enter freshwater in the Neotropical region, but remain coastal or confined to short, coastal rivers. Only *Microphilypnus*, from the central Amazon and Orinoco basins, are strictly freshwater species, and also constitute an endemic freshwater genus of eleotridins. There are numerous marine, shallow water species of gobiids along the Neotropical coasts, and species other than those recorded here may be encountered in tidal zones, e.g., the widespread *Gobionellus oceanicus* (Pallas) and *Guavina guavina* (Schneider), and species listed as peripheral in Central America by Miller (1966), viz. gobiins *Bathygobius mystacium* Ginsburg, *Ctenogobius boleosoma* (Jordan & Gilbert), *C. shufeldti* (Jordan & Eigenmann), *Gobionellus daguae* (Eigenmann), *G. hastatus* Girard, *G. sagittula* (Günther), *G. microdon* (Gilbert), *Gobiosoma hildebrandi* (Ginsburg), *G. homochroma* (Ginsburg), *G. spes* (Ginsburg), *Microgobius miraflorensis* Gilbert & Starks, and eleotridins *Erotelis armiger* (Jordan), *Erotelis smaragdus* (Valenciennes), *Guavina micropus* Ginsburg.

Gobies are small to medium-sized fishes, the smallest Neotropical species being *Microphilypnus*, with about 2 cm SL maximum length, and the largest Neotropical species are found in *Gobiomorus* (60 cm TL) and *Dormitator* (ca 40 cm TL). Gobies possess two dorsal fins, the anterior with 2-8 weak spines, the posterior with soft rays. The lateral line system is obvious only on the head, and the arrangement of sensory pores and neuromasts is important for identification and phylogenetic analysis. The gill membranes are joined to the isthmus. All Neotropical species are benthic. Gobiins have the pelvic fins united and modified into a single median sucking disk, whereas in eleotridins the pelvic fins are separate. Particularly gobiins are sexually dimorphic, with males larger and more colorful, often with the gape much larger than the female. Gobies typically have an elaborate courtship behavior and spawn in pairs. The male guards the eggs, commonly in shelter like in a natural crevice or empty mollusk shell. Among Neotropical gobiins, *Sicydium* and *Awaous* species are found in fast running waters.

Neotropical gobies are covered in national species monographs, such as Bussing (1998), Greenfield & Thomerson (1997), Keith et al. (2000). Recent generic revisions by Murdy (1998) and Watson (1996) have been radical; species level systematics of particularly *Sicydium*, *Microphilypnus*, and *Leptophilypnus* remains highly unsatisfactory. *Ctenogobius* is recognized as distinct below, but is usually synonymized with *Gobionellus*.

AWAOUS

Gobius (Awaous) Valenciennes in Cuvier & Valenciennes, 1837: 97. Type species: *Gobius ocellaris* Broussonet, 1782. Type by subsequent designation by Bleeker (1874: 320). If *Awaous* regarded as used in a vernacular sense, then name dates to Steindachner (1861: 289).

Euctenogobius Gill, 1859: 45. Type species: *Euctenogobius badius* Gill, 1859. Type by monotypy. Gender: masculine.

Chonophorus Poey, 1860: 274. Type species: *Chonophorus bucculentus* Poey, 1860. Type by monotypy. Gender: masculine.

Platygobius Bleeker, 1874: 316. Type species: *Gobius macrorhynchus* Bleeker, 1867. Type by original designation. Gender: masculine.

Trichopharynx Ogilby, 1898: 769. Type species: *Gobius crassilabris* Günther, 1861. Type by original designation. Gender: masculine.

Suiboga Pinto, 1960: 1. Type species: *Suiboga travassosi* Pinto, 1960. Type by original designation. Gender: feminine.

Chiramenu Rao, 1971: 183. Type species: *Chiramenu fluviatilis* Rao, 1971. Type by original designation. Gender: masculine.

Awaous banana (Valenciennes, 1837)

Gobius banana Valenciennes in Cuvier & Valenciennes, 1837: 103. Type locality: Santo Domingo. Lectotype: MNHN A.1265, designated by Watson (1996:3).

Gobius martinicus Valenciennes in Cuvier & Valenciennes, 1837:

105. Type locality: Martinique I., West Indies. Syntypes: MNHN A-1266 (1), A-1327 (2).

Chonophorus bucculentus Poey, 1860: 275. Type locality: Cuba. Syntypes and/or Poey specimens: MCZ 13330 (1), 13375 (1), 13379-80 (1, 1); USNM 4772 (1), 4774 (1).

Chonophorus contractus Poey, 1861: 424. Type locality: Cuba. Holotype (?): MCZ 31220. Types?: MCZ 13247 (1), 13260 (1); ZMB 5963 (1).

Gobius mexicanus Günther, 1861: 61. Type locality: Mexico. Syntypes: BMNH 1856.3.17.41-42 (2).

Gobius transandeanus Günther, 1861: 62. Type locality: Fresh waters of Western Ecuador. Syntypes: (4) BMNH 1860.6.16.135-136.

Gobius dolichocephalus Cope, 1867: 403. Type locality: Near Orizaba, Veracruz, Mexico. No types known.

Awaous nelsoni Evermann, 1898: 2. Type locality: Río Rosario at Rosario, Sinaloa, Mexico. Holotype: USNM 48836.

Gobius (Awaous) guentheri Regan, 1903: 629. Type locality: W. Ecuador. Syntypes: BMNH 1860.6.16.133-134 (2).

Maximum length: 26.4 cm SL

Distribution: North, Central, and South America and Caribbean Islands: Pacific slope, from coastal drainages of Baja California to the Tumbes River, Peru; Atlantic localities in Florida, Cuba, Hispaniola, Jamaica, Puerto Rico, lesser Antillean islands, in Central America from Mexico through Panama, northern coastal rivers of Venezuela, and Trinidad, W.I.; mainly freshwater, occasionally brackish water

Countries: Barbados, Belize, Colombia, Costa Rica, Cuba, Dominica, Dominican Republic, Guatemala, Haiti, Honduras, Jamaica, Martinique, Mexico, Nicaragua, Panama, Peru, Puerto Rico, Saint Vincent, Trinidad and Tobago, Venezuela, USA

Common names: River goby (Belize), Lamearena (Costa Rica), Oliva, Guavina (Puerto Rico)

Remarks and References: Species revised by Watson (1996: 3), who included *A. transandeanus* (Günther), recognized as a distinct species by Bussing (1998: 398)

Awaous tajasica Lichtenstein, 1822

Gobius tajasica Lichtenstein, 1822: 273. Type locality: Brazil. Neotype: ANSP 84175, designated by Watson (1996:13), but a syntype or holotype may exist as ZMB 2036 (1).

Euctenogobius latus O'Shaughnessy, 1875: 146. Type locality: Bahia, Brazil. Holotype: BMNH 1862.11.23.42.

Suiboga travassosi Pinto, 1960: 2, fig. 1. Type locality: Rio Pituaçu, cidade de Salvador, estado da Bahia, Brasil. Holotype: MNRJ 6196.

Maximum length: 16.2 cm SL

Distribution: South America: Coastal rivers of Brazil from Piauí to Santa Catarina States; fresh and brackish water.

Countries: Brazil

Remarks and References: Species revised by Watson (1996: 13).

Awaous flavus Valenciennes, 1837

Gobius flavus Valenciennes in Cuvier & Valenciennes, 1837: 60. Type locality: Suriname. Holotype: MNHN A-1344.

Euctenogobius badius Gill, 1859: 47. Type locality: Amazon R., South America. Holotype: USNM 6091.

Euctenogobius strigatus O'Shaughnessy, 1875: 145. Type locality: Surinam. Holotype: BMNH 870.3.10.54.

Gobius kraussii Steindachner, 1879: 134, pl. 2 (figs. 2-2a). Type locality: Mouth of Maroni R., Suriname. Neotype: MNHN A.1334, designated by Watson & Horsthemke (1995: 84).

Awaous decemlineatus Eigenmann, 1918: 686. Type locality: Quibdo [Colombia]. Holotype: FMNH 58476 [ex CM 7478].

Maximum length: 8.2 cm SL

Distribution: South America: Atrato, and Magdalena Rivers, Orinoco River delta, Essequibo River, Maroni River, and near Belém; in coastal streams under tidal influence.

Countries: Brazil, Colombia, Guyana, Suriname, Venezuela

Remarks and References: Species monographed by Watson & Horsthemke (1995).

CTENOGOBIUS

Ctenogobius Gill, 1858: 374. Type species: *Ctenogobius fasciatus* Gill, 1858. Type by original designation. Gender: masculine.

Ctenogobius claytonii (Meek, 1902)

Gobius claytonii Meek, 1902: 121, pl. 31 lower. Type locality: Rio San Francisco, La Antigua, Vera Cruz, Mexico. Holotype: FMNH 3740.

Maximum length: 5.8 cm SL

Distribution: North, Central, and South America: Atlantic coast from Veracruz, Mexico to Venezuela

Countries: Belize, Colombia, Costa Rica, Guatemala, Honduras, Mexico, Nicaragua, Panama, Venezuela

Remarks and references: Considered a synonym of *Ctenogobius fasciatus* Gill, by Robins & Lachner (1966).

Ctenogobius fasciatus Gill, 1858

Ctenogobius fasciatus Gill, 1858: 376. Type locality: [Trinidad Island, West Indies]. Lectotype: USNM 7549, designated by Robins & Lachner (1966: 868).

Maximum length: 5.2 cm SL

Distribution: South America: Trinidad Island, probably fresh water.

Countries: Trinidad and Tobago

Remarks and references: The status of *Ctenogobius* is uncertain pending revision. The genus is treated as a synonym of *Gobionellus* Girard, 1858, but as a valid subgenus, by Robins & Lachner (1966), arguing that Gill (1858) was likely published after Girard (1858). The name *Ctenogobius* is used for numerous species in the Pacific and Indian Oceans and Asian freshwater.

Ctenogobius pseudofasciatus (Gilbert & Randall, 1971)

Gobionellus pseudofasciatus Gilbert & Randall in Gilbert & Kelso, 1971: 44, fig. 6A. Type locality: West side of Tortuguero Lagoon, Limón Prov., Costa Rica. Holotype: UF 13516.

Maximum length: 5.3 cm SL

Distribution: Central America: Atlantic slope of Costa Rica, in marine, brackish, and fresh water.

Countries: Costa Rica

DORMITATOR

Dormitator Gill, 1861: 44. Type species: *Eleotris somnulentus* Girard, 1858. Type by monotypy. Gender: masculine.

Lophodormitator Hoedeman, 1952: 197. Type species: *Dormitator lophocephalus* Hoedeman, 1951. Type by monotypy. Gender: masculine. Proposed originally as a subgenus of *Dormitator*.

Dormitator cubanus (Ginsburg, 1953)

Dormitator cubanus Ginsburg, 1953: 19. Type locality: San Cristobál, Cuba. Holotype: USNM 55668.

Maximum length: 9.4 cm SL

Distribution: Caribbean Islands: Cuba Island, in freshwater.

Countries: Cuba

Dormitator latifrons (Richardson, 1844)

Eleotris latifrons Richardson, 1844: 57, pl. 35 (figs. 4-5). Type locality: Pacific Ocean [e. Pacific]. Syntypes: (2) BMNH.

Hemieleotris carmenensis Nichols, 1952: 4. Type locality: Carmen I., Gulf of California, Mexico. Holotype: AMNH 18724.

Dormitator latifrons mexicanus Ginsburg, 1953: 20. Type locality: San Lucas, Lower California, Mexico. Holotype: USNM 7350.

Maximum length: 26 cm SL

Distribution: North, South and Central America: Along the Pacific

slope from California to Peru, in freshwater
 Countries: Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Mexico, Nicaragua, Panama, Peru, USA
 Common names: Pocoyo, Dormilón (Costa Rica).

***Dormitator maculatus* (Bloch, 1792)**

Sciaena maculata Bloch, 1792: 44, pl. 299 (fig. 2). No locality.
 Holotype: ZMB 2149.

Eleotris grandisquama Valenciennes in Cuvier & Valenciennes, 1837: 229. Type locality: America. Holotype: MNHN A-1564.

Eleotris mugiloides Valenciennes in Cuvier & Valenciennes, 1837: 226. Type locality: Martinique I., West Indies; Suriname; Mexico. Syntypes: MNHN A- 1596 (1) Martinique, A-1678 (1) Suriname, 2631 (1) Suriname; ZMB 2150 (1).

Eleotris sima Valenciennes in Cuvier & Valenciennes, 1837: 232. Type locality: Veracruz, Mexico. Syntypes: MNHN A-1666 (2).

Eleotris somnulentus Girard, 1858: 169. Type locality: Mouth of Rio Grande del Norte (Rio Bravo), Texas, U.S.A. Syntypes: MCZ 35971 [ex USNM 641] (5), USNM 641 (33).

Eleotris omocyanus Poey, 1860: 269. Type locality: Havana, Cuba. Syntypes: MCZ 13371-72 (1, 1).

Eleotris gundlachi Poey, 1860: 272. Type locality: Santiago, Cuba (fresh water). Syntypes: ?MCZ 13374 (1).

Philypnus lateralis Gill, 1860: 123. Type locality: Cabo San Lucas, Baja California, Mexico. Syntypes: USNM 2435-42 (7 or 8).

Dormitator microphthalmus Gill, 1863: 170. Type locality: (Pacific) Panama. Holotype: USNM 4953..

Dormitator lineatus Gill, 1863: 271. Type locality: Savannah, Georgia, U.S.A. Holotype: USNM (apparently lost).

Dormitator macrophthalmus Puyo, 1944: 231, fig. 2. Type locality: Tonate. Holotype: whereabouts unknown.

Dormitator lophocephalus Hoedeman, 1951: 4, fig. 2. Type locality: Dutch Guiana (a ditch, some miles south of Paramaribo). Holotype: ZMA 100061a.

Maximum length: 38 cm TL

Distribution: North, South and Central America: Along the Atlantic slope from North Carolina to southeastern Brazil, in freshwater.

Countries: Bahamas, Belize, Brazil, Colombia, Costa Rica, Cuba, French Guiana, Guatemala, Guyana, Jamaica, Martinique, Mexico, Nicaragua, Panama, Puerto Rico, Surinam, Trinidad and Tobago, USA, Venezuela

Common names: Fat sleeper (Belize), Guarasapa, Pipón (Costa Rica), Gobie (French Guiana)

Remarks and References: *Dormitator maculatus* is frequently confused with *Gobiomorus maculatus* in secondary literature, probably because of the identity in species epithet.

ELEOTRIS

Gobiomoroïdes La Cepède, 1800: 592. Type species: *Gobiomoroïdes piso* La Cepède, 1800 (= *Gobius pisonis* Gmelin, 1789). Type by monotypy. Gender: masculine.

Eleotris Schneider, 1801: 65. Type species: *Gobius pisonis* Gmelin, 1789. Type designated by ICZN by use of plenary powers; on Official List (Opinion 93, Direction 56). *Eleotris* Gronow, 1763 placed on Official Index (Direction 56) as a name published in a rejected work. Gender: feminine.

Epiptthalmus Rafinesque, 1815: 86. Type species: *Gobiomoroïdes piso* La Cepède, 1800 (= *Gobius pisonis* Gmelin, 1789). Type by being a replacement name. As “*Epiptthalmus* R. [Rafinesque] *Gobiomoroïdes* Lac. [La Cepède].” Unneeded replacement for and objective synonym of *Gobiomoroïdes* La Cepède, 1800. Gender: masculine.

Culius Bleeker, 1856: 385, 411. Type species: *Cheilodipterus culius* Hamilton, 1822. Type by absolute tautonymy, not *fuscus* = *nigra* as designated by Bleeker (1874: 303). Gender: masculine.

Eleotris (*Giuris*) Sauvage, 1880: 54. Type species: *Eleotris* (*Giuris*) *vanicolensis* Sauvage, 1880. Type by subsequent designa-

tion by Jordan (1919:401). Appeared without description with four species of *Eleotris*. Gender: masculine.

Eleotris (*Kieneria*) Maugé, 1984: 98. Type species: *Eleotris* (*Kieneria*) *vomerodontata* Maugé, 1984. Type by original designation. Gender: feminine.

***Eleotris amplyopsis* (Cope, 1871)**

Culius amplyopsis Cope, 1871: 473. Type locality: Suriname. Syntypes: ANSP 10577-79 (3).

Eleotris isthmensis Meek & Hildebrand, 1916: 359. Type locality: Mindi, Canal Zone, Panama. Holotype: FMNH 8951.

Maximum length: 8 cm SL

Distribution: North, Central, and South America: Atlantic slope, from South Carolina to French Guiana.

Countries: Belize, Costa Rica, Guyana, French Guiana, Panama, Surinam, Trinidad and Tobago, USA, Venezuela

Common names: Large-scaled spinycheek sleeper (Belize), Pez perro, Guabina, Lucia (Costa Rica).

***Eleotris picta* Kner, 1863**

Eleotris picta Kner, 1863: 223, fig. 6. Type locality: Rio Bayano, Panama. Syntypes: NMW 76866 (1).

Culius aequidens Jordan & Gilbert, 1882: 461. Type locality: Mazatlán, Sinaloa, w. Mexico. Syntypes: USNM 28268 (1, apparently lost), 29240 (2, apparently lost).

Maximum length: 32 cm SL.

Distribution: North, Central, and South America: Pacific slope, from California to Peru and the Galapagos Archipelago.

Countries: Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama, Peru, USA.

Common names: Vieja (Costa Rica).

***Eleotris pisonis* (Gmelin, 1789)**

Gobius pisonis Gmelin, 1789: 1206. Type locality: America australi. No types known, based on Gronovius (1756), n. 168, and Amore pixuma in Marcgravius (in de Laet, 1648).

Gobius Amorea Walbaum, 1792: 205. Type locality: Sub zona torrida. No types known, based on Gronovius (1756), n. 168, *Gobius pisonis* Gmelin, 1789, and Amore pixuma in Marcgravius (in de Laet, 1648), may be a replacement name for *Gobius pisonis* Gmelin.

Eleotris gyrinus Valenciennes in Cuvier & Valenciennes, 1837: 220, pl. 356. Type locality: Saint Dominique; Martinique I., West Indies; Artibonite R., Suriname; Mexico. Syntypes: MNHN A-1597 (1) Martinique, MNHN A-1672 (1) Suriname, MNHN A-1673 (3) Suriname, MNHN A-1693 (1) Suriname, MNHN A-1698 (3) Saint Domingo.

Eleotris carvalhonis Starks, 1913: 65, pl. 9. Type locality: Lake Papary, Brazil. Holotype: SU 22215.

Maximum length: 12 cm SL

Distribution: North, Central, and South America: Atlantic slope, from Florida to Brazil, in fresh and brackish water.

Countries: Bahamas, Bermuda, Brazil, Dominican Republic, Colombia, Costa Rica, Ecuador, French Guiana, Guyana, Guatemala, Martinique (France), Mexico, Nicaragua, Panama, Puerto Rico, Surinam, Trinidad and Tobago, USA Common names: Small-scaled spinycheek sleeper (Belize), Pez perro (Costa Rica), Gobie (French Guiana).

***Eleotris tecta* Bussing, 1996**

Eleotris tecta Bussing, 1996: 252, fig. 1. Type locality: Quebrada Banegas, trib. of Río Rincón, 3 km southwest of Rincón, upper Golfo Dulce, 8°40'20"N, 83°31'10"W, Pacific coast of Costa Rica, below elev. of 10 m. Holotype: LACM 45893-1.

Maximum length: 8 cm SL.

Distribution: Central America: Pacific slope, from tributaries to the Golfo Dulce, Costa Rica, to Puerto Utria and Gorgona Island, Colombia.

Countries: Colombia, Costa Rica

Common names: Pez perro (Costa Rica)

GOBIOIDES

Cayennia Sauvage, 1880: 57. Type species: *Cayennia guichenoti* Sauvage, 1880. Type by monotypy. Gender: feminine.

Gobioides La Cepède, 1800:576. Type species: *Gobioides broussonnetii* La Cepède, 1800. Type by subsequent designation by Bleeker (1874: 329). Gender: masculine.

Ognichodes Swainson, 1839: 183, 278. Type species: *Gobioides broussonnetii* La Cepède, 1800. Type by monotypy. Gender: masculine.

Paratyntlastes Giltay, 1935: 11. Type species: *Paratyntlastes africanus* Giltay, 1935. Type by original designation. Gender: masculine.

Plecopodus Rafinesque, 1815: 87. Type species: *Gobioides broussonnetii* La Cepède, 1800. Type by being a replacement name. As "*Plecopodus* R. [Rafinesque] *Gobioides* Lac. [Lacepède]." An available replacement name (unnneeded) for *Gobioides* La Cepède, 1800. Gender: masculine.

Amblyopus (*Tyntlastes*) Günther, 1862: 194. Type species: *Amblyopus sagitta* Günther, 1862. Type by monotypy. Gender: masculine.

Gobioides broussonnetii La Cepède, 1800

Gobioides Broussonnetii La Cepède, 1800: 576, pl. 17 (fig. 1) Type locality: No locality stated [? Surinam]. Holotype: MNHN 4209.

Gobius brasiliensis Schneider, 1801: 69. Type locality: Brazil. No types known.

Gobius oblongus Schneider, 1801: 548. Type locality: No locality, based on La Cepède, 1800. Possible types: MNHN 4209 (1).

Cepola unicolor Gray, 1854: 188. Type locality: Indian Ocean at Ambon I., Moluccas Is., Indonesia; Mediterranean Sea. Syntypes: BMNH 1853.11.12.81 (1).

Gobioides barreto Poey, 1860: 282. Type locality: Cuba. Syntypes and/or Poey specimens: MCZ 13246 (1), ZMB 5940 (1).

Amblyopus mexicanus O'Shaughnessy, 1875: 147. Type locality: Mexico. Holotype: BMNH uncat.

Cayennia guichenoti Sauvage 1880: 57. Type locality: Cayenne, French Guiana. Holotype: MNHN 6200.

Maximum length: 46 cm SL.

Distribution: North, Central, and South America; Caribbean Islands: Along the coast of Gulf of Mexico; Cuba and Puerto Rico; coast of Colombia, Venezuela, Guyana, Surinam, French Guiana, and Brazil south to Rio Grande do Sul State; brackish and, rarely, fresh water.

Countries: Belize, Brazil, Colombia, Cuba, French Guiana, Guiana, Mexico, Puerto Rico, USA, Venezuela

Remarks and references: Species revised by Murdy (1998: 129).

Common names: Violet goby (Belize)

Gobioides grahamae (Palmer & Wheeler, 1995)

Gobioides unicolor Palmer, 1952: 53. Type locality: Marajo Island, Brazil. Holotype: BMNH 1925.10.28.465.

Gobioides grahamae Palmer & Wheeler, 1955: 68. Type locality: Marajo Island, Brazil. Holotype: BMNH 1925.10.28.465. Replacement name for *Gobioides unicolor* Palmer, 1952, preoccupied in *Gobioides* by *Cepola unicolor* Gray.

Maximum length: 17 cm SL.

Distribution: South America: Atlantic coast and river mouths from Guyana to Marajó Island, in brackish and freshwater.

Countries: Brazil, French Guiana, Guyana, Surinam

Remarks and references: Species revised by Murdy (1998: 126).

Gobioides peruanus (Steindachner, 1880)

Amblyopus (*Gobioides*) *peruanus* Steindachner, 1880: 94, pl. 2 (fig. 2). Type locality: Guayaquil, Ecuador. Holotype: NMW 76499.

Maximum length: 26 cm SL.

Distribution: North, Central, and South America: Pacific coast from southern Mexico to northern Peru, in brackish and freshwater

Countries: Costa Rica, Ecuador, Mexico, Panama, Peru.

Remarks and references: Species revised by Murdy (1998: 128).

GOBIOMORUS

Gobiomorus La Cepède, 1800: 583. Type species: *Gobiomorus dormitor* La Cepède, 1800. Type by subsequent designation. Type designated by Jordan & Gilbert (1883:572). Gender: masculine.

Philypnus Valenciennes in Cuvier & Valenciennes, 1837:255. Type species: *Platycephalus dormitator* Schneider, 1801. Type by monotypy. Gender: masculine.

Alvarius Girard, 1859: 101. Type species: *Alvarius lateralis* Girard, 1859. Type by monotypy. Gender: masculine.

Lembus Günther, 1859: 505. Type species: *Lembus maculatus* Günther, 1859. Type by monotypy. Gender: masculine.

Gobiomorus dormitor La Cepède, 1800

Gobiomorus dormitor La Cepède, 1800: 583. Type locality: Amérique méridionale. No types known.

Platycephalus dormitator Schneider, 1801: 60, pl. 12. Type locality: Martinique I., West Indies. No types known.

Alvarius lateralis Girard, 1859: 101. Mouth of Rio Grande del Norte (Rio Bravo), Texas, U.S.A. Syntypes: whereabouts unknown.

Eleotris longiceps Günther, 1864: 151. Type locality: Lake Nicaragua, Nicaragua. Holotype: BMNH 1864.1.26.207.

Maximum length: 60 cm TL

Distribution: North, Central, and South America and Caribbean Islands: Atlantic slope, from Florida to Suriname

Countries: Anguilla, Antigua and Barbuda, Aruba, Bahamas, Barbados, Belize, Cayman Islands, Colombia, Costa Rica, Cuba, Curaçao, Dominica, Dominican Republic, Grenada, Guadeloupe, Guatemala, Guyana, Haiti, Jamaica, Martinique, Mexico, Montserrat, Nicaragua, Panama, Puerto Rico, Saint Kitts and Nevis, Saint Lucia, Saint Vincent, Surinam, Trinidad and Tobago, Turks and Caicos Islands, USA, US Virgin Islands Venezuela, Virgin Islands

Common names: Bigmouth sleeper (Belize), Guavina, Bocón (Costa Rica), Guavina (Puerto Rico), Guabine, Giant Goby (Trinidad and Tobago).

Gobiomorus maculatus (Günther, 1859)

Lembus maculatus Günther, 1859: 505. Type locality: Andes of Ecuador. Holotype: BMNH 1860.6.16.131.

Eleotris lembus Günther, 1861: 121. Type locality: Western Ecuador. Holotype: BMNH 1860.6.16.131. Replacement name for *Lembus maculatus* Günther, 1859, preoccupied in *Eleotris* by *Sciaena maculata* Bloch, 1792, now in *Dormitator*.

Philypnus lateralis Gill, 1860: 123. Type locality: Cabo San Lucas, Baja California, Mexico. Syntypes: USNM 2435-42 (7 or 8).

Maximum length: 27 cm SL.

Distribution: North, Central, and South America: Pacific slope, from the Yaquí River, Mexico, to Peru, in fresh and brackish water.

Countries: Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama

Common names: Guavina (Costa Rica)

Gobiomorus polylepis Ginsburg, 1953

Gobiomorus polylepis Ginsburg, 1953: 20. Type locality: Colima, Mexico. Holotype: USNM 130917.

Maximum length: 28 cm SL

Distribution: North and Central America: Pacific slope, from Tepic to Puerto Ángel, Mexico, and from the Pozo Salado River to the

Jicote River, Costa Rica.
Countries: Costa Rica, Mexico.

GOBIOSOMA

Gobiosoma Girard, 1858: 169. Type species: *Gobiosoma molestum* Girard, 1858. Type by subsequent designation. Type apparently designated first by Bleeker (1874: 310). Gender: neuter.

Garmannia Jordan & Evermann in Jordan, 1895: 495. Type species: *Gobius paradoxus* Günther, 1861. Type by original designation. Gender: feminine.

Gerhardinus Meek & Hildebrand, 1928: 889. Type species: *Gerhardinus nudus* Meek & Hildebrand, 1928. Type by original designation. Gender: masculine.

Gobiosoma (Dilepidion) Ginsburg, 1933: 17. Type species: *Gobiosoma ginsburgi* Hildebrand & Schroeder, 1928. Type by original designation. Gender: neuter.

Garmannia (Gobiculina) Ginsburg, 1944: 380. Type species: *Garmannia homochroma* Ginsburg, 1939. Type by original designation. Gender: feminine.

Garmannia (Gobiohelpis) Ginsburg, 1944: 380. Type species: *Garmannia spes* Ginsburg, 1939. Type by original designation. Gender: masculine.

Garmannia (Gobiolepis) Ginsburg, 1944: 379. Type species: *Garmannia hildebrandi* Ginsburg, 1939. Type by original designation. Gender: feminine.

Austrogobius de Buen, 1950: 22. Type species: *Gobiosoma parri* Ginsburg, 1933. Type by monotypy. Gender: masculine.

***Gobiosoma yucatanum* Dawson, 1971**

Gobiosoma (Garmannia) yucatanum Dawson, 1971: 433, fig. 1. Type locality: Quintana Roo, south side of harbor of Cd. Chetumal, Mexico, to 1 m. Holotype: USNM 205368.

Maximum length: 2.6 cm

Distribution: North and Central America: Atlantic slope from Quintana Roo, Mexico, south to Brus Lagoon, Honduras, mostly brackish, rarely fresh water

Countries: Belize, Honduras, Mexico

Common names: Yucatan goby (Belize)

EVORTHODUS

Evorthodus Gill, 1859:195. Type species: *Evorthodus breviceps* Gill, 1859. Type by monotypy. Gender: masculine.

Mugilostoma Hildebrand & Schroeder, 1928:327. Type species: *Mugilostoma gobio* Hildebrand & Schroeder, 1928. Type by original designation. Gender: neuter.

***Evorthodus lyricus* (Girard, 1858)**

Gobius lyricus Girard, 1858: 169. Type locality: Brazos Santiago, Texas, U.S.A. Lectotype: USNM 646, designated by Ginsburg (1931:120).

Evorthodus breviceps Gill, 1859: 195. Type locality: Near the mouth of a river near Pitch Lake, Trinidad I., West Indies. Holotype: USNM 34456

Smaragdus costalesi Poey, 1860: 280. Type locality: Havana, Cuba. Holotype: MCZ 13109.

Gobius parvus Meek, 1902: 121, pl. 31 top. Type locality: Río San Francisco at La Antigua, Veracruz, Mexico. Holotype: FMNH 3738. Permanently invalid; preoccupied by *Gobius parvus* Nardo, 1824.

Ctenogobius curtisi Fowler, 1952: 108, pl. 21 (figs. 8-9). Type locality: Port-au-Prince, Haiti, West Indies. Holotype: ANSP 72128.

Maximum length: 9 cm TL

Distribution: North, Central, and South America: Atlantic slope, from Maryland south to Suriname, mainly estuarine or brackish, also marine, rarely freshwater.

Countries: Belize, Cayman Islands, Costa Rica, Cuba, Dominican

Republic, Haiti, Jamaica, Puerto Rico, Trinidad and Tobago, Turks and Caicos Islands, US Virgin Islands, USA, Venezuela
Common names: Lyre goby (Belize)

HEMIELEOTRIS

Hemieleotris Meek & Hildebrand, 1916: 364. Type species: *Eleotris latifasciatus* Meek & Hildebrand, 1912. Type by original designation. Gender: feminine.

***Hemieleotris latifasciata* Meek & Hildebrand, 1912**

Eleotris latifasciatus Meek & Hildebrand, 1912: 68. Type locality: Río Cárdenas at Corozal, Panama. Holotype: FMNH 7575.

Maximum length: 8 cm SL

Distribution: North, Central, and South America: Pacific slope, from San Juan del Sur, Nicaragua, to southern Colombia.

Countries: Colombia, Costa Rica, Mexico, Nicaragua, Panama.

Common names: Guavinita

***Hemieleotris levis* Eigenmann, 1918**

Hemieleotris levis Eigenmann, 1918: 684. Type locality: Pools in Buenaventura [Colombia]. Holotype: CAS 78976 [ex IU 13865].

Maximum length: 4.8 cm SL

Distribution: South America: Pacific coast of Colombia, from Buenaventura north to the Baudó River, in fresh water.

Countries: Colombia

LEPTOPHILYPNUS

Leptophilypnus Meek & Hildebrand, 1916: 361. Type species: *Leptophilypnus fluviatilis* Meek & Hildebrand, 1916. Type by original designation. Gender: masculine.

Microeleotris Meek & Hildebrand, 1916: 363. Type species: *Microeleotris panamensis* Meek & Hildebrand, 1916. Type by original designation. Gender: feminine.

***Leptophilypnus fluviatilis* Meek & Hildebrand, 1916**

Leptophilypnus fluviatilis Meek & Hildebrand, 1916: 361. Type locality: Mindi, Canal Zone, Panama. Holotype: FMNH 8952.

Maximum length: 6.4 cm SL

Distribution: Central America: Atlantic slope of central Panama, in brackish water.

Countries: Panama

***Leptophilypnus mindii* (Meek & Hildebrand, 1916)**

Microeleotris mindii Meek & Hildebrand, 1916: 364. Type locality: Mindi, Canal Zone, Panama. Holotype: FMNH 8954.

Maximum length: 5.6 cm SL

Distribution: Central America: Atlantic slope of central Panama, in brackish water.

Countries: Panama.

***Leptophilypnus panamensis* (Meek & Hildebrand, 1916)**

Eleotris macrolepis Meek, 1914: 130. Type locality: Jesus María, Costa Rica. Holotype: FMNH 7775. Preoccupied in *Eleotris* by *Culius macrolepis* Bleeker, 1875.

Microeleotris panamensis Meek & Hildebrand, 1916: 363. Type locality: Río Juan Díaz, Panama. Holotype: FMNH 8953.

Maximum length: 5.8 cm SL

Distribution: Central America: Pacific slope, in the Chorrera and Juan Díaz Rivers in Panama, and Jesús María in Costa Rica, in fresh water.

Countries: Costa Rica, Panama.

Remarks and References: Composite illustration of holotype and paratype in Grey (1947: fig. 49). Synonymy follows Grey (1947:167), with *M. panamensis* replacing *E. macrolepis*, supported by the current ICZN (1999), Art. 60.2, violating Art. 59.2, but conserved by Art. 59.3.

MICROPHILYPNUS

Microphilypnus Myers, 1927:133. Type species: *Microphilypnus ternetzi* Myers, 1927. Type by original designation. Gender: masculine.

Microphilypnus amazonicus Myers, 1927

Microphilypnus amazonicus Myers, 1927: 134. Type locality: Brazil: Igarapé do Mai Joana, Manáos. Holotype: CAS 76819 [ex IU 17703].

Maximum length: 2.4 cm SL

Distribution: South America: Lower Negro River basin.

Countries: Brazil

Microphilypnus macrostoma Myers, 1927

Microphilypnus macrostoma Myers, 1927: 135. Type locality: Brazil: Igarapé do Mai Joana, Manáos. Holotype: CAS 76820 [ex IU 17704].

Maximum length: 2 cm SL

Distribution: South America: Lower Negro River basin.

Countries: Brazil

Microphilypnus ternetzi Myers, 1927

Microphilypnus ternetzi Myers, 1927: 134. Type locality: Venezuela: Caño de Quiribana, near Caicara. Syntypes: CAS 76818 [ex IU 17702] (2), MCZ 31710 [as 31582 in original description] (1), SU 18080 (2).

Maximum length: 2 cm SL

Distribution: South America: Middle Orinoco River basin.

Countries: Venezuela

SICYDIUM

Sicydium Valenciennes in Cuvier & Valenciennes, 1837: 167.

Type species: *Gobius plumieri* Bloch, 1786. Type by subsequent designation. Type designated by Gill (1861: 101). Gender: neuter
Sicya Jordan & Evermann, 1896: 456. Type species: *Sicydium gymnogaster* Ogilvie-Grant, 1884. Type by original designation. Gender: feminine. Originally proposed as a subgenus of *Cotylopus*.

Sicyosus Jordan & Evermann, 1898: 2867. Type species: *Sicydium gymnogaster* Ogilvie-Grant, 1884. Type by being a replacement name. Replacement for *Sicya* Jordan & Evermann, 1896, apparently preoccupied in Lepidoptera. Gender: masculine. Originally proposed as a subgenus of *Cotylopus*.

Oreogobius Boulenger, 1899: 125. Type species: *Oreogobius rosenbergii* Boulenger, 1899. Type by monotypy. Gender: masculine.

Sicydium adelum (Bussing, 1996)

Sicydium adelum Bussing, 1996: 820, fig. 1. Type locality: Río Schui, trib. of Río Telire, Sixalo drainage near Costa Rica-Panama border, 9°30'06"N, 83°00'04"W, elev. 90 m. Holotype: LACM 45941-1.

Maximum length: 7.5 cm SL.

Distribution: Central America: Atlantic slope of Costa Rica, in fresh water.

Countries: Costa Rica.

Remarks and References: Redescription, with illustration and map in Bussing (1998: 400).

Common names: Chupapiedra, Tití (Costa Rica).

Sicydium altum (Meek, 1907)

Sicydium altum Meek, 1907: 149. Type locality: Turrialba, Costa Rica. Holotype: FMNH 6034.

Maximum length: 14 cm SL.

Distribution: Central America: Pacific slope of Costa Rica, in fresh water.

Countries: Costa Rica.

Remarks and References: Redescription, with illustration and map

in Bussing (1998: 402).

Common names: Chupapiedra, Tití (Costa Rica).

Sicydium buscki Evermann & Clark, 1906

Sicydium buscki Evermann & Clark, 1906: 854, fig. 3. Type locality: small brook in San Francisco Mountains, Santo Domingo [Dominican Republic]. Holotype: USNM 53276.

Maximum length: 6 cm TL

Distribution: Caribbean Islands: Hispaniola Island, in fresh water.

Countries: Dominican Republic

Sicydium gilberti Watson, 2000

Sicydium gilberti Watson, 2000: 11, fig. 6. Type locality: Río Baonico, 20 m from mouth, 1.5 km northeast of La Cienaga, 15 km south Barahona, Dominican Republic. Holotype: SMNS 17309.

Distribution: Caribbean Islands: Hispaniola Island, in fresh water.

Countries: Dominican Republic

Sicydium gymnogaster Ogilvie-Grant, 1884

Sicydium gymnogaster Ogilvie-Grant, 1884: 158, pl. 11 (fig. 2). Type locality: Misantla, Veracruz, Mexico. Syntypes: BMNH 1873.6.5.2-4 (3) Vera Cruz, BMNH 1880.4.7.18-20 (3) s. Mexico.

Distribution: North and Central America: Atlantic slope rivers from Misantla, Veracruz, Mexico, to Honduras, in fresh water

Countries: Honduras, Mexico

Sicydium hildebrandi Eigenmann, 1918

Sicydium hildebrandi Eigenmann, 1918: 685. Type locality: Cisnero, Rio Dagua [Colombia]. Holotype: FMNH 58465 [ex CM 7466].

Maximum length: 11 cm SL

Distribution: South America: Dagua River basin, in fresh water.

Countries: Colombia

Sicydium multipunctatum Regan, 1905

Cotylopus punctatus Regan, 1905: 362. Type locality: Tequixistlan, Oaxaca, Mexico. Holotype: BMNH 1906.6.1.421. Secondly preoccupied in *Sicydium* by *Sicydium punctatum* Perugia, 1896, replaced by *Sicydium multipunctatum* Regan, 1906.

Sicydium multipunctatum Regan, 1906: 11, pl. 1 (fig. 1). Type locality: Tequixistlan, Oaxaca, Mexico. Holotype: BMNH 1906.6.1.421. Replacement name for *Cotylopus punctatus* Regan, 1905, secondarily preoccupied by *Sicydium punctatum* Perugia, 1896 when both are in *Sicydium*.

Distribution: North and Central America: Pacific slope, from Mazatlán, Mexico to the Choluteca River Honduras

Countries: El Salvador, Guatemala, Honduras, Mexico

Sicydium plumieri (Bloch, 1786)

Gobius plumieri Bloch, 1786: 154, pl. 178 (fig. 3). Type locality: Antilles. No types known.

Sicydium siragus Poey, 1860: 278. Type locality: Fresh waters of Santiago, Cuba. Syntypes: MCZ 13328 (2).

Sicydium antillarum Ogilvie-Grant, 1884: 157, pl. 12 (fig. 3). Type locality: Barbados, West Indies. Holotype: BMNH 1850.7.27.6.

Sicydium vincente Jordan & Evermann, 1898: 2207. Type locality: St. Vincent I., West Indies. Syntypes: (several hundred) MCZ 52287-89 (1, 1, 21), 26108 (100), 52286 (17); USNM 120292 [ex MCZ 26108] (10).

Sicydium caguitae Evermann & Marsh, 1899: 355. Type locality: Río de Caguaita at Caguas [Puerto Rico]. Holotype: USNM 49364.

Maximum length: 11 cm TL

Distribution: Caribbean Islands: Antilles south of Cuba, in fresh water

Countries: Puerto Rico, Barbados, Cuba, Jamaica, Martinique, Guadeloupe, Saint Vincent

Common names: Guavina (Puerto Rico)

***Sicydium punctatum* Perugia, 1896**

Sicydium punctatum Perugia, 1896: 18. Type locality: Martinique I., West Indies. Holotype MSNG 6821.

Sicydium montanum Hubbs, 1920: 89. Type locality: Mountain brook at Macuto, Caracas, Venezuela. Holotype: FMNH 9053.

Gobiosoma thomasi Fowler, 1949: 1, figs. Type locality: Rio Grande, Portland Parish, Jamaica. Holotype: ANSP 71841.

Maximum length: 8 cm SL

Distribution: South America and Caribbean Islands: Caribbean coast of Venezuela, Trinidad Island, West Indies; Dominica, Jamaica, Puerto Rico and Martinique, in fresh water

Countries: Dominica, Jamaica, Martinique, Puerto Rico, Trinidad and Tobago, Venezuela

***Sicydium rosenbergii* (Boulenger, 1899)**

Oreogobius rosenbergii Boulenger, 1899: 126. Type locality: Paramba, N.W. Ecuador, 3500 ft. altitude. Syntypes: BMNH 1899.6.29.26-27 (2).

Maximum length: 11 cm TL

Distribution: South America: Pacific slope of Ecuador, in the Parambas River, in fresh water.

Countries: Ecuador

***Sicydium salvini* Ogilvie-Grant, 1884**

Sicydium salvini Ogilvie-Grant, 1884: 159, pl. 12 (fig. 2). Type locality: Panama. Holotype: BMNH 1864.1.26.413.

Sicydium pittieri Regan, 1907: 260. Rio Grande de Térraba, Costa Rica. Syntypes: BMNH 1907.2.11.42-43 (2).

Maximum length: 14 cm SL.

Distribution: Central America: Pacific slope, from the Tamarindo River, Nicaragua, to the Cárdenas River, Panama, in fresh water.

Countries: Costa Rica, Nicaragua, Panama

Remarks and References: Redescription, with illustration and map in Bussing (1998: 405); synonymy of *S. pittieri* follows Bussing (1998: 405).

Common names: Chupapiedra, Tití (Costa Rica).

Family Achiridae (American soles)

Robson T. C. Ramos

The Achiridae are saltwater and freshwater flatfishes with the eyes on the right side, body rounded or ovate in lateral view in most species, including fins, and elongate in *Achiropsis nattereri*, *Apionichthys dumerili*, and one undescribed species referred to *Apionichthys*. The eyed-side lower lip has a conspicuous, variously fringed fleshy rim, which distinguish the species of this family from other sympatric flatfishes. The lower lip is internally strengthened by a cartilaginous piece positioned laterally to the dentary, the upper free half above the dentary dorsal margin; this cartilaginous piece, which is visible only by dissection or in cleared and stained preparations, is also present in other flatfish families, but clearly less developed than in achirids. The posterior nare forming a wide longitudinal slit above the posterior end of the upper lip, and hidden by the lower lip when the mouth is closed, is also a diagnostic external character for achirids. A similar character also appears in the Soleidae, but is never covered by lower lip in that family; soleids do not occur in the Neotropics. The anterior nare is tubular as in some other flatfish families. The margin of the preopercle is marked by a narrow naked area, particularly at its angle; this area is very narrow in adults and concealed by scales in juveniles of *Soleonassus*. The teeth are villiform, organized in a patch and present on the jaws only on the blind side, except for *Hypoclinemus mentalis*, which possesses teeth on the jaws of both eyed and blind sides. Dorsal fin extending forward onto the cranium up to the anterior end of the upper jaw, which is often covered by a fringed dermal flap projected from the anterior end of this fin. In *Achiropsis*, *Apionichthys*, *Pnictes*, and *Soleonassus* the anterior end of the dorsal fin and its corresponding supracranial area extend beyond and conceal the anterior margin of the mouth. The eyed-side pelvic fin is united to the anal fin by a membrane; both pelvic fins are enclosed in a single dermal envelope in *Gymnachirus* and *Soleonassus*, also united to the anal fin by a membrane; pelvic fins extending forward in *Achiropsis*, *Apionichthys*, *Pnictes*, and *Soleonassus*, the first pelvic-fin ray inserted just below the ventral end of the mandibular symphysis. The dorsal and anal fins are free from the caudal fin in most species, or united to the caudal fin by a narrow membrane in *Achiropsis*, *Apionichthys*, and *Pnictes*. Pectoral fins often minute, present on one or both sides, or absent. Lateral line frequently ornamented with dermal processes or ramified tubes, particularly on the head. Scales ctenoid, those of the head external margin larger than those on the body, and a little turned to its center; scales absent in *Gymnachirus*, except for remains of lateral line tubes on head and body. Medium size achirid species are 15 centimeters long, the largest species occurring in freshwater. Achirids are carnivores, eating fishes and benthic invertebrates. Fully developed gonads were examined in specimens 2.5 centimeters SL, from a species which grows up to 12 centimeters. Common names of these fishes include American Soles (English), Lenguado (Spanish), and Linguado (a general Portuguese word for Pleuronectiformes). In several Brazilian regions they are also known as Solha, Sôia, Sôia, Tapa, or Armaçã. Presently, nine genera and 28 species are recognized (Nelson, 1994). No recent revision is available. Chabanaud (1928a) published a review of achirids, but it is not a comprehensive work. The achirid genera are presently being reviewed by the author, and synonymization of some genera and species may be expected. Also, additional species restricted to freshwater and referred to *Apionichthys*, and marine species referred to *Trinectes* and *Achirus* will be described.

The assemblage that composes the family Achiridae was traditionally treated as part of the Soleidae, in subfamilial rank. Jordan (1923) proposed family rank to that assemblage. This view was subsequently supported by Chabanaud in several papers (e.g., 1935, 1939), but not by Greenwood et al. (1966). Recently, Chapleau and Keast (1988) proposed the monophyly of the achirids based on five osteological cranial characters, but rejected the traditional view of a monophyletic Soleidae (Soleinae + Achirinae), previously supported by other authors. A cladistic study of intergeneric relationships, also in progress by the present author, detected eight new exclusive characters to support the monophyly proposed by Chapleau and Keast (1988) for the achirids.

Achirids are mainly shore fishes restricted to both sides of Americas, including the subtropical, southern portion of Nearctic region, and all the Neotropics, except for its extreme south. The genera *Achiropsis*, *Apionichthys*, *Pnictes*, and *Soleonassus* are restricted to freshwater in northern South American rivers, except for *Apionichthys dumerili*, which occurs in estuarine areas of the Orinoco, Corantjin, Oyapock, Amazon and Grajaú basins, also entering lowland freshwaters as do some other marine achirid species, and in marine areas under the influence of those rivers. Two species of *Catathyridium* are restricted to the Paraguay-Paraná, and Uruguay systems, and one species (*C. garmani*) occurs in estuarine and marine coastal areas of Southeastern Brazil, including salt and freshwater portions of Lagoa dos Patos, coastal areas of Uruguay and northern Argentina. Some marine species of the genera *Achirus* and *Trinectes* occasionally enter freshwaters.

ACHIROPSIS

Achiropsis Steindachner, 1876: 161. Type species: *Solea (Achiropsis) nattereri* Steindachner, 1876. Type by monotypy. Gender: feminine.

***Achiropsis nattereri* Steindachner, 1876**

Solea (Achiropsis) nattereri Steindachner, 1876: 158. Type locality: Rio negro. Holotype: NMW 14001.

Achiropsis normani Chabanaud, 1928a: 641. Type locality: Rio Jurza [= Juruá River, Brazil]. Holotype: BMNH 1897.12.10.5.

Maximum length: 23.4 cm

Distribution: South America: Amazon basin; there are no records from rivers Xingu, Tapajós, and Madeira.

Countries: Brazil, Ecuador, Peru

Remarks and references: See Chabanaud (1938) for a more detailed description; for synonymization of *Achiropsis normani* see Ramos (1998)

Common names: Lenguado (Ecuador, Peru), Linguado (Brazil)

ACHIRUS

Achirus La Cepède, 1802: 658. Type species: *Pleuronectes achirus* Linnaeus, 1758. Type by absolute tautonymy; *P. achirus* included in the synonymy of *A. fasciatus* La Cepède. Gender: masculine.

***Achirus achirus* (Linnaeus, 1758)**

Pleuronectes achirus Linnaeus, 1758: 268. Type locality: Surinami. No types known.

Maximum length: 18 cm

Distribution: Western Atlantic: Probably Venezuela to northeastern Brazil.

Countries: Brazil, Suriname, Venezuela

Remarks and references: The distribution of *Achirus achirus* is stated by Chabanaud (1928b: 23) as "West coast of Americas, including West Indies. Cited from 7°N from 34°S", and Cervigon (1966: 812) as "north and east of Gulf of Mexico to Rio Grande do Sul State, Brazil" (data on both papers are coincident). Cervigón (1996: 16) states: "its distribution extends from Golfo de Paria to Amazonas." No papers dealing with Achiridae include reference to a precise collection of *A. achirus* in Gulf of Mexico or West Indies; Meek and Hildebrand (1928) do not cite this species for Panama. *Achirus achirus* was described from Suriname, and there are records from Venezuela, Suriname (the original description and other papers which refer to it), and Brazil (Figueirero & Menezes, 2000; Rosa, 1980). *Achirus achirus* certainly do not occur in southeastern South America (Figueirero & Menezes, 2000), the most southern collection was made in Paraíba State, northeastern Brazil (Rosa, 1980). The probable distribution of *A. achirus* is the coastal areas from Venezuela to northeastern Brazil, but further studies are necessary to map the distribution of this species. Like several achirid species, it is a marine species which occasionally enters freshwaters; there is at least on record of this species for freshwater (Tocantins River at Cameté, Pará State, Brazil). Ortega and Vari (1986) cite *A. achirus* for freshwaters of Peru (Amazon basin), but it is a misidentification, as this species does not occur in highland freshwaters. In this area *Hypoclinemus mentalis* occurs, which is frequently mistaken for *A. achirus*.

Common names: Lenguado (Venezuela), Linguado (Brazil), Solha (Brazil)

***Achirus novoae* Cervigón, 1982**

Achirus novoae Cervigón, 1982: 243, fig. 20. Type locality: La Lagunita Lake, near Bolívar, State of Bolívar, Venezuela. Holotype: FCLR 644.

Maximum length: 10.6 cm

Distribution: South America: Orinoco basin, including delta.

Countries: Colombia, Venezuela

Remarks and references: See Ramos (1998) for redescription and comparison with other species occurring in the same area.

Common names: Lenguado (Colombia, Venezuela)

Species inquirenda

Achirus errans Miranda Ribeiro, 1915: Heterostoma p. 23. Type locality: Rio Jaurú and Rio Paraguay. Syntypes: (2). Type not examined, literature information insufficient for assessing status of the species

APIONICHTHYS

Apionichthys Kaup, 1858: 104. Type species: *Apionichthys dumerili* Kaup, 1858. Type by monotypy. Gender: masculine.

Soleotalpa Günther, 1862: 489. Type species: *Soleotalpa unicolor* Günther, 1862. Type by monotypy. Gender: feminine.

***Apionichthys dumerili* Kaup, 1858**

Apionichthys dumerili Kaup, 1858: 104. Type locality: unknown. Syntypes: BMNH 1927.4.27.1.

Soleotalpa unicolor Günther, 1862: 489. Type locality: West Indies. Holotype: BMNH uncataloged.

Apionichthys ottonis Steindachner, 1868: 120. Type locality: Mittelmeer [Mediterranean Sea]. Syntypes: NMW 14122, NMW 14123.

Apionichthys nebulosus Peters, 1869: 709. Type locality: Suriname.

Apionichthys bleekeri Horst, 1879: 31. Type locality: unknown. Holotype: University of Utrecht (examined by Chabanaud (1928b)).

Maximum length: 12.4 cm

Distribution: South America: Estuarine areas of the Rivers Orinoco (Venezuela), Corantijn (Suriname), Oyapock, Amazon and Grajaú (Brazil), and from marine areas under influence of those rivers. Enters low land freshwaters - there are records from Jari (Brazil) and Corantijn rivers.

Countries: Brazil, French Guiana, Guyana, Suriname, Venezuela

Remarks and references: The description of the genus (Kaup, 1858) corresponds to that of the single valid species (translated to English in Günther (1862: 489), and to Portuguese in Miranda Ribeiro (1915: 30)). The type locality of *A. ottonis* is obviously in error.

Common names: Flounder (Guyana), Lenguado (Venezuela), Linguado (Brazil)

CATATHYRIDIDIUM

Catathyridium Chabanaud, 1928b: 28. Type species: *Solea jenynsii* Günther, 1862. Type by subsequent designation by Myers, 1929: 37. Gender: neuter.

***Catathyridium garmani* (Jordan, 1889)**

Achirus garmani Jordan in Jordan & Goss, 1889: 314. Type locality: Rio Grande do Sul, Brazil. Holotype: MCZ 11246.

Maximum length: 17 cm

Distribution: Southwest Atlantic: Estuarine and marine coastal areas of southeastern Brazil, including salt and freshwater portions of Laguna dos Patos basin, Uruguay, and northern Argentina.

Countries: Argentina, Brazil, Uruguay

Remarks and references: Jordan (in Jordan & Goss, 1889: 314) did not give a description, he just indicated that there was a new species and stated the number of the single type specimen (MCZ 11246). See Ramos (1998) for a description and synonymy.

Common names: Lenguado (Argentina, Uruguay), Linguado (Brazil)

***Catathyridium jenynsii* (Günther, 1862)**

Solea jenynsii Günther, 1862: 476. Type locality: Rio de la Plata. Holotype: BMNH 1917.7.25.3.

Achirus trichospilus Berg, 1895: 130. Type locality: Entre-Ríos, Argentina and Río Negro, Mercedes, Uruguay. Syntypes: MACN (2); MHNM.

Maximum length: 23.7 cm

Distribution: South America: Paraná and Uruguay River basins.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: Redescribed with synonymy in Ramos (1998).

Common names: Lenguado (Paraguay, Uruguay), Linguado (Brazil)

***Catathyridium lorentzii* (Weyenbergh, 1877)**

Achirus lorentzii Weyenbergh, 1877: 13, pl. 1. Type locality: Río Paraná, next to Santa Fé, and Río Uruguay, Argentina. Syntypes: (several) Mus. Nacional Argentina, Buenos Aires.

Hypoclinemus paraguayensis Chabanaud, 1928b: 35. Type locality: Río Paraguay, South America. Holotype: NMW.

Maximum length: 5.4 cm

Distribution: South America: Paraguay and Uruguay River basins.

Countries: Argentina, Brazil, Paraguay, Uruguay

Remarks and references: See Ramos (1988) for a redescription, synonymy, and discussion on new combination. Holotype of *Hypoclinemus paraguayensis* probably lost (pers. comm., Ernst Mikschi, NMW).

Common names: Lenguado (Argentina, Paraguay, Uruguay), Linguado (Brazil)

HYPOCLINEMUS

Hypoclinemus Chabanaud, 1928b: 32. Type species: *Solea mentalis* Günther, 1862. Type by subsequent designation by Myers (1929: 37). Gender: masculine.

***Hypoclinemus mentalis* (Günther, 1862)**

Solea mentalis Günther, 1862: 475. Type locality: River Capim (Para) [=Capim River, Pará, Brazil]. Syntypes: BMNH 1849.11.8:63-64.

Achirus hasemani Steindachner, 1915: 347. Type locality: Rio Branco at Conceição, Brazil. Holotype: NMW.

Maximum length: 21 cm

Distribution: South America: Amazon basin (there are records throughout the basin, except upper portion of Tapajós and Xingu rivers), Orinoco basin (upper tributaries: Guaviare, Casicare, Voutuari), and throughout the Essequibo River basin.

Countries: Colombia, Guyana, Peru, Venezuela

Remarks and references: See Ramos (1998) for redescription and synonymy.

Common names: Lenguado (Colombia, Peru, Venezuela), Linguado (Brazil)

PNICTES

Pnictes Jordan, 1918: 343. Type species: *Achiroopsis asphyxiatus* Jordan, 1889. Type by original designation. Gender: masculine.

***Pnictes asphyxiatus* (Jordan, 1889)**

Achiroopsis asphyxiatus Jordan in Jordan & Goss, 1889: 319. Type locality: Exact type locality unknown [probably Tocantins-Araguaia system, Goiás, Brazil]. Holotype: MCZ 11106.

Maximum length: 9.6 cm

Distribution: South America: Amazon basin (one record from Amazon River, and that of the holotype).

Countries: Brazil

Remarks and references: Original description translated into Portuguese by Miranda Ribeiro, 1915: 30). According to Higuchi (1992) the holotype was collected after the conclusion of the Thayer Expedition, for comparison with lower Tocantins River specimens. Isbrücker (1973: 174) suggests the type locality as "Rio Araguaia drainage, upper course of Rio Vermelho at Goiás (15°57'S 50°07'W)", but this has not been confirmed.

Common names: Linguado (Brazil), Sóia (Brazil)

SOLEONASUS

Soleonasmus Eigenmann, 1912: 528. Type species: *Soleonasmus finis* Eigenmann, 1912. Type by original designation. Gender: masculine.

***Soleonasmus finis* Eigenmann, 1912**

Soleonasmus finis Eigenmann, 1912: 528, pl. 70 (fig. 2). Type locality: Tumatumari [Guyana]. Holotype: FMNH 53965.

Maximum length: 8.8 cm

Distribution: South America: Potaro River basin in Essequibo River drainage, and middle to upper Amazon River basin.

Countries: Brazil, Guyana, Peru

Remarks and references: See Ramos (1998) for redescription.

Common names: Flounder (Guyana), Lenguado (Peru), Linguado (Brazil), Sóia (Brazil)

TRINECTES

Trinectes Rafinesque, 1832: 20. Type species: *Trinectes scabra* Rafinesque, 1832. Type by monotypy. Gender: masculine.

***Trinectes fluviatilis* (Meek & Hildebrand, 1928)**

Achirus fluviatilis Meek & Hildebrand, 1928: 1002, pl. 102 (fig. 2). Type locality: Rio Juan Diaz, Panama. Holotype: USNM 81667.

Maximum length: 5 cm

Distribution: Eastern Pacific: Costa Rica to Peru; enters freshwater.

Countries: Colombia, Costa Rica, Ecuador, Panama, Peru

Common names: Lenguado (Colombia, Costa Rica, Ecuador, Panama, Peru)

Family Tetraodontidae (Pufferfishes)

Sven O. Kullander

Pufferfishes, with about 125 species known to-date, are predominantly marine fishes, and most species occur in tropical seas. The name derives from their ability, as a defense behavior, to inflate themselves into a nearly globular shape by engulfing either air or water. Most puffers are mildly to strongly toxic, containing an alkaloid poison, tetraodotoxin, which accumulates particularly in the gonads, and which is acutely lethal if eaten. The body is naked, but commonly features small scales in the shape of prickles. The upper and lower jaw each has two strong teeth.

Several species are known from the coast of South and Central America, but only one species is confined to Neotropical freshwater (*Colomesus asellus*), and one more species, although coastal, occasionally enters freshwater (*C. psittacus*). Both *Colomesus* species are fairly small, and without commercial interest. The biology of the *Colomesus* species appears not to have been studied. The genus was extensively revised by Tyler (1964), with detailed discussion of nomenclatural problems and redescription of the genus and included species, and no significant information has been added since.

COLOMESUS

Batrachops Bibron, in Duméril, 1855: 280. Type species: *Tetrodon psittacus* Schneider, 1801, by monotypy. Gender: masculine. Preoccupied by *Batrachops* Heckel, 1840.

Colomesus Gill, 1855: 422. Type species: *Tetrodon psittacus* Schneider, 1801. Type by being a replacement name for *Batrachops* Bibron. Gender: masculine.

Colomesus asellus (Müller & Troschel, 1849)

Chelichthys asellus Müller & Troschel, 1849: 641. Type locality: im süßen Wasser des Barama. Holotype: not located. types known.

Maximum length: 12.8 cm SL.

Distribution: South America: Amazon River basin from Peru to Marajó Island, including tributaries Araguaia and Guaporé Rivers; Orinoco River basin near the mouth; Essequibo River basin.

Countries: Brazil, Guyana, Peru, Venezuela.

Colomesus psittacus (Schneider, 1801)

Tetrodon psittacus Schneider, 1801: 505, pl. 95. Type locality: mari Malabarico. Syntypes: ZMB 4297 (3)

Maximum length: 28.9 cm SL

Distribution: South America: Shallow marine waters, brackish, occasionally fresh water in river mouths along the Guianas to the Gulf of Paria and Trinidad Island.

Countries: French Guiana, Guyana, Suriname, Trinidad and Tobago, Venezuela.

SPECIES INQUIRENDAE

Tetrodon fasciatus Schneider, 1801: 508. Based on a drawing in Seba, 1758, pl. 24 (fig. 1). No type specimens. Questionably a synonym of *C. psittacus* fide Tyler (1964: 120).

Tetrodon semispinosus Fréminville, 1813: 253, pl. 4 (fig. 6). Type

locality: Saint Domingue. Syntypes: MNHN A-5257 (2). Questionably a synonym of *C. psittacus* fide Tyler (1964: 121).

Family Lepidosirenidae (Aestivating lungfishes)

Gloria Arratia

The South American dipnoans are represented by the monotypic family Lepidosirenidae (*Lepidosiren paradoxa*). The presence of a long ceratohyal in lepidosirenids is a unique feature among extant members of Dipnoi. Lepidosirenids have elongate bodies with long dorsal and anal fins formed by ceratotrichia and a “true” caudal fin (so-called in the literature as diphyercal condition) is missing. They have a reduced number of dorsal and anal ceratotrichia, and these rays are thin and weakly ossified in comparison to other dipnoans. The small, filament-like paired fins lack ceratotrichia but keep actinotrichia through growth. Lepidosirenids lack the cheek bones; they present unpaired vomerine teeth and the stem of the parasphenoid is extremely long, extending below the vertebral column. As in other dipnoans, they lack the premaxilla and maxilla and as well as the gular plates and branchiostegal rays. The large adductor mandibulae complex extends onto the cranial roof. They have paired functional lungs, but the larval stages possess, in addition, external gills. They may reach one-meter total length. Most of the knowledge on living dipnoans is based on the African and Australian ones. However, there are a few papers concerning the morphology and feeding of *Lepidosiren* (e.g., Bemis, 1984, 1987; Bemis & Lauder, 1986), and recently, new information on the vertebral column and its associated structures provides additional features separating *Lepidosiren* from other dipnoans (Arratia et al., 2001). The phylogenetic relationships of the Lepidosirenidae have been explored by Schultze and Marshall (1993).

Living members of the Lepidosirenidae are distributed in freshwaters of the Neotropical region in the Amazon basin (Brazil), Paraguay basin (Paraguay), and in Paraná river, Bermejo basin (Salta) and in Chaco (Argentina). Fossils of *Lepidosiren* cf. *paradoxa* are known from the Upper Cretaceous of Peru and the Upper Cretaceous-Paleocene of Bolivia and the modern *Lepidosiren paradoxa* is known from the Eocene of Argentina. In addition, in the past, another dipnoan family was living in South America, the Ceratodontidae. For information on fossil and extant South American dipnoans see Schultze (1992) and Arratia & Cione (1996).

Lungfishes are used in the aquarium fish trade even though they should be protected considering that they are the only living South American dipnoan.

LEPIDOSIREN

Lepidosiren Fitzinger, 1837: 379. Type species: *Lepidosiren paradoxa* Fitzinger, 1837. Gender: feminine.

Amphibichthys Hogg, 1841: 361, 362. Type species: *Lepidosiren paradoxa* Fitzinger, 1837. Type by being a replacement name. Gender: masculine. Unneeded replacement for, and objective synonym of, *Lepidosiren* Fitzinger, 1837, which Hogg felt was inappropriate (Eschmeyer, 1998: 1836).

Lepidosiren paradoxa Fitzinger, 1837

Lepidosiren paradoxa Fitzinger, 1837: 379. Type locality: Amazonas. Syntypes: ?NMW 16414 (1, dry), 90977 (1, dry).

Lepidosiren articulata Ehlers, 1894: 84. Type locality: Asunción. No types known.

Maximum length: 125 cm TL

Distribution: South America: Amazon, Paraguay and lower Paraná River basins.

Countries: Argentina, Bolivia, Brazil, Colombia, French Guiana, Paraguay, Peru, Venezuela

Common names: Anguille tété (French Guiana), Piracuru-bóia (Brazil), Pirambóia (Brazil), Tarrira-bóia (Brazil)
